and he raised stuff and took it to market and sold it and gained his liv-lihood and expected that his oldest son would follow him, but the Emperor wanted it, a strong power, a monarchical country. But the cottager said his father had owned it, and his grandfather had owned it and he had earned his liv-lihood by it. and he would not move out for the King or anybody else. And they tore down his house from his head and took him to jail, and he commenced his suit and carried it through to the King's own court, now called the Emperor's court, then the high court of appeals in Germany, and judgment was passed that the King's wall must come down, and he must have his property back. The decree of the highest court of Germany, protecting the rights of the people, said this man's property is his, it cannot and shall not be taken from him, for any price, if he does not wish to sell to the King. He did not make the King any more trouble than asserting his right as a true German citizen. But the decree of the court sustained the cottager against the King, and the records collected by Rufus Choate, detailed in his life, give the day and the date and the parties and the counsel and everything in that great fight for liberty and protection of property.

You want a hotel, you want a farmer to have a place that he can raise wheat, and he shows to the court that it is necessary to raise wheat and therefore it is necessary to take a piece of somebody's property. Why not? This right to take property for a railroad is one that arises from necessity, absolute necessity upon showing that there is no other way to go. That is why it is permitted them to take property. Continuing from the decision of Judge Cooley:

"To render the analogy closer, they are required to obtain 1370 a license from the public authorities to follow this calling,

and for this license a fee is exacted. Like the railroad corporation they supply a public want, and if the former can be called a public agency, the latter, it must be conceded, are entitled to stand in the same category.'

There is the back-driver by the side of the great corporation, the Michigan Central, according to the decision of Judge Cooley.

Now, gentlemen, the same fight has been made against crossing, when railroad property was sought to be taken, it was so far above and beyond the protection accorded to the homestead that you cannot touch it. We cannot take that margin of the Michigan Central. The same argument was made under the statute which confers the right to take property for crossings. Let us see what is said by the courts upon this claim that it is for public use, and you cannot take it for another. In other words, Mr. Baker puts the railroad property of the Michigan Central in precisely the situation legally that the city hall stands in, having been obtained for one public use, you cannot take it for another. It is not true. Let me read to you, and I am going to leave the mark here. It bears upon the case in principle, on all fours, and you must not be misled by the fallacy and the sophistry, however loudly enunciated into your ears. This is a decision recently rendered, in January, 1883, Grand Rapids, Newaygo & Lake Shore Railroad against The Grand Rapids & Indiana Railroad Company, 35th of Mich., 273.

"One railroad company has no right to appropriate without compensation the franchises or property of another for the construction of its road. The fact that property has been taken for a particular public use does not make it public property for all purposes,

1371 and the property rights of a railroad company in its right of way are protected by the same restrictions against appropriation by any other railroad company for railroad purposes or other public use, as is afforded by the constitution and laws in the case of private property of an individual."

They wanted to extend a spur track across the line of the other company. After discussing the authorities, you see where the distinction is made that I contend for, and have tried to illustrate here.

"The theory that land taken under the power of eminent domain is taken for the public use has really caused much mischief."

There is danger of Mr. Baker leading you into mischief.

"The term public use or public purpose is misleading. An object may be public for one purpose, while for others it would not be. Corporations have frequently, in order to accomplish their purposes, sought to give this term its broadest meaning, and then, using it as a foundation to erect structures thereon wholly at variance with all well-known legal principles. In this they have derived encouragement and support from the courts in holding that property thus taken and held by a private corporation is taken for a public purpose, in order to find some ground upon which to authorize its being taken in invitum.

"Now, while railroads, in no sense, are for the use and accommodation of the public, and to this extent may be considered as used for public purposes, the mistake in this case consists in assuming that the property by them acquired, having been taken for a public purpose, may be used and appropriated by any other corporation for a similar public purpose without making compensation therefor; that public property for one purpose shall be public for all. But

is this true? In the case of a common public highway, every one has an equal right of passage over it; but if it is sought to appropriate it to some essentially different public use, as a railroad, it is now generally conceded that the owner of the soil would be entitled to additional compensation. A turnpike is also a public

highway, which the public have a right to use upon paying toll. If it is appropriated to some other public use, the turnpike company would be entitled to compensation, and if the new use was essentially different from the old, the owner of reversion would be entitled to compensation. In the one case the public have the right to the free use of the road, in the other, to the use upon paying toll; but in neither event are their rights considered in case of the road

being appropriated to a different purpose,

If lands are taken for a site for a light-house or a fort, although clearly taken for public purposes, yet the public as such are excluded therefrom. The use for which it is designed is one that is inconsistent with individual rights, either separate or collectively. In some cases where property is required for public use, a mere temporary use or easement only is required, while in others an apparently perpetual and exclusive occupation is required. In the former class, whenever the public easement is relinquished or vacated, the owner of the reversion is restored to his original rights, while in the latter case it would not follow that he would have any rights whatever upon a relinquishment of the uses for which the property was acquired. It is apparent, therefore, that it will not do to say that property taken for a particular public use thereby becomes public for all purposes. The public may have the right to use it for certain purposes,

and yet individuals or private corporations have rights therein 1373 at the same time. These rights may be considered as private rights, separate and distinct from the rights of the public. Wherever such private rights exist, they are entitled to protection, and can only be divested in the same manner and under the same

laws that individual rights may be.

"Our conclusion upon this branch of the case is that the franchises or property of one railroad may be taken for the construction of another, in all cases where the property of an individual might

be, upon making compensation therefor."

I now refer to the case of The Toledo, Saginaw & Mackinaw Railroad Company vs. The East Saginaw and St. Clair Railroad Company, 72 Mich., p. 206, where it was desired to make a crossing of the tracks with a branch or spur track. The opinion was delivered

by Chief Justice Sherwood.

"The line or lines the board of directors may adopt for its road on entering a city or village, in reaching the terminal points, when made a part of the original survey or map, constitute and become a part and parcel of its main line; and when the map and survey shall have received the approval of the State crossing board, and been filed with the register of deeds of the county in which the crossings are to be made, the rights of way of other roads may be condemned for the use of the crossing road, as in the case of private property, and it will make no difference whether the new road proceeds through the place to the terminal points by one or more terminal lines. The construction of a branch or spur, or extension not included in or with the main line, and as a part thereof, after the map and survey have been adopted and approved by the State

crossing board, or after the railroad has been completed, preseuts another and entirely different question. It then becomes an added section of the road."

Gentlemen of the jury, you would not have any elevated road if it were not for the order of crossing the Michigan Central tracks. because the elevated road instead of coming up on grade is to cross the Michigan Central tracks. Will the learned counsel tell me, under these authorities, if the elevated road is required by the State crossing board to go across the Michigan Central track, why the Michigan Central Railroad Company cannot be compelled to give them a crossing on its own line instead of taking the public street? Think of it, when a crossing is provided for, the railroad seeking to cross the track of another, it may take the property of that other sufficient to enable it to cross. The railroad crossing board said to the union depot company, You cannot cross, for the protection of life in the city of Detroit, you must not cross the Michigan Central at grade. How shall you get across it? Through the public highway. There is a decision of the court of last resort of Michigan that if the railroad crossing board think it necessary to make an elevated-railroad crossing, if it must be done there is the decision of the court of last resort, in four adjudicated cases, that the property of the Michigan Central, as to that means of crossing the public highway, and leaving the public highway free is precisely, and of no higher dignity, and has no more protection than the property of a private individual. Aside from that, you bear in mind that you would have no other crossing except the city authorities say you must not cross the Michigan Central at grade. To enable you to go over the Michigan Central by the direct route, the Michigan Central property is of no higher dignity than the cottage of the mechanic.

Now, gentlemen of the jury, I think you can read English and understand it as well as Senator Smith or any other of the gentlemen I have named. The constitution, as I have said, contemplates that you can read this statute for yourselves. On the other hand, whether we are entitled, if it were not a crossing, whether we are entitled to go up and take that margin, as we have drawn it there, and take the property from the Michigan Central road, I have shown you that it is deserving of no more protection than the property of a private individual, but there must be a statute. The union depot act does not forbid it, because the union depot act provides, not that you shall not take depot property for terminal facilities, it does not prohibit that. If it did prohibit that we could not proceed. That I admit. It provides:

"In case any such company is unable to agree for the purchase of any real estate, property or franchises required for the purpose of its incorporation, it shall have the right to acquire the title to the same in the manner and by the special proceeding prescribed in this act; but there shall be no power, except for crossing, to take the track or rights of way of any other -ailroad company without the consent of said railroad company."

There is no prohibition against taking depot grounds, is there?

Then turn back to the statute passed at the same time, passed for the purpose, as suggested by Mr. Joy, to enable some railroad company at some time, somewhere—he cannot remember to have drawn it-to enable some railroad company, somewhere or at some time. to condemn the depot grounds of some other company that is not Whereabouts has it been done? And why did Mr. Joy using it.

draw the act, and why is it drawn in connection with the union depot act at the same session, except to enable them to use the grounds of the Michigan Central? This is plain I think you can understand it, and will not take the English. statement that it cannot be done. This is a part of the general railroad law, which has heretofore provided that land may be taken under the constitution for the use of railroad companies, on the verdict of twelve freeholders, or on the appointment of three commissioners, precisely the business you are doing here, and this is the end of a section added in 1881:

"When any part of the land of any railroad company in this State, in or adjacent to its depot grounds is not in actual use for depot or other purpose pertaining to the operation of a railroad. and such land is not needed by said railroad company for the purpose of a depot or other terminal facilities, it shall be lawful for any other railroad company organized as aforesaid, needing such land for the purpose of a depot or terminal facilities, to acquire the same in the same manner as may now be done for such purpose from individuals. The question of actual use and of necessity for the aforesaid purposes by said railroad company owning and not using said land, shall be determined in addition to other questions as provided by law in cases of condemnation of lands for the purpose aforesaid, and the same proceedings in all respects, as near as may be, shall be had for the aforesaid purpose as now provided by law where land is acquired for such purpose from individuals."

Mr. FREUD: Provided it is not in actual use.

Mr. Dickinson: Yes, and provided it is not needed, but let me tell you, you provide by law that no man shall enter a house in the

daytime, it shall be a crime to do it, if he does it secretly. If he does, certain things shall be done. You do not take that man right up and send him to prison, if you find him doing You have to give him a trial before twelve men. Now, when you find a statute providing that the land may be taken if it is not used, or needed, and it provides a tribunal to try it, would you forestall that tribunal by deciding at the outset that you cannot succeed

before the jury?

And now I am going to read you the testimony of their witnesses, to refresh your memory that this land may be taken, that this land can be taken for this elevated structure, and that it will not interfere in any way with the Michigan Central road, with the use of its property. That it does not use this structure in the air, that its own property is at grade. You must take the property as you find it today, taking the Michigan Central as you find it, aside from the question of their needing the premises today to do their freight business, aside from that question; and it must be a need

101 - 55

in good faith, as Mr. Lothrop says, when they can do their business at the junction, or elsewhere. I shall show you that that business can be carried on under that elevated structure just as well with the elevated road, and show it by their witnesses.

Recess.

I address myself now, gentlemen of the jury, to the question propounded by the juryman, Mr. Freud, as to whether the road use it and need it, as to whether the road can use it and can need it. And I think it well to call your attention to some of their witnesses. Mr. Joy said, you remember, when he had stated that it was impossible and impracticable to run up the Michigan Central ground, that he never heard, until this trial, that we proposed they

should take the margin of the Michigan Central road; and be finally acceded that that was the best route. I then read

to you the closing argument made by me, which he said he listened to from beginning to end-not my opening argument but my closing argument; I read extracts from my closing argument that he said he listened to showing that in every sentence connected with the question of necessity, I marked out this route as the most practicable along the margin of the Michigan Central road-on the former trial, Mr. Joy having sworn that he never had heard of such a route. He, however, at the end conceded, after much questioning, that this was the most direct route from the old depot ground, and you can see that it is. Bear in mind that here is Backus' planing factory, and here is Twelfth street, and here is where they now enter River street (pointing to map). You can see that from the old depot grounds, at this point, as they have laid it out, as it is already laid out, before they cross Twelfth street, the most direct route is up the margin of the Michigan Central, the most direct route that they can take; that this route that they do take, crossing here into Twelfth street, is an injury to the road, this being the most direct, leaving River street free, and crossing River street there at an elevation. I call your attention to this line of track. I do not know whether you have seen it, but I have seen it since this trial commenced; it is a side track connecting with the Diamond Match Company, the Peninsular stove works, the flour mill, and with all the property beyond here; I have seen it crowded with locomotives and cars—this side track running along the margin of River street out about the sidewalk. And it is important that you should see that, if you have not seen it, so that you may form a conclusion upon the testimony that has been introduced

here by Mr. Ellis, by Mr. Joy and by Mr. Mulliken, that the 1379 elevated structure, if it runs up River street and bestrides this track, will not in any way interfere with the running of freight cars and locomotives. It is important, you see, that it will not in any manner interfere with their locomotives and freight cars and freight business on that track when they run up there, and it will not so interfere with them. (Juror Charest says that the jury

have seen that side track.)

Now, in direct connection with the question asked me by Mr.

Freud, let me refer you to the testimony of their witnesses; and first I will read the testimony of Mr. Ellis, at page 111 of his testi-

monv:

"Q. In going along this street along by the stove works and the Union mills and the Diamond Match Company, or the old Richardson match factory, which is still used as a match factory, is it not—A. Yes, sir. Q.—you discovered the old side track there, which had been there for many years? A. Yes, sir. Q. Which had been in use for loading freight from the stove works and the match factory and the Union mills and so on? A. Yes, sir. Q. Right up the street on the side, and they run engines in there, don't they? A. Yes, sir. Q. It is a broad-gauge track? A. Yes, sir. Q. They run the ordinary locomotive in there, and the ordinary freight cars of all descriptions? A. Yes, sir. Q. How are you going to get along without destroying that business? A. We span the whole thing; we give them the clear standard height for locomotives and cars under it. Q. And you won't interfere with them in the slightest degree? A. I don't think we will. Q. They can run their freight cars in there, and load their flour and wheat and stoves and matches, just as well as though you didn't have your elevated struc-

ture there? A. Yes, sir. Q. On this broad-gauge track? A. 1380 Yes, sir. Q. And you don't interfere with it or injure it?
A. No, sir; they have a franchise there of their road. Q. That runs up pretty close to the Manufacturers' building? A. It runs in the paved portion of the street, 15 feet away from them."

Now, there is Ellis, the engineer of the road, whose elevated structure is not going to interfere in the slightest degree, who will not even admit that it will give a shadow of injury, with the carrying of this large freight business with all these manufacturing concerns there. The Michigan Central own it, of course. It is their side track; here it runs from their own main line right up the street; the Michigan Central is not injured by the taking of that track there. Do they want to run a track under here? (On map.) Or do they want to leave their freight sheds here, 14 feet in the clear, or 18 feet in the clear here. If it will not interfere with this track in the slightest degree, will it interfere with this track in the slightest degree? Answer me that. Is it a taking of the Michigan Central property to take that side track, over which runs a great freight business, all the stove business of the stove works there, all the match business of the Diamond Match Company, all the wheat and flour business of Kidder & Piper, the great freight business of those manufacturers, it being necessary to have locomotives and the broadest-gauge cars, the highest cars and the highest locomotives? If it will not interfere with it, if it is not taking that side track, is it taking anything that the Michigan Central want when it comes here and spans over? Are they using that structure in the air? I ask my friend, Are the Michigan Central, or is this side track using the air? Could they use the air, when their whole system is at grade? Do they need the air on their side track, on River street,

when their own engineer, the engineer of the union depot 1381 company, the immaculate union depot company, the company that is going to have charge of our private rights and our private property, when that engineer, the man whose functions you would have said are superior to yours when he laid out a track. when he tells you that they do not take an inch, they do not take an ell of the property in that side track, because they do not interfere with it in any way, their structure spans it. If there is a juryman on this jury who does not know, in the face of that testimony, that it is a mere pretense on the part or in behalf of the Michigan Central Company, who is not here—a mere shadow of a pretense when they say that you can leave that there over which the elevated structure is spanned, or it is proposed to span, with this side track, then that juryman has listened to the testimony and to the principles which we have labored to present, to little purpose. We have been engaged in no child's play; we have been engaged here, as I said at the opening, standing here against all comers, upon a question of fundamental right, and we are here to say that if it is not necessary to take River street, if it is not necessary to injure property there, if your best route is up here, and to take no man's property, we want you to go across the road and keep your railroads upon the property already acquired by railroads; and we may want some for the great Pennsylvania road, and for the great Delaware & Lackawanna, to come in here. Shall we not, so long as there is room here, so long as we do not interfere with any other business. upon the testimony of their own witnesses, shall we not keep our streets free, and keep our thoroughfares and keep our property for our manufactures untouched?

Oh, but there is another witness, a man who comes in here as their witness, a man who built and who must have largely the credit for the pushing enterprise of the Detroit, Lausing Northern, Mr. J. B. Mulliken. They put him on the stand and ask him some questions, and I want your marked attention to his testimony. I refer to Mulliken's testimony at pages 440, 444, 445, 446 and 447. I asked Mr. Mulliken some questions on cross-examination, to which I call your attention; and for all there is in the case, I have not the slightest idea that you could get Mulliken to bend one way or the other from what he deemed the truth. I think Mr. Baker got an unexpected answer when he asked him a ques-

tion. Mr. Baker says to him:

"Q. It is proposed to build a railroad up River street, an elevated railroad. I suppose you are familiar with the property down there? A. Yes, sir. Q. And the Fort Street Union Depot Company has laid out a route for its road along River street. Suppose it is legally impracticable, legally impossible for the Fort Street union depot to acquire the right of way over the property of the Michigan Central, what would you say, that being the case, about the feasibility and the practicability of the route that was selected along River street? A. I think it is perfectly feasible and practicable. Q. Do you know of any better route into this proposed union depot? A. No, sir, not if they could not get in over the Michigan Central grounds. Q. If they could get in over the Michigan Central grounds they would have as direct and as good a route? A. I think so. Q. But if you

cannot go in over the Michigan Central grounds, you think that is the best one? A. I think it is as good as any."

Then on page 442 he testifies as to cinders. On page 444 I ques-

tioned him as follows:

"Q. I show you this map of the Central grounds. Here are the Michigan Central grounds, here are the old union

depot grounds, and here it is where they propose to cross into River street at Twelfth. Now, taking the line of the union depot track, running along the margin of the old union depot grounds, what, from that point at Twelfth street, is the most practical route and the best route into the depot grounds? A. The most direct line would be the most practical. Q. Which is that? A. Following along the margin of the Michigan Central property. Q. That would be the best route, would it not? A. In my opinion. Q. Mr. Baker has asked you about legal difficulties; do you know of any legal difficulties in the way? A. I do not; I am not an attorney."

He is then asked who is the counsel of the D., L. & N., and says

Mr. Lothrop.

"Q. The most direct route, you think, would be up the margin of the Michigan Central? A. That would be the most direct line. Q. In the Michigan Central yards, between Twelfth and Third streets, they do a passenger business? A. Yes, sir. Q. And they do a freight business there? A. Yes, sir. Q. Most always you find freight cars standing in their yard, filling it up? A. Yes, sir. Q. All about Twelfth street is frequently stored full of freight cars? A. Yes, sir."

Within two years Mr. Mulliken resigned as manager of the Detroit, Lansing & Northern, but for fifteen years he had full charge of their freight and passenger business, he being the head and front of the management of all its business. He knew that yard from a to izzard. They had grounds of their own, extending from that street

clear through to the river bank. He continues:

"Q. If there can be conducted under this elevated structure 1384 on River street a switch, over which may be done all the

freight business of such factories as the Diamond Match Co. and stove works and Union mills, where freight cars can be run under with the locomotives of this elevated structure, standing sufficiently high in the clear to permit the conduct of freight business under that track, do you see any reason why, if the Michigan Central desire to use a track on the margin next to River street, they could not as well conduct a freight business under that as can be done on the switch-engine under the elevated structure. Do you see any practical difficulty? A. I think not. Q. So that if the elevated structure was run over there, the Central could carry on a freight business under that margin? A. Yes, sir. Q. They do not now need or use the space that would be used by the elevated structure? A. No, they do not use the space above ground. Q. Have you noticed the old freight sheds and tumble-down brick house they have on the margin along River street? A. I know they have some buildings there. Q. Do they use them for anything? A. I

do not know, I am sure, whether they do or not. Q. You did your business there with the Michigan Central for the D., L. & N., so far as the practical conduct of the business was concerned, to say nothing of the annoyance from competing roads-you carried it on well, didn't you? A. Yes, sir. Q. The passenger trains ran in and out in good shape. A. Yes, sir. Q. They had no more than the ordinary delays in any depot? A. No, sir. Q. You had a contract made with them, when they agreed to give you place, that you would not compete with them? A. Yes, sir. Q. That was the difficulty? A. Yes, sir. Q. You were perfectly comfortable so far as the running of your road was concerned on their grounds and depot? A. Yes, sir."

1385 Can any one make an oath that the Central do not need it in the air? Can any one make an oath that they do not need or use it in good faith, when Mulliken, who knew the yard from beginning to end, who had property in the yard, or his company had, says that they used it for storage of freight cars, even if the question were not as to whether they need the room in the air. when their whole system is at grade. Can any one swear to it? Mulliken has sworn to it, that they do not use it in the air and they do not need it, with their system up here. Do they need it, if they went through at grade; could we take that margin; do they use it in good faith? Mulliken says they use it for the storage of cars. Gentlemen of the jury, they have two elevators there, an elevator and warehouse; you cannot take property and condemn property for public use, for the use of an elevator. The Michigan Central had room enough for two elevators; in their yards, with all their business, they store their yard full of freight cars, and Mulliken says, and Mulliken is a disinterested man and knows all about these things. Are you going to try the case upon the testimony?

Mr. Backus, will you take and move that elevated structure; put the elevated structure with the railroad on one side and put the other on the other. (Mr. Backus does so.) This plan is accurate, drawn to a perfect scale; as the elevated structure stands with reference to that building, in size and in distance and in measurement, so in the greater structure are the distances, precisely drawn to a scale, to the fractional part of an inch in the larger structure, so that you can form your comparisons. Now, Mr. Backus, put on your elevated crossing for teams on the other side. (Mr. Backus

does so.) I believe there is 24 feet when you put the causeway for the teams in the street. How many feet does that give us from the building? (Mr. Backus savs:) From our

line it gives 7 feet; from here it is 80 feet.

Now, Mr. Backus would not have that elevated structure, that railroad, run at the place where it is proposed to run it, for \$150,000 or more. He says, You fix that road, as I have suggested with this model, use your elevated structure for teams over on the Michigan Central up there, use this space, and put your elevated structure and your cars, and your freight and your passengers, over there, as it will stand beyond the viaduct for teams, and do not give us one penny.

Mr. BACKUS: We do not need that structure for teams; we do not want it.

Mr. Dickinson: But if they do put in the elevated structure over

there we do not want one cent; we do not need it.

Now a word more as to the power to take it. Mr. Baker has laid some stress on that, and I will only add a few words to what my distinguished associate has said and to what Mr. Lothrop has said. I call your attention to his testimony again. He swore on direct examination that he had some conversation with Mulliken at some time with regard to getting a right of way in from the junction. He said at that time that he was very positive there was no law which would permit them to acquire property of the Michigan Central road. He did so testify. But do you remember that on the cross-examination I said to Mr. Lothrop: Do you remember the passage of the union depot act? Yes, sir; I aided, said Mr. Lothrop, in advising the judiciary committee of the legislature as to some parts of it. Now, said I, Mr. Lothrop, was your conversa-

tion with Mulliken before or after the passage of the union 1387 depot act; in other words, was the time when you said there

was no statute providing for the combination of the depot grounds of the Michigan Central, to give the Detroit, Lansing & Northern a passage, before or after the passage of the depot act by the legislature? He says, I am clearly of the opinion that it was before. So that you see at the time he had the conversation with Mulliken, at which time he says he knew no law by which the grounds of the Michigan Central could be taken, this act for the taking of the union depot grounds was not passed, because that was passed at the session when the union depot act was passed. What value is his testimony, when his attention had not been called to it? It was not called then, because no such act was passed. But now he says the proceeding provides—whether it is constitutional or not we will not say-but under it it is provided for the question of the need of the Michigan Central owning it, or its use of it, and that is a question of the use in good faith and the need in good faith, and it is to be tried by a jury like this. That is his testimony.

Now, I want to know whether the jury are going to pass upon this question of necessity, or are going to pass it by, because of the acts of the union depot company since, in getting ready for this trial by buying property since the first trial. I want to know, secondly, if there is a man on the jury that believes in the face of the testimony, that any other jury of twelve of their fellow-citizens is going to say. in the face of the testimony of their own witness, Mulliken, that they need that space there. If you find that they do not use it—and Mulliken says they do not use it, because their system is at grade—how can you find that they do use, or that any jury would find that they use it? How can you find that

jury would find that they use it? How can you find that they need it, when Mulliken says that they use it for the storage of freight cars? I do not care anything about the Michigan Central employés they bring in here. They brought Mr. Sutherland here. I asked him on cross-examination about this.

Let us see about this question of use and need. I remember what he testified: You accommodated the Grand Trunk up to the time it left? Yes. You have accommodated since the Detroit, Lansing & Northern? Yes. The Flint & Pere Marquette? Yes. The Bay City road? Yes. You accommodated all these roads that are going out and have gone out? Yes. You have just bought this immense area of 400 feet on River street, clear through to the river. from the Detroit, Lansing & Northern? Yes. You have room enough on your grounds to put up two elevators. All these roads are going to leave you-the Detroit, Lansing & Northern did not leave you because they were not fully accommodated. Mulliken says they did not. Mulliken says they were perfectly comfortable; had all the room to do their freight and passenger business that they desired in the Central grounds, and that was not the difficulty: that the difficulty was that they had extended their line, and had to carry on a competition with the Michigan Central Company. These are going out. What are they going to do with the room that is left after they go out? Cannot they give us these few feet, if it does not injure their track? Think of it and take it home to yourselves, gentlemen of the jury; and take this home to yourselves: Who of you—and this is the test—fellow-citizens of Mr. Backus, board of arbitration chosen to protect legal rights, chosen to protect an individual from the schemes of these railroad corporations which are organized not for charity or for the benefit of the city-who of

that structure within that distance of your place of business. on that narrow street, spanning it from curb to curb? That is the question. Take it home to yourselves. That is what you are appointed for. Take it home to yourselves, in your business, whatever it is, who of you would have it if you could avoid it, spanning the street? And bear in mind that it is at the summit of the declivity of a grade of 521 feet to the mile; the very worst place in the whole elevated structure is as you approach the top of that grade. Can you not hear the locomotive from the Canadian Pacific; can you not hear the locomotive from the Flint & Pere Marquette, and from the Detroit, Lansing & Northern, and from the Wabash, coming up that grade and getting on top of it with a load, in front of Backus; can you not hear it, in wet weather, this powerful locomotive, broad gauge, pulling a load, stretching over that track, as the wheels turn and the load will not come? You can hear the whirr of the wheels, as she tugs on the slipperv track, and the load will not come up the grade, although the locomotive may be over the grade. Can you hear the puff, puff, puff of that engine as she

tries to pull the load up? Can you hear the whirr of the wheels as the train hangs back on that steep grade of $52\frac{1}{2}$ feet to the mile, as the wheels will not catch the track? She puffs and puffs to gather her power, and she throws sparks and smoke and steam. If you would not like such a neighbor in your business, if you are looking for a place of business, would you rent such a place? Let us have no sophistry about this; let us have no sneers about this. Mulliken says that at $52\frac{1}{2}$ feet to the mile, it is possible you might run

you, in the business in which you are now engaged, would like

with dampers closed, but no engineer ever did it or ever will do it. Let me read what Mulliken says about that, at pages 441 and 442:

"Q. On this proposed railroad there is a short grade of 52 feet to the mile, and then it is practically level in the union depot grounds; the place where it is 52 feet to the mile is upon the old union depot grounds beyond the foot of Twelfth street, and it is proposed to run an elevated road through River street to the corner of Third street; will you state whether it would be practicable, in operating the railroad, to run over this trestle-work, that commences at Twelfth street and goes through to the vicinity of Eighth street, with the dampers closed? A. It could be done. Q. Could it be done without any very great trouble or expense? A. I don't think it would cost any more; I don't think it would be done in the regular transaction of the business; I don't think it would be carried out. Q. Why? A. Simply because the engineers would not do it; I think it would be a great deal better, if you wanted to avoid moke and dust, to burn a fuel that it did not make any difference."

Now it is a nice thing to theorize about stopping smoke and dust, but practically the question is, how the engineer is going to conduct a road. There is an ordinance to prevent smoke, but look on the river and see the smoke; look on the railroads and see the smoke. If they have got to burn anthracite coal you will have cinders and smoke, as they have in New York where they burn it. We have to take things as they are; we have to avoid smoke and dust. What are you going to do if you do not? You are going to be fined \$20. How will that help Backus? Are you going to believe that cinders and smoke and steam will not be thrown out going up that grade? Apart from all the fineness and details of the testimony, would you like it by

your own business? And if you would not like it by your 1391 own business, just as you are situated, how would you like to rent the place for a manufactory in any business? Would you take it as a gift and go down there? Is it necessary to interfere with this business of Backus when there is a statute which permits them to cross the street? They say they cannot take the Michigan Central property. What is the real thing they condemn along this Why, the property of the Michigan Central. Held for street? To approach its own sacred precincts; it is property in the street that they have condemned and paid for. Do not you know that if the Michigan Central property was safe from condemnation, the property in that street is equally safe. Mr. Baker says they hold it for the public use. If they hold it for anything it is as a corporation, inside their yard, just as you might hold property, and can maintain trespass. And the Michigan Central have no property in the street, for which they got \$29,000, except their corporation right continues to their abutting property; they hold that title, the same title that they hold these grounds over there. And the Michigan Central is hostile and fighting this scheme all the while, and you cannot take its property because it is all appropriated to public use. They would have let it touch your property, would

102 - 55

they not? To say nothing of the bargain. How did you come to get it? Fighting? When did you disagree on your contract? Once; and they said you have got to go to law, and we will fight you on the question of taking this property. You got there and took that property, and that was just as much their property to the center of that street as Backus' property is to the center of that street, where they want to pass him; it was property of the

Michigan Central corporation that they had to get and acquire before they could pass over the street. Those grounds are no more sacred property than the grounds in the street. They would not be here condemning property if they had not property in the street. That is the proceeding here. Will some one tell me how it is that they can take the Michigan Central property in the street, held by the same title as their grounds, used by them as an approach, if they could not do it legally, if they could not take the yard property legally, when the title is precisely similar, subject to public uses? They have been paid nothing for the viaduct for teams over there, but they have been paid this \$29,000 for this corner down here where they cross at Twelfth street, a little corner there, for the property of the Michigan Central on this River street, for their elevated structure and for the property of the Michigan Central here on the other side of the street. That is just what they paid, \$29,000. Did they condemn it? Oh, they are fighting this thing! Now, they cannot break the argument that though the Michigan Central was hostile to it, yet it yielded its property rights in River street; yielded before a commission appointed under the constitution of the State for condemnation purposes. Why didn't the Michigan Central say to these people whom it was fighting, Remove thy shoe-from off thy feet, the ground on which you tread is our ground. Now, will some one tell me if they are not giving away their property; will some one be good enough to tell me whether that is property in River street, and property of the Michigan Central held as its own in fee, subject only to the public right to go over it? How do they take that property from the Michigan Central road if you cannot take the property of the Michigan Central road because it sets over on their ground there? They say

The fight has disappeared for some reason or other. The fight was on some time or other, and yet you find the Michigan Central not only yielding River street and submitting to condemnation proceedings, but it yields 24 feet of its own sacred grounds besides the viaduet for teams. It is funny. And the Michigan Central is hostile, bear in mind, fighting the union depot company, as a competing line, tooth and nail. Hostile, says Mr. Baker. The only evidence of moment on that is that there is not any more fight, and Mr. Joy says, You just give us what we want here, Mr. Michigan Central, or I have got a little joker on that statute book which I will try on, and we will come along here and close Fourth, Fifth and Sixth streets if we want to, and carry on things here at our own sweet will, and be at peace, or we will walk over your ground. That is about the size of it. And the next thing we know,

when I am out at the legislature, appealing to the legislature to tax these railroads, I commenced the agitation, that is all I expected to do, so that there will be sent from the people of this State all over at some time, to some future legislature, a body of men who will tax the property of corporations just like business men's property is taxed, who will tax the real-estate property of the Michigan Central as business property is taxed, so that they could not afford to hold any more than is held in other cities, for freight business; it is a valuable property they hold for freight business; when I was out there insisting upon it and laying it before the joint committee of the legislature, whether it was right and just that the man who had a feed store on River street should pay the full assessed value of his store and taxes, and for police protection and all, and the

vessel men should pay taxes, upon millions and millions worth of property, to the municipal government here, and the Michigan Central should pay no taxes-urging upon them that the Michigan Central road should pay taxes, to lessen the average of taxes, which have reached the enormous burden of 17 mills to the dollar; and Mr. Joy was there, and made an argument in favor of the Michigan Central and against taxing it. I tell you peace has been declared. War was on between these companies until this right of way had been obtained from the Michigan Central and these people had contracted to divide that street and to shut up, by a piece of legislation passed at the last session, more streets. Mr. Joy says he could not stand it to hear that it should be urged that the Michigan Central property should be taxed. But just the same, the legislature of 1892 will pass an act to impose local taxes upon the Michigan Central property, just the same as if Mr. Joy had not been there. So that they will retire. They have retired in New York, gone uptown, when business property became too valuable to do freight business downtown, they planted their passenger depot on 6 acres of land and did their business with 240 trains a day on that amount of area, and moved their freight business to the river, as they have done in Chicago, and given up the area to manufacturing interests and to business that wants to come and build up the city and pay taxes for the advancement of all our people; they will have to do that here, as they have done in Chi-No man invests a dollar over there that does not pay taxes on the investment; and Chicago is a great city. Every railroad pays taxes, and they pay taxes there to the amount of \$750,000 into the city treasury in Cook county alone for railroads.

Michigan Central railroad uses its depot there and pays its share of taxes there; the Grand Trunk and the Wabash pay their share of taxes, that go to swell Chicago. But here in Detroit no taxes are paid by these companies. True, this union depot company, when they got their charter through, said they would pay two and a half per cent. on the gross receipts, not on their real estate, not on their property, but on their gross receipts will be just what they are for the street railway companies, just what they please to send in.

I want to comment for a moment upon the testimony. You are here, and we are supposed on both sides to produce for your enlightenment the best testimony of which the case is capable. pretense that the elevated road in New York was a criterion as to the damage made by an elevated road of three or four grand trunk lines, they brought Mackintosh here as a witness; Mackintosh, a clerk in the office of the attorneys and counsel of the elevated roads of New York; Mackintosh, with the idea, as my friend Judge Chipman said, that we were something of hayseeds out here anyway, and he would teach us a wrinkle about the damages occasioned to property by railroads running by them. Of course Mackintosh was ridiculous and absurd, and I will not dignify him by referring to his testimony before you twelve men, but I only refer to him to show what kind of people we have to deal with, what kind of testimony this company will bring, when it has all the means necessary to get the best evidence of which a case is susceptible; and I say to you that Mackintosh was sent here because it was fit that such a man as Mackintosh would just about suit the intelligence of us people out here; and he was sent here to fool us. The

cross-examination developed that he had been a clerk in that office; that he retired once for two weeks and took the case of a woman against the elevated road; that he returned into the employment of the elevated road before he had settled that case, and then settled her case with the elevated road. That is the kind of lawyer Mr. Gould employs. You would hoot him out of court in Michigan. Imagine it-a man going out of their employment, so that he can get business by saying that he is no longer in the employment of the elevated road; getting a case of some poor woman against the road, going back into the employment of the company, after he has had the case for about two weeks, and then settling the case. That is his testimony given in cold blood. the kind of people they send here; and it is not respectable to send such testimony here; and he testified to ten dollars a foot damage to the planing mill, and he thinks it might be \$100 a foot over in front of Mabley's, and you, under your constitutional duty, are to take the testimony and do justice, and they know it, and they gave you such testimony as that in a suit in which Mr. Backus has been collared and brought in here, and is entitled to fair treatment and entitled to a fair appraisement of his property. And they have abundant means to get good real estate men in New York, to get good business men in New York, to get disinterested real-estate agents in New York; yet they bring an attorney of the attorneys of the road as the first of their witnesses. And the second of their New York witnesses is a man who has been in a hundred and sixty to two hundred railroad suits as a stock witness. They did not bring his associate, Hawes; I expected Hawes; they hunt people in couples; and I was ready for them; they brought those two men here, and when their second witness

1397 was sworn and examined, I asked, on cross-examination, if he had been cross-examined by Mr. Rodger Foster and Rufus H. Peckham, and you will remember that I could not get him to

say in any single case if he had sworn what I asked him. Why? Because if he said he did not so swear, I could assign perjary upon him, and he dodged every such question I addressed to him of that Those are the witnesses they bring, the creatures of Jay kind. Gould that are brought out here to insult with their methods the intelligence of our Michigan citizens. I won't bandy words about The class of blood-suckers and vultures that he sets upon the people of New York; with his forty million blanket mortgage to hold up to the people and say. "You get your judgment if you No wonder they settle with him. And this witness would have you believe that, in the testimony he gave and Mackintosh gave, the damages were the whole damages to be the criterion in the Backus case, whereas, over and over again—and I have a collection of the cases from beginning to end, every case that went to the court of appeals—the New York courts held, up to the Lahr case in 104 New York, that those damages were damages to the rental value of the property; and that was to be a criterion in the Backus case. There has been an attempt to defraud you upon these facts, and it is worthy of the man who owns the elevated roads. and who has cut out honest investors three times, worthy of the man who is a wrecker, and has made his \$200,000,000 from wrecks of the fortunes of others. Not long ago one of my New York papers related how he quietly went down there with his Manhattan elevated road and took possession of the only outlet that the people had to the water to breathe God's free air-Battery park-without leave or licence took possession of it with his structures, put

his elevated road over it, poured cinders and dust and steam in that park, for the people of lower New York, and the council of New York, moved by public sentiment, did actually, by a unanimous vote, give him warning to get out of that, and put the police force at work to tear down the structure; and I cut out the cut from my New York paper, the World, where Gould is going over the fence with his coat-tail application for Battery park in the mouth of a bad dog, the common council. For the first time, old Father Knickerbocker says, "Well, there is one good deed by a very bad dog." That is all they want to do here. That street is public property. Why do they take it, except they want it? They do not want to pay for going anywhere else. They say Backus said, Go right in back of me, before the railroad commissioner. I will tell you what Backus said to the railroad commissioner: he didn't have any counsel there; he said to the crossing commissioners, "Gentlemen, the crossing of this elevated structure in front of my place, according to Mr. Ellis' plans, will ruin my property, you might just as well go right in back of me and take it." And Mr. Baker would have that twisted into a statement that he wanted them to take his He did not know that he could send them over the Central road. Do you think he was speculating on the railroad companies? That point has been made from beginning to end of the case, that Backus wants to speculate upon railroad companies. would not like to own that property there, his 7 acres of lumber yard and his great river front, his place on Fort street for storing, his admirable situation for his planting mill, with railroad facilities with the Michigan Central, buying a piece here and a piece there, getting clear through to Fort street, by buy-

ing pieces now and again, gathering together the great plant that makes that magnificent piece of real estate, constituting his plant of his planing mill, his lumber yard and his storage place. Does he want to sell it? Why, he has just made his lease, not more than six years ago, arranging for old age, looking forward to 24 years o equally good business for the boys; he made his lease six vears ago for 30 years; that was only in 1885, and has 24 years to Who has not seen Backus, early and late, and I fear on Sundays, through that panic that I knew about, carrying a great load of indebtedness that came upon him, with his paper never dishonored? With no indorser stuck one copper; he paid every debt he owed; his life-work was saved, saved for the boys, and this magnificent property paid for, all with his two hands, and with hard work. and without a cent from his father to bless him with as capital, nothing but his two hard hands; is he to be charged with being a speculator upon railroads, especially on the charge of this man who seems to be at the head and front of this, and whose creatures are representing him here? Backus is entitled to fair compensation, no compromise at 50 cents, no compromise at 25 cents, no compromise at 993 cents, but dollar for dollar; he went through with it night and day, and I was his neighbor; you saw him out at daylight in those days, when I was an early riser on Fort street; I sleep later now; he was there all day, his little luncheon in his basket, trying to pay his debts through that dark time, when banks were tottering and merchants were failing all around him, trying to make money in order to save his credit and commercial honor and pay his debts; and he did it-and he is the man who is charged with robbing a railroad when he has paid every man he owed,

dollar for dollar, without asking even for an extension, helping men with his credit in that dark day, and paying the debts that he owed. Not only that, but coming through, with the boys in business, working without salaries, building up and accumulating this great property, paid for, the mill saved, and leased to a corporation made up of himself and his two boys, so that the thing may run when he dies, because if he hadn't put it in a corporation, and he should die, after his hard work, the property would have to be sold at executive sale; he put it in a corporation, so that the boys should not be embarrassed by his death, as he had embarrassed no one by his life; he fixed it for them. And they say he is trying to rob a railroad, trying to sell his great accumulation of property. I tell you that it is a case where there should be a careful search for the principles that apply under our Government to individual protection and we should not be shouted down nor whistled down the wind. It is not right. It is not just to such a man as this. Instead of abusing him, put your hands upon a witness that will testify that he is not a man of honor. You have a right to do it. That he is not to be believed; you have a right to do it. Bring a witness here to attack the character of

Backus for truth and veracity, instead of bringing Pangborn and Mackintosh and Hawes, whom they failed to get across the border.

Adjourned to Wednesday, July 15, 2 p. m.

1401

WEDNESDAY, July 15, 1891—2.10 p. m.

Argument of Mr. Dickinson Continued.

MR. FOREMAN AND GENTLEMEN OF THE JURY: I hope to finish within 30 minutes, as I promised vesterday, and I shall briefly review, in a plain business talk, some of the testimony, at least refresh your memory as to the witnesses that have been sworn and the purport of their testimony. Before doing that, however, I should say that something has been said about this company having local investments here. There is no one in Detroit, upon the board, or in the management of the Fort Street Union Depot Company, except R. G. Butler, of the Wabas road. R. G. Butler came here as the representative of the Wabas oad, and he is the only man in the board. Mr. Joy is the treas r of the company, but is not on the board. Every other man in ne management is a non-resident, so far as that is concerned, and you see the management of the Fort Street Union Depot Company is peculiarly and wholly a Wabash management. The testimony is furnished by the Wabash manager; so far as the foreign testimony comes here, it comes from the Wabash people in the city of New York. Mr. Alger and Mr. McMillan were in the old union depot scheme at the foot of Twelfth street. They are not in this company. The old union depot line has been turned over to the Wabash, and will undoubtedly be rented, if it has not already, to the Fort Street Union Depot Company. Those gentlemen are not in the Fort Street Union Depot Company. The articles of association do not embrace any of these gentlemen, and Mr. Joy said that the only man living in Detroit, on the board, was Mr. R. G. Butler.

Something has also been said by Brother Baker about the practice of having lawyers put on the witness-stand, and he said Theodore Romeyn was sworn as to the laws of New York. This is true, and the reason is that in Michigan and in every other State, the laws of each State are in some respects different and they stand to each other as foreign States, as another country, so far as local laws are concerned, so that if you want to prove the law of England, you can put a witness to testify it. If you want to prove the law of New York, you can put a witness on to testify it, if you do not have a copy of the statutes, if there is any kind of a law peculiar to New York you can call a witness and show that he is competent and has practiced under the law, that such is the law, and it goes for what it is worth. But imagine our putting a lawyer before my distinguished associate, Judge Chipman, when he was on the bench, to testify as to the law of this State. Imagine Judge Chipman on the bench listening to any member at this bar going on the stand and swearing to what the law of Michigan was. can see the absurdity of it; and I would not be guilty of the flagrant impropriety of putting any lawyer on the stand to corroborate the testimony of Judge Chipman, as he gave it to you in his argument, or to corroborate my own examination of the question, as to the statute of this State to show you what the meaning of the statute was. There was nothing improper about putting Mr. Lothrop on, inasmuch as Mr. Mulliken had testified as to what he was advised by legal counsel. I did not criticise the action of the gentleman in putting Mr. Lothrop on. The testimony of Mr. Lothrop was that he was not aware of any statute at that time. There was no statute at that time, and so far as my having criticised Mr. Lothrop.

1403 I said, railroad lawyer that he was, and counsel for the Michigan Central and counsel for the Detroit, Lansing & Northern, nothing could make him say that that property could not be taken under the statute. I waived the oath of Mr. Lothrop, and I think he would tell you that the counsel who now addresses you who followed him when there were few to follow him, in the old days, who had followed him wherever his white plume shone in the old days, when there was but a handful of followers, in the cause which he led, would be the last man to reflect in the slightest

degree upon G. V. N. Lothrop.

Now, gentlemen of the jury, I am convinced myself that you are not going to say that it is necessary, in view of the testimony, to put this elevated road up River street. I thought it might shorten the trial somewhat if you would dispose of the question of necessity and then take up the other question, or make it unnecessary to take it up, but as you have chosen to take both questions which might be submitted to you into consideration, it is my duty to refer briefly. and I shall very briefly refer to the question of damages, if you do take River street, a question which I sincerely believe you will never reach in your deliberations. We want no damages. We simply want you to do what we said you should do before they attempted to put a hole in the street, to build your structure. We want you to go over there and leave River street alone, and take this land and this space in the air for your structure, and pay us nothing. We ask no verdict from the jury's hands, and that you understand perfectly.

If you do take River street, I have said to you, in such a case, that
— the taking of property, and as read you by Judge Chipman,
1404 the taking of the street is the taking of property. I need not
say any more than to read the union depot act, that makes
careful provision on the subject; in case the jury should find the

taking necessary, I read from section 3461:

"And in case of the construction of such tracks on any public street, lane or highway, the same shall be on such terms and conditions and shall be agreed upon between the company and the common council of any city, or the village board of any village, or the commissioner of highways in any township in which the same may be; provided that such tracks shall not be constructed on any public street, lane, alley, highway or private way, until compensation be made by the company therefor to the owner or owners of property adjoining such street, lane, alley, highway or private way,

and opposite where such tracks are to be constructed, either by agreement between the company and each owner, or ascertain- and paid as hereinafter prescribed for obtaining property or franchises

for the purpose of its incorporation."

There is the statute for taking that street. But the taking of the street and the easement is the taking of property, and my brother Chipman has read to you the law of New York, holding distinctly that the taking of property for an elevated railway is the taking of the property of an abutting owner, in the meaning of our constitution, which provides that no property shall be taken until a jury of freeholders shall decide that it is necessary to take that property, and this is property within the meaning of that constitution just as much as if it were his front-door yard or his mill. That is what I shall address myself to for one moment, aside from the statute.

In the case of Pearsall vs. The Board of Supervisors of 1405 Eaton County, 74th Mich., 558. There a street had been laid out and it was proposed to close it, and the question was whether they could close it against the protest of private owners.

The courts say, all the judges concurring:

"The benefits to be received by a person whose land is taken by the public for a road are a part of the consideration for the release of the land, or its condemnation for a road, and when once vested in him, or he becomes entitled thereto, they are as much his property as the land itself, and neither the State nor any of its subordinate agents can deprive him of them, except in the manner pointed out by the constitution, and that has not been done in this case. Notice, finding a public necessity for taking, and compensation ascertained by jury, and made, are wanting, and without these the proceedings are void."

Now, as to the injury to Backus' business, as to whether that is to be taken into consideration. I refer to the case of The Grand Rapids & Indiana Railroad Company against Weiden, 70th of Mich., 392, and again we have the strong language of our own Campbell upon this question. In this case he says that the property-owner may object to the lack of necessity for the road at all, or for its location over his land, under any condition. Here the jury did not do their duty by the property-owner. They paid him for his land and let the business go to the devil. With reference to the

damage to the man's business, the court says:

"Both of the appellants were using their property in a lucrative business, in which the locality and its surroundings had some bearing on its value. Apart from the money value of the property itself, they were entitled to be compensated so as to lose nothing by

the interruption of their business and its damage by the 1406 change. A business stand is of some value to the owner of the business, whether he owns the fee of the land or not, and a diminution of the business facilities may lead to serious results. There may be cases when the loss of a particular location may destroy a business altogether, for want of access to any other that is suitable for it. Whatever damage is suffered must be compensated. Appellants are not legally bound to suffer for petitioner's benefit.

103 - 55

Petitioner can only be authorized to oust them from their possessions by making up to them the whole of their losses."

Mr. Julien: If we come to the question of damages, have we got two parties to give damages to, that is A. Backus, Jr., and the company?

Mr. BAKER: They will have to be separate. We will submit the

form of the verdict to you.

Mr. Dickinson: Bear in mind that the planing mill was stocked with machinery before it was leased, and then it was leased to this concern for \$5,000 a year. The corporation is made up of Backus and his two sons, so that it makes no great difference as to how the amount of damages are apportioned so long as you together give

enough, if you reach that question.

Now, upon the question of damages, I am going to refer very briefly to the testimony in this case. You are aware that in all branches of manufacturing and business, competition is so great that profits are necessarily very small. Money is not made in these days in manufacturing, except it is made by doing an enormous amount of business. Competition is so great that the line between the making of money on a million feet of lumber and the loss of money on a million feet of lumber is very narrow. The

chance of making money on 30,000,000 feet of lumber is the chance of having an enormous number of sales after it is Thus they make large money by handling an enormanufactured. mous product, but you see that the line is so narrow between profits and no profits in the business itself, that a quarter of a cent cheaper, or one per cent., may mean bankruptcy or success to an enormous concern. Now, to do business properly and to make money in handling this immense trade, and you know by the testimony of the millmen here and the testimony of all parties, this is one of the largest concerns in the United States, has more machines, and it is better equipped than any other mill that has been named to you. They do an enormous business, and if you do a thing to these premises by which they will be crippled in their manufacture, so that they cannot manufacture as cheaply as before, or so that their product will sell for one per cent. less, it is the end of the business. You can see that. The margins are so narrow that they must be able to realize; with sharp competition all over the United States, they must be able to realize very small profits in that competition, and they must be able to make things good, make them to advantage, and to have sunlight and cleanly atmosphere, and have every facility to keep their products clean. You can easily see how it is if it injures them to some little extent in the matter of the soot getting into the knives, if that injury will be very slight, that has the effect of increasing the cost; or, if it has the effect of injuring their product, that alone, in the enormous business they do upon such small profits, as the business must necessarily be done, may mean bankruptcy to the business. Is there any doubt about it in any man's mind? So that they cannot say they will throw a few cinders

in there, they cannot say they will throw a little smoke in there, they cannot say that sometimes it will be very smoky and at other times not, they cannot say sometimes it will drop on their lumber and other times not, from the edge of the ties in wet weather, and it may drop on some of their product, because if you injure their business, they have got to go out of the trade. Their business is worth nothing the moment it does not make the half of one per cent. or one per cent. or five per cent. over and above the cost and expense, that moment the business will not pay, and it is worthless to Backus, who has built it up down there, and compel him to go out of business, because it would be much better for him to leave it a wreck than to keep on and lose money.

Now, let us look at the witnesses they have brought here on their side. We have referred to Mr. Mulliken's testimony, and I refer you again to the testimony that he gave in reference to the throwing of cinders. You understand they put this contrivance on all the Detroit, Lansing & Northern cars, as well as on the Flint & Pere Marquette, and it had been on when Mulliken was general manager; that you cannot stop, and they have not been able to stop the flow of cinders. They will come in, even into the passenger

cars.

I will not touch upon Mr. McIntosh. I am not going through every witness they brought. I have said all that I care to say about him.

Mr. Ranney is a real-estate agent, and they put him on the stand to testify as to the value, and he says that the real estate is worth from \$100 to \$150 a foot as it stands, without the mill. That is all he testifies to.

Mr. David S. Sutherland has testified as to the need of the 1409 Michigan Central for the property. He is the yardmaster, and has charge of the cars. We have against it Mulliken's

and has charge of the cars. We have against it Mulliken's testimony, and Mr. Ellis' testimony, all of which I have talked to you about yesterday. You know that Mr. Sutherland said they needed that great yard there so as to get onto the boat. Do they have more than one freight boat at a time to take a train? Cannot they be run from Delray or anywhere else to the freight boats? Their docks are not lined with freight boats. They can only put one train on at a time. Across the river you will find they run their freight cars right on the double track of the Michigan Central, on the other side of the river. It does not take any more room to get the cars on the boat than it does to get them off, if they make them up somewhere. That is all I wish to say about that.

Mr. Phister simply swears to the value of the real estate. He was never in the planing-mill business, but he swears he does not think it would injure the Backus property, although he never was in the

business and knows nothing of a planing mill. Pass him.

David Beveridge testified upon insurance. David Beveridge is an expert, and I wish to read very briefly from his testimony as to whether rates would be increased. He reminds me of a lot of experts who came to Grace hospital, and all agreed that Francis J. Dunn, who had gangrene in his foot, could be saved; after a full and careful examination as expert medical men could make, his leg was taken off at the knee, and they were all of the opinion that he

was all right and would live. They cut it off in order to save his life. He died. There is a practical demonstration as against expert testimony. Mr. Beveridge, although he never insured the Backus mill, says the insurance rate would not be increased.

That is what his testimony was, superficially, on its face, that it would not be increased for this business, that it would not be increased on the lumber yard by the passage of those trains through. We put the two men who do the insuring on the stand and they swore as a matter of fact, notwithstanding that in practice, Backus' cost of insurance on the lumber yard, as to which this man Beveridge had testified, had been actually doubled. There was theory of an expert against practice, and Backus is the man that has to pay the fiddler. Beveridge did not think the insurance rate on the mill would be increased superficially. He is an expert, never insured it nor examined it for insurance, but we have the men that do the insuring for Backus and give him the cheapest rate he can get, and they swear that they do not know whether the companies will take it at all, but if they do they will charge him from one to one and a half per cent. increase of his present rate, and besides, he would be required to increase his risk so that it may be divided among other insurance companies, so that on the \$88,000 of insurance covering his mill and the stock on hand, amounting to a million feet of lumber, worth from \$40,000 to \$50,000, he must carry an increased amount of insurance, because of this increased risk, and to pay an advanced rate on the insurance he now carries, besides carrying an enormous amount of more insurance to save himself, and both insurance agents doubt whether the companies will give it on a largely increased amount. Thus, if he is paying three and a half per cent. now, he would have to carry, with the lumber and stock on hand, \$150,000 to save himself, or \$62,000 more than he is carrying now, and he would have to pay on the new insurance the increased rate on all that new amount, to

wit, four and a half per cent. He would have to pay one and a half per cent more on the \$88,000 than he is paying now.

Let us see what Mr. Beveridge testified to and what he meant by it, and I shall be very brief about this. (Page 485.) You will see how his testimony reads and what it amounts to. Mr. Baker's question is, "It is a brick building and box factory, and it is proposed by the Fort Street Union Depot Company to build an elevated road in that street, where the superstructure will carry the engines about the height of the second story, or between the second and third stories of his main building, etc.; as a man familiar with this business, I desire to know whether or not the construction and operation of the elevated road along River street, as I have described, the road to be operated in compliance with the statutes and ordinances, with all the skill that is known to the art of operating railroads at the present time, in regard to dampers, spark-arresters, and so on. A. If operated in the manner which you describe, so that sparks would not be emitted, there would be no increase in the risk." Are you going to have any road operated so that sparks will not be

emitted, no sparks emitted at all? Are you going to have it at the top of this grade, are you going to have it operated in the highest style of the art? The ordinance does not require the highest style of the art. The general ordinance says that no business shall be carried on in Detroit which emits this black smoke. There is no ordinance that requires autharacite coal, even if that would stop it. This man is telling whether there would be an increased risk, and he never had anything to do with an elevated road, except in one place. On cross-examination I asked him, "Would you think that the running of a railroad through a lumber yard would increase the

rate? A. I don't think it would increase the rate if it were 1412 run according to the ordinance. If it is run according to the ordinance, so that there is no emission of sparks, it would not increase the rate. Q. Did you ever inspect their lumber yard? A. Yes, sir. Q. For the purpose of insurance? A. Yes, sir. you recommend any increase of rate because of the railroad? A. No, sir. Q. How did it come that they trebled the rates when the railroad went through? A. I don't know. Q. Didn't they increase the rates after the running of the railroad through that lumber yard? A. I never did. Q. Did the insurance company? A. I am sure I don't know. Q. You do not do the insuring? A. No. Q. The insurance companies charge what they please and refuse to insure? A. They refuse to insure when they do not wish the risk. The insurance is not compulsory. Q. You have testified as to the situation of the building; will you please tell the jury what is the situation of the building with regard to this new railroad? A. As described by Mr. Baker, I judge that it is to be about 39 feet distance from the elevated road," etc.

You see he testifies he would not increase the rate on the lumber yard, when they have increased the rate on the lumber yard. Backus is not taking insurance for fun. There is your expert

against that.

He continues further: "Q. Do you know of any railroads on which sparks are not emitted? A. Yes, sir. Q. Where? A. The West Shore road, running through Newburgh. Q. I am talking about Detroit, Michigan; do you know of any railroad that does not emit sparks in entering this city? A. I notice they generally

shut down. Q. Do you know of one? A. In going through 1413 the city I notice they do not emit sparks. Q. Which one?

A. None of them."

Is that true?

"You are as positive about that as anything else that you have testified to? A. Simply from my own observation; my own observation shows me that. Q. You think the fire risk would be greater alongside of the railroad if it were six feet than if it were

30 or 40 feet? A. Not if they do not emit sparks."

You know that all railroads that come in do emit sparks. You know from your own observations that his testimony is not worthy to be considered, because his testimony is just as strong that the rate on the lumber yard would not be increased, and yet Backus, getting the cheapest rate he can, has to pay more.

Mr. CHIPMAN: The jurymen who went out to examine the engine

know whether sparks were emitted.

Mr. Dickinson: I did not go with you. You know better than I do whether it emitted sparks that night when it was being run as a test. You know perfectly well that it is as true that two and two make four that the locomotive engineers who are bound to get into the depot on time will run their engines up that grade in such a way that sparks will be emitted. I am not going to take any more time with Beveridge.

Thomas J. Hattswell, the master mechanic of the Flint & Pere Marquette, testified as to the machinery in the locomotive to pre-

vent smoke and cinders.

Mr. Morris, the superintendent of moving power and the rolling stock of the Detroit, Lansing & Northern road gave testimony to the same effect, as to the use of these improvements.

1414 Barnes, the superintendent of the Wabash road, testimony to the same effect, the use of the spark-arrester and smoke-

consumer.

Simpson is a locomotive engineer on the Bay City line, has been running about three months, and he testified that he never set fire to anything in those three months.

McIntosh swears there never was any fire in New York caused by the elevated roads. There was one chair factory burned down, as shown by one report that we happened to run on by chance.

Mr. Conger is a locomotive engineer on the Detroit, Lausing & Northern, and tells of planing mills at Muskegon. They run about 150 feet from some Muskegon mills, and they never burned up the town, and they run at grade.

Mr. Robertson, a locomotive engineer on the Detroit, Lansing & Northern, tells of planing mills 50 feet away at Lansing that have

never been burned up.

Those are all the witnesses that they have called. They have produced no planing-mill men. If they could get Pangborn and McIntosh of New York, with their power to give us the best testimony of which the case is susceptible, would they not have brought planing-mill men if they had been able to? Not one from all the United States do they put upon the stand to give you the best evidence on that point, whether they could take a planing mill, whether they could run it to advantage and not ruin themselves, alongside of that clevated track. I am not going to argue to you that even the elevated road in New York, with all the cases that we have brought here that have been laid for damages to the rental value and the fee, for the smoke and the steam and the gas and the

cinders that are emitted from that light structure, with those light locomotives, carrying nothing but passengers—I am not

going to argue to you the distinction, and the worthlessness of such testimony, as compared with the effect which would be produced with four great railroads running over an elevated structure on a trunk line, hauling heavy passenger cars and heavy freight. It does not compare. I am not going into that, for the purpose of showing that there is no comparison, although in every case they

have been compelled to pay damages for the rental value and are now being compelled to pay for the fee, even with those light structures with street cars—even with all that, they do not compare and you know it, with this structure, with the standard locomotives, with the engineers of the Canadian Pacific and the Wabash and the Flint & Pere Marquette, and the Detroit, Lansing & Northern getting in on time and going up this grade with a load.

We called Mr. Wardle, you remember him, the witness that lives

We called Mr. Wardie, you remember him, the witness that lives at Ionia, and the special agent of the four companies which he named. He testified it would be undesirable to insure Backus at all, with this structure by the side of his mill. If they took the insurance at all, they would increase the rate one and one-half percent. Is that for the purpose of deluding the jury that he says it,

or is it true?

Mr. James A. Jones has the rest of the Backus insurance. On the present insurance he says the rate would be increased, and Backus must carry increased insurance, and that he did increase the rate by the order of his companies on the lumber yard, and Backus had to pay it.

John B. Eldert, you remember the honest fellow that came here, with his blonde mustache, who had been an engineer on the Michigan Central railroad, and had been lately on the Texas road. He

says that the throwing of sparks and cinders, where they use substantially the same device for spark and cinder arresters

as they do here, cannot be avoided. He says they will have cinders and they will have fire out of the locomotive, and that it sets fire; he corroborates Mulliken in the fact that you cannot stop cinders. He says it is absolutely impossible to run a fifty-foot grade with the dampers closed. Do you cast aside the testimony of such a man because he has been in the employ of railroads. In all his experience he never saw any device for going up a grade or working in a yard that did not throw sparks sufficient to start a fire.

Mr. Sutherland, the man who had charge of cleaning cars and the general foreman of the depot of the Michigan Central road, the red-

faced man, you remember.

Now, you have got a device, haven't you, to stop cinders and sparks. Mr. Sutherland testifies that he takes from one to three pints off from a passenger car that comes in over the Flint & Pere Marquette, and over the Detroit, Lausing & Northern, although he is not so familiar with the Detroit, Lausing & Northern cars; that the sparks do get in, and he says he frequently finds holes burned in the cushions inside the car.

William F. Tripp, the inspector of lumber in Backus' yard, says the accumulation of cinders on the lumber is very great; says that the lumber which comes in over the Flint & Pere Marquette, off of one car of lumber, he considers sufficient to half a ton of coal sifted, and he shows you the kind of cinders they are, and these come from cars on the lines which they say have this device to stop cinders. He says that the lumber in the yard for a distance of 30 to 60 feet from the track has holes burned in it by einders from passing

locomotives. They put no planing-mill men on the stand. We put on E. L. Thompson and George W. Robinson, in competing business with us, and they both testify that that planing mill, on account of this elevated structure going by there with the steam and smoke and cinders, this planing mill could not be carried on there, and they would not run it and they would not have it, either of them. Here are planing-mill men to instruct you who are not planing-mill men. Have they, on the other side, enlightened you as to whether there is a man who will take that mill as a gift, alongside of that elevated structure, with an investment to carry on their planing-mill business and take the risk of it? These are planing-mill men, not our creatures, not our stock witnesses, not our friends in the business, but competing with us. These men would not carry on the business, they would not run the place and they could not do it.

Next comes Maltz, car-cleaner on the Michigan Central, who testifies to the burning of cushions on passenger cars, and as to a car

coming in within the last day or two on fire.

There is the testimony, and the effect of the testimony is, beyond any question, that Backus' business, a lucrative business, from the immense quantity that he does, cannot be carried on in that place. It cannot be carried on. What shall we say of light? Does not every one know with that structure put before him, when you think of it, it does not look as it does on the model, that structure with three tracks upon it, and the switches with the ties but eight inches apart, that that is going to make a black hole in front of Backus' property, with the engines running by? Is it going to give him the flickering light of which they complain in New York? Is the steam going to pour out when they run by? Are the cinders going to pour out in the same way they pour upon the lumber yard, and if they do pour out, are they going to send sparks as far as in the lumber yard, and if they do go as far are they going to send sparks as far as in the

lumber yard, and if they do go as far, are they going to fall 1418 upon Backus' property? Are the cinders going to fall upon his fine material so that it will injure the knives? Are they going to fall upon the clean product? In wet weather will the oil drip on his products? What have you to say as to whether one of you would take this institution, this business, and carry it on. The lumber and planing-mill men say that they would not have it, that

it would ruin their business.

Now, as to the matter of damages. You figure up the increased cost of insurance on the \$88,000 that he now carries, on the undisputed testimony, at one and a half per cent., which it would cost him more than it does now, and then add to that $4\frac{1}{2}$ per cent. on the additional insurance he must take, and then, how long is the lease to run, 24 years, and you see what the damage will be to Backus, if you take that off his profits, and what the damage is to him, under the decision of Judge Campbell, concurred in by the whole bench, if he has a lucrative business, you must see, if you go into this question, that he does not suffer at all. If he would not have the increased insurance, if he did not have the rate increased, without doubt, he could carry on his business, but the rate is increased, is

it not, by reason of this road going through, and if it is increased at this rate, what would be the damage to him in the end, say in 20 or 25 years? But if he cannot carry it on, if you believe he cannot carry it on, what is the damage to Backus to break him up and to compel him to go elsewhere in order to save the rest of his plant, to wit, the lumber yard and the storage-house on Fort street? He has got that property. It is a necessary adjunct to this planing mill, in which he has made money. Can he get out and buy another piece of property and put up a planing mill? You know the cost

he has been put to, that he has paid out since the fire \$116,000, 1419 that he had his office saved and his kilns saved, making the total value of the property, exclusive of the real estate, \$150,000. There it is. Now, gentlemen, that \$150,000 is worth nothing with this thing alongside of it for this business. Is there any doubt about it? In the first place, if he cannot carry on the business, will any one rent it? If they will rent it, will they rent it for a planing mill and save him all his machinery? They will not. The planing-mill men say they would not have it. If the value of the property is not saved for a planing mill, what is it good for? It may be good for locomotive shops, but that is the real estate. Locomotive shops cannot utilize his vast expenditure in that planingmill plant. He cannot sell his planing-mill plant for locomotive shops, and he cannot rent it to locomotive shops; it is a planing mill, and it has cost this money exclusive of the value of the real estate. He may rent the real estate, but the planing mill, which is worth at least \$150,000, is lost, to say nothing of the value of the real estate which he has accumulated there. Is there any doubt about it at all? Do you believe, under the testimony, where both sides presumably have given you the best testimony which they could get, do you believe that they can carry on the business with profit? If not, it is of no value?

Think for a moment, the Michigan Central road have 1,500 feet along this line, and for that piece alone they got \$15,000. They got for their front there, and for this corner here where they enter River street, they got, all told, \$29,500 for the corner, for their frontage on River street, not taking any of their property within their lines. Is Backus' damage ten times what the Michigan Cen-

tral's is? What do sparks do with the Michigan Central 1420 railroad? What do cinders do to it? They have sparks and cinders themselves. What does smoke do to them? What does vapor, or gas or steam do to the Michigan Central? And yet they get these damages. How is it? They get the damages and compensation for taking the line of the street, and they are furnished with a viaduct along next to their road besides. They get that amount of money. Do you think Backus is damaged ten times what they are, with his 230 feet, damaged ten times what they are for 1,500 feet? Let us see what the elements of damage are. Cinders, do they hurt the Michigan Central? Steam, does that hurt the Michigan Central? Gas, smoke, it is the same line of business. Just compare the business of the Michigan Central with that of Backus.

Gentlemen of the jury, I have prepared a verdict which I shall submit when you enter upon your deliberations, finding that public necessity does not require the use of River street in front of Backus' property, and I shall ask you to sign it as your vervict. Brother Baker will submit to you a form of verdict for you to sign, that it does require them to take that property, and a form of damages that you shall give. I shall provide no form of damages, because I do not believe you will reach that question. We want no money. We are not responsible for their spending a dollar until this question was decided. We would not have this structure alongside of us for any money that you could give us. It is the business we have. We don't want your money, we want you to leave us alone. We have a better investment than all the money you could give us. We have something that will answer us, something that has lasted Absalom Backus all his life. He has all the railroad connections he wants, and he can get no better return for his

it to any better advantage. Since 1882, the date of the fire, he has been paying off \$116,000 of debt, and his income for the last year over and above the rent is \$27,000 a year profit, besides paying him his \$5,000 a year rent. How can he do better with the money? He does not want the money. He wants his property, he wants it free and clear, and he doesn't want a dollar; he doesn't ask you to consider the question of damages, if they will cross the

street, as they may.

Gentlemen, I have endeavored to do my full duty in this matter. The question here is a question that was argued before the other jury. We have come to you for a final decision upon it. The Morton case, to which reference was made by Mr. Baker, has nothing more to do with this than a passage in the Koran. They took for union depot purposes the homestead of the late Mr. Brooks, and his daughter wanted to stay there. I contested the constitutionality of the law. The supreme court sustained the constitutionality of the union depot act, and the question of the taking of it for the union depot, the question of the public necessity of the union depot has nothing to do with this case. This is a question of the approach, and what is the best route to approach.

The union depot is a public necessity. The union depot has come to stay. We welcome it, we are glad to have it. We say that it shall approach the depot by the best route and not destroy business along the line of the approach. It is a question of the approach and not of the union depot. That is the question for you to decide. As I have said, I have with some labor endeavored to follow all the

position- of my brother Baker which might mislead you. I have laboriously presented to you an exposure of some of his fallacies, as I believed them to be. I feel that I have done as well as I can, and I leave it to your consciences as citizens of Detroit, and as fellow-citizens of Backus, to do your duty under the constitution of the State.

Closing Argument of Mr. Baker.

MR. FOREMAN AND GENTLEMEN OF THE JURY: When I opened this argument and occupied about two hours and a half of your time, I thought I was trespassing somewhat upon your patience and your forbearance, but I thought it would be excused on your part because of the importance of the case to my client and to the general public that resides in the city of Detroit, and as, according to your own decision, the burden of proof rested upon the petitioner. But now that my very learned and distinguished friends on the other side have occupied four days of your time and have talked about ten hours, I think I may be pardoned for asking your indulgence for an hour or so in reply.

It has been said that the human breast is like a harp with a thousand strings, and if there is any chord that my learned friends have not endeavored to strike, in their arguments, and their appeals to you, I know not what that chord is. If there is a single argument that could be addressed to your intelligence, your prejudice, your hatred or your gratitude, in any way to influence you in behalf of their client, that argument has been made in a very forcible manner; and I was surprised that Judge Chipman, who is getting into the sere and yellow leaf, should stand up here and talk with

the force and power he did for some four hours and a half.

The counsel have said a great many things to you that have a bearing on this case, and they have said a great many 1423 things that have no bearing on it whatever, in my judgment, many things that would have been better for them to have left unsaid; but it is customary with counsel, in the argument of cases, to present their cause in the best possible light from their standpoint, but it is not always true that counsel understand a case perfeetly, or understand a case as the jury do, and it frequently happens that counsel, in their zeal and ardor make arguments that are of no force or effect whatever, and in fact are a boomerang and tell against them. It is not surprising that our learned friends here, in the course of their arguments, have set up a great many men of straw for the purpose of knocking them down, and to declaim here, for fifteen or twenty minutes about something that is entirely imaginary and of no practical consequence. I thought Judge Chipman was guilty of an act of that kind when he asserted here in the opening of his argument that it was not wrong in Mr. Backus to demand a jury, that it was not a crime or an offense known to the law in Mr. Backus to demand a jury in this case. No one had asserted that it was wrong upon his part to ask for a jury to come in here and determine the question of necessity and the question of damages. He is entitled to a jury under the constitution and laws, but it is worthy of comment that the same statute which authorizes a jury to be impaneled also authorizes the appointment of three commissioners by a court of record, and that, in the first instance, commissioners will be appointed, unless a jury is demanded. Now, my brethren and their client did not want commissioners, although

it would be quite clear to most any one having this kind of business in charge, that three intelligent men could sit down and go over this case and dispose of it with quite as much facility

and with quite as much ease and quite as much care as a jury. I rather apprehend, when you come right down to it, that instead of demanding commissioners, they have demanded a jury because they thought, not that they were entitled to a jury, or because they thought they would get more justice from a jury, but that they rather proceeded upon the theory that if they increased the number from three to twelve, it was possible that among the twelve they might find some one that might possibly agree with them about this case, and it would increase their chances just that much, because, from our standpoint, at any rate, it would be impossible for a jury to be impaneled in this county in which any considerable number of them would have the same views in regard to this case that have been expressed by my learned friends in behalf of Mr. Backus.

They have made a great argument here, they have made a great contention from the beginning of this case about this question of necessity, as if some great outrage were going to be perpetrated upon Mr. Backus because this elevated road was to be built in front of his property. But, gentlemen, is that true? Is it true that an outrage is going to be perpetrated upon him, or upon any property along the line of that street by the construction of this elevated road? Is it not true that that elevated road leaves the street entirely open, as before; that it merely occupies a line along the curb-stone upon either side, with a row of posts 35 feet apart, and overhead is a structure capable of carrying railroad trains, locomotives and cars, and that the physical effect, the actual damage to the respondent's property is very small compared with the actual value of the property?

It is undoubtedly true that this elevated road might have been located in streets in the city of Detroit where it would have been objectionable, upon general and public grounds; but there is no such fact in existence here as would make it against the public interests to occupy that street down there for half a mile with an elevated railroad, because, in the first place, the property upon the south side is devoted to railroad purposes. The property beyond there, upon the old union depot grounds, is already devoted to railroad purposes, and all the property is either now, or will be in the immediate future, manufacturing property, while there are a few old residences along the north side of that street; the value of the property, as you all know, rests in its value for manufacturing purposes. It is located in a manufacturing vicinity. It is valuable for such purposes, and it is valuable for no business or residence purposes, I submit. Such being the case, it is a little remarkable considering what has been done in this case, that Mr. Backus should come here and contend, as he does, that we ought to go along the margin of the Michigan Central property.

If, in 1889, when this project had been started, it had been known to any one that it was possible to lay out a route along the Mich-

igan Central property, we would have very gladly done it, because it would be very nice indeed to come up over the Michigan Central property and cross Eighth street, and go on to the union depot grounds in that way, if it could be done. It is undoubtedly true that you can build an elevated road there that would not interfere very seriously with the Michigan Central property, that is, you can span a track of the Michigan Central property along the margin there, so that, to some extent, they could continue to use the property. That is undoubtedly true, but it would be to some ex-

tent an interference with their property and their rights in the premises, and, as I have pointed out, and as Brother Chipman, during my argument conceded, unless there is some legislative authority by which we could go along there, it is an absolute legal impossibility for us to do so. If, as suggested by Mr. Joy, we could suspend that elevated road along there without having any posts at all, it might be legally possible, but it is not true. This elevated road, wherever you put it, has got to be supported on posts, it has got to be maintained by iron pillars, and they necessarily would be about the same distance apart as they are upon this proposed elevated structure along River street, to wit, from 35 to 40 feet. It would necessitate coming along the margin of the Michigan Central property the entire distance from Twelfth street to a point just beyond Eighth street, and it would be utterly ridiculous to believe that we could ever obtain the consent of the Michigan Central railroad to occupy that extent of their property. Brother Chipman promised, during my argument, that when it came his turn, he would explain how we could do this, how we could condemn this right of way, how the necessary petition could be verified, and the necessary proceedings could be taken to acquire the right of way, and I leave it to you whether he did explain it in any such way. When he came to that part of it, I noticed that the first thing he asserted was, why you have done it already, you have already condemned a triangular piece of land across the corner of Twelfth street and River street, and I suppose he thought that settled this controversy as far the power was concerned. But, gentlemen, I have only to recall the fact that appears in evidence here, that under an agreement that was entered into between these

two companies about the erection of a viaduct for teams, that had been ordered by the State authorities, the Michigan Central had consented that we take this triangular—at a price that might be agreed upon, or, if we could not agree upon it, that it should be left to be determined by commissioners, or by a jury, and that, in pursuance of that agreement, the case was submitted to commissioners, and they awarded, for going across the triangular piece of land the insignificant sum of \$2,900, or about the value of a lot 29 feet front on Twelfth street, and extending back 150 or 200 feet. And in that case, the tracks were so situated that it was necessary to cut off standing room for two cars, and it was done because the Michigan Central wanted to get this viaduct for teams constructed, and in order to get it, they consented to it, and the only disadvantage it would have been to the Fort Street Union Depot Company

would be to have swung out a little sooner upon River street. We could have obviated the difficulty very readily by going over on River street just before we got to Twelfth street. So that, so far as that is concerned, it is simply a case where the Michigan Central did not see fit, after the commissioners had awarded the sum of \$2,900 for that property, to further contest it. I do not know how that would have come out if the Michigan Central had insisted that we had no right to go across there, and had denied the validity, as they did at one time, of the agreement that they had entered into with this company in regard to it. But the facts in regard to it are, as they appear in evidence before you, that the railroad authorities, that is, the State crossing board, or the commissioner of railroads, ordered these two companies to put in a viaduct for teams, and reserved the right to approve of the plan. The Fort Street

Union Depot Company submitted a plan that left River street open, so that you could drive under it from one end to the The Michigan Central railroad submitted a plan by which that was to be closed by abutments, and claimed that that was their understanding of the agreement that had been entered into by Mr. Crapo upon one hand, and Henry Russel, the attorney of the Michigan Central, upon the other, during the absence of Mr. Ledyard in Europe, but the railroad commissioner finally decided that he would approve of the Fort Street Union Depot Company's plan, which left the street open. The Michigan Central desired to close that street. because they desired to avoid a dangerous crossing there, by which teams and vehicles are constantly going across there in front of their engines and trains. They desired to occupy that much of the street as a railroad yard, and to have it inclosed, so that nobody could molest them in the use of that street. As it is, they are obliged to keep flagmen here and a gate at a considerable expense, and keep a constant outlook, and exercise great care in transacting their business over that street. They were very anxious to close it. They consented to all these things with the hope and the expectation that they would get it closed; but so far as actually putting up abutments was concerned, the decision of the State authority was finally against them, and under the circumstances the right of way was condemned in front of that property, and they were awarded altogether the sum of \$28,560, or upon an average of \$11 a foot. Part of it was \$10 a foot, and the residue was \$12.50 and. \$13.50 a foot, for a distance of nearly half a mile.

When my learned friends contend that we had authority to condemn this land, because we had condemned a right of way 1429 in front of that property along River street, they simply have contended to you that because we could condemn a right along River street, we could therefore go through their property, and they cited authorities to show that the property-owner owns property to the center of the street. In one sense a man does own his property to the center of the street. He owns the fee, subject to the public easement, as a highway, but of course it is not used and occupied by him, and you must clearly understand this statute by this time, that where it is not used and occupied it is subject to condemnation. There is no question about it. It is their property within the meaning of the statute. If it is not occupied by them within the meaning of that statute, it can be condemned, but to condemn a right of way in front of their property is a very different thing from condemning a right of way through their property.

But there is another view to take of this, and I was very much pleased to have Mr. Backus change that model over and put his elevated road over on the margin, because while he, in his desire to say something to protect himself, asserted it was not necessary to have any viaduct for teams at all, his counsel realized the absurdity of that, and he said, Put that approach in there, in front of his property, and told him to put the inside, that is, to make the masonry in the street. Now, gentlemen, that approach has been ordered in there by the State authorities, and I desire at this time to call your attention to the statute to show the extraordinary power that is exercised in such cases, for the purpose of showing that it is wholly independent of this Fort Street union depot enterprise. It was within the power of the railroad commissioner at any time to order the Michigan Central to put a bridge in there, and they would

have to do it. They had occasion to do it when we proposed 1430 to build an elevated road there. They did, upon the application of the Michigan Central, because the Michigan Central wanted to put a viaduct in there to obstruct the passage of the

union depot company.

The authority of the railroad commissioner in such cases is found in section 17 of the act creating that office, and this is the language

of it:

"Whenever, in the opinion of the commissioner of railroads, the safety of the public would be more efficiently secured by stationing a flagman to signal trains where a highway or street is crossed by any railroad, or when one railroad crosses or intersects another railroad, or by the building of a gate or bridge at such highway, street or railroad crossing, or intersection, or street railway crossing, he shall direct the corporation or corporations owning or operating any such railroad or railroads to station a flagman, or to erect and maintain a bridge or a gate at such crossing as the public safety may demand; and in case such flagman is directed to be stationed, or gate or bridge directed to be erected and maintained where one railroad crosses or intersects another, the expense thereof shall be borne jointly in equal proportion by the companies owning or controlling each of said railroads."

Then it makes the company subject to a fine of \$100 and a continuous fine of \$25 a day for every day that they refuse to put it in, and it is a frequent occurrence for the railroad commissioner to

order these crossings to be put in throughout this State.

Now, gentlemen, suppose the railroad commissioner had ordered a viaduct put in there for teams. Under that statute it would have

to be done at that crossing. He has ordered it done, and if you put this railroad over on the margin the street crossing would necessarily be in the highway; there would be no other place to put it. It would be ridiculous to put it still further

over on the Michigan Central property, and to make an angle in the street to get to it and another angle to get from it; it would be absolutely ridiculous to do any such thing as that. That statutory power is to put it in the highway, so as to make a crossing there. and if it was done it would be necessary to make an incline, an approach of masonry, or partly of masonry and partly of iron, and it would be necessary to commence back far enough upon the street so that when you reach the Michigan Central track you would be 18 feet in the clear, and it cannot be done a cout seriously interfering with the property of Mr. Backus. It cannot be done without injuring his property more than the proposed elevated railroad would injure it, because it would cut off his ingress and egress to the back part of his premises, if you build that approach. must remember that this model that he has shown, the wooden part of it only shows that part of it, only goes part way to the Michigan Central. In other words, the entire elevation is not reached until you get to the Michigan Central track, and the order of the railroad commissioner was that the grade should be at the rate of 25 feet to the mile; so that if this were done, if you change this road over as they propose here, it would be necessary to injure Mr. Backus' property a great deal more than it is injured now. Of course, I do not contend that he would not receive his damages. Of course, if that was ordered in front of Mr. Backus' property they would have to pay him damages, but we would have this advantage, that the Michigan Central would have to pay one-half of it, and it

would not all fall upon the Fort Street Union Depot Company, but, so far as Mr. Backus' property is concerned, it would have just as serious an effect, just as injurious an effect as

the elevated road will have when that is constructed.

So that when you come to consider this whole question, I think I can submit, with a great deal of confidence, that my brothers have not made out their contention, on their part, that it would be, practically, the best route, or that there is any authority for it at all, and, in this connection, I desire again to call your attention to the case which I read to you from Pennsylvania.

Mr. CHIPMAN: There was no statute like this in that State.

Mr. BAKER: No, there was no statute, but I have shown that the

statute does not help you any.

The question is, whether they could do it at all, not whether they do a little injury, but whether they did a great deal of injury, and all my brethren contend for here is that it might be done without a great deal of injury, as far as the Michigan Central is concerned, but, gentlemen of the jury, I do not think that is true; we would have to put our posts upon their property, upon property that is occupied by them, on property that is needed by them, or, at any rate, property that it is reasonable to believe any jury that would be called would find that it is needed by them. My brethren say that you ought not to consider the other verdicts that have been rendered in these cases. But how would you ever build a railroad unless it is considered what had already been done? It certainly is a fact that if a jury excluded what had been done, and went upon

original ideas in regard to it, you would be liable to have just as many different decisions as you had routes. One jury would say one route is the best and another jury would say another route was the best, and you could not proceed an inch, you would be exactly where you would be if you had to buy the property by private agreement with the property-owners, because, how can any one of you say that if you impanel twelve men to pass upon the Michigan Central route, and the Michigan Central came in here and contested it and made their showing, and they would be entitled to a hearing and to be represented by counsel, and they presented all the facts in regard to their road, that they would not say that the best route was River street. The Michigan Central certainly would make that contention. So that if we went on in that way we could never build a railroad and never have a union depot in this city. I do not say you are bound by what they have done. You have the power, and if you think they have all made a mistake, you have the power to set it all aside and to stop this enterprise: but men situated just as you are, for all that appears men who are just as intelligent as you are, men who have listened to testimony just as patiently as you have, jury after jury have put upon record decisions in favor of this necessity, jury upon jury called from the body of this county, and with one or two exceptions, every one residing in this city, have said it was necessary; and this is practically the last case to be submitted to a jury. think it is entitled to some weight, and to be considered, and that this enterprise ought not to be frustrated or stopped or delayed on any such question, and that Mr. Backus ought to take his just and fair damages and make no further contest upon the ground that there is no necessity for going along this street. In addition to that, we have the approval of the State authorities and of the

common council, and I think Brother Chipman went a good ways when he undertook, in an indirect sort of way, to influence you by questioning the motives and the purposes of the common council of the city of Detroit as illustrated in a controversy that has recently existed in this city in regard to the street railway franchises, because he stood up here and implored you to ignore the decision of the common council, because the common council were some horrid or outrageous body of men that ought not to have any respect anywhere. But allow me to call your attention to the difference between the two cases: In the one case the common council was taking something that the people of this city and the newspapers of this city did not approve, but when they granted the right to the Fort Street Union Depot Company to build a railroad along River street, the granting of the right was approved by every newspaper in the city of Detroit, and it was approved, as far as I know and was able to learn, and I was actively connected with it, by every man, woman and child in the city of Detroit, with the exception of one or two property-owners down there, and the only ones that showed themselves at any meeting were Luther Beecher and Absalom Backus; but outside of those two there was not a voice within the corporate limits of the city of Detroit that was raised 105 - 55

against this grant or the giving of this privilege; because the terms that were proposed to the common council were fair and just, and the common council were virtually compelled by the pressure of public opinion to grant the right asked for.

Mr. Dickinson: Didn't you know that there was a petition sent

in against it?

Mr. Baker: As I say, some property-owners objected to it, but outside of those interested parties there was not a man, woman or child in this city that opposed it, and every newspaper in the city was in favor of it, and it was granted by the com-

mon council because it received the public approval from Delray to Conner's Creek; but counsel are driven to such straits here that they appeal to a prejudice that they suppose exists against the common council at the present time, that you should ignore their decision, although it was rendered under such circumstances and

under such a condition of public sentiment.

In my opening argument, I made some allusions as to how easy it was to paint a great outrage; how easy it was to find fault with something that had been done a great many years before, and I took occasion to say that there were a great many things about the land grants that were made to the Northern Pacific and the Union Pacific that were commendable; and my brethren branched off into a tirade here, condemning those land grants, because they think it is something that will catch the popular ear at the present time. But go back to the time those roads were built, go back to the time when those enterprises were started, and see whether or not the giving of the land grants was approved by the people of the country. Why, without the land grants the Northern Pacific would never have been built; and although the man who encouraged it more than any one elese in this country, the well known Jay Cooke, who was the financial agent of our Government during the war, and as honest and true a man as ever stood up in this country-although he encouraged it, and obtained this land grant, we all know that the panic of 1873 was brought upon this country because of Jay Cooke's failure in endeavoring to put that route through from sea to sea, and while he put it through and built it up, there are

four or five States occupied by people, by thousands upon thousands of people, by farm after farm, village after village

thousands of people, by farm after farm, village after village, and city after city, and it has grown to be a part of the great empire that exists upon this continent; and my brethren claim great credit because a year or two ago the Congress of the United States forfeited some unearned land grants in the northern peninsula of this State. That is true. A land grant had been made and the land was not considered good enough, was not worth enough to justify an investment to build the railroad, and the railroad was never built, and they simply forfeited — as unearned; it is Brule river; and they claim they have done a great thing, because, afterwards, minerals were discovered upon it and it became valuable—that they forfeited it as unearned land. Now, that will do to talk to the marines, to people who have no knowledge of business and affairs in this country; but we know, at the time these grants were made

to these railroad companies, the companies that built the Union Pacific and the Northern Pacific, that the grants were approved by the people of this country, and if they had to do it over again they would give it just as readily as they gave it then. They might exact something different in the light of experience. In the case of the Union Pacific they not only gave them a land grant, but they gave them financial aid, and through some want of judgment or management the Government took a second mortgage upon the property, and it is upon that property that the indebtedness is due, and they have not been able to collect it, simply because there is a first mortgage, and that is a first lien upon the property and the assets of the company. Now, those things have been done in this country; these public enterprises that will be of great good to this country have been encouraged by the people simply because the American people are progressive, simply because they do desire to subdue this continent and to

occupy it with cities and villages and farms and a teeming population from the Atlantic to the Pacific, and the great instrument that has enabled them to do it is the railroad system of this country. And you take the Jay Cooke route, the Northern Pacific; it runs through a country that would be uninhabitable if it was not for the railroads; it would be worthless for all practical purposes if a railroad did not run through it. And it is just so in the growth and development of cities. We can sit down here and we can let Toledo be built up. We can let Port Huron be built up. We can let Chicago be built up, and all these competing places that surround us; but unless we go forward and furnish some sort of facilities and some sort of advantages, we will simply be left in the struggle, and Detroit will be nothing more than a big village.

My brother seems to think that he did a very great thing that ought to help him in this case here, because some years ago, when they desired to build the Wabash line down to Butler, they raised some \$200,000 by subscription in this city. He seems to regret it. He is a very enthusiastic man, and he made a speech in its favor, and he closed his speech by subscribing \$250. I suppose he did it because he thought it was a good thing and that it would be approved by his fellow-citizens. He made another speech and closed it by subscribing another \$250, and in the end he made ten speeches, and he wound them up in the same way, and he subscribed \$2,500. Was that honorable to him? I think it was; I think it is a refutation to his argument or his attempt to use it in this case; and any one who has any knowledge of the business in this city would

gladly raise \$200,000 more than to be deprived of the advantages that the Wabash road has furnished to the business men of this city. It brings in a very large amount of traffic, it taps the Southwest; it taps the corn and the pork country of the United States. They bring in more grain into the city of Detroit over that road than over all the other roads put together, and it has built up institution after institution from Twelfth street down to Delray, that can exist and do business there, because the railroad runs through their side tracks and they can be maintained.

You go along from the Backus property down to Twenty-fourth street; among other things you will find there is a garbage works—we all noticed it when it was there—but there are other manufacturing institutions, large institutions, where a large amount of business has been done, and which could not be done and transacted in this city if that railroad did not run there. So that my brother was doing an act that is contrary to his argument in this case, contrary to the purpose for which he desires to use it in this contention here, he was doing something that was in accord with public spirit and with public progress, and the erection and maintenance of suitable public works and improvements.

Now they say this will be a great injury to Mr. Backus, that it will destroy his mill and he will have to move out of there. Do you believe any such thing as that? Judge Chipman claimed that I abused Mr. Backus in and out of the case. I have no recollection of any such thing. I have certainly no such feelings towards Mr. Backus. He is one of the respondents in this case, and he owns this land. All I can say in regard to him is that I do not think Mr. Backus would swear to a lie or misrepresent anything upon

the stand, but I do say that he is very extravagant in his ideas as to the value of his own property, and is very extravagant in his notions as to what his actual damages should be in this case, and I have only to illustrate it by one piece of testimony that he gave here, in which he testified that that real estate there was worth \$150,000. The best testimony that they could get in the case put it at from \$100 to \$150 a foot; and if you figure it up you will find that that piece of property is less than \$50,000; it is \$46,250, or thereabouts, at \$150 a foot. And you know, and I know, every man in this city who has any familiarity with realestate values in this city knows, that you can go and buy a better piece of property than that for \$50,000, with more railroad facilities, and of more value. Fifty thousand dollars is a good round And still he comes upon the stand here and undertakes to make you believe that that piece of real estate is worth \$150,000. Now, we have to take their own figures as to what this planing mill costs, and they estimate that at \$150,000 as what it cost. I did desire to have some experts go there and examine that mill, and make an estimate as to what they would duplicate it for, but Mr. Backus did not see fit to let them examine the property, and the result was that I was unable, in the hurry with which the testimony of this case was closed, to produce any such testimony, but there are some builders or men who are familiar with building on this jury; you have seen this property and the machinery in it; you have heard his testimony as to how he values the real estate, and you can form some sort of judgment, putting all these things together, as to what that property is really worth, as to what you could duplicate that property for if you started out to do it today; and I will submit this proposition, that none of you would

1440 hesitate to duplicate the entire thing, machinery and all, for \$100,000, and perhaps considerably less. It may have cost all they claim, but it was built years ago, and we know that at the

present time everything can be built a great deal cheaper, and that when you value that mill and the machinery as it is there today at \$100,000, you are putting a big price upon it. But the question here is, how is that property affected in value by this superstructure and this elevated railroad? Practically the rule of damages is, how much would it sell for if the railroad was not built there, and how much would it sell for after it was built; and I submit that it would not sell for any considerable sum less, because the advantages that that property will receive from the railroad are fully equivalent to any damage that will occur to it. How can it be damaged? What is the thing that is to damage it? In the first place, all Mr. Backus uses River street for is a place to draw lumber along, a street to draw loads of lumber up and down that street and into that property. Can he not do it just the same after this road is built as be-Precisely the same. The posts will span his gates, they are 35 feet apart, he can drive right in there, where there is a telegraph pole now, there will be a support of an iron pillar for this elevated superstructure, and the elevation of the superstructure will be greater than the timbers he has over the top of his gate; so that so far as ingress and egress are concerned, he is not injured one iota; the only possible way that these posts can have any effect upon him would be in case they desired to put up a new building or something of that kind, years and years in the future, that it might be necessary to plan his building a little differently, so as not to have a doorway or a gateway, or anything of that kind, right in front of a post. So that as far as ingress and egress

441 are concerned he is not seriously damaged. To some extent those are an annoyance, and will interfere with the free use

of the property, but it is not serious.

What other elements enter into it? They say that his light will be affected. As far as that is concerned, he has put his planing mills on that first floor in a dark room, he has put them so that the head- of the machines are over against a dark wall, a blind wall, and the workmen seem to get along there first rate, they do his work at any rate. And this elevated superstructure will not seriously interfere with that light, because it is all open, it is about forty feet from the elevated structure to his building, and that is all open, with nothing but a fence and an open shed with windows in, next to the street. So that as far as that is concerned, while it will have some little effect upon his light, it will hardly be noticeable. certainly will have no such effect upon his light as to make that a ground for any great amount of damages, and I do not suppose that if he goes on with his business there, it would be long before he would put in at quite inexpensive rates an electric system of lighting for his entire plant, so that he could run night and day if he desires to. It would be only in the nature of an improvement, that would enable him to work nights as well as days. So there is nothing there on which you can base any very great amount of damage.

As far as the noise is concerned, when that machinery is in operation, you cannot talk with one another in that building anyhow;

I have tried it. When his machinery is in operation it makes so much noise now that you cannot hold a conversation in that mill unless you get off to one corner and halloo. So that as far as the

noise is concerned, the fact that a train will go up and down there occasionally would have no effect upon the men working in that mill. In fact, they could not hear it, they would

not know that it went along that trestle there.

Then, what is it? Here is light and noise, and the only remaining thing that can be thought of in the case, is the fire risk, and my brethren have talked from nine to ten hours in the case, and Mr. Dickinson spent about 15 minutes just at the close of it, talking about the fire risk, the only thing that deserves any very serious consideration at the hands of the jury; the only thing upon which they can make an apparent showing that they are somewhat injured. But let us look at that a little, just as it is shown by the testimony and by experience, to see whether it does the injury that is asserted here, and involves such a great loss. In the first place, we have a practical demonstration right down upon this property that is a complete refutation of their argument, and that is that the Michigan Central line has run right alongside of this property ever since 1871, and has never set it afire. They say it is too far away. How far is it away? When you go down there look at it; you go around to this shed that they have made here (on model); go around to this post and see how far the Michigan Central tracks and their main tracks run from this shed, with it open here, over the tops of these cars, open here, and the lumber piles along here, as it is represented here, as open and exposed a place as you can conceive of: that has been in operation some 20 years in that way, with a railroad yard where engines constantly are at work in and out, right alongside of this property, and it never as much as caused a blaze, with the wind blowing the sparks and cinders right in over those cars,

and through those open spaces, and through that shed, and through the mill in every direction. It is a complete refuta-

tion of the contention they make in this case.

They say no planing-mill men were introduced. I expected they would make such an argument as that. But as this case closed I asked the privilege of putting Mr. Dwight upon the stand. you all know where Mr. Dwight's mill is. Mr. Dwight's mill has been built after the railroads were constructed, and has been built right in the fork, the "Y" of the Bay City and Michigan Central, this side of West Detroit. The planing mill and lumber vard stands bounded on each side by a railroad that is in constant use, and it has been in use there for years, and it has never yet burned There is another planing mill down here by the Milwaukee yard. Some of you are undoubtedly familiar with it-the old Ross mill; I don't know who runs it now; but there is a planing mill right alongside of that yard, and it has been run there for years, and you have known it and seen it, and it has never been afire yet. Then we have the Murphy chair works and the Peninsular car works that are out at the other junction. Murphy makes tables and chairs, and his business is fully as dangerous a business as a

box factory, and that is located right in the junction there. You cannot have such institutions and you cannot do that kind of business where you handle lumber and manufacture it, unless you do have railroads, and the more you have the better you are off. And it is not such a terribly dangerous thing as they try to make out. Were my brethren entirely fair when they brought in the fire reports in this city and they counted up during the year 63 fires that had been caused by locomotives, and come to look them through,

there were three or four of them out at the junction, and one or two places only where fires had been caused to the adjoin-

ing property by locomotives; all the others were where wooden railroad bridges had been set afire, where the bridges were immediately above the smokestack. There were not as many fires set by locomotives in this city within twenty odd as are set on fire by the ordinary chimneys of our houses, because the same report said that there were twenty-odd fires in this city caused by the sparks that come from the ordinary house chimney. And then they searched the entire reports of the city of New York over, and they found just one fire in the entire city of New York that was occasioned by the elevated road. We do not know how dangerous the property was, in what unsafe condition it was left. I have no doubt but what if you leave a lot of rubbish and stuff at the side of a railroad, and there comes a dry time, it is liable to catch fire from sparks from a locomotive, but it will be because of the dangerous condition of your premises, and it will not be because of the great heat that is contained in a spark from a locomotive. What is a spark from a locomotive? It is simply a piece of unconsumed coal or carbon or wood, if they use wood, that is small, and it would be almost impossible to start a fire with one of them; that is, it will go out-three-quarters of them will go out before they get fifteen feet from the engine, and the rest of them will go out immediately when they strike anything, the minute they strike anything, just as the sparks from Mr. Rivard's engine, as they fly from his hot iron, as soon as they strike the floor. So that, when you come right down to practical experience, it is not such a great increase in the fire risk, and Mr. Beveridge tells you that the West Shore road

went through the city of Newburgh, and not a single rate was increased on account of it, and that this rate down here would not be increased if this road were properly run and

operated.

We have a statute that makes the union depot company, or any company liable for any fire that is occasioned by their negligence. Mr. Backus is not entitled to pay for his mill before it burns up, and if we run that road improperly, he not only could maintain a bill against us but he could recover any damages that he sustained on account of it. But the fact is that it is not dangerous, and if he will use a little common sense and make a few changes down there, he can get his insurance for a less rate than he is now getting it at, even after the elevated road is erected. He has got a dust-arrester there, and he undertakes to show how it is necessary to have air. The air must escape from that dust-arrester, and it is possible that

sparks may go through there and set that burlap afire. The jury did not desire to hear that testimony. I suppose the jury did not desire to hear it because they knew all about it. Because they knew from their own observation and knowledge that these metallidust-arresters can be put upon such property, and that as far as fire from the outside are concerned, they are practically fireproof. Burther Chipman, showing his knowledge of it, stands up and says why, a metallic dust-arrester has got to be open at the top. That only shows how easy it is for a learned lawyer and a learned Congressman to be mistaken.

Judge CHIPMAN: I said that the testimony in this case show

that; and that is all the testimony does show.

Mr. Baker: I will leave it to the judgment and observation of this jury that where you have a dust-arrester—and one purpose of it is to take the dust and shavings out and send them in on-

direction and send the air in another direction, and when i is in use the force of the air would keep any sparks from going into it in any shape or manner; there is a great pressure of air coming out of the top of this dust-arrester, and when it is not in use it is perfectly easy to put an automatic cover upon it; so that when it is not in use that cover will fall back and cover the open ing in the top of it, and the opening is not more than three or fou or five feet in diameter anyhow. That is all there is of it. You can have an automatic cover, so that the minute you stop you mill running it will fall right back there, and it is absolutely fire proof as far as any outside exposure is concerned. In addition t that, what is that great box and frame that he has got on top o his dust vaults there for? What are those cleats, that lattice-world for? It is simply a place to let the air escape. But he only ha three pipes there forcing air into those vaults. How much of mechanic would it take to put in say three times as many pipes a the further end there and take every particle of that air out over on the other end of it, or to make a pipe there and bring it down towards the ground and west so that the air could escape? All i is for under heaven is to simply let out the air that is forced through these pipes; and the dust falls down to the bottom and the air goes out; so that all he has got to do with that dust-arrester, i he wants to keep that, if he insists that is the best one there is or earth, and he wants to keep it, is to put on an arrangement of tha kind and simply have an opening somewhere that will take that air out in such a direction that there will be no fire risk connected And they kick or squirm, and they got you to exclude that testimony, because they knew I could prove to a demonstration that

his machinery is not right, and that a dust-arrester could be fixed, with hardly any expense over the present expense, so

that it would be a thousand times better than it is at the present time. But my friends contend that you cannot make Backus change this, he has got a right to go on in that stubborn kind of a way and burn up if he wants to, and you have got to pay him for it, and pay him for it now before he does burn up. But is that true? Is that the right way to look at this? Is it not a bet

ter argument to say that if there is any increased danger there, and you can avoid it by a trifling expense, that you must do it, or at any rate that you cannot expect damages, you cannot ask from this jury damages upon the theory that you are not compelled to do it. and that this loss must be suffered anyhow. Why, it would be ridiculous for any jury to award damages upon any such theory, when, by a trifling expense, not to exceed \$100, he can fix that present dust-arrester so that a spark would not get into it in a thousand years from the locomotives upon this road; and if he put the new improved dust-arrester in, such as are in use all over the United States and all over this city, he could get his insurance a great deal less than he is now getting it at. And all I can say about it is that you have a right to go upon your own judgment and observation, to go to these institutions and see how they manage it. and get along without any great fire-trap such as he has got there on top of his premises.

What other element of damage is there? What other consideration to influence you in reaching a verdict in this case? Upon what theory could you award him any considerable sum of money? Why, they say, Backus would not have that built there for \$150,000. Well, that is well enough to assert, that is very nice talk, but

where a man has got a piece of property like that and wants to unload it upon this company as he does, it is not entitled to very much belief. Brother Dickinson says he did not mean it when he went up there before the railroad crossing board and said this route ought to go along Fort street. He did not mean that. What did he say it for? What did he go up and ask to have it laid out there for, if he didn't want the railroad company to buy this mill? Why, that is just what he does want them to do, and that is all they argue this question of necessity for, that they think if they can get one or two jurymen to agree with them upon this question of necessity, perhaps the depot company will go down there and buy that entire property and get out of it in that way. That is all they insist upon that for, and the reason for it appears in Mr. Backus' own testimony. He went on from 1871 down to 1883 and 1884, and he told you just what they made every year, running from \$15,000 to \$72,000 a year; but when he got down to 1883 or 1884, and down to 1890, there was a vacuum, he could not tell you a figure, and he finally admitted upon the stand that he did not make anything, he kind of hemmed and hawed upon that. but finally admitted that he didn't make anything during those years, but Mr. Dickinson talked with him and got him upon the stand again and he said he was paying up debts, and tried to explain it in that way. But he was paying debts all the years before, and if a man had made \$30,000 or \$40,000 and he paid so much money out to pay his debts, he would know what the figures were, and when you come down to figures, he could not tell you what debt he had paid or anything else, and when you come right down to it, they didn't make

anything those years; and when you come right down actually to the situation of that mill, with the yard half

a mile away, it is not a desirable situation for a planing mill, considering the competition that there is in the business, and their own witness, Mr. Thompson, who was brought here to testify in their behalf, tells you so. And any ordinary observer can see that it is not a suitable location to haul lumber all the way it has to be hauled there, in order to feed those machines. But Mr. Backus saw fit to rebuild his mill there, although there was plenty of room down upon the river, but if he went there he would have to use the Wabash road more, and he finally concluded to rebuild it where it was, and he put it up there, and he has got it, and he has got a right to enlarge it and to make all he can out of it, and to sell it to anybody that he can sell it to; it is perfectly legitimate and all right; but when the depot comes along and merely goes in front on River street, he is entitled to just such damages as he sustains and no more; and he has no right to inflict those damages; he has no right to elevate the value of his property beyond its real market value and worth, and to undertake to recover a fabulous sum of money for an imaginary wrong and an imaginary injury. And in this connection, I desire simply to call your attention to what the supreme court of this State has said about this enterprise. Brother Dickinson referred to this case, the case of The Fort Street Union Depot Company vs. Mrs. Morton. She owned a piece of property down on the corner of Fourth street, built by the late N. W. Brooks, I believe, and Brother Dickinson appeared for her and insisted that the union depot act was unconstitutional and there was no necessity for any such thing; and this is what Judge Morse in deciding the case for the whole court said about it:

1450 "That a union depot like the one sought to be established by the petitioner in the city of Detroit would be of great and incalculable benefit, no one who reads this record can doubt. The act stamps the property to be taken with a public character and imposes upon it a trust for the public use, which cannot be divested by any act of the corporators of the company. The law of its existence plainly prevents it from becoming a mere private corporation or from disregarding its public uses."

There was some question made about the title to the act, and it was claimed that it did not authorize the building of independent railroads, to wit, the establishment, maintenance and operation of railroads, independent of depot purposes. Judge Morse as to those

objections says:

"Neither of these objections to the title is good. The acquiring of land is a necessary precedent to the construction of depots and railroad tracks, and the means by which it is to be acquired, and the power granted to acquire it, need not be stated in the title; and the operation of local trains under section 30 of the act is confined to its tracks. This object is stated in the title as follows: 'With the necessary connecting tracks and the management of the same.' And the building of these tracks in connection with the depot, and the running of trains upon them, are all a part of the same general object as the construction of the depots and station-houses of the

company, to wit, the increasing of the facilities and comforts of

travel and transportation of passengers and freights."

Showing that they had their line upon this question of connecting tracks and railroads. Then it was claimed that there was no public necessity shown, and this is what they say about the necessity:

1451 "We think also that the question of the necessity was properly determined under the evidence by the jury." in

favor of the depot company.

And that is a decision in regard to this very enterprise, by our own supreme court, where this whole scheme and plan was laid before them, and is upon record, to stand there as a monument for

all time as the wisdom of the court.

There is one other question that I want to talk a little about, and that is your right to ask the advice of the circuit judge. My brother Dickinson insists with a great deal of ardor that you are an independent body, and do not need any advice; that you are to do as you see fit, and ought not to ask the advice of anybody; do it on your own hook. But what makes him so afraid of the advice of the circuit judge? What makes him so anxious to exclude the assistance of the circuit judge? Don't you think it is because he knows that the advice of the circuit judge would be against him? Don't you believe that if he thought the circuit judge was going to give advice in his favor, he would waive all these questions of constitutional law and about you being an independent tribunal. and would only be too glad to have the circuit judge come in and decide on his side of the case? My brother is fully aware that if you leave this question to any member of the bar who has occasion to look at it, his decision would be against him, that his proposition is one that could not be sustained. He read from the decision in the case of Railroad Company vs. Chesbro, 72 Mich., p. 476, where they reiterate the doctrine that a jury are not a court, and can act independently of the court; but there is no decision that has

1452 yet been made that says the jury cannot ask the advice of the circuit judge, if they see fit to, if they think it would be of any use to them; and I have only to read from Judge Champlin's decision in the same case, to show you that that is the under-

standing of the court:

"The statute permits the judge of probate to attend the jury, to decide questions of law and administer oaths to witnesses. But, as we have frequently held, the whole matter is in the hands of the jury after they are sworn, and the decisions of the probate judge are merely advisory. If he attends them at their request, and decides upon the admission or exclusion of testimony, it will be presumed, unless the contrary appears, that the jury have sanctioned and adopted his decisions. In this case no testimony was excluded from the consideration of the jury upon the question of damages; and having viewed the premises, they were enabled to weigh the opinions of vitnesses who testified both as to the value of the land taken and as to damages."

In other words, the statute authorized the judge to attend and to

take part in the proceedings, under the decision of the supreme court, that is to be done or not to be done, at the request of the jury. If the jury permit the judge to come along and give instructions, and to aid them in their deliberations and to pass upon testimony, the supreme court say that it will be presumed that they adopted his decision and conclusions.

Now, you can go out and consider of your verdict in this case. You can first go and view these premises; you can consider in your own minds all that has been said by counsel; you can look this whole subject over; all I can say to you is this, that if you get into any difficulty about it, if there is any question with any single member of the jury upon this subject of this necessity, it is

perfectly competent, under the decisions that the supreme court have made, for you to ask the circuit judge to come in here and ask him to advise you in regard to it; just as you did upon the question as to who had the burden of proof; and if a majority of you desire that advice, I have no doubt the circuit judge would attend for the purpose of giving it. I make that proposition to you; I have no question as to how you would decide it if it was left to your own judgment and to such arguments as you might address to one another; in the end you would all be agreed that we have no legal authority to go along the Michigan Central property; you can take these decisions, you can take that statute, you can argue it among yourselves, and the more you argue it, the more you contend upon the subject, the weaker the person will be who takes up the argument of our friends upon the other side; but if you are unable to solve it in that way-and there is not the slightest confusion upon the subject-ask the circuit judge to come in here, and hear what he has to say about it, if you think it will be of any assistance to you in your deliberations. But do you really think that this argument is made here in dead earnest; that they really think that any jury would ever find against the necessity in this case? Do you think our brethren upon the other side have any such hope? Is it not an argument that they make more because it is something with which they can present their side of the case, with the hope and the expectation that if they convince one man, any one of you, upon that question, when that man comes to the question of damages, after he has receded upon that question, he will vote for higher damages than he would if he had originally been convinced. A man convinced against his will is of the same opinion still, they

say; and while in the end he might admit that he had got the worst of the argument upon the question of necessity, he might turn around when you undertook to fix the damages, and vote for the entire value of the property, and hold it away up so that it would be utterly impossible for the other jurymen to agree with him. It is just an effort on the part of these people in contesting this question of necessity, to get all the money they can; if they could get such a verdict from twelve men, if you should go out and bring in a verdict against the necessity, under the form that will be submitted to you by Mr. Dickinson, they know that Mr. Backus would be in a position to sell his property, that we

hould not get by there without making terms with him in some way, and that he would have this enterprise by the throat, and could demand whatever he saw fit; and if they cannot convince welve men of that, they are in hopes that they can convince one or two of you, so that when you go out and consider your verdict, and consider it upon that question, you will vote away up in the housands, and that will prevent an agreement; but this is a quesion that has got to be decided, and it has got to be decided correctly, sooner or later. They succeeded in obtaining a disagreement before one jury; it is possible they can succeed in obtaining disagreement here; but sooner or later we are entitled to have, and will have a verdict from a jury that this is necessary, and ssessing the damages of A. Backus, Jr., and A. Backus, Jr. & Sons t a reasonable amount. They say they are dragged into court here, out I noticed they came in with a very good deal of force; they have imployed two of the most eminent members of the bar; and they come n here and contend, week after week, trying to wrench from this jury damages that they are not entitled to, an award that should not be rendered. But the case is in your hands. We desire to go 455 on with this union depot, and to complete the depot and the railroad that is to connect with it this year, if possible, but ather than be robbed, rather than pay an extortionate award, we would rather that you would disagree, and enable us to fight it over again, until we can have justice from a jury of this county; because it is just like this, gentlemen of the jury: We desire to go on and erect this building and to build this railroad; we are perectly willing to pay any fair and just damages, such damages as welve intelligent men would agree to, but when they expect to exort from us the entire value of that property for going in front of t, we say it would be an act of injustice; it would be a wrong that we will fight and contest against as long as there is a breath of life n us. Why should he have superior rights to anybody else? Why should he not make some concessions and yield something for he general good? We are going in front of his property. ought to be able to tell quite accurately just what his damages are. You ought to be able, talking it over among yourselves, looking at he property, to arrive at a just and proper conclusion. You are to lecide, in the first place, how much Absalom Backus, Jr., is entitled o for the injury to the fee, to the land. If you took the money that was paid to the Michigan Central Railroad Company, to wit, from 10 to to \$13.50 a foot, you would not not be out of the way as to he injury to the fee, which would be some \$2,000, \$2,380 or \$2,500 r something like that. Then when you come to the injury to the orporation, A. Backus, Jr., & Sons, who own the building and have lease there, the question is how much will they be really damaged n that plant and in that business there because this railroad is built and operated in front of them upon that property. 456 building belongs to the company. The land itself is all that belongs to A. Backus, Jr., the naked land. The business and inprovements and the buildings belong to A. Backus, Jr., & Sons. We have twelve men here that know something about property,

that know something about business, you can go and look at that property, look at this building, look at the sections of this railroad that are being built; and you ought to be able to determine with a good deal of accuracy what the damages are. And you have a very good illustration in some of the cases in New York and in some of the cases right along this elevated road, in the awards that have been already made. It is for you to consider, it is for you to determine; all we insist upon is that this verdict should be a just and reasonable one, and that they should recover what they are justly entitled to, and not one cent more. It is in your hands to determine, gentlemen of the jury, and I trust that in the end you will be enabled to agree upon a verdict that this is a public necessity. and that their damages do not amount to any very great sum of That is all I wish to say to you.

Mr. Dickinson: Mr. Baker has said that Mr. Backus refused to permit people to go in and look at his planing mill. He has never refused any one to go into his planing mill, until Mr. Mackintosh was here the last time, and he refused to let Mr. Mackintosh come On the next day after Mr. Mackintosh went away, and after the testimony was all closed and the arguments had commenced, there were two men, Mr. Dee and Mr. Spitzley-

Mr. BAKER: It was the day before the case was closed. They reported it to me before the case was closed.

Mr. Dickinson: The testimony had been closed. Mr. Mackintosh had applied and was refused admittance, and then the testimony was closed, and Mr. Spitzley and Mr. Dee came the next day.

Mr. BAKER: They went down there before the evidence was closed. I sent them down there before. I sent Mr. Henry Spitzley, as reputable a man as there is in this city, down there, and he was denied admittance, and I did not get his testimony.

Mr. Dickinson: That was after the testimony was closed. man was refused admittance during the pending of the testimony before the jury, or until after the testimony was closed, until after Mr. Mackintosh was here the last time.

Mr. BAKER: All I can say is it was reported to me the other way.

It was reported to me before the testimony was closed.

Mr. Dickinson: You had no right to state it anyway, unless you

gave us a chance to meet it.

The jury states that they will go to view the premises again in the morning-Thursday morning, and they are instructed by counsel for both parties not to talk with any of the Backuses. The jury also state that they will retire to the jury-room to deliberate upon a verdict at 2 p. m. Thursday.

Adjourned to Thursday, July 16, 1891, at 2 p. m.

1458 The following is the award and report of the second jury:

Award of Jury.

STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

THE FORT STREET UNION DEPOT COMPANY

vs.

ABSALOM BACKUS, JR., A. BACKUS, JR., & SONS, JAMES N. DEAN, and William H. Davison, Respondents.

To said court :

We, the undersigned, inhabitants and freeholders of the county of Wayne, duly impaneled and sworn as jurors in this cause to ascertain the necessity of taking for public use, to wit, for the purpose of constructing a union railroad depot and station grounds in the city of Detroit, in said county, with the necessary connecting railroad tracks and accommodations, all of the real estate, property, franchises, rights, easements and privileges described in the petition in this cause, and to ascertain and determine the compensation or damages which ought justly to be made by the Fort Street Union Depot Company to the above-named respondents therefor, do respectfully certify and report that we met at the court-room in the market building in the city of Detroit, on the 8th day of June, 1891. That

the Fort Street Union Depot Company appeared by F. A. Baker, its attorney, and the respondents appeared by Don M.

Dickinson and J. Logan Chipman, their attorneys. That we proceeded to hear the proofs and allegations of the parties, and also proceeded together to view the premises proposed to be taken, and for that purpose we continued our sessions from day to day until the 16th day of July, 1891, when this cause was submitted to us by said parties. That we caused the testimony and arguments of counsel before us to be stenographically reported and reduced to writing at the request of the parties, and the same are herewith returned and filed.

After said cause was submitted to us, having maturely considered the proofs and allegations of the parties and the arguments of counsel thereon, we did ascertain and determine that public necessity requires that said real estate, property, franchises, easements and privileges should be taken for public use, to wit, for the purposes of constructing, maintaining and operating a union railroad depot and station grounds in the city of Detroit, in said county, with the necessary connecting railroad track and accommodation by the Fort Street Union Depot Company, under its articles of association and the constitution and laws of this State.

And thereupon we did further ascertain and determine that the compensation or damages which ought justly to be paid by the Fort Street Union Depot Company to respondents for the said real estate, property, franchises, easements and privileges as described

in the petition in this cause is as follows:

To Absalom Backus, Jr., as the owner of the fee of a parcel of land hereinafter described, the sum of seventeen thousand eight hundred and fifty dollars.

1460 To A. Backus, Jr., & Sons, a corporation as the tenants in possession of said parcel of land, the sum of seventy-eight

thousand two hundred and ninety-three dollars.

To James N. Dean and William H. Davison, executors of the

estate of Crosier Davison, deceased, the sum of one dollar.

The real estate, property, franchises, rights, easements and privileges referred to in this award are more particularly known and described as the right of way to construct and maintain a viaduct or elevated railroad in, upon and along River street and in front of the property in which the respondents are interested as owners or otherwise, in accordance with the ordinance agreed upon between the common council of the city of Detroit and the petitioners, the orders of said railroad crossing board and of the commissioner of railroads, and the general plans and designs adopted by the petitioners and as approved by the State railroad commissioner, which were filed and served with and constitute a part of the petition in this cause.

The property in which the respondents are interested as owners or otherwise, in front of which said viaduct or elevated railroad is to be constructed or maintained, is situated on the north side of River street, in the city of Detroit, in the county of Wayne, and is bounded and described as follows: Bounded on the westerly side by a parcel of land owned by Barbara Seadley, and on the northerly side by Fort street west and the Michigan Central railroad, on the easterly side by a strip of land seventeen feet wide owned by the Michigan Central Railroad Company, and on the southerly side by River street, formerly known as Woodbridge street. Said property is known as the Backus planing mill and box factory, and it has a frontage on River street of two hundred and thirty-eight and forty-hundredths feet.

Detroit, July 16, 1891.

1461 STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

THE FORT STREET UNION DEPOT COMPANY, Petitioner,

ABSALOM BACKUS, JR., A. BACKUS, JR., & SONS, JAMES N. DEAN, and WILLIAM H. DAVISON, Respondents.

And now comes the said petitioner by F. A. Baker, its attorney, and noves the court to vacate and set aside the verdict, award and report of the jury in this cause, and to grant a new trial of the questions of public necessity and of the compensation or damages, which ought justly to be awarded to respondents.

This motion is based upon the following grounds:

1. The jury was not attended by a judge of this court, or by a circuit court commissioner, to decide questions of law and administer

caths to witnesses.

2. The attorney for the respondents, taking advantage of the absence of the judge, did improperly, erroneously and falsely claim and pretend to and before said jury that the petitioner, The Fort Street Union Depot Company, has power, under the statutes of this State, to condemn right of way for an elevated railroad along the margin of the property of the Michigan Central Railroad Company

on the south side of River street, and for that reason the jury ought to find that there is no public necessity for taking a

right of way in, upon and along said River street for the elevated railroad proposed by the petitioner, and thereby said attorney did, by repeated arguments and assertions, to and before said jury, convince a number of said jury that the property of the Michigan Central Railroad Company could be condemned by the petitioner under existing statutes, so that when said jurymen came to yield on the question of necessity, they were so biased and prejudiced against the petitioner that they insisted upon the most extravagant, exarbitant and grossly excessive damages, to the great wrong and injury of petitioner.

3. The attorney for the respondents, in opening their case to the

jury, among other things said to them:

"Now, for its application, gentlemen of the jury, I say to you that there is no necessity whatever for this elevated structure to come up River street; I say to you that I shall show to you beyond a shadow of a doubt, by the statutes of this State, a provision in the statutes of this State, and in an act passed at the time of this union depot legislation, providing that this union depot must confine its routes to approach its union depot along the line of railroad property already acquired within the city limits."

"I tell you this union depot company, if it does not make its agreements with the Michigan Central not to do it, and does not come into court with it, they can come up on the margin of the Michigan Central property on the south side of River street, and leave Backus' property untouched, without paying Backus a dollar.

The Michigan Central does not want them to; they say, Use River street and leave us alone. Why don't they condemn Michigan Central property instead of condemning our prop erty in the street and imperiling our business? They say they won't do us any damage. We say they will. We say they wil ruin our business. We say, 'You will ruin our business; if you think you will not, if you don't want to pay us, and we don't wan a dollar of your money, this business that we have built up is worth more than all you can pay us-it is the business of this man's life he has just settled it so that his boys can run it, and he can have some rest after he has accumulated this property-if you don't want to pay us, and we don't want your money, go over there and condemn Michigan Central property, condemn your line along the Michigan Central ground 25 or 30 feet up River street, and don't pay us a dollar, leave us our street free.' And I tell you, gentle men, to say that you cannot condemn Michigan Central property is the merest sophistry. I will show you the statute which says you may take the property if it is not needed by the other road But how shall the question of the need of the other road or com pany be passed upon? Precisely as these 12 men are passing upon this question. It goes before a jury of 12 for condemnation. The Michigan Central will say to the union depot company, 'It is no necessary to take our route,' just as we say that it is not necessary to take this. They will say to the union depot company, 'We need all our property.' 'Very well,' says the union idepot company, 'you need all your property, we will try that question before a jury of 12 men in the city of Detroit, whether you need 38 acres of ground of the best business property on River street to carry on your business."

1464 "How are you going to get rid of it? Why, here is your statute which provides, the legislature having taken thought at last, that if any railroad company shall refuse to give terminal facilities to another, that other may take under proceedings laid down in the statute. If any railroad company does not need any part of its property, it may be taken for the approach of any union depot railroad company, or any other railroad that desires to enter. Now we will say that you gentlemen, not in this case, but we will say vou were a jury called in a case of the union depot company against the Michigan Central, and the Michigan Central say, 'I cannot let you go up this margin of mine up the River road, I cannot let you build your elevated road up this margin beyond 30 or 40 feet there.' 'Why?' 'Because I need it.' The union depot company replies, 'We will go to a jury upon the question of whether you need 38 acres of land, when you bought nearly half of Grosse Isle down here just to keep your money invested; when you bought land all over here, around the suburbs, we will just go to a jury and see if you need 38 acres of that land on the river front; we will go to a jury and show that jury that no other railroad on earth has such a holding of property near a business center, and does not need such a holding of property, and never has to exceed ten acres;' and how long do you think it would take us, on a presentation of facts, to get a verdict of the jury that the Michigan Central shall play dog in the manger no more, but shall give this land at a fair price to the union depot company?"

"We shall urge upon you with confidence, that your duty will not be done to Detroit, or to your fellow-citizens, the duty which

State, as explained and fully illustrated by the highest court of your State, if you permit this route to come up there, when we shall show you, by such men as Mr. John B. Mulliken, that the best route for the union depot company itself is up this Michigan Central property."

4. The attorney for the respondents on his cross-examination of the witness John B. Mulliken, put the following questions for the purpose of leading said jury to believe that the petitioner could condemn the property of the Michigan Central Railroad Company, and that Mr. G. V. N. Lothrop, the general counsel of the Detroit, Lansing & Northern Railroad Company, had so advised that company:

"Q. Who is the general counsel of the D., L. & N.?

"A. Mr. Chas. B. Lothrop.

"Q. Mr. G. V. N. Lothrop before that?

"A. He was formerly.

"Q. That being the best route, was there ever any talk about the power of the said railroad company, wanting terminal facilities, to condemn the Michigan Central ground?

"A. Mr. Lothrop told me at one time there was no difficulty in

doing that.

"Q. Which Mr. Lothrop?" A. G. V. N. Lothrop."

5. Although it clearly appeared on the further examination of said witness John B. Mulliken, and by the testimony of said G. V. N. Lothrop, that the advice and opinion of said Lothrop was, that the property of the Michigan Central Railroad Company, or of any other railroad company, could not be condemned without

1466 additional legislation, the attorney for said respondents did claim and pretend to and before said jury that under the advice and opinion of said Lothrop the petitioner could condemn a right of way along the margin of the Michigan Central property

on the south side of River street.

6. Although it conclusively appeared by the testimony in the case that the property of the Michigan Central Railroad Company, on the south side of River street, was all in actual use by said company for depot or other purposes pertaining to the operation of a railroad, and the same was needed by said company for the purpose of a depot or other terminal facilities, the attorney for the respondents, at the close of the testimony for the petitioner, made the following statements and assertions to and before said jury:

"I now read the section which I claim gives the power to condemn the right of way in this case, over the grounds of the Mich-

igan Central Railroad Company. The section is as follows:

When any part of the land of any railroad company in this State, in or adjacent to its depot grounds is not in actual use for depot or other purposes pertaining to the operation of a railroad, and such land is not needed by said railroad company for the purpose of a depot or other terminal facilities, it shall be lawful for any other railroad company, organized as aforesaid, needing such land for the purpose of a depot or terminal facilities, to acquire the same in the same manner as may now be done for such purpose from individuals. The question of actual use and of necessity for the aforesaid purpose by said railroad company owning and not using said land shall be determined, in addition to other questions, as provided by law in cases of condemnation of lands for the

1467 purpose aforesaid, and the same proceedings in all respects, as near as may be, shall be had for the aforesaid purpose, as now provided by law where land is acquired for such purpose from

individuals.'

"It is very clear that this matter of the use and occupation of the grounds, and of the need of the railroad company for such grounds, are questions which must be determined by a jury, called as you are called. They must pass upon the question of whether this is the best route. They ask the Michigan Central for the privilege of occupying the grounds, and if they fail to agree, they take it before a jury. How long do you suppose it would take a jury to determine it?"

7. The counsel for the respondents, who assisted the attorney on the trial before said jury, at the close of the testimony for the petitioner, made, among others, the following argument or statement to

and before said jury :

"But it is a noteworthy fact that this very section, quoted here by my brother Dickinson, was passed in 1881, the same year that the union depot act was passed, and also that the two acts were the product of the same mighty brain and the same strong hand, to wit, Mr. Joy, the head of the union depot project. Both acts passed by the same legislature, both coming from the same man, twins, my friends, born at the same birth, christened after the same father, both of them the progeny of this union depot scheme. What did Mr. Joy draw that act for? You know and I know that he is a man that does not act without a motive. What did he put senseless stuff, if the interpretation of my friend Mr. Baker is correct, upon this statute book for? What was its purpose? Do you doubt for a single instant that he had in view the practicability and the

1468 possibility of using the Michigan Central grounds in connection with the grounds he acquired, touching them at Twelfth street for the purpose of getting further up into the city? Have you any question about that? In what other cities in the State of Michigan is there any project of this kind on foot? Where else does any necessity arise for legislation on this point? Can you tell me; can any one show me? It does arise here, and it was born here, came from the same source that the union depot act came from, the same session of the legislature, to wit, 1881. That is a fact worth considering. And that Mr. Joy was right, that you can take part

of these grounds for other railroad purposes was demonstrated by

the history of this case.

"Almost the first departure from the union depot grounds at the foot of Twelfth street takes the elevated structure of this railroad within the sacred precincts of the Michigan Central railroad grounds, their 20 acres cuts off a corner of it, not only crosses their tracks but goes within the holy of the holies, into the very temple itself, into this mystic and magic 38 acres of depot grounds, around which the mighty protection of the law, according to my friend Mr. Baker, is put. How does this happen? According to my friend's argument, you cannot get an inch of it. According to his argument the thing is so absurd as a matter of fact, that no jury in the world would ever permit it to be taken."

"So my friends, in view of the history of this matter, it is all, I was going to say, nonsense, but it certainly is not law to say to you that this statute does not bear the meaning which my brother

Dickinson puts upon it. Let us look at that statute. Tell 1469 me what it does mean; what can it mean? I have asked you already what was it drawn for? Why, it was a sort of Siamese twin to this union depot act. If the meaning that is con-

What easy is it meaning of it, tell me what is the meaning?

What case is it meant to fit?

"When any part of the land of any railroad company in this State, in or adjacent to its depot grounds, is not in actual use for depot or other purposes pertaining to the operation of a railroad, and such land is not needed by such railroad company for the purpose of a depot or other terminal facilities, it shall be lawful for any other railroad company, organized as aforesaid, needing such land for depot or terminal facilities, to acquire the same in the manner

as may now be done for such purpose from individuals.

"That is very plain, isn't it? Can anything be plainer? This act says in effect—it does not say in effect, it says positively—that where the land is in use or needed for depot purposes, that it may be condemned like other land—needed now, needed today, needed this instant, not needed ten years from now. I think the gentleman was in error when he said this term needed referred to what might happen in the future. When it is in use now and needed now, that is the meaning of the law. But when the land is in actual use and needed it cannot be taken. When it is not in actual use and needed, then, my friends, it may be condemned exactly in the same manner as your property, or Mr. Backus' property, or anybody's else property may be condemned, but with this condition. There are two other facts to be submitted to the jury in this connection, added to the investigation to be made by the jury, to the fact to be inquired into in that case, like the present one. In

1470 the present case you are to inquire into the necessity of using Mr. Backus' land, and, if necessary, to ascertain what compensation he should receive for the condemnation, but in this case the question of actual use and of necessity for the aforesaid purposes by said railroad company owning and not using such land, shall be determined in addition to other questions, as provided by law, in

case of condemnation of land for the purpose aforesaid, and the same proceedings in all respects, as near as may be, shall he had for the aforesaid purpose, as now provided by law, where land is acquired

for such purpose from individuals.

"So that in a case of this nature you are to make the same inquiry which you make in the case of Mr. Backus, but in addition to that the jury is to answer whether the land is in actual use and whether it is needed by the railroad company for depot purposes. Now, it seems to me that is very plain; it is as plain as words can make it. And yet my friend says it does not mean anything. He says you cannot do it and you must not do it, and he says if a jury should determine that the land was not in actual use, and by use is meant bona fide use, a real use, not a use for the purpose of preventing somebody from taking it, but a real, bona fide use, and the need is meant a present need-and yet he says if the jury should find it was not in such use, and that there was no such need, that there is no court in the world that would let the verdict stand. It will be a sad day for the people of the State of Michigan if the supreme court of that State ever carry out the threat made by my friend Mr. Baker, and overturn the verdict of an honest jury in their endeavors to protect the rights of the citizens and of the public in a matter of this kind. The supreme

court, under such a state of facts, he says, would not sustain the verdict. Mr. Lincoln had a homely way of

saying that you had better not cross the bridge until you get to it, and I do not think that you gentlemen had better bother with the supreme court until we get to that. One thing is certain, that a judge on the bench, when the case is being tried before him, will not tolerate the lawyer who threatens him with the supreme He gives his best judgment, uncaring and unapprehensive as to what the result will be. His only aim is to do justice, and so your aim must be to do justice and to act according to the lights which you have before you. I say to you, if it is worth anything to you, if it is worth as much as Mr. Baker's assertion, I say to you that the supreme court would not do it, that there is no principle upon which they could do it, that this is a mere question of fact in a matter which the constitution has given you supreme control over. Further than that, that the constitution has given you more control in a matter of this kind than even a subordinate court, than it gives a jury in a court of record, because you are judges both of the law and the facts, and your findings on the facts cannot be assailed. In what way can they be assailed? How can the supreme court, as a matter of law, determine the weight of testimony? How can the supreme court determine whether you believe Mr. Backus most or Mr. Joy most, when their testimony are in conflict? And yet this matter of the use and the need of that road there would all be matter of testimony for you to weigh and determine, with such lights as your experience has given you. How, I ask you, could the supreme court overturn your judgment?"

"Now take that statute and read it and see if it does not bear

us out in the position we take. Tell me what it was made for, if it was not made for a case like this. Tell me if it 1472 would not be better for all concerned for this railroad to go up on the Central grounds instead of going up River street. Tell me if Mr. Backus' interests are not at least on as important a level as the interests of this company in this proceeding. The law says they should not take this street unless it is necessary, and we say it is not necessary, and we invite you to that conclusion. We show you the route which they themselves, or at least their leading men, agree would be a preferable route; but they say they will not take it because under the law they cannot take it, because they know in advance that a jury, if called, will determine that the railroad are using their ground and have need to use their ground.

"Now, my friends, I have asked you already, would a jury determine that? What do they want with their grounds? What business have they at all with that immense quantity of ground? They are there as an enemy to civilization, they are a hostile foe within the limits of your city. No other city would tolerate such a state of things. They are standing in the way of progress in Railroads come here to benefit us. The good they do us is incidental. They come here to benefit themselves, and above all. my friends, no improvement can benefit a community which overrides the right of the citizen and which stands in the way of the proper advancement of that community. They have got the whole river front, and it is as much as we and our wives and our little ones can do to catch a glimpse of that beautiful river, the scene of the sports of our youth, to which we resorted for health and pleasure. Thirty-eight acres there and 48 acres just alongside of it, and yet

we are told that a jury could never be got but would find that a strip of the width of this elevated structure could not

be taken from the air of heaven 38 or 40 feet above the track of that road, because they were in actual use and needed for depot purposes by the railroad company. My friends, that is an insult to your intelligence, it is against the facts and it is against common There is a moving out from that 38 acres of the Michigan Central. The Grand Trunk has gone out, the Detroit, Lansing & Northern is going out, the Flint & Pere Marquette are going out, three great railroad corporations have gone and are going elsewhere to do their business. My friend Mr. Baker desires you to believe that any jury who will be called upon to pass that question would treat it as nonsense, and that if they did agree to it, the supreme court would overrule them. We take a different view.'

8. After the testimony of Mr. G. V. N. Lothrop had been introduced, the attorney for the respondents made the following argument or statement to and before said jury, relative to the testimony

of said witness:

"For the first time in a somewhat long professional career, although a young man, counsel have seen fit to call upon the witnessstand lawyers to testify what the law is. Nothing was ever heard of it the time before, and for the first time in a long professional career we have been charged, or I have been charged, with not doing my duty, because I would not do such an unprofessional thing as to call a lawyer to testify as to the law. Now, gentlemen of the jury, will sound make you believe or disbelieve the evidence of your own ears and the testimony of Mr. Lothrop? Did Mr. Lothrop tell you, or would he tell you, or could he be brought to tell you—counsel of the Detroit, Lansing & Northern,

1474 formerly counsel for the Michigan Central, a railroad lawyer from the crown of his head to the sole of his feet, could be brought to tell you that you could not condemn that margin of the Michigan Central under that statute. Are you to be driven, not only to consider but to take the statements of Mr. Baker as to testimony that occurred when you were all here? Mr. George V. N. Lothrop, who took that witness-stand, would never I think have stated, railroad lawver as he is and counsel of railroad companies' interests as he is, he never would have stated to you that that strip of land could not be condemned for depot purposes and for these terminal facilities, and he did not so state to you, but he did state that that question under the statute that I read to him, and which was called to his attention for the first time, would go to the jury. and you are to be driven and bulldozed by a powerful pair of lungs to disbelieve what Mr. Lothrop told you upon that witness-stand not one hour ago."

9. The counsel for the respondents in his closing argument to and

before said jury, among other things said to them:

"And they come here to you and you do not say yes; you say, 'We will look into this matter and we will see if it is necessary, we will see if there is not a better way of doing this, a way which will interefere less with private property, that will take less of the public streets, and will achieve the same results.' Now, is there a way? I have already said to you that nobody denies that. Even their own witnesses accede that. Ellis, Joy, every one of them, say that the other way would be the best. Mr. Joy at first began saying that it

could not be done anyhow under this statute, that it would require what is called a special act; but when his attention was called to the fact that there can be no special act in this State, but that there can be only general laws, he finally admits that under the statute we have brought to you and read to you, it could be done, provided anybody would swear in the petition to enough to start the proceedings. How can it be done? Can it be done? He makes one objection; he only gives one practical reason in all his testimony; he says you cannot do it, because if they put an elevated road on the Michigan Central grounds the posts would be an obstruction. Do you mark and understand that? Posts are no obstruction to poor Backus; they are no obstruction to business people who were there before the road came there; they do not interfere with the use of the street one single bit, and according to our brother Joy, they are a blessing in disguise, if you only try them long enough to find it out. But when you come to put them within the classic precincts, within the sacred domain of the railroad company, then all of a sudden they become a nuisance and an

obstruction. They become so great an obstruction then, that no

857

jury should permit them to be put up there. There is an old saying that you cannot eat your cake and have it too. I do not for the life of me see how you can make these things a blessing to Backus in front of his premises, and a nuisance and an obstruction to the Michigan Central R. R. on their premises. They say that street cars could run under these tracks, carriages could run under them, that all the uses of a great public street could be carried on under them, locomotives and trains could run under them—here is the locomotive on the Central track that has to run under them. All this has to be done when you come to look at Backus' case; but the moment you put in the road on the other side of that

the moment you put in the road on the other side of that 1476 fence, all these reasons are distorted and they become reasons

against it instead of reasons for it.

"One juryman asked a question that was in my mind when they talked about these roads being an obstruction if put up in the air there; he asked a question, Why cannot they put buildings under them? Why not? Tell me why not? You will find buildings under other such obstructions. You will find buildings under approaches to bridges, buildings in which business is carried on; and you know and I know that the railroad buildings, freight sheds and buildings of that kind, are never run to any great height; 22 feet would be a great height for one of those sheds. They certainly would not interfere with their use for that purpose.

"Mr. Dickinson: You may have forgotten Mr. Joy's testimony that the Ludgate Hill station in London had three stories of rail-

roads running in over one another.

"Judge Chipman: I have not forgotten that. But the question asked by the juror struck me as being entirely pertinent. We are not here to find a way for this company to do their work cheaply. You are not here for the purpose of saving their money; you are not here for the purpose of finding the necessity of using this street, and the moment you begin to talk among yourselves as to how much it will cost the company, more or less, that very moment you fail to do your duty under your oath, you become unfaithful to your duty to Backus, and utterly unfit for the great trust reposed in you by your presence here.

Why not build the elevated road alongside there? Why not carry it right through? There is only one reason why—that the posts will interfere. But we say the posts will interfere with Backus:

and the supreme court say that the business and interests of the respondent, in a case of this kind, are just as important and as sacred in the eyes of the law as the business and interests of the petitioner. Look at Backus, employing 150 men. How many will the union depot employ? And how many would be employ if their road goes in front there? Will they give you 150 new citizens? You know they won't. That great corporation, the Michigan Central railroad, has not such a number of men in its employ there at that depot as Mr. Backus employs. Which business is the largest, which is of the most real importance to our people, their business or Backus'? You know what Backus' business will do for the city; the merchant knows it, the manufacturer knows it, 108-55

every man who is engaged in any kind of business for the making of money knows that much, at least, is secure, and that that much ought to be preserved and held onto; and while we want to secure the other, and secure the improvements which the union depot company may bring, we do not want to throw away anything we have got, but we want to keep what we have got and get as much

more as we can.

"They say that you could not make a petition to a court under this statute that has been read so often that I hate to repeat it; they say that no man could go into court and swear to a petition stating that the Michigan Central Railroad Company did not use that land and had no need of it. Would any of you find any difficulty about going and swearing that the Michigan Central Company was not using 30 or 40 feet in the air there, and that they have no need of it; and have you any idea that the Michigan Central Railroad Company could go in and defend against it? Have you any idea that they can prove that they have any need of it? You know they are not using it, and the only thing they would be reduced to would be as to the

question whether putting those posts in the ground there was such obstruction to their business as would defeat the application. I do not believe that any jury would find it an obstruction. No jury would, if they believed the testimony given here, to put this road in front of Mr. Backus' place, because all the testimony brought by the petitioner is that it is not a nuisance and that it is not an obstruction. They could run their tracks under it; there would be no trouble about it; they could put sheds under it; it would be no interference really, or so small an interference that no jury would take it into consideration, provided you believe the testimony given in behalf of the petitioner in this case. Is there any practical difficulty about that? Answer me that. They say no man could do it without committing perjury. Would you commit perjury if you went into court and took oath that they did not use and did not need this space up there in the air? The fact is that they are not using these grounds in any such manner as they are trying to make out; some of those cars lay there month in and month out, as anybody can see who goes down there and looks; they lay there until they are begrimed with dust and age. They are not using it; and it was because the Michigan Central knew that under this statute a petition could be made and that the probabilities were that a jury would give a verdict and that that verdict would be sustained by the court, that they stopped fighting this project and let them have this corner there, let them have 19 feet from the viaduct, and they have come to terms, so that there is no longer any fight between the two companies. Now, my friends, there is no difficulty in this; I want to impress on your minds honestly and fairly that there

is no difficulty. Would you hestitate to take that oath that
1479 they were not using it, for you know they are not using the
height of that elevated road, and they do not need it. And
the company would have to come in and prove that they were
using and that they were needing it, and they could not prove that

the putting of the posts there was an obstruction and a nuisance, if you believe that they are not an obstruction and a nuisance to Backus.

"Somebody asked here whether the Michigan Central might want to use it for an elevated road. That came up yesterday. Of course they do not want to use it. Their whole system is a system at grade; they come in at grade, their buildings are all put at grade, and they have no plan on hand, and they have no necessity for an elevated road there-the Michigan Central has not; so you see that on that score there is no practical difficulty, and if you refuse to give that application to this statute, then I ask you, What use are you going to make of it? If it does not mean what we contend, tell me what it does mean? That is fair. If we are not right, then who is right? Nobody will tell us what it means. Mr. Joy undoubtedly had it passed when he had the union depot act Nobody vouches any explanation about it. What does it mean? Evidently, in some way it means that one company may take the depot land of another company. That much everybody concedes. And yet they undertake to tell you practically that there are no circumstances under which that can be done. Now, my friends, the circumstance has arisen, the case is here, and if they can go over there it is the best route for them, it is the best route for the city. It leaves you the street, it saves Backus, it keeps the railroads altogether there over that fence, and the public generally will be better accommodated."

1480 10. The attorney for the respondents in his closing argument to and before said jury, among other things,

said to them:

"And I shall convince you, under authority and by the law, that the union depot company can take that margin of the Michigan Central road, beyond the shadow of a doubt; and I am not here to urge any absurdity upon you; I am not here to urge any folly upon you, because to take an insincere position and to present one in which I have no confidence, or in which we have no confidence. after the consideration we have given to the subject, is not according to my methods or my habits. My friend on the other side has said that I wanted a jury because I thought I could carry the jury. Why, gentlemen of the jury, if I have ever had any successes before juries or elsewhere, my fellow-citizens will at least do me the justice to say that it is because I have been considered at least a sincere man, that although sometimes I may have been wrong, my worst enemy will not say that I have not acted from conviction, and I have not been guilty of the supreme folly of bringing into this court before a jury of twelve men any absurd doctrine as advocated by Mr. Baker, that in the first place there is no law that will permit you take that margin of the Michigan Central road for the elevated railroad."

"Then turn back to the statute passed at the same time, passed for the purpose, as suggested by Mr. Joy, to enable some railroad company at some time somewhere—he cannot remember to have drawn it—to enable some railroad company somewhere or at some time to condemn the depot grounds of some other company that is not using it. Whereabouts has it been done? And why did Mr. Joy

draw the act; and why is it drawn in connection with the union depot act, at the same session, except to enable them to use the grounds of the Michigan Central? This is plain English. I think you can understand it, and will not take the statement that it cannot be done. This is a part of the general railroad law, which has heretofore provided that land may be taken under the constitution, for the use of railroad companies, on the verdict of 12 freeholders, or on the appointment of three commissioners, precisely the business you are doing here, and this is the end of a section added in 1881:

"'When any part of the land of any railroad company in this State, in or adjacent to its depot grounds, is not in actual use for depot or other purposes pertaining to the operation of a railroad. and such land is not needed by said railroad company for the purpose of a depot or other terminal facilities, it shall be lawful for any other railroad company, organized as aforesaid, needing such land for the purpose of a depot or terminal facilities, to acquire the same in the same manner as may now be done for such purpose from individuals. The question of actual use and of necessity for the aforesaid purposes by said railroad company owning and not using said land, shall be determined in addition to other questions, as provided by law in cases of condemnation of lands for the purpose aforesaid, and the same proceedings in all respects, as near as may be, shall be had for the aforesaid purpose, as now provided by law, where land is acquired for such purpose from individuals.'

"Mr. FREUD: Provided it is not in actual use.

"Mr. Dickinson: Yes, and provided it is not needed; but let me tell you, you provide by law that no man shall enter a house in the daytime, it shall be a crime to do it, if he does it secretly.

You do not take that man right up and send him to prison if you find him doing it. You have to give him a trial before twelve men. Now, when you find a statute providing that the land may be taken if it is not used or needed, and it provides a tribunal to try it, would you forestall that tribunal by deciding at

the outset that you cannot succeed before the jury?"

" Now, a word more as to the power to take it. Mr. Baker has laid some stress on that, and I will only add a few words to what my distinguished associate has said, and to what Mr. Lothrop has said. I call your attention to his testimony again. He swore on direct examination that he had some conversation with Mulliken at some time with regard to getting a right of way in from the junction. He said at that time that he was very positive there was no law which would permit them to acquire property of the Michigan Central road. He did so testify. But do you remember on the cross-examination I said to Mr. Lothrop: Do you remember the passage of the union depot act? Yes, sir, I aided, said Mr. Lothrop, in advising the judiciary committee of the legislature as to some parts of it. Now, said I, Mr. Lothrop, was your conversation with Mr. Mulliken before or after the passage of the union depot act; in other words, was the time when you said there was no statute providing for the combination of the depot grounds of the Michigan Central, to give the Detroit, Lansing & Northern a passage, before or after the passage of the depot act by the legislature. He says, I am clearly of the opinion that it was before. So you see at the time he had the conversation with Mulliken, at which time he says he knew no law by which the grounds of the Michigan Central could be taken, this act for the taking of

gan Central could be taken, this act for the taking of 1483 union depot grounds was not passed, because that was passed at the session when the union depot act was passed. What value is his testimony, when his attention had not been called to it; it was not called then because no such act was passed. But now he says, the proceeding provides—whether it is constitutional or not we will not say—but under it it is provided for the question of the need of the Michigan Central owning it, or its use of it, and that is a question of the use in good faith and the need in good faith,

and it is to be tried by a jury like this. That is his testimony. "Now, I want to know whether the jury are going to pass upon this question of necessity or are going to pass it by, because of the acts of the union depot company since, in getting ready for this trial by buying property since the first trial. I want to know, secondly, if there is a man on the jury that believes, in the face of the testimony, that any other jury of 12 of their fellow-citizens is going to say, in the face of the testimony of their own witness, Mulliken, that they need that space there. If you find that they do not use it-and Mulliken says they do not use it-because their system is at grade—how can you find that they do use, or any jury would find that they use it? How can you find that they need it, when Mulliken says that they use it for the storage of freight cars? I do not care anything about the Michigan Central employés they bring in here. They brought Mr. Sutherland here. I asked him on cross-examination about this. Let us see about this question of use and need. I remember what he testified: You accommodated the Grand Trunk up to the time it left? Yes. You have accommodated since the Detroit, Lansing & Northern? Yes. The Flint &

Pere Marquette? Yes. The Bay City road? Yes. You accommodated all these roads that are going out and have gone You have just bought this immense area of 400 out? Yes. feet on River street clear through to the river, from the Detroit, Lansing & Northern? Yes. You have room enough on your grounds to put up two elevators; all these roads are going to leave you—the Detroit, Lausing & Northern did not leave because they were not fully accommodated. Mulliken says they did not. Mulliken says they were perfectly comfortable; had all the room to do their freight and passenger business that they desired, in the Central grounds, and that was not the difficulty, that the difficulty was that they had extended their line and had to carry on a competition with the Michigan Central Company. These are going out. What are they going to do with the room that is left after they go out? Cannot they give us these few feet, if it does not injure their track? Think of it, and take it home to yourselves, gentlemen of the jury."

11. The jury erred in refusing to receive the testimony of the witness Phillip C. Miller, offered by the respondents in rebuttal, to show that the dust-arrester used by the respondents is not as good as those generally in use, and that by a small outlay, the alleged fire risk resulting to the premises from said dust-arrester and the proposed elevated railroad in River street could be wholly done away with.

12. The jury erred in refusing to permit the following question to be put to the witness Phillip C. Miller: "Do you know of any instances where the Backus dust-collector has been put in and has

been taken out and something else substituted?"

13. The jury erred in refusing to permit the following question to be put to the witness Phillip C. Miller: "Will you state whether the Backus dust-arrester is in general use

at the present time?"

14. The jury erred in refusing to permit the following question to be put to the witness Phillip C. Miller: "State whether or not it would be practicable to close up the lattice-work that is on the Backus dust-arrester on the roof, and put in other openings so as to avoid the danger from sparks."

15. The jury erred in refusing to permit the witness, Frank H. Mackintosh, to testify to the amount of damages paid by the elevated railroad in New York for injuries to the fee to the Martine

property.

16. The jury erred in refusing to permit the following question to be put to the witness, Jeremiah Pangborn: "What effect did the

elevated railroad have upon the abutting property?"

17. The jury erred in refusing to receive the testimony of Col. Frank J. Hecker and William F. Dwight relative to dust-arresters and the handling of timber by tramways, offered by the petitioner in rebuttal.

18. The jury erred in refusing the testimony offered by petitioner in rebuttal, to show that a large number of people in Detroit are using the metallic dust-arresters, and that they are better and safer

than the Backus dust-arrester.

1486 19. The damages awarded to respondents by the jury are

grossly extravagant, exorbitant and excessive.

20. The damages awarded by the jury to the respondents are so excessive, unwarranted and unjust, as to show that the jury were actuated by passion or prejudice.

21. The damages awarded are unwarranted by and are against

the weight of the evidence.

22. The jury retired to consider their verdict in charge of the officer appointed by the court to attend them, and while they were so considering their verdict they were, without the consent of the court or said officer, or the parties, supplied with and drank twelve pint bottles of intoxicating malt liquor, commonly known as lager beer, and the grossly extravagant and outrageous awards made were the result of the intoxication or exhibitantion caused thereby.

23. The proceedings before said jury and the awards made are in

many other respects irregular, illegal and unjust.

This motion is based on the files and records in this cause, and on the stenographer's report of the proceedings and testimony and arguments had before said jury, as returned by them, and on the affidavit of Ernest C. Owen, herewith filed and served.

F. A. BAKER, Attorney for Petitioner.

Detroit, August 15, 1891.

To Dickinson, Thurber & Stevenson, attorneys for said respondents.

GENTS: Take notice that the above and foregoing is a copy of a motion this day filed in the above-entitled cause. Said motion will be brought on for argument before the Hon. George Gartner, circuit judge, at the opening of court on Monday, the 31st day of August, 1891, or as soon thereafter as counsel can be heard.

F. A. BAKER, Attorney for Petitioner.

Detroit, August 15, 1891.

1487 STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

THE FORT STREET UNION DEPOT COMPANY, Petitioner,

ABSALOM BACKUS, JR., A. BACKUS, JR., & SONS, JAMES N. DEAN, and WILLIAM H. DAVISON, Respondents.

COUNTY OF WAYNE, 88:

Ernest C. Owen, being duly sworn, deposes and says that he is one of the employés of Gies' European hotel, on Monroe avenue, in the city of Detroit; that on the evening of the 16th day of July, 1891, he assisted in serving refreshments to a jury then confined in charge of an officer in circuit court No. 1, in the city hall, in the city of Detroit; that by the direction of Hon. George Gartner, circuit judge, and under the supervision of the deputy sheriff in charge of said jury, there was first taken in to said jury a basket of sandwiches and articles of food; that at the request of the jury this deponent and his assistant went back to the hotel and got twelve pint bottles of beer, and under cover took the same in to said jury, and that said jury immediately and before deponent left the room began drinking said beer.

E. C. OWEN.

Subscribed and sworn to before me this 15th day of August, 1891.

GEO. F. ROBINSON,

Notary Public, Wayne County, Mich.

1488 STATE OF MICHIGAN:

The Circuit Court for the County of Wayne.

THE FORT STREET UNION DEPOT COMPANY, Petitioner,

ABSALOM BACKUS, JR., A. BACKUS, JR., & SONS, JAMES N. DEAN, and WILLIAM H. DAVISON, Respondents.

And now come the respondents, Absalom Backus, Jr., and A. Backus, Jr., & Sons, and say as to the motion made in this court in the form of a motion for a new trial, that they respectfully object to and protest against any consideration of the said motion by the said court or any judge thereof, on the ground that the said court or judge, or either of them, have no jurisdiction or authority whatever to review, reverse, or to vacate the verdict, award and report of the jury in this cause.

And without waive, expressly reserving the said objection, the respondents state the further ground, that since the filing of the verdict, award and report of the said jury in this matter, the said petitioner has entered upon and possessed the said property and premises which were the subject of the proceedings in this matter.

ABSALOM BACKUS, JR. A. BACKUS, JR., & SONS, By A. B., JR., President.

Endorsed: Filed Sept. 12, 1891. Victor T. Lemke, d'p'y cl'k.

The Circuit Court for the County of Wayne.

FORT STRUET UNION DEPOT Co., Petitioner,

ABSALOM BACKUS, Jr. A. BACKUS, JR., & SONS, JAMES N. DEAN, and WILLIAM H. DAVISON, Respondents.

And now come the said respondents, by Dickinson, Thurber & Stevenson, their attorneys, and move the court for a confirmation of the report of the jury in this matter. This motion is based on the files and records of the proceedings in this matter and upon the affidavits of Absalom Backus, Jr., and D. Farrand Henry, filed in the proceedings.

DICKINSON, THURBER & STEVENSON, Solicitors for Respondents.

Endorsed: Filed Sep. 12, 1891. Victor T. Lemke, d'p'y cl'k.

1490 STATE OF MICHIGAN:

The Circuit Court for the County of Wayne.

THE FORT STREET UNION DEPOT COMPANY, Petitioner,

ABSALOM BACKUS, JR., A. BACKUS, JR., & SONS, JAMES N. DEAN, and WILLIAM H. DAVISON, Respondents.

STATE OF MICHIGAN, County of Wayne,

D. Farrand Henry, being duly sworn, upon his oath saith that he is, and has been for a period of fifty years last past, a resident of the city of Detroit. That he is a civil engineer by profession, and has practiced as such for forty years. Affiant further saith that at the request of Absalom Backus, Jr., on the 5th day of September, A. D. 1891, he examined the work of the petitioner, The Fort Street Union Depot Company, in front of and adjacent to the property of the respondents, Absalom Backus, Jr., and A. Backus, Jr., & Sons, upon River street. The property referred to is two hundred and thirty-eight and a half (238½) feet front on the north side of River street and abutting thereon, and is occupied by the planing mill and yards of A. Backus, Jr., & Sons. That the structure of the petitioner, consist-

ing of an elevated railway upon trestles with posts, cross-girders, longitudinal girders, ties and rails, and embracing two tracks

at that point, and evidently constructed for three tracks beyoud that point to the east, appears to be completed in the street up to near the west line of the Backus property aforesaid, and where so completed spans the highway known as River street. That the process of construction of the said work extends in front of and beyond the Backus property to the east and toward the center of the city, along and upon said street beyond the crossing of the Michigan Central railroad. That immediately in front of the Backus property aforesaid, upon said street, affiant finds the following structure, material, and conditions in connection with said construction: In front of the said Backus property upon said street, nine feet and six inches from the south line of said street, measured to the center of the excavation, there have been excavations for the foundation of seven stone piers, and in these excavations there have been already laid permanent stone piers with concrete extending, as affiant should judge, six feet below the surface, and surmounted by permanent iron bases for iron columns, which iron bases on all of said piers is above the grade of the street. That there are seven excavations in front of the said Backus property, and the depth of each is of the dimensions of about eight feet in length as the street runs, and five or six feet across, and extending into the street toward the Backus property about fifteen feet from the south line of These excavations have been once filled, but the grade has not been restored, and the depression is such as to render the grade of the surface impassable for teams for the uses of a highway. North of said stone piers, and over them, is a double trestle structure extending from the south line of said street twenty-four feet north toward the Backus property and along the entire front of said property. That upon each part of said double structure there are iron longitudinal girders with ties, and a portion of the same is iron with rails. At present this double structure is supported by wooden posts. Along the said street there is strewn material for the construction of said elevated railroad. All the longitudinal girders of the entire structure are three feet nine inches deep. West of the property, where the structure is completed, the cross-girders are four feet five inches in depth. Those laid out and ready to be laid opposite this property are five feet ten inches in depth, which would leave, when the structure is completed, about thirteen feet clear. Over the Michigan Central Railroad crossing the girders are halved or boxed in so as to give more head room.

Affiant further saith that also in front of the said property and between the said double structure and the north curb-line of said street immediately adjacent the Backus property, and within twelve or fifteen feet from the north line of the street, which is the Backus line, there is an excavation extending throughout the whole front of the Backus property, of the depth of about four or five feet, which has been loosely filled in but the grade not restored, and there is now a depression throughout its entire length, rendering the street impassable as a highway, so that with the said structure as above described and the said excavation, the entire front of the Backus property has been so appropriated as to be rendered useless as a highway from curb to curb.

And further affiant saith not.

D. FARRAND HENRY.

Subscribed and sworn to before me this 5th day of September, A. D. 1891.

PHILIP M. COFFIN, Notary Public, Wayne Co., Mich.

1493 The Circuit Court for the County of Wayne.

THE FORT STREET UNION DEPOT COMPANY

Absalom Backus, Jr., and A. Backus, Jr., & Sons et al., Respondents.

STATE OF MICHIGAN, S8:

D. Farrand Henry, being duly sworn, upon his oath says that on Saturday last, the 19th inst., he visited and examined River street, in front of A. Backus, Jr., & Sons' mills; that he finds the Union Elevated Railroad structure is fully in place up to lines run across the street from the east and west line of the Backus property, and is permanently built and constructed, spanning the entire street up

to those lines. That, in addition to the conditions immediately in front of the Backus property described in his previous affidavit, affiant finds that the holes left around the foundations for the piers on the southeast line of the street have been loosely filled, but a wheel would easily sink into them, but the depressions in the pavement on the north half of the street, where the sewer was built, have not been changed, so that a portion of the street is very bad for heavy teaming; that he finds in addition that the south fence has been removed and part of the heavy iron girders have been placed along the wooden posts in the middle of the street, and that a lot of building stone has been corded up on the south half of the street, commenc-

1494 ing at the post about thirty feet east of the west line of the Backus lot, and is being built out west, completely filling the space between the foundations for the south line of piers and the central line of posts, and thus blocking the south half of the street, and forcing all travel into the north half.

And further deponent saith not.

D. FARRAND HENRY.

Subscribed and sworn to before me this 21st day of September, A. D. 1891.

JAMES H. CULLEN, Notary Public, Wayne County, Mich.

STATE OF MICHIGAN:

The Circuit Court for the County of Wayne.

THE FORT STREET UNION DEPOT COMPANY, Petitioner,

vs.

Absalom Backus, Jr., A. Backus, Jr., & Sons, James N. Dean, and William H. Davison, Respondents.

STATE OF MICHIGAN, County of Wayne, \$88:

Absalom Backus, Jr., being duly sworn upon his oath, saith, that he is one of the above-named respondents. That the verdict of the jury in this matter was filed with the court on the 16th day

in the absence of the respondents and of their attorney and counsel, this court or a judge thereof, made an order granting a stay of proceedings in this matter for a period of thirty days, on the application of the petitioner, to enable the petitioner to move for a new trial which has been presented. That immediately after the granting of said stay of proceedings, and after the filing of the report of the jury in this matter, the petitioner entered upon the premises of the respondents, Absa'lom Backus, Jr., and A. Backus, Jr., & Sons, described in the petition in this matter, to wit, the property of the said respondents and their easement in River street, on which their planing-mill property, for a frontage of 238½ feet, abuts, and have proceeded to possess themselves of said property and to

erect a structure for an elevated road, as proposed in their said petition, and now maintain the structure and obstruction in said street in front of the said premises, as stated in the affidavit of D. Farrand Henry, Esq., which affiant has read and which is herewith filed.

Affiant further saith that by its acts and doings in the premises, the petitioner has appropriated the said River street in front of the said premises and obstructed and destroyed the use of the same by the respondents, and has, by the erection of the said structure, so darkened the said planing mill as to materially interfere with the carrying on of its business, all of which acts and doings have been done by the said petitioner without the consent of said respondents, or any of them, and against their repeated protests expressed to the agents of the petitioner in charge of the work.

Affiant further saith that the excavation extending the entire length of the said premises, and which is referred to in the said affidavit of Mr. Henry, was made under the direction

of and by the employés of the said petitioner.

ABSALOM BACKUS, JR.

Subscribed and sworn to before me this 5th day of September, A. D. 1891.

> PHILIP M. COFFIN, Notary Public, Wayne County, Mich.

STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

FORT STREET UNION DEPOT COMPANY, Petitioner,

ABSALOM BACKUS, JR., A. BACKUS, JR., & SONS, JAMES N. DEAN, WILLIAM H. DAVISON, Respondents.

COUNTY OF WAYNE, 88:

Charles H. Ellis, being duly sworn, deposes and says that he resides in the city of Detroit. That his occupation is that of a civil engineer, and that he is the engineer of the Fort Street Union Depot Company, and has the supervision and charge of the work of constructing an elevated road, or viaduct, along River street, in the city of Detroit, for that company. That the contract for doing said work was let to the Detroit bridge and iron works, a corpora-

tion located in the city of Detroit. That said elevated railroad, or viaduct, has been constructed from Twelfth street

to the west line of the property known as the Backus planing mill and box factory, and also from the east line of said property to a point nearly across the tracks of the Michigan Central Railroad Company. That said elevated railroad has not been constructed, and no attempt has been made to construct the same in front of the property of said respondents. That, on the contrary, the Fort Street Union Depot Company, at a large expense, made a contract with

वुन्नु 98

the said bridge and iron works, in its progress along the street, to go around the Backus property. That on the 17th day of July, 1891, the day after the verdict was rendered in this case, this deponent was advised by F. A. Baker, the attorney for the Fort Street Union Depot Company, not to construct said elevated railroad in front of the Backus property until further orders, but to go by or around said property; and on or about the 23d day of July, 1891, this deponent received a letter from said Baker, dated Duluth, July 21, 1891, a copy of which is annexed as Exhibit A. That on the 20th day of July, 1891, this deponent, as the engineer of the Fort Street Union Depot Company, wrote a letter to J. W. Schaub, the engineer of the Detroit bridge and iron works, a copy of which letter is annexed as Exhibit B. That on or about the 23d day of July, 1891, this deponent received from said Schaub a reply, a copy of which is hereto annexed as Exhibit C. That this deponent accepted said proposition in a letter to said Schaub, dated July 23, 1891, a copy of which is annexed as Exhibit D. That upon the 6th day of August, 1891, the board of public works of the city of Detroit granted a permit to the Detroit bridge and iron works

to occupy not more than half of River street, between the Michigan Central Railroad tracks and Twelfth street, sixty

days, with building material under the ordinance of the city of Detroit on that subject, to which reference is hereby made, and a copy of said permit is hereto annexed as Exhibit E. That in pursuance of the contract so made and the permit so granted, the Detroit bridge and iron works built a temporary trestle, supported by wooden posts, with which to carry its traveling derrick and crane around and by the Backus property. That said trestle is located entirely on the south half of said River street, and not at all on the half of the street adjacent to the Backus property, and the same does not in any way interfere with the use of said street in front of said property. That the only work of a permanent nature that has been done in any part of the street in front of the Backus property is that of putting in the foundations along the south curb-line of said street for the posts of the proposed elevated railroad. That said foundations are wholly beneath the surface of the street, and no foundations have been put in on the north curbline in front of said property; that in putting in said foundations on the south curb-line it was necessary to make an excavation for each post about ten feet square and eight feet deep, and to drive nine piles in the bottom for the support of a concrete foundation and stone cap, about six feet deep. That the work of making said excavations on the south curb line opposite the Backus property, and driving the piles therein, was all done between the 26th day of June, 1891, and the 10th day of July, 1891, and before the verdict in this cause was rendered, so that the only work that has been done on said foundations since the verdict has been that of filling said excavations with concrete, putting on stone caps

and putting in the castings and rods that are to receive and support the iron posts that are to be hereafter erected thereon.

That the excavation on the north half of said street, referred

to in the affidavits of D. Farrand Henry and Absalom Backus, Jr., has no connection with the work or superstructure of the elevated railroad, and the facts in regard thereto are as follows: That the ordinance under which the elevated railroad is being constructed provides that the posts shall stand on the curb-lines. That in making the preliminary borings along the north curb-line of River street, it was found that a lateral sewer was located under said curbline, and that it would be necessary to move said sewer further into the street. That on the 21st day of April, 1891, a resolution was introduced in the common council of the city of Detroit by Ald. Thompson, a copy of which resolution is hereto annexed as Exhibit That said resolution was referred to the board of public works. who made a favorable report thereon on the 28th day of April, 1891. and said resolution was thereupon unanimously adopted by the common council. That under the authority contained in said resolution, and subject to the supervision of the board of public works, the Fort Street Union Depot Company caused said new sewer to be constructed in said River street, and said sewer was completed and all connections therewith made before the first day of June, 1891. That the surface of the street was left in good order and repair, and there is no depression therein that in any way interferes with travel along said street. That it was necessary to change said sewer before any foundations could be put in on the north curb of River street, either in front of the Backus property or west thereof. That said sewer could not be built in sections, but was one continuous piece of work, that had to be completed before any portion of the old sewer could be disturbed.

Deponent further says that the Fort Street Union Depot Company has not, either before or since the verdict in this case, taken possession of or attempted to take possession of the right of way sought to be condemned, but on the contrary has carefully abstained therefrom as aforesaid.

(Signed)

CHARLES H. ELLIS.

Subscribed and sworn to before me, this 14th day of September, 1891.

WALTER BARLOW, Notary Public, Wayne County, Mich.

Ехнівіт А.

DULUTH, MINN., July 21st, 1891.

Mr. C. H. Ellis, Detroit, Mich.

DEAR SIR: As I understand our conversation, you will go right on with your work going by or around the Backus property, so as to complete the superstructure on each side of that property as soon as the bridge Co. can do the work.

If any legal difficulties arise, by way of injunction or otherwise,

wire me at length at Thornhill Farm, Steele, North Dakota.

Yours.

F. A. BAKER.

EXHIBIT B.

ЈULY 20тн, 1891.

J. W. Schaub, Esq., engineer Detroit bridge and iron works.

DEAR SIR: Please give me an estimate of cost of construction of temporary trestle-work in River street in front of the Backus property, upon which to carry your derrick, and also the ex-1501

pense of bringing your derrick back in position to put in the permanent work when the way is clear to do so. I want it to include all the work and material which is not embraced in your contract for construction of viaduct.

If the amount is satisfactory I will accept it at once, and authorize you to proceed on the plan proposed, so as not to have any delay to your work.

Yours truly,

CHAS. H. ELLIS, Ch'f Eng'r.

EXHIBIT C.

Office of Detroit bridge and iron works,

DE ROIT, MICH., July 22d, 1891.

Mr. Chas. H. Ellis, ch'f eng'r union depot Co., 297 West Fort St., city.

DEAR SIR: Replying to your valued inquiry of the 20th inst., regarding temporary work to carry traveler:

We will be pleased to furnish all the material and labor to execute the same, in accordance with your requirements, for the sum

of sixteen hundred and eighty (\$1,680) dollars.

This tender is made with the understanding that you will furnish us a right of way to occupy the south half of River street, directly in front of the Backus property. This right to be in the form of a permit from the city council, to occupy the middle of the street and sidewalk with our temporary work, until the permanent work can be put in position.

Yours truly,

DETROIT BRIDGE AND IRON WORKS. J. W. SCHAUB.

1502

EXHIBIT D.

JULY 23, 1891.

J. W. Schaub, Esq., engineer Detroit bridge and iron works.

DEAR SIR: I have your letter of 22d inst., inclosing proposal for temporary work for traveler, in answer to my request of the 20th.

The Fort Street Union Depot Company accepts your proposition to do such work for the sum of sixteen hundred and eighty (\$1,680) dollars.

Yours truly.

CHAS. H. ELLIS, Ch'f Eng'r Fort St. Depot Co.

EXHIBIT E.

BENJAMIN S. WARREN, Notary Public, Wayne County, Michigan.

1511 STATE OF MICHIGAN:

Circuit Court for the County of Wayne.

THE FORT STREET UNION DEPOT COMPANY, Petitioner,

ABSALOM BACKUS, JR., & Sons and Others, Respondents.

Proceedings to condemn a right of way for an elevated railroad in and along River street, in the city of Detroit.

Mr. Fred. A. Baker appeared as counsel for petitioner, and Mr. Don M. Dickinson and Mr. J. Logan Chipman as counsel for respondents.

Opinion of Judge Geo. Gartner.

The petitioner is a corporation organized under the provisions of act No. 244, Laws of 1881.

For the purpose of acquiring certain rights of respondents 1512 in and along River street, in the city of Detroit, the pe-

titioner filed its petition in this court, whereupon such proceedings were had resulting in the impaneling of a jury before whom the matter was presented, and who made and signed a report finding that a taking is necessary for public use, and awarding to respondents \$96,144.00 compensation.

The report of the jury was on the 16th day of July, 1891, pre-

sented to this court and filed.

A motion was made by the petitioner to vacate and set aside the verdict, award and report of the jury, and to grant a new trial, alleging, substantially, the following reasons:

1. In that the jury were not attended by a judge of this court, or by a circuit court commissioner, to decide questions of law, and

administer oaths to witnesses.

2. In that the attorney for the respondents did improperly, erroneously and falsely claim and pretend to and before said jury that the petitioner, The Fort Street Union Depot Company, has power under the statutes of this State to condemn a right of way for an elevated railroad along the margin of the property of the Michigan Central Railroad Company on the south side of River street, and for that reason the jury ought to find that there is no public necessity for taking a right of way in, upon and along said River street for the elevated railroad proposed by the petitioner, and thereby said attorney did, by repeated arguments and assertions, to and before said jury, convince a number of said jury that the property of the Michigan Central Railroad Company could be condemned by the petitioner under existing statutes, so that when said jurymen came to yield on the question of necessity, they were so biased and prejudiced against the petitioner that they insisted upon the most extravagant, exorbitant and grossly excessive damages, to the great wrong and injury of petitioner.

3. In that the jury erroneously refused to receive certain 1513

testimony.

4. In that the damages awarded to respondents are (a) grossly extravagant, exorbitant and excessive; (b) are so excessive, unwarranted and unjust as to show that the jury were actuated by passion or prejudice, and (c) are unwarranted by and against the weight of evidence.

5. In that the jury, while deliberating upon their verdict, were, without the consent of the court, supplied with twelve quarts of

beer.

6. In that the proceedings are in other respects irregular, illegal

and unjust.

The respondents (a) entered a motion for the confirmation of the report of the jury, (b) object to and protest against any consideration of said motion of petitioner, either by the court or judge, on the ground of want of jurisdiction or authority to review, reverse or vacate the verdict, award and report of the jury, and (c) allege that since the filing of the verdict, award and report, the petitioner has entered upon and possessed the said property which was the subject-matter of the proceedings so begun and instituted by the petitioner.

I shall not consider these motions and the various allegations therein contained in the order here presented, as a consideration of one necessarily involves and disposes of others; and whether the allegations contained in the motion of petitioner be regarded as causes for a new trial, or treated merely as objections to the confirmation of the award and report of the jury, will make but little.

if any difference.

The statute provides that after the jury are selected and have taken and subscribed an oath prescribed by article eighteen of the constitution, that they will justly and impartially as-

certain and determine the necessity of taking and using the lands, franchises or other property sought to be condemned, and, if necessary, determine the just compensation to be made therefor, they may proceed to view the premises, issue subpœnas, administer oaths to witnesses, hear the proofs and allegations of the parties, if requested, reduce the testimony to writing, and at the close of which, without unreasonable delay, determine the questions of necessity, make and sign a report to the court or judge of the proceedings before them which may be filed. (See sections 8 and 9.) It is further provided that the judge before whom the proceedings are brought, or a circuit court commissioner to be designated by him, may attend said jury to decide questions of law and administer oaths to witnesses, and he may appoint the sheriff or other proper officer to attend and take charge of said jury while engaged in said proceedings.

"On such report being made by the jury, the court, on motion, shall confirm the same on the next or any subsequent day when in session, unless for good cause shown by either party. * * * Said court, as to the confirmation of such report, shall have the

power usual in other cases." (Sec. 10.)

Under the constitution of 1835, art. 18, sec. 9, the State could not lawfully take and hold the property of a citizen without just com-

pensation. The mode of taking, however, the manner of inquiry and the kind of tribunal to determine the question, were all subjects of legislative action and control, and legislative action upon the subject was not restricted by any constitutional inhibition. (The

People ex rel. vs. M. S. R. R., 3 Mich., 496.)

The power of the legislature was, by the constitution of 1850, limited and restricted, art. 18, sec. 2, and which provides: "When private property is taken for the use and benefit of the public, the necessity for using such property, and the just compensation to be made therefor, except when to be made by the State, shall be ascertained by a jury of twelve freeholders residing in the vicinity of such property," etc.

The questions of necessity and compensation are for the jury, and not in any way subject to legislative interference, and while the manner of procedure may be and is prescribed by statute, still any statute upon the subject, which fails to observe and provide for every constitutional safeguard, would be inoperative and void.

In Powers' appeal, 29 Mich., 510, the court say: "Where the constitution is so imperative, no legislation can be maintained which does not plainly require the question to be left to the jury. Their finding, without such requirement, is not within their oaths, and is extra-judicial. The oath is the measure and limit of their legal action, and it is impossible to say that property has been taken by due process of law unless the statutes provide expressly for every constitutional safeguard framed to govern such action."

See also The People ex rel. vs. Brighton, 20 Mich., 57.

In M. C. & L. M. R. R. Co. vs. Clark, 23 Mich., 524, the court, after referring to the constitutional provision, says: "Under the provision no use can be deemed public upon the mere assumption by interested parties that it is so; and a finding that the taking is needful to the proposed enterprise is not the same as a finding that it is

for the use and benefit of the public. The report of the jury
must distinctly cover this point in every case; and they cannot properly make one which will warrant the taking of

land unless satisfied not only that the particular land is needed for the construction of the work, but also that the work itself is one of

public importance."

See also G. R. N. & L. S. R. R. Co. vs. Van Driele, 24 Mich., 409. In McClary vs. Hartwell, 25 Mich., 140, an act was held as coming within the constitutional prohibition, the court say: "The act of 1865 appears to have wholly misapprehended or overlooked this provision, for it contains no requirement that the necessity for the taking shall be passed upon, nor did the order of the court, appointing commissioners in this case, direct them to consider that subject, nor did they consider it in fact. It would seem, therefore, that the proceedings must be wholly ineffectual.

"The constitution contemplates the possibility that a disposition may at some time exist to seize property for public uses without any need whatever, and it has guarded against it by providing for an impartial tribunal, to whom the question of necessity shall in every case be submitted. The finding of necessity cannot in any in-

stance be dispensed with, nor can anything be accepted as a substitute for it."

Whatever may be said of necessity is equally applicable to compensation. Both are imperatively made by the constitution questions to be determined by a jury of freeholders. It is a function which neither the State nor any of its governmental departments can exercise, whether the provision of the constitution in this particular be regarded as a grant or a limitation of powers to be exercised by the State. This is a right granted to or reserved by the

citizen whose property may be sought to be taken, and the

1517 these questions is as absolute as any right can be under a constitutional government. The consideration of this question became necessary, as it is incidentally applicable to questions arising and hereinafter considered. In a logical analysis of the statute, it is the principal and first question to be determined. That the legislation upon the subject of condemnation is capable of vast improvement, that the present system is not suitable to our system of jurisprudence in this State, and that it may in instances result in great injustice being done, is beyond controversy. These are, however, subjects not under judicial control or correction. We must deal with the condition of matters as we now find them, and apply and construe the law as the legislature in their great wisdom has seen fit to enact. In Tol., A. A. & G. T. R. R. vs. Dunlap, 47 Mich., 461, the court say: "The statute is evidently framed in accordance with the laws of some other States, where the judicial power is not parceled out as it is here, and some complications have been caused by this practice which introduce difficulties. * * * It is greatly to be regretted that this species of legislation has been so very carelessly framed."

See also G. R. L. & D. R. R. vs. Chesebro, 74 Mich., 471.

The procedure under the statute is special, and not strictly speaking a judicial proceeding. The rules governing proceedings judicial in their character are not to that extent applicable so as to govern and control the procedure before this so-called special tribunal which the constitution has created and the procedure before whom the statute is contemplated to regulate. Under our system the regular exercise of judicial power is vested in certain courts,

and those functions which courts exercise, as well as the rules appertaining to and governing judicial procedure at nisi

prius, are not applicable to proceedings before this special tribunal, which is governed by different considerations, and whatever power courts or judges can exercise in these matters is dependent upon statutory authority or enactment, and no authority or power is given to or can be exercised by a court or judge, unless expressly provided by statute. The proposition involves, first, the nature and functions of this special tribunal, and, secondly, the power or jurisdiction of the court or judge to review or set aside the action of the jury. These questions are so interchangeable that they may be properly considered together. Referring again in this connection to the statute, it is provided that failure or neglect to

pay the award shall be deemed as a waiver and abandonment to acquire any rights, and further, " within twenty days after the confirmation of the report of the commissioners or jury, as above provided for, either party may appeal, by notice in writing to the other, to the supreme court, from the appraisal or report of the commissioners or jury; such notice shall specify the objections to the proceedings had in the premises, and the supreme court shall pass on such objections only, and all other objections, if any, shall be deemed to have been waived; such appeal shall be heard by the supreme court at any general or special term thereof, on notice thereof being given according to the rules and practice of the court. On the hearing of such appeal, the court may direct a new appraisal before the same or new commissioners or jury, in its discretion. The second report shall be final and conclusive upon all parties interested. If the amount of the compensation to be allowed is increased by the second report, the difference shall be a lien on the land appraised.

and shall be paid by the company to the parties entitled to 1519 the same, or shall be deposited as the court shall direct; and in such case all costs of the appeal shall be paid by the company: but if the amount is diminished, the difference shall be refunded to the company by the party to whom the same may have been paid. and judgments therefor and for all costs of the appeal shall be rendered against the party so appealing. On the filing of the report, such appeal, when made by any claimant of damages, shall not affect the said report as to the right and interests of any party. except the party appealing; nor shall it affect any part of said report in any case, except the part appealed from; nor shall it affect the possession of such company of the land appraised; and when the same is made by others than the company it shall not be heard except on a stipulation of the party appealing not to disturb such possession during the pendency of such proceedings."

See Railroad Laws, 1890, p. 88.

The power of the court to amend defects or informalities in the

proceedings is also specially provided for. (Sec. 13.)
In Peninsular R. R. Co. vs. Howard, 20 Mich., 18, the maxim "that no man shall be a judge in his own case," was held applicable in this proceeding; that the jury were, in effect, judges, in the absence and beyond the control of the court, and that there was no authority in the act for the judge to accompany or preside over the jury in their action.

In Mich. Air Line R. R. vs. Barnes, 44 Mich., 226, the court say: "When the law provided how the tribunal should be constituted for these cases, and prescribed the method to be observed, it obviously contemplated that the practice respecting the admission of testimony should be as simple as

a due regard to substantial justice would permit. It was not intended to leave the fate of the determination had in view to any fine-spun theories, or to the refinements which are not uncommon in trials at the circuit. They were not supposed to be necessary to the fundamental purpose or beneficial

workings of inquests of this nature, and no provision was made for the certain attendance of any one presumptively qualified to deal with them. The statute plainly assumes that the jury may conduct the inquiry without the aid of any legal expert, and under circumstances in which it would be difficult, if not impracticable, to preserve technical or hair-drawn questions in a shape to be reviewed, and were the niceties of nisi prius to be insisted on, the proceedings would speedily break down under the perplexities and embarrassments due to its own methods. The conclusions to which these and other considerations had is that a very large discretion in admitting and rejecting testimony is left to the jury, or the attending officer, whenever there is one, and that when the case is brought here by appeal, the award cannot be disturbed on account of such decisions, unless it is fairly evident, in view of the facts and circumstances, that the ruling was not only inaccurate, but was a case of substantial injustice to the appellant in the matter of the result."

It is difficult to understand what is meant by the court in speaking of the rulings of "the attending officer." This reference is certainly inconsistent with what is said in discussing the power of

the jury.

In Tol., A. A. R. R. vs. Dunlap, 47 Mich., 462-'6, the court say: "Under our constitution, such powers as are strictly judicial in their character, can only be vested in certain courts which are named in the constitution itself. The circuit courts, as 1521 courts, have such powers. The judges, as judges, out of

court, do not possess them, and cannot be vested with them. "The proceedings to condemn lands, although made under the railroad laws, subject to judicial review and supervision, for certain purposes, are not in themselves and never have been regarded as judicial proceedings. Our constitution allows them to be conducted by highway commissioners in some cases, and by specially appointed commissioners or juries of freeholders. The inquiry in this State, as elsewhere, is an appraisal or estimate of values, and not a contest on litigious rights, and includes what is not elsewhere included, an inquiry into the necessity of the proposed taking for public purposes, which was never made by courts, but always heretofore by the legislature, or some unjudicial body of its creation. Had it not been for the specific provisions in our constitution, the State could have provided for these inquiries to be made by any medium it might select. Our present system is better calculated than the old one, if fairly applied, to secure the rights of landowners. But the nature of the proceedings remains as before, a special proceeding by a temporary tribunal selected for the occa-

sion, and not a judicial proceeding in the ordinary sense.

"As provided for under the railroad laws, there are certain proceedings in court to select a jury, and subsequent proceedings to determine whether the action of the jury should be sustained. Beyond this the courts have no part in the matter, * * * no diffi-

culties should have arisen to confound these functions."

In this case the circuit judge attended the sittings of the jury,

admitted and excluded testimony, and charged the jury precisely

as on a trial. In this connection the court say:

1522 "The judge formed no part of this special tribunal. The statute, indeed, allows the judge to 'attend said jury to decide questions of law and administer oaths to witnesses;' but the same statute which allows this allows him to designate a circuit court commissioner for the same purpose, and also allows the jury to proceed without either. Whatever the language of this statute literally construed may mean, it is very clear that any such functions must, at most, be advisory. The jury will undoubtedly be regarded as accepting and doing what they permit to be done. But in all such cases the constitution as well as the principles of the common law makes them judges of law and fact. Their conclusions are not based entirely on testimony. They are expected to use their own judgment and knowledge from a view of the premises, and their experience as freeholders, quite as much as the testimony of witnesses to matters of opinion. And while an appellate court is bound, in such cases, to set aside proceedings which appear to be based on false principles, it cannot properly deal with rulings as if they were excepted to on a common-law trial, or dispose of the controversy on merely technical notions.

"While the language of the charge of the judge is certainly ambiguous and open to criticism, yet it appears distinctly that the jury regarded, not merely the necessity of the land if the road should be laid out, but also the importance of the road itself. We cannot say from an inspection of the record that there is any prevailing reason for holding that the jury were misled in their con-

clusions."

Where the jury are the judges of the law and fact, misdirection of the court to the jury cannot be assigned as error. (Chamberlain vs. Brown, 2 Doug., M., 120.) See also Det., West. Trans. &

Junc. R. R. vs. Crane, 50 Mich., 182, where the principle of 1523 Mich. Air Line R. R. vs. Barnes, and Tol., A. A. R. R. vs. Dunlap, are cited and affirmed. All these cases were also cited and affirmed in P. H. & S. R. R. vs. Voorheis, 50 Mich., 510, and wherein

the court sav :

"The proceedings in this class of cases are special, and bear little resemblance to ordinary legal trials. The law contemplates simplicity, as far as possible, in regard to the practice. The jury, unaided by counsel or parties, may conduct the inquests, and a very large discretion must necessarily be left to the commissioners or officers accompanying them in receiving or rejecting testimony. The strictness of nisi prius practice is not in accordance with the spirit or policy of the law."

The same misapprehension in the language used by the court occurs in this case as in Peninsular R. R. Co. vs. Howard, supra.

In F. & P. M. R. R. vs. D. & B. C. R. R., 64 Mich., 363, the court, following the principle laid down in the cases above cited, held that it was not error in the court refusing to instruct the commissioners. that while the court might have done so had it thought proper, still it is not a duty imposed by law, and that its instructions would not

have been binding upon the commissioners had it done so. The same must logically follow as to any ruling the court might make

upon the receiving or rejecting of testimony.

In G. R. L. & D. R. R. vs. Chesebro, 74 Mich., 470, the judge acted as though he had been a nisi prius judge presiding over a commonlaw jury directing the testimony to go before them, and on what theories of damages. The court hold that it is a very serious ques-

tion whether the constitution will suffer a jury of inquest to act as a court of common-law jurisdiction under the condi-

tions applicable to other juries; but that such had not been attempted; that a jury of inquest forms no part of the machinery of and is not a court; that the jury cannot be made subject to any instruction, but must act in their own judgment, and that, "when the award comes up for confirmation, it may be attacked for irregularity or impeached on the merits in various ways, as it may be on appeal. But the award is and must be the jury's award, and reached in the jury's own way. If the jury see fit to accept the rulings which are wrong, and act on them, their action will be reviewed accordingly, but as their own and not as the attending magistrate's ruling."

See also-

T. S. & M. R. R., 83 Mich., 31, and Fort Street Union Depot Co. vs. Jones, id., 415.

From an analysis of the cases coled the rule suscinctly stated is as follows:

The tribunal provided by the constitution and statute is special in its character. The proceeding before it is not a judicial proceeding. The jury is a jury of inquest, and as such, judges of the law and fact. The inquiry is confined to the questions of necessity and compensation, and is in no way a contest on litigious rights; the proceedings are under the absolute control of the jury, who are not bound to follow the advice or rulings of the court. The court has no power or authority except such as is expressly given by the statute, and that no power or authority is by the statute given the court after the jury have been impaneled and sworn, until after the presentation to the court of their

report and the filing thereof. The judge, or a commissioner to be appointed by him, having no authority under the law, and his action, if in attendance before the jury, being merely advisory, it necessarily follows that there is no force in the objection now made based upon the non-attendance of a judge or commissioner to decide questions of law and administer oaths to witnesses. Besides, the petitioner having proceeded before the jury without objection, the same would have to be, if for no other reason than this, treated as waived. It is contended by respondents that this court has no jurisdiction or authority to review, reverse or vacate the verdict, award and report of the jury. This proposition brings up the question as to what authority, if any, is given the court by the statute. The statute provides that the court on motion shall confirm, "unless for good cause shown by

either party," and as to the confirmation of the report the court has the power usual in other cases. The setting aside of the report necessarily involves a new appraisal, and it is contended that this can only be done on appeal. There is considerable force in this objection especially in view of the provision of the statute to the effect that in case of a new appraisal the second report shall be final and conclusive upon all parties interested. The grounds stated in petitioner's motion are the same which on appeal would be treated as objections to the order of confirmation and should this court refuse to confirm upon the reason and grounds stated in the motion, it would be doing that which the appellate court could do for the same reasons on appeal, and I see no reason why this provision of the statute is not applicable to the action of this court, and that in case of a new trial being ordered by this court precisely

the same results would follow. The various provisions of the statute upon the question of condemnation must be taken as a whole, and its scope and object gathered from its various

parts in arriving at the legislative intent.

Washburn vs. People, 10 Mich., 384.

The question, however, as to the power of this court to set aside the report of the jury has been adjudicated in this State. In M., H. & O. R. R. vs. Probate Judge, 53 Mich., 217, a motion was made to set aside the finding and report of commissioners, alleging various grounds. The motion was denied and an order entered confirming the report. Upon an application for a mandamus the supreme court say: "The motion made by the petitioner to set aside the report was one proper to be made, and, if substantiated, would have furnished sufficient grounds for setting aside the report. The probate court has authority to set aside the report of commissioners for good cause shown."

In P. H. & N. W. R. R. vs. Callanan, 61 Mich., 14, the court say: "The confirmation of a report in these cases is not a matter of strict right upon a regular record. If substantial reasons are shown against it by facts not in the record itself, the court has power to do justice and refuse confirmation, and on appeal the same power exists." And if sufficient cause is shown against the confirmation the report or proceedings should be set aside. (Penn. R. R. vs.

Howard, 20 Mich., 24.)

It is further contended that since the filing of the verdict, award and report of the jury, the petitioner has entered upon and possessed the property and premises, the subject-matter of the proceedings so instituted by the petitioner, and it is claimed by reason thereof petitioner has waived its right to object to the confirmation

of the award.

1527 This claim is founded upon certain affidavits filed at the hearing, and which are as follows:

First, made Sept. 5, 1891.

"D. Farrand Henry, being duly sworn, upon his oath saith that he is, and has been for a period of fifty years last past, a resident of

the city of Detroit. That he is a civil engineer by profession, and has practiced as such for forty years. Affiant further saith that at the request of Absalom Backus, Jr., on the 5th day of September. A. D. 1891, he examined the work of the petitioner, The Fort Street Union Depot Company, in front of and adjacent to the property of the respondents, Absalom Backus, Jr., and A. Backus, Jr., & Sons, upon River street. The property referred to is two hundred thirty-eight and a half (238½) feet front on the north side of River street and abutting thereon, and is occupied by the planing mill and yards of A. Backus, Jr., & Sons. That the structure of the petitioner, consisting of an elevated railway upon trestles with posts, cross-girders, longitudinal girders, ties and rails, and embracing two tracks at that point, and evidently constructed for three tracks beyond that point to the east, appears to be completed in the street up to near the west line of the Backus property aforesaid, and where so completed spans the highway known as River street. That the process of construction of the said work extends in front of and beyond the Backus property to the east and toward the center of the city along and upon said street beyond the crossing of the Michigan Central railroad. That immediately in front of the Backus property aforesaid, upon said street, affiant finds the following structure, material and conditions in connection with said construction: In front of the said Backus property upon

said street, nine feet and six inches from the south line of 1528 said street, measured to the center of the excavation, there have been excavations for the foundation of seven stone piers, and in these excavations there have been already laid permanent stone piers with concrete, extending, as affiant should judge, six feet below the surface and surmounted by a permanent iron base for iron columns, which iron base on all of said piers is above the grade of the street. That there are seven excavations in front of the said Backus property, and the depth of each is of the dimensions of about eight feet in length, as the street runs, and five or six feet across, and extending into the street toward the Backus property about fifteen feet from the south line of said street. These excavations have been once filled, but the grade has not been restored and the depression is such as to render the grade of the surface impassable for teams or the uses of a highway.

North of said stone piers and over them is a double-trestle structure extending from the south line of said street twenty-four feet north toward the Backus property and along the entire front of said property. That upon each part of said double structure there are iron longitudinal girders with ties, and a portion of the same is ironed with rails. At present this double structure is supported by wooden posts. Along the said street there is strewn material for the construction of said elevated railroad. All the longitudinal girders of the entire structure are three feet nine inches deep. West of the property where the structure is completed the cross-girders are four feet five inches in depth. Those laid out and ready to be laid opposite this property are five feet ten inches in depth, which

would leave, when the structure is completed, about thirteen 1529 feet clear. Over the Michigan Central Railroad crossing the girders are halved or boxed in so as to give more head room.

Affiant further saith that also in front of the said property and between the said double structure and the north curb-line of said street, immediately adjacent to the Backus property and within twelve or fifteen feet from the north line of the street, which is the Backus line, there is an excavation, extending throughout the whole front of the Backus property, of the depth of about four or five feet, which has been loosely filled in, but the grade not restored, and there is now a depression throughout its entire length, rendering the street impassable as a highway, so that with the said structure as above described and the said excavation the entire front of the Backus property has been so appropriated as to be rendered useless as a highway from curb to curb."

Second, made Sept. 5, 1891.

"Absalom Backus, Jr., being duly sworn, upon his oath saith that he is one of the above-named respondents. That the verdict of the jury in this matter was filed with the court on the 16th day of July, A. D. 1891. That on the 17th day of July, A. D. 1891, in the absence of the respondents and of their attorney and counsel, this court, or a judge thereof, made an order granting a stay of proceedings in this matter for a period of thirty days, on the application of the petitioner, to enable the petitioner to move for a new trial, which has been presented. That immediately after the granting of said stay of proceedings, and after the filing of the report of the jury in this matter, the petitioner entered upon the premises of the respondents, Absalom Backus, Jr., and A. Backus, Jr., & Sons.

of the said respondents and their easement in River street, on which their planing-mill property for a frontage of 238½ feet abuts, and have proceeded to possess themselves of said property and to erect a structure for an elevated road, as proposed in their said petition, and now maintain the structure and obstruction in said street in front of the said premises, as stated in the affidavit of D. Farrand Henry, Esq., which affiant has read, and which is herewith filed.

Affiant further saith that by its acts and doings in the premises, the petitioner has appropriated the said River street in front of the said premises and obstructed and destroyed the use of the same by respondents, and has, by the erection of the said structure, so darkened the said planing mill as to materially interfere with the carrying on of its business, all of which acts and doings have been done by the said petitioner without the consent of said respondents or any of them, and against their repeated protests expressed to the agents of the petitioner in charge of the work.

Affiant further saith that the excavation extending the entire length of the said premises, and which is referred to in the said affidavit of Mr. Henry, was made under the direction of and by the complement of the said potitions."

employees of the said petitioner."

Third, made Sept. 21, 1891.

"D. Farrand Henry, being duly sworn, upon his oath says that on Saturday last, the 19th inst., he visited and examined River street in front of A. Backus, Jr., & Sons' mills; that he finds the Union Elevated Railroad structure is fully in place up to lines run across the street from the cast to the west line of the

across the street from the east to the west line of the Backus property, and is permanently built and constructed, span-1531 ning the entire street up to those lines. That in addition to the conditions immediately in front of the Backus property described in his previous affidavit, affiant finds that the holes left round the foundations for the piers on the southeast line of the street have been loosely filled, but a wheel would easily sink into them, but the depressions in the pavement on the north half of the street where the sewer was built have not been changed, so that part of the street is very bad for heavy team-That he finds in addition that the south fence has been removed and part of the heavy iron girders have been placed along the wooden posts in the middle of the street, and that a lot of building stone has been corded up on the south half of the street commencing at the post about thirty feet east of the west line of the Backus lot, and is being built out west, completely filling the space between the foundations for the south line of piers and the central line of posts, and thus blocking the south half of the street and forcing all travel into the north half."

Opposed to the showing so made, the petitioner filed the follow-

ing affidavit, made Sept. 14, 1891, viz:

Charles H. Ellis, being duly sworn, deposes and says that he resides in the city of Detroit. That his occupation is that of a civil engineer, and that he is the engineer of the Fort Street Union Depot Company, and has the supervision and charge of the work of constructing an elevated road, or viaduct, along River street, in the city of Detroit for that company. That the contract for doing said work was let to the Detroit bridge and iron works, a corporation located in the city of Detroit. That said elevated

railroad, or viaduct, has been constructed from Twelfth 1532 street to the west line of the property known as the Backus planing mill and box factory, and also from the east line of said property to a point nearly across the tracks of the Michigan Central Railroad Company. That said elevated railroad has not been constructed, and no attempt has been made to construct the same in front of the property of said respondents. That, on the contrary, the Fort Street Union Depot Company, at a large expense, made a contract with the said bridge and iron works, in its progress along the street, to go around the Backus property. That on the 17th day of July, 1891, the day after the verdict was rendered in this case, this deponent was advised by F. A. Baker, the attorney for the Fort Street Union Depot Company, not to construct said elevated railroad in front of the Backus property until further orders, but to go by or around said property; and on or about the 23d day of July, 1891, this deponent received a letter from said

Baker, dated Duluth, July 21, 1891, a copy of which is annexed as Exhibit A. That on the 20th day of July, 1891, this deponent, as the engineer of the Fort Street Union Depot Company, wrote a letter to J. W. Schaub, the engineer of the Detroit bridge and iron works, a copy of which letter is annexed as Exhibit B. That on or about the 23d day of July, 1891, this deponent received from said Schaub a reply, a copy of which is hereto annexed as Exhibit C. That this deponent accepted said proposition in a letter to said Schaub, dated July 23, 1891, a copy of which is annexed as Exhibit D. That upon the 6th day of August, 1891, the board of public works of the city of Detroit granted a permit to the Detroit bridge and iron works to occupy not more than half of River street between the Michigan Central Railroad tracks and Twelfth street, sixty

1533 days with building material, under the ordinance of the city of Detroit on that subject, to which reference is hereby made. and a copy of said permit is hereto annexed as Exhibit E. That in pursuance of the contract so made and the permit so granted, the Detroit bridge and iron works built a temporary trestle, supported by wooden posts, with which to carry its traveling derrick and crane around and by the Backus property. That said trestle is located entirely on the south half of said River street, and not at all on the half of the street adjacent to the Backus property, and the same does not in any way interfere with the use of said street in front of said property. That the only work of a permanent nature that has been done in any part of the street in front of the Backus property is that of putting in the foundations along the south curbline of said street for the posts of the proposed elevated railroad. That said foundations are wholly beneath the surface of the street. and no foundations have been put in on the north curb-line in front of said property; that in putting in said foundations on the south curb-line it was necessary to make an excavation for each post about ten feet square and eight feet deep, and to drive nine piles in the bottom for the support of a concrete foundation and stone cap, about six feet deep. That the work of making said excavations on the south curb-line opposite the Backus property, and driving the piles therein, was all done between the 26th day of June, 1891, and the 10th day of July, 1891, and before the verdict in this cause was rendered, so that the only work that has been done on said foundations since the verdict has been that of filling said excavations with concrete, putting on stone caps and putting in the castings and rods that are to receive and support the iron posts that are to be hereafter erected

support the iron posts that are to be hereafter erected thereon. That the excavation on the north half of said street, referred to in the affidavits of D. Farrand Henry and Absalom Backus, Jr., has no connection with the work or superstructure of the elevated railroad, and the facts in regard thereto are as follows: That the ordinance under which the elevated railroad is being constructed provides that the posts shall stand on the curb-lines. That in making the preliminary borings along the north curb-line of River street, it was found that a lateral sewer was located under said curb-line, and that it would be necessary to move said sewer

further into the street. That on the 21st day of April, 1891, a resolution was introduced in the common council of the city of Detroit by Ald. Thompson, a copy of which resolution is hereto annexed as Exhibit F. That said resolution was referred to the board of public works, who made a favorable report thereon on the 28th day of April. 1891, and said resolution was thereupon unanimously adopted by the common council. That under the authority contained in said resolution, and subject to the supervision of the board of public works, the Fort Street Union Depot Company caused said new sewer to be constructed in said River street, and said sewer was completed and all connections therewith made before the first day of June, 1891. That the surface of the street was left in good order and repair, and there is no depression therein that in any way interferes with travel along said street. That it was necessary to change said sewer before any foundation could be put in on the north curb of River street, either in front of the Backus property or west thereof. That said sewer could not be built in sections, but was one continuous piece of work, that had to be completed before any portion of the old sewer could be disturbed.

"Deponent further says that the Fort Street Union Depot Company has not, either before or since the verdict in this case, taken possession of or attempted to take possession of the right of way sought to be condemned, but on the contrary has care-

fully abstained therefrom, as aforesaid."

EXHIBIT A.

DULUTH, MINN., July 21st, 1891.

Mr. C. H. Ellis, Detroit, Mich.

DEAR SIR: As I understand our conversation, you will go right on with your work going by or around the Backus property, so as to complete the superstructure on each side of that property as soon as the bridge Co. can do the work.

If any legal difficulties arise, by way of injunction or otherwise,

wire me at length at Thornhill Farm, Steele, North Dakota. Yours, F. A. BAKER.

Ехнівіт В.

Јицу 20тн, 1891.

J. W. Schaub, Esq., engineer Detroit bridge and iron works.

DEAR SIR: Please give me an estimate of cost of construction of temporary trestle-work in River street in front of the Backus property, upon which to carry your derrick, and also the expense of bringing your derrick back in position to put in the permanent work when the way is clear to do so. I want it to include all the work and material which is not embraced in your contract for construction of yielduct.

1536 If the amount is satisfactory I will accept it at once, and authorize you to proceed on the plan proposed, so as not to have any delay to your work.

Yours truly,

CHAS. H. ELLIS, Ch'f Eng'r.

EXHIBIT C.

Office of Detroit bridge and iron works.

DETROIT, MICH., July 22d, 1891.

Mr. Chas. H. Ellis, ch'f eng'r union depot Co., 297 West Fort St., city.

DEAR SIR: Replying to your valued inquiry of the 20th inst, regarding temporary work to carry traveler:

We will be pleased to furnish all the material and labor to execute the same, in accordance with your requirements, for the sum of sixteen hundred and eighty (\$1,680) dollars.

This tender is made with the understanding that you will furnish us a right of way to occupy the south half of River street, directly in front of the Backus property. This right to be in the form of a permit from the city council, to occupy the middle of the street and sidewalk with our temporary work, until the permanent work can be put in position.

Yours truly,

DETROIT BRIDGE AND IRON WORKS. J. W. SCHAUB.

1537

EXHIBIT D.

JULY 23D, 1891.

J. W Schaub, Esq., engineer Detroit bridge and iron works.

DEAR SIR: I have your letter of 22d inst., inclosing proposal for temporary work for traveler, in answer to my request of the 20th.

The Fort Street Union Depot Company accepts your proposition to do such work for the sum of sixteen hundred and eighty (\$1,680) dollars.

Yours truly,

CHAS. H. ELLIS, Ch'f Eng'r Fort St. Depot Co.

EXHIBIT E.

Office of board of public works.

DETROIT, Aug. 6th, 1891.

Permit to Occupy Street with Building Material.

To whom it may concern:

Detroit bridge and iron works has permission to occupy not more than half of River St., bet. M. C. R. R. and 12th St., 60 days, with building material, under the ordinance.

JACOB GUTHARD, President.

Colored lights required, and gutters must be left open.

EXHIBIT F.

By Ald. THOMPSON:

"Resolved, That the Fort Street Union Depot Company be and is hereby granted permission to construct a lateral sewer in River street, under the supervision of the board of public works, from a point fifty feet east of Twelfth street to a connection with the Eleventh Street sewer, said sewer to replace the one now in use, and which is directly under the line of the foundations to be built by said company under its ordinance, said company to make all connections with new sewer in place of present connections with old sewer."

The petition contains the following averment, which was not only sustained by the proofs, but the matters so alleged are not disputed:

"That your petitioner has surveyed its depot grounds and the route of its proposed tracks, in the county of Wayne, and made a map and survey thereof, by which said depot grounds and route are designated, and it has located the same according to such survey, and filed a certificate thereof, indorsed on such map and survey, and signed by a majority of the directors of said company, in the register's office of said county of Wayne, to wit, on the 12th day of November, 1889; that before filing said map and survey, to wit, on the 22d day of October, 1889, your petitioner submitted the same to the State railroad crossing board, consisting of the commissioner of railroads, attorney general and secretary of state, for approval, in compliance with section seven of the general railroad law of

this State, as amended by act No. 236 of the Public Acts of 1887, p. 294; that thereupon such proceedings were had that

afterwards, to wit, on the 8th day of November, 1889, said map and survey was duly approved by said board, and a certificate of such approval indorsed thereon, and said map and survey so certified and approved, now remains of record in the said register's office for the county of Wayne, and to which record reference is hereby made."

From the map and survey referred to and the proofs before the jury, it appears that the elevated railroad is to extend in and along River street from a point near Twelfth street to a point near Eighth street, and that the property of respondents is situated on the north side of River street and has a frontage on that street two hundred

thirty-eight and one-half feet.

It further appears by the proofs that the petitioner has acquired from the abutting property-owners nearly all of the right of way along River street; that west of the property of respondents it has acquired all of the right of way, and that long before the verdict in this case was rendered the petitioner was engaged in constructing its elevated superstructure in River street, commencing at Twelfth street, and coming east towards Eighth street; that putting in the foundation for the posts along the north curb-line, west of the property of the respondents, it was found necessary to relocate the lateral

sewer in River street, but this work was done under a resolution of the common council authorizing it, and that it was all finished before the verdict in this case was rendered. When the west line of respondents' property was reached, the petitioner, at an expense of some \$1,680, contracted with the Detroit bridge and iron works, who have the elevated railroad construction contract, to go by or around the property of the respondents.

For this purpose a temporary trestle was built on the south half of the street, on which the traveling derrick was carried by the property of respondents, and the work of building the superstructure was resumed on the east line of that property, and it has been continued across the tracks of the Michigan Central railroad and up to the west line of the property of the Peninsular stove works. It also appears that before the verdict was rendered the excavations for the foundations were made in the south curb-line. opposite the property of the respondents, and that the concrete foundations and capstones and iron rods have been put in since then, but it does not appear that this was done for the purpose of taking possession, as the act itself was nothing more than a filling up of the holes that had been previously made. The temporary trestle was placed on the south half of the street, under and by virtue of the authority of a permit of the board of public works of the city of Detroit, authorizing the company to occupy half of River street with building material, under the city ordinance on that sub-The whole course of the petitioner shows, beyond serious question, that it had no desire to encroach upon the legal rights of the respondents, and that it has attempted to go as far as it had legal authority to go, and no further. The petitioner has not been guilty of any act that can be fairly construed as a taking of possession or an acceptance of the verdict and award, against which complaint is made.

That the respondents, as the owners of property abutting on River street, have rights in and to the street, and in the whole width thereof, is beyond question, and whether such right is to the fee or only an easement or right in the nature of an incorporeal heredita-

ment, is not material, it is sufficient to say that such right exists. Upon this question counsel for respondents in his brief cites the following authorities: Lehr vs. Metropolitan Elevated R. R. Co., 104 N. Y., 268; Lamb vs. Chicago R. R., 47 N. W. Rep., 455; Pearsall vs. Board of Supervisors, 74 Mich., 561; Yates vs. Chicago R. R., 48 N. W. Rep., 1040; Adams vs. C. B. & N. R., 49 Minn., 286; S. C., 36 Am. & Eng. R. R. Cas., 7, and cases cited in note; Reidinger vs. M. & W. R. R., 62 Mich., 29.

The question is thoroughly considered and determined in this State in G. R. & I. R. R. vs. Heisel, 38 Mich., 62, and the principle enunciated in the New York elevated railroad cases is applicable to and is the law of this State. See also Taylor vs. Bay City Street R. R., 45 N. W. Rep., 335; Lamm vs. R. R., 47 N. W. Rep. (Minn.), 455; Detroit City R. R. vs. Mills, 48 N. W. Rep., 1007; Gales vs. R. R., 48 N. W. Rep., 1040. This question was quite extensively discussed at the hearing, and although not disputed it may not be

out of place to state the principle as laid down in the elevated railroad cases, as the same are applicable in the present proceed-

ings:

(1.) An elevated railroad in the streets of the city, operated by steam power, is a perversion of the use of the street from the purposes originally designed for it, and is a use which neither the city authorities nor the legislature can legalize or sanction, without providing compensation, for the injury inflicted upon the property of abutting owners.

(2.) The easement covers the right of passage over the street and in the bed of the street for ingress and egress to and from the premises and also for the free and uninterrupted passage and circulation of air through and over such street for the benefit of the

property situated thereon.

1542 (3.) The ownership of such easement is an interest in real estate, constituting property within the meaning of that term as used in the constitution and requires compensation to be made therefor before it can lawfully be taken from its owner for public

Applying such doctrine, it was contended that respondents having the right to the full width of the street, and also the right to the circulation of air, the acts of the petitioner constituted a taking of possession under the law. Upon the question as to what constitutes a taking of possession counsel for respondents in his brief cites, Pumpelly vs. Green Bay Co., 13 Wall., 166; U. S. vs. Russell, 13 Wall., 623; Dodson vs. City of Cincinnati, 34 Ohio St., 276; East. Penn. R. Co. vs. Schoellenberger, 54 Penn. St., 144; Bloodgood vs. M. & H. R. R., 18 Wend., 9. These cases and others which were referred to by counsel are all cases where the action was for trespass or actions on the case, or proceedings instituted to recover damages for encroachments made upon lands or rights or interests in lands, in other words, direct proceedings to recover damages and which bear little or no analogy to the question raised in this matter.

That the petitioner, in order to erect an aqueduct or elevated superstructure in River street upon and over which to run trains of cars, has to obtain, first, the consent of the city of Detroit, and secondly, the right to do so from the abutting property-owners is unquestioned. The first has been obtained by the passage of an ordinance by the common council of the city, and to obtain the second, so far as respondents are concerned, the present proceedings were instituted, and the claim here is that by reason of the acts

done by petitioner, it has become estopped from objecting to 1543 the proceedings, and must be held to have acquiesced therein.

That there might be considerable force in this position had the petitioner taken possession under the proceedings or for the purposes for which the proceedings were instituted, may be admitted, though this has not only been questioned but held not to be the case by respectable legal authorities. There are instances when the act of a party may be a judicial affirmance or confirmation of the proceedings (Massie vs. Brady, 41 La. Au., 553; Tooley vs. Gridley, 3 S. & M. (Miss.), 493; Henderson vs. Herrod, 23 Miss., 434), and if a

purchaser gets into possession of the estate without the sanction of the court. he will be compelled to pay the money into court, 2 Danl. Ch. Pr., 1277, and if the court refuses to confirm he is a trespasser and liable for mesne profits (Lapton vs. Almy, 4 Wis., 242), so tothe voluntary acceptance of damages by the owner in the absence of fraud or mistake in fact operates as a waiver of whatever errors may have existed in the proceedings and estops the party from disputing them. (In re Woolsey, 95 N. Y., 135; 2 Dill. Mun. Corp., sec. 593.) In case of a sale, though not legally binding in the first instance, it may become so by ratification, either express or implied, of the party whose property is sold. (Rorer on Judicial Sales, sec. 161; Midicord vs. Girod, 4 How., 503, 561; Scott vs. Freeland, 7 S. & W., 409, 420; Tooley vs. Gridley, 3 S. & W., 493; Henderson vs. Herrod, 23 Miss., 434.) And acceptance may be such a ratification so that the validity cannot be contested. (Lee vs. Gardner, 26 Miss., 921; Jennings vs. Kee, 5 Ind., 257; Maple vs. Kussart, 53 Pa. St., 348.)

The general rule may be stated that in the absence of fraud or mistake the acceptance of the award is a ratification or confirmation

of the proceedings, and the same follows where the award is 1544 paid, though under protest, and the land is actually appropriated. (M., H. & O. R. R. vs. Probate Judge, 53 Mich., 217.) Where there is an actual receipt of damages by a party entitled thereto, this constitutes and is a waiver of delay in depositing and paying the money and is a ratification of the proceedings (id.) And the owner is entitled to payment where, before the confirmation, possession has been taken and the actual use of the property retained. (2 Dill. Mun. Corp., sec. 614; Johnson vs. Almeda Co., 14

Cal., 106.)

It has been held that a petitioner may abandon the project and discontinue the proceedings, although it may have taken possession of the premises. By the taking of possession there is no implied agreement to purchase at the appraisement, though in such case the owner can demand the premises and damages for being deprived of them and for injuries thereto. (2 Dill. Mun. Corp., sec. 609; Hullin vs. Municipality, 11 Rob. (La.) 97; Feiten vs. Milwaukee, 47 Wis., 494; Norris vs. Baltimore, 44 Md., 606; Baltimore vs. Musgrave, 48 Md., 272; Brokaw vs. Terre Haute, 97 Ind., 176.)

In Poor vs. Blake, 123 Mass., 543, which was an action of trespass, it appeared that the city entered upon and took possession of all the parcels of land described in the order widening the street, for the purpose of widening, except the land of the plaintiff upon which no entry was made until some time after such original entry, and of which the possession was not taken until some time after the original entry. It was held that the original entry was an entry upon all the lands included in the petition, and that by agreement

of the parties such original entry was sufficient to bind 1545 plaintiff's land under the proceedings. In this State the statute required an entry to be made within a certain time, and which time had expired before the actual entry upon the plaintiff's land. To the same effect, see Dougherty vs. W. S. L. & P. R. R., 19 Mo., App. 419; Commonwealth vs. Haverhill, 7 Allen, 523.

An entry has been defined as an act of possession by authority of the party condemning (Lewis on Em. Domain, sec. 583); and the taking of tools and wagons upon the property without the authority or consent of the party condemning is not an entry. (Standish vs. Liverpool, 1 Drewry, 1.) Nor is the stretching of a telegraph wire over the land an entry. (Dimmick vs. Council Bluffs R. R., 58 Ia., 637.) Is is also stated by Lewis, sec. 531, upon the authority of the case of Wilmington & Susquehanna R. R. vs. Condon, 8 G. & J. (Md.), 443, that if the party condemning takes possession of the property under the proceedings it will be estopped from prosecuting objections to the report of the proceedings. In the case cited by the author it was admitted by the company that subsequent to the date of the inquisition the company had occupied the land therein condemned, and had been engaged in constructing their road over and upon it. The court refused to hear the objections and confirmed the report. An appeal was taken, and without passing upon the question so determined by the lower court, the appeal was dismissed for the reason that the proceedings by the statute was special and limited to the lower court, and from the decision of which no appeal would lie to any other tribunal.

I find no other case in which this question directly arose and was adjudicated. The principle upon which the rule is founded is that,

by reason of an acquiescence in the proceedings and award, and the taking of possession being evidence of an acquiescence,

an estoppel arises. Estoppels in pais are based upon equities, and are enforced for their protection. (Bell vs. Todd, 51 Mich., 28.) They must be mutual (Chope vs. Lorman, 20 Mich., 327), and cannot arise in favor of those who are not themselves estopped. (Baker vs. Johnston, 21 Mich., 319.) Nor can there be estoppel unless a party is misled to his prejudice by the one against whom it is set up, and does material acts relying upon conduct well calculated to mislead him. (Palmer vs. Williams, 24 Mich., 328; De Mill vs. Moffat, 45 Mich., 125.) There is nothing inequitable in the petitioner now insisting upon the objections to the award, as respondents have not in any way been misled by any act of the petitioner, nor have they in any manner been damnified by reason thereof, nor were the acts of petitioner such as could lead respondents to believe that petitioner had assented to the proceedings. (Peake vs. Thomas, 39 Mich., 585; Vanneter vs. Crossman, 42 Mich., 465.)

The occupancy by the petitioner of the half of the street has not been for any such purpose as contemplated by the proceedings, nor has such occupancy been under such proceedings. This, as is shown, petitioner has carefully endeavored to avoid. The entry, as well as the occupancy, was under the authority granted by the city of Detroit, for a temporary purpose only, and not for the purpose of erecting in front of respondents' lands the aqueduct, or superstructure, contemplated by the institution of the proceedings and the right to erect, which was sought to be obtained under and by virtue of such proceedings. The right of the city to give licenses

113 - 55

to occupy the streets is provided by ordinance, and which is as follows:

"The board of public works is hereby granted authority to issue permits to persons desiring the same to occupy any street, alley or public place temporarily with building mate-Provided, that such permit shall not include more than onehalf the width of any street, alley or public place," etc. The authority of the city to pass such ordinance is not questioned. respondents could not maintain either an action of trespass or an action on the case, by reason of such occupancy which is done under the permit given by the board of public works, and I find no authority which would give them a right of action or entitle them to an injunction for the erection of the elevated superstructure in the street, not in front of and adjacent to their property. While the construction of the superstructure in the street imposes an additional servitude not contemplated or designed in the purposes of the street originally, it is only by reason of the fact that respondents' property fronts or abuts on the street that they are entitled to compensation for such interference with the street. There were no acts done by petitioner which can be construed as an acquiescence in the award or verdict, nor to estop petitioner from making objections thereto.

I have discussed the relative power of the court and jury in proceedings of this nature under the statute, while the proceedings by and before the jury are not a judicial proceeding, still the proceeding by and before the court up to the time of swearing the jury, as well as all proceedings after the filing of the report, are judicial in their character and partake of the nature of ordinary proceedings in court, and are governed largely if not absolutely by the same rules and the same considerations applicable to judicial investiga-

tions and determinations. The one great difficulty attending the proceedings by and before the jury is in that it is not ordinarily evident or ascertainable what the ruling or determination of the jury was upon questions raised before them, and in all such instances the presumption of the law is that they followed correct legal principles, and that as judges of the law they applied and followed the law correctly and not erroneously. It cannot be contended that as they are made by the law, judges of the law, they have the right to disregard the law and all acknowledged and wellrecognized legal principles. This was never contemplated by the constitution or the statute, and it is sufficient to say that no case can be found which holds or even recognized such a vicious and monstrous doctrine. When, however, the rulings of the jury are clearly apparent upon the face of the proceedings, then it may be found the duty of the court to consider and, if necessary, review such rulings, for it is the duty of the court to see that substantial justice has not been disregarded. (Mich. Air Line vs. Barnes, supra; Tol. A. A. & G. T. vs. Dunlap, supra; Det. West. Trans. & Junc. R. R. vs. Crane, supra; P. H. & S. W. R. R. vs. Voorheis, supra.) In M. H. & O. R. R. vs. Probate Judge, supra, it is held that if the amount awarded is unreasonable, and indicates that it was the result of prejudice or

partiality, or that the jury must have acted upon a wrong basis of estimating the damages, it is a good cause for setting aside the report, citing Chapman vs. Greves, 8 Blackf., 308. So, too, if the damages are grossly inadequate. (F. & P. M. R. R. vs. D. & B. C. R. R., supra.)

In G. R. & I. R. R. vs. Weiden, 70 Mich., 394, the court say: "The powers and duties laid upon us by the statute require us to see that substantial justice shall not be disregarded by the jury of

inquest. We are not disposed to be governed by such tech-1549 nicalities as are not in the furtherance of justice. But we are bound to see that parties are not deprived of their property without necessity, or without full compensation for being compelled to relinquish it. And, while respect is due to the honest action of juries, it is not conclusive, and is subject to comparison with the facts in the record." In this case it was held that juries have no right to disregard facts and follow their own caprices, and that if the finding is clearly against the weight of evidence, and not based upon any following of the evidence, it is arbitrary and unjust. G. R. & D. R. R. vs. Chesebro, supra, it was held that the court should consider the proceedings without technicality and on the substantial merits, not to take up the special exceptions to the reception or exclusion of testimony singly, but refer to the main points, bearing upon the tendency and effect of the rulings, which the jury evidently acted upon as binding upon them, as they had no right to do. In this case the court concludes as follows: "The verdict is such as to show very clearly that the result must be due to a departure from correct practice, and a false view of the law. In such cases it is better to receive than to exclude testimony which may enlighten the jury; and, unless it is evident that the jury has been misled to injustice, their action will not be disturbed for technical reasons."

In The Fort Street Union Depot Co. vs. Jones, supra, it is held that where the errors complained of are such as may fairly be said to have had a controlling influence in securing the result, it is the

duty of the court to interfere.

The grounds upon which courts will interfere and set aside the award of juries in proceedings of this nature, has received the attention of and been adjudicated by courts of other

and various States. Juries exercise important functions and pass upon valuable rights, and should be entirely free from prejudice and of all undue influence, and it has been held that reports are set aside for partiality, bias, prejudice or inattention, or unfaithfulness in the discharge of their duty, or for errors of such extraordinary character, or grossness, as furnishes a just inference of the existence of such influence. (Mills on Eminent Domain, sec. 234; Bryant vs. Glidden, 36 Me., 36; The State vs. Justice, 24 N. J. L., 413; Bennett vs. Camden R. R., 14 N. J. L., 145; Pa. R. R. vs. Lutheran Congregation, 53 Penn., 445; Inge vs. Police Jury, 14 La. An., 117.)

It is clear, under the authorities, that any improper conduct on the part of the jury materially affecting the merits is sufficient cause

for setting aside the report. (Lewis Em. Dom., sec. 522.)

In the case of N. Y. C. & H. R. R., 64 N. Y., 60, it was held to be good cause for setting aside the report, if there was such carelessness or irregularity amounting to misconduct by which a party was harmed; and that the same reasons which would lead to the setting aside of a verdict of a jury, or a report of a referee for misconduct, palpable mistake or accident, would suffice for like interference with the report of a jury in such a proceeding. But it will be presumed that the jury performed their duty and that all things were rightly done unless the contrary be shown. (In re Road, etc., 109 Pa. St., 118.) In matter of N. Y. L. & W. R. R., 29 Hun., 604, it was held that the power and authority of the court to interfere was settled by Matter of N. Y. C. & H. R. R., supra, and that such power was not restricted in the exercise of its general jurisdiction, and that

1551 the court has power by virtue of its inherent jurisdiction to set aside the report for good and sufficient reasons; upon appeal, 93 N. Y., 385, this case was affirmed and held a matter for

the exercise of the discretion of the lower court.

The jury have a large discretion, and when this has been grossly abused the court will interfere and prevent an injury (Bourgeois vs. Mills, 6 Tex., 76), and will set aside reports for accident or mistake. Matter of N. Y. L. & W. R. R., 63 How. Pr., 265, for acting on erroneous principles. Van Wickle vs. Camden & Amboy R. R., 14 N. J. L., 162; Williamson vs. East Amwell, 28 N. J. L., 270; Swayze vs. N. J. Midland R. R., 36 N. J. L., 295; Crater vs. Fritz, 44 N. J. L., 374; Matter of N. Y. L. & W. R. R., 33 Hun., 639; S. C., 98 N. Y., 447; S. C., 102 N. Y., 704; S. C., 2 How. Pr., N. S., 225; Beckett vs. Midland R. R., 1 L. R. C. P., 241, for proceeding in a careless, negligent or unintelligent manner. Walters vs. Houck, 7 Ia., 72, for being against the evidence or against the weight of evi-Wilson vs. Rockford, etc., R. R., 5 Ill., 273; Fitchburg R. dence. R. vs. Eastern R. R., 6 Allen, 98; Harding vs. Needway, 10 Met., 465; Commonwealth vs. Sessions, 5 Mass., 435, for receiving or rejecting testimony. Matter of N. Y. W. S. & B. R. R., 35 Hun., 260; but where illegal evidence was laid before the jury and at once withdrawn the court refuses to set aside the award. (Goodwin vs. Milton, 25 N. H., 458.)

In New Hampshire, under a statute providing that commissioners may admit or reject evidence, and their decision thereon to be final and conclusive upon such rulings, and that no report should be set aside because of such admission or rejection, the court, in Thompson of the cou

son vs. Conway, 53 N. H., 622, following Freeman vs. Plainfield, 52 N. H., 146, and Jones vs. Goffstown, 39 N. H., 254, held that the court would not set aside the report unless for cause other than the rejection or admission of testimony: But it is held in this case that verdicts are set aside when against the evidence, and when so decidedly against the weight of evidence as to make it apparent that the jury must have been misled or have failed to consider intelligently the evidence laid before them, citing Clark vs. Society, 45 N. H., 334, and also for misconduct or fraud, but not because the court would have found differently upon the same evidence (Palmer vs. Portsmouth, 43 N. H., 265; Wendell vs. Moulton,

26 N. H., 41), and concluding holds that there is no doubt of the power of the court to set aside the report for fraud or misconduct.

and probably also for gross errors or mistakes.

There is no doubt under the authorities of this State above cited, that the court has the power of setting aside the report when the damages awarded are either inadequate or excessive, as this has been done in repeated instances. See also Chapman vs. Graves, 8 Blackf., 308; Kansas City R. R. vs. Campbell, 62 Mo., 585; Corporation vs. Manhattan Co., 1 Caines R., 507; Clarksville vs. Atkinson, 1 Sneed, 426; Van Wickle vs. C. & A. R. R., 14 N. J. L., 162. Matter of Central Park, 51 Barb., 277. While some cases appear to hold a contrary doctrine, the language used should be taken with reference to the propriety of the action rather than with reference to the power of the court. Matter of Boston Road, 27 Hun., 409. Matter of New Reservoir, 1 Sheldon (N. Y.), 408; Troy & Boston R. R. vs. Lee, 13 Barb., 169; Willing vs. Baltimore R. R., 5 Whart.,

460; Allison vs. Delaware Canal Co., 5 Whart., 482. Inde-1553 pendent of a statutory provision making the judgment of the jury final and conclusive, it seems to be the general and uni-

versal doetrine that the court has power to interfere.

In considering the question of damages and in setting aside the report for such reason, the court is governed by the same principles as obtained in the case of the verdicts of juries in common-law suits. (Rheimer vs. S. R. & T. Co., 29 Minn., 147; Matter of William Str.,

19 Wend., 678.)

It has been held that where correct rules have been adopted, the award will not be set aside, unless the amount is palpably erroneous. (Matter of Thompson, 45 Hun., 261.) And where there is evidence to sustain a verdict, and the testimony is conflicting, the court will not interfere. (S. R. & D. R. R. vs. Gammage, 63 Ga., 604; I. & W. R. R. vs. Van Horn, 18 Ill., 257; Kyle vs. Miller, 108 Ind., 90; T. & St. L. R. R. vs. Eddy, 42 Ark., 527; Same vs. Cella, 42 Ark., 428; S. & M. R. R. vs. Rhea, 44 Ark., 258; L. R. J. R. R. vs. Woodruff, 4 Ark., 381; R. R. vs. Gesner, 20 Pa. St., 240; Colvill vs. St. P. & C. R. R., 19 Minn., 283; Sedalia vs. M. K. & T. R. R., 17 Mo. App., 105: City of Kansas vs. K. C. R. R., 84 Mo., 410; H. & G. I. R. R. vs. Ingalls, 15 Neb., 123; V. & T. R. R. vs. Elliott, 5 New, 358; Somerville R. R. vs. Doughty, 22 N. J. L., 495; State vs. Miller, 23 N. J. L., 383; Morgan's Appeal, 39 Mich., 675.) And this is especially the case where the jury have viewed the premises. (W. P. R. R. vs. Reed, 35 Cal., 621; McReynolds vs. Baltimore R. R., 106 Ill., 152; South Park Comm'rs vs. Trustees, etc., 107 Ill., 489; C. & E. R. R. vs. Blake, 116 Ill., 163; O. & R. V. R. R. vs. Walker, 17 Neb., 432; V. & T. R. R. vs. Henry, 8 New, 165; Matter of St., 60 How. Pr., 290; Supervisors, etc., vs. Stout, 9 W. Va., 703.)

1554 But when a verdict is grossly excessive it should be set aside.
(Mutual Tel. Co. vs. Kalkamp, 103 Ill., 420.) But a verdict
more than the amount testified to on one side and less than that
testified to on the other should not be set aside upon the question
of amount alone. (Matter of N. Y. R. R., 21 Hun., 250; Somerville
R. R. vs. Doughty, 22 N. J. L., 495; Ill. R. R. vs. McClintock, 63 Ill.,

514.) But where there was a great discrepancy in two reports, and conflicting evidence as to value, a new trial was granted. (N. O.

R. R. vs. Zerringue, 23 La. An., 521.)

The jury are by no means an independent and irresponsible body. Under the statute "they may view the premises described in the petition, and shall hear the proof and allegations of the parties." And while they act independent of and are not under the control of the court, and while the proceedings before them are absolutely under their own discretion and control, still all their acts as well as the proceedings had before them are subject to review by the court. The law upon the subject, succinctly stated, is as follows:

1. The court, by virtue of its general and inherent power and jurisdiction, has the same powers in proceedings of this nature to correct the action of the juries, and is governed by the same principles applicable to setting aside verdicts of common-law juries.

2. While proceedings of this nature are not to be reviewed from a technical standpoint, still it is the duty of the court to consider the proceedings upon their substantial merits, without technicality, and see that there has not been a miscarriage of substantial justice.

3. The presumption is that the jury acted rightly; but if it is apparent from the proceedings, or it be made to appear to the court that the action of the jury is due to a departure

from correct practice and a false view of the law, so that there has been a miscarriage of justice, or that the result is due to inattention or unfaithfulness of the jury in the discharge of their duty, or to carelessness or irregularity amounting to misconduct, or any improper conduct materially affecting the merits, or if the jury proceeded in a careless, negligent or unintelligent manner, or if the jury have been misled or failed to consider intelligently the evidence before them-in all such cases the court may interfere.

4. The jury, in the admission or the rejection of testimony, is not governed by any technical rules, but such ruling must have a due regard to substantial justice; and when the general tendency and effect of the rulings upon which the jury acted, as binding upon them, as they had no right to do, and it is apparent that improper testimony was received or proper testimony rejected, such as would necessarily have a controlling influence in arriving at a verdict,

then it may become the duty of the court to interfere.

5. When it is fairly evident that the rulings of the jury were inaccurate, and not fairly applied to secure rights, and resulted in substantial injustice being done, it being apparent that such errors had a controlling influence in securing the result, then the court should

interfere.

6. If the amount awarded is unreasonable, is inadequate or excessive, and it is indicated by the proceedings to be the result of gross errors, bias, partiality, prejudice, accident, mistake, misconduct, fraud, gross abuse of discretion, or based upon erroneous principles, and the proceedings furnish a just inference of the existence of such influences, then in such case it becomes the duty of the court to interfere.

Whatever may be said of the nature of proceedings of this character, and the large powers and discretion vested in the jury in conducting the same, it was never contemplated that such powers and such discretion could be exercised arbitrarily and without proper regard for substantial justice. Ordinarily, the greater the power, the more jealous is the law of its careful exercise, and the greater is the responsibility of the persons vested therewith. The functions of juries in these classes of cases cannot be overestimated; to them is left the determination of great interests, and parties are not only entitled to, but have the right to demand of them the exercise of the most cool, careful, intelligent and unbiased

judgment.

The two questions which it is for the jury to determine, viz., necessity, and if found affirmatively, then just compensation, are separate, distinct and independent of each other. The damages allowable must be actual and adequate in the full sense of those terms (G. R. & I. R. R. vs. Heisel, supra), and cannot be allowed on mere conjecture, speculation, fancy or imagination; they must be real, tangible and proximate. (F. & P. M. R. R. vs. D. & B. C. R. R., supra.) Vindictive damages are not admissible. (G. R. L. & D. R. R. vs. Chesebro, 74 Mich., 466.) The question for the jury is, Is the taking in the manner proposed a public necessity, and should the jury so find, they are to give all damages which have been made to appear and that the law allows; but they are not warranted or authorized to give any damages based upon the idea that another or a more advantageous route might or could have been selected and determined upon; this question is involved only in the question of necessity, and in no way applies to or should in any manner be considered in determining the amount of compensation.

1557 It was held in D. W. T. & J. R. R. vs. Crane, supra, that the supreme court cannot consider any reasons against the confirmation of the report of the jury except those which were presented to the lower court, and the statute provides that notice of the appeal shall specify the objections, and that all other objections shall be deemed to have been waived. It must therefore necessarily follow that this court is confined to the objections set forth by the petitioner in its motion.

In order to fully comprehend and understand the nature and scope of the second objection it is necessary to state the grounds upon which the same is based, and which are contained in the mo-

tion, as follows:

"The attorney for the respondents, in opening their case to the

jury, among other things said to them:

"Now, for its application, gentlemen of the jury, I say to you that there is no necessity whatever for this elevated structure to come up River street; I say to you that I shall show you beyond the shadow of a doubt, by the statutes of this State, a provision in the statutes of the State, and in an act passed at the time of this union depot legislation, providing that this union depot must confine its routes to approach its union depot along the line of railroad property already acquired within the city limits. (Record, p. 41.)

I tell you this union depot company, if it does not make its agreements with the Michigan Central not to do it, and does not come into court with it, they can come up on the margin of the Michigan Central property on the south side of River street, and leave Backus' property untouched, without paying Backus a dollar. The Michigan Central do not want them to; they say, Use River street and leave us alone. Why don't they condemn Michigan

Central property instead of condemning our property in the street and imperiling our business? They say they won't do us any damage. We say they will. We say they will ruin our We say, You will ruin our business, if you think you will not. We don't want a dollar of your money; this business that we have built up is worth more than all you can pay us-it is the business of this man's life; he has just settled it so that his boys can run it, and he can have some rest, after he has accumulated this property-if you don't want to pay us, and we don't want your money, go over there and condemn Michigan Central property; condemn your line along the line of the Michigan Central ground twenty-five or thirty feet up River street, and don't pay us a dollar; leave us our street free. And I tell you, gentlemen, to say that you cannot condemn Michigan Central property is the merest sophistry. I will show you the statute which says, You may take the property if it is not needed by the other road. But how shall the question of the need of the other road or company be passed upon? Precisely as these twelve men are passing upon this question. It goes before a jury of twelve for condemnation. The Michigan Central will say to the union depot company, 'It is not necessary to take our route,' just as we say it is not necessary to take this. They will say to the union depot company, 'We need all our property.' 'Very well,' says the union depot company, 'you need all your property; we will try that question before a jury of twelve men in the city of Detroit, whether you need thirty-eight acres of ground of the best business property on River street to carry on your business.'

"How are you going to get rid of it? Why, here is your statute which provides, the legislature having taken thought at last, that if any railroad company shall refuse to give terminal facilities to another, that other may take it under proceedings laid down in the statute. If any railroad company does not need any part of its property, it may be taken for the approach of any union depot railroad company, or any other railroad that desires to enter. Now, we will say that you, gentlemen, not in this case, but we will say you were a jury called in a case of the union depot company against the Michigan Central, and the Michigan Central say, 'I cannot let you go up this margin of mine up the River road, I cannot let you build your elevated road up this margin beyond thirty or forty feet there.' Why? 'Because I need it.' The union depot company replies, 'We will go to a jury upon the question of whether you need thirty-eight acres of land, when you bought nearly half of Grosse Isle down here just to keep your money invested, when you bought land all over here around the suburbs, we

will just go to a jury and see if you need thirty-eight acres of that land on the river front; we will go to a jury and show that jury that no other railroad on earth has such a holding of property near a business centre, and does not need such a holding of property, and never has to exceed ten acres; and how long do you think it would take us on a presentation of facts to get a verdict of the jury that the Michigan Central shall play dog in the manger no more, but shall give this land at a fair price to the union depot company.

"We shall urge upon you, with confidence, that your duty will not be done to Detroit, or to your fellow-citizens, the duty which

you are expected to perform under the constitution of your 1560 State, as explained and fully illustrated by the highest court

o your State, if you permit this route to come up there, when we shall show you, by such men as Mr. James B. Mulliken, that the best route for the union depot company itself is up this Michigan

Central property.

"The attorney for the respondents on his cross-ex mination of the witness James B. Mulliken, put the following questions for the purpose of leading the jury to believe that the petitioner could condemn the property of the Michigan Central Railroad Company, and that Mr. G. V. N. Lothrop, the general counsel of the Detroit, Lansing & Northern Railroad Company had so advised that company:

"Q. Who is the general counsel of the D., L. & N.?

"A. Mr. Charles B. Lothrop.

"Q. Mr. G. V. N. Lothrop before that?

"A. He was formerly.

"Q. That being the best route, was there ever any talk about the power of the said railroad company, wanting terminal facilities, to condemn the Michigan Central ground?

"A. Mr. Lothrop told me at one time there was no difficulty in

doing that.

"Q. Which Lethrop?
"A. G. V. N. Lethrop.

"Although it clearly appeared on the further examination of said witness James B. Mulliken, and by the testimony of said G. V. N. Lothrop, that the advice and opinion of said Lothrop was, that the property of the Michigan Central Railroad Company, or of any other railroad company, could not be condemned without additional legislation, the attorney for said respondents did claim and pretend to and before said jury that under the advice and opinion

of said Lothrop the petitioner could condemn a right of way 1561 along the margin of the Michigan Central property on the

south side of River street.

"Although it conclusively appeared by the testimony in the case that the property of the Michigan Central Railroad Company on the south side of River street was all in actual use by said company for depot or other purposes pertaining to the operation of a railroad, and the same was needed by said company for the purpose of a depot or other terminal facilities, the attorney for the respondents,

114 - 55

at the close of the testimony for the petitioner, made the following statements and assertions to and before said jury:

"I now read the section which I claim gives the power to condemn the right of way in this case over the grounds of the Michigan Central Railroad Company. The section is as follows:

"When any part of the land of any railroad company in this State, in or adjacent to its depot grounds, is not in actual use for depot or other purposes pertaining to the operation of a railroad, and such land is not needed by said railroad company for the purpose of a depot or other terminal facilities, it shall be lawful for any other railroad company, organized as aforesaid, needing such land for the purpose of a depot or terminal facilities, to acquire the same in the same manner as may now be done for such purpose from individuals. The question of actual use and of necessity for the aforesaid purpose by said railroad company, owning and not using said land, shall be determined, in addition to other questions, as provided by law, in cases of condemnation of lands for the purpose aforesaid, and the same proceedings, in all respects, as near as may be, shall be had for the aforesaid purpose, as now provided by law where land is acquired for such purpose from individuals.

"It is very clear that this matter of the use and occupation of the grounds, and of the need of the railroad company for such grounds, are questions which must be determined by a jury, called as you are called. They must pass upon the question of whether this is the best route. They ask the Michigan Central for the privilege of occupying the grounds, and if they fail to agree they take it before a jury. How long do you suppose it would take a jury to determine it?"

The counsel for the respondents, who assisted the attorney on the trial before said jury, at the close of the testimony for the petitioner, made, among others, the following argument or statement to and before said jury:

"But it is a noteworthy fact that this very question, quoted here by my brother, Dickinson, was passed in 1881, the same year that the union depot act was passed, and also that the two acts were the product of the same mighty brain and the same strong hand, to wit, Mr. Joy, the head of the union depot project. Both acts passed by the same legislature, both coming from the same man, twins, my friends, born at the same birth, christened after the same father, both of them the progeny of this union depot scheme. What did Mr. Joy draw that act for? You know and I know that he is a man that does not act without a motive. What did he put senseless stuff, if the interpretation of my friend, Mr. Baker, is correct upon this statute book for? What was its purpose? Do you doubt for a single instant that he had in view the practicability and the possibility of using the Michigan Central grounds in connection with the grounds he acquired, touching them at Twelfth street, for

the purpose of getting further up into the city? Have you any question about that? In what other cities, in the State of Michigan, is there any project of this kind on foot? Where else does any necessity arise for legislation on this point?

Can you tell me, can any one show me? It does arise here, and it was born here, came from the same source that the union depot act came from, the same session of the legislature, to wit, 1881. That is a fact worth considering. And that Mr. Joy was right, that you can take part of these grounds for other railroad purposes, was

demonstrated by the history of this case.

"Almost the first departure from the union depot grounds at the foot of 12th street takes the elevated structure of this railroad within the sacred precincts of the Michigan Central Railroad grounds, their 20 acres, cuts off a corner of it, not only crosses their tracks, but goes within the holy of the holies, into the very temple itself, into this mystic and magic 38 acres of depot grounds, around which the mighty protection of the law, according to my friend Mr. Baker, is put. How does this happen? According to my friend's argument, you cannot get an inch of it. According to his argument the thing is so absurd as a matter of fact that no jury in the world would ever permit it to be taken."

"So, my friends, in view of the history of this matter, it is all, I was going to say nonsense, but it certainly is not law to say to you that this statute does not bear the meaning which my brother Dickinson puts upon it. Let us look at that statute. Tell me what it does mean. What can it mean? I have asked you already what was it drawn for? Why, it was a sort of Siamese twin to this union depot act. If the meaning that is contended for it is not the meaning of it, tell me what is the meaning. What case is it meant

to fit?

"When any part of the land of any railroad company in this State, in or adjacent to its depot grounds, is not in actual use for depot or other purposes pertaining to the operation of a railroad, and such land is not needed by such railroad company for the purpose of a depot or other terminal facilities, it shall be lawful for any other railroad company, organized as aforesaid, needing such land for depot or terminal facilities, to acquire the same in the manner as may now be done for such purpose from individuals.

"That is very plain, isn't it? Can anything be plainer? This act says in effect, it does not say in effect, it says positively, that where the land is in use or needed for depot purposes that it may be condemned like other land, needed now, needed today, needed this instant, not needed ten years from now. To think the gentleman was in error when he says this term needed referred to what might happen in the future. When it is in use now and needed now, that is the meaning of the law. But when the land is in actual use and needed it cannot be taken. When it is not in actual use and not needed, then, my friends, it may be condemned exactly in the same manner as your property or Mr. Backus' property, or anybody else's property may be condemned, but with this condi-There are two other facts to be submitted to the jury in this connection, added to the investigation to be made by the jury, to the fact to be inquired into in that case like the present one. In the present case you are to inquire into the necessity of using Mr. Backus' land, and if necessary to ascertain what compensation he

should receive for the condemnation; but in this case the question of actual use and of necessity for the aforesaid purposes by said railroad company owning and not using such land shall be

determined, in addition to other questions, as provided by law, in case of condemnation of land for the purpose aforesaid, and the same proceedings in all respects, as near as may be, shall be had for the aforesaid purpose as now provided by law

where land is acquired for such purpose from individuals.

"So that in a case of this nature you are to make the same inquiry which you made in the case of Mr. Backus, but in addition to that the jury is to answer whether the land is in actual use, and whether it is needed by the railroad company for depot purposes. Now, it seems to me that is very plain. It is as plain as words can make it, and yet my friend says it does not mean anything. He says you cannot do it and you must not do it, and he says if a jury should determine that the land was not in actual use, and by use is meant bona fide use, a real use, not a use for the purpose of preventing somebody from taking it, but a real bona fide use, and the need is meant a present need; and yet he says if the jury should find that it was not in such use, and that there was no such need, that there is no court in the world that would let the verdict stand. It will be a sad day for the people of the State of Michigan if the supreme court of that State ever carry out the threat made by my friend, Mr. Baker, and overturn the verdict of an honest jury, in their endeavors to protect the rights of the citizens and of the public in a matter of this kind. The supreme court, under such a state of facts, he says, would not sustain the verdict. Mr. Lincoln had a homely way of saying that you had better not cross the bridge until you get to it, and I do not think that you, gentlemen, had better bother with the supreme court until we get to that. One thing is certain, that a judge on the bench, when the case

is being tried before him, will not tolerate the lawyer who threatens him with the supreme court. He gives his

best judgment, uncaring and unapprehensive as to what the result will be. His only aim is to do justice, and so your aim must be to do justice and to act according to the lights which you have before you. I say to you, if it is worth anything to you, if it is worth as much as Mr. Baker's assertion, I say to you, that the supreme court would not do it; that there is no principle upon which they could do it; that this is a mere question of fact, in a matter which the constitution has given you supreme control over. Further than that, that the constitution has given you more control in a matter of this kind than even a subordinate court, that it gives a jury in a court of record, because you are judges both of the law and the facts, and your findings on the facts cannot be assailed. In what way can they be assailed? How can the supreme court, as a matter of law, determine the weight of testimony? How can the supreme court determine whether you believe Mr. Backus most or Mr. Joy most when their testimony are in conflict? And yet this matter of the use and the need of that road there would all be matter of testimony for you to weigh and determine, with such

lights as your experience had given you. How, I ask you, could

the supreme court overturn your judgment?

"Now, take this statute and read it and see if it does not bear us out in the position we take. Tell me what it was made for, if it was not made for a case like this. Tell me if it would not be better for all concerned for this railroad to go up on the Central grounds, instead of going up River street. Tell me if Mr. Backus' interests are not at least on as important a level as the interests of this com-

pany in this proceeding. The law says they should not take this street unless it is necessary, and we say it is not necessary, and we invite you to that conclusion. We show you the route, which they themselves or at least their leading men agree would be a preferable route; but they say they will not take it, because under the law they cannot take it, because they know in advance that a jury if called will determine that the railroad are

using their ground and have need to use their ground.

"Now, my friends, I have asked you already, would a jury determine that? What do they want with their grounds? What business have they at all with that immense quantity of ground? They are there as an enemy to civilization, they are a hostile foe within the limits of your city. No other city would tolerate such a state of things. They are standing in the way of progress in this city. Railroads come here to benefit us. The good they do us is incidental. They come here to benefit themselves, and above all, my friends, no improvement can benefit a community which overrides the right of the citizen, and which stands in the way of the proper advancement of that community. They have got the whole river front, and it is as much as we and our wives and our little ones can do to catch a glimpse of that beautiful river, the scene of the sports of our youth, to which we resorted for health and pleasure. Thirtyeight acres there and 48 acres just alongside of it, and yet we are told that a jury could never be got but would find that a strip of the width of this elevated structure could not be taken from the air of heaven 38 or 40 feet above the track of that road, because they were in actual use and needed for depot purposes by the railroad

company. My friends, that is an insult to your intelligence; it is against the facts and it is against common sense. There is a moving out from that 38 acres of the Michigan Central. The Grand Trunk has gone out, the Detroit, Lansing & Northern is going out, the Flint & Pere Marquette is going out, three great railroad corporations have gone, and are going elsewhere to do their business. My friend, Baker, desires you to believe that any jury who will be called upon to pass that question would treat it as nonsense, and that if they did agree to it, the supreme court would overrule them. We take a different view."

After the testimony of Mr. G. V. N. Lothrop had been introduced, the attorney for the respondents made the following argument or statement to and before said jury relative to the testimony of said

witness:

"For the first time in a somewhat long professional career, although a young man, counsel have seen fit to call upon the wit-

ness-stand lawyers to testify what the law is. Nothing was ever heard of it the time before, and for the first time in a long professional career we have been charged, or I have been charged, with not doing my duty, because I would not do such an unprofessional thing as to call a lawyer to testify as to the law. Now, gentlemen of the jury, will sound make you believe or disbelieve the evidence of your own ears and the testimony of Mr. Lothrop. Did Mr. Lothrop tell you, or would he tell you, or could he be brought to tell youcounsel of the Detroit, Lansing & Northern, formerly counsel for the Michigan Central, a railroad lawyer from the crown of his head to the sole of his feet, could he be brought to tell you that you could not condemn that margin of the Michigan Central under that statute? Are you to be driven, not only to consider, but to

1569 take the statements of Mr. Baker as to testimony that occurred when you were all here. Mr. George V. N. Lothrop, who took that witness-stand, would never, I think, have stated, railroad lawver as he is, and counsel of railroad companies' interests as he is, he never would have stated to you that that strip of land could not be condemned for depot purposes and for these terminal facilities. and he did not so state to you, but he did state that that question under that statute that I read to him, and which was called to his attention for the first time, would go to the jury, and you are to be driven and bulldozed by a powerful pair of lungs to disbelieve what Mr. Lothrop told you upon that witness-stand and not one hour ago."

The counsel for respondents, in his closing argument to and

before said jury, among other things, said to them :

"And they came here to you, and you do not say yes; you say, 'We will look into this matter and we will see if it is necessary, we will see if there is not a better way of doing this, a way which will interfere less with private property, that will take less of the public streets, and will achieve the same results.' Now, is there a way? I have already said to you that nobody denies that. Even their own witnesses accede that. Ellis, Joy, every one of them say that the other way would be the best. Mr. Joy at first began saying that it could not be done anyhow under this statute, that it would require what is called a special act; but when his attention was called to the fact that there can be no special act in this State, but that there can be only general laws, he finally admits that under the statute we have brought to you and read to you, it could be done provided anybody would swear in the petition to enough to

1570 start the proceeding. How can it be done? Can it be done? He makes one objection; he only gives one practical reason in all his testimony; he says you cannot do it because if they put an elevated road on the Michigan Central grounds the posts would be an obstruction. Do you mark and understand that? Posts are no obstruction to poor Backus; they are no obstruction to business people who were there before the road came there; they do not interfere with the use of the street one single bit, and according to our brother Joy, they are a blessing in disguise, if you will only try them long enough to find it out. But when you come to put

them within the classic precincts, within the sacred domain of the railroad company, then all of a sudden they become a nuisance and an obstruction. They become so great an obstruction then that no jury should permit them to be put up there! There is an old saying that you cannot eat your cake and have it too. I do not for the life of me see how you can make these things a blessing to Backus in front of his premises, and a nuisance and obstruction to the Michigan Central R. R. on their premises. They say that street cars could run under these tracks, carriages could run under them, that all the uses of a great public street could be carried on under them, locomotives and trains could run under them,—here is the locomotive on the Central track that has to run under them. All this has to be done, when you come to look at Backus' case; but the moment you put in the road on the other side of that fence, all these reasons are distorted and they become reasons against it, instead of reasons for it.

"One juryman asked a ques u that was in my mind, when they talked about these roac being an obstruction if put up in 1571 the air there: he aske question: Why cannot they put Why not? Tell me why not? buildings under them. You will find buildings under other such obstructions. You will find buildings under approaches to bridges, buildings in which business is carried on; and you know and I know that the railroad buildings, freight sheds, and buildings of that kind, are never run to any great height; 22 feet would be a great height for one of those sheds. They certainly would not interfere with their use for that purpose.

"Mr. Dickinson: You may have forgotten Mr. Joy's testimony, that the Ludgate Hill station in London had three stories of rail-

road running in over one another.

"Judge CHIPMAN: I have not forgotten that. But the question asked by the juror struck me as being entirely pertinent. We are not here to find a way for this company to do their work cheaply. You are not here for the purpose of saving their money; you are not here for the purpose of finding the necessity of using this street, and the moment you begin to talk among yourselves as to how much it will cost the company, more or less, that very moment you fail to do your duty under your oath, you become unfaithful to your duty to Backus, and utterly unfit for the great trust reposed in you by your presence here.

"Why not build the elevated road alongside there? Why not carry it right through? There is only one reason why—that the posts will interfere. But we say the posts will interfere with Backus; and the supreme court say that the business and interests of the respondents in a case of this kind are just as important and as sacred in the eyes of the law as the business and interests of the petitioner. Look at Backus, employing 150 men. How many will

the union depot employ? And how many would be employ if their road goes in front there? Will they give you 150 new citizens? You know they won't. That great corporation, the Michigan Central railroad, has not such a number of men

in its employ there at that depot as Mr. Backus employs. Which business is the largest, which is of the most real importance to our people, their business or Backus'? You know what Backus' business will do for the city; the merchant knows it, the manufacturer knows it, every man who is engaged in any kind of business for the making of money knows that much at least is secure, and that such ought to be preserved and held onto; and while we want to secure the other, and secure the improvements which the union depot company may bring, we do not want to throw away anything we have got, but we want to keep what we have got and get

as much more as we can.

"They say that you could not make a petition to a court under this statute that has been read so often that I hate to repeat it; they say no man could go into court and swear to a petition stating that the Michigan Central Railroad Company did not use that land and had no need of it. Would any of you find any difficulty about going and swearing that the Michigan Central Company are not using 30 or 40 feet in the air there, and that they have no need of it; and have you any idea that the Michigan Central Railroad Company could go in and defend against it? Have you any idea that they can prove that they have any need of it? You know that they are not using it, and the only thing they would be reduced to would be as to the question whether putting those posts in the ground there was such obstruction to their business as would defeat the application. I do not believe that any jury would find it any obstruction. No jury would if they believed the testimony given here, to put this

1573 road in front of Mr. Backus' place, because all the testimony brought by the petitioner is that it is not a nuisance and it is not an obstruction. They could run their tracks under it; there would be no trouble about it; they could put sheds under it; it would be no interference really, or so small an interference that no jury would take it into consideration, provided you believe the testimony given in behalf of the petitioner in this case. Is there any practical difficulty about that? Answer me that. They say no man could do it without committing perjury. Would you commit perjury if you went into court and took oath that they did not use and did not need this space up there in the air? The fact is that they are not using those grounds in any such manner as they are trying to make out; some of those cars lay there month in and month out, as anybody can see who goes down there and looks; they lay there until they are begrimed with dust and age. They are not using it; and it was because the Michigan Central knew that under this statute a petition could be made, and that the probabilities were that a jury would give a verdict and that that verdict would be sustained by the court, that they stopped fighting this project and let them have this corner there, let them have 19 feet for the viaduct, and they have come to terms, so that there is no longer any fight between the two companies. Now, my friends, there is no difficulty in this; I want to impress on your minds honestly and fairly that there is no difficulty. Would you hesitate to

take that oath that they were not using it, for you know they are not using the height of that elevated road, and they do not need it. And the company would have to come in and prove that they were

using and that they were needing it, and they could not prove that the putting of the posts there was an obstruction and a nuisance, if you believe they are not an obstruction

and a nuisance to Backus.

"Somebody asked here whether the Michigan Central might want to use it for an elevated road. That came up yesterday. Of course they do not want to use it. Their whole system is a system at grade; they come in at grade, their buildings are all put at grade, and they have no plan on hand and they have no necessity for an elevated road there—the Michigan Central has not; so you see that on that score there is no practical difficulty, and if you refuse to give that application to this statute, then I ask you, What use are you going to make of it? If it does not mean what we contend, tell me what it does mean. That is fair. If we are not right, then who is right? Nobody will tell us what it means. Mr. Joy undoubtedly had it passed when he had the union depot act passed. Nobody vouches any explanation about it. What does it mean? Evidently, in some way, it means that one company may take the depot land of another company. That much everybody concedes And yet they undertake to tell you practically that there are no circumstances under which that can be done. Now, my friends, the circumstance has arisen, the case is here, and if they can go over there it is the best route for them, it is the best route for the city. It saves you the street, it saves Backus, it keeps the railroads all together over that fence, and the public generally will be better accommodated."

The attorney for the respondents, in his closing argument to and

before said jury, among other things said to them :

"And I shall convince you, under authority and by the law, that the union depot company can take that margin of the Mich-1575 gan Central road, beyond the shadow of a doubt, and I am

not here to urge any absurdity upon you, I am not here to urge any folly upon you, because to take an insincere position and to present one in which I have no confidence, or in which we have no confidence, after the consideration we have given to the subject, is not according to my methods or my habits. My friend on the other side has said that I wanted a jury because I thought I could carry the jury. Why, gentlemen of the jury, if I have ever had any successes before juries or elsewhere, my fellow-citizens will at least do me the justice to say that it is because I have been at least considered a sincere man, that although sometimes I may have been wrong, my worst enemy will not say that I have not acted from conviction, and I have not been guilty of the supreme folly of bringing into this court, before a jury of twelve men, any absurd doctrine, as advocated by Mr. Baker, that, in the first place, there is no law that will permit you to take that margin of the Michigan Central road for the elevated railroad.

"Then turn back to the statute at the same time passed for the

purpose, as suggested by Mr. Joy, to enable some railroad company at some time, somewhere—he cannot remember to have drawn it—to enable some railroad company, somewhere or at some time, to condemn the depot grounds of some other company that is not using it. Whereabouts has it been done? And why did Mr. Joy draw the act, and why is it drawn in connection with the union depot act, at the same session, except to enable them to use the grounds of the Michigan Central? This is plain English. I think you can understand it, and will not take the statement that it cannot be

done. This is a part of the general railroad law, which has heretofore provided that land may be taken, under the constitution, for the use of railroad companies, on the verdict of twelve freeholders, or on the appointment of three commissioners, precisely the business you are doing here; and this is the end of a

section added in 1881:

"When any part of the land of any railroad company in this State, in or adjacent to its depot grounds, is not in actual use for depot or other purposes pertaining to the operation of a railroad, and such land is not needed by said railroad company for the purpose of a depot or other terminal facilities, it shall be lawful for any other railroad company organized as aforesaid, needing such land for the purpose of a depot or terminal facilities, to acquire the same in the same manner as may now be done for such purpose from individuals. The question of actual use and of necessity for the aforesaid purposes by said railroad company owning and not using said land, shall be determined in addition to other questions as provided by law in cases of condemnation of lands for the purpose aforesaid, and the same proceedings in all respects, as near as may be, shall be had for the aforesaid purpose as now provided by law where land is acquired for such purpose from individuals."

"Mr. FREUDE: Provided it is not in actual use.

"Mr. Dickinson: Yes, and provided it is not needed, but let me tell you, you provide by law that no man shall enter a house in the daytime, it shall be a crime to do it, if he does it secretly. If he does, certain things shall be done. You do not take that man right up and send him to prison, if you find him doing it. You have to give him a trial before twelve men. Now when you find a statute providing that the land may be taken if it is not used, or

1577 needed, and it provides a tribunal to try it, would you forestall that tribunal by deciding at the outset that you cannot

succeed before the jury?

"Now a word more as to the power to take it. Mr. Baker has laid some stress on that, and I will only add a few words to what my distinguished associate has said, and to what Mr. Lothrop has said. I call your attention to his testimony again. He swore on direct examination that he had some conversation with Mulliken at some time with regard to getting a right of way in from the junction. He said at that time that he was very positive there was no law which would permit them to acquire property of the Michigan Central road. He did so testify. But do you remember on the cross-examination I said to Mr. Lothrop: Do you remember

the passage of the union depot act? Yes, sir; I aided, said Mr. Lothrop, in advising the judiciary committee of the legislature as to some parts of it. Now, said I, Mr. Lothrop, was your conversation with Mr. Mulliken before or after the passage of the union depot act; in other words, was the time when you said there was no statute providing for the combination of the depot grounds of the Michigan Central, to give the Detroit, Lansing & Northern a passage, before or after the passage of the depot act by the legislature? He says, I am clearly of the opinion that it was before. So that you see at the time he had the conversation with Mr. Mulliken, at which time he says he knew no law by which the grounds of the Michigan Central could be taken, this act for the taking of the union depot grounds was not passed, because that was passed at the session when the union depot act was passed. What value is his testimony, when his attention had not been called to it;

1578 it was not called then because no such act was passed. But now he says, the proceeding provides—whether it is constitutional or not he will not say—but under it, it is provided for the question of the need of the Michigan Central owning it, or its use of it, and that is a question of the use in good faith, and the need in good faith, and it is to be tried by a jury like this. That is his

testimony.

"Now I want to know whether the jury are going to pass upon this question of necessity, or are going to pass it by, because of the acts of the union depot company since, in getting ready for this trial by buying property since the first trial. I want to know, secondly, if there is a man on the jury that believes, in the face of the testimony, that any other jury of 12 of their fellow citizens, is going to say, in the face of the testimony of their own witness, Mulliken, that they need that space there. If you find that they do not use it-and Mulliken says they do not use it, because their system is at grade-how can you find that they do use, or any jury would find that they use it? How can you find that they need it, when Mulliken says that they use it for the storage of freight cars? I do not care anything about the Michigan Central employees they bring in They brought Mr. Sutherland here. I asked him, on crossexamination about this. Let us see about this question of use and need. I remember what he testified: You accommodated the Grand Trunk up to the time they left? Yes. You have accommodated since the Detroit, Lansing & Northern? Yes. The Flint & Pere Marquette? Yes. The Bay City road? Yes. You accommodated all these roads that are going out and have gone out? You have just bought this immense area of 400 feet on River Yes. street clear through to the river, from the Detroit, Lausing & Northern? Yes. You have room enough on your grounds

to put up two elevators; all these roads are going to leave you; the Detroit, Lausing & Northern did not leave because they were not fully accommodated. Mulliken says they did not. Mulliken says they were perfectly comfortable; had all the room to do their freight and passenger business that they desired in the Central grounds, and that was not the difficulty; that the difficulty was that

they had extended their line and had to carry on a competition with the Michigan Central Company. These are going out. What are they going to do with the room that is left after they go out? Cannot they give us these few feet, if it does not injure their track? Think of it, and take it home to yourselves, gentlemen of the jury."

The objection based upon what took place at the hearing before the jury, as above set forth, involves the question, first, Has the petitioner power under the statutes of this State to condemn a right of way for an elevated railroad along the margin of the property of the Michigan Central Railroad Company-and if it has no such power, secondly, did such claim, made under the circumstances, and in the manner in which it was made, so bias and prejudice the jury against the petitioner, as to have caused them to award excessive compensation, and does the same furnish a just inference of the existence of such influences?

The power of eminent domain is in the State; and is a power delegated by the people to, and vested in the legislature, subject to certain constitutional limitations, and it can only be exercised by virtue of a legislative enactment, it is a power the exercise of which cannot be implied or inferred, but must be given in express terms, or by necessary implication. (Lewis on Em. Dom. sec. 240, and

cases cited in note.)

1580 The statute which authorizes the petitioner to condemn property by virtue of the power of eminent domain, is, like all grants of power by the Government, to be strictly construed (Lewis, sec. 254), and only such construction will be given an enactment to carry into effect the chief and manifest purpose for which it was passed. (Commonwealth vs. F. R. R., 8 Cush., 240; Gray vs. L. & B. R. R., 9 Beav., 391; Martin vs. Rushton, 42 Ala., 289; Spofford vs. B. & B. R. R., 66 Me., 26; Binney's case, 2 Bland Ch. (Md.). 99; Lea vs. Johnson, 9 Iredell Law, 15; Belknap vs. Belknap, 2 Johns' Ch., 463; Watson vs. A. Water Co., 36 N. J. L., 195; Reynolds vs. Spears, 1 Stew., 34; A. G. S. R. R. vs. Gilbert, 71 Ga., 591; C. & E. I. R. R. vs. Wiltse, 116 III., 449; Belcher S. Co. vs. St. L. Grain Elevator, 82 Mo., 121; Cox vs. Tifton, 18 Mo. App., 450; Jersey City vs. Central R. R., 40 N. J. Eq., 417; Central R. R. vs. Hudsunder Co., 40 N. J. L., 289; Miami Coal Co. vs. Wigton, 19 Ohio St., 560; P. & L. E. R. R. vs. Brace, 102 Pa. St., 23; Simpson vs. S. S. Water Works, 24 L. J. Eq., 380.)

The general principles that property once taken for public use cannot be again taken, and the principles which govern in respect to the taking of property already taken and devoted to public use,

are as follows:

1. All property held for public use is still subject to the eminentdomain power of the State, with this exception, that it cannot be taken to be used for the same purpose in the same manner.

2. The right to take property already devoted to public use must

be given in express terms or by necessary implication.

3. Whether such authority has been given in any case, 1581 either in express terms or by implication, is necessarily a question for the courts.

4. Whether the power exists in any given case is a question of legislative intent, to be ascertained in the first place from the terms of the statute, and in the second place by the application of the statute to the subject-matter. If the language of the statute is explicit, the courts have nothing to do but to give effect to the express language

of the statute. (Lewis on Em. Dom., sec. 276.)

The legislature cannot divest itself of its sovereign powers, and while it may grant to an individual, or to a corporation, the power to exercise the right of eminent domain, still, when so exercised, all property taken is still subject to the power of eminent domain in the State. The power is in the State. The exercise of the power may be granted, and when granted and exercised, the same power

over the property is still in the State.

The right to take property already devoted to public use must be given in express terms or by necessary implication. This principle has become established by abundant authority. (Lewis on Em. Dom., sec. 226, and cases cited; Boston Water Co. vs. W. R. R., 23 Pick., 360; Springfield vs. Can. R. R. R., 4 Cush., 63; Proprietors, etc., vs. Lowell, 7 Gray, 223; H., etc., R. R. vs. L. & H. R. R., 118 Mass., 891; B. & M. R. R. vs. Lowell, 124 Mass., 368; P. & W. R. R. vs. N. & W. R. R., 138 Mass., 277; N. J. & S. R. R. vs. L. B. Comm'rs, 39 N, J. L., 28; Matter of B. & A. R. R., 53 N. Y., 574; People ex rel. vs. Thompson, 98 N. Y., 6.)

The principle being well established that property already devoted to one public use cannot be taken for another public use 1582 without express legislative authority, it remains to be seen whether the petitioner has express legislative authority to condemn the property of the Michigan Central Railroad Company.

The act under which the petitioner is incorporated gives general authority to condemn "any real estate, property or franchises," needed for the purposes of such corporation; but this general authority, as we have seen, does not apply to property that is already devoted to a public use. In addition to authorities above cited, see W. & N. R. R. vs. R. C. Comm'rs, 118 Mass., 561; A. & F. R. vs. A. & W. R. R., 75 Va., 780; O. C. R. R. vs. Bailev, 3 Or., 164; C. C. R. R. vs. Moss, 23 Cal., 323; C. P. R. R. vs. C. P. R. R., 47 Cal., 549; and as to such property, in order to make it subject to condemnation, we must find an express grant of authority.

The act expressly authorizes the petitioner "to lay out and construct its tracks upon or across any stream of water, * * * and across any plank road, railroad or canal, which may be necessary for

the purpose," etc. (Sec. 4, sub. third.)

And in section 6, which confers general power to condemn the lands needed, there is contained an express limitation. It provides as follows: "In case any company is unable to agree for the purchase of any real estate, property or franchises required for the purposes of its incorporation, it shall have the right to acquire the title to the same in the manner and by the special proceedings prescribed in this act; but there shall be no power, except for crossing, to take the track or rights of way of any other railroad company, without the consent of said railroad company."

Without considering the effect to be given to the prohibition contained in this provision, it is sufficient to say that the expression in this act of authority to condemn a right of way "across" another railroad, necessarily excludes the power to condemn a right of way "along" another railroad, as proposed, and as it was contended before the jury could be done in this case. The rule of interpretation was stated by the supreme court of Wisconsin as follows: " But it is a well-settled rule of construction that specific provisions relating to a particular subject must govern in respect to the subject as against general provisions in other parts of the law which might otherwise be broad enough to include it." (Felt vs. Felt, 19 Wis., 196.) And in New Jersey, the court, after citing several English cases, and then said, "When the intention of the law given, which is to be sought after in the interpretation of a statute is specifically declared in a prior section as to a particular matter, it must prevail over a subsequent clause in general terms, which might by construction conflict with it. The legislature must be presumed to have intended what it expressly stated, rather than that which might be inferred from the use of general terms." (State vs. Trenton, 38 N. J. L. 64-68.)

It follows that the petitioner, under the act under which it is incorporated, has no power to condemn property already devoted to the public use, and for that reason could not, under the statute, acquire the right along the margin of the Michigan Central railroad

property.

The petitioner is expressly prohibited, except for the purpose of making a crossing, from taking "the track or rights of way of any other railroad company without the consent of said railroad company," sec. six, supra, and as we have seen the act does not contain any provision whatever which either expressly or impliedly authorizes such condemnation, and there is no attempt to confer any such

1584 It was further contended that the petitioner was a railroad company, and as such had power to condemn the property of the Michigan Central railroad, under and by virtue of an amend-

ment to the general railroad law.

The general railroad act contains the same provisions, "that there shall be no power, except for crossing, to take the track or rights of way of any other railroad company, without the consent of said railroad company, except as hereinafter provided." (1 How. St.,

sec. 3331.)

As originally enacted, section 36 of the general railroad law, related to the manner of making crossings, with a proviso, "that no such crossing or connection shall be made within the depot limits of any such company, or acquiring the right thereto, as provided in this act, for the taking of land and other property." (1 How. St., sec. 3350.) This section was, however, amended in 1883, and again Public Acts, 1883, p. 188; Public Acts, 1887, p. 294, and the amended section contains no provision authorizing the condemnation of the depot grounds or rights of way of another company.

The following amendment to the general railroad law was enacted

in 1881 (1 How. St., sec. 3357):

"Sec. 44. When any part of the land of any railroad company in this State, in or adjacent to its depot grounds, is not in actual use for depot or other purposes pertaining to the operation of a railroad, and such land is not needed by said railroad company for the purpose of a depot or other terminal facilities, it shall be lawful for any other railroad company, organized as aforesaid, needing such land for the purpose of a depot or terminal facilities, to acquire the same in the same manner as may now be done for such purpose

from individuals. The question of actual use and necessity 1585 for the aforesaid purposes by said railroad company owning

and not using the land, shall be determined in addition to other questions, as provided by law in cases of condemnation of lands for the purpose aforesaid, and the same proceedings in all respects, as near as may be, shall be had for the aforesaid purpose as now provided by law where land is acquired for such purpose from individuals."

Except so far as the power is conferred by the above section, there is no authority under our laws to condemn the property of

another railroad company.

The conclusion stated in the opinion in G. R. N. & L. S. R. R. & vs. G. R. & I. R. R., 35 Mich., 265, cited by counsel for respondents,

has no application whatever to the principle here involved.

Wa-ving the question of the right of the petitioner to avail itself of the provisions of this statute and which is extremely doubtful, as it will bear the interpretation of being applicable only to companies organized under the provisions of the general railroad law, the principal difficulty of the contention of the respondents is, in not only assuming the right and the power, but also assuming the existence of all the conditions necessary for the exercise of the power.

In order that the power may be exercised under this statute, it is necessary that both conditions exist, viz., the land proposed to be taken, must be not in actual use and not needed, and these questions under the statute must be determined, in addition to other questions, as provided by law in cases of condemnation. These questions can only be determined in a direct proceeding, and it is not only impracticable, but impossible to have them determined in a proceeding when they are not necessarily involved. The power

given is the exercise of the power to condemn, and it would be but sheer folly to attempt to exercise such power when

the necessary conditions did not affirmatively appear, and it certainly was not the intent of the legislature that such questions could be made to arise in any other but a direct preceeding, and

no issue of fact arises until such issue is framed.

The question is a question of power, not a question of expediency. The statute does not bear the construction contended for by the respondents, and the petitioner has not the power to condemn under the statute above cited. The statute does not go beyond the terms of some adjudications, as property not in use for railroad purposes,

and not necessary to the proper exercise of corporate franchises, may be taken by another company (B. & O. R. R. vs. P. W. & K. R. R., 17 W. Va., 812; P. P. & J. R. R. vs. P. & S. R. R., 66 Ill., 174), nor will the general rule apply when but a small and immaterial part is necessary for the right of way of another company, or other imperative use (C. & W. R. R. vs. C. & E. R. R., 112 Ill., 589; N. Y. H. & N. R. R. vs. B. H. & E. R. R., 36 Conn., 196); and where a company owned land abutting on a street, the fee extending to the middle of the street, it was held that another company having authority to occupy the street would not be prevented from doing so by the fee being in the first company (Phil., etc., R. R. vs. Penn., etc., R. R., 16 Phila., 636).

In Allegh. V. R. R. vs. Pittsb. Junc. R. R., 122 Pa. St., 511, an attempt was made to lay out a route through a railroad yard, etc. The master held the action justified under an act which provided that if "in the judgment of such court it is reasonably practicable to avoid a grade crossing they shall, by their process, prevent a crossing at grade." Upon exceptions to the master's report, the court

below held that the act had no application, for the reason 1587 that it referred to railroad crossings alone, and that this was not a case of crossing at all in the proper sense of that term. This was held correct, and the court say: "The act of 1871 relates 'to crossings of lines of railroads by other railroads." There was no attempt here to cross the line of plaintiff's road. It was an attempt to run through plaintiff's yard, and the crossing of some of its yard tracks and switches which were merely incident to the use of its main line, as was well observed by the court below, "the attempt is not simply to cross the yard and tracks with a common use, but absolutely to take from plaintiff a portion of their yard for the sole use of the defendant. The issue is not in what mode the defendant should cross plaintiff's property, but solely whether it can cross at all." In this case it is also held that while the franchises of a corporation are property, subject to the power of eminent domain, yet when property has been already taken for one public use, by a corporation, it cannot be taken by another corporation for another use, except by express grant or by necessary implication, and holds "the principle well settled that the lands or right of way occupied by one railroad company, for its corporate purposes, cannot be taken by another railroad company, except for new crossings, and then only for crossing purposes, and not for exclusive occupancy." Cases cited.

It was claimed that the yard of plaintiff was larger than necessary for its then present use, and that it could be so rearranged as to accommodate defendant's track without serious detriment to the plaintiff, either in the present or the future. Upon this question the court

say: "We are of the opinion that a railroad company has a right to consider the needs of the future, and to construct its road and make its plans with reference to those future needs."

And "every reasonable intendment must be taken in favor of the primary rights, etc.; no actual encroachment upon these rights can be santioned or allowed, and in measuring their extent there must be a liberal construction for the future, as well as the existing ne-

cessities of the complainant, the use of the existing tracks, the construction of additional ones, the convenient storage of its freight at all seasons, and the unembarrassed transaction of all its business."

It was further said by the court that as the location claimed was a matter of economy, not of necessity, and upon this quoting from another case, say: "This plea of necessity is so frequently used to cover infractions of both public and private rights that, prima facie, it is suspicious and must be closely scrutinized, especially when it is used to carry corporate privileges beyond charter limits;" also, "that all acts of incorporation and all acts extending corporate privileges are to be construed most strongly against the companies setting them up, and that whatever is not unequivocally granted must be taken as withheld."

Important legislative grants cannot be interfered with or destroyed upon a mere pretense, in fact at the will of the holder of

the latest franchise.

In H. R. vs. Lee, 118 Mass., 391, it is held that it cannot be presumed that the legislature intended to allow land devoted to public use to be subjected to another, unless the authority is given in express words or by necessary implication, and such implication can only be found in the language of the act, or from the application of the act to the subject-matter, so that the railroad cannot be

laid, in whole or in part, by reasonable intendment on any other line. A well-considered case and one in point is that

of B. & M. R. R. vs. L. & L. R. R., 124 Mass., 368.

In P. P. & C. I. R. R. vs. Williamson, 91 N. Y., 552, the court, after stating the proposition as above, say: "But we do not rest our decision upon that point, but upon the fact that these lauds having already been lawfully appropriated, under the right of emineut domain, to a public purpose, express and direct legislative authority is necessary to justify their appropriation by proceedings in invitum

to a different purpose."

In I. C. R. R. vs. C. B. & N. R. R., 122 Ill., 484, the court, after discussing the subject with reference to a statute, among other things, say: "It is no part of the duty of courts to provide a remedy in any case, much less in one where the legislature has purposely, as it would seem here, declined to provide one. We say purposely declined, because it would be unreasonable to suppose that the legislature did not consider the question whether, under special circumstances, it might not sometimes become necessary for one railroad company to take, longitudinally, the whole or any part of the right of way of another company, to be used for its main tracks; and the fact that no provision was made for a case of that kind affords the strongest evidence that the non-action of the legislature was intentional." (See also St. P. Union Depot Co. vs. St. Paul, 30 Minn., 359; M. & St. P. R. R. vs. Fairbault, 23 Minn., 167; Atlanta vs. C. R. R., 53 Ga., 120.)

It may also be remarked that the evidence is conclusive and uncontradicted that the Michigan Central Railroad Company is in the actual occupancy of all the property between River street and the Detroit river, from Third street to Twelfth street, and that it is necessary to use all that property to properly transact its business. The question, as it appears, which was suggested during the hearing as to whether an elevated road would interfere with the use by the Michigan Central, needs no consideration; there being no power to condemn for a surface road, it follows that there is no power to condemn for an elevated road, for, as said, the question is not one of expediency nor of feasibility, but of power, and there is no distinction, as to property, between an elevated and a surface road.

Had this matter been before a jury at a common-law trial, the charge of the court would have had to be that, under the law and evidence, the property of the Michigan Central railroad could not be condemned, and this being the case, the subject was not a proper one for contention and argument before the jury in this matter.

The next question which arises is, considering the claim so made and the manner in which it was made, and there being no authority for making it, did it have a tendency to bias and prejudice the jury against the petitioner, and thus influence them to award unjust damages?

It is a fact not to be disguised that an appeal to the passions and prejudices of an ordinary jury necessarily has its effect, and that this is especially true when a railroad corporation is involved. Juries in these cases are ofttimes led to do things which they would not do in controversies between individuals, and when, as was done in this case, an appeal is made to a jury that one company has a large quantity of land, more acreage than other companies doing more business, and supplementing this statement with an argument based upon a false view of the law, that certain of the

property of such company can be taken, no illustration is needed to demonstrate its effect upon an ordinary jury. The argument, as we have seen, which was made to the jury carries with it its own commentary; it was an appeal to their passions and to their prejudices, based upon an unwarranted assumption of alleged facts, of which there was no proof, and of a power under a law which is in no way applicable to the case. That this not only had a tendency to prejudice the jury against the petitioner and influence their award, but that as a matter of fact did, is clearly apparent from the record, and shown by their verdict in this case.

It is not sufficient to say that the jury found with petitioner upon the question of necessity; this does not in any way meet the question. The petitioner was entitled to just consideration upon the question of compensation or damages to be awarded, and was also entitled to have the jury act upon this question without bias, without passion and without prejudice. The natural and inevitable effect of the arguments made, is manifest; it would be difficult to conceive of an argument more effective, the certain and inevitable tendency and effect of which would be to influence the jury and cause them to award the most extravagant and exhorbitant damages.

While a jury in a matter of this kind should be liberal in their

estimate and award of damages, still they should be just and any amount awarded beyond full and adequate compensation is unauthorized, unwarranted, arbitrary and unjust.

As we have seen, the jury although judges of the law and facts, have no right to disregard well-recognized legal principles, and counsel who appear before them are governed by the same rules

and subject to the same responsibility which govern their 1592 conduct in court. In fact, a greater responsibility attaches

to counsel when appearing before a jury of inquest, while having the same latitude in argument, still it is not greater, and errors which might otherwise be corrected are here not subject to correction until brought before the court. It therefore behooves counsel in conducting such proceedings to be more circumspect in what they say or do. That it is not only within the power of the court, but that it is also its duty to interfere, where matters foreign to the issue are placed before the jury, or matters prejudicial are rehearsed before them, is a well-established legal principle. This power is not confined to the lower court on motions for a new trial, but is frequently exercised by appellate courts on error or appeal.

In Rickabus vs. Gott, 51 Mich., 227, counsel in his opening stated matters foreign to the issue before the jury, and upon error the verdict was set aside. And where a party's rights were prejudiced by remarks of the court, the judgment was reversed. (Cronkhite vs.

Dickerson, 51 Mich., 178.)

A party is entitled to the unbiased judgment of the jury on the facts. (Wheeler vs. Wallace, 53 Mich., 856; People vs. Horn, 57

Mich., 505.)

In Bond vs. Pontiac R. R., 62 Mich., 646, the court say, "It was early objected that plaintiff and his witnesses were allowed to refer repeatedly to defendant as the party dealing or dealt with, where the question of authority was mooted, and it was essential to know with what particular person the dealing was had. We think the objection should have been regarded, and the court, by allowing witnesses to persist in such references, placed the jury in a position where they were not only liable to be misled, but were also likely to overlook the necessity of proof of authority."

1593 In Sullivan vs. Deiter, 49 N. W. Rep., 261, the judgment of the lower court was reversed, based solely upon the man-

ner in which the cause was tried, and this consisted of questions asked and statements made by counsel before the jury.

Statements of counsel before a jury in criminal cases have frequently been held error in this State. (People vs. Quick, 58 Mich., 321; People vs. Dane, 59 Mich., 550; People vs. Carr, 64 Mich., 702.)

In Koch vs. Hebel, 32 Mo. App., 103, a statute provided that certain affidavits of claims against estates should not be received as any evidence of the claim, but in the face of this statute, counsel for plaintiff, in his argument, alluded to the statutory affidavit. Held sufficient ground for reversal.

In a trial before a common-law jury counsel have no right to elaborate and argue upon matters not in the case, nor upon law not applicable thereto, and it is the duty of the court to see to it, and

allow no matters to occur which may tend in any way to mislead the jury, or divert their minds from the strict line of inquiry in which they are engaged; and comments upon matters irrelevant are never permitted. The instances in, and the cause for which courts have interfered and set aside verdicts of juries because of occurrences at the hearing before them are very numerous, and it would be unprofitable to go into any extended review of the cases at this time, as the error here is evident, and that it had a decided effect on the jury is beyond question.

The good faith of counsel in presenting and arguing before the jury a matter foreign to the inquiry and irrelevant to the 1594 issue, was palpably prejudicial, and no amount of good faith

can cure the error. The placing of such matter before the jury and the raising of questions which could not under the law be properly brought before them, and in no way involved under the issue raised, and the questions which they were to determine cannot be excused upon a plea that the motive in doing so rested upon honest judgment, and that the matters were thus urged in absolute good faith.

Under the statute, as we have seen, the jury "shall hear the proof and allegations of the parties," and an objection is made upon the ground that proper testimony was offered and rejected, and that such testimony so rejected is of that character as would necessarily have a controlling influence in arriving at a verdict upon the question of the amount of just and adequate compensation.

In order to fully comprehend and understand the nature and effect of this objection, it will be necessary to quote somewhat at length from the record.

It appeared from the testimony of Absalom Backus, Jr., that the property of the respondents consisted of a large planing mill and box factory, and that the shavings and sawdust are forced by fans through pipes into a shavings-room and a sawdust-room; that these rooms are each 40 or 50 feet long, 20 feet wide, and 30 feet high. These rooms are surrounded with solid walls with openings at the

bottom to take out the shavings and sawdust, and on top of these rooms there is an arrangement known as the Backus dust-arrester. This dust-arrester consists of a large amount, some 2,700 yards, of burlap, and is so arranged that all the air that is forced by the fans into the shavings and sawdust room passes through this burlap,

causing the shavings and sawdust to collect on the inside of the burlap, and fall down into the rooms or reservoir below.

The frames carrying the burlap are covered with a roof, and the side consists of open lattice-work through which the air escapes to the outside. The fine dust will come through the burlap and accumulate around the frame. In answer to questions put to him by his counsel, Mr. Backus testified as follows:

"Q. I wish you would go on and tell the jury in your own way what sort of a plant you have there, why you think it is the best, what you think are the dangers to which that machine gives rise, and generally give an account of it? Give us the shape and purposes of that dust-bin and its liability to fire, according to the way the wind blows, and which way the wind blows down there, and

all that? "A. In order to run a planing machine and make your room available, it is necessary to get rid of the shavings and sawdust as fast as it is made, and the most practical way to do that is to use a large fan and exhaust fan that draws the stuff from the machine and throws it into a large reservoir, wherever it is; in order to have it work properly it has got to be a large place that will have three fans. If you undertook to throw it into this room it would not come in there, it would work against itself. You have to give it free vent. If you do not, the shavings and dust goes out, and that makes it a nuisance every way. It has been a great study with everybody in this business for a great many years. I have been very much exercised over it myself. I tried a great many schemes. Away back in 1873 I got a kind of an idea of blowing it in at the opening, but I never got relief until I got onto this idea gradually of burlaps, and gradually it developed into a perfect success. I took out a patent, and I have built probably a hundred of them for some of the largest institutions in the land; and without excep-

tion they all say it is superior to anything else. Many of them have been exchanged for other appliances, but they come back and say, 'Backus, yours is the best.' This runs automatically, requiring no power. The others require a good deal of power, and this gives us perfect relief and free from dust, leaves the shavings and sawdust in the room where you want it, so I have adopted that. Hand me that little model there. (The model was

handed to witness.)

"Q. Just explain how that Burlap acts, and the necessity for ventilators on the top and the dangers you are trying to counteract.

"A. Our room over there is very lengthy, it takes in two rooms as much as 70 or 80 feet long. This is 6-inch board and 6-inch crap all along, and 20 to 26 feet wide, and I put perhaps 12 feet high on that place, and in all I have got 2,700 yards of burlap. The way it goes in here through these open cracks and comes out here, the wind comes out free because there is no pressure on it, and there is so much surface that it is like a man putting his head in a woolen sack, he can breathe free, if he put it in a flour sack he could not. The wind raises it and these things puff out, swell out, and when you shut down your mill they collapse, that breaks the dust loose and they fall down, consequently it is automatic. Mitchell & Rowland of Toledo use one; Sanger & Rockwell of Milwaukee also; Anson Eldred of Port Howard; and the big men of Chicago, Palmer & Fuller. These large carriagemen of Fort Wayne, Studebaker, put in a large one. I put in 100 of them in different places;—the pencilmakers in New York and the car works.

"Q. Have you a patent on it?

"A. Yes, sir.

"Q. Well, go on with your statement.

"A. Of all the devices that have ever been put up that is the most substantial and reliable one. It is bulky and costs

money; but when you get it in you can go to sleep nights and think it is all right, because it will do the work. Crampton & Bolton said, when one was put in there, 'When I start my fan it will crack my fan all to pieces.' My man who was putting it up said, 'No, it won't.' He told him to wait until he started the engine and to be very careful. He started up the engine and this thing didn't even flutter and he says, 'All right, go ahead.' That was Crampton & Bolton."

Mr. Backus further testified that the prevailing winds are up and down the Detroit river, and that locomotives passing up and down the elevated railroad on River street would throw out sparks which would be drawn through the lattice-work and onto the burlaps and fine dust that comes through the same, and in that way there would be a very great increase in the fire risk.

Among other things he testified as follows:

"Q. What do you consider the precise danger and the precise detriment to your plant there by this structure being put up in front of it?

"A. I consider it as an absolute ruin to our business. "Q. Go on and tell the jury in your own way why.

"A. I do not think it would be a practical thing for us to run it, for the reason, in the first place, that it would not be but a little while before we would be burned up. It is inevitable, because you must remember that works like powder. It is a thing that is very combustible and they are exposing me every few minutes. Sometimes when you least expect it. It is not necessary that all the sparks should go there, but one spark would set me on fire.

If there is not much wind this dust collects, it lays inside, a little dust lays there. It is stuff that will burn like powder, and if this spark finds us it will destroy us before we know it. And even if our property is insured it is going to cost us a good deal of money. In my candid opinion, as I have looked it over, it will cost

about \$6,000 a year to pay the extra insurance."

On cross-examination Mr. Backus, among other things, testified as follows:

"Q. Do you not know that a dust-arrester like this is a very dangerous dust arrester so far as fire is concerned, and that a number of mills have been burned up by them?

"A. No, sir; I do not.

"Q. Do you not know that it is the most dangerous dust-arrester known to the trade?

"A. I don't know that.

"Q. Do you not know that this dust-arrester does not work satisfactorily or safely, and that other dust-arresters are being put in generally all over the country?

"A. No, I don't know any such thing. I know this, that that dust-arrester is the most practical dust-arrester on the face of the

continent today."

In answer to a question by Mr. Charest, one of the jurors, Mr. Backus testified that he had received letters stating that his dust-arrester was a good one, and upon further cross-examination by counsel for petitioner, he testified:

"Q. You received those when your dust-arrester first came out?

"A. I have had letters lately.

"Q. Do you not know that if any one approved of your dust arrester lately it is because they did not know about the others?

1599 "A. I don't know any such thing.

"Q. Do you not know as a man of experience in this sort of thing that your dust-arrester is absolutely worthless?

"A. I do not."

Mr. Backus gave a great deal of other testimony in support of

the burlap dust-arrester.

The respondents also called James A. Jones, as an insurance expert, who testified that the elevated railroad in River street with the dust-arrester so near it, would make the dust and shavings building almost uninsurable, and that the rate on the other buildings would be increased from 25 to 50 per cent.

To rebut the testimony of Mr. Backus and Mr. Jones, above referred to, and other similar testimony, the petitioner called Philip C. Miller as a witness, and showed by him that he was an expert in the business of putting in fanning and blowing pipes and dust-

arresters.

Counsel for the company then offered to show by the witness that the Backus dust-arrester is not a proper one, and that another kind could be put in that would be fireproof and a great deal better, and

do away with the alleged fire risk entirely.

He offered to show that the Backus dust-arrester is an exceedingly dangerous one, and that it has been discarded generally throughout the United States and Canada, and that the dust-arresters now in use are small metallic dust-arresters that are absolutely fireproof as far as any outside exposure is concerned and that without changing the pipes, flues or fans, in the Backus mill, the dust and shavings rooms could be rendered fireproof at an expense of about \$1,300. This testimony was formally ruled out and

1600 excluded by the jury as entirely immaterial. No reason was given for this ruling except a suggestion by Mr. Julien, one of the jurors, that the jury had no power to compel Mr. Backus to

change his dust-arrester.

It appears, therefore, that the case was submitted to, and considered by the jury, upon the uncontradicted testimony offered by the respondents tending to show that the Backus planing mill and box factory were sure to be consumed by fire if the elevated railroad was operated in front of the property. All the testimony offered by the company to rebut this proof was rejected by the jury.

The reason stated by the juror is not worthy of any consideration, but it was claimed on the argument of this motion that as the jury had had the matter before them for nearly two months when this offer was made and being desirous of bringing the matter to a close.

that this justified their conduct and ruling. If the proofs offered were competent and relevant to the issue, they should have been received, and the jury had no right to exclude them; the reason given by counsel does not answer the purposes of the law. That such proof was both competent and relevant cannot be seriously questioned, and that it would have had a very important bearing upon the issue, and a controlling influence in arriving at a just verdict upon the question of the amount to be arrayed is equally clear. A case directly in point is that of the 11... St. L. R. R. vs. Sweitzer, 117 Ill., 399.

I do not deem it necessary to consider the other objections to the rulings of the jury, as what has been said disposes of the principal one relied upon at the hearing of this motion, and to show the bear-

ings of the others on the case would require extended quota-1601 tions or review of a large part of the proceedings; counsel ought not to have any difficulty in agreeing upon that which is competent and relevant, and where there is doubt the safest and

best plan is to receive instead of rejecting testimony.

The damages awarded are most remarkable. The right of way sought to be acquired is the right of way for an elevated railroad along River street in front of the property of respondents. They have a frontage on the street of some 238 feet, and on Fort street of about 75 feet. At \$150 a foot, which is a large estimate, the land itself is worth \$46,950. The testimony of respondent, Absalom Backus, Jr., is to the effect that the buildings and improvements had cost \$150,000, and are worth that now. But, deducting 25 per cent. for depreciation, which is usual on buildings and improvements of some years' standing, we have a valuation of \$112,500, or a total valuation for the entire property of \$159,450.

And yet for simply going in front of this property a jury makes

a total award of \$96,144.

Comparing this award with what has been voluntarily accepted or awarded in other cases on River street, we have some striking contrasts:

Geo. H. Hammond, 45 feet frontage, \$2,500, or \$55.55 per foot. Diamond Match Co., 210 feet frontage, \$1,600, or \$76.18 per foot. Union mills, 140 feet frontage, \$21,250, or \$157.78 per foot. Geo. Kunze, 25 feet frontage, \$1,000, or \$40 per foot.

Geo. C. Wetherbee, 25 feet frontage, \$1,500, or \$60 per foot.

Hylet Barker, 25 feet frontage, \$1,000, or \$40 per foot.

Frank Hildebrand, 25 feet frontage, \$1,500, or \$60 per foot.

Mich. Cent., 166 feet frontage, \$1,660, or \$10 per foot.

Mich. Cent., 47 feet frontage, \$470, or \$10 per foot.

Barbara Steadley, 65 feet frontage, \$2,615.20, or \$42.30 per foot.

Louis J. Specht, 27½ feet frontage, \$1,100, or \$40 per foot.

Mary Specht, 27½ feet frontage, \$1,100, or \$40 per foot.

Barbara Baxter, 23 feet frontage, \$690, or \$30 per foot.

Margaret Specht, 23 feet frontage, \$713, or \$31 per foot.

John Winister, 51 feet frontage, \$1,530, or \$30 per foot.

Jacques Ruhlman, 20 feet frontage, \$1,000, or \$50 per foot.

Rachel Ruhlman, 20 feet frontage, \$1,000, or \$50 per foot.

Catherine Harpfer, 40 feet frontage, \$1,600, or \$40 per foot.

Boynton & Boutell, 45.87 feet frontage, \$917.40, or \$20 per foot. It is impossible to review the record in this case without coming to the conclusion that upon no possible theory is the amount awarded justified. The proceedings not only furnish a just inference, but the conclusion is unavoidable, that the verdict is the result of bias and prejudice and based upon erroneous principles. To review the proceedings in detail would be impracticable. That the amount awarded is not only exorbitant, but grossly so, would, after a review of the proceedings, be the inevitable conclusion of any impartial or disinterested person; and to allow such a finding to stand would be a travesty upon justice.

That the jury felt and acted that whatever they did was 1603 justifiable, that they were the law unto themselves, and were

at liberty to do and act according to their own caprices, is apparent throughout the entire proceedings. They regarded themselves, as was stated before them "masters of the situation." To refer to one matter as an illustration: The court was asked by them as to who, under the law, had the right to open and close the argument before them. After being advised that the petitioner, holding the affirmative, had the right to begin and reply in the argument to the jury, which is the law (1 Thompson on Trials, sec. 247; South Park Comm'rs vs. Trustees, 107 Ill., 489; McReynolds vs. B., etc., R. R., 106 Ill., 152; Neff vs. Cincinnati, 32 Oh. St., 215), yet notwithstanding such instruction, and being given upon their request, a statement was made by counsel, in effect, that they were the judges of the law. The jury then retired, and after considering the matter for some time, returned, and finally concluded that they. would follow the law. This illustration is but characteristic of the proceedings throughout. The jury seem to have forgotten that they were dealing with important interests, and concluded that they were justified in all they did, regardless of the law.

The final objection is based upon the fact that the jury, while deliberating upon their verdict, surreptitiously obtained twelve quarts of beer. Without considering this matter or the legal effect thereof, it may properly be said that it is surprising that there was not some one upon the jury to recognize, to say the least, the impropriety of such action and have prevented it. This was undoubtedly due to a mistaken notion or an overestimated idea of irresponsibility and independence, and which the jury seem to have

entertained regarding their action.

The award must be set aside and a new jury sworn.

GEO. GARTNER, Circuit Judge. 1604

Order Vacating Award.

THE FORT STREET UNION DEPOT COMPANY
28.
ABSALOM BACKUS, JR., et al.

Остовек 26, 1891.

In this cause the motion of said complainant for an order of the court setting aside the award heretofore made by the jury in said cause, and for the impaneling of another jury in said cause having been heretofore argued and submitted after due consideration thereon, it is ordered that the award heretofore made by the jury impaneled in said cause and entered therein be and the same hereby is set aside and held for naught. And it is further ordered that a new jury be impaneled in said cause in accordance with the statute governing said proceedings.

(Signed)

GEO. S. HOSMER, Presiding Judge.

The respondents in the condemnation proceedings then applied to the supreme court for a writ of mandamus to compel Judge Gartner to set aside his order vacating the award or verdict of the jury and granting a new trial in such condemnation proceedings.

The following order was made by the supreme court was a set.

The following order was made by the supreme court upon such application.

At a session of the supreme court of the State of Michigan, held at the supreme court room, in the capitol, in the city of Lansing, on the nineteenth day of November, in the year of our Lord one thousand eight hundred and ninety-one.

Present: The Honorable John W. Champlin, chief justice; Allen B. Morse, John W. McGrath, Charles D. Long, Claudius B. Grant,

associate justices.

ABSALOM BACKUS, JR., and A. BACKUS, JR., & Sons, Relators, vs.

GEORGE GARTNER, One of the Judges of the Circuit Court for the County of Wayne, Respondent.

This matter having heretofore been heard upon the petition of the relator- and the answer of the respondent, and having been argued by counsel for the respective parties, and due consideration thereof having been had, and no sufficient cause being shown to the contrary, thereupon it is ordered that a peremptory writ of mandamus issue out of and under the seal of this court to compel him, the said circuit judge, respondent as aforesaid, to forthwith vacate and set aside the order heretofore made by him setting aside the award or verdict of the jury and granting a new trial in the proceedings of The Fort Street Union Depot Company, petitioner, against Absalom Backus, Jr., A. Backus, Jr., & Sons, James N. Dean,

and William A. Davison, respondents, pending in said circuit court, and to forthwith enter an order confirming said award or verdict.

And it is further ordered that the relators recover of and from the said Fort Street Union Depot Company their costs of this proceeding.

1606 STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

FORT STREET UNION DEPOT COMPANY, Petitioner,

ABSALOM BACKUS, JR., A. BACKUS, JR., & SONS, JAMES N. DEAN, WILLIAM H. DAVISON, Respondents.

And now comes the said petitioner, by F. A. Baker, its attorney, and shows cause why the verdict and award of the jury in this cause should not be confirmed, but ought to be vacated and set

aside, and submits the following additional reasons:

24. The supreme court erred in granting a writ of mandames in this case, having misapprehended and misunderstood the facts of the case, and the law applicable thereto, and unwittingly deprived the circuit courts of this State of a wise and wholesome power and jurisdiction vested in them by the constitution and laws of this State, and upon the unwarrantable assumption that the circuit courts have no more power and jurisdiction in condemnation cases than the supreme court has under its appellate jurisdiction.

25. Said writ of mandamus was improvidently granted.

26. To confirm said verdict against the deliberate judgment of the circuit court for the county of Wayne is in and by itself a vio-

lation of the constitution and laws of this State.

27. During the trial before the said jury, to wit, on the 1607 20th day of June, 1891, Henry N. Backus, a stockholder and officer of the corporation respondent known as A. Backus, Jr., & Sons, knowingly, willfully and corruptly paid to Felix Julien, one of the jurors in said case, a large sum of money, to wit, one hundred and thirty dollars, for the purpose and with the intent of corruptly influencing the said Felix Julien as a juror in said case, and to the great wrong and injury of petitioner. Said payment was made under the pretense that the said Henry N. Backus was indebted to the said Felix Julien in the amount so paid, whereas in truth and in fact the indebtedness paid was the debt of the National Herb Medicine Company, and the said Henry N. Backus was not liable thereon, and he had previously denied that he was liable thereon and had refused to pay the said Felix Julien the said debt or any part thereof.

The affidavits of Samuel F. George and Gilbert C. McCullough are filed in support of the foregoing accusation, and the petitioner offers to maintain and prove the same with the testimony of witnesses at such time and in such manner as the court may direct.

The above objections are based upon the files and records in this

case, the affidavits mentioned above, and the affidavits of F. A. Baker and Geo. F. Robison herewith filed.

F. A. BAKER, Attorney for Petitioner.

Detroit, November 27, 1891.

1608 STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

THE FORT STREET UNION DEPOT COMPANY, Petitioner,

ABSALOM BACKUS, JR., A. BACKUS, JR., & SONS, JAMES N. DEAN, WILLIAM H. DAVISON, Respondents.

COUNTY OF WAYNE, 88:

Samuel F. George, a resident of Detroit, in the State of Michigan, being duly sworn, upon his oath deposes and says that the National Herb Medicine Company is a corporation organized under the laws of the State of Michigan, and is located in the city of Detroit, in said State; that from the 10th day of March, 1891, to the first day of July, 1891, the board of directors of said company consisted of Henry N. Backus, of Detroit, Mich., Horace C. George, of Detroit, Mich., and this deponent; that said Henry N. Backus is the son of Absalom Backus, Jr., of Detroit, and is one of the stockholders in the corporation known as A. Backus, Jr., & Sons, and that said Absalom Backus, Jr., and said A. Backus, Jr., & Sons are two of the respondents in the above-entitled condemnation suit; that in the month of March, 1891, this deponent, as the president of the National Herb Medicine Company, employed Felix Julien, a carpenter and contractor, to do some work fitting up the

store, 305 Woodward avenue, in the city of Detroit, then about to be occupied by said National Herb Medicine Company; that said Felix Julien did said work for the said National Herb Medicine Company, and said company became indebted to him therefor in about the sum of one hundred and twenty-six dollars; that deponent is sure said indebtedness was over one hundred dollars, but is unable to state the exact amount; that said Henry N. Backus had nothing to do with the employment of said Felix Julien, except this, that he gave the name of said Felix Julien to this deponent as that of a suitable person to employ, and this deponent, in employing said Felix Julien, informed him that Henry N. Backus was one of the members of the National Herb Medicine Company, and had sent him to him, said Julien; that after said work had been done by said Felix Julien, he presented a bill therefor to said National Herb Medicine Company, but made the bill out against "the Backus & George Medicine Company;" that the said National Herb Medicine Company was unable to pay said bill, and it remained past due and wholly unpaid from and after about the 15th day of April, 1891, or thereabouts; that at one time the said Felix Julien came to this deponent, at 305 Woodward avenue, and asked for his pay,

and claimed that he would hold said Henry N. Backus for it; that deponent is unable to state whether this conversation was before or after it was publicly announced that said Felix Julien had been selected to serve as one of the jurors in the above-entitled cause, but it was about that time; that after said Felix Julien had been selected as one of said jurors, the said Henry N. Backus came to this deponent and requested that the National Herb Medicine Company pay

the said Felix Julien the amount of his said bill; that this
1610 deponent told said Henry N. Backus that the company was
unable to pay said bill; that said Henry N. Backus replied
that he would see Julien and have him hold on; that a few days
afterwards the said Henry N. Backus again came to 305 Woodward
avenue, and informed this deponent that he, the said Henry N.
Backus, had paid to said Felix Julien the amount of his said bill
against the National Herb Medicine Company, and the company
would not be bothered any more with it; that the said Felix Julien
has made no further claim claim against the said company therefor;
that said National Herb Medicine Company was indebted at the same
time to a number of other persons or firms, but this deponent is not
informed whether said Henry N. Backus has paid any of them or
not.

SAMUEL F. GEORGE.

Subscribed and sworn to before me this 28th day of September, 1891.

WALTER BARLOW, Notary Public, Wayne County, Mich.

1611 STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

FORT STREET UNION DEPOT COMPANY, Petitioner,

Absalom Backus, Jr., A. Backus, Jr., & Sons, James N. Dean, William H. Davison, Respondents.

COUNTY OF WAYNE, 88:

Gilbert C. McCullough, being duly sworn, deposes and says that his occupation is that of a painter and decorator, and he is located at the store No. 307 Woodward avenue, in the city of Detroit, in said county; that in March and April, 1891, this deponent, at the request of Felix Julien, the carpenter, did some work in fitting up the store No. 305 Woodward avenue, then about to be occupied by the National Herb Medicine Company, in which Henry N. Backus was represented to be a copartner or member; that the work performed by deponent came to and was of the value of eighty-six and seventy one-hundredths dollars; that said Felix Julien did the carpenter work in fitting up said store, and his bill, as deponent was informed by said Felix Julien, was about one hundred and thirty dollars; that after said work was done the said Felix Julien and this

deponent requested the said Henry N. Backus to pay their said bills; that at one time they made this request to him together;

that Henry N. Backus, in reply to said request, denied all liability on said claims, and positively and peremptorily declined to pay the same or any part thereof; that deponent is not able to fix the exact date that this conversation occurred, but according to his best recollection, it was in the fore part of June, 1891. and before the second trial of the above entitled condemnation suit was commenced, if said trial was not commenced until June 10. 1891; that subsequently this deponent was informed by the said Felix Julien that while he, the said Felix Julien, was serving as a juror in said condemnation suit, the said Henry N. Backus came to him and paid him the amount of his said bill, and that said Felix Julien informed him that he was so paid on or about the 20th day of June, 1891; that said Henry N. Backus has never paid this deponent; that deponent recently sued said Henry N. Backus before John Patton, justice of the peace of the city of Detroit, for the amount of said claim; that said Henry N. Backus defended said suit on the ground that he was not liable on said claim, and said justice of the peace so decided, and entered a judgment for said Henry N. Backus, the defendant in said suit; that the liability of the said Henry N. Backus to this deponent depends upon exactly the same state of facts as his liability to said Felix Julien; that said Felix Julien was called as a witness for deponent in said suit, who testified that the Drs. George requested him to do said work and represented that Henry N. Backus sent them to him; that Henry N. Backus was a witness in his own behalf and testified that he simply recommended Felix Julien to said The National Herb Medicine Company, and did not authorize the said Drs. George, or either of them, to bind him, the said Henry N. Backus, personally;

that said suit was tried before the said John Patton, justice of the peace, on the 18th day of November, 1891, and was

decided by him on the 23d day of November, 1891.

GILBERT C. McCULLOUGH.

Subscribed and sworn to before me this 24th day of November, 1891.

WALTER BARLOW,

Notary Public, Wayne County, Michigan.

STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

FORT STREET UNION DEPOT Co., Petitioner,

ABSALOM BACKUS, JR., A. BACKUS, JR., & SONS, JAMES N. DEAN, WILLIAM H. DAVISON, Respondents.

COUNTY OF WAYNE, 88:

Fred. A. Baker, being duly sworn, deposes and says that he is the attorney for the above-named petitioner; that at the time he pre-

pared and filed the motion made by him to vacate the verdict of the jury in this cause, he had not learned that, during the trial of the case, Henry N. Backus had paid any money to Felix Julien, one of the jurors; that deponent became aware of the facts set forth in the affidavit of Samuel F. George, on the 28th day of September, 1891, but did not become aware of all the facts set forth in the affidavit of Gilbert C. McCullough, until a short time after

the trial of the case of McCullough against Backus, before Justice Patton, on the 18th day of November, 1891; that deponent waited for the trial of such case before said justice before bringing the matter to the attention of the court, in order to learn the testimony and the attitude of said Henry N. Backus with reference to the claim of said Gilbert C. McCullough, and his explanation of the fact that he paid the claim of said Felix Julien.

Deponent further says that he is informed that said Henry N. Backus claims that there is a difference between the claim of said McCullough and the claim of said Julien, and that he was at least morally bound to pay the claim of said Julien, but deponent believes and submits that the facts show that said Henry N. Backus paid the said Felix Julien corruptly, and for the purpose of influencing him as one of said jurors.

Deponent therefore submits the matter to the court as one that

demands a full investigation.

F. A. BAKER.

Subscribed and sworn to before me, this 25th day of November, 1891.

WALTER BARLOW, Notary Public, Wayne County, Michigan.

1615 STATE OF MICHIGAN:

in the Circuit Court for the County of Wayne.

THE FORT STREET UNION DEPOT COMPANY, Petitioner,

Absalom Backus, Jr., A. Backus, Jr., & Sons, James N. Dean, William H. Davison, Respondents.

COUNTY OF WAYNE, 88:

Lesher stated to deponent the facts set forth in the unsigned affidayit hereto annexed, as Exhibit A; that, at first, said Joseph H. Lesher promised to sign and swear to said affidavit, but, before doing so, changed his mind and refused to sign and swear to the same stating to deponent that the only way he would be willing to furnish any proof, would be as a witness, served with a subpoma to testify in court.

(Signed)

GEO. F. ROBISON.

Subscribed and sworn to before me, this 27th day of November, 1891.

EDGAR S. WHEELER, Notary Public, Wayne County, Michigan.

1616

EXHIBIT A (ROBISON'S AFFIDAVIT).

STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

THE FORT STREET UNION DEPOT COMPANY, Petitioner,

ABSALOM BACKUS, JR., A. BACKUS, JR., & SONS, JAMES N. DEAN, WILLIAM H. DAVISON, Respondents.

COUNTY OF WAYNE, 88:

Joseph H. Lesher, being duly sworn, deposes and says that he was the foreman of the jury on the second trial of the above-entitled condemnation suit; that when the jury retired to consider their verdict, they first took up the question of public necessity; that a majority of the eleven men on said jury steadily voted against the public necessity on the ground that the route of the elevated railroad should have been located on the property of the Michigan Central Railroad Company; that the jury, being unable to agree on that question, they put it aside, and took up the question of damages; that it was not until a majority of the jurors had agreed upon the sum of \$96,144 as the amount of the damages, that all of said jury would consent to a verdict in favor of the public necessity; that Felix Julien was one of the jurors who voted against the public necessity, and upon the question of damages he was one of the highest.

1617 STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

FORT STREET UNION DEPOT COMPANY, Petitioner,

Absalom Backus, Jr., A. Backus, Jr., & Sons, James N. Dean, and William H. Davison, Respondents.

And now come said respondents, by Dickinson, Thurber & Stevenson, their solicitors, and move the court to strike from the files the following paper-writings, to wit:

1. Additional objections to confirmation of verdict.

The affidavit of Samuel F. George, dated September 28, 1891.
 The affidavit of George F. Robison, dated November 27, 1891.

4. The affidavit of Gilbert C. McCullough, dated November 24,

5. The affidavit of Frederick A. Baker, dated November 25, 1891.
Because it appears that said first three grounds of objection are impertinent, and improper to be placed upon the files of this court, and that the last ground, entitled "27th," is based upon information which was in the hands of the petitioner before the submission of the motion to coufirm to the circuit judge, and nearly a month before the accision of the circuit judge on the motion.

Because the said ground is frivolous.

Because the said ground is unsupported by proof.

This motion is based on the files and records of this cause and the affidavit of Henry N. Backus herewith filed.

DICKINSON, THURBER & STEVENSON,

Solicitors for Respondents.

Dated November 30, 1891.

1618 STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

FORT STREET UNION DEPOT COMPANY, Petitioner,

Absalom Backus, Jr., A. Backus, Jr., & Sons, James N. Dean, and William H. Davison, Respondents.

WAYNE COUNTY, 88:

Henry N. Backus, being duly sworn, saith that he is a stockholder in the company of the respondents, A. Backus, Jr., & Sons, and has been since its organization, and that his stockholding in said company is about one-quarter of its capitalization; that the management of the defense in this proceeding has been largely conducted by the president of the company, Absalom Backus, Jr., from the impaneling of the jury until the present time; that affiant, during the proceedings, attended more especially to the business of the concern, and was not a witness in the case.

Affiant further saith, that the National Herb Medicine Company was formed in September, 1890, and this affiant had nothing to do with the organization; but that in the month of March, 1891, Doctor Samuel F. George applied to affiant to permit his name to be used as a stockholder in the said last-named company, saying that the use of affiant's name would give the concern standing in Detroit, and that was all that was needed to make it a success, as it was an

honest and very profitable enterprise; that affiant accepted 1619 two hundred and fifty shares of stock of said herb company from the said Samuel F. George, and he believes, though he does not know, that he was afterwards in some way made a director, though he believes without any legal election; that soon after he was made a stockholder he found that the concern seemed to have no credit, and the fact of his connection with it was being used with merchants and others with whom his personal financial standing

118 - 55

was good, to obtain credit for the said herb company. On discovering this, affiant protested against such use of his name; but before this, and soon after affiant became connected with the company, about March 23d, 1891, the said George came to affiant with regard to fitting up No. 305 Woodward avenue, and asked affiant if he could get some one near the place to do the work. F. Julien & Co. were carpenters near there, at No. 12 Wilcox street, and had been to some extent cash customers of A. Backus, Jr., & Sons, but affiant had no more acquaintance with said F. Julien & Co., or any of them, than he had with a thousand or more customers who purchased material of affiant's company; that affiant gave said Doctor George a note to said F. Julien & Co., with the latter's address. Said note was written upon a piece of wrapping paper, unsealed and uninclosed, simply saying the herb company wanted some work done and to treat them well. All this was before April 1st. 1891. After the work was finished the herb company failed to pay F. Julien & Co., and Julien & Co. so telephoned this affiant before April 24, 1891. Affiant left for New York on April 25, 1891, and returned to Detroit on May 9, 1891. On May 11, 1891, the said Julien, of Julien & Co., telephoned affiant at affiant's office on Fort street, asking affiant to call at Julien & Co.'s place of business when affiant came uptown. This affiant did so on that day, when he met the said

Julien at his place of business and was introduced by him to Mr. McCullough, who makes an affidavit in this matter, whom affiant had never seen or met before. Julien claimed that he could not get his pay from the herb company for the work done, and that it had been understood distinctly that he was to have cash upon the completion of the work, and immediately. He said that he would not have trusted the company but for affiant's connection with it and the fact that affiant had sent the herb company to him to get the work done. Both McCullough and Julien wanted to know if he could not help them to collect their accounts. In the presence of McCullough (affiant being under no possible moral or legal obligation to McCullough for the credit he had given the herb company, as he believed), affiant did state that he was under no obligation, and could not undertake to pay or collect accounts against the herb company, though affiant said to both of them, that they ought to have their pay. Affiant remained until McCullough retired, wishing to see Julien privately, and did see said Julien privately, and feeling morally bound because of having sent the herb company to Julien, a customer of affiant's concern, affiant then and there stated to Julien that while he felt no obligation to any one with whom affiant's name had not been used, that vet as Julien had doubtless given the credit to strangers at affiant's request, he, affiant, would see that he got his money and that he might rely upon it, but in the meantime to try and get it out of the herb company; but he then expressly promised to take care of the debt, and considered himself from that time in honor bound to do That at that time the said Julien was, so far as affiant knows, not thought of in connection with the jury in this case, as he

finds from the record that the jury were not even struck until June 4th, 1891. That on the next day Doctor Samuel 1621 F. George met affiant at the post-office as affiant was going to the United States court-room, where a hearing was to be held before Judge Jackson, affecting the use by the railroad company of the dock front of affiant's company, A. Backus, Jr., & Sons, and informed affiant that Julien was pressing his bill for collection, and threatened to close the herb company up, and at that time the said Doctor George borrowed forty dollars of affiant with which to pay the rent of the store. That the said Julien from time to time telephoned affiant, at affiant's house and office, reporting as to his efforts and failure to get any money out of the herb company, and urging affiant to attend to it The matter ran until June 12th, 1891, when affiant received a note through the mail, a copy of which, with words and marks on the outside, is as follows:

"F. Julien & Co., contractors and builders, 12 Wilcox St.

DETROIT, MICH., June 11, 1891.

FRIEND BACKUS: Please to send me check for Dr. George's bill, as I need the money very much, and it is old.

F. JULIEN & CO."

And the envelope inclosing which is as follows:

"If not delivered in ten days, return to F. Julien & Co., Carpenters and builders, 12 Wilcox St., Detroit, Mich.

Postmarked Detroit, June 12, 10.30 a. m., '91. With two-cent stamp cancelled.

Mr. HENRY N. BACKUS, 35 Trumbull Ave., City."

That hereto annexed marked Exhibit A is the original bill for the said Julien & Co.'s work which was handed to affiant by Dr. S. F. George. That afterwards the said Julien sent affiant the bill hereto annexed marked Exhibit B; that afterwards, as soon as it was convenient for affiant to pay the money, on June 19, 1891, while out driving with affiant's wife he drove to Julien's place and paid him the bill and got it receipted. That affiant said nothing whatever to said Julien about the case pending or about any other subject than the payment of the bill, and that he had come to keep his word and was sorry that he, Julien, had not got his money sooner; he replied that he needed the money to pay his men the next day, which was Saturday.

Affiant further says that in every case where, with affiant's knowledge and consent, his name was used to obtain credit for the said National Herb Medicine Company, affiant has in like manner assumed and paid the bills although he was not legally obliged to pay, until he put an effectual end to the use of his name in any manner by going out of the company, which he did on June 27,

1891. That among the bills he has so paid where there was no written guarantee by him is a list attached showing the amount and date of payment or assumption, marked Exhibit C; that hereto annexed, marked Exhibit D, is a fair sample of the letters received by affiant regarding said bills since his connection with the said herb company; that the bill referred to in the last exhibit went to the herb medicine company at affiant's request without any written guaranty, and the only reason affiant has not paid it is that the goods were not satisfactory and were tendered back and refused by M. H. Chamberlain & Co.

Affiant further says, that in the transaction with Julien he was actuated by no other motive but to do what in honor he was bound to do in accordance with his promise, and would have paid it precisely in the same way that he did others if Julien had not been on the jury; that so much was it his own personal matter in carrying out his policy as to those who had given credit at his request, that he never even mentioned the subject of this or any of the bills to his father or brother, or any or either of his counsel in this proceeding, until October 8, 1891, after the argument of the motion for a new trial in the circuit court, when counsel for respondents in this case informed affiant that he had been told that he, affiant, had paid one of the jurors some money during the hearing, and asking the facts, which affiant there detailed as above.

Affiant further says that he is informed, and believes and charges the truth to be, that the representative of the petitioner in this case in the State of Michigan, Hon. James F. Joy, knew of the said transaction of this affiant with said Juror Julien before the last verdict was rendered in this cause; that when affiant's father, Absalom Backus, Jr., was upon the stand in this trial, and affiant was sitting with his brother listening to his testimony, one James A. Robison, a brother of one of the attorneys for the said petitioner, George F. Robison, whose office is with Mr. Baker, the counsel for petitioner in this case, and who, the said James A. Robison, had been at all times active against the respondents in this matter from its commencement, approached affiant, in the hearing of his brother, and stated to him that he, the said James A. Robison, had just been admitted to the bar, and stated that he had the said McCullough claim

for collection, and wanted to know if affiant had any objection to his suing the National Herb Medicine Co., or whether affiant would pay the McCullough claim. Affiant told him that he was under no obligation to pay the McCullough claim, whereupon the said Robison stated, You have already paid during

this trial one of the jurors for a similar claim.

Affiant further says that he is informed, and believes and charges to be true, that before any objections were filed to the confirmation of the verdict in this case, the petitioner had been advised fully of the transaction with said Julien, and that the said James F. Joy had directed an attorney of this court to investigate the matter, and he had investigated it and knew everything that can now be shown in the matter, and had discovered that it was a business transaction,

out of which nothing could be made adverse to respondents; that the investigation had been pursued up to September 28, 1891, two days before the motion for confirmation was submitted to this court, and nearly a month before this court had rendered any decision upon said motion to confirm, and the petitioner then had in the form of an affidavit the substantial facts as embodied in the affidavit made by one Samuel F. George, of the date September 28, 1891, and these allegations he is ready to verify.

And further affiant saith not.

HENRY N. BACKUS.

1627 EXHIBIT D (AFFIDAVIT OF HENRY N. BACKUS).

DETROIT, MICH., July 16, 1891.

H. N. Backus, Esq., care of A. Backus & Son-, city:

DEAR SIR: We inclose you herewith statement of account against National Herb Medicine Co., being amount due for barrel of wine vinegar ordered by you on the 13th April last. We have called on this firm some eight or ten times with statement, and have been put off for one reason or another.

Will you kindly send us check to balance, and oblige

Yours respectfully,

M. H. CHAMBERLAIN & CO., Per HASTINGS. 1628 STATE OF MICHIGAN:

The Circuit Court for the County of Wayne.

THE FORT STREET UNION DEPOT COMPANY, Petitioner,

ABSALOM BACKUS, JR., A. BACKUS, JR., & SONS, JAMES N. DEAN, WILLIAM H. DAVISON, Respondents.

To Dickinson, Thurber & Stevenson, attorneys for said respondents:

Protesting against the injustice of the writ of mandamus granted by the supreme court in this cause, and for the purpose of enabling the petitioner to perfect an appeal herein to the supreme court, you are hereby notified that on Monday the 30th day of November, 1891, or as soon thereafter as counsel can be heard, the petitioner will apply to the circuit court for the county of Wayne, before the Honorable George Gartner, circuit judge, to settle and sign an order of confirmation in this cause. You are herewith served with a copy of an order which is submitted as a proper one to make under the circumstances of this case.

F. A. BAKER, Attorney for Petitioner.

Detroit, November 27, 1891.

(Attached to this notice is a copy of the proposed order of confirmation as found on pages 1633, 1634, and 1635 of this Record.)

1629 STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

FORT STREET UNION DEPOT COMPANY, Petitioner,

ABSALOM BACKUS, JR., A. BACKUS, JR., & SONS, JAMES N. DEAN, and WILLIAM H. DAVISON, Respondents.

And now come the said respondents, by Dickinson, Thurber & Stevenson, their attorneys, and object to the form and substance of the order of confirmation proposed, and insist that if any order of confirmation is entered, that it shall be entered in the usual form of orders of confirmation in similar cases, and expressly object to the provisions of said proposed order as to deposit of money in bank, and in connection with that portion of said order that provides that upon said deposit the said Fort Street Union Depot Company shall be entitled to enter upon and take possession of the property of the respondents sought to be condemned, as such an order would be unwarranted by the constitution and laws of the State.

DICKINSON, THURBER & STEVENSON, Attorneys for Respondents.

Dated November 30, 1891.

1630 STATE OF MICHIGAN:

> The Circuit Court for the County of Wayne. THE FORT STREET UNION DEPOT COMPANY) ABSALOM BACKUS, JR., & SONS et al.

> > Memorandum.

On October 26, 1891, this court caused to be entered in the aboveentitled matter an order that the award of the jury be set aside and a new jury sworn for reasons fully set forth in an opinion then filed. Since then the supreme court of Michigan have ordered that a writ of mandamus issue to this court to set aside the order so made by this court and to enter an order confirming the report of

the jury.

Additional objections to the confirmation of the award have been filed by the petitioner, and which respondents now move be stricken from the files, together with the affidavits filed in support thereof. It is claimed that such objections are impertinent, improper, frivolous, and unsupported by proof; but, as this court has no jurisdiction under the ruling of the supreme court to pass upon objections made and filed, it necessarily follows that the motion to strike from the files must be denied.

The motion to confirm heretofore made and urged by the respondents has not been renewed, and petitioner, protesting against the order of the supreme court, now asks that such order be entered for the purpose of enabling the petitioner to perfect an appeal to the supreme court and place such matter in a position so that the

same can be reviewed.

The form of the order proposed is objected to. It contains a brief recital of the proceedings and provides for the deposit of \$96,144.00 and costs and the time within which such deposit

shall be made. In this it conforms strictly with the language of the statute, sees. 10 and 11. It also provides that upon such deposit being made that petitioner may enter upon the possession and use the right of way for the purposes of its incorporation. This is objected to upon the ground that this would be taking the respondents' property without first having made compensation therefor. As soon as the deposit is made the petitioner waives all its rights to the control of the same and it becomes subject to the order of this court or of the supreme court, to be paid in whole or in part to the respondents, as the court may finally determine, and the deposit becomes and is the real subject-matter of contention. That respondents are fully protected and can suffer no possible harm is beyond controversy. While the law upon the subject is somewhat ambiguous, it certainly was never contemplated that the rights and interests of all parties should not at all times and under any and all circumstances be fully protected. In case a new appraisal should be ordered by the supreme court, if the award is increased the amount of the increase is a lien upon the property taken; if,

however, the amount is diminished, the difference shall be refunded to the company. The order as proposed protects the rights and interests of all concerned, and neither party can or will thereby be

placed in a position to suffer any possible loss or injury.

This court will not order the payment to respondents of an award grossly exhorbitant, extravagant, excessive, and unjust and leave petitioner without security in the event the award be diminished, nor will it do any act to further delay or refrain from the doing of an act which would operate to further delay the accomplishment of an important public improvement, and this especially where the question of public necessity has been determined affirmatively and where the only question open for contention is the question of the amount of just compensation.

Should I have again, in the opinion of the supreme court, fallen into error in this matter, it may speedily be corrected. The delay of one month cannot possibly operate as an injustice under 1632—the law and the facts in this case to any of the parties.

The order as prepared will be entered. This is done in obedience to the writ of mandamus granted by the supreme court, but not otherwise, and against the deliberate judgment of this court. Notwithstanding the objections made and filed to the confirmation of the award, this order is made in pursuance of, and the same being the legal operation and effect of, the writ of mandamus granted as aforesaid.

GEORGE GARTNER, Circuit Judge.

At a session of the circuit court for the county of Wayne, held at the court-house, in the city hall, in the city of Detroit, on the 30th day of November, 1891.

Present: Hon. Geo. Gartner, circuit judge.

THE FORT STREET UNION DEPOT Co., Petitioner,

ABSALOM BACKUS, JR., A. BACKUS, JR., & SONS, JAMES N. DEAN, WILLIAM H. DAVISON, Respondents.

Order of Confirmation.

In obedience to the writ of mandamus granted by the supreme court of this State in the above-entitled condemnation suit, but not otherwise, and against the deliberate judgment of this court, it is ordered, that notwithstanding the objections made to the confirmation of the verdict and award of the jury in this case as set forth in the motion made by the petitioner to vacate and set aside said verdict and award, and notwithstanding the further objections and the affidavits in support thereof this day read and filed, the said verdict and award is hereby in and by virtue of the legal operation and effect of said writ of mandamus, in all things confirmed.

The petition in this case was filed by the Fort Street Union Depot Company, against the above-named respondents, to condemn to the

119 - 55

public use the right of way for the construction and operation of an elevated railroad in, upon and along River street, in the city of Detroit, in said county of Wayne, in front of the property hereinafter described, in which the respondents are interested as owners, or otherwise, in accordance with the ordinance agreed upon between the Fort Street Union Depot Company and the common council of the city of Detroit, the orders of the State railroad crossing board, and of the commissioner of railroads, the plan approved by the commissioner of railroads and the general plan adopted by said company, all of which are set forth or were mentioned in, and were filed and served with the petition in this case.

The respondents demanded a jury to determine the questions of

necessity and compensation.

A jury was impaneled and sworn, who reported to the court that they were unable to agree on a verdict.

A second jury was then impaneled and they reported the verdict

and award confirmed by this order.

The following is a description of the real estate and property in which the respondents are interested, and in front of which the said elevated railroad is to be constructed and operated, viz:

All those certain pieces or parcels of land situated on the north side of River street, in the city of Detroit, in said county, known as the Backus planing mill and box factory. Said property is situated on the Lognon farm, so called, and the River Street frontage of said property is 238.06 feet, and it is bounded on the east by a strip of land, the property of the Michigan Central Railroad Company, and on the west by a lot, the property of Barbara Steadley.

It is further ordered that within sixty days from the date of this order, the Fort Street Union Depot Company is required to deposit under the supervision of the clerk of this court, in

the Detroit National bank, and to the credit of this cause, the sum of ninety-six thousand one hundred and forty-five dollars, and also the costs and expenses of the respondents, including an attorney fee of twenty-five dollars, as they may have been taxed, provided that if said costs and expenses have not been taxed within said sixty days, that the same be so deposited within five days after they are taxed.

Said moneys shall remain on deposit in said bank, but at the risk of petitioner, subject to be drawn therefrom, and to be paid to the parties entitled to the same, on orders signed by one of the judges

of this court and countersigned by the clerk.

It is further ordered that upon the deposit of the said sum of ninety-six thousand one hundred and forty-five dollars, and of the said costs, expenses and counsel fees, as aforesaid, the said The Fort Street Union Depot Company shall be entitled to enter upon and take possession of and use the right of way above described for the purpose of its incorporation, under its articles of association and the constitution and laws of this State, and that said respondents shall be divested and barred of all right, estate and interest in such right of way, until such right or title shall be again legally vested

in them, and said right of way shall be deemed to have been acquired by said company for public use.

GEORGE GARTNER, Circuit Judge.

1636 STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

THE FORT STREET UNION DEPOT COMPANY, Petitioner,

ABSALOM BACKUS, JR., A. BACKUS, JR., & SONS, JAMES N. DEAN, and WILLIAM H. DAVISON, Respondents.

Notice of Appeal.

To said respondents:

You will take notice that the said petitioner, by F. A. Baker, its attorney, appeals to the supreme court from the verdict, award and report of the jury in this cause, and from the confirmation thereof.

The petitioner does hereby specify the following objections to the proceedings had in the premises, that is to say: (Here follow objections one to twenty-three, as set forth in the motion to vacate said verdict and award dated August 15, 1891.)

24. The supreme court erred in granting a writ of mandamus in this case, having misapprehended and misunderstood the facts of the case, and the law applicable thereto, and unwittingly deprived

the circuit courts of this State of a wise and wholesome power 1637 of jurisdiction vested in them by the constitution and laws.

of this State, and upon the unwarrantable assumption that the circuit courts have no more power and jurisdiction in condemnation cases than the supreme court has under its appellate jurisdiction.

25. Said writ of mandamus was improvidently granted.

26. To confirm said verdict against the deliberate judgment of the circuit court for the county of Wayne is in and by itself a vio-

lation of the constitution and laws of this State.

27. During the trial before the said jury, to wit, on the 20th day of June, 1891, Henry N. Backus, a stockholder and officer of the corporation respondent known as A. Backus, Jr., & Sons, knowingly, willfully and corruptly paid to Feliex Julien, one of the jurors in said case, a large sum of money, to wit, one hundred and thirty dollars, for the purpose and with the intent of corruptly influencing the said Felix Julien as a juror in said case, and to the great wrong and injury of petitioner. Said payment was made under the pretense that the said Henry N. Backus was indebted to the said Felix Julien in the amount so paid, whereas in truth and in fact the indebtedness paid was the debt of the National Herb Medicine Company, and the said Henry N. Backus was not liable thereon, and he had previously denied that he was liable thereon, and had refused to pay the said Felix Julien the said debt or any part thereof.

28. The circuit judge erred in disregarding and overruling the above objections and in entering an order confirming said verdict and award.

F. A. BAKER,

Attorney for Petitioner and Appellant.

Detroit, Dec. 2, 1891.

At a session of the supreme court of the State of Michigan, held at the supreme court room, in the capitol, in the city of Lansing, on the third day of March, in the year of our Lord one thousand eight hundred and ninety-two.

Present: The Honorable Allen B. Morse, chief justice; John W. McGrath, Charles D. Long, Claudius B. Grant, Robert M. Mont-

gomery, associate justices.

THE FORT STREET UNION DEPOT COMPANY, Appellant, vs.

ABSALOM BACKUS, JR., and Others, Appellees.

This cause, coming on to be heard, is argued by F. A. Baker in part for appellant.

At a session of the supreme court of the State of Michigan, held at the supreme court room, in the capitol, in the city of Lansing, on the fourth day of March, in the year of our Lord one thousand eight hundred and ninety-two.

Present: The Honorable Allen B. Morse, chief justice: John W. McGrath, Charles D. Long, Claudius B. Grant, Robert M. Mont-

gomery, associate justices.

THE FORT STREET UNION DEPOT COMPANY, Appellant, vs.
ABSALOM BACKUS, JR., et al., Appellees.

The argument heretofore commenced herein is concluded by Mr. Baker, for appellant; Mr. Don M. Dickinson is heard for the appellees, and the cause is duly submitted.

1640

Supreme Court of the State of Michigan.

THE FORT STREET UNION DEPOT Co. vs.
ABSALOM BACKUS, JR., et al.

Opinion.

Filed June 10, 1892.

Long, J.:

This cause was before this court at the October term, 1891, and an opinion filed December 21, which is reported in 89 Mich., 209. That proceeding was for mandamus to compel the court below to set aside the order made by it granting a new trial, and to compel

that court to confirm the award made by the jury. The case is en-

ti'led "Backus v. Gartner, circuit judge."

It appeared in that proceeding that a motion was made in that court by the petitioner in the present case to vacate and set aside the verdict of the jury. The circuit court set the verdict and award of the jury aside, and the mandamus was asked by the respondents to vacate that order and to confirm the verdict. This writ was granted by this court, and an order confirming the verdict and award by the jury entered in the court below. Twenty-three specific reasons were urged before the court below why this motion for a new trial should be granted, and those reasons are substantially set out in the opinion by this court in that case, and need not be restated here, as those reasons, with others now set out in this appeal, are the objections to the proceedings upon which we are now asked to pass. In addition to the objections then made to the verdict and order of confirmation, objections Nos. 24 to 28, inclusive, are now added, as follows:

24. The supreme court erred in granting a writ of mandamus in this case, having misapprehended and misunderstood the facts of the case and the law applicable thereto, and deprived the circuit courts of this State of a wise and wholesome power of jurisdiction

vested in them by the constitution and laws of this State.

25. Said writ of mandamus was improvidently granted.

26. To confirm said verdict against the deliberate judgment of the circuit court for the county of Wayne is in and by itself a violation of the constitution and laws of this State.

27. During the trial before the said jury one of the stockholders of A. Backus, Jr., & Sons knowingly, willfully, and corruptly paid to one of the jurors the sum of \$130 for the purpose and with the intent of corruptly influencing him as a juror in said case. Said payment was made under the pretense that said stockholder was indebted to said juror in said amount, whereas in truth and in fact the indebtedness paid was the debt of another and not a debt upon which said stockholder was liable, and was one upon which he had previously denied liability and refused to pay.

28. The circuit court erred in disregarding and overruling the above objections and in entering an order confirming said award.

The only point decided in the mandamus case was whether, under the statute, the circuit court had authority to set aside the award and report of the jury, and to order a new trial or inquisition before a new jury, where the objections to the confirmation of the report are not based upon jurisdictional defects. The decision turned upon the construction of section 10, chap. 93, How. Stat.

The language of this section is: "On such report being made by the commissioners or jury the court, on motion, shall confirm the same on the next or any subsequent day when in session, unless for good cause shown by either party. * * * Said court, as to the confirmation of such report, shall have the powers usual in

other cases."

This court gave construction to the language of that section and held that "there is nothing in this section which states that the court shall have power to set aside the panel of jurors or commissioners appointed by the court and direct that proceedings de novo shall be had upon the petition, and that the term 'powers usual in other cases' refers to 'the powers of courts in the confirmation of reports made to such courts by some bodies or persons authorized by law to make them in accordance with the known practice of the court."

We need not refer here to the reasons given by this court for that ruling, as they are fully set out in the former opinion,

to which reference is made.

We permitted in the present appeal a reargument of that question for the reason that should we find we were then in error neither party will have lost any substantial right, as all the questions then presented are now before us for review, and this court, under the statute, possesses ample power to correct any errors which may be found in the record and proceedings. The motion for mandamus was argued before us at the October term last, and such consideration was not given it then as the interests now involved in the controversy demand. We have now listened to a reargument of the question then passed upon and our attention has been called to several decisions, from which we conclude that the powers of the circuit courts in this class of cases were too much restricted by the former opinion.

Section 10 of the act under which the proceedings were had proceedings were had provides that, the report of the jury being made, the court, on motion, shall confirm the same, unless for good cause shown by either party. The statute does not point out for what particular cause or causes the court may refuse to confirm the award. While the jury in such cases are judges of the law and fact, yet if it be made to appear to the court before confirmation of the award that the jury have based their verdict and award upon false principles and substantial justice has not been done in the premises the court ought to refuse to confirm the findings. Toledo, etc., R'y Co.

v. Dunlap, 47 Mich., 466.

This question has been settled by this court by former adjudica-

tions, which were overlooked in the mandamus case.

In Marquette, etc., R. R. Co. v. Probate Judge, 53 Mich., 217, commissioners were appointed to condemn certain lands for railroad purposes. They made their report and filed it in the probate court. The petitioner filed a motion in that court to set aside the finding

and report of the commissioners for the reasons:

1643 1. That the damages and compensation were excessive

and exorbitant.

2. That the commissioners included in the compensation a large amount of money for loss of profits in the fuse business during the interruption of the same, and for loss of wages while the factory should be stopped, and for loss of business to arise from the removal of the factory to another site, without any evidence on which to found the same.

3. That the allowed a sum of money to one of the owners of the property for the cost of removing therefrom.

4. That they grossly overestimated the value of the land and the structures thereon.

5. That they allowed greater damages for the real estate than its whole value.

6. That they overestimated the value of the garden, trees, and

shrubs.

7. That one of the commissioners, after being appointed and before the finding, received privately from one of the respondents a written paper containing a list of the structures and other property upon the land, which stated the valuation of the same and of the damages thereto at the sum of \$11,000, and that he was influenced

thereby in his deliberations.

The motion was founded upon affidavits and other testimony produced in the probate court. This was met by a counter-motion from the attorneys of the respondents to strike the affidavits from the files, and to refuse to hear testimony in opposition to the commissioners' report, on the ground that such affidavits and oral testimony of witnesses were incompetent and inadmissible on the hearing of the motion to set aside the report. The probate court denied the motion of petitioner and granted that of the respondents. Before any motion was made for the confirmation of the report, the petitioner applied to this court for an order on the probate judge to show cause why he should not receive and consider, upon the motion to set aside the report, the affidavits and oral testimony offered, and why (should said report be confirmed) he should not set aside

such confirmation for the purpose of such hearing. An 1644 order to show cause was granted in the case, and the return

showed that the facts upon these points were correctly stated in the petition. It was said by this court: "The motion made by the petitioner to set aside the report was one proper to be made, and, if substantiated, would have furnished sufficient grounds for setting aside the report. The probate court has authority to set aside the report of commissioners for good cause shown. If the amount awarded is unreasonable and indicates that it was the result of prejudice or partiality, or that the commissioners must have acted upon a wrong basis of estimating the damages, it is a good cause for setting aside the report." Citing Chapman v. Groves, 8 Blackf., 308.

This question came before this court again in Port Huron, etc., R'y Co. v. Callanan, 61 Mich., 12. In that case it was claimed that the commissioners' award was grossly inadequate and did not indicate whether it included past as well as future damages. It was said, "If the proceedings complained of are in most respects technically regular—which we shall not decide—we have no doubt that substantial wrong has been done. The confirmation of a report in these cases is not a matter of strict right upon a regular record. If substantial reasons are shown against it by facts not in the record itself, the court has power to do justice and refuse confir-

mation, and on appeal the same power exists."

The learned circuit judge before whom the proceedings for confirmation of the report of the jury in the present case were had, and

who, by the mandate of this court, confirmed the findings and award.

filed an opinion in the case before us, in which he says:

"While the proceedings by and before the jury are not judicial, still the proceedings by and before the court up to the time of swearing the jury, as well as all proceedings after the filing of the report, are judicial in their character and partake of the nature of ordinary proceedings in court, and are governed largely, if not absolutely, by the same rules and the same considerations applicable to judicial investigations and determinations. The one great difficulty

attending the proceedings by and before the jury is that it is not ordinarily evident or ascertainable what the ruling or determination of the jury was upon questions raised before them, and in all such instances the presumption of the law is that they followed correct legal principles, and that as judges of the law they applied and followed the law correctly and not erroneously. cannot be contended that, as they are made by the law judges of the law, they have the right to disregard the law and all acknowledged and well-recognized legal principles. This was never contemplated by the constitution or the statute, and it is sufficient to say that no case can be found which holds, or even recognizes, such a vicious and monstrous doctrine. When, however, the rulings of the jury are clearly apparent upon the face of the proceedings, then it may be found the duty of the court to consider and, if necessary, to review such rulings, for it is the duty of the court to see that substantial justice has not been disregarded."

In support of this proposition the circuit judge cites the following cases: Mich. Air Line R'y v. Barnes, 44 Mich., 226; Toledo, etc., R'y Co. v. Dunlap, 47 id., 461; Detroit West., etc., R. R. Co. v. Crane, 50 id., 182; Port Huron, etc., R'y Co. v. Voorheis, id., 510. We are satisfied that the cases referred to support the doctrine stated by the

circuit judge.

This question has received consideration in the courts of other States. It is laid down as a rule by Lewis on Eminent Domain (section 522) that, under the authorities, any improper conduct on the part of the jury materially affecting the merits is sufficient cause for setting aside the report.

In re New York Cent., etc., R. R. Co., 64 N. Y., 60, it was held to be good cause for setting aside the report if there was any such carelessness or irregularity amounting to misconduct by which a

party was harmed.

In re New York, etc., R'y Co., 29 Hun., 604, it was held that the power and authority of the court to interfere was settled by In re New York Cent., etc., R. R. Co., 64 N. Y., 60, and that such

1646 power is not restricted in the exercise of its general jurisdiction, and that the court has power, by virtue of its inherent jurisdiction, to set aside the report for good and sufficient reasons. Upon appeal this case was affirmed (reported in 93 N. Y., 385), and it was held a matter for the exercise of the discretion of the lower court.

The jury have large discretion, and when this has been abused

the court will interfere and prevent an injury, and will set aside the report for accident or mistake. Bourgeois v. Mills, 60 Tex., 76.

The report will also be set aside for acting on erroneous principles.

In re New York, etc., R'y Co., 63 How. Pr., 265.

In Iowa it is held that the report will be set aside for being against the evidence or against the weight of evidence. Walters v.

Houck, 7 Iowa, 72.

It is also settled by numerous decisions that the court, upon the motion for confirmation of the report, may look into the matter of the action of the jury in receiving or rejecting testimony, and if wrong rulings are made, substantially affecting the rights of the parties, the report will be set aside. Wilson v. Railroad Co., 59 Ill., 273; Fitchburg R. R. Co. v. Eastern R. R. Co., 6 Allen, 98; Harding v. Inhabitants of Medway, 10 Metc. (Mass.), 465; Com. v. Court of Sessions, 6 Mass., 435.

It is undoubtedly true that where correct rules have been adopted by the jury the award will not be set aside aunless the amount of the verdict is palpably erroneous; but it cannot be doubted that under the authorities above cited and the repeated rulings of this court the court before which proceedings are had upon the question of the confirmation or the setting aside of the findings and award

of the jury may set the award aside:

1. If it is found by the court that there has been fraud or misconduct upon the part of the jury affecting the rights of the parties.

2. For gross errors or mistakes of the jury.

3. For the erroneous rejection or admission of testimony

1647 affecting the rights of the parties.

4. For errors of such extraordinary character or grossness as furnish a just inference of the existence of undue influence, partiality, bias, and prejudice, or unfaithfulness in the discharge of the duty imposed.

5. When it is apparent to the court that the damages awarded

are either inadequate or excessive.

The method of proceeding by which these facts are brought to the attention of the court must be left very largely to the discretion of the court which is to hear and decide the motion for confirmation or to set aside the findings. The facts may be presented to the court by affidavits or by oral testimony, and upon which the court is bound to act in determining the questions raised. Mar-

quette, etc., R. R. Co. v. Probate Judge, 53 Mich., 217.

The court below, acting in the present case upon the motion before it, undoubtedly had the power to pass upon the question presented to it by the affidavits, and to vacate and set aside the award of the jury. No substantial injustice has been done, however, by the mandate of this court compelling the court below to confirm the findings and award of the jury, for the reason that under the statute this court, under its appellate power, may consider all of the questions there involved and determine the rights of the parties thereunder.

The statute provides: "Within twenty days after the confirmation of the report of the commissioners or jury, as above provided

120 - 55

for, either party may appeal, by notice in writing to the other, to the supreme court from the appraisal or report of the commissioners or jury. Such notice shall specify the objections to the proceedings had in the premises, and the supreme court shall pass on such objections only, and all other objections, if any, shall be deemed to have been waived. Such appeal shall be heard by the supreme court at any general or special term thereof, on notice thereof being given according to the rules and practice of the court.

On the hearing of such appeals the court may direct a new 1648 appraisal before the same or new commissioners or jury, in

its discretion."

Before proceeding to a discussion of the objections to the confirmation of the report of the jury it becomes necessary to state the situation and surroundings of the property sought to be taken and the manner in which the petitioner proposes to erect its road

along the street in front of respondents' property.

The proposed Fort Street union depot will front upon Third and Fort streets, and, with the proposes local freight-house, will cover about six acres of ground. The approach of the track to the depot extends along the river side of River street up to about Twelfth street, when it curves to the northeast, and there enters entirely into and passes upon River street, upon which the Backus property is situated. The railroad track pursues River street, towards the center of the city, to about Seventh street and then again curves to the northeast to take its course to the new depot. Before reaching Twelfth street the track begins an elevated grade, and where it passes respondents' property, on the northerly side of River street, is at an ascending grade of 22 feet to the mile. This elevated structure is to span the street from curb to curb, upon iron posts or pillars 35 feet apart on each side, above, in front of, and below the Backus property. In front of that property there are three broadguage tracks. Solid pans and shields are to be under every track. The tracks are to carry three trains with double locomotives. There is to be a switch in front of this property. Added onto the width of the railroad viaduct itself, in the street and continguous to it, there is to be an elevated viaduct for trams, solidly made, of the width of 24 feet, making a total width in front of the Backus property of 64 feet. Every track is laid upon ties, and the space between the ties is 6 inches. The cars, in passing, will project over the elevated structure from one to two feet. The weight of the standard locomotives will be from 50 to 60 tons. The top of the rails on the structure in River street, in front of the property, will be 25 feet above the roadway.

The Backus plant consists of a planing-mill property, and is in the first block towards the city from Twelfth street, on the 1649 northerly side of River street. It covers 13 acres of land,

with a front on River street of 238.40 feet, and extends through the block to Fort street. The buildings front on River street, on a level with that street, which is 15 feet lower than Fort street. These buildings are of brick, 45 to 48 feet high. The building is erected and arranged with reference to its relative situa-

tion to the Michigan Central railroad, which passes under Fort street and approaches River street obliquely, passing the northeasterly side of the Backus property, contiguous to it, with its main tracks at the extreme end, 80 feet away, and continually receding until it is 300 feet from the Backus property as it passes into River street at grade. It furnishes switch facilities for the planing mill. The value of the mill property is variously estimated at from \$150,000 to \$200,000. The plant consists of the planing-mill property, the lower mill, dust-room, shavings-room, four dry kilns, boilerhouse, engine-room, and sheds on the side next to the Michigan Central Railroad tracks 200 feet in length, with room to store 15 car-loads of material. Mr. Backus himself puts the value of all this property at \$150,000, and says that includes everything outside of the real estate. It is claimed, also, that the returns from this mill net from \$25,000 to \$70,000 per year. Mr. Backus says, in reference to the dust-room and the appliances therein, that, in order to run the planing mill and make the room available, it is necessary to get rid of the shavings and sawdust as fast as it is made, and the most practical way to do that is to use a large exhaust fan that draws the stuff from the machine and throws it into a large reservoir; that in order to have it work properly it must be in a large place that will have free vent; that arrangements for taking care of the dust and shavings have been a great study for many years; that he finally conceived an idea of arranging his dust-room with burlaps, which is a perfect success; that he took out a patent for the arrangement of the dust-room with burlaps, and has probably built 100 of them for some of the largest institutions in the land, and, without exception, it is superior to anything else. It runs automatically, requiring no power; 2,700 yards of burlaps 1650

The mill itself has 4 boilers and a 250-horse-power engine, together with 19 planing machines and other ma-

chinery of the best quality.

The claim was made upon the part of the respondents before they jury that the building of this track in River street by the petitioner for the purpose of carrying its railroad trains not only excluded the respondents from the free use of the street and the approaches to the mill and the light and air necessary to the proper conduct of their business, but also greatly endangered their property to fire from the engines of the petitioner in passing and repassing over this structure, especially on an upgrade, and by the switch in front of the premises. Testimony was also given showing that by reason of this increased hazard of fire from the engines it would be difficult to procure insurance, which, if it could be procured, would be at greatly increased rates by reason of the danger of sparks from the engines falling upon the building and communicating to this dustroom, which is described to be of such inflammable character that it would be ignited from the smallest spark. It was also contended before the jury by the respondents that, by reason of the structure thus cutting off the free approach to the mill which the respondents have heretofore had from River street and the bostructing of light and air and the endangering of the property by sparks from th

engines, practically the whole mill property was ruined, and that the planing-mill business could not be profit by conducted there. It was also contended by the respondents that there was no necessity for the taking of River street, as the petitioner could lawfully have taken a strip of land belonging to the Michigan Central Railroad Company and used by it as yards upon the opposite side of River street from respondents' property.

Two trials of the case have been had in the court below. One was commenced February 25, 1891, and terminated March 18 in a disagreement of the jury. A new jury was impaneled on June 10 following, and that jury rendered a verdict July 16 in favor of the petition- on the question of the necessity of taking the property in

River street for public uses, and assessed the damages of the 1651 respondents as follows: To Absalom Backus, Jr., as the owner of the fee, \$17,850; to the corporation, A. Backus, Jr., & Sons, \$78,293.

All of the objections to the proceedings before the jury except the first relate to the question of damages. The first objection is that the jury were not attended by a judge of the circuit court or by a circuit court commissioner to decide questions of law and to administer oaths to witnesses.

We think the first objection cannot be insisted upon in the present case, for the reason that the petitioner's proceedings before the jury were without objection and without request that the jury be attended by the court or commissioner, and the petitioner must therefore be treated as having waived that point. We have listened to a very learned argument upon the part of counsel for petitioner upon the cases heretofore decided by this court, in which counsel contends that the court has always been wrong in holding that the presence of the judge or commissioner was not necessary in condemnation proceedings, inasmuch as the contest was not on litigious rights, and the jury were judges of the law and facts. We shall not enter upon a discussion of that question here or review those cases, from the fact that the question was waived by petitioner in the court below.

The second objection urged by petitioner's counsel is that "the attorney for the respondents, taking advantage of the abs-nce of the judge, did improperly, erroneously, and falsely claim and pretend to and before said jury that the said petitioner has the power, under the statutes of this State, to condemn a right of way for an elevated railroad along the margin of the property of the Michigan Central Railroad Company on the south side of River street, and for that reason the jury ought to find that there is no public necessity for taking a right of way in, upon, and along said River street for the elevated railroad proposed by the petitioner; and thereby said attorney did, by repeated arguments and assertions to and before said jury, convince a number of said jury that the property of the Michigan Central Railroad Company could be condemned

by the petitioner under existing statutes, so that when said jurymen came to yield on the question of necessity they were so biased and prejudiced against the petitioner that they in-

sisted upon the most extravagant, exorbitant, and grossly excessive

The third objection sets out substantially the argument of damages. counsel for respondents before the jury upon the question of necessity and his efforts to make it appear that such necessity for using the street did not exist, for the reason that petitioner could condemn the property of the Michigan Central Railroad Company

adjoining the street.

The fourth objection is that the attorney for respondents, on his cross-examination of the witness James B. Mulliken, put the following questions for the purpose of leading said jury to believe that the petitioner could condemn the property of the Michigan Central Railroad Company, and that Mr. G. V. N. Lothrop, general counsel for the Detroit, Lansing & Northern Railroad Company, had so advised that company:

Q. Who is the general counsel of the Detroit, Lansing & Northern?

A. Mr. Charles B. Lothrop.

Q. Before that, Mr. G. V. N. Lothrop?

A. He was formerly.

Q. That being the best route, was there ever any talk about the power of the said railroad company wanting terminal facilities to condemn the Michigan Central ground? (The Detroit, Lausing & Northern is one of the routes interested in the union depot company.)

A. Mr. Lothrop said to me at one time that there was no diffi-

culty in doing that. Q. Which Lothrop? A. G. V. N. Lothrop.

The fifth objection is that, although it clearly appeared on the further examination of said witness, James B. Mulliken, and by the testimony of said G. V. N. Lothrop that the advice and opinion of said Lothrop was that the property of the Michigan Central Railroad Company could not be condemned without additional legislation, yet counsel for respondents claimed and pretended before the jury that under advice and opinion of Mr. Lothrop the petitioner could condemn a right of way along the margin of the lands of the Michigan Central Railroad Company.

The sixth objection is that this argument was used before

1653 the jury, although it appeared by the testimony that the property of the Michigan Central Railroad Company on the south side of River street was all in actual use by said company for depot and other purposes pertaining to the operation of the railroad, and that the same was needed by the said company for the purposes of

the depot and other terminal facilities.

The seventh, eight, ninth, and tenth objections all relate to the statements of counsel and claim made by them in behalf of respondents, that the Michigan Central Railroad property could be taken by the petitioner; that the statutes authorized the taking, and the appeal by counsel to the jury not to take respondents' property, for the reason that it was the duty of the petitioner to go over the grounds of the Michigan Central Railroad Company.

All these objections may be considered together. The union depot act (No. 244, Laws of 1881, chap. 93, How. Stat.) does not contain any provisions authorizing the taking by the union depot company of the lands of the railroad company except for crossings.

Section 6 of the act provides: "In case any such company is unable to agree for the purchase of any real estate, property, or franchises required for the purpose of its incorporation, it shall have the right to acquire the title to the same in the manner and by the special proceeding prescribed in this act; but there shall be no power, except for crossing, to take the track or rights of way of any other railroad company without the consent of said railroad company."

It is contended, however, upon the part of counsel for respondents that it may be taken by virtue of the general railroad law. The general railroad law provides that there shall be no power, except for crossing, to take the track or rights of way of any other railroad company without the consent of said railroad company, except as is thereinafter provided, being substantially the same provisions as in the union depot act. How. Stat., sec. 3331. As origi-

nally enacted, section 36 of article 2 of the general railroad 1654 law related to the manner of making crossings, with a proviso: "No such crossing or connection shall be made within the depot limits of any such company without the consent of such company or acquiring the right thereto, as provided in this act for the taking of land and other property." How. Stat., sec. 3350.

This section was amended, however, in 1883 and 1887. The amended section contains no provision authorizing the condemnation of the depot grounds or rights of way of any other company.

3 How. Stat., p. 3285, sec. 3350.

By the amendment to the general railroad law enacted in 1881 (How. Stat., sec. 3357) it is provided: "When any part of the land of any railroad company in this State in or adjacent to its depot grounds is not in actual use for depot or other purposes pertaining to the operation of a railroad, and such land is not needed by said railroad company for the purpose of a depot or other terminal facilities, it shall be lawful for any other railroad company, organized as aforesaid, needing such land for the purpose of a depot or terminal facilities, to acquire the same in the same manner as may now be done for such purpose from individuals. The question of actual use and of necessity for the aforesaid purposes by said railroad company owning and not using said land shall be determined, in addition to other questions, as provided by law in cases of condemnation of lands for the purpose aforesaid, and the same proceedings in all respects, as near as may be, shall be had for the aforesaid purpose as now provided by law where land is acquired for such purpose from individuals."

It is under this statute that counsel for respondents contended before the jury, and contends here, that the union depot company had the power, and that it was its duty, to have taken the lands of the Michigan Central Railroad Company rather than occupy the public street, to the injury of respondents. Except in so far as the power is conferred by this section, there is no authority under either act to condemn the property of another railroad company except for a crossing.

The testimony shows that the Michigan Central Railroad Company is in the actual occupancy of all the property between River street and the Detroit river from Third to Twelfth

1655 streets, and that it is necessary to use all that property to transact business properly. The proposition does not relate simply to the right of petitioner to make a crossing of the Michigan Central tracks or right of way, but to the taking of a strip longitudinally from the side of lands used by that company as yards and depot grounds. The union depot act does not in express terms or by implication authorize this taking, and whether the petitioner can avail itself of the provisions of the general railroad law above quoted is questionable; but, admitting that the provisions of the general railroad law have application to the petitioning company, so that it could invoke the aid of that statute, certain conditions must exist before it could condemn for its own uses:

1. That the lands are not in actual use for depot or other purposes pertaining to the operation of the railroad of the Michigan Central Company and not needed for depot or other terminal facil-

2. That the railroad company seeking to condemn needs the land for depot or terminal facilities.

3. That a public necessity exists for the taking for the purpose for which the land is sought to be acquired.

The last two questions would be involved in the ordinary condemnation proceedings under the statute. The first question could be determined only in a direct proceeding for that purpose, and it would be not only impracticable, but impossible, in a condemnation proceeding, to try that question. There is no power given by the union depot act to try such a question in a proceeding for condemnation, and the general railroad law does not, in express terms, confer the power upon commissioners or a jury to enter upon such an inquiry. No forum is pointed out by the railroad law where this question may be litigated, and there arises no implication that it was the intent of the legislature to permit the jury of inquest to enter upon such an inquiry. The form of the oath to be administered to the jury is to determine the public necessity and just compensation, and not to enter upon an inquiry as to whether

property which has been set to one public use is not neces-1656 sary to that use and may be devoted to another.

In Allegheny, etc., R. R. Co. v. Pittsburgh, etc., R. R. Co., 122 Penn. St., 511 (6 Atl. Rep., 564), it was claimed that the yard of the plaintiff was larger than was necessary for its present use, and that it could be so arranged as to accom-odate defendant's tracks without serious detriment to the plaintiff either in the present or future.

The court said: "We are of opinion that a railroad company has a right to consider the needs of the future and to construct its road and make its plans with reference to those future needs. Every reasonable intendment must be taken in favor of the primary rights. No actual encroachment upon these rights can be sanctioned or allowed, and in measuring their extent there must be a liberal consideration for the future, as well as the existing, necessities of the complainant, the use of the existing tracks, the construction of additional ones, the convenient storage of its freight at all seasons, and the unembarrassed transaction of all its business."

See also Housatonic R. R. Co. v. Lee & H. R. R. Co., 118 Mass., 391; Boston & M. R. R. Co. v. Lowell & L. R. Co., 124 id., 368; Railroad Co. v. Williamson, 91 N. Y., 522; Illinois Cent. R. R. Co. v. Chicago, etc., R. R. Co., 122 Ill., 484 (13 N. E. Rep., 140); Union Depot Co. v. St. Paul, 30 Minn., 359 (15 N. W. Rep., 684); Railway Co. v. Faribault, 23 id., 167; Atlanta v. Railway Co., 53 Ga., 120.

Under the form of proceedure established in the State by prior decisions, when the jury are not attended by a court to determine the admissibility of evidence and correct principles upon which litigious rights are to be determined, it would be a novel proceeding to permit the jury to be judges of the law and facts in a contest where the question involved was whether a railroad company was in actual use of property for depot purposes or facilities. The section of the constitution which authorizes a jury in condemnation proceedings does not contemplate that they may enter upon such a

question as is here presented, and the general railroad law does not bear that construction. The present case, however,

is freed from that question by testimony, which is uncontradicted, that the Michigan Central Railroad Company is in actual occupancy of all that property, which is necessary to transact its business properly.

It is contended, however, by counsel for respondents that the presentation of the question by argument of counsel could not have influenced the jury, as they found the question of necessity in favor of the petitioner. I think that question is well answered by the

learned circuit judge

He says: "It is no sufficient to say that the jury found with petitioner upon the question of necessity. This does not in any way meet the question. The petitioner was entitled to just consideration upon the question of compensation or damages to be awarded.

* * The natural and inevitable effect of the arguments made is manifest. It would be difficult to conceive of an argument more effective, the certain and inevitable tendency and effect of which would be to influence the jury and cause them to award the most extravagant and exorbitant damages."

The court again remarks: "As we have seen, the jury, although judges of the law and facts, have no right to disregard well-recognized legal principles, and counsel who appear before them are governed by the same rules and subject to the same responsibility

which govern their conduct in court."

It is the duty of the court to interfere where matters foreign to the issue are rehearsed before the jury prejudicial to the interests of a party. Cronkhite v. Dickerson, 51 Mich., 178; Bond v. Railroad Co., 62 id., 646; Sullivan v. Deiter, 86 id., 404. There are many

pages of the arguments of counsel in the record showing the persistency with which counsel urged upon the jury the right of the petitioner to take the property of the Michigan Central Railroad Company, and it is too plain for argument that it must have affected the jury in determining the amount of damages to be awarded. The jury ought not to have permitted the testi-

mony to be given relating to that subject, or listened to ar-1658

guments thereon.

Objections 11, 12, 13, and 14 are directed to the refusal of the jury to permit the petitioner to show that another kind of dustarrester could be placed in the building at a small outlay, and one which would make the building comparatively safe from ignition from falling sparks from passing engines. It is not necessary to enter upon a full discussion of that question. The jury were in error in rejecting this testimony in view of the testimony of re-

spondents upon the subject.

The objections which we have discussed we think well taken and for that reason the award of damages should be set aside. The court below well remarked: "The damages awarded are most remarkable. The right of way sought to be acquired is the right of way for an elevated railroad along River street in front of the property of respondents. They have a frontage on the street of some 238 feet and on Fort street of about 75 feet. At \$150 a foot, which is a large estimate, the land itself is worth \$46,950. The testimony of respondent Absalom Backus, Jr., is to the effect that the buildings and improvements had cost \$150,000 and are worth that now; but, deducting 25 per cent. for depreciation, which is usual on buildings and improvements of some years' standing, we have a valuation of \$112,500, or a total valuation for the entire property of \$159,450, and yet for simply going in front of this property a jury makes a total award of \$96,143."

It is objected by respondents' counsel that the award cannot be disturbed for the reason that since the award and confirmation petitioner has, by order of the court, paid the amount awarded to the respondents. We think this objection cannot be sustained. Section 11 of the union depot act provides for the recording of a certified copy of the order of confirmation in the office of the register of deeds and the taking possession of the land, and that the sum to be paid as damages, etc., shall be paid by the company or deposited as provided in section 16 within 60 days after the confirmation of

the report, and upon failure to so do said company shall be deemed to have abandoned the proceedings. By section 10

the court may direct to whom the money is to be paid or where deposited. Section 11 provides for an appeal to the supreme court within twenty days after the confirmation, and on such appeal the court may direct a new appraisal before the same or another jury. If the amount of compensation is increased by the second report, the difference is to be a lien on the land appraised and be paid by the company. If the amount is diminished, the difference shall be refunded to the company. The appeal shall not affect the rights of a party not appealing, and only the right of the appellant

121 - 55

in the matters appealed from. It is apparent that it was the intent of the legislature that the rights of the parties appealing should not be affected upon the appeal by the payment of the money as directed by the court, either to the party or on deposit for the use of such party. The petitioning company has not appealed from the award as to the public necessity for taking the property, but from the amount of damages awarded; and the fact of the payment of the damages to the respondents under order of the court cannot affect the right to have the question retried by another jury.

The award of damages must be set aside with costs, and that question submitted to a new jury, to be impaneled before the circuit court for the county of Wayne, in accordance with the statute.

McGrath and Grant, JJ., concurred with Long, J.

MONTGOMERY, J. (concurring):

The opinion of Mr. Justice Long sufficiently states the facts in the case; and the only question to which I shall advert is that of whether the circuit judge has power, under the statute relating to these proceedings, to set aside the award of the jury and direct a new trial before another jury to be impaneled.

It would be unseemly and unwarranted for the court to overrule its former opinion in any case where such result is brought about by a difference in view between justices, one of whom succeeds the

other (McCutcheon v. Homer, 43 Mich., 483); but inasmuch as a majority of the court as constituted when the opinion in Backus v. Gartner was rendered concur in overruling that decision, I feel free to state that in my opinion the statute is sufficiently broad to confer the power assumed by the circuit judge in this case.

The statute imposing the duty and conferring power upon the circuit judge in such proceedings provides that he "shall confirm the same on the next or any subsequent day when in session, unless for good cause shown by either party;" and, further, that "said court, as to the confirmation of such report, shall have the powers usual in other cases." The words "powers usual in other cases" were so construed in Backus v. Gartner as to exclude the power to award a new venire, and it was held by the learned chief justice that the intent was to convey the same power as was conferred on the judge in other cases in which the confirmation of reports, made to such court by some body or persons authorized by law to make them, was committed to his jurisdiction, and the learned justice cites as an analogous proceeding the power conferred to confirm the report of referees, and concludes that the only power under that statute would be to confirm the report of the referees or send the same back to the same referees.

Section 7379, How. Stat., seems to have been overlooked, which provides that "the circuit judge may, by an order under his hand, filed with the clerk, discharge any referee on cause shown by affidavit, and may in like manner fill any vacancy that may occur in their number, or may direct the reference to proceed and be concluded without filling any such vacancy."

It cannot be doubted that under this section the circuit judge might, upon a showing that the referees were prejudiced or biased, discharge one or all of such referees, and refer the same to new referees to be appointed by him.

Under article 6, ec. 8, of the constitution, the circuit courts are vested with full power in civil and criminal proceedings. They are the courts of the highest original jurisdiction in the State, and are beyond the reach of the legislative power. Heath v. Circuit Judge.

37 Mich., 372; Allen v. Circuit Judge, id., 474.

The power to control the verdicts of juries and set aside the same for bias is among the most essential powers vested in a nisi prius court, and to justify a construction of a statute which excludes this power the language should be clear and unmistakable. In my judgment, such an intent is not evidence- by the act in question. The provision that the circuit judge shall have the powers usual in other cases fairly construed means the powers usual in other cases within the jurisdiction of such court. This includes the power to see that justice shall not miscarry by reason of the prejudice or misconduct of the jury.

The law of Tennessee provides that not more than two new trials shall be granted to the same party in any action at law or on the trial by jury of an issue of fact in equity. In Trott v. West, 10 Yerg., 499, the supreme court of Tennessee held that this act did not intend to prevent the court granting new trials for error in the charge of the court to the jury, for error in the admission or rejection of testimony, for misconduct of the jury, and the like. See also Turner v. Ross, 1 Humph., 16; Railroad Co. v. Hackney, 1

Iead, 170.

I concur in the conclusion reached by Mr. Justice Long.

Morse, C. J. (dissenting):

I am well satisfied with the decision of this court when this case was here before, and with the opinion of Chief Justice Champlin, reported in 89 Mich., 209. Any other holding is not only inconsistent with the repeated adjudications of this court, but contrary to the spirit and purpose of the constitutional provision relating to the taking of private property for the use or benefit of the public.

Under section 2, article 18, of the constitution, it is evidently contemplated that the necessity for the taking and the just compensation to be awarded are to be found by a jury of 12 freeholders (residing in the vicinity of such property) or by not less than three commissioners appointed by a court of record, as shall be prescribed by law. It was never intended that the fixing of damages should

rest in the disc-etion of any court, but the right of the person 1662 whose property is to be sequestered to the determination of

12 of his neighbors upon the question is guaranteed by the constitution, so that neither courts nor legislatures can deprive him of it. Yet in this case the judges of this court are asked to set aside the judgment of the 12 men provided by the constitution to ascertain respondents' damages, and, in effect, to fix our own estimate of damages to property which some of us have never seen and of the

location of and value of which we are ignorant, except as we weigh and determine the conflicting evidence in the record before us. For if we have the power, and, having it, exercise it, to set aside a verdict because we think it is too big, do we not, in effect, fix the limit beyond which a jury cannot go in the ascertainment of damages? Having no personal knowledge of the property of respondents sought to be condemned by these proceedings, and having no constitutional or statutory power to use a personal view of the premises in aid of my judgment, I shall not take the liberty to substitute my judgment for that of 12 men residing in the vicinity of this property and presumably having better knowledge of the property than I and the damages that will result to it by the proposed taking. I know of no other reason for a view of the premises except that such view may be used in the formation of the judgment of the jury, both as to the necessity of the taking and the amount of the compensation to be awarded.

The jury in condemnation proceeding-, "as in all cases where no certain measure exists, must trust somewhat to their own judgment. That is one of the purpose- to which juries for which juries of inquest are provided. They are expected to view the premises and use their own senses, both to obtain such an information as an evewitness can gain and to interpret and comprehend the testimony of

others."

Grand Rapids, etc., R. R. Co. vs. Chesebro, 74 Mich., at p. 475. Toledo, etc., R'y Co. v. Dunlap, 47 id., 466.

(Campbell, J.:)

It has been uniformly held by this court, in the face of a statute which provided that the judge should attend the jury to decide questions of law and to administer oaths to witnesses, that after the jury were selected and sworn the whole matter was in their hands,

and the decisions of such judge were entirely advisory, and that the jury were the sole judges of the law and the facts: and, further, that they were not conclusively bound by the opinions of witnesses either as to value or damages. Grand Rapids, etc., R. R. Co. v. Chesebro, 74 Mich., 471, 472, 475, and 478; Michigan Air Line R'y Co. v. Barnes, 44 id., 226, 227; Toledo, etc., R. R. Co. v. Dunlap, 47 id., 456; Port Huron, etc., R'y Co. v. Voorheis, 50 Mich., 510; Detroit West., etc., R. R. Co. v. Crane, id., 182, 187; Flint & P. M. R. R. Co. v. Detroit & B. C. R. R. Co., 64 id., 363; Fort Street Union Depot Co. v. Jones, 83 Mich., 415, 418.

The contention of the petitioner that the circuit judge had a right in this case to set aside the verdict of the jury and granted a new trial because of the admission of irrelevant testimony must rest upon the presumption that this is a judicial proceeding, to be controlled by the courts as in a suit at common law. This is not the theory of the constitution nor in accordance with the rulings of this court. It is not a judicial proceeding.

"Commissioners form no part of the machinery of a court, and a jury of inquest is not a court. It has always been settled that the appropriation of private property did not come under the 'judicial

power' as it is located under the Constitution in courts, and except for the Constitution the nature of the tribunal of condemnation would have been discretionary with the legislature." Campbell, J., in Grand Rapids, etc., R. R. Co. v. Chesebro, 74 Mich., at p. 471.

The proceedings in this class of cases are special and bear little resemblance to ordinary legal trials. Toledo, etc., R'y Co. v. Dunalp, 47 Mich., 462; Port Huron, etc., R'y Co. v. Voorheis, 50 id., 510.

If the circuit judge can be permitted to set aside a verdict because of improper and irrelevant testimony has been admitted, then the long line of decisions above quoted must be overruled, or our holdings will be so inconsistent as to be absurd and the proceedings become a farce.

(First), we hold that the attending judge has nothing to 1664 do with the admission or rejection of evidence, and that if

he rules upon any question the jury are at liberty to disregard such ruling, they being the sole judges of the law and the facts; and, second, that if the jury in admitting or rejecting evidence have erred in the estimation of the circuit judge he may for that reason refuse not only to confirm their verdict, but set it aside and order a new jury. If this last proposition is to be maintained, what sense is there in the holding that the judge cannot control the jury in their deliberations before verdict upon this matter of the rejection of testimony? Would it not be better and cheaper for all parties and more in accordance with the requirements of justness and fairness and that the attending judge should pass upon the matter and what is proper testimony before it goes to the jury? The answer is obvious.

The second proposition is entirely inconsistent with the first, and if established by this court, as contended for in this case, it would be well to state that the previous adjudications of this court — expressly overruled, and from this date inaugurate a new departure in the

law of condemnation of private property for public use.

Much stress is laid upon the imperfections of the jury, but the answer to this is that they are the tribunal chosen by the constitution, as a highway commissioner was chosen to condemn lands for public highways. So far no court has undertaken to interfere with the commissioner's rulings as to the necessity of the damage in a highway opening where he had acquired jurisdiction. He is an autocrat beyond the law as to these matters, and made so by the constitution; and a jury, in my opinion, in a case of this kind, is a tribunal to fix the damages and are judges of the law and the facts, created so by the constitution; and, when clothed with jurisdiction as the law provides, their award can only be impeached for fraud or corruption or upon a showing that by mistake or wilfultness they have omitted to take into consideration substantial elements of damage, and therefore substantial injustice has been done; and this is a matter for the supreme court aid not for the attend-

ing judge. As pointed out when the case was here before, no express power is given such officer in the statute to set aside the verdict of a jury and to impend a new one, but such power is expressly granted to this court. The only power

given is to confirm, or, at best, to refuse to confirm, the report of the jury or commissioners. Here the duty of the attending judge ends under the statute, and, in view of the constitution, it is not to be presumed that he has any implied power, unless, indeed, it be true that this is a judicial proceeding and the judge has common-law powers, which has been denied time and time again by this court.

The absurdity of permitting the circuit judge in this case to set aside the verdict because of the errors in admitting testimony and because of the talk of counsel the same as - this were an ordinary lawsuit is well illustrated by one claim of the petitioner and the opinion of the circuit judge thereon. In the course of the proceesindgs it was contended by the attorney for the respondents in their behalf that there was no necessity for the taking of the Backus property or the street in front of it, because there was - strip of land belonging to the Michigan Central Railroad Company which might be taken instead. It was found by the circuit judge that the contention of respondents' counsel was wrong in law, and that he had put improper questions to witnesses in this respect, especially in drawing out from one witness that Mr. George V. N. Lothrop had at one time said that there was no difficulty in condemning this Michigan Central property for railroad purposes, and this was one of his principal reasons for setting the verdict of the jury aside. Yet the jury found against the respondents upon the question of necessity, the very question to meet which this claim that this Michigan Central strip could be taken and used was raised and argued by respondents' counsel; but the circuit judge, in the face of this finding, is convinced that, although the raising of this question and the argument upon it had no effect for the purpose for which it is used, yet it tended to largely increase the damages in favor of respondents, to

the great prejudice of the petitioner. The award is not to be set aside even by this court unless it clearly appear that injustice has been done, and yet we are asked to go into the realm of speculation to guess that an argument made by an attorney for one purpose, and in which purpose it failed, was productive of great

harm in another and altogether different direction.

We held in Kalembach v. Railroad Co., 87 Mich., 509, that it would not be presumed that the jury in that case were prejudiced upon the measure of damages because of improper instructions by the court upon the law of negligence. Mr. Justice Grant said the result of the opposite rule "would be that a court must correctly instruct the jury upon all branches of every case in order to avoid prejudicing the jury in their assessment of damages." But here the doctrine is announced that in condemnation cases, where the jurors have heretofore been considered the judges of the law and the facts and not bound by the instructions of the attending judge, the attorneys for the parties must make no mistakes in their claims as to the law upon any branch of the case, or the verdict will be set aside. I have yet to learn of any case in the history of jurisprudence where a verdict has been set aside because an attorney for either party was mistaken in his ideas as to the law of the case and contended in good faith for a proposition which was erroneous

in the estimation of the courts. If this principle is established, there will be but little safety or certainty in trials of any kind, since much litigation is born of lawyers' errors, and if the appellate courts must pass upon the errors of counsel as well as of the court reversals will be the rule and affirmation an exception.

This court has never held that a probate or circuit judge could set aside a verdict of a jury or a report of commissioners and impanel a new jury or appoint new commissioners because the award of damages was excessive or because improper evidence was received. In Marquette, etc., R. R. Co. v. Probate Judge, 53 Mich., 222, it was said that the commissioners' report might be set aside if the amount awarded was unreasonable and indicated that it was the result of prejudice or partiality or that they acted upon a wrong

basis of estimating the damages. It has also been said in other cases that the commissioners' report could for substan-

tial reasons be set aside or the award of the jury be vacated for irregularity or on the merits. Port Huron, etc., R'y Co. v. Callanan, 61 Mich., 14; Grand Rapids, etc., R. R. Co. v. Chesebro, 74 id., 472. If a judge can, under these decisions, vacate the award of a jury, there is no adjudicated case in Michigan where an order was ever made by an attending judge granting a new trial before a new jury, and there is no showing that such an order was ever made except in this case. No provision is made in the statute for any such action; and, as the right of appeal is only given upon the confirmation of the report, it seems plain to me that the right to vacate an award of damages is not vested in the attending judge because of excessive damages or the reception of improper evidence. If he vacates the award, it must be for jurisdictional reasons or because of fraud, undue prejudice, or corruption in the jury or commission-The amount of the damages and the law of the case as to the reception or rejection of testimony are beyond his province. With either he has nothing to do, or the utterances of this court are to be disregarded.

In the very latest case in this court before this one Mr. Justice Grant, speaking for the whole court, said, after quoting from the language of Mr. Justice Campbell in Railway Co. v. Dunlap: "It was there also held that the functions of the judge in such cases were advisory and that such controversies as this cannot be disposed of on merely technical notions. These proceedings may be instituted in probate courts, the judges of which are frequently not lawyers and are unfamiliar with the rules of evidence. If they were to be set aside on account of error in the admission or rejection of testimony, the difficulty of obtaining a finding by the jury which could stand the test would be apparent." Fort Street Union

Depot Co. v. Jones, 83 Mich., 418.

It will be seen that the petitioner in that case was contending for exactly the opposite rule that it seeks to have enforced in this case.

If it is to be held that a judge cannot control a jury by ruling as to what testimony they may receive, as we have unfirmly decided heretofore, and also that, after the jury come in and report, their award may be vacated and a new trial granted

1669

by this same judge because they have received improper testimony or rejected competent evidence, then the language of Mr. Justice Grant seems appropriate, for a jury are presumably as ignorant of rules of law as are probate judges, and there will seldom be found a verdict that can stand the criticism of a circuit judge in this respect. As before said, the whole thing becomes a farce and absolute nonsense, unless this court goes still further than the majority opinion in this case and overrules all our former adjudications that the jury are the judges of the law and the facts and relegates the proceedings to the judicial practices after the form of the common-law trials. I am not prepared to go thus far, nor yet to take the initial step which logically must lead the court at last to this end.

In conclusion, I do not think the petitioner has any standing in this court. I know of no constitutional method by which an indiyud-al or a corporation can be authorized to take the property of another and hold, enjoy, and use it while litigating in the courts the amount it shall pay for the property. In any other case than a condemnation proceeding the voluntary payment of a judgment, after appeal, would discontinue the appeal. It is contended that under the statute it was the intent of the legislature that the rights of the parties appealing should not be affected by the payment of the money, -s directed by the court, either to the party or on deposit for the use of such party; and it is further contended that as the petitioner has not appealed from the finding of public necessity for taking the property that question is settled and the company's right to contest on appeal the award of damages remains, although it has taken possession of the property and paid the damages. Under our constitution private property cannot be taken without just compensation, and it is not intended that possession of the property shall be given to the public or to a quasi-public corporation until the matter of compensation is settled or finally determined and paid or secured beyond peradventure.

Section 9, art. 15; Sheldon v. Kalamazoo, 24 Mich., 386; Marquette, etc., R. R. Co. v. Probate Judge, 53 id., 226.

The legislature has no power to avoid this plain provision of the constitution. The petitioner could only get possession of this street in front of respondents' property by the payment of the award. On its own motion it paid the money to respondents and took possession of the property. By so doing it abandoned its appeal.

Order of the Supreme Court.

1670 At a session of the supreme court of the State of Michigan, held at the supreme court room, in the capitol, in the city of Lansing, on the tenth day of June, in the year of our Lord one thousand eight hundred and ninety-two.

Present: The Honorable Allen B. Morse, chief justice; John W. McGrath, Charles D. Long, Claudius B. Grant, Robert M. Mont-

gomery, associate justices.

THE FORT STREET UNION DEPOT COMPANY, Petitioner and Appellant,

Absalom Backus, Jr., A. Backus, Jr., & Sons, James N. Dean, William H. Davison, Respondents and Appellers.

12421.

This cause having been brought to this court by appeal from the circuit court for the county of Wayne, and having been argued by counsel and due deliberation having been had thereon, it is now ordered and adjudged that the verdict and award of the jury in this cause, in so far as the same fixes and determines the compensation and damages that the petitioner ought justly to pay to the respondents, be, and the same is hereby, vacated and set aside, and that the said verdict and award, so far as the same determines the question of public necessity, be, and the same is hereby, affirmed.

It is further ordered and adjudged that there be a new appraisal of the compensation and damages that ought justly to be paid to the respondents be had before a new jury, to be impanneled and sworn according to the act under which the proceedings in this cause were instituted, and for the purposes of said new appraisal this cause and the record therein are hereby remanded to the circuit court for the county of Wayne, with directions to proceed with said new appraisal, the costs of this appeal to abide the event of said appraisal, as provided by said act.

1672 STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

FORT STREET UNION DEPOT COMPANY, Petitioner,

Absalom Backus, Jr., A. Backus, Jr., & Sons, James N. Dean, and William H. Davison, Respondents.

To Dickinson, Thurber & Stevenson, attorneys for respondents.

GENTS: Take notice that on Monday, the 10th day of April, 1893, at the opening of court, or as soon thereafter as counsel can be heard, the petitioner will move the court before the Hon. George Gartner, circuit judge, for an order to strike, summon, swear and impanel a jury for the trial of the question of damages in this cause in pursuance of the order and directions of the supreme court therein.

F. A. BAKER, Attorney for Petitioner.

Detroit, April 5th, 1893.

1673 STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

FORT STREET UNION DEPOT COMPANY, Petitioner,

Absalom Backus, Jr., A. Backus, Jr., & Sons, James N. Dean, and William H. Davison, Respondents.

Edward A. Stricker, being duly sworn, deposes and says, that on this 5th day of April, 1893, he served a notice, of which the annexed is a copy, upon Dickinson, Thurber & Stevenson, and that such service was made at the office of said firm by handing the same to James H. Cullen, a clerk in said office, all members of said firm being absent therefrom.

EDWARD A. STRICKER.

Subscribed and sworn to before me, a notary public, this 5th day of April, 1893.

WALTER BARLOW, Notary Public, Wayne County, Mich.

At a session of the circuit court for the county of Wayne, held at the circuit court rooms in the city of Detroit, on the 10th day of April, A. D. 1893.

Present: Hon. Henry N. Brevoort, Hon. George Gartner, Hon. George S. Hosmer, Hon. Cornelius J. Reilly.

FORT STREET UNION DEPOT COMPANY) vs. Absalom Backus, Jr., et al.

Before Judge Brevoort.

In this cause it is ordered that it be and it hereby is continued as to the empanelling of a jury until Friday, April 14, 1893, without prejudice and without the defendant waiving any of his jurisdictional rights.

STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

In the Matter of the Application of The Fort Street Union Depot Company, a Corporation, Petitioner,

against

ABSALOM BACKUS, JR., "A. BACKUS, JR., & SONS," JAMES N. DEAN, and WILLIAM H. DAVISON.

Absalom Backus, Jr., who is a citizen of the State of Michigan, and a person residing in the city of Detroit, county of Wayne and State of Michigan, and A. Backus, Jr., & Sons, which is a corporation created and existing under the laws of the State of Michigan, having its principal office and carrying on its business in the said city of Detroit, and which is a person residing within the said city,

on receipt of a notice of motion in this court that a jury be struck, summoned, sworn and impaneled before the Henor-

able George Gartner, circuit judge, for the retrial of the question of damages in this cause, in pursuance of the order and directions of the supreme court therein, appearing for the purpose of this pleading, objection and protest only, in their own proper persons come and say:

That this court, or the said judge, should not make said order or take any further cognizance or jurisdiction of this matter for the

following reasons:

(1.) That the order and direction of the court heretofore, and the order and direction of the supreme court, affirming the order and direction of this court in that behalf, and all the proceedings in that behalf, providing and directing a retrial of the question of damages in this cause, and the proposed order to strike, summon, swear and impanel a jury for said retrial, and any order of the court directing a retrial have constituted, and do and will constitute, a denial by the State of Michigan to the said Absalom Backus, Jr., and the said A. Backus, Jr., & Sons, persons within its jurisdiction, of the equal protection of the laws, contrary to the intent and meaning of article fourteen of the Constitution of the United States, in this:

(1.) By the constitution of the State of Michigan and the laws adopted under and in accordance therewith, as uniformly construed by the courts of said State, except in single case where the

said Absalom Backus, Jr., and the said A. Backus, Jr. & Sons wer parties whose property was sought to be condemned by the said petitioner, under the petition in this matter, the question of the amount of damages to be awarded for the taking of property for public use is one for a jury (when demanded as it was demanded in this case) as an independent and non-judicial body or referee of its own kind without interference or constraint by a court or by an judge with or of the sound discretion of the jury in fixing it

1676 And in and by said constitution and said laws, as un formly construed and applied by the courts of the said State, except in the single case of these two persons, a judge or court is not permitted to set up a judgment as to said damages by way of binding instruction to said jury and against their judgment in their said sound discretion or by coercing such constitutional body to adopt the judgment or discretion of said court of judge by granting new trials until an award may be reached which may be in accordance with the judgment of said court or judge.

And the said Absalom Backus, Jr., and A. Backus, Jr., & Som aver, on information and belief, that the courts of the State and the supreme court of the State of Michigan have applied these principles repeatedly in adjudicated cases, without exception, in protection of all other persons than themselves within its jurisdiction and have never denied the application of the said principles of the constitution and the said laws of the State or to any person or per

sons except to them.

They aver that the said circuit judge has asserted the right to pass upon the question of the amount of damages to be awarded these respondents, and to set up his judgment against that of the said constitutional body or tribunal, and has sought to maintain his judgment by awarding a new trial in this case; and in this proceeding he is sustained by the supreme court of the State, which is a court of last resort in the State of Michigan; and said supreme court also, contrary to the uniform course of its decisions, of which there are many in the official reports of the adjudicated cases affecting other persons within the jurisdiction of the said State, has as to these respondents in this proceeding, affirmed its right to set up its judgment as to the proper amount of damages to be awarded against the sound discretion of said jury, and to coerce a

conclusion as to the amount in accordance with its judgment, by ordering a new trial in this matter against these re-

spondents

(2.) And in this, that under the said constitution and laws of the State of Michigan, and the adjudications of the courts of the said State, the uniform rule in condemnation proceedings, where business is sought to be condemned for public use, has been that damages for interruption of business and to the business stand, and for the diminution of business facilities, should be awarded as part of just compensation in addition to mere injury to the realty; but in this case, and to these persons, the said circuit judge and the supreme court have denied the protection of that constitutional rule and law, as repeatedly construed by the said courts, and have limited and do

200 200 200 200 200 200

limit in this proceeding the damages to mere injury to the realty and to the buildings thereon.

(3.) And in this also, that under the said constitution and laws of the State of Michigan, as uniformly and, as these respondents aver, repeatedly adjudicated by the courts of said State, no court or tribunal has jurisdiction to prosecute a proceeding as for condemnation under the power of eminent domain, when pos-ession has been actually taken of the property sought to be condemned by the person or body upon whom the prerogative to condemn, under the power of eminent domain, has been conferred.

And these respondents aver that the said petitioner has been in full possession of all the said property since the confirmation of the award in this case by the said circuit court, and has thereon constructed its railroads, trestles and bridges, and has been carrying on regularly the railroad business of four great railroad compa-

nies, besides its own; and that the order for a new trial in
these conditions, is a denial of the right of these respondents
to this protection under said laws from the oppression of litigation, and their undisturbed holding of the amount they have
received by the award of the jury, accorded under said laws by the

said courts to all other persons than themselves.

(2.) That the proceeding sought to be taken in form for a new trial is a proceeding under the authority of the State, through its courts, to deprive the said Absalom Backus, Jr., and A. Backus, Jr., & Sons of their property without due process of law, in violation of section one, of article fourteen of amendments to the Constitution of the United States.

(1.) Because, on the confirmation of the award and proceedings by the circuit judge, the total amount of the award was paid to these respondents by the petitioner, and the petitioner entered into full and complete possession of the respondents' property, sought to be taken by the proceedings; whereby the title to said property, passed to said petitioner, and the title to said money passed to these respondents.

(2.) And because this proceeding for a new trial is prosecuted not to reach said property the title to which has passed and which is fully possessed by the petitioner, but to reach, under the constraint of the courts, a portion of the award in money the title to which has

passed to these respondents.

(3.) And because the use of the said property contemplated by the petitioner, as shown by its said petition, is not a public use, and is not one as in which the public can make, compel, or have any part, interest, or benefit whatsoever, and its business and purposes are for the private ends and gains of the petitioner, in the prosecu-

tion of an enterprise charged with no duty to or service 1679 to the public by law; and a proceeding for condemnation for

private use is not due process of law.

And these respondents here refer to and read, as a part of this their plea, objection and protest against this proceeding, the record and proceedings in this matter from the filing of the petition, including the proceedings of the jury as signed by them in the two

former trials, and the subsequent record and proceedings in this matter in the said circuit court and in the supreme court of the

State of Michigan.

Respectfully submitting the premises, these respondents, Absalom Backus, Jr., and A. Backus, Jr., & Sons, protest against the summoning and impaneling of a jury in this matter and against any further trial or proceedings herein.

A. BACKUS, Jr., & SONS, By H. N. BACKUS, Vice-President and Acting President. A. BACKUS, Jr., By H. N. BACKUS.

STATE OF MICHIGAN, County of Wayne, 88:

Henry N. Backus, being duly sworn, upon his oath saith: That he is vice-president and acting president of A. Backus, Jr., & Sons, a corporation created and existing under the laws of the State of Michigan, and signed the foregoing statement by direction of the directors and all the stockholders of the said company; that he knows the contents thereof, and that the statements of fact contained therein are true as far as stated of the own knowledge of the respondents therein named, and that the statements therein contained on information and belief, or advice and belief, are true to the best of his knowledge, advice, information and belief.

He further saith that he is authorized and directed by 1680 Absalom Backus, Jr., by special direction, in his absence to

append his signature to the foregoing statement.

HENRY N. BACKUS.

Subscribed and sworn to before me this 15th day of April, A. D. 1893.

JAMES H. CULLEN, Notary Public, Wayne County, Mich.

(Indorsed: Plea and protest to jurisdiction. Filed April 17, 1893. John Marshall, deputy clerk.)

At a session of the circuit court for the county of Wayne, held at the circuit court rooms in the city of Detroit, on the seventeenth day of April, A. D. 1893.

Present: Hon. Cornelius J. Reilly, Henry N. Brevoort, George S.

Hosmer, George Gartner.

FORT STREET UNION DEPOT COMPANY vs.
ABSALOM BACKUS, Jr., et al.

Before Judge Gartner.

The respondents in this cause appearing specially for that purpose, object to the jurisdiction of the court to proceed to select a

jury for a retrial of said cause, and file a plea and protest to the jurisdiction of the court, and thereupon the court, after hearing the arguments of counsel, overruled the same.

At a session of the circuit court for the county of Wayne, 1681 held at the circuit court rooms in the city of Detroit on the fifth day of July, A. D. 1893.

Present: Hon. George Gartner, George S. Hosmer, C. J. Reilly, Robert E. Frazer, Henry N. Brevoort.

UNION DEPOT COMPANY A. BACKUS, JR., COMPANY et al. Before Judge Gartner.

Ordered that the trial of this cause be and the same hereby is set for August fifteenth, A. D. 1893.

THE FORT STREET UNION DEPOT COMPANY

ABSALOM BACKUS, JR., A. BACKUS, JR., & SONS, JAMES N. DEAN, and WILLIAM H. DAVISON.

Before Judge Gartner.

In this cause, the sheriff for the county of Wayne on this day having made return to the venire issued that he had served said venire on the persons named therein, and all of the persons named therein except William A. Eldridge having appeared and the following: Herbert Snow. Thomas A. Dingwell, Joseph B. Moore, Peter Flannigan, after showing due cause therefor, and having been with the other jurors sworn on their voir dire, were excused from serving in said cause; and the court having ordered the sheriff to summon talesmen, and thereupon such proceedings were had that on the 11th day of September, 1893, the following-named persons, freeholders, qualified to sit as jurors in courts of record in this State, to wit: Henry E. Baker, Henry H. Eby, Wm. C. Hausher, Frank F. Sommers, Chester E. Wright, John W. Leonard, Mason E. Safford, John E. Calnon, Richard Rowland, Vincent Zimmel, James M. Young and Everett M. Clark, were duly impaneled, tried and sworn as a jury to determine the public necessity for taking

and using for public use the real estate, property rights and assessments and privileges described in the petition in said cause and — which the above-named respondents are interested as owners or otherwise, and if they shall deem the same necessary to be taken, to justly and impartially determine the damages or compensation which ought justly to be made by the said petitioners to said respondents as owners or as interested in said real estate, property, interests, rights, assessments and privileges mentioned in said petition, said jurors having subscribed said oath and the same having been filed, they retired and elected Henry E. Baker, one of their number, as their foreman, and the sheriff appointed the sheriff of the county of Wayne as the proper person to attend and take charge of said jury while engaged in said proceedings.

STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

THE FORT STREET UNION DEPOT COMPANY, Petitioner, vs.

A. BACKUS, JR., & SONS, a Corporation, and ABSALOM BACKUS, JR., et al., Respondents.

I, Henry M. Reynolds, clerk of said circuit court, do hereby certify, that it appears upon the calendar of said court that upon the 6th day of November, 1893, a verdict was rendered for respondents in said cause for the sum of \$63,000, and I further certify that said verdict was not spread upon the journal of said court, nor is said verdict, as signed by the jury in said cause, now in the files of

said cause in this office, and it does not appear of record in said court that said verdict, as signed by said jury, was ever filed in said cause.

In testimony whereof, I have hereunto set my hand and the seal of said court this 22nd day of August, 1894.

[SEAL.]

HENRY M. REYNOLDS, Clerk, By CHAS. C. KELLOGG, Deputy Clerk.

Testimony Taken on Third Trial.

STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

FORT STREET UNION DEPOT COMPANY, Petitioner, vs.
ABSALOM BACKUS, JR., Sons & COMPANY.

Before Judge Gartner.

SEPTEMBER 5, 1893.

Mr. Dickinson: On behalf of the respondents in this case I desire to renew my solemn protest against a retrial and against a further harassment of these respondents in this matter for the reasons stated in the papers filed at the last hearing, when the order was entered to proceed with the drawing and striking of a jury. I desire that this protest be entered now and at every stage of the proceedings. I desire the report to further note that the court is present at this time.

A jury was then struck in the regular way by Mr. F. A. Baker, on behalf of the petitioner, and Mr. Don M. Dickinson, on behalf of the respondents, and an adjournment taken to Monday, September 11, 1862, at 2.

ber 11, 1893, at 2 p. m.

1691

The Court: You may call the jury, Mr. Sheriff.

Mr. Dickinson: Before the jury is called, if your honor please, I desire to ask whether your honor, Judge Gartner, of the circuit court, proposes to sit in this case.

The Court: I have not vet considered that matter.

Mr. Dickinson: So far as the presence of the court is required. Mr. BAKER: If the court please, in regard to that matter, we argued the question somewhat fully before the supreme court in the second hearing in this case, and I became satisfied that the supreme court from the decision that they had made in the case and from what took place on the argument in that case, are of the opinion that it is perfectly competent for the circuit judge to try these cases precisely the same as in an ordinary civil action at common law, and your honor will remember that the statute expressly

provides for it. Mr. Dickinson: I do not think you quite understand my motion, Mr. Baker. I was not going into that question of whether it is competent for the court to sit, whatever judge we have. his honor whether it is his purpose to sit in this matter-leaving that question open as to the competency to sit permanently or a

time.

The COURT: The matter is before me now, Mr. Dickinson.

Mr. DICKINSON: We had no means of knowing until this time because we are now just entering upon the examination of the jurors and the question arises. We had no opportunity of knowing whether your honor would sit here until this moment.

The COURT: I have had charge of the matter since its inception.

I suppose I shall have to continue in charge of it.

Mr. Dickinson: Very well. Now, upon that matter I desire to ask, under instructions of my clients-the specific 1692instructions in writing of my clients-to have some other judge sit, on the ground that your honor is prejudiced against them and on account of the influence which your honor would be under, consciously or unconsciously, for the petitioner. This motion we would like to support by affidavit at any time your honor will hear it.

Mr. Baker: Of course no such motion can be entered, if the court No such motion has ever been made in my experience in the State of Michigan-such a thing as challenging the court.

Mr. Dickinson: I will cite your honor a precedent in the 89 Kentucky, in a precisely similar case as it happens, of the building of a viaduct, and it is always competent-wherever it is believed, I think, in any case at common law-wherever either party believes that he is entitled to a change of venue, for instance, or believes that the court before whom he is to be heard is prejudiced-it is always competent and he has a right to make a motion for a change of judge.

Mr. Baker: No such practice has ever prevailed in this State or any other jurisdiction, unless there is some statute that provides for it. In Kentucky they have some statute which authorizes either party to call for a trial by a member of the bar, but there is no such jurisdiction here. There is no such thing as change of venue because of the prejudice of the court, and it is an insult to the court to allege any such thing.

Mr. DICKINSON: I do not think your honor will so understand it as an insult to the court. It is perfectly competent for the party to

make the objection and to support it.

Mr. BAKER: I frequently find fault with the judges, but I never

come into court to do it.

The Court: I think, Mr. Dickinson, that having had charge of this matter from the beginning, I will take charge of it at this time.

Mr. Dickinson: And your honor will not listen to affidavits showing the prejudice or in support of the objection I have made? The Court: I have not said that. Of course, I do not know

what the affidavits are.

Mr. Dickinson: Well, we desire time to make that showing. We did not know before this time that your honor would sit.

The COURT: You might impanel the jury; they will have to

view the premises.

Mr. Dickinson: Your honor exercises the judical function at once on the impanelling of the jury. It must be made now if at any time. I suppose your honor has the power to go on without listening to the motion, if your honor sees fit.

The Court: I am here willing to listen to any motion counsel

desires to make.

Mr. Dickinson: This motion I desire to make and sustain it by affidavits.

The COURT: I will hear it at this time.

Mr. Dickinson: We have not been prepared.

Mr. BAKER: A man who comes in with such a motion as that ought to be prepared.

Mr. Dickinson: Yes, he ought to be if he knew who the court

was to be.

Mr. BAKER: You ought to know who the court was to be.

The Court: I think you may go on and impanel the jury; the matter will be adjourned for a few days anyway.

Mr. Dickinson: And your honor will listen to the motion later.

The Court: Yes.

Mr. Dickinson: If you honor has the 89 Kentucky, your

1694 honor will see that it is an entirely proper motion.

The COURT: I am not at all thin-skinned, Mr. Dickinson.
Mr. DICKINSON: I desire, may it please the court, at this stage of
the case also to interpose the objection to a retrial of the case, which
I have heretofore stated in writing on the files of the court, and to
protest against this retrial for those reasons and against the jurisdiction of the court.

The Court: You may proceed with calling the jury, Mr. Sheriff.
The jury was then called and selected in the regular way, and
duly sworn.

The COURT: Gentlemen of the jury-this is a case which will probably take some time to try, and all that is necessary for me to say at this time is that in view of the fact that it is a very important case, you are to be very careful not to hold any conversation about it, either among yourselves, or to permit any conversation with any outsider with reference to the matter. You must keep your mind entirely clear and free from any influence. You want to listen to the testimony and the arguments of counsel as they are made in court, and after you retire to the jury-room then and only then to talk the matter over and consider the testimony offered in the case, together with the arguments of counsel, in arriving at a conclusion of such questions as may have been presented to you.

Adjourned till September 13, 1893.

SEPTEMBER 13, 1893-9.30 a. m.

Mr. BAKER: If the court please, and gentlemen of the jury: As is customary in the commencement of trials before a jury it is incumbent upon me to state to you the case on the part of the peti-

tioner in this case, The Fort Street Union Depot Company, and to lay before you in a general way the character and 1695 nature of the testimony that we propose to introduce before

You are impanelled in this case to determine the damages. Mr. Dickinson: Will you let me interrupt you for a moment, Mr. Baker. For all purposes the planing mill of the respondents ought to be running when the jury go to view the premises. will be ready by the morning.

Mr. BAKER: You do not want them to go there until morning? Mr. Dickinson: The jury ought to see the planing mill running

and in operation.

Mr. BAKER: That is a matter we can determine after I get through

with my opening.

Gentlemen of the jury, as I said before, you are impanelled in this case to determine the damages and to determine the compensation that the Fort Street Union Depot Company should pay to Absalom Backus, Jr., and to a corporation known as A. Backus, Jr., Sons & Company, for building an elevated railroad or superstructure along River street in front of their planing-mill property, which has a frontage upon Fort street and also a frontage upon River street. The Fort Street frontage is about 75 feet and the River Street frontage is 2381 feet; and upon the property they have a large planing mill and box factory. The Michigan Central Railroad track bound them upon the east and the property owned by various individuals bound them upon the west, between their property and Twelfth street.

The Fort Street Union Depot Company is a corporation organized under the union depot act in this State for the purpose of furnishing depots and terminal facilities to railroad companies; and they have built their depot and have built their elevated track along River street, by which they reach the depot. And this case

remains to be determined as far as the damages are concerned 1696 We will show to you on the part of the petitioner in the case the value as we understand it and as our witnesses will testify. of the planing-mill property, and we will introduce testimony showing the value of the land, if it was vacant, and as to the value of the buildings, which will be indicated by the testimony, showing what they can be duplicated for, and also the value of the machinery. We will show the value of the property and then it will be incumbent upon the jury in this case to determine what depreciation, if any, in the value of this property has taken place or been occasioned by the building of this elevated railroad along River street, and the maintenance and operation of railroad tracks thereon. So that you will see the question is quite a simple one and simply involves the exercise of the judgment of the jury as to how much their property has been depreciated in value, how much less it is worth, because of the construction of these railroad tracks of the union depot company along this street in front of their property. You will be permitted at a time that may be agreed upon to visit the property, and you will be allowed to go through the Backus planing mill and examine that property, as Mr. Dickinson has stated, while it is in operation, so that you can see the nature of their plant, and you can go upon and under and about the superstructure of the elevated railroad, and see to what extent, if any, that has caused any injury or creates any damage or has any bad effect upon the value of the planing-mill property. And if you find that it has depreciated the value of that property, to determine to what extent.

There will be some testimony in the case relating to the question of the increase of the fire risk. Upon the part of the petitioner in this case we will show you by competent insurance men that the fire risk upon that property has not been increased by the construc-

tion and maintenance of this road, that the rates are no larger and will be no larger because of the construction of this road,

with possibly one modification. Upon the River Street front Mr. Backus has a shaving vault, a brick building, with two somewhat large apartments in it, some 18 or 20 feet wide, I should think, and 40 or 50 feet long, and into which the shavings and dust from the planing mill are carried through blow-pipes that are operated with revolving fans, and the shavings and dust in the mill are deposited in these vaults by the use of these fans and blow-pipes. And upon the top of this shaving vault they have what is known as the Backus dust-arrester, which is a large structure upon which burlap is stretched. Mr. Backus, I think, will tell us that there are some 2,700 yards of burlap stretched upon frames that are built in that shape, that is, V-like, the V standing up, and there are rows of them, the burlap running up and down, so that when the air comes through the blow-pipe into the shavings vault, carrying shavings in there, the air goes through the burlap and the shavings are gathered on the other side and dropped into the vault beneath. And there will be considerable testimony in the case in regard to this dust-arrester. We will endeavor to show you on the part of the petitioner by competent testimony that the dust-arrester which

Mr. Backus has there is not a proper one, but it is one that is not up to the present state of the art in regard to dust-arresters, and that it will be perfectly feasible and practicable, if he desired and was willing to do it, to put in what is known as the Vortex dust-arrester, which is a metallic one, and only about six or eight feet wide at the top and is funnel-shaped. It blows the air into the funnel and the centrifugal action upon the shavings in this funnel causes the air to go out at the top and the shavings to drop beneath, and we will show you by competent testimony that that is the dust-arrester that is in almost universal use in the United States, that it is made of galvanized or sheet iron and has an auto-

matic top, so that when the mill is not in operation it drops 1698 down, and is absolutely fireproof as far as any exposure from the outside is concerned; when the mill is in operation the wind comes up through the top of this dust-arrester and it is impossible for any spark or anything to get into it, and when the mill is not in operation the top rests upon it, so that there is no more fire risk to it than with any other iron exposure of that kind, the same as any other roof. We will show by men who are engaged in this business and who know all about it, that this metallic dust-arrester, the Cyclone or Vortex dust-arrester, built upon these principles, was invented eight or nine or ten years ago, and it has been almost universally adopted throughout the United States and Canada and is successful, doing away with any exposure from outside either from the chimneys of your own plant or from any railroad or chimneys in the neighborhood. The only way to fire a shavings vault would be to start a fire on the outside, so that we will demonstrate to you by the testimony of insurance men and by the testimony of men engaged in the dust-arrester business that as far as that is concerned, there will be no possible increase in the fire risk if a suitable dust-arrester, one that is up to modern times and the present state of the art, is placed upon that mill, and that it can be My recollection is that the testimony will show that it can be done at an expense of \$1,300.

This is the general nature of the case that you will be called upon to decide. It will take some days to put in the testimony. We will go ahead and put in our proof showing the value of the land, showing the value of the buildings and plant, and showing this insurance testimony and the testimony in regard to the shavings vault and dust-arrester, and submit the case as far as we are concerned. Then the respondents upon the other side will

introduce their testimony and we will be at liberty to introduce rebuttal testimony, and when it is concluded the case will be argued the same as any other case and committed for your decision. Under the decision of the supreme court there is but one question for you to pass upon in this case and that is the question of damages to the property. With this statement of the general nature of the case as an opening, we will make arrangements with counsel on the other side for you to visit the property, either some time today or tomorrow morning, as may be convenient to the parties.

124 - 55

Mr. Dickinson: As the value of the real estate may be a mere bagatelle as compared to the injury to the business, it is essential, we think, that the jury should see the mill in operation.

Mr. BAKER: We have no objection to that. I have no objection to the jury meeting here tomorrow morning and then going down and looking at the property.

Then adjourned till next day at 2 p. m., when the jury visited and viewed the property in question, when a further adjournment was taken till September 22, 1893, at 9.30 a. m.

FRIDAY, September 22, 1893—9.30 a. m.

Francis Adams, sworn on behalf of petitioner.

Examined by Mr. BAKER:

Q. Where do you reside?

A. In this city.

Q. How long have you lived in Detroit?

A. Something over 20 years.

Q. What has been your business?

A. Lumber.

Q. What is your present business?

A. I have not any.

1700 Q. Have you been interested at any time in real estate? A. Yes, somewhat.

Q. Are you acquainted with the property in the vicinity of the Backus planing mill and box factory?

A. I am.

Q. For how many years have you been acquainted with it? A. 36.

Q. Did you formerly own property in that vicinity? A. I did.

Q. Are you acquainted with real-estate values there? A. Well, somewhat.

Q. Backus & Sons have a frontage on River street of 2381 feet, running back to the Michigan Central railroad on part of it and on a portion of it to the frontage on Fort street of about 75 feet. Can you tell us what the market value of the real estate separate from the buildings and improvements on it was in 1892 when the elevated railroad was built along in front of the property?

A. From \$50 to \$70.

Q. What frontage would you say was worth \$50 to \$70-the River Street frontage?

A. Yes, I should think that was worth the most. Q. What was the Fort Street frontage worth?

A. Oh, I should not make much difference if I was buying it. Q. You are familiar with the property, you know where it is?

A. Yes, sir.

Q. Next to the Michigan Central there. As I understand you, you testify with reference to the value of the land without regard to the improvements?

A. Yes, sir.

1701 Cross-examination.

By Mr. DICKINSON:

Q. The property that you owned down there is property which is now owned by the union depot company, is it not?

A. Yes, sir.

Mr. BAKER: By the old union depct company?

Q. The union depot company bought your property. Did you do any business for the union depot company?

A. I did some.

Q. And you have been a witness in the fifteen or twenty suits always for the union depot company?

A. Yes-always seemed to be just about this one. I have been

here several times.

Q. Were you not a witness in a suit against Mrs. Zacharia Chandler by the union depot company?

A. I think I was. I have been on two or three besides this.

Q. Do you know of any that you were not on?

A. Yes, I think I can find some.

Q. What one?

A. Some of the Jones estate on Fifth street.

Mr. BAKER: I do not think he was sworn in but two cases.

Q. Were you not sworn on the Morton case?

A. Yes, sir.

Q. Were you not sworn in the Jones case over in the church property on Lafayette avenue when the court was held in that building—Philharmonic hall?

A. I think not.

Q. You have always been a witness whenever any of the Backuses were involved, haven't you?

A. I should judge so.

Q. Yes. You have been engaged to some extent in depot building, have you not, also?

1702

A. Yes, sir, but not here. Q. What did you get for your property when you sold it to the union depot down there?

Mr. BAKER: That is objected to as immaterial and incompetent. His property is further down, and I do not understand under the authorities that testimony of actual sales of other property is competent.

The COURT: I think the latitude of inquiry in a case like this should be large, and if there is any doubt about it the testimony

should be admitted. You may answer the question.

Exception for petitioner.

A. It was a different kind of property. What I mean by different is, it was different in form, comprised a much larger frontage.

Q. Well, but what did you get per foot for it?

A. About \$200.00.

O. You were sworn in the last trial of this case. Will you please tell the jury whether in answer to Mr. Baker's question as follows you answered as I read it: "Q. From your knowledge of the value of property in that vicinity and considering the location of the Backus mill property there, what in your judgment would be the value of the River Street frontage of that property running back halfway, and what would be the market value, in your judgment, of the land itself, vacant?" And did you answer \$100 a foot.

A. May be.

Q. Do you think it is worth any less, or have you changed your mind in any way as to the value of the property at that time?

A. Not very much.

Q. Do you think the property has been reduced in value any since the railroad was built in front of it?

A. No. I don't.

Q. Do you know anything about it? 1703

A. Very little.

Q. Have you been inside of the mill in your life?

A. Yes, sir.

Q. When-since the last trial?

A. No, sir, I have not been inside since then-prior to that.

Q. Did you go in prior to that?

A. Yes, sir.

Q. In answer to me at the last trial did I not ask you on crossexamination, "Did you ever go into the Backus mill?" and did you answer, "No, except to look in there"?

A. Oh, I may have.

- Q. Well, have you been into the mill and gone through the mill?
- A. No, sir, I have not gone through the mill exactly. I have been through part of it.

Q. Do you know anything about it? A. Yes, I have been through part of it. Q. What part of it?

A. The lower stories chiefly.

Q. Do you know whether comparatively, it is one of the finest in the West of its kind?

A. Yes, always had that reputation.

Q. You think it is? A. Yes, a good mill.

Q. Now, you lower your estimate of the property since the road has gone through there, of the property, of the real estate?

A. I have.

Q. You would lower your estimate?

A. I would somewhat.

Q. Would you not, in estimating the value of the property of Mr. Backus, take into consideration somewhat the kind of business it had been used for, and for which it might be used again?

A. No, sir; I don't think I would.

Q. In estimating the real-estate value of such property as that,

with the railroad connections of the Michigan Central, as it stood before the new structure was put upon the street, wouldn't you in considering the value of the real estate, estimate the advantages for business?

A. I certainly should, but exactly how I should do it, I don't

know

Q. But you would not estimate it over \$50 or \$70 a foot in '92, before the railroad went by there?

A. No, sir; I don't think I should.

Q. What has changed your mind from \$100 a foot at that time to \$50 or \$70 a foot?

A. The value of other lands immediately adjoining-what they

can be purchased for.

Q. Do you know how much Mr. Joy paid for the property just below on the corner?

Mr. Baker: I make the same objection, that it is immaterial and incompetent

The COURT: Answer the question.

Exception for petitioner.

A. No, sir.

Q. Do you know the property that Mr. Joy bought at the corner of Twelfth and River streets, just below Backus' property, 70 feet front?

A. I think I do. I know all the property there. Whethar Mr.

Joy bought it or not, I don't know.

Q. You didn't know that Mr. Joy bought it and paid \$274 a foot for it?

A. No. sir.

Q. Well, in making up your value of the property, you would take into consideration the sales made about, wouldn't you? A. Yes, sir. 1705

Q. Will you please tell the jury where there have been

any other sales above or below Backus' property?

A. I don't know where the sales have been made. I know of parties that wanted to sell.

Q. You don't know of actual sales?

A. No, sir. Except one, which is hardly a criterion. It is where Backus' chimney now stands, or right adjoining it.

Q. O, the little lot there adjoining it?

A. Yes, sir.

Q. He bought that next his mill?

A. Yes, some years ago.

Q. On the River Street front?

A. Yes, sir.

Q. Where the chimney is?

A. Yes, sir.

Q. What did he pay for that, if you know? Objected to as immaterial and incompetent.

I did know, but I have forgotten what it was.

Q. Do you take into consideration the value of the property for Backus in giving your estimate of the value in 1892?

A. No, sir.

Q. You have not considered its comparative situation to his whole plant, his lumber yard below, and his storehouse above on East Fort street?

A. No, sir; I have not particularly.

Q. You have not taken that into consideration. Your property, I think, that you sold, was below Backus' planing mill?

A. Yes, sir.

Q. And above his lumber yard?A. Yes, sir.

Q. How much front did you have on River street?

A. I think I sold nearly 500 feet. 1706

- Q. And it ran back to the river, how much—the dock? A. My impression is that it was between five and six hundred feet.
 - Q. Well, do you mean to the channel bank or the river?

A. The channel bank.

Q. You mean to the channel bank?

- A. Well, that I mean to the river. The larger part of that was dock.
 - Q. You mean to the front of the dock? A. Yes, sir.

Q. Did you have any railroad facilities to that property, to the Michigan Central, that you sold for \$200.00 a foot?

A. No, sir.

Q. Nothing but dock front?

A. Nothing but dock front and street.

Q. Do you think the railroad facilities for shipping add anything to the value of the Backus property—the Michigan Central?

A. Yes, it does, somewhat.

Q. You knew that Backus for the use of his mill has to haul all his property from his lumber yard, all his lumber?

A. He does about a third of it.

Q. And for storage has to take it up on Fort street?

A. I would answer that in the same way. He does about a third of it, but not all.

Q. Does what?

A. He ships it by railroad a good deal.

Q. What proportion?

A. I could not say that; I am not conversant with his business enough to measure that.

Q. You are not familiar with his business?

A. Not familiar enough to state.

1707Q. His lumber yard is usually pretty well stocked?

A. Not always.

Q. It is usually stocked? It is by lumber received by water?

A. That is the way he stocks it.

Q. Does he ever put in his lumber store yard there lumber received by rail?

A. Yes, I think he does.

Q. Will you tell the jury how he got there before the union depot company-by rail, how he could get the lumber by rail into his lumber yard?

A. I don't think I understand the question.

Q. I understand you to say that he stored lumber in his lumber yard that he received by rail in 1892?

A. Yes, sir.

Q. What was his railroad connection to store?

A. I don't know; I saw it coming from the dock, and different quarters.

Q. And stored it in his lumber yard?

A. Yes, sir.

Q. You saw the lumber being stored in the lumber yard that was received by rail?

A. Yes, I did.

Q. Would he take it up there by wagon?

A. Yes, sir.

Q. And store it?

A. Yes, sir.

Mr. BAKER: The railroad ran through the property.

Q. Yes, but he never used that. That has no lumber connections.

A. Mr. Backus bought lumber in various places in this State and other States. It was drawn in by rail.

Q. But his principal business is done on his dock front?

A. That is where the principal business is done.

1708 By Col. ATKINSON:

Q. Yours was one of the earliest sales of property, was it not, to the union depot?

A. Yes, I think it was the first.

Q. It commenced the deal down there, and that was how many years ago?

A. Eight or nine years ago.

Q. Now, you have not known any sales to be made of property down there since that time, have you?

A. Yes, sir.

Q. Except what was made to the union depot company?

A. No, sir.

Q. Now, the price you got was very small compared with the price everybody else got, was it not?

A. Well, I would hardly say everybody else, but lower than a

good many.

Q. As events turned out you underestimated the value of the property very much in making your sale, and others got considerably more for theirs?

Objected to as immaterial and incompetent.

Col. ATKINSON: We are trying to fix the value down there.

The COURT: Answer the question.

Exception for petitioner.

A. That was somewhat the measure of it—the measure of the values that were paid there, but not altogether.

Q. Which was somewhat—your sale?
A. Yes, the manner in which you put the question.

Q. Well, the others got a good deal more as a rule, didn't they?

A. Somewhat more.

Q. And in every condemnation proceeding at that time as well as in the recent union depot, you were a witness, were you not, for the company?

1709 A. I was in a good many.

Q. And always put the value at considerably lower than the amount allowed by the juries, or sworn to by other witnesses?

Objected to as incompetent and immaterial.

Objection sustained.

Mr. Dickinson: Will you permit me here, in accordance with the usage of the supreme court of the State, repeatedly stated in the judgments of the court—the duty of the judge at one of these hearings is purely advisory, that he has not the power to exclude or rule upon the testimony. I desire to make that objection.

The Court: I overrule the objection.

Mr. Dickinson: I desire to object to your honor's sitting and giving directions to the jury as to the competency or relevancy of the testimony.

Objection overruled.

Exception for respondents.

Mr. BAKER: What I object to particularly is this, the effort to get in the verdict of the juries in the other cases.

The Court: The question is certainly objectionable.

Col. ATKINSON: Well, is it the form-Mr. BAKER: No, sir; it is the substance.

The Court: The substance.

Mr. BAKER: Getting in condemnation verdicts as evidences of value, or sales.

Mr. Dickinson: Let me get my record straight. I understand that your honor purposes to sit here as in a trial of common law? The COURT: Yes.

Mr. Dickinson: And to rule upon testimony and to advise and instruct the jury?
The COURT: Yes.

Mr. Dickinson: To that I object, and not only ask an exception, but protest against it as a disregard of the constitution of the State, and a disregard of the supreme court of the State, the theory being that the jury are to get at the rights of the question at issue as an independent tribunal, a tribunal sui generis, the best way they can, without the limitations and restrictions of a common-law trial.

Objection overruled.

Exception for respondents.

Q. Were you acquainted with the Hubbard & King property?

A. I knew that.

Q. It was close to yours, was it not?

A. It was very near it.

Q. Do you know what that property sold for?

Objected to as immaterial and incompetent.

Objection overruled. Exception for petitioner.

A. No, sir; I don't.

Q. That sold for four or five hundred dollars a foot, didn't it? A. I was not aware that it did.

Q. You don't know what it brought?

A. No, sir.

Q. Were you acquainted with the Voight property?

A. Yes, sir.

Q. And with the Sibley property?

A. Yes, sir.

Q. Do you know what the Sibley property sold for-the right of way across, the hundred feet of the Sibley property?

Mr. BAKER: I object to that, if the court please, because that involved a mere right of way and not the value of the property.

The COURT: The reason I admitted this testimony was this, Mr. Adams has testified as to the value of the property, 1711

he has given that as his opinion, and I have permitted testimony to show as to what the property in the immediate vicinity or in that vicinity has sold for, as bearing upon the question of his knowledge.

Col. ATKINSON: That is the ground on which I ask it.

The question was repeated.

Mr. BAKER: That involves a mere right of way across.

Col. ATKINSON: It is 100 feet taken right out of it, it is what it

sold for.

Mr. BAKER: Half or three quarters of a mile below. I object to it as wholly incompetent and immaterial. We will have to try all those cases over again if this is to go on in this way. There are too many collateral issues introduced here as to the value of these different pieces of property, and of course we will have to go into every one of them if they are allowed to bring them in in this way.

Q. You say you knew the Sibley property and the Backus prop-

erty. Which is the most valuable?

A. Do you mean the Backus property upon Fort street?

Q. Yes, the Backus property just as it is situated, stretching from Fort street to River street, or 100 feet taken out of the center of the Sibley lot, having neither a street front nor a river front, just a 100foot chunk right across the center of that lot.

Mr. Baker: I object to that as wholly immaterial.

Q. Which would be the most valuable? 125 - 55

The Court: Answer the question. Exception for petitioner.

A. One would be for one kind of business and the other would be for another.

Q. Which would be the most valuable for ordinary-

A. And the party that would have one would not take the other as a gift.

Q. Is that the best answer you can give?

1712 A. It is about as good a one as the case deserves. are not parallel properties at all; not represented at all in the same line.

Q. Well, the piece of the Sibley property could not be used for ordinary business as advantageously as the Backus property, could

it?

A. No, sir.

Q. Then it would be worth less, wouldn't it?

A. It would in one respect.

Q. In what respect would it be worth more?

A. Would the Sibley be worth more?

Q. Yes

A. I think if a party was getting some property together there for a lumber business, the Sibley would be worth the most.

Q. Just a hundred-foot piece in the center of the lot without a

street front or river front?

A. Parties do not buy property in that way.

Q. I am trying to get at those pieces of property that have been You have been acquainted with that district for how many sold. years?

A. Well, I might say for over 30 years.

Q. What did you say you valued the Fort Street front at? A. About \$50 a foot.

Q. What depth of lot?

A. I think that would be about 120 or 130.

Q. Now, there was a time when Fort Street property was worth more than Woodward avenue, the same distance out?

A. Yes, sir.

Q. What has happened to it?

A. Well, the Lord knows and he doesn't tell.

Q. He has not informed his servant?

A. He has not informed me.

Q. It has been largely destroyed by the railroads, hasn't 1713

A. I don't know as it has.

Q. What is your opinion? What happened to it, what is the matter down there, anyway?

A. It seems to have gone to seed.

Q. And the railroads came. Has there any other change occurred to send it to seed except the railroads there?

A. There are some factories and things; yes.

Q. What has happened to destroy the property there?

A. There is some stove and other property down there. Q. The stove property is valuable property, is it not?

A. It does not build up a residence part.

Q. Well, the stove property came there after. That is some distance this side, but from the Michigan Central down to Twentyfourth street-what has happened to the property there?

A. I don't know of anything that you can put your finger on

except the one of construction of buildings and the class.

Q. Well, there have not been any buildings constructed to speak

of for ten or fifteen years. A. Yes, there has been a chair factory, a soap factory, and I don't

know what all.

Q. And a railroad has been built?

A. Yes, sir.

Q. Now, has there been any increase in the value of that region, including the Backus property, since the sale of your property to the union depot some years ago?

A. I don't think there has.

Q. Didn't you in every case where you were examined at that time swear that there would be a great increase when the railroad was built there?

Objected to as immaterial. 1714

Objection sustained. Exception for respondents.

Q. Well, you have been disappointed, haven't you?

Same objection, ruling and exception.

Q. What is it you base your knowledge of values on, what sale or offer to sell?

A. Of two or three parties that I think still occupy some small

pieces of land on the street just below Backus. Q. Just below on River street?

A. No, sir; on Fort-one.

Q. What is the extent of his property?

A. It is not very large.

Q. Well, how large? A. Well, I think he has 50 or 100 feet on Fort street.

Q. And how deep?

A. Well, it originally went to the River road; I don't know as it does now or not.

Q. And the River road. That is-

A. What you call River street.

Q. Is it on the corner?

A. No, sir.

- Q. It is an interior 50-foot lot running from Fort to River street?
- A. That is what it was originally, with still more on the south side.

Q. When did you know of that being offered for sale?

A. Just shortly after one of these trials, two or three years ago.

- Q. What would that property be useful for—business or residence?
 - A. Well, he occupies it as a grocery store now.
 - Q. A grocery store occupies the Fort Street front?
 - A. And residence also. Q. How far down is it?
 - A. I think it is three lots below Backus.
- 1715 Q. In the same block, then?
 - A. Yes, sir.
- Q. Now, that property on account of the railroads coming there is only capable of being used for some heavy kind of business like warehouses or something of that kind? It has been destroyed for residence purposes, hasn't it?
 - A. Yes, except in a kind of crude way.
- Q. Would you consider that lot at all parallel for business purposes with the Backus property?
 - A. I don't know why it is not just as good.
- Q. That would be 50 feet by about 300 feet then in depth running from street to street and in the center of a block?
 - A. It is in the center of a block.
 - Q. Would that be large enough for a planing mill?
- A. Yes, it would be large enough for several. But it would not be large enough for store-rooms.
 - Q. Well, what was that offered for?
- Mr. Baker: I make the same objection to that—offers of sales. Col. Atkinson: It is the only thing on which this witness bases his knowledge.
 - The Court: Answer the question.
 - Exception for petitioner.
 - A. The party told me that he would be glad to get \$50 a foot.
 - Q. Who is that?
- A. I cannot tell you his name at present, although I have known him at least 30 years or more.
 - Q. What brought about the conversation?
 - Q. Were you trying to buy?
 - A. No, sir, I was not.
 - A. I think he was summoned as a witness on one of these trials.
- 1716 Q. You were making testimony then—one witness telling the other?
 - A. Well, we had got through that part.
 - Q. Well, you had been at it?
 - A. Oh, he said—Q. Well, that is all.
 - Redirect examination
 - By Mr. BAKER:
 - Q. That is, you had been testifying, you mean?
 - A. Yes, sir.

Q. You were talking with him afterward?

A. Yes, sir.

Q. Was he a witness?

A. I think he was.

Q. Was he the owner of the property?

A. Yes, and I think he is yet.

Q. And he had a case with the union depot company about the damage in front of it?

A. He may have had with the piece that was sold on the River

road, but not the whole.

Q. Does he keep a grocery store down there?

A. I think he does yet. Q. Is he a German?

A. Yes, sir.

Q. Mr. Ruhlman, isn't it? A. I guess that is the name.

Q. The property that you sold to the old union depot company was where your saw-mill was?

A. Yes, sir, part of it and part of it was below.

Q. Your property was what is known as the river-front property?

A. Yes, sir.

Q. It ran from River street to the channel bank with all riparian rights?

A. Yes, sir. 1717

Q. And you were the first party that sold to the old union depot company?

A. I was.

Q. Were you compelled to sell in order to get money?

A. No, sir.

Q. Had you at that time abandoned your business of running a mill there?

A. I had some years before. Q. Your mill was not in use?

A. No, sir.

Q. How many feet front did you have?

A. About 500, in three or four parcels—to sum it up.

Q. That is, it was in detached parcels?

A. Yes, sir.

Q. And you negotiated a sale to some one connected with the old union depot company?

A. Yes, sir.

Q. Do you remember who it was? A. It was young Walker, I think. Q. And you got \$200 a foot for it?

A. About that.

Q. You didn't have any suit, any condemnation case?

A. No, sir.

Q. Was your property the same kind of property as the Backus lumber yard?

A. Yes, sir.

Q. About how far is it from River street to the channel bank or dock line?

A. It varies from 900 to about 500 feet.

Q. Some of it is 900 feet?

A. Yes, sir.

Q. So that that sort of property down there is large in extent and area?

A. Yes, sir.

Q. You don't know anything about what Mr. Joy paid for the property on the corner of Twelfth street on the north

A. Yes, I understood he paid \$12,000.00.

Q. Do you know how much a foot that was?
 A. No—it is another street I thought of—not Twelfth street.

Q. Now, you said on your cross-examination that property upon Fort street has gone to seed. Will you state whether it had gone to seed before or after this union depot enterprise down there?

A. Partly both.

Q. Well, I ask you whether it had gone to seed before the union depot enterprises were started?

A. Yes, to some extent it had.

Q. Now, is it not a fact that years ago Fort street west was the leading residence street in the city?

A. One stretch of it was, but not as a whole.

Q. But from Woodward avenue down to about Third street; it was at one time considered the handsomest and most valuable residence property in the city?

A. It was.

- Q. And in the growth of the city that has changed largely, has it not?
 - A. Well, I don't know whether it has changed or is changing.

Q. It has been changing for a good many years?

A. Yes, sir.

Q. To what extent would you say the real-estate front on River street that belongs to Absalom Backus, Jr., has been decreased in value by the fact that the union depot elevated road has been built in front of it?

A. No, I don't-

Mr. Dickinson: Well, I object to that. He has not shown any knowledge of the way in which the property is affected.

Q. You have seen the superstructure down there?

A. I have.

Q. You have been under it?

A. Yes, sir.

Q. And along the street under it?

A. Yes, sir; I think I have a couple of times.

Q. So that you know about how it is situated with reference to the Backus property?

A. Yes, sir.

- Q. Now, has there been any depreciation in the real-estate values from 1892 to 1893?
 - A. Very small.
- Q. Has there been any depreciation during that time because of the hard times?

A. I think there has.

Col. ATKINSON: That I object to as leading.

The COURT: Hard times would necessarily affect everything more or less, Mr. Baker.

Mr. BAKER: Well, I withdraw that question.

Q. You say you have been down there a couple of times since the superstructure was completed. Have you been inside the Backus mill to see how the mill was affected?

A. Yes, I was in it as I told you, in the lower story.

Q. Since this superstructure was completed?

A. No, sir.

Q. You have only been by it outside?

A. Yes, sir.

Q. I ask you whether you have been inside since the superstructure was completed?

A. Well, I may; I think I was at one time, but it was only for a

few minutes.

Q. From the River Street side?

A. Yes, sir.

Q. When was that? 1720

A. Some time early in the spring, I think.

Q. Did you go upstairs?

A. No, sir.

Q. Did you go inside the mill or inside the yard?

A. I think I went inside the mill; I know I went inside the

Q. Whom did you see?

A. I didn't see anybody in particular.

Q. The structure was then up and trains running over it?

A. The structure was up, I think, and completed, but I don't know whether any trains were running over it.

Q. You didn't see any trains running over it?

A. No, sir.

JAMES F. Joy, sworn on behalf of the petitioner.

Examined by Mr. BAKER:

Q. How long have you lived in Detroit?

A. Since 1836.

Q. Whereabouts do you live? A. On Fort street, No. 140.

Q. At the corner of what street?

A. First.

Q. How long have you lived there?

A. 30 years and upwards.

Q. You were formerly connected with the Michigan Central railroad?

A. Yes, I was connected with the Michigan Central a great many

Q. Were you connected with the Michigan Central when they located at the foot of Third street?

A. Yes, sir.

Q. Have you any knowledge of real-estate values in the city of Detroit in that section of the country west of Third street?

A. Well, I have such as a man who has had a great deal to do with

it for a great many years may have, sir.

Q. Do you know the property belonging to Absalom Backus, Jr., that is situated on River street just west of the Michigan Central railroad. It has a frontage on River street of 238½ feet and running back to the Michigan Central tracks and to Fort street, and a frontage on Fort street, on the street itself, of about 75 feet?

A. Yes; I know the property.

Q. Can you tell us what the market value of the real estate detached from the improvements upon the property, that is, separate from the buildings and machinery and so on, what it was worth at the time the elevated railroad was built in 1892?

A. It was worth about \$150.00 a foot on River street and on Fort

street-it extended back to Fort street.

Q. It was worth considerably less on Fort street?

A. I should judge \$50 a foot.

Q. So you would put the Fort Street property at about \$100?

A. Yes, sir.

Q. What would you say as to whether these estimates are liberal or not?

A. Very liberal, sir.

Cross-examination.

By Col. ATKINSON:

Q. How do you determine the market value of lands?

A. Well, because I bought a good deal of property there and have been well acquainted with the cost, known it to be sold, all through that section.

Q. You bought a good deal in the vicinity of the Backus prop-

erty, did you?

1722 A. Yes, sir, and had it offered to me for years there.

Q. Where is the nearest piece that you bought below the Backus property?

A. Well, I bought some perhaps on this side—I have had it offered to me.

Q. I would rather you would follow my order.

A. I cannot tell you the nearest piece of property, because I do not know the distances there, but it is below Backus on River street; I have had it offered to me.

Q. Well, now, I do not want any offer. I want to know the nearest piece that you bought?

Mr. BAKER: Let him tell now what the offers were. You wanted

offers.

Q. I have not asked for offers.

A. Perhaps the nearest piece which I actually purchased on that

street would be this side of the Michigan Central railroad.

Q. But I say on the other side below Backus' property, what is the nearest piece of property that you purchased, west of the Michigan Central and west of Backus'?

A. I do not think I actually purchased any piece of property

there-I think I did on the corner of the block.

Q. Corner of what streets?

A. It would be Twelfth street and the River road.

Q. What frontage on the River road? A. 75 feet.

Q. And what depth?

A. Running clear up to Fort street.

Q. Then that would be the corner of the block in which the Backus property is situated?

A. I think it is, sir.

Q. Or is it a block below—the same block?

A. I think it is.

Q. Now, that was the nearest purchase you made to the Backus property?

A. It is the nearest I have actually bought. I have had 1723 property offered to me there.

A. What did you pay for it per foot?

A. I do not know what it was per foot. I paid for the whole about \$28,000.

Q. \$28,000 for 75 feet?

A. Yes, sir.

Q. Now, did you buy anything else in that block? That would

be nearly \$400 a foot.

A. Well, sir, I can't help that. I negotiated. I do not think I bought for the depot company any more than that. I don't think I did.

Q. That is the nearest piece of property below the Michigan_

Central that you know of being sold lately?

A. No, sir.

Q. Well, what is?

A. I cannot tell about the sales there, but I have had the property offered to me over and over again. I have settled for damages along there and know the price of the property.

Q. Do you know of any other sale, actual sale in that vicinity,

within recent years?

A. Yes, I think I bought a piece there myself.

Q. Where?

A. I cannot tell you just where it is, but it is in that block.

Q. You bought other pieces yourself, you say, there? A. Yes, one, I think.

126 - 55

Q. Whereabouts is that?

A. Well, I cannot tell you exactly where it is, sir. I bought it to accommodate a man rather than otherwise, and I don't know just exactly the location of the property, but I think there are 20-odd feet of it and running back a long distance.

Q. What street is it fronting on?

1724 A. On River street.

Q. Running towards Fort?

A. Running towards Fort.

Q. That would be between the other purchase and the Backus property?

A. Yes, sir. Q. Do you know what you paid for it?

A. I don't remember exactly what I paid for it, but I think it was about \$100 a foot.

Q. From whom did you buy it?

A. James A. Randall. I took it off James A. Randall's hands, I didn't buy it for the property, but I took a debt off his hands which he had for that property. He had taken it-I guess from somebody down there whose votes he wanted when he was a candidate for the legislature, and he came to me one day and wanted me to take that off his hands and I took it. It had been sold to him or the party who had it for \$100 a foot.

Q. Well, that was a case of security rather than a real purchase? A. Well, I took the property and paid for it-relieved him of the

debt. Q. A sort of accommodation, rather than a mercantile transaction?

A. Yes, I paid more than it was worth to accommodate James A. Randall.

Q. Are you in that business now?

A. No, sir, I am not.

Q. You did not buy it for the union depot company?

A. I bought it for myself. That is to say, the union depot company had nothing to do with it then.

Q. Have they got it since?

A. No, sir; I settled with them for a right of way across in front of it.

Q. That was a 20-foot strip?

A. I think it was 22, that is my impression. I am not certain about the width; I didn't pay much attention to that.

Q. That is between the corner of Twelfth street and the Backus property, you think?

A. I think it is.

Q. And running to Fort street?

A. Yes, sir; it does not go to Fort street, but it runs very deep. Those lots are very deep, I cannot tell you just how deep they are.

Q. Is it of uniform width?

A. I think it is.

Q. 20 feet there would be of no value for the kind of business that would have to go to that region?

A. O, well, they are divided into 20-foot strips. I have had an-

other 20-foot strip offered to me.

Q. What would a 20-foot strip be good for?

A. I cannot tell you that.

Q. It would not do for the kind of business that has to be con-

ducted there?

A. I cannot tell you anything about that. I am not a business man. I know what the property cost; I know what the property is worth there; I know what I paid for it.

Q. You paid cash for that? A. I paid money, yes, sir.

Q. At the time or-

A. No, sir; I took his debt off his hands.

Q. The party owed Randall that much upon it and you took the debt?

A. I took the debt.

Q. So the party now owes you?

A. No, sir; I paid for the lot. It was a contract for a lot; contract assigned by Randall to him, and I went and paid for the lot; that is what I did, and got the title to it.

Q. The contract ran to Randall? 1726

A. No, sir; it ran to a man of whom he took it; a man who had a little saloon down there. He had bought that land and made a contract for it. He got Randall to take that contract off his hands, and Randall came to me and wanted me to take it off his hands. I took it off his hands and paid for it and got a title to the lot.

Q. You would not regard that as a mercantile transaction at all? A. No, sir; it was not a mercantile transaction, strictly speaking.

I did it to accommodate Randall.

Q. Hasn't there been another piece of property in that region sold from the Detroit, Lansing & Northern to the Michigan Central?

A. I don't know anything about that, sir.

Q. Do you know the piece that has changed hands there?

A. I know there was a piece running across the Michigan Central depot grounds down there which belonged to the Detroit, Lansing & Northern road.

Q. Has that road parted with it, do you know? Do you know

whether that has been sold?

A. I don't know about that. I cannot give you any information about that.

Q. What street did that front on?

A. Fronts on River street and runs to the river.

Q. What would be river property?

A. Yes, sir; runs right through the Michigan Central grounds; about the middle of it.

Q. You do not fix the market value then of property there by that transaction with Ran dall

A. I know the market value of property there because I have had it offered to me so much.

Q. You do not fix it then by that sale at all?

A. Well, no more than I tell you; that was not al-Q. Now, can you give us any other sale, any actual sale?

A. Yes, sir; there was one other actual-no. Q. In the ordinary course of business, except your own purchases?

A. I will tell you of one other sale which took place there, but it was disaffirmed afterward. There was a piece of property sold at auction there, a lot 50 feet wide.

Q. When was that?

A. That was an estate of a man out at Howell.

Q. Where was this situated?

A. It was west of Backus and east of Twelfth street. I cannot tell you just where. I was there at the auction sale and bid upon it myself.

Q. That was an auction sale? A. Yes, sir.

Q. It was afterwards disaffirmed by the court.

A. Disaffirmed; I cannot tell you how.

Q. And it didn't go off?

A. Didn't go off.

Q. Do you know of any other sale?
A. That is all I know of there—actual sale. I tell you I have had property offered to me there.

Q. The only transaction then in that neighborhood, actual sale, has been the purchase by yourself on the corner of Twelfth street?

A. And the other lot. Q. And the vote lot?

A. Yes, sir.

Q. But that is the only one.

A. That is the only actual sale I know of.

Q. Haven't you bought a piece of land just this side of Backus, between them and the Michigan, that little brick building there, on the corner?

A. Yes, I think I did.

Q. How much was there of that?

A. I cannot tell you that.

Q. Well, it is just a little-

A. A little piece of land there with a little brick building on it. Q. About 20 feet?

A. Yes, about that.

Q. What did you pay for that?
A. I don't remember, but I think \$8,000.

Q. That would be four or five hundred dollars a foot? A. I never figured up how much it was a foot, sir.

Q. That runs back only a short distance?

A. I never figured up how much it went back.

Q. A little triangle. That joins the Backus property, doesn't it?

A. I cannot tell you that exactly, either; it is close by it; it may adjoin it.

Q. What is that valuable for?

A. Valuable to the Michigan Central to have, sir. Q. Did you buy it for the Michigan Central?

A. No, sir, bought it for myself.

Q. Thinking the Michigan Central would want it some day and you would get a good price?

A. No, sir; I bought it because we had to arrange for a right of

way in front of it. That is what I bought it for.

Q. So you bought it and paid \$8,000 for that piece?

A. Yes, I wanted to arrange for a right of way in front of it. Q. The same right of way you had to have in front of the Backus property?

A. Yes, sir. I am not certain that was the amount I paid for it,

but I think it was.

Q. In referring to your testimony upon the former hearing of this case, I find that you stated fully the particulars about the sale of that piece by the Detroit, Lansing & Northern.

A. That all may be. 1729

Q. You said it was just below the Michigan Central and part of the course of the Michigan Central as it now is on it. " It is just below the Michigan Central tracks, except that they run over one corner, I think. That is 50 feet wide, I think. The tract of land they bought-I forget how wide it was, it is on River street, fronts on River street, but I sold it to the Michigan Central for \$50,000."

A. Yes, sir.

Q. "That was pretty soon after the war?"

A. I didn't sell it to the Michigan Central, that is not there.

Q. That is the way it runs.

A. That is a mistake, sir, in the reporter.

Q. (Reading.) "The property has been sold by the Lansing road to the Michigan Central, and that is all that has been sold, and freight sheds are now on it."

A. That is right.

Q. "For how much?" was the question asked you. "I think \$80,000, running through 300 feet to the river with a river front and a front on River street." Does that refresh your memory now that the sale was \$80,000?

A. I probably stated what I thought was the case at that time.

Q. You do not now recall?

A. No, sir, but I probably stated what I had been informed at that time. I know nothing about it myself.

Q. That possibly is about 200 feet wide, isn't it?

A. No, sir.

- Q. How wide? A. It had, I think, 50 feet, and 10 feet more—the city had a right to build a sewer.
 - Q. That would be 60 feet wide? A. That is my impression, 60 feet.

Q. And \$80,000?

1730 A. That is my impression.

Q. That would be over \$1,000 a foot.

A. That all may be.

Q. How far is that from the Backus property?

A. That is on the other side of the road, sir. I cannot tell you just how it is situated. The Backus property was on the other side of the road there, and this was in the middle of the Michigan Central road, and runs to the river.

Q. It is almost directly opposite the Backus property?

A. Yes, on the other side of the road.

Q. And nearly across from the Backus property?

A. Yes, sir.

Q. That would be about \$1,300 a foot front?

A. Yes, sir; that was in the Michigan Central yard and all covered with tracks.

Q. It was not any more valuable, was it, being in the Michigan Central yards, than it would be anywhere else, except to them?

A. Yes, sir, a good deal more valuable.

Q. For what purpose?

A. For yard purposes of the Michigan Central.

Q. Well, to the company it would be worth more, but for ordi-

nary purposes it would not be worth any more?

A. The value of property is dependent upon where it is situated a great deal. That was located in the middle of the Michigan Central yard as it is now, and all covered over with tracks belonging to the Lansing road.

Q. Then it was quite valuable to the Michigan Central?

A. To the Michigan Central, yes, sir.

Q. Now, property is worth what it will pay an income on, isn't it—real estate?

A. It depends a little upon circumstances about that.

1731 Q. What would you consider a fair return for the value you put upon real estate, what percentage?

A. I have got a good deal that pays a devilish little percentage. Q. Well, if you got 2 per cent. out of your real estate you would be very well satisfied, wouldn't you?

A. No, sir, I would not.

Q. How much?

A. I should want to get five or six, if I could.

Q. How much do you get?

A. It depends on circumstances. I have got a great deal I do not get anything from. I have a great deal I get a little bit from.

Q. If a piece of property paid 4 per cent. net-

A. No, sir, it would depend on circumstances. If it were merely land and was rented, about 4 per cent., and the party who had it paid the taxes on it, and everything of that sort, that would be perhaps a fair rent.

Q. So that if it would produce 4 per cent. net you would consider

it worth-

A. Rent.

O. A fair investment at present that would produce 4 per cent.

net? A. For perpetual lease, and the party who had leased paid all the taxes and everything of that sort, I would be willing to loan money on it.

Q. Four per cent. net would be a fair return, then, on the value?

A. Yes, sir.

Q. The value you put on this property, I suppose, is just for the real estate, without regard to the buildings at all?

A. Yes, sir.

Q. Without regard to the mill?

A. Yes, sir.

Q. That property is very advantageously situated on the 1732 Central, is it not, for shipping by the Central road?

A. That gives it its value, sir. It would not be worth \$150

but for that, at all.

Q. Through the Central roal it can reach any other railroad centering in our city, can it not

A. Well, it gets its value the igh that.

Q. So that this property ha shipping facilities which enabled it to reach any railroad coming into the city?

A. Well, you can reach other roads over the Central; you can

reach any road in the world. Q. It had its switches and connections all made with that road?

A. Yes, sir.

Q. And a very large frontage on the Michigan Central?

A. Well, Mr. Baker told you how much it was; I don't know. Q. I think Mr. Baker omitted that frontage, the distance on the Michigan Central.

A. I don't know what it is.

Q. Now, Mr. Backus has been there a long time in business, has he not?

A. Yes, sir.

Q. How many years?

A. I don't know.

Redirect examination.

By Mr. BAKER:

Q. Did you attend this auction sale?

A. I did.

Q. That was regularly advertised and put up to the highest bidder?

A. Yes. sir. Q. Will you state the circumstances under which you bought that property on the corner of Twelfth street and the 1733 River road?

Col. ATKINSON: I object to that.

A. The old union depot company, of which I was president, bought it. It was bought under my directionsCol. ATKINSON: Give us an exception.

A. We bought that property for the purpose of putting twelve feet into the street and making the street leading down to the old depot grounds twelve feet wider, at the time. We paid a great deal more than that property is worth, because we wanted it for a special purpose and had to have it, and there were half a dozen ones to deal with, and it cost us more than it was worth, the company having no right to condemn that for a street.

Q. Did you widen the street?

A. No, sir; but we are going to. We bought it for that, and we hold it for that purpose.

Q. How much frontage on Fort street?

A. About 300 feet, I think. It may be a little more or a little less-75 feet on the River road.

Q. How much front on Twelfth street?

A. I think about 300 feet.

Q. The whole length of the sidewalk? A. Yes, sir.

Q. Has the Backus property a frontage on the side street?

A. No frontage anywhere except on River street.

Q. There are shops and buildings on the Twelfth Street front of this property?

A. Yes, sir; some.

Q. You used to be connected with the Detroit, Lansing & Northern?

A. Yes, I built that road.

1734 Q. Did you buy that strip of land that runs from River street through to the channel bank?

A. Of the Michigan Central he has been alluding to?

- Q. Yes.
 A. Yes; I bought it.
 Q. That was deeded to the Detroit, Lansing & Northern?
- A. Yes, sir; I sold it to the Detroit, Lansing & Northern. Q. That company used to come into the Michigan Central yard?

A. Yes, sir.

Q. Do you know under what circumstances they left that yard? A. They left that yard because they had so much difficulty in doing business; they could not stay there, as I understand it.

Q. What was the attitude on the Michigan Central in regard

to it?

Col. ATKINSON: That I object to as immaterial.

Mr. BAKER: They have gone into the value of this strip of land they claim was sold for \$80,000. I want to show the circumstances under which the \$80,000 was paid for that land.

Col. ATKINSON: Do you propose to show the attitude of the Michi-

gan Central?

Mr. BAKER: As bearing on that.

Col. ATKINSON: We would prefer to have some one who knows about it. Mr. Joy says he knew nothing about it at first. If there is any special circumstance the Michigan Central representative or the Lansing representative will know about it.

Mr. BAKER: All I desire to prove by Mr. Joy in regard to that is that anybody who is familiar with it at all knows it-that the Michigan Central gave the Detroit, Lansing & Northern

1735 notice to get out of the depot, and that the Detroit, Lansing & Northern owned this strip of land that ran right through and severed the Michigan Central yard, and the Michigan Central had no power to condemn it, and it was a matter of treaty and negotiation between them as to how much that would pay them, and under those circumstances the Detroit, Lansing & Northern got \$80,000. That is generally what I want to prove.

Col. ATKINSON: But he does not know that, and if you go into it we will show it was not the fact, because we had that before. They were not given notice to get out; they had all the room they

wanted there. It is so testified; Mr. Mulliken so testified.

Mr. BAKER: Mr. Mulliken said they had all the room, but there were other things that interfered with it.

Col. ATKINSON: They were not notified to get out at all.

Mr. BAKER: Do you object to Mr. Joy testifying to it because you want a witness that knows about it?

Col. ATKINSON: Yes, and I object to the competency of the testi-

mony.

Mr. BAKER: Well, I will not go into that with Mr. Joy, but I will call somebody that knows about it. I think that is all, Mr. Joy, unless there is something you desire to state.

A. Yes, I should desire to state about the value of the property As I stated, I have had property offered to me down down there.

there for sale.

Q. I put that question to you. Will you state to what extent your judgment of the value of the Backus property is based upon offers to you of property in the vicinity?

Col. ATKINSON: I object to that on the ground that offers do not tend to show.

The COURT: The value of the property is largely a matter of

Col. ATKINSON: What I urge is that in the direct exam-1736 ination of the witness, as to values, it is not competent to

draw out offers of property.

Mr. BAKER: Under the facts testified to by Mr. Joy, I submit it is perfectly competent for him; considering the amount of business he has done there it is competent for him to state to what extent the offers of property in that vicinity influence his judgment.

The COURT: I suppose it would be perfectly competent to show

upon what he bases his opinion.

Col. ATKINSON: On cross-examination it would be proper, but on direct examination I think the market value is fixed by actual sales, and not offers.

The COURT: I think I will admit the testimony.

Exception for respondents.

Mr. Dickinson: We object on another ground, that he cannot state the facts upon which he bases his judgment without stating the persons who have made the offers. He cannot state generally that he bases his judgment on offers made to him without stating the facts of the offers.

Mr. BAKER: Well, I do not know to what extent he can do that.

A. I do not think the offers of property I have had there have any influence on my judgment. I have bought property all along that street, both sides of the Michigan Central, vacant property as well as property occupied, and I know the value of the property there as well as any other man living.

Q. So that you do not rely so very much on offers that were

made to you?

A. No, sir; I know what property is worth there. I bought both on the east side of the road and the west side of it.

1737 Recross-examination.

By Col. ATKINSON:

Q. I would like to ask you this question that I omitted. That Backus property is so situated to the Michigan Central yards, is it not, that it might be very valuable in connection with them some day?

A. No, sir, I don't think so, ever.

Q. Isn't it situated exactly like this little \$8,000 piece that you bought?

A. No, sir; not at all.

Q. Could you use that little piece without using a piece of the Backus property?

A. Yes, it is the other side of their track. Now, I will tell you

about that piece.

Q. The other side of their track?

A. The other side of the switch to Backus. Backus' switch runs down between that property and the Backus property, if I remember right.

Q. But the Backus switch is on the Backus property?

A. Yes, but it is the other side of that little piece of property. Q. Isn't the Michigan Central rather crowded for room there?

A. Not for tracks. Q. Well, for room, yard room?

A. Their yard is the other side; they will never want to use the Backus property for the yard.

Q. Why not?

A. Simply because it is not convenient for them for a yard; they cannot use it.

Q. What is the reason they cannot use it? A. Because it is not located so they can use it. Q. It is right alongside of their tracks, isn't it?

A. Right alongside of their grounds, sir. All the Michigan Central want there is access in and out to their railroad vards. sir, and they have all the tracks they want or ever will there.

Q. Now, in your former testimony I find substantially this statement, that the Michigan Central is so crowded for room it has practically made a yard of all its tracks at West Detroit?

A. So it has.

Q. If it is crowded in that way won't it some day take in adjoin-

ing property?

A. No, sir, they have acquired large yards away out to the junction there, perhaps 50 or 60 or 70 or 80 or perhaps 100 acres, where they built their outside yards, and all they want now is access between those yards and the yard in the city.

Q. They had those outside yards when you gave your testimony

as to the crowded condition of the track?

A. To some extent.

Q. The business of such a road as the Michigan Central will in-

crease from year to year in the natural order of events?

A. Yes, sir, and that is the reason why they built their outside yards. All they want now between the yards and the yard in the city is convenient tracks to pass to and fro over.

Q. They have that and yet they use them practically as a yard

at any rate?

A. Well, they run their trains over there.

Q. That is not good business, is it, to have to use your tracks as

a yard?

A. Well, if you want my judgment about that I can give it to you distinctly. They will never want any more track room between the yard in the city and their great yards outside; they will never want Backus' grounds.

Q. They will never want it?

A. No, sir. That is my judgment.

Q. Don't they own a little strip between the piece that you bought and the Backus property now; haven't they 1739 acquired a little 17-foot strip there?

A. I cannot tell you anything about that.

Q. Do you know who owns next-

A. I don't know anything about it. I know only what I bought there. I know the Michigan Central track ran down by Backus' ground. Now, I want to explain about the little tract of land I bought there and for which I paid perhaps more than the land was worth; but we were so situated that I felt sure that after making a fair allowance for right of way in front of it, that the Michigan Central would take it for the balance. Now, I don't remember exactly what I paid for that. I bought it under Mr. Baker's advice. He advised the depot company to buy it and the depot company hadn't given me any authority to buy it and I could not buy it for them, so I advanced the money for it myself out of my own pocket, agreeing with Mr. Baker, who was the counsel for the depot company, what the damage would be for the right of way in front of it. That amount was deducted from the price which I paid, as I remember it, and then I offered it to the Michigan Central for the balance, whatever it was, and they took it.

Q. So that the Michigan Central now owns it.

A. They own it; yes, sir.

Q. They acquired right up to the Backus property now, then?

A. That is what I said before, sir, and the reason why they wanted that property was this: I knew perfectly well that I should not lose money by it, because the Michigan Central wanted to build an elevated road over there, an elevated road for passengers, and the end of their track, I think, came right down upon that piece of property where they wanted to build it, or close by it; and with that piece

of property there, if I had seen fit to oppose their building it, they could not have built that passageway over it, so I au-

thorized Mr. Baker to say to them that he had made a bargain with me for what damages should be paid for the elevated railroad coming along there, and to offer it to the Michigan Central for the balance of the money and they took it, and I made not a farthing out of it. I have forgotten, Mr. Baker, the price I paid for it. You advised with me about it and I remember I advanced the money.

Mr. Baker: I don't remember the figures now myself.

A. We took off what was fair for the damage for the elevated road to go along there and the Michigan Central took it at the balance of the price.

Q. You did not buy that because you did not want Mr. Backus

to get it, did you?

A. No, sir; I simply bought it because we wanted the right of way in front of it, and so much time had elapsed, and I bought it to get rid of that quarrel about the right of way in front of it, knowing I could sell the balance to the Michigan Central after taking off that.

Mr. Baker: The company would save the expense of a con-

demnation case?

A. Yes; which might be a good deal.
Q. Might be more than the difference?

A. Yes, sir.

Q. So that it was bought and disposed of under those circumstances?

A. Yes, and those were the motives.

Q. The only object of buying it was to save the expense and close the matter up of the right of way?

A. Yes, that is all.

ROBERT M. Zug, sworn on behalf of petitioner.

Examined by Mr. BAKER:

Q. Where do you live?

1741 A. Corner of Howard and Fourth streets in the city of Detroit.

Q. How long have you lived here?

A. I was born here. I am 42 years of age.

Q. What is your business?

A. Handling real estate, making loans and so on.

Q. Are you a son of the late Samuel Zug?

A. I am.

Q. Did you or your father formerly own property in the vicinity of the Backus property?

A. He owned a piece considerably this way.

Q. This side of the railroad? A. Yes, this side of the railroad.

Q. This side of the Michigan Central?

A. Yes, sir.

Q. How far this side was it?

A. Between Seventh and Eighth streets.

Q. Are you, as a real-estate dealer and as one of the heirs of the property that you refer to, familiar with real-estate values in that vicinity?

A. Well, not so very-simply handle money there.

Q. Well, you would become more or less familiar from that, wouldn't you?

A. Yes, sir.

Q. Will you tell us what, in your judgment, the Backus property, which has a frontage of 238 feet on River street and extends back, say, half a block-taking the River Street front by itself and not going through to Fort street-what, in your judgment, situated as that is near the Michigan Central tracks, was worth in 1892, per foot front?

A. Well, I think being next to the railroad there it would probably have more value than property in the same block that was not

near the railroad.

1742

Q. Yes, undoubtedly. But leaving out the railroad-A. I would consider that property then worth about \$100 a foot.

Q. If the Michigan Central did not lay alongside of it you would say it was worth about \$100 a foot?

A. Yes, possibly that.

Q. What additional value would you put on it because of the Michigan Central alongside of it?

A. That I could not say.

Q. You would not want to form any judgment about that?
A. No, sir, I would not. I would say I get that value from the fact that there was other land there in that same block which my father owned down below there.

Q. So that you became familiar with the property in that way?

A. Yes, sir.

Cross-examination.

By Col. ATKINSON:

Q. Do you still own that property down there?

A. No, sir.

Q. How long since you parted with it?

A. Well, that between Seventh and Eighth, I sold a part of it

about six years ago, I think, or seven years ago, and the rest about five years ago.

Q. And did you ever own any below the Backus property in that

block?

A. Yes, sir.

Q. How long since you parted with that?

A. About five or six years ago.

Q. What kind of a piece did you own?

A. I think it was 40 feet front and about 100 feet deep.

Q. On River street?

A. On River street, and the north side.

1743 Q. A small lot there, then?

A. Yes, sir.

Q. It did not go through to Fort street?

A. No, sir, I think it was 100 feet deep. I paid no attention to it for years.

Q. Have you known of any sale of property between the Michigan Central, say, and Twelfth street, within the last five years?

A. I simply know of one, and that was the piece that was referred to by the last witness, that was put up at auction. That is the only one that I know anything about.

Q. That was only attempted to be sold; the sale did not go

through?

A. No, sir.

Q. Then you do not form your estimate-

A. Well, I don't know whether that sale went through or not. Q. You do not form your estimate, then, from any actual sales?
A. Except from the one I made myself.
Q. That is five or six years ago?

A. Yes, sir.

Q. And a little lot?

A. Well, I don't know, 40 feet. I do not consider that a very small lot.

Q. That is not a region that is suitable for stores, is it?

A. No, sir.

Q. It is not suitable for residences?

A. Well, hardly.

Q. It would be more suitable for heavy manufactories or ware-

houses than anything else, wouldn't it?

1744 A. Well, anything in the way of manufacturing, large or small, could go in there. There is an establishment there now that has been there for years.

Q. There is no alley to it?

A. No, sir.

Q. What kind of manufacturing do you carry in your mind that is running on a lot that size in Detroit?

A. Well, I don't know as I can place any now. There is an in-

stitution there now, the Baraga graphite works.

Q. On that piece?

A. Yes, sir.

Q. What do they manufacture?

A. I don't know. I have never been in the place since they went in.

Q. What was it you called it?

A. Some graphite works.

Q. The Baraga?

A. Yes, sir.

Q. It is a mere office, isn't it?

A. No, sir, they have a factory there.

Q. What is graphite, anyway?

A. Black lead.

Q. They are manufacturing there, are they?

A. As far as I know. I have not been by the place for three years.

Q. Well, the only sale, then, that you have known, has been the

sale to Mr. Joy?

A. Yes, sir.

Q. Don't you know of the sale from the Detroit, Lansing & Northern to the Central?

A. No, sir, I paid no attention whatever to anything in that

neighborhood since I disposed of it.

Q. Where there are no sales being made, how do you estimate the values and get at the market value?

A. Well, thinking of what values are in the same locations where

there is business.

Q. You say you have not even looked over this property 1745 for three years?

A. I don't know as I have been in front of that property-yes, I

did. I went down about a year ago.

Q. How near to it do you know of any sale having been made? A. No sales at all that I know of; there has been some offered me there repeatedly, down below there; that is all I know.

Q. There have been no sales? A. No, sir, as far as I know.

Q. You have had some offers, I suppose, since the railroad was built there?

A. Yes, sir.

Q. Whereabouts was the property that has been offered to you? A. On the north side of River, below Scotten's building, Thirteenth street, in through there-Twelfth or Thirteenth.

Q. That would have no railroad connection at all?

A. No, sir.

Q. You say you are incompetent, you think, to form any judgment of the value of the Backus property, as it is really situated in connection with the Michigan Central?

A. Yes, sir.

Q. Now, you are a real-estate man, are you?

A. Well, to some small extent.

Q. Can you tell us where in the city there is a piece of property of that size, situated as well with the railroad as that is-where it could be got?

A. Well, without giving it any thought, I don't know.

Q. It is a very hard thing, isn't it, to pick up a piece of property as large as that, and situated in that way, with any of the railroads around the city?

A. Well, there is a good deal of vacant land lying around 1746 the railroads.

Q. There are small pieces, yes; but it is pretty hard to get a piece of that extent?

A. That I don't know; I never attempted anything of the kind.

Q. You don't know where it can be got?

A. No, I cannot say that. I simply say I know there is a good deal of vacant land lying around the railroads; whether it is owned by one or a number I don't know.

Q. Can you tell us of any piece that would be large enough to accommodate the Backus plant, and where it is, and what he could

buy it for?

A. No, sir, I could not.

Q. You have had no experience, then, in that kind of property? A. No, sir.

Q. Do you know of any piece of vacant property as near to the center of the city and connected with a railroad, as Backus' is?

A. No, sir, I certainly do not. Q. It is an exceptional-

A. There might be on the east side; I am not familiar through there.

Q. It is an exceptionally situated piece of land?

A. Yes, sir.

Q. Which is the most valuable front, River or Fort street?
A. I would say River street.

Q. You estimate it \$100 a front foot on River street?

A. Yes, sir.

Q. How much on Fort?

A. Excuse me one moment. What year did you put that as to what my valuation should be?

Q. 1892. That is before this railroad was built.

1747 A. Yes, sir.

Q. You estimate the River Street front \$100 a foot, and the Fort Street front at how much; or do you run the property all through at \$100?

A. No, sir, it is simply to the center.

Q. And at how much do you put the Fort Street front?

A. Oh, I don't know, \$60 to \$80.

L. H. PHISTER, sworn on behalf of petitioner.

Examined by Mr. BAKER:

Q. Where do you reside?

A. Detroit.

Q. How long have you lived here?A. Twenty-five years.Q. What is your business?

A. Real estate.

Q. How long have you been in the real-estate business?

A. About seven years or a little over, I think. Q. Buying and selling on commission?

A. Partly, yes, sir.

Q. What would you say as to whether there is any vacant property in this city that could be procured for a manufacturing plant alongside of a railroad?

You can get plenty of it, if anybody wants it.

Q. Now, the Backus property is just over the crossing on River street of the Michigan Central, and it has a frontage of 238 feet on River street and runs back to the Michigan Central track bordering upon an angle upon the north, and to Fort street, the Fort Street frontage being about 75 feet. There is a jog in the property, so that it is best to separate the two frontages. What I want to know is, what that property was worth in 1892, not considering the

plant and improvements, considering it as vacant land. I ask you in the first place what, in your judgment, the River

Street front was worth per foot front at that time?

A. Well, I estimate it at that time about \$150 a foot.

Q. What would the 75 feet frontage on Fort street be worth?

A. I estimate that about the same figure.

Q. In your estimate do you consider the utility of the Michigan Central railroad with reference to the property?

A. Yes, sir, I do.

Cross-examination.

By Col. ATKINSON:

Q. Where could you get a piece of property of that size, situated

in the same way with the railroads?

A. Well, I could not say now without looking up my books, whether I have any right on the Michigan Central or not. I know there is just above the bridge a little further up some vacant property that has been there a long time, that I presume could be bought.

Q. Piece as large as this?

A. Yes, it must be fully as large, some by the Baker Street bridge. I cannot say that the property is in the market; I simply know that it is vacant property.

Q. And you think you could select a piece there 300 feet in depth

and 238 feet front-having frontage on a street of 238 feet?

A. It is quite a large piece; I do not recall the dimensions of it. Q. You do not know of any such piece as centrally located as the Backus property?

A. No, sir, not as centrally located. That, I think, is about the

nearest piece to the depot that can be got.

Q. The nearest point to the center that such property 1749 could be got at all?

A. Yes, I think so.

Q. How do you get at your values? 128 - 55

A. Well, we have to base that upon the general experience and sales.

Q. What sales have you known of down there?

A. The only sale that I know of personally was one I made myself in the same block a little further down, between there and Twelfth street.

Q. That is that little graphite piece?

A. That is the graphite factory. Q. Forty feet by 100?

A. I think it is 45. I was looking at my books to find out, but I made that sale a few days after I dissolved partnership and I do not find any record; but I think it is 45 feet.

Q. How long ago was that?

A. A year ago last July. Q. That was a forced sale, was it not?

A. You might call it a forced sale. The party had to sell, he was hardly able to hold it, but I think it was partly on account of the partnership conditions in the management of that factory. He was practically compelled to sell.

Q. Do you know of any other sale?

A. I know of other sales made in that block.

Q. That has no railroad connection?

A. No. sir.

Q. So that it is not situated like the Backus property?

A. No, sir.
Q. What other sales have you known in that block?

A. There was property sold between that and the Backus property, but I have forgotten the figures exactly.

Q. Who bought that?

A. There was a Mr. Bennett bought some.

1750 Q. Running through from one street to the other? A. No, sir, I think it ran back 140 feet or thereabouts.

Q. That had no railroad connections?

A. No, sir.

Q. No alley? A. No, sir.

Q. Don't you know of any other sales?

A. I cannot recall. I know of that property, that it was all offered there, but I cannot recall the price of other sales.

Q. Your real-estate business has never led to any transactions down in that region except this graphite one?

A. No, that was all in that immediate vicinity.

Q. Was that sold on a mortgage?
A. There was a mortgage on it, yes, sir.

Q. Well, it was sold to collect the amount due on the mort-

gage? A. Well, it was not under foreclosure; it has been deeded as security-George C. Langton, I think, had part of the title. I think the title was in two or three different parties; the party had it on contract, and practically had to sell, or pay up.

Q. And Langdon had failed in business?

A. That I don't know. He had no ownership-

Q. You would not consider that sale as fixing the value of property in that region?

A. Not for railroad frontage, no, sir.

Q. Can you recall any sale of railroad frontage something like the Backus property, within the last five years, in Detroit?

A. I cannot recall, in that vicinity, on the Michigan Central, any sale that I could recall the particulars.

Q. With any railroad?

A. I have, up around the junction and around the city in 1751 various other localities.

Q. Do you remember a piece near the junction?

A. There is a piece sold there where the electric motor or storagebattery factory is, located, I think, on the Y, and I think it fronts on the D. & M .- both railroads.

Q. Did you have anything to do with that sale?

- A. The party that bought it was in my office. I had the property for sale, but his nephew, who was in the same office, practically made the sale.
 - Q. How much was there of that piece? A. I think there were about two acres.

Q. When was that?
A. The first sale of that was five or six years ago, but he sold an acre of it something like a couple of years ago, one acre sold within about two years, if I recollect rightly.

Q. Well, that is four miles from the center of the city, isn't it? A. A little over three; not much over three miles, I think.

Q. And from what experience do you get at the advantages from the connection with the Michigan Central and their market value?

A. Well, no practical experience of my own, simply a general

knowledge of what it is worth.

Q. You do not know of a sale within five years of property situated like that?

A. On the Michigan Central-no, sir, not like that. Q. I do not confine you to the Michigan Central.

A. Well, this piece that sold up there was only two years ago, the last sale of that.

Q. Well, property out at the junction is not worth quite as much as it is on Fort street yet.

Mr. BAKER: Some of it is worth more.

Q. You have been a witness in all the union depot cases, 1752 have you?

A. Not in all of them, I think.

Q. In how many?

A. I think in a case against the Michigan Central, and in the previous trial of this case.

Q. Don't you know of the sale of property down there from the Detroit, Lansing & Northern to the Michigan Central?

A. Only as I heard of it, not of my own knowledge.

Q. You have heard of a sale of that kind?

A. I heard it talked, heard it in the testimony here, but not being conversant with it, I did not give any particular study to it.

Q. Wouldn't that have as much tendency to fix the market value

down there as a sale under a mortgage?

A. I think where one was a forced sale that the other was a forced

purchase.

Q. So you would think that the Michigan Central was forced to purchase, and that railroad companies pinch one another when they get a chance?

A. I know so about that piece.

- Q. You know Mr. Joy pretty well? A. We all know him as a citizen.
- Q. He has the reputation of being a shrewd, careful business man?

A. He undoubtedly is; yes, sir.

Q. Did you know of the purchase by him on the corner of Twelfth street?

A. I knew of it at the time, but I have forgotten the price.

Q. Don't you think a sale to him would have about as much to do with fixing the market value as a forced sale of a small piece?

A. Well, the market value is what you can get out of a piece. If you get a man where he has got to have a piece it is easier to get more out of him than otherwise.

Q. Then you consider Mr. Joy and the Michigan Central as people who had to pay higher than any one else?

A. If the circumstances were such they had to have a piece, I

think they would.

Q. Do you know anything about the circumstances under which Mr. Joy bought?

A. Except as I have heard it stated. They wanted that to widen

the street.

Q. Do you know of the little piece this side of the Backus property that was purchased by Mr. Joy-20 feet?

A. I don't know the particulars of it.

Q. Do you remember that little brick building this side of the Backus property?

A. I do; yes, sir.

Q. Would that property be worth any more than the Backus

property per foot front on River street?

A. As far as actual value is concerned, taken into connection with the property, it is a little hard to say, but as controlling the frontage there, and being in the way it might compel a little higher price on that account.

Q. Would you consider it for the purpose of use as worth any

more than the Backus property?

A. Well, it is too small a piece for actual business to any very great extent, as I understand it.

Q. Did you know of that being sold for \$8,000, less than 20 feet front.

A. I didn't; no, sir.

Q. And less than 60 feet in depth at the deepest point, and only a little triangle.

A. If it was sold at that price I should consider it as rather a

forced sale in one sense.

Q. So that wherever Mr. Joy buys you consider the sale 1754 forced, and wherever there are sales on mortgage you think it fixes the market values?

A. Hardly that. I do not wish to be interpreted as saying that. I think the fact that they wanted the property, they were forced to buy it and pay a higher price than they would-

Q. Nobody buys unless he wants a thing?

A. Yes, sir; sometimes they do.

Q. You have no other knowledge of values down there?
A. Not in that vicinity, until you get further out.

Q. Have you been employed by the union depot company to examine the property and fix values?

A. No, sir.

Q. Did you ever go through the Backus property?

A. Not through the plant. I have been around the grounds. I have been on the grounds, but not through the buildings.

Q. What did you do that for?

A. The only time I have ever been on the lot to my knowledge was when I have been in their office some years ago. I do not think I have ever been on the lot except along the River Street frontage, if that is on the lot.

Q. What I want to get at is, did you make an examination for

the purpose of testifying?

A. When I was subpænaed to appear I went down there and looked the property over to refresh my memory, for some questions might be asked me on which I would like to be posted, as to its location.

Q. Were you subpœnaed before they knew of the testimony you

would give

A. That is my recollection; yes, sir. I do not recollect how I came to be subpænaed. I think that Mr. McKay told me once he had told Mr. Baker to subpæna me on account of my knowledge and the general commission business. He thought I was

pretty well posted. That is my general recollection of the way I was first subprenaed. I had no conversation with Mr. Baker at that time, and did not know him personally, and I never had the honor of Mr. Joy's acquaintance personally.

Q. You ought to know them both well.

A. I do by sight.

EDWARD F. CHAPMAN, sworn on behalf of the petitioner.

Examined by Mr. BAKER:

Q. Where do you live?

A. Detroit.

Q. How long have you lived here?

A. Nearly two years and a half.

Q. What is your business?

A. I am inspector for the Michigan Inspection Bureau.

Q. What is the Michigan Inspection Bureau?

A. It is an association for the purpose of making rates and inspections of property-insurance rates.

Q. For what purpose?

A. For the use of insurance companies.

Q. Who passes judgment on the different rates in this city?

A. I do.

Q. Personally?

A. Yes, sir. Q. That is, you have charge of this bureau?

A. Yes, sir.
Q. You have been here doing this work for about two years and a half?

A. Yes, sir. Q. Who preceded you?

A. David Beverage.

Q. Where did you formerly reside? A. Before coming here I lived in Cleveland. 1756

Q. Did you do similar work there? A. Yes, sir.

Q. Do you know of the rates here upon the Backus planing mill and box factory, on River street?

A. Yes, sir.

Q. When you came here the union depot company elevated road had not been built, had it?

A. No. sir.

Q. It was actually completed in 1892?

A. I think so.

Q. Will you state whether or not there has been any increase in the insurance rates on that property since the railroad was coustructed, because of the construction of the railroad?

A. There has been no increase at all.

Q. Can you give us the rates that were paid upon the property before the railroad was built?

A. No, sir; I cannot. I can give you our advisory rate, but what the rate that was paid was I cannot say.

Q. Can you give the rate that was fixed by your bureau?

A. Yes, sir.
Q. I suppose there is a separate rate on each structure?

A. There is a separate rate on the mill and boiler and engine houses.

Q. Give us the rates.

A. On the mill the rate was 5.25; boiler and engine house, 4.50; lumber shed attached to mill, 5.25. Your question was what the rates formerly were?

Q. Yes.

A. There was no rate on the shavings vault until a few months ago.

Q. Have you omitted the dry kilns?

A. Yes.

Q. What was the rate on the dry kilns? 1757

A. I don't know. I don't remember about the dry kilns.

Q. Let me refresh your recollection. Do you remember the dry kilns and something connected with it, 4.50? A. It is my impression it is the same as the boiler and engine

house. Q. And on the office?

A. According to my recollection it is 2% on the office.

Q. You say that before the railroad was built or until recently there was no rate on the shavings vault? A. No rate until recently on the shavings vault.

Q. Is there any rate on it now?

A. Yes, sir.

Q. How did you come to put a rate on it?

A. I was asked to put a rate on it.

Q. By whom?

A. I think I received a letter from Backus & Sons, some time in April.

Q. Last April?

A. Yes, sir. Q. What rate did you put on it?

A. 8%. Q. Prior to that had any rate been on it?

- A. None that our record shows. Q. Do you know whether any insurance had been placed on it before?
- A. I don't know of any. Q. But outside of the shavings vault then, are the rates now the same as before the railroad was built?

A. Yes, sir.

Cross-examination.

By Mr. DICKINSON:

Q. For what insurance companies do you act as inspector? A. The organization is maintained by or stands in the 1758 name of the Michigan Fire & Marine, the Detroit Fire & Marine, of Grand Rapids-State companies.

Q. You do not represent all the fire-insurance companies, do you?

A. No, sir.

Q. You do not know or do not pretend to state whether or not Backus' rates had been increased by the insurance companies in which he insured?

A. I do not.

Q. Does he insure in any of your companies?

A. I could not say.

Q. Don't you know whether he does or not? A. No, sir, I have nothing to do with that.

Q. You have only these insurance companies you have spoken of? A. That is all. We furnish rates to different companies who purchase them. We furnish rates to a great many other compaQ. You don't know whether the Backuses have insured with any of the companies to whom you have furnished rates?

A. Yes, I know that they have done so.

Q. You have nothing to do with the fixing of the rates they actually charged them?

A. I cannot control that. We make advisory rates.

Q. Your business is merely advisory to the insurance companies?

A. Yes, sir.

Q. Then after that if the insurance compan. s choose they make their own terms to be insured?

A. Yes, sir.

Q. What have you to say as to whether or not the cost of the Backuses insurance has or has not been increased since the building of this road?

1759 A. I have no means of knowing.

Q. Do you know of the rule by which rates may be increased or the cost of insurance may be increased by compelling the insured to take four-fifths valuation?

A. I know there is such a clause in use.

Q. For what purpose does that apply; under what circumstances has it applied?

A. It is applied on manufacturing risks generally.

Q. All manufacturers are not required to take four-fifths valuation, are they?

A. Yes, sir.

Q. In this town?

A. Yes, sir.

Q. Was Backus required to take four-fifths valuation insurance before the building of this superstructure?

A. When I say they are required I mean our rates are based on the use of it. We cannot require anybody to give those rates.

Q. The insurance company can say they won't insure unless they take four-fifths valuation?

A. Yes, sir.

Q. Do you know whether the insurance companies, before the building of this superstructure, did or did not require Backus to take four-fifths valuation?

A. We did not require the use of the 80 % clause on manufacturing risks; that is, we did not fix it previous to a year ago last

August, I think.

Q. Will you please answer the question, whether you know anything about whether Backus was required to take four-fifths insurance prior to the building of this superstructure?

A. I don't know.

Q. Do you know of any other manufacturing interest in town that is required to take the four-fifths valuation, and if so, please state.

1760 A. We advise it on all.

Q. You advise it, but as a matter of fact whether they do?

A. I know it is in use.

- Q. Can you name any manufacturing institution that does actually insure on the four-fifths valuation?
 - A. Why, I think nearly all of them do. Q. Do you know anything about it? A. I don't keep any record in my mind.

O. Did Backus insure his dust room and shavings-room before this structure came there?

A. I don't know.

Q. You simply don't know whether it was rated or not?

A. That is all we do-give a rate on it.

- Q. But if the dust-room caught fire it would probably burn out the mill in the ordinary nature of things?
- A. It might. Q. Will you please state whether within the last year, since January 1, 1892, the general rate of insurance has not been lowered here in the city?

A. No, sir.

Q. Within the last year or year and a half?

A. We have not made any reductions; not any general reductions.

Q. Whom do you mean by we?

A. I mean the association with which I am connected.

Q. Directly connected. That association you will please name again.

A. The Michigan Inspection Bureau.

Q. Who composes that?

A. The Michigan Fire & Marine Insurance Company, and Detroit Fire & Marine Insurance, and the Grand Rapids Insurance Com-

Q. Have you furnished any inspection rates to, we will 1761 say, the Ætna Insurance Company, of this city?

A. Yes, sir.

Q. Do they not also have inspectors of their own?

A. Yes, sir.

Q. They get all the advice they can, do they not, and then do as they please?

A. Yes, sir.

Q. So that all you do is like a merchant, who is determining a question of sale on credit-you give the agency reports and give all the advice you can give and he makes such terms as he pleases?

A. Yes, sir, we furnish advisory rates. Q. You simply give your opinion? A. Yes, sir.

Q. You are not an officer in any way of the State?

A. No, sir.

Q. And who pays you?

A. I am paid by the inspection bureau. Q. Composed of these three companies?

A. Yes, sir.

Q. When you furnish rates to an outside company, who pays you?

A. Our business is to furnish them. They subscribe to the rater of the bureau, the companies do.

Mr. BAKER: Every company does.

A. And pay for them.

Q. Can you give me a list of the companies here that take your risk?

A. No, sir, I could not.

Q. Can you by looking at your books give us a list?

A. Yes, sir. Q. I wish you would.

Mr. Baker: To what extent is the insurance business carried on on your rates?

A. I could not say.

Mr. Dickinson: Do you mean to say that a railroad run-1762 ning by a property does not increase the fire risk?

A. No, sir, I don't say so.

Q. You don't say that it does not. What did you put upon their office?

No answer.

By Mr. BAKEL:

Q. Why are you employed as this inspector?

A. Really, I could not say,

Q. Perhaps you do not understand my question. Have you a knowledge of insurance, of fire risks, are you an expert?

A. I have been engaged in the business for a number of years.

Q. How many years?

A. Twenty years.

Q. Did you ever work at this business in any city besides Cleveland and Detroit?

A. Not wholly. I have been connected with insurance companies for that time, and it has been a part of my business to estimate rates during that whole period.

Q. Isn't the fact—of course, you may be a little modest in regard to it—that you are employed to fix rates in this city because you

are an expert in judging of the fire risk?

A. Because I have had some experience in it, yes, sir.

Q. And do companies that do business with you rely upon your judgment?

A. Yes, sir.

Q. Now, in answer to Mr. Dickinson, you say that you would not testify that a railroad in front of a piece of property like this would increase the risk. I will ask you whether or not, in your judgment,

the presence of the elevated railroad in front of this property

has so far increased the fire risk as to make it necessary or advisable to increase the insurance rates down there?

A. No, sir, not to that extent.

Q. So that they can get their insurance just as cheap as they ever could, as far as their rates are concerned?

A. I don't know.

Q. Of course, you don't insure yourself, but as far as your office is concerned?

A. Yes, sir.

Q. You say your association is maintained by three Michigan fireinsurance companies?

A. They formed the organization. It is maintained by subscrip-

tions from whoever has its rates.

Q. Are not nearly all the insurance companies doing business in this city subscribers?

A. Well, a large proportion of them are.

Q. Most all of the old New York, Connecticut and Massachusetts companies?

A. Yes, sir.

Q. You could give us a list of the subscribers? A. Yes, sir, by tomorrow or this afternoon perhaps.

Q. Well, we won't want it this afternoon, I think; in fact, you need not bring it here until we call for you, but you can make up a list so as to bring it here.

By Mr. DICKINSON:

Q. Were you in this building when trains were passing?

A. No, sir.

Q. Did you examine the building? A. I looked it over a year ago or so.

Q. When did you do it? A. I could not tell you.

- Q. You could not tell whether it was in the summer or in the winter?
- A. No, sir; but it is my impression that I looked at it last 1764 year and the year before in the summer time.

Q. When did you come here? A. Two years ago in June.

- Q. Now, when you looked it over last year the structure was built, was it not, the elevated road?
 - A. Yes, I think the structure was there. Q. Where did you go in the building?

A. I went through the mill itself. Q. Did you go in the lower floor?

A. Yes, sir. Q. Upstairs?

A. Yes, sir.

Q. Did you go into the dust-room?

A. No, I think not.

Q. Did you see the place where the dust is removed from the buildings into River street?

A. I don't recollect seeing it; I may have seen it.

Q. Did you go into the shavings-room?

A. I don't think so.

Q. Did you see how the accumulation of shavings and dust is removed from the mill?

A. You mean how it is caught?

Q. How it is removed from the mill?

A. No, I didn't see it.

Q. Do you know how the shavings and the dust are removed from the mill so as to prevent their flying all about?

A. I understand there is a dust-catcher in that frame structure on top of the shavings-vault building.

Q. You saw the dust-arrester on the top? A. Yes, sir.

Q. But did you see in the mill itself how the dust and shavings are removed from the mill?

A. They are blown by pipes, as I recollect.

1765 Q. You did not follow it up to see where they are received or how they are removed?

A. I think I followed them up to see how they were received, but as to how they were removed I don't recollect that I did.

Q. Did you see any trains passing while you were there?

A. No, sir.

Q. You don't know whether or not they threw cinders. Did you inquire as to whether they threw cinders?

A. No, sir; I didn't inquire.

Q. Where were you engaged before you went to Cleveland? A. I was traveling in Ohio mostly, Ohio and West Virginia.

Q. As inspector?

A. As inspector and special agent.

Q. For fire risks? A. Yes, sir.

Q. For what concern?

A. For the Queen Insurance Company.

Q. In Cleveland have they any elevated structures in front of any manufacturing property?

A. No; I think not.

Q. Have you in your business been familiar with the effect upon manufacturing property of elevated structures about the second story?

A. Not specially.

Q. Did you ever have any inspection of that character before you inspected this?

A. Never had any occasion to consider it specially.

Q. You did not inspect this with the trains running by at all? A. No, sir.

1766 Q. Never observed the practical effect upon the property or diagnosed the effect of passing trains in front of property?

Q. Did you inspect in Bay City?

A. No. sir.

By Mr. BAKER:

Q. Have you got in your business a map of the Backus property?

A. We have the fire-map such as is furnished to all insurance companies.

Q. You make up a survey of this whole city?

A. There is a map company that does that for the whole country.

Q. They make a map of the city with accurate outlines of the property, and do you have one of those when you are inspecting property?

A. We have it in our business, yes, sir, very much. It is in large

volumes.

Q. And the insurance companies have duplicates of it?

A. Yes, sir.

Q. Could you bring that when you bring this list of the companies?

A. Yes, sir.

Adjourned till Sept. 27, '93.

SEPTEMBER 27, '93-9.30. a. m.

PHILLIP C. MILLER, sworn on behalf of the petitioner.

Examined by Mr. BAKER:

Q. Where do you reside?

A. Chicago.

Q. How long have you lived in Chicago?

A. For the past six years or a little longer.

Q. What is your business? 1767

A. Blowpipe and dust-collector business.

Q. How long have you been connected with that business?

A. About six years.

Q. What does that business consist of; what is this blowpipe and

dust-collector business?

A. Putting in fans and a system of galvanized or iron piping for carrying off the shavings and dust from various wood-working machines and taking and depositing it in the shavings vault; and we put in furnace feeders to drop them right into the furnace, if parties

Q. Do you know what dust collector or arrester, whatever you

call it, is in general use at the present time?

A. Yes, sir.

Q. What is it called?

A. Well, there are several different makes. There is one known as the Allen & Curtis, and one called the Vortex manufactured in Milwaukee, which our company handles, and there is one manufactured here in Detroit by Hyde & Smith, and there are several others manufactured in a small way, but they all consist of the metallic form of dust-arresters, driving the dust out of the air current by centrifugal force, as it is called.

Q. Are all these that you mentioned upon the same general plan? A. They all work on the same principle, about, but somewhat

different in construction.

Q. What do you do-manufacture these or travel about the coun-

try introducing them? A. Travel about the country and take contracts for putting in systems.

Q. And what parts of the United States have you visited in this business?

A. Well, the New England States, New York, Pennsylvania. Ohio, Indiana, Missouri, Wisconsin, Michigan and Illinois.

Q. State whether or not you have a general knowledge of this business or art?

A. I have.

Q. Throughout the parts of the United States where wood-working manufactories are carried on?

A. Yes, sir.

Q. Have you a model of the Vortex, the one that you introduce? A. Yes, sir.

Q. Is this the model that I have here?

A. Yes, that is the machine that we use in connection with our You might get one of these cuts there and you can see a little more. This is a metallic machine. The air is blown in here with the shavings and dust and the heavy particles have a tendency to keep to the outside walls, and they drop down, and all the shavings and dust practically come out of this end without any air. The air escapes on the top here.

Q. What is the object of that cover?

A. That is simply to keep out a spark, rain or snow—the weather. It is not absolutely necessary, and a great many do not put them on.

Q. When the mill is not in operation that will drop down automatically?

A. Yes, it will drop down automatically. The air opens it.

Q. Have you a cut here that shows how they are usually placed on mills?

A. Yes, there are some drawings there. (Taking papers.) That will give you a general idea of the system. You see we put in this fan here and this is supposed to be galvanized iron or steel piping

and runs to all these various machines connected with this fan and blown into this machine here, but you gather all

these shavings with the air and you want to have some means of separating, taking the air out of them and allowing the shavings to drop; by blowing into this machine they whirl around there and are separated. The air takes this direction and the shavings this.

Q. Just pass that along so the jury can see. Have you had any experience with dust-arresters that are made out of burlap or

cheese cloth?

A. Yes, sir.

Q. How long ago were they in use?

A. Well, it is in 1885, I believe, and a few sold, I think, in 1886, just about the time these machines came out.

Q. When did this centrifugal dust-arrester come out?

A. 1886. I think that was the year, but it may have been 1885.

Q. About how many have been introduced, to the best of your knowledge and judgment?

A. I should judge, at a low estimate, there are some three thousand of them.

Q. Have you canvassed or been through the city of Detroit so that you can tell us whether they are in general use here in this city?

A. I was around yesterday to see how many there was in use.

did not go all over in one day, but I got quite a number. Q. What would you say as to their being in general use here?

A. I should think they were in general use the same as in the other cities.

Q. Will you state in what respect this excells the old-fashioned

burlap or cheese-cloth dust-arrester?

A. The one I was connected with was known as the O K. which was a series of screens with cheese cloth, and that was 1770

set up above on top of the building. They were very inflammable affairs and a great many of them are burnt up now. I guess they are practically out of use, but when you would start the fan up they would blow all up for a little while and then they would mat up, the lighter dust and cause a back pressure on the fan, would not give a free outlet. Sometimes they would blow full, although they were considered a pretty fair thing at that time, just about as good as there was; they had to use something; but as quick as these metallic machines came out most of them were taken out right away. They would mat up and cause a back pressure and would not draw up the shavings. There is lots of light dust from the pores of the wood that will mat right up against the piece of cloth, and on this O K at noon and night you had a bumper; you had to scrape it to clean it. I believe this one that is known as the Backus-I have seen that, they are web-shaped screens, and they are supposed to be self-cleaners. When the fan stops they come back and scrape off, but there is no screen in this Vortex at all.

Q. Pass that around to the jury so that they can see the internal construction of it. Have you examined the plant of the dust-arrester that is in use at the Backus planing mill and box factory?

A. Yes, sir.

Q. Have you made an estimate of what it would cost to put in an improved dust-arrester in the plant?

A. Yes, sir; I made an estimate a year ago, or when I was here

before.

Q. Have you made your measurements again?

A. I just looked over it the other day when I was here with you; I guess it is about the same.

Q. Will you state how Backus would have to change his building,

if any, in order to put them in?

A. There is only one thing about it before you put this machine up. The shavings hopper off, for there is no wind

to blow them, and if a man wanted to have the same storage capacity as before with the old device he would have to have his vault a little higher to do it. People that want a large storageroom for shavings generally build them a little higher, build the vault a little higher.

2. What would that necessitate in his place-building his walls

to his shavings vault somewhat higher?

A. Yes, building them about on a height with that roof that now contains the other dust-arrester.

Q. Lengthening the pipes some.

A. Lengthening the pipe a little; yes, sir.
Q. Would you use his same fans and pipes?

A. Yes, as far as they would go. There would have to be a little

additional to get further air to the machine.

Q. State whether or not as they are usually put in, they have a building, or whether they put the shavings right down into the firebox of the boilers?

A. Well, the furnace-feeder has not got into such general use as the separater; that is, we have put in a great many, but there is a difference of opinion in regard to the value of them. The people when we first started in were a little skeptical in regard to the fire running up their pipes, but we put in a great many large plants.

Q. The shavings go right into the fire-box?

A. Yes, right into the furnace.

Q. What is that you have there?

A. That is a drawing of the Madison car-furnace feeder.

Q. That is not a part of the dust-collector?

A. No, sir.

Q. You can either put the shavings into the fire-box or you can put them into the vault?

A. Yes, sir.

Q. Just as you see fit?

772 A. Yes, sir.

Q. Now, will you state what it would cost Mr. Backus, what would be the reasonable cost of making this change in his mill so as to put on this metallic dust-arrester, exclusive of the

raising of the wall and putting on a new roof?

A. My estimate before on that was that I would put these machines, furnishing the additional pipe, for \$1,380, exclusive of the masonry and carpentry work, what they might have to do with the vault; or if he would set them on the same roof he would have to put a new roof on, or tear that old one off. This is for the machines put up on the roof wherever he might wish them and with the necessary additional pipe to connect to them.

Q. Can you state, as far as you have examined, the list of manufacturing institutions in the city of Detroit that have these in use?

A. I have a list of some of the factories that I got yesterday.

Q. Will you name some of them?

A. Pingree & Smith have one made by the Allen & Curtis Company, right down here on this street, on their shoe factory. We put a system of the same kind in shoe factories.

Mr. Dickinson: O, everybody knows Pingree.

Q. He does not need any blowpipe.

A. A. C. McGraw. I sold them when I was with the Allen & Curtis Company. The Detroit Wooden Ware Company, W. A. C. Miller Lumber Company, and there is one not in use there on a plant up here, on Walker's plant, up along the river, a car shop that is not running. I saw a machine up there. There is Vinton

& Company. Then there is the Adams Machine Company, I have just put up two machines, a man is working there now putting in

the pipe system. Q. That is right alongside of the elevated railroad?

1773 A. Down in here somewhere, I don't know what street. The Detroit Casket Company, Posselius Brothers, C. D. Widman & Co. There is the Force & Dickinson Co., and Murphy & Wasey chair factory. There is the Michigan-Peniusular Car Co., the American Harrow Co., F. J. Sarmiento, Hartz, Hosbach & Co., Farrand & Votey, the Wolverine Manufacturing Co., Dwight Lumber Co., and I believe there is one in the Ideal Manufacturing Co., I think it is the Ideal Manufacturing Co. I made them prices; they didn't buy our machine, but the other parties put it in-the Saginaw firm.

Q. You have not examined the western part of Detroit?

A. I have not been out at West Detroit. They tell me there are a lot of factories there, but I have not been out there.

Q. I suppose you have been in the Saginaw valley?

A. I have been up there in Saginaw.

Q. Do you know whether or not there is a firm there devoted to this business?

A. Yes, the Allen & Curtis Company.

Q. Do they put in these same machines or substantially the same

apparatus?

A. The same thing; the dust-arrester is a little different. They blow in down on the bottom, but it is a metallic machine; they do not screen the air-separate it in the same manner.

Q. That is, it works by centrifugal force, the same as the Vortex?

A. Yes, sir.

Q. What do they call it?

A. It is known as the Allen & Curtis machine.

Q. Then there is the Cyclone.

A. The Cyclone is manufactured by Heiser, or the Knickerbocker Co., at Jackson. That is, they have abandoned it 1774 There was a consolidation between those two companies, and Heiser took the right from the Knickerbocker Co. to make what is called the Cyclone, and after he consolidated with the Allen & Curtis. Now the Knickerbocker make nothing except for flour-

ing mills, and the Allen & Curtis Co. for wood-working. Q. Do you mean to say they use these same apparatus for flour-

ing mills?

A. Yes, sir. Q. Do you know whether they are in general use in Minneapolis

and Duluth, the great flour centers?

A. I have not been in many of the flour mills. I know the Vortex sell a great many; I have put them in in elevators.

Q. What do you mean, a grain elevator?

A. Yes, sir; I put them in for Armour & Company, and Counselman, at Chicago.

Q. That is, they can be used in any place where it is advisable to collect dust through pipes and fans?

A. Yes, sir.

^{130 - 55}

Q. This apparatus being used to separate the air and the dust? A. The air from the dust.

Cross-examination.

By Mr. DICKINSON:

Q. What is your age? A. 31.

Q. How long have you been in the dust-arrester business?

A. About six or seven years.

Q. Now, what are you doing-showing your patent again?

A. I am just showing my plans.

Mr. BAKER: One of the jurymen looked at it.

Q. That is all right, but we will object to putting in the 1775 specifications of any patent in this case. What was your business before you went into the dust-arrester business?

A. Tinner and sheet-iron worker.

Q. Whereabouts? A. In Chicago. I learned my trade in Lockport, Ill.

Q. How long have you lived in Chicago?

A. I have lived in Chicago off and on. I have been there the past six years; perhaps longer.

Q. And you have been engaged for the last six years in introduc-

ing dust-arresters?

A. Yes, sir. Q. When was the patent taken out for this dust-arrester you have shown?

A. I do not know the dates of the patents of this particular machine.

Q. Isn't it on the machine?

A. No, sir, it is not on any of these cuts.

Q. Look at your model. Isn't it on the model?

A. I guess they are on these papers. It is not marked patented. Of course it is only a model. I have a list of some of the patents here.

Q. Which patent is this a model of?

A. It is manufactured under all the patents.

Q. This is called the Vortex shavings and dust collector?

A. Yes, sir.

Q. Patented January 29th, '89; June 25th, '89; some improvement, I suppose?

A. I suppose so. I am not posted so particularly on the patents. Q. March 26th, 1889, and February 17th, '91. I suppose that is

right, is it?

A. The Vortex Company built these for us. We do not build them. That is the patent they told us to put on. 1776

Q. You have to put on every machine you put up the certificates of patents?

A. Yes, sir.

Q. Those are right I have read over from this circular?

A. That is right as near as I know. I am not the patentee of it myself.

Q. What is your company itself? A. We are an independent company and make a special business of putting in blow-pipe systems in wood-working factories.

Q. You have the right from the Vortex Co. to use it.

A. We have the exclusive right of that machine for word-working purposes.

Q. In all the States? A. In all the States.

Q. Do you know how many patents there are for dust-arresters taken cut in the United States Patent Office?

A. Of the metallic machines?

Q. Yes.
A. It is on the top there.

Q. I do not mean the same patent exactly as this, but how many patents for dust-arresters?

A. Well, I had a list of them once, and I believe I had between

40 and 50 patent papers.

Q. Don't you know that there are 361 patents for dust arresters? A. No, sir, I don't know it, I never looked it up.

Q. Did you ever hear that? A. No, sir, I never heard that.

Q. But you yourself know of some 60 or 61?

A. I know of some 40 or 50. I send for them on the metallic machines.

Q. You don't know how many other dust-arresters there are patented in the United States?

A. No, sir. 1777

Q. For other than metallic patents?

A. I know of two.

Q. Now, did you put in the dust-arrester for C. D. Widman, for instance?

A. No, sir.

Q. Who did? Is it a Vortex? A. No, sir, it is not a Vortex.

Q. Some other patent?

A. I guess I can tell you what it is. What one did you have reference to?

Q. Widman? A. W-i-n-t-o-n? Q. W-i-d-m-a-n?

A. From the outside appearance that looks to me to be a Huyett & Smith machine, manufactured here in Detroit.

Q. It is not a Vortex, at all events?

A. It is not a Vortex.

Q. Force & Dickinson, is that a Vortex?

A. No, sir.

Q. Now, I will ask you to go through your list and tell how many of your patent machines are here?

A. We haven't got any of our make here.

Q. Not one in this city?

A. No, sir, not that I know of that we have sold. The Vortex Company, before we got the right to sell, may have sold some.

Q. You don't know of any? A. No, sir.

Q. The others that you have seen are of some other patent than the Vortex?

A. Yes, I suppose.

Q. When did you make this model?

A. Yesterday.

1778 Q. Make it here in town?

A. Yes, sir.

Q. Made it from drawings?

A. Originated it. I am familiar with the machine and just made a sketch and told the man to make it.

Q. Made it here in town for this case—the model that has been shown?

A. Yes, sir.

Mr. BAKER: I want to ask here-about how wide in diameter do

you usually put them on?

A. They run all the way from 24 inches up to 11 feet. We build them as large as 11 feet in one machine. Of course sometimes a factory has on two or three machines.

Q. Did you talk with Murphy & Wasey, for instance?

A. No, sir.

Q. Didn't ask them whether they are satisfied and whether their place is full of dust, whether it worked or not?

A. No, sir.

Q. Do you sell in New York?

A. Yes, New York State.

Q. Do you sell in New York city?

A. No, sir, I have not sold any that I know of in New York city. Q. Probably for the sake of your business you know something

of where dust-arresters are used, don't you?

A. Yes, sir.

Q. Do you know the number that are used in New York?

A. Of the metallic machine?

Q. Of any machine, where they use dust-arresters.

A. No, sir, I don't know the number, but it is used there.

Q. You don't know the number of institutions that require dustarresters?

1779 A. No, sir.

Q. Have you heard?

A. I have not.

Q. I suppose in a great institution where there is a great deal of manufacturing and a great deal of dust created, one object that must be obtained is to prevent the flying of dust?

A. That is what they are put on for.

Q. This dust, you know, in your business, when it becomes dense is almost as inflammable as gunpowder?

A. They claim so, I believe.

Q. That it will explode, it does occasionally explode and blow up mills?

A. Yes, I have known of several that blew up. Q. So that they must prevent the flying of dust?

A. That is what they are for.

Q. In the mill?

A. In the mill or outside. Q. Or. outside or anywhere?

Q. Now, is there a single Vortex dust-arrester in use in New York A. Yes, sir. city?

A. There are two in shoe factories. You have that circular there

of mine. I can tell you, I guess.

Q. How many have you used in New York?

A. We got two there in shoe factories, we may have more.

Q. What flies in shoe factories—pegs?

A. No, sir, heel-trimmers and edge-trimmers.

Q. Your dust-arrester works perfectly in a shoe factory? A. Well, they of course are not perfect. They are absolutely free from dust—as good a thing as can be gotten up for the purpose.

Q. In shoe factories they are absolutely free from dust? A. They use them; they are not absolutely free from dust, 1780 some of the lightest escapes.

Q. Don't you know in the city of New York there are 48,000 factories and mills that require dust-arresters, in the city of New York

and Brooklyn?

A. I don't know anything about it, but that is a big estimate, there might be. I would not know anything about how many there are. There is a great many there, the Allen & Curtis Company have an established agent.

Q. Who are Allen & Curtis?

Mr. BAKER: The Saginaw men.

A. They have a man established there; they are a little bigger company than ours.

Q. Do you know what proportion of the New York mills of various descriptions that use dust-arresters, use metallic ones?

A. Yes, I could say safely that all wood-working factories do. Q. Well, the factories that use dust-arresters to avoid dust and prevent explosions?

A. We are connected more particularly in our business with wood-

Q. Well, but you put in grain-elevators, you say, and in flouring

mills? A. Yes. I don't know anything about how many are in use in flouring mills, because we never had anything to do with a flouring-mill plant.

Q. Do you know how many dust-arresters are in use in planing

and wood-working mills in New York?

A. No, sir, I could not say.

Q. How many can you say of your own knowledge? How many metallic dust-arresters are in use in New York and Brooklyn of any kind or description?

A. No, sir, I could not say.

Q. In wood-work?

A. I can give you the names of some firms that use them.
Q. But you cannot tell the number?

A. No, sir.

Q. They don't all use the Vortex, do they?

A. No, sir.

Q. Have you the exclusive right also in Canada?

A. No, sir; we do not go outside.

- Q. You haven't the right, then, in Canada? A. Yes; we have the right if we want to.
- Q. You would know if they used the Vortex dust-arrester, a model of which you have shown, anywhere in the United States and Canada, wouldn't you, as you have the sole right?

A. Of course I am not familiar with every place we put them in.

We haven't sold any in Canada to my knowledge.

Q. In New York you haven't?

A. In New York State?

Q. New York city and Brooklyn?

A. We have sold some in New York. We have two there that I know of.

Q. Well, only two?

Mr. BAKER: That he knows of.

Q. Those are shoe factories?

A. Those are shoe factories.

Q. Now, you haven't any doubt, have you, your company being the sole agents and having the sole right in the United States—you haven't any doubt that this dust-arrester is the best in the world?

A. Well, I claim it.

Q. You claim it every day when you sell it?

A. Yes; ours is the best, of course. There are several others of the same type.

Q. There are a lot of others that claim to be the best?

A. Yes. Of course Allen & Curtis claim theirs is the best.

I used to when I sold it.

Q. You run onto their machine all over in your business?

A. Yes, sir.

Q. They all claim to be the best?

A. Certainly.

Q. You run onto agents who sell dust-arresters that are not metallic?

A. Yes, sir.

Q. And you run onto agents who make a good business by selling dust-arresters which are not metallic?

A. Not for wood-working factories. We do not run against anybody in our business—I have not for the last four years—that makes anything but a metallic dust arrester that we run against. There are several firms in that business, and we run against them; but they all handle metallic machines.

Q. But you do run onto those who use cloth and burlap?
A. In flouring mills. I met an agent the other day.

Q. In flouring mills the dust is fine, and has to be provided for?

A. Yes, sir.

O. It is claimed on behalf of the cloth dust-arrester, is it not that it is the only dust-arrester that will take and hold the dust? Am I right-do they claim it? I want to ask you that, an agent of the Vortex?

A. I don't know what they claim for flouring mills.

Q. Do you know that the agents of cloth dust-arresters, of any description, non-metallic dust-arresters, claim that the metallic dust-arrester don't arrest the finest dust?

A. Yes, sir.

O. There is a good deal of war in dust arresters as there was in lightning rods and different businesses?

A. Yes, sir. 1783

Q. They issue circulars, oppose each other and so on?

A. Yes, sir.

Q. Now, do you sell any in Boston?

A. Yes, sir.

Q. How many have you got in Boston?

A. Well, we sell a great many to the Boston Blower Company, and they make a business of putting in pipe-work there.

Q. Give them the license to put them in?

A. We simply sell them the machine for so much money.

Q. You could not say where they put them in?

A. No, sir.

Q. How many have you sold in Boston to the blower company?

A. We have sold, anyway, eight or ten machines.

Q. In Boston?

A. And then we put one in for a large piano factory. Q. How many have you sold in Philadelphia?

A. We haven't sold any that I know of.

Q. How many have you in the great city of Chicago?

A. We have quite a number.

Q. The metropolis of the Republic? We got them in McCormick's. A. We got some in there, yes.

Q. How many? Give us them.

A. There is McCormick's and Wiltz-

Q. Give us the number; we do not care for the names. It is the home office of the Vortex?

A. The home office of the United States Company.

Q. That is your company, the sole agent of the Vortex?

A. Yes, sir.

Q. How many, in round numbers, have you put in in the city of Chicago ?

A. Well, I suppose we have some thirty machines in there. 1784 Q. Can you tell me how many institutions in the city of Chicago use dust-arresters?

A. No, sir.

Q. Haven't you had any list made so that you could canvass for your own machine?

A. We send out circulars there.

Q. I want you to answer the question: Haven't you, in your home office there, the sole agents of the Vortex, a list of the people who want dust-arresters or who use them in the city of Chicago?

A. We have not; only Dun. We check our circulars out of

Dun.

Q. You cannot tell how many people want the dust-arrester such as you manufacture?

A. No, sir; certainly not.

Q. Or how many people use any dust-arrester in the city of

Inicago?

A. No; certainly not. We advertise in the wood-working journals; travel on inquiries entirely. We have our standing ads. in the papers.

Q. Well, but you have only some 30?

A. In Chicago, yes, sir.

Q. Do you know anything about how many institutions in Chicago use the metallic of any kind or description?

A. Well, I could from an estimate of what I think.

Q. I want you to know.

A. I would not give you that. I can give you an estimate of what I think there is there.

Q. Did you ascertain that by inquiry and investigation?

A. No, sir, not by inquiry, just from what I know, what we have sold and what the Allen & Curtis people have sold, and what Huyett & Smith have sold, and what Kuche, a man that used to be in the business, sold. There were four or five firms in this business, and all sold a number of those machines.

Q. There are some 50 or 60 other patents in this business, to your

knowledge?

A. Fifty or 60 others that make a special business—

Q. Fifty or 60 different patents for dust-arresters?

A. I said I have seen 40 or 50 papers that I have in my office. That is all I know. You said 300.

Mr. Baker: You don't claim that every patent is manufactured?

Q. I won't claim that, but there are at lesat 300 that are manufactured.

A. Well, I don't know.

Mr. Baker: 300 patents, I understood you?

Q. 381 patents, and they are all the best dust-arresters on earth.

A. Some of them are back numbers, probably not made at all. Q. You don't know anything about that at all, do you?

A. I know about one of them in particular.

Q. You don't know anything about what is in the city of New York, evidently, you don't know anything about what is in the city of Philadelphia, evidently, you don't know anything about what is

in the city of Boston, evidently, and you don't know anything about dust-arresters in the city of Chicago. And that is all you know?

Mr. BAKER: He has testified to no such thing.

O. He says he don't know the concerns that use dust-arresters in the city of Chicago.

A. That may be, but I can easily give you a list of them if you

want them.

O. Do you know any one that uses anything but a metallic dustarrester in Chicago?

A. Wood-working institution? 1786

Q. In any institution where fine dust flies?

A. I am only testifying on wood-working, I don't know much about mills. I can say of wood-working institutions that I don't know of any other but metallic dust-arresters, although there may be some others.

Q. There is a pretty strong argument made for the merits of the cloth dust-arrester, made by the owners of the cloth dust-arrester.

A. Not for wood-work. Q. As against yours?

A. Not in wood-working plants.

Q. They do not claim they can do the work as well as yours?

A. No. sir.

Q. Those who own patents on dust-arresters?

A. No, sir.

Q. Now, you do not claim in your scheme of the dust-arrester the discharge of the dust into the furnace, do you. That is not in your scheme or patent-the discharge of the dust into the furnace?

A. This part here (referring to model).

Q. Discharge into the furnace. That is plain English?

A. You mean the furnace-feeder. Q. Yes, you don't include in your patent the discharge of dust into the furnace?

A. Everything that goes down this hopper here goes into the fur-

nace if you feed it.

Q. Don't you think in that case that if this avalanche of dust went into the furnace it would be apt to blow up your mill?

A. Well, it don't do it.

Q. Then I understand you to say that you include in your design the turning of the dust into the furnace?

A. That is, if people want it. That is another device en-1787 tirely.

Q. Is there any patent on that?

A. Well, we have not, because Allen & Curtis claim a patent on the feeder.

Q. Where have you seen it where the dust was conducted from the dust-arrester into the fire, where it is in use?

A. Well, we have got it in the Madison Car Co., and we have it in Mason & Myer in Buffalo.

Q. What is their business?

A. Sash, doors and blinds, and Metz has it-hardwood interior finish.

Q. They conduct it directly into the furnace?

A. Yes, sir.

Q. How large an institution is that sash, door and blind institution?

A. It is a good-sized plant. We put in two three-thousand-dollar jobs of piping, dust-arresters.

Q. As large as the Backus mill?

A. Well, I don't know, but I think it is as large. It may not be. Q. What amount of horse-power is necessary to use to work your dust-arrester?

A. There is no moving parts in there. It don't require anything

in the way of power for this. It is for the fan.

Q. Doesn't it require some considerable increase of power over

the old style of dust-arrester?

A. Not over the old style. Of course you rotate air, and it takes a little back pressure. Of course you cannot blow air through a straight pipe any distance but what you will get a certain amount of back pressure.

Q. If it was not for the back pressure the metallic dust-arrester

could not work?

A. Not necessarily need to be back pressure. Of course, as I say, you rotate air, or drive it through a straight pipe and elbow, and you cause some back pressure. You can see by putting a glass on it and testing it, but I claim that these machines, the fan, always have a free outlet, and there is less back pressure on this class of machine than on any other that is used.

Q. You are going to leave that model with us are you not?

A. Yes, sir.

Q. Do you know any other place where they discharge dust and shavings into the furnace?

A. McCormiek Harvester Co. and Wiltz. That is the plant here

(referring to paper).

Q. Do they discharge it in the McCormick Harvester Company directly into the furnace?

A. Yes, sir. Q. Without any stoppage anywhere?

A. Not unless they want to throw them into the vault-getting too many. Then they will switch in there?

Q. If they get too many?

A. Yes, sir.

Q. Isn't the tendency of putting dust on fire in furnaces to smother the fire if it comes in great quantities?

A. Well, I don't know anything about that. All I know is they

work when we put them in.

Q. Any other place where they turn the dust into the furnace?

A. There is the Buffalo Planing Mill Company.

Q. That is the one you just told us of?

A. No, sir.

Q. Another one? That is three.

A. That is another one. And the Milburn wagon works at Toledo. And we put them in at North Baltimore, at the North Baltimore Furniture Company.

Q. Maryland?

A. Ohio. 1789

Q. Yes-5. A. If you get that circular there, I have got a lot of names on there. I can tell that have got feeders. A. H. Andrews, Chicago. I put in feeders there.

Q. Well, do they discharge directly there?

A. Just the same as this cut shows.

Q. I don't want the cut. I want to know how the dischage is

made from the mill?

A. From here. We simply put a switch right on here. This side leads to the shavings vault in case they are getting too many on, and the other side will lead down to the furnace.

Q. They all provide for a discharge when they get too much

into the vault?

A. Yes, sir. Q. How is the dust and shavings vault relieved when that gets filled?

A. When the shavings vault and furnace gets filled?

Q. No, sir. The shavings vault and dust vault-they are separate?

A. No, sir. They are all in one, unless you get a sawdust pipe separate from the shavings.

Q. How is the vault relieved when it is not discharged into the furnace?

A. You got to haul them out or shovel them out; that is all.

Redirect examination.

By Mr. BAKER:

Q. Now, you have given some testimony as to the number of Vortexes that are in use in Chicago as thirty. Will you state whether Allen & Curtis, the Saginaw firm, have an agency in Chicago?

A. Yes, sir.

Q. Do you know whether or not they have put in a large 1790 number of them there?

A. Yes, sir.

Mr. Dickinson: Just give your number.

Q. Have you any way of telling or have you ever made any

account so that you can tell how many there are?

A. No, sir, I have not done that, I have not counted them. I can merely make an estimate of what I think there are there, but I can name a few of the firms that have them.

Mr. Dickinson: Do they do a better business than you?

A. They do four or five times the business we do. They are a larger company.

Q. Have they been at it longer?

A. They have been at it a great deal longer. We have been in it only three years and they have been in it since the patent came out.

Q. There is a lawsuit pending between your company and that company as to the validity of your patent?

A. Yes, sir.

Q. Now, do they make a metallic dust-arrester that acts by centrifugal force, substantially like this?

A. Yes, sir. Q. This firm in Jackson, the Knickerbocker Company—do you know whether they make a similar apparatus?

A. For wood-working Heizer had that right here before the con-

solidation between these two companies.

Q. What did the Knickerbocker Company make it for?

A. For flouring mills. They divided the patent and one took it for flouring mills and the other for shavings and dust.

Q. Do you know of any burlap dust-arrester like that down on the Backus mill in use in Chicago?

A. I don't.

Q. Do you know of any one except this one that is in use 1791 anywhere in the United States?

A. Well, I saw one right down here on this next factory, up this way. There is one in there. I should judge it is either the O K or the Backus by the looks of the house.

Q. That is the organ works, Clough & Warren?

A. I think so, down along the tracks.

Q. You have traveled pretty much over the Northern States in this business?

A. Yes, sir.

Q. Have you found one elsewhere, and just tell us where, if you have?

A. I have not in the last three years that I know of.

Q. You don't remember of seeing one in use anywhere in the last three years?

A. No. sir.

Q. Prior to that what were they?

A. Well, the Milburn Wagon Co. had one.

Q. How do you know that?

A. They told me so and we put in a system of pipe and dust-collector there about three years ago. Allen & Curtis had put in their type of machine and we took theirs out and put ours in, but before that they told me they had a burlap. I believe it was a Backus dust-arrester.

Q. In all your travel any time in the last six years have you run

onto any burlap Backus dust-arrester?

A. Palmer & Fuller had one in Chicago, but it is not in use; they have taken it out, and Peters had one, and when I was coming through here I saw they had substituted the other machine.

Mr. Dickinson: Is it Backus or burlap?

A. I don't know, I suppose it is Backus dust-collector. And Mar-

shall, and Allen & Curtis man I met on the train, said he had sold him an outfit, so that that is out of there.

Q. You knew they had a cloth arrester there although this 1792 one was being put in now?

A. Yes, sir.

Q. You saw that the other day when you came from Toledo?

Q. Where is there any other Backus dust-arrester?

A. I saw one about five years ago, I think, in Milwaukee, a party had one there, and there was one used at Oshkosk, if I remember right.

Q. What has become of them?

A. I don't know, but the one at Milwaukee-the party says it was taken out.

Q. What was put in in place of it?

A. Cyclone.

Q. The Cyclone is the dust-arrester that is manufactured by Allen

& Curtis?

A. Well, I don't know the real name, but the Cyclone was this one made in Jackson. They have all got their different machines. We call the Allen & Curtis the A. & C. machine, although the general public call all of them that name, but we have a particular name in the trade. The public says the Cyclone; they were named that when the machine first came out and most of the people commonly talking call them that now.

Q. Have you ever visited New York city in connection with your

business?

A. No, sir.

Q. Has your company an officer there?

A. No. sir.

Q. Have Allen & Curtis?

A. Yes, sir, they have a man there.

Q. Do you know whether or not the centrifugal dust-arrester is in use in New York city?

Objected to. He says he has not been there.

Q. You say you have been there on business? 1793

A. Yes, sir.

Q. From your knowledge of the manufacturing institutions in the city of New York, will you state whether or not the Cyclone or Allen & Curtis, or Vortex are in general use there?

Objected to. The witness has not shown any knowledge.

Q. State whether you know or not?

A. I know something about it; yes, sir.

Mr. Dickinson: Well, he wants to state his knowledge.

Q. What do you know about it? How many days did you spend there?

A. I put in centrifugals when I traveled for Kuche for Hall & Son up at 100th street, and I had another job there for another

party, a mantle man; I cannot think of his name. Kuche had sold a machine to Behr Brothers and to the Fisher Piano Company, but I cannot think of the other party there. I was connected with Kuche, and I knew the list of machines—that is, referring to his books, and I knew that there were some of his machines there, and Allen & Curtis, of course.
Q. You say you have been there in New York and put in these

machines. Do you know of any burlap dust-arrester that is in use

there?

A. No, sir; I never run across it. Q. Have you visited Boston?

A. Yes, sir.

Q. In your business?

A. Yes, sir.

Q. Do Allen & Curtis do business there?

A. Yes, sir.

Q. Do you know whether or not the burlap dust-arrester is in general use in Boston?

A. For wood-working purposes it is not.

1794 Q. Have you visited Philadelphia?

A. I have been there, but not for four years.

Q. Not in your business?

A. Yes, on business.

Q. Do you know whether or not the burlap dust-arrester is in general use there in wood-working establishments?

A. I never run across any there. Allen & Curtis have sold machines there and Kuche the centrifugal; he has put in some there.

Q. You were the agent, as I understand you, some years ago of the cheese-cloth dust-arrester?

A. When I was working for Kuche; yes, sir.

Q. Will you state what the fact is in regard to the back pressure there on a cloth dust-arrester, what causes the back pressure?

A. The light dust mats up the pores in the cloth, and consequently it don't give the free relief. It is all right for a little while, an hour or two, and then it will mat up, and they have to clean it. This Kuche machine had a bumper, and they had to clean it morning, noon and night. Besides that they would mat up and in a month or two be all filled up, and you could not get it off. We had a great deal of trouble with them, although he sold quite a number of them at the time; but they have been taken out since.

Q. Is that more or less true of any cloth dust-arrester?

A. Yes, sir.

Q. If the mesh is very coarse, of course it is not-

A. It won't mat up as freely, but then it will allow sawdust to get out.

Recross-examination.

By Mr. Dickinson:

Q. Did you go into the American Pencil Company factory in New York?

1795 A. No, sir.

Q. The Eagle Pencil Company?

A. No, sir.

Q. Ever been in a pencil factory?

A. No, sir.

Q. You don't know, then, about the fineness of the dust?

A. No, sir; not in a pencil factory.

Q. Do you know in your business generally, from hearing it, that in the manufacture of pencils very fine dust is raised?

A. I had a communication from the Eagle Pencil Company in Florida, wanting to know about this dust-arrester. They were building a plant there—about a year ago.

Q. I am asking you if you know about the fineness of the dust

raised?

A. No, sir.

Q. Have you heard of the American Pencil Co.?

A. I don't know it.

Q. You know of the Eagle?
A. I know of the Eagle.

Q. They have put in the burlap and won't have any other?
A. That might be, I won't say anything to the contrary.

Q. You say you don't know of any, although on your cross-examination you did not seem to be very familiar with the number of dust-arresters in Chicago. You don't know of any in Chicago that use Burlap?

A. No, sir.

1796

Q. I understood you correctly that you had no list in your business and depended entirely upon inquiries of the people who used dust-arresters, depended upon inquiries for your dust-arresters?

A. All I mean to say, in my travels I have not run against

any, there may be some.

Q. Didn't I understand you on cross-examination to say you had made no canvass of the dust-arresters and depended upon inquiries?

A. Yes, sir.

Q. Then you do not go about Chicago making inquiries and looking up dust-arresters?

A. I live there and am around there a good deal.

Q. Have you made any canvass, do you change your testimony—whether you have made any canvass in the course of your business?

A. Only in the course of our business.

Q. Only when you have been called upon to put them in?

A. When we go to one factory we will see another and see a great many.

Q. You haven't made any canvass?

A. I have not gone out with a paper and made a canvass.

Q. Have you been around to see what dust-arresters there are?

A. In the course of our business we are out there every day.

Q. Then do you correct your testimony that you depend upon inquiries for your business, and don't go about asking for it?

A. A good deal-mostly on inquiries and letters.

Q. You say you never run across a cloth, burlap or any other than a metallic dust-arrester in Chicago?

Mr. BAKER: In the woodworking business.

A. I said I saw one at Palmer & Fuller's.

Q. In Chicago?

A. Yes. It is not in use. I sold them an Allen & Curtis machine.

1797 Q. Did you go into Newell's piano-key factory in Chicago? A. No, sir.

Q. Don't know what they use there?

A. No, sir. I have heard of the factory, I never was in it.

Q. Do you know whether in the manufacture of piano keys they make a very fine dust?

A. Yes, sir.

Q. You don't know whether they use burlap?
A. In Comstock & Cheney's—

Q. Will you answer my question, Mr. Patentee.

Mr. BAKER: He is not a patentee.

A. I don't know what they use.

Q. I want to know whether you know that the manufacture of piano keys makes a very fine dust?

A. Yes, sir.

Q. I want to know if you know whether they use burlap?

A. I don't know what they use.

Q. Will you swear then to the jury that there are not 38 concerns in Chicago that use burlaps and cloths.

A. In wood-working?

Q. I don't care what it is in, it is where fine dust is.

A. I am on wood-working, and I don't want to go into the flouring mills or anything of that kind. You can ask me anything you want on wood-working.

Q. Will you swear there is nobody in Chicago in the wood-work-

ing business that uses cloth today.

A. I don't know of anybody.

Q. Will you swear there is not?

A. No, sir.

Q. Will you swear there are not ten where they have particularly fine dust in wood-work.

1798 A. I will simply say I have not seen a burlap or cloth

dust-arrester in a wood-working factory.

Q. I ask you whether you swear; you know you said you did not go to these mills in your business except as you went in the ordinary course of your business. I ask you whether you will swear there are not at least ten in Chicago who use burlap and cloth?

A. You mean in wood-working?

Q. Yes, I said 28 generally.

A. I won't swear. There might be 100, for all I know.

Mr. BAKER: Of course you don't know whether they are there or not.

A. No, sir, but I can name some leading concerns in the business

who use the metallic.

Q. You are in the business?

A. I have not seen one. Of course we are in the city looking after the metallic, and when one machine goes in we know it.

Q. Do you know of any piano-key factory that has metallic? A. Comstock & Cheney, of Vermont, use the centrifugal.

Mr. Dickinson: Do the Comstock & Cheney Piano Company make piano keys?

A. Piano keys and key-boards.

By Mr. DICKINSON:

O. Is that Gov. Cheney, of New Hampshire?

A. I don't know.

Q. Will you state to this jury that they make piano keys?

A. They make them, cut out the celluloid. There is one fan there that does nothing but take its dust; there are a lot of machines that cut this celluloid and ivory, and they have a big bleaching-house to bleach the ivory.

Q. They have one machine that takes the dust?

1799 A. One fan.

Q. And you swear that Comstock & Cheney make piano keys and finish them?

A. They make key-boards ready to put in an organ or piano. Q. Do they make piano keys and finish them in that factory?

A. They saw out-

Q. Will you answer the question whether you know or not?

A. Well, I will say yes.

By Mr. BAKER:

Q. What do you say they make there?

A. They make key-boards; that is, they cut out the ivory and cut out the black keys and make the whole thing. This is one of the largest in the country, supplying firms like Fisher and a great many other concerns in the city—key-boards, as I call them.

Q. Mr. Dickinson was very careful to ask you to testify whether they finished them or not. Do they make them in the rough?

A. They sell them right out of their shop, all ready to stick in.

Q. Do they polish them and finish them?

A. Yes, and the Monroe Organ Reed Company are in the same business.

Mr. Dickinson: Do you mean piano boards?

A. Piano or organ.

Q. You swear to the keys as well as the key-boards?

A. I suppose you call a key that thing they put their finger on?

Q. Yes?

A. They make them. Q. And finish them?

132 - 55

A. Yes, sir.

Mr. BAKER: Do you know whether they finish them there 1800 or not, polish them finally?

A. They saw the celluloid out there and put it on?

Q. You have seen that? A. I have seen that.

Q. You don't know Gov. Cheney?
A. No, sir.
Q. You are not very familiar with politics in New Hampshire?

A. No, sir. This was Connecticut.

JOHN FINN, sworn on behalf of petitioner.

Examined by Mr. BAKER:

Q. Where do you live?

A. Detroit.

Q. How long have you lived here?
A. Twenty-two years.

Q. What is your business? A. Building and mason-work. Q. Do you know Patrick Dee?

A. Yes, sir.

Q. Did you go with him to examine the Backus property?

Q. Yesterday or the day before yesterday? A. Yes, sir.

Q. Did you and he make an estimate of what it would cost to duplicate the mason-work down there, and the brick-work and plastering and stone-work?

A. Yes, sir.

Q. Did you and he make the estimate together?

A. Yes, sir.

Q. Make your own measurement?

A. Yes, sir.
Q. You measured all the different walls and the plastering 1801 and all sorts of mason-work down there?

A. Yes, all that we knew of.

Q. All you could see?

A. All we could see.
Q. The foundations of the building and all that sort of thing?

A. Yes, sir.

Q. What would it reasonably be worth to duplicate the masonwork there?

A. \$26,884.08.

Q. You would be willing to take a contract to duplicate that amount of work for that amount of money?

A. Yes, sir.

Q. Would it be a fair and reasonable price for it?

A. I think so.

Q. You didn't make any estimate of the wood-work?

A. No, sir.

Cross-examination.

By Col. ATKINSON:

Q. That is just the mason-work? A. Yes, sir, the brick-work, the rubble-stone work and cut stone.

Q. Does that include all the plant?

A. Yes, sir.

Q. The office and everything? A. Yes, I have them all separate here.

Q. How deep a foundation do you allow?

A. Five feet below the ground, below the grade.

Q. How wide do you make the foundation walls, how thick?

A. From 16 inches to 4 feet.

Q. Did you measure them yourself or make an estimate? A. I measured them as they are with the exception of the 1802 two retaining walls, which we measured and used our own judgment about what was necessary. We measured them four feet thick but Mr. Backus said they were six. Of course we could not see the walls but we put them in at four feet thick.

Q. So that in some respects you lessened the masonry from what the Backuses told you it was, from what you could see and used

your own judgment of what it ought to be?

A. Yes, sir.

Q. What difference would that make in the cost of those walls? A. That would make a difference of about \$1,500.

Q. On the other walls did you assume the measurement as Mr. Backus told you?

A. Yes, sir.

Q. So that if you did the mason-work as Mr. Backus says it has been done, you would add \$1,500 to your estimate?

A. Yes, sir. Q. What price do you figure the brick at?

A. \$9 a thousand. Q. In the walls?

A. In the walls.

Q. That is a very low figure, isn't it?
A. Well, that is what I figure work at now.

Q. You are figuring it then at the present depressed prices?

A. Yes, sir.

Q. How would you figure that two years ago?

A. Well, about the same, that class of work—a fair price.

Q. Do you think you included everything that there is there?

A. Yes, I think I did as near as I could get it.

1803 Q. You would be willing to take the contract, would you?

A. Yes, sir.

Q. And replace the mason-work at that figure?

A. Yes, sir.

Q. Then that would make for you, adding the \$1,500, a little over \$28,000 for the mason-work alone of that plant?

A. Yes, sir.

Q. Did you figure any stone capping?

A. Only on the office.

Q. Isn't there any stone used in the mill?

A. I didn't notice any on any building except the office building.

Q. Then what you endeavored to do was to see what you could put up a duplicate of that work -, just as it is.

A. Yes, sir.

Q. Did you figure the foundation walls of stone?

A. Yes, sir.

Q. And the retaining walls?

A. Yes, sir.

Q. You figured it, then, just as it is?

A. Yes, with that exception I made about the retaining walls. Q. What did you allow for the stone-work?

A. 20 cents a cubic foot; that is, \$3.20 a perch, and 25 cents a cubic foot for the retaining wall, which was to be laid with Portland cement.

Q. In the mason-work or brick-work, as it is called, do you figure anything for sewers?

A. No, I didn't estimate anything for that.

Q. That is entirely separate?

A. Yes, I haven't got that.

Q. Then this simply covers the walls of the building, the brick and stone work of the walls?

A. Yes, sir.

Direct examination:

Q. What about the retaining wall? Where is that?

A. That is the retaining wall of the yard.

Q. Between the Michigan Central and Backus?

A. Yes, sir.

Q. Do you know whether that was built by the Michigan Central or Backus?

A. No, sir.

Q. You reduced the width there to four feet on what ground? A. Well, I called it four feet because I thought that was neces-

sary. Mr. Backus said it was six.

Q. Did he tell you that the Michigan Central built it?

A. No, sir, he didn't say who built it.

Q. But, as a builder, would you say that four feet was enough? A. Yes, sir. I think if it was made of that class of cement, Portland cement.

Q. How long is that wall?

A. 172 feet, I think.

Q. And it runs from Fort street?

A. Yes, sir.

Q. Along the line of the Michigan Central property?

A. Yes, sir.

Q. So as to hold the land up there?

A. Yes, sir.

Q. You don't know who did build it?

A. No, sir.

Q. And if you figure that wall two feet wider, as Mr. Backus says, you would add \$1,500?

A. Yes, sir.

Q. Otherwise your figures are correct, duplicating it just 1805 as it is?

A. Yes, sir.

Recess until 2 p. m.

2 o'clock P. M.

CHARLES M. HEALD, after being duly sworn on behalf of the plaintiff, testified as follows:

Examined by Mr. BAKER:

Q. Where do you reside? A. Grand Rapids, Michigan. Q. What is your occupation?

A. General manager of the Detroit, Lansing & Northern road.

Q. Of any other road?

A. Of the Chicago & West Michigan; vice-president of the Fort Street Union Depot Company.

Q. The Detroit, Lansing & Northern railroad runs from this city

to Grand Rapids on another line up to Howard City?

A. Yes, sir.

Q. Did your road—that is, the Detroit, Lansing & Northern formerly own a strip of land just this side of the River Street crossing; that line from River street through the yard of the Michigan Central Company to the river?

A. Yes, sir.

Q. How wide was that parcel of land?

A. 160 feet on the water and running back equal width through to River street.

Q. Will you state the facts and circumstances connected with the sale of that property to the Michigan Central Railroad Company;

how it came about and how the price was fixed? State a history of your controversy over that property. That would, 1806perhaps, be the better way.

A. Well, in 1887 the Grand Rapids, Lansing & Detroit railroad, a corporation formed for the building of a road from Grand Ledge into Grand Rapids, a continuation—

Mr. ATKINSON: I would like to interpose an objection to this tes-

timony as incompetent and immaterial.

Mr. BAKER: This was drawn out, if the court please, by the crossexamination of Mr. Joy. Mr. Dickinson wanted a witness who knew the facts in regard to it.

The COURT: I think I will admit the testimony.

Exception for the defendant.

A. (Continuing:) I must go back, necessarily, a little bit in my testimony in order to show the cause for the sale of this strip of land—

Mr. Dickinson: Let me ask you right here: When did you come here?

A. On the first of March, 1890.

Q. Then you were not here in 1887?

A. No, sir.

Q. Are you going back of the time you came here?

A. Yes, sir, the reason I do that is simply to show the condition of affairs at the time I took hold.

Objected to.

The Court: You will have to confine yourself to your own per-

sonal knowledge.

A. I purpose doing that. I simply want to mention in advance the situation I found, not to state why that was the condition of things, but to state what I found at the time I took hold. As I say in 1877 this road was built. The Michigan Central claimed it was a violation of the contract between the Detroit, Lansing & Northern and that road, and for that reason declined to further accept the rental which the Detroit, Lansing & Northern road had been paying the Michigan Central road for the use of its terminals at that time.

1807 Q. What had the rent been?

Objected to as immaterial and incompetent.

Mr. BAKER: It is a part of this same subject, if the court please.

Mr. Dickinson: We insist upon the objection.

The COURT: How do you claim that is material?

Mr. Baker: What we desire to show is that they got into a controversy about this rental, and that there was a settlement of the controversy. I want to show how they differed in regard to the rent. It will all appear to be competent as soon as he goes on and states the facts in regard to it. And it was all settled in one transaction.

WITNESS: I may state here that the sale of this piece of property was not an out-and-out sale of property, but it was merely put in as a part of a general settlement of old accounts between the two roads. That is the reason I wanted to go back a little bit.

Q. Will you state what that controversy was, and how you settled it?

Mr. Dickinson: That we object to as incompetent and immaterial.

Mr. Baker: As bearing on the value or the price that was paid for it.

The COURT: I think I will admit the testimony.

Exception for the defendant.

A. (Continuing:) The Michigan Central objecting to the building of this connection between Grand Ledge and Grand Rapids raised the rental from \$10,000 to \$40,000 per annum. The Detroit, Lan-

sing & Northern took exception to that, and continued to pay on the basis of \$10,000. The Michigan Central claiming \$40,000, only credited the payments on account. That was the condition of affairs when I took hold.

Q. How did you finally adjust it?

A. When I took hold I was notified shortly after that by the Michigan Central that we must either pay the \$40,000 rental

or must leave there. About the same time or shortly afterwards I ascertained that the D., L. & N. Company owned this strip of land which ran from the river back to River street, right straight through their yards, and I notified the Michigan Central people they would either have to pay a rental for the use of that land or they would have to discontinue the use of it.

O. It ran right across their tracks?

A. It ran right straight across their tracks; it was a strip 160 feet wide, for which the D., L. & N. road never received any compensation whatever. That led to a number of conversations and a good deal of correspondence between the two roads, and it was finally adjusted, the rental having accrued, on the basis of \$40,000 for three years and a half, up to the first of March, 1891. On that date a settlement was made. In that settlement this strip of land 160 feet wide was put in at a valuation of \$80,000.

Q. What was the rent figured at?

Objected to as incompetent and immaterial.

Mr. BAKER: I desire to show they figured the rent at \$40,000.

Mr. Atkinson: It will open up an issue whether the Michigan Central had a lawful claim or an unlawful claim of \$40,000. It seems to me that is an issue we cannot try here.

Objection overruled. Exception for the defendant.

Q. State at what amount the rent was figured at, please? In fixing up your account, I understand you allowed \$80,000, in the settlement, for the land?

A. The Michigan Central had the D., L. & N. charged for three years and a half on the basis of \$40,000; that was \$160,000 in round figures. As against that they offered to take in part payment

1809 this strip of land and another piece of land which the D., L. & N. road owned in Detroit in part payment, and the balance was paid in cash.

Q. So the Detroit, Lansing & Northern had to make a large pay-

ment to them?

A. They made a payment of \$25,000 to them in cash, in addition to the balance of this account.

Q. What, if any, agreement was made in regard to the rent until

you could move into the union depot?

A. That was a part of the agreement under which this settlement was made; that the Michigan Central were to permit the D., L. & N. to stay there for two years from the 1st of March, 1891, at the rental which was based upon this settlement. Each item of this settlement was a part to make up the general whole.

Q. Do you know, in a general way, how long the Detroit, Lansing & Northern had been in that depot?

A. No, sir, I don't.

Q. That is, you have no personal knowledge of it?

A. No, sir, I haven't.

Q. Do you know whether or not it was customary for the Detroit. Lansing & Northern to pay a rental of \$10,000?

A. It had been for a number of years past; some ten or fifteen

years back.

Q. After you assumed the management, did you continue to pay at that rate?

A. We paid at that rate, but we were credited on account merely.

They insisted on the \$40,000.

Q. In the end it was just as you have stated?

A. On the basis of \$40,000; yes, sir.

Cross-examination.

By Mr. DICKINSON:

Q. Was the arrangement with the Michigan Central by which you paid \$10,000 in writing?

1810

A. Yes, sir. Q. Where is it?

A. It is on file.

Q. Have you it? A. Not with me.

Q. Can you get it, so we can have it in evidence?

A. Not today.

Q. Will you get it and send it in?

A. A copy will be sent here. If it is necessary to send the original I will do so.

Q. The agreement was in writing?

A. Yes, sir.

Q. Then I insist upor the original?

The Court: I think you are entitled to that Mr. Dickinson.

Mr. Dickinson: I move to strike out the testimony in reference to the conflict between the Michigan Central and the Detroit, Lan-

sing & Northern.

Mr. BAKER: I object to its being stricken out. All he has testified to is that they paid \$10,000 a year, and went on to pay it. He has not undertaken to give the contents of this written lease. If they want a copy of the lease we will be glad to furnish it at the proper time.

The COURT: I think, Mr. Baker, they are entitled to a copy of the written agreement. Unless that is furnished the testimony will be

stricken out.

By Mr. Dickinson:

Q. Are the Detroit, Lansing & Northern using this strip of land?

A. Using it merely to pass over with the trains.

Q. They were not using it independently of the Michigan Central?

Q. It is a part of the yard for which the Detroit, Lansing & Northern paid ten thousand a year?

A. Yes, sir.

1811 Q. You had no special use for this except as the tracks of the Michigan Central ran over this strip?

A. No independent use of it.

Q. And you had no use for it, as far as you know, for years before?

A. I know of nothing prior to the time I took hold.

Q. Will you please state, Mr. Heald, whether the agreement by which you say a settlement was made was in writing?

A. It was.

- Q. Where is it? A. It is on file.
- Q. Will you produce it?

A. I can do so.

Mr. Dickinson: I move to strike out the testimony, the entire testimony, may it please your honor, of this witness.

The COURT: The testimony will be stricken out unless the agree-

ment is produced.

Mr. BAKER: We will produce the agreement.

The WITNESS: The agreement will not show up the transaction. It will simply tend to corroborate my statements.

Q. But you did make the agreement in so far as the settlement between the Michigan Central and your road was concerned, in

writing.

A. The first agreement you asked for I found in effect when I took hold. That formed the basis of the rental we were at that time paying, and the furnishing of that will simply corroborate my statement. The second agreement is an agreement for the use of their premises from the first of March, 1891, to the first of March, 1893, which shows the new rental after the settlement in which this strip of land was taken as a part.

Q. You will produce that agreement?

A. Certainly I can produce that. 1812 Q. Did you in making the adjustment in figures, allot so much for this thing and so much for that-I think, to use your language—was that reduced to writing?

A. No, sir.

Q. Was it not reduced to writing in the correspondence?

A. It was reduced somewhat to writing in the shape of correspondence.

Q. So that the various items are in some writing?

A. Not exactly; they were finally settled at a conference.

Q. Between whom?

A. Between Mr. Ledyard and myself.

Q. The final adjustment was made between Mr. Ledyard and yourself?

133 - 55

A. Yes, sir.

Q. Any one else present?

A. I don't remember as there was.

- Q. Did the Michigan Central ever abate its claim for \$40,000? A. No, sir.
- Q. They insisted that it was their legal right to charge that?
 A. They did.
- Q. And your original agreement for \$10,000 was then some ten or fifteen years old, was it?

A. The date of it I don't remember, sir.

Q. Well, fifteen or twenty years?

A. I don't think it was as long as that. I cannot tell.

Q. It will show for itself when you produce it?

A. Certainly.

Q. Had the business of the Michigan Central largely increased since that?

A. It had.

1813 Q. So that they were crowded for room?

A. I presume it was increased. I don't know of my own knowledge.

Q. So that they were crowded for room, I say.

A. No necessitating the removal of our trains, not to that extent.

Q. You were not present at the previous trial of this case when they said they were so crowded for room you had to get out?

A. No, sir, I was not present.

Q. At least the business had doubled in fifteen years?

A. That I cannot answer. I don't know anything about their business.

Q. Do you know the rental value of the entry into the Michigan Central depot had increased in fifteen years?

A. I don't think that is a question I would care to answer, unless

I am required to.

Q. I am only asking you what you think. You stated you ought not to pay over \$10,000, and they insisted you ought to pay \$40,000.

A. I am perfectly willing to answer that to the extent that I thought \$40,000 was an excessive amount.

Q. But the business had largely increased in the yard of the Michigan Central?

A. I don't know anything about the Michigan Central. I can

only answer for the D., L. & N.

Q. When any one has anything to rent they usually charge what it is worth to them?

Mr. Baker: Not if they have made an agreement to take less. Q. But if the agreement had expired it makes a difference. They had a right to charge more if they thought it was worth more. You never proposed to refer it to see what was a proper rental?

A. There was no action taken in that direction.

Q. The Michigan steadily maintained that it was worth \$40,000, and they would have to charge it, didn't they?

A. Yes, sir.

Q. Did Mr. Ledyard ever say in the conference that \$80,000 was too much for the piece?

A. I don't remember that he ever made that remark. Q. That was your proposal to charge him that?

A. No, sir.

Q. Who did suggest it that the price fixed for the piece should be \$80,000?

A. I don't remember what the original price fixed for the piece was. That was done in a conference between Mr. Ledyard and myself, but just what the original price was, I don't remember.

Q. I am not asking you for the original price.

A. I mean to say the original figures suggested. It is impossible to remember that.

Q. What did the D., L. & N. pay for that strip of land?

A. I don't remember. Q. The books show?

A. I presume they would.

Q. Will you kindly send that in?

A. I will furnish whatever is required.
Q. Do you know who you bought it of?

A. No, sir.

Q. Do you know anything of the circumstances under which it was bought?

A. No, sir. It was bought a good many years ago.

Q. After you went out of there, you had already made your arrangements when you had your talk with Mr. Ledyard on the part of the union depot company?

A. Yes, sir.

Q. And were going into the union depot company?

A. Yes, sir.

1815 Q. That was before you had settled this matter you had arranged to go?

A. Yes, sir.

Q. After leaving the Michigan Central you had no use for this strip?

A. Yes, we could have made excellent use of it on the water front.

Q. Did you have any way to get at it except over the Michigan

Central tracks?

A. No, sir. We would not have used it in connection with the D., L. & N. That would have been impractical. We could have used it the same as any other person for warehouse purposes.

Q. Not in connection with the D., L. & N.?

A. No, sir.

Redirect examination.

By Mr. BAKER:

Q. At the time you came here, was your road and the Michigan Central doing business together under this agreement you refer to? A. Yes, sir.

Q. With a fixed rent at \$10,000? A. Yes, sir.

- Q. Although it may have been dated some years before, it was still extant?
 - A. Yes, sir. The agreement, I think, was dated in 1874.

Mr. ATKINSON: That is objected to as incompetent.

Q. I don't care about the terms of the agreement. I want to know whether, as a matter of fact, you were still operating under it when you came?

A. Yes, sir.

Mr. ATKINSON: All that Mr. Heald can state is that he found the agreement in the files of his office, and he also found a notice from the Michigan Central that they must pay \$40,000 instead of \$10,000.

The Court: The question is under what agreement they were

operating at the time he went there.

The WITNESS: I beg your pardon. I did not find the notice that we were to pay \$40,000. That was given subsequently.

(After leaving the stand the witness states that it is a rule of his office not to allow an original paper - go out of his office, and it is agreed by counsel that a certified copy may be used in place of the original agreement.)

(The further consideration of this case was then adjourned to next

day at 9.30 a. m.)

SEPTEMBER 28, '93-9.30 a. m.

GEORGE F. SHERWOOD, sworn on behalf of petitioner.

Examined by Mr. BAKER:

Q. Where do you live? A. Jackson, Mich.

Q. What is your business?

A. Agent for the Allen & Curtis Dust-arrester Company, of Saginaw.

Q. What sort of dust-collector do they sell?

A. They sell a metallic dust-arrester, a centrifugal machine. Q. How long have you been connected with that company?

A. A little over five years?

Q. What do your duties consist of?

A. Making drawings of factories, such as planing mills and furniture factories; in fact, every factory where they make shavings and dust from wood.

1817 Q. Does your work relate to wood-working establishments? A. Yes, sir.

Q. Exclusively?

A. Why, not entirely so. We sell to shoe factories. Q. Do you have anything to do with flouring mills?

A. Nothing at all, sir.

Q. Were you connected with any manufacturing institution some years ago before you went with the Allen & Curtis Company? A. Yes, sir, with the Smith Purifier Company, at Jackson. Q. That was a large wood-working institution?

A. Flour-mill machinery.

Q. They manufactured flour-mill machinery?

A. Yes, sir.

Q. And it was a wood-working establishment?

A. Well, we had wood-working machines there, of course.

Q. You did not manufacture flour there?

A. No. sir.

Q. Will you state whether or not you travel throughout the United States in the introduction of this metallic dust-arrester?

A. Why, I have traveled as far as California, Tacoma, Seattle, Lower California, Kentucky, West Virginia, Ohio, Michigan, Vir-Q. Then you travel pretty much all over the United States?

A. Yes, sir. ginia, North and South Carolina, Iowa and Wisconsin.

Q. How far east have you gone? A. As far as Hampton Roads.

Q. Have you gone to the State of New York or Massachusetts?

A. No, sir. 1818

Q. Are you, then, generally familiar with the dust-arrester business and with the state of the art?

A. I think so.

Q. Do you know anything about the former dust-arresters that were in use, the burlap and the cheese-cloth dust-arresters?

A. Why, when I was superintendent of the Smith Purifier Company at Jackson we put in a burlap set of V-shaped machines for handling our dust before this machine was known.

Q. Before what machine was known?

A. Any of these metallic centrifugal machines.

Q. Before they were invented?

A. Yes, sir.

Q. They used that burlap dust-arrester there some years?

A. Used it about a year and a half.

Q. What became of it then?

A. Well, we burned it up and blew it up; burned it up twice and exploded it.

Q. What did the company do then?

A. After I left they put in a centrifugal machine made by Allen & Curtis.

Q. They put in this new invention?

A. Yes, sir.

Q. Will you state what, if any difference, there is between the

Vortex and the Allen & Curtis?

A. It can be nothing more than a matter of construction, a difference of construction, that is all. The system is the same, the separation is made the same, by centrifugal action; the main principle is the same-in fact, of all these metallic machines.

Q. Do you know whether these metallic dust-arresters acting centrifugally are in general use in the United States at the present time or not?

A. They certainly are.

Q. Will you state whether the burlap and cheese-cloth dust-arresters are in general use?

A. I have yet to see the second one, or, I might say, the third one.

Q. I suppose you have some competitors in the business?

A. Why, yes.

Q. Will you state whether there is any firm at the present time in the United States competing in the dust-arrester business with the burlap or cheese-cloth?

A. I never have met any such firm. Or even heard of them.

Q. Or an agent of any such firm?

A. No, sir.

Q. So they are not in the trade at the present time?

A. I should not consider them so.

Q. Have you been down to look at the Backus property?

A. I went down there this morning.

Q. From your knowledge of this art, would it be practicable and feasable to put one of these metallic dust-arresters on those premises?

A. Yes, sir, decidedly so.

Q. Will you state from your knowledge of the art whether or not it would be an improvement to that plant.

A. It certainly would be an improvement as a protection against

fire, back pressure, etc.

Q. What is there about that back pressure. Can you explain that briefly to the jury?

A. In our machines, I would not consider any more back press ure—in our machines or any centrifugal machines in fact—1820 more than the friction of the pipes, the discharge from the fan to the machine and the twirling of it in the machine. It makes a centrifugal motion.

Q. How would the back pressure be with one of these machines

as compared with the burlap or cheese-cloth?

A. Whereas our machine will work clear all the time, it will work for ten years, as long as the machine lasts, but the burlap machine will always clog up. It did with us when I used them—gain in pressure.

Q. From your knowledge of the art what is your opinion as to whether it would require more power to run a metallic centrifugalacting dust-arrester upon these premises than the one that is now

in use?

A. Well, you could build your burlap machines large enough to overcome the back pressure, without a doubt, at a cost of three or four times as much as a metallic machine would cost. Take them on the same area, why it would be decidedly in our favor.

Q. Well, is there a back pressure just from forcing the air through

the pipes?

A. Why, I would consider it so by the friction, there certainly is friction, and where there is friction there must be back pressure.

Q. So that there is some back pressure that is incident to the machines?

A. We consider it very little.

Q. Very little with the centrifugal? A. Yes, it is relieved very quickly.

Q. Have you put in any machines in Detroit?

A. Yes, sir.

Q. Can you name any of them?

A. I sold one to the Murphy & Wasey chair factory.

Q. Out here at the junction?

A. Yes. And the house of correction.

Q. The prison here?
A. Yes, and to the shoe factory of A. C. McGraw. The 1821 Dwight Lumber Co.

Q. Is that the lumber company out on the Michigan Central?

A. Yes, sir, and also to a novelty wood company.

Q. From your knowledge of the art would it be feasable to continue the use of the burlap down there and to put in a construction on the top of that building all around it in any away, so as to avoid sparks from the outside?

A. Why, I would hardly think so before seeing it, but after seeing it this morning and the area they have, and so little dust escape, I should think it could be very nicely done by enclosing it and carry-

ing the pipes down half way or clear to the ground.

Q. How would you do that?

A. Just enclose those ventilators there with iron or anything that the insurance company will agree to and carry pipes delivering, down from those.

Q. Carry the pipe so that the air would go downwards?

A. Yes, sir.

Q. That could be done at a small expense, could it not?

A. Well, it would cost considerable in the size of that machine. I could not say how much, but perhaps four or five hundred dollars, something of that sort.

Cross-examination.

By Col. ATKINSON:

Q. What firm do you say you represent?

A. Allen & Curtis.

Q. And their business is furnishing dust-arresters?

A. Yes, sir.

Q. Well, your idea is that to overcome the dangers of the 1822 railroad there ought to be a change in the construction of this property down here, is it?

A. Why, it would be much better.

Q. But some change would have to be made?

A. I would think so; yes, sir. If it were mine I would make it

Q. So as to make it reasonably safe?

A. Certainly.

Q. What is the chief danger from fire now?

A. Well, you know there is always a matter of fine particles of dust coming out through those ventilators. Cheese cloth or any. thing else put in that form with the pressure at the back of it will certainly discharge some fine particles of dust in the air, and a spark coming in contact with that might make you trouble.

Q. Your idea is that from this dust-arrester now in use there is a fine dust escape which is liable to be set fire to from the railroad?

A. To a certain extent there is a danger to it; the same as from the smokestack.

Q. That fine dust, I suppose, is somewhat explosive? A. Yes, under pressure.

Q. And that would be the danger, I presume, of sparks igniting or exploding it as it escapes?

A. Yes, sir.

Q. So that the only means, then, of meeting the additional risk would be to put in your dust-arrester?

A. Any centrifugal dust-arrester. Of course I would say mine,

naturally. We think ours is the best.

Q. Of course you wouldn't sell it unless it was the best?

A. We think we own it all, and we are trying to make everybody else believe so.

Q. You believe it vourself?

A. I certainly do.

Q. What would it cost to put your machine there?

A. I could tell something about that by knowing the size of the discharge pipes from each fan. I understand there are three fans going there.

Q. You cannot tell us at present what the additional cost to

Backus & Sons would be?

A. For the separators—only in that way, if I knew the size of the discharge pipes.

Q. You haven't examined it enough to tell us at present?

A. No, sir.

Q. You say there would be an increase of power required to overcome the back pressure?

A. In which way?

Q. The friction of your machine over the burlap.

A. I don't see why. We have no more discharge pipe than they have. Ours is the same every hour of the day. Our back pressure-what little we do have-is the same every hour of the day, and theirs certainly cannot be with the particles of dust held in suspense all the time; they certainly must clog those.

Q. Will you state whether more power would be required or

not?

A. I certainly don't think so.

Q. Now, is there any escape of dust from your arrester?
A. Very little indeed.

Q. Is there any?

A. On that style of factory we would not consider any.

Q. There would be no escape of dust at all?

A. Very little.

Q. How would that establishment there compare with Murphy & Wasey?

A. Murphy & Wasey's is a good deal worse factory.

Q. There is more dust over there?

A. Yes, it is very fine dust; all sandings.

Q. Do you know enough about these two establishments to 1824 say that the dust is finer that is made by Murphy & Wasey than Backus?

A. I certainly do.

Q. There is a very great escape at Murphy & Wasey's, isn't there, with your machines?

A. I have not seen them since they have been running.

Q. Have you ever been in the Backus mill when it was being run?

A. I never have been in the Backus mill.

Q. How do you know what dust they make? A. Well, I think I am pretty well informed in the business of any kind of dust-arresters.

Q. Yes, but what is your information as to what dust is made at

Backus'?

A. No more than I would get from a long experience in such things; by looking from the outside and seeing the machines run and what machines a factory of that style would have to run.

Q. Did you ever look at the Backus establishment when it was in

full operation?

A. I don't know whether I have. I never saw it before, and it is not in full operation now.

Q. Did you ever see one just like it?

A. Yes, a thousand of them.

Q. Same kind of machines as Backus'?

A. Yes, sir.

Q. Will you tell us where there is one?

A. I have seen about every wood-working machine there is made in the United States.

Q. Tell us where there is one just like Backus'?

A. O, I could not tell you exactly.

Q. Where is the one nearest like it? A. I would consider my large planing mill, sash, door and blind factory.

Q. Have you examined the particular machinery? 1825

A. No, sir.

Q. That is used in the Backus mill?

A. No, sir.

Q. Do you know what the machines are? A. I don't, what they have in that factory.

Q. Have you examined the dust that is made there?

A. No, sir.

Q. Yet you feel competent to swear to its fineness?

A. I feel competent to swear to there being a vast difference between Murphy & Wasey's and that place.

Q. You have not examined Murphy & Wasey's since you put in your own machines?

A. No, sir.

Q. Don't know how much dust is escaping?

A. I don't.

Q. There is an escape of very fine dust in your machine?

A. I think there is in all centrifugal machines, no more in ours than any others.

Q. Isn't there a hole in the top?
A. Yes, sir.

Q. Out of that doesn't the fine dust come up, like clouds?

A. At times it may, not always.

Q. What is to prevent a fire if a spark gets in that?

A. A spark could not get inside of that with the pressure on it, that goes out of that air chamber.

Q. The pressure would be such that it would keep the spark away

from the fine dust?

A. Yes, you could not get a brick-bat in there.

Q. If it came in contact with sparks it would explode, wouldn't it, that fine dust?

A. No, sir, not ventilated with the air in that shape?

Q. Why? A. Why, I don't see how it could possibly. It would have 1826 to be under pressure to explode it.

Q. If the fire ignited it, wouldn't that explode it?

A. You are not confined there at all, you see, and the pressure is so great there you would get no chance to fire it, it could not run back.

Q. There is a great pressure in your dust-arrester, throwing the fine dust out into the open air. Does that dust fall down on anything afterward or keep going up?

A. We do not have any such trouble with it, its settling on the

roof.

Q. Does it come down and settle on everything around?

A. We do not have any such occasions, we do not have any grumbling about such things.

Q. Do you mean by that you never have seen anything going

up, that nothing escapes?

A. What little dust gets away is scattered around in the air somewhere.

Q. I suppose it goes up to heaven?

A. Well, I don't know particularly about that; there is never enough of it in any machine I ever saw, of anybody's make.

Q. What is your honest opinion, does it remain in the air or

come down somewhere?

A. We do not pretend to make enough of it to bother us.

Q. There is not enough to come back to earth?

A. We are not bothered with it.

Q. Do you mean now to tell us that none escapes, or do you mean that some escapes and you do not think it ever comes back to the earth?

A. It would be impossible to say that of a machine, that none escapes.

Q. Does that come back and settle down?

A. You would naturally think so. 1827

Q. Isn't it explosive?

A. Not in that condition; no, sir.

Q. After it comes back and settles down on the roof, say that a spark touches it?

A. If it should settle on the roof it would cause a fire quick

enough, but not explode.

Q. I suppose in all dust-arresters, the dust is brought back to the earth, isn't it, somewhere?

A. We do not pretend to have any to bring back. We deliver it

in the bin or boiler. Q. What do you arrest? Isn't it dust that is arrested by this machine?

A. That is dropped below into the shavings bin.

Q. Where?

A. Into the shavings bin or boiler; just as you see fit. Q. After it is back in the shavings bin, is it explosive?

A. Why, I suppose it might be under certain circumstances, but we do not consider it so.

Q. Under what circumstances would you consider it explosive?

A. With the bin made perfectly tight and perhaps the machine choked up and not working properly it may give a little back pressure into the bin, and in that case it is explosive?

Q. After it goes back into the bin, isn't it explosive?

A. I would not consider it so; I would not think so. Not in the way we ventilate it.

Q. Have you ever had any practical management of a planing mill?

A. Yes, sir.

Q. Where?

A. At the Smith Purifier Company.

Q. The Smith Purifier Company was not a planing mill, was it?

A. Building flour-mill machinery at Jackson.

1828 Q. Well, that was a machine shop, but not a planing mill? A. And it is a large planing mill, perhaps as many machines as you have in this factory.

Q. The George T. Smith Middlings Purifier Company factory you

would class as a planing mill?

A. Yes, sir.

Q. Did you have charge of the planing mill?

A. Had charge of the whole factory.

Q. Now, you say you used burlap there at first, and that you burned that out and once blew it up?

A. Burned up three times—blown up the third time.

Q. What was the cause of the explosion?

A. One of our men went in there with a broken globe, accident-

ally raised the door and some of the fine dust came down, ignited from the globe and exploded.

Q. Took a globe in? A. A broken globe lamp.

Q. It exploded, then, because it came in contact with fire of some kind?

A. Yes, sir.

Q. Wouldn't that dust explode no matter what the arrester was if it came in contact with fire?

A. I don't think the arrester would have much to do with it. When you get it down in the bin, if the bin was closed up tight. under certain circumstances you might-

Q. The arrester had nothing to do particularly with the explo-

sive quality of the dust?

A. Why, no.

Q. Is it on account of the machine that this explosion occurred. or would it explode regardless of what machine was being used if it came in contact with fire?

A. I have yet to hear of an explosion where they had a machine

and no tight bins.

Q. Then you think if this dust had been arrested by a metallic instead of a burlap machine, when it came in contact with the blaze of the lamp, it would not explode?

A. It would have been all ventilated, and you would not have

had any tight bin there to explode.

Q. Then one of the merits of your dust-arrester is that it keeps air in the bin? A. No, sir, we have no air in the bin. We would leave the doors

all wide open. Q. What effect has the machine on the dust after it comes back

and settles into the bin? Has it any?

A. We take the back pressure off to relieve any chance of fire or anything of that sort, so that we can ventilate the bin. If you do not ventilate the bin, of course you get a tight chamber there, and that is explosive, the same as gunpowder.

Q. Then one merit of your machine is that it ventilates the

bin?

A. Well, you can ventilate the bin by having our machine.

Q. What I want to get at is this-

A. Or any other machine that takes back pressure off.

Q. If I understand it right, there is a bin down there for the dust ; after it comes down and after it has been stopped and falls to the Now, it seems to me that it would make no difference what machine stops it, it would be just the same dust after it came down into the bin, and it would be just as explosive if stopped by a metallic arrangement-

A. Oh, no.

Q. As it would if stopped by a burlap after it came down into the bin?

Mr. Baker: Just explain that.

Q. Then you mean to say that because it was stopped by your

metallic machine it would not explode after it has come back to the bin. Please tell us so if you do not, and relieve us of 1830

the anxiety?

A. That is not the idea exactly, at all. If your burlap machine will relieve the air from your bin, relieve the air so that you can ventilate your bin, let your air escape freely without carrying the dust away that you have-without feeding-the same machine as we have, so as to relieve the pressure of the bin, it would stop explosions.

Q. Then it is this exhaust of the air in the top of your machine

that creates the safety in the bin?

A. Why, it relieves the fan of the back pressure you would have

in the bin, if it were not for that.

Q. Do you recollect the explosion at Lee, Hollands & Company's at Buffalo? A. No, sir, I never traveled east and I don't know anything about

that.

Q. Buffalo is not exactly east. A. Well, it is further than my territory has ever been. Q. It is where the president went when he went west?

A. It is out of my territory.

Q. Your judgment after looking this property over, as I understand you, is that this railroad there, or because of its being there, there is a danger of fire which could be lessened somewhat by changing the dust-arrester?

A. There is no question about it in my mind.

Q. What danger do you find from fire there?
A. Why, you certainly have air coming out of your bal-oons.
Q. What is the danger of fire?

Mr. BAKER: He is trying to tell you.

Q. I understand that there is combustible material there that will burn?

A. Yes, that is the idea.

Q. There is danger of fire coming from what source?

A. There is danger of it coming from your smokestack, the 1831 same as there is always to any mill or place that is alongside of the track; it would be hard to get away from that fact.

Q. Danger from the railroad?

A. There is no question but what there is some danger there, yes, sir.

Q. Not much from the railroad, is there? Isn't it almost as good as a fire department? Do you mean there would be sparks from the engine or anything of that sort?

A. You would have the same chance of a spark from there as you would from anywhere else, of setting fire to anything in that

line, wood-perishable by fire.

Q. You never heard of a railroad setting fire to anything next it? A. I have occasionally, that is, their claiming they set fire to buildings and one thing and another, dry fields and hay and so forth. They have made those claims; whether they substantiated them or not I don't know.

Q. How often do you think this buriap dust-arrested of Backus' would clog up and have to be cleaned out?

A. That would be hard to tell without seeing it in operation.

Q. That is one of the objections to it?

A. That would be an objection; that was our objection. There is one thing I would like to say there, that there is no question but what Backus has a very large machine there with plenty of area which will last him perhaps long enough until he stops, to clean it, He would not have to claim it until he stops.

Q. As he has it constructed it is very large so that it would avoid much more trouble than a small one covering the same area which

yours would cover?

A. Figuring the same as ours would cover, yes, the same area. Q. How often in your judgment would this dust-arrester

of Backus' require cleaning?

A. That would be impossible for me to state without seeing I don't know what the area of it is.

Q. That is the objection to burlap, that it requires cleaning? A. That is one of the severe objections, and the cost is another.

Q. It is more expensive to construct, to begin with?

A. O, yes, and to maintain.

Q. And then it clogs up so that it has to be cleaned often?

A. Yes, that has been my experience.

Q. It is dangerous when it is clogged, is it?

A. It is when it clogs, because it comes back to the old theory of back pressure again.

Q. You cannot give us any idea of how often this machine would

clog up?
A. This special machine, no, sir.

Q. Would you be willing to swear that it requires cleaning once

a vear?

A. I would not say anything about it. I don't know on what principle it is built, as far as the area is concerned. It is a matter of area with this machine with me, it is a very large machine.

Q. You never have seen a machine like this, as I understand you,

in operation?

A. We built one there at the Smith Purifier Company's like it, made of burlap.

Q. That was cheese cloth?

A. Burlap.

Q. Who built it?

A. We built it ourselves.

Q. Had you had any experience in building them?

1833 A. We built it after the plans of Kuche-put in the shavings and dust-

Q. You never saw one like Backus' anywhere?

A. Yes, the same principle as Backus'. I saw the same principle, as near as I can tell. They are V-shaped balloons, as I understand it.

Q. The same principle, but as to the construction?

A. There may be a difference in the cloth, or a difference in something of that sort, but the shape of the machine is the same.

Q. Now, in the way in which the air rises in the two machines,

they are different, are they not?

A. All we do, saw a slot in the floor between each V-shaped balloon.

Q. How wide were they?

A. The slot-I should say the machine was about a foot to sixteen inches, and the slot about two-thirds that size in width; say ten inches, by the whole width of the machine.

Q. Do you know how it is in the Backus machine?

A. I do not, of course. I have not looked at this special machine.

Q. Have you ever been in Mitchell & Roland's, of Toledo?

A. No, sir.

Q. So that you have never seen a Backus dust-arrester in operation?

A. Only the one we built there, that was not built by Backus.

No, sir, I never have.

- Q. One built on the plan on which his is built—that is what you mean?
 - A. Exactly like his. I never have. Q. Have you ever been in Cadillac?

A. Yes, sir.

Q. Do you know Comer & Son?

A. I know of the people. 1834

Q. Did you ever look at their establishment?

A. I did not.

Q. You say you have not made any estimate of the cost to say what it would cost these people to change their property?

A. Well, it would mean something else besides the arresters,

you understand.

Q. About how many dust-arresters of that kind would you have to put in there?

A. You could put it all into one, or into four or five, if you

pleased.

Q. You could make one large enough?

A. Yes, but you would have to raise your bin in order to get the same storage room, if that is any object.

Q. You would have to increase the size of the building?

A. Yes, sir.

Q. And you would increase it by raising it higher?

A. Whichever way would be the best.

Q. Would it have to be enlarged on the earth? A. No, sir.

Q. Did you sell Mr. Widman, of this city, his machine?

A. No, sir, unless that is the—that is not the novelty works, is it? I don't remember the name of the novelty works.

Q. Picture-frame factory.

A. Where is it situated, what part of the city?

Q. Up in the northeast part of the city.

A. No, sir.

Q. You have five machines, as I understand, in operation here in Detroit?

A. We have more than that, but this is what I have sold myself. We have two at Murphy & Wasey's, one at the house of correction, two at the Dwight Lumber Company, and the novelty works, and two at the McGraw shoe factory, that I know of.

Q. What ventilators are these that you speak of, where a pipe

could be put in to carry the air to the earth?

A. Why, it would be inclosing the extra building you have on top of the shavings bin further, if you want to make that system safer than it is now.

Q. There are ventilators there now, are there?

A. Yes, sir. Q. What is the object of them?

A. To let the air out, I suppose. You would not want to confine it in there.

Q. To let the air out or in, which?

A. The air out.

Q. How does it get in?

A. Gets in, I should judge, from the under side where you have the fans, under the V-shaped balloons.

Q. It is blown in and goes out through the ventilators?

A. Yes, sir.

Q. Your plan would be to carry it down to the earth by pipes? A. Oh, no—you mean to carry the air?

Q. Yes.

A. I should think that would do. There may be better plans; I have not thought of it enough to say how you would protect that system.

Q. Have you ever seen anything constructed on that plan?

A. Not as large as that, with this principle.

Q. With pipes to carry from the ventilators down to the earth? A. No, sir, it is just a thought of getting rid of the air without having it come up.

Q. Do you know why the slats are put on both sides there? 1836 A. I should judge for ventilating, letting the air out freely.

Q. Is there any advantage of having them on both sides; couldn't they be ventilated from one side?

A. They could, but I would consider it better from both sides.

Q. So far as your own experience goes, you never have come across a Backus dust-arrester then, except this one.

A. No, sir, not in use for that purpose-or any other.

Q. In these circulars in advertising, you call especial attention to the fact that you have not any burlap in connection with your machine, don't you?

A. I don't know that I ever saw it on our circulars. It might have been in the old regime, on first starting into the business.

Q. Do you mean to leave us to understand that you are so well acquainted with the dust-arresters of the country that you know that the Backus dust-arresters are not used to any considerable extent?

A. To this extent, that I never met any one selling them; I never heard of one being put in or figuring against any one putting one in.

Q. By that do you want us to understand that they are not used? A. I should not consider they are in use at all for this purpose; I mean for shavings and dust.

Q. Do you know C. R. & J. C. Wilson, of Detroit, carriage manu-

facturers? A. I think I have had a call there or something of that sort. don't know now; no, sir.

Q. Do you know what kind they are using?

A. No, sir.

Q. Do you know the Clough & Warren piano factory?

A. No. sir.

Q. That is quite a large institution, isn't it?

A. I could not tell you anything about it. You under-1837 stand Detroit is not my territory.

Q. You only know, then, of your own territory.

A. My territory covers two-thirds of the United States at different

times in the five years I have been in their employ.

Q. Now, don't be modest about it, but tell us whether you are willing to swear that no dust-arresters except what you have seen in that territory are used?

A. Oh, that would be very foolish to do anything of the kind.

Q. It seems so.

A. That would be very foolish.

Q. About all you know is where you have sold the machines vourself?

A. We have six other men and I know of their experience about sales; we meet together very often.

Q. Do you sell in Chicago yourself? A. No, sir. I have sold in Chicago.

Q. Do you know Palmer & Fuller, of Chicago, a sash and door

A. No, sir; I know very few firms there. There would be no use of calling my attention to concerns in Chicago.

Q. Do you know the Newall Piano Co.?

A. No, sir.

Q. Do you know Palmer & Fuller by reputation?

A. No, sir; I have had very little experience with Chicago.

Q. You do not do any investigating, then, do you, going through and seeing what dust-arresters are in the mills where you have no business transactions?

A. I do in everything where shavings and sawdust are handled, or anything in that line that we have a right to sell them-if I see anything that looks like a machine built on our plan.

Q. Is Detroit in your territory? 1838

A. No, sir.

Q. Did you ever investigate the Backus mill before you were asked to go and do so as a witness?

135 - 55

A. No, sir; I hav- not investigated it now. I stood on the side. walk and looked at it, that is about all.

Q. What part of Michigan is in your territory?

A. No part. They give me a little bit of Michigan. I have sold in Michigan up as far as Marquette, when they think I ought to come back. It is just a matter of giving me a little work when I am home for a week.

Q. Any of your dust-arresters thrown out that you know of and

replaced by others?

A. By other machines? I could not tell you of any. We have had machines taken out for being too small. I have taken them out myself.

Q. And other kinds put in?

A. No, sir; not to my knowledge. I have sold a great many larger machines and taken out small ones.

Q. Do you know the Smith & Huyett Manufacturing Co.?

Q. Haven't they had to replace several of your dust-arresters? A. I could not tell you anything about that. It would be really surprising if they had not.

Q. Haven't they replaced it by another machine?

A. I could not tell you anything about it.

- Q. So that so far as you know, then, your machine has always worked to the entire satisfaction-
- A. Oh, no, sir; not always. We have had trouble with our machines the same as anybody else has.

Q. Just the same as the others?

A. Well, we have had trouble with them.

1839 Q. You say in principle they are the same as the Vortex? A. All those principles are the same; in all metallic machines the principle is the same.

Q. All practically the same.

A. I say all of them-about all of them.

Q. Are the shavings ever thrown out through the top?

A. Yes, when they get clogged up or anything goes wrong with the inside of them.

Q. They never clog, do they? A. Oh, occasionally.

Q. Then they throw the shavings right out through the top?
A. They will throw the shavings, yes, sir, occasionally; any machine will.

Q. There would be danger of fire if they came in contact with sparks, I suppose?

A. Why, about as much as there would of anything else of that

kind, any light material.

Q. Don't they throw when the door is opened below sometimes, when they are not clogged up, when you open the door?

A. To the bin?

Q. Yes.

A. That would have no effect on our machines or any other centrifugal I ever saw.

Q. No effect at all?

A. I would not consider it so; I do not see how it could.

Q. You never have been at Widman's, as I understand you, the picture-frame factory?

A. No, sir, I never have. I could very soon account for its doing

so, had I seen it.

Q. How?

A. Well, the machine would be too small, for one thing, 1840 and there may be some part of the inner construction of it gotten out of place.

Q. If it was too small then it would work poorly? A. Yes, clog below, and it has got to get out above.

Q. That would throw the shavings right out through the top?

A. Yes, sir.

Q. And the dust with them? A. Why everything goes with it.

Q. How often have you seen that occur?

A. Once to my knowledge I saw it occur from a machine being overloaded, putting on two more fans after figuring it for one large fan. It did so until I called there and tore it out and put in a large one-at their expense, of course; it was no fault of ours.

Redirect examination:

Q. As I understand these machines called the Backus machines, the pipes through which the shavings or sawdust come open right into the bin?

A. Why, that is the way that ours was constructed.

Q. And the air is supposed to go up through the burlap that is spread upon frames, up and down, in V shape?

A. Yes, sir.

Q. Inverted V's?

A. Yes, sir.

Q. And the result is that the bin has to be air-tight, and when the mill is in operation it is full of air?

A. Yes, sir, it is full of air.

Q. And it will fill to the corners and all around, simply because the air keeps the bin full?

A. Yes, sir.

Q. In all its corners?

A. Yes, sir.

Q. Isn't that an objection where the bin is full of air with floating dust and shavings-isn't that more explosive than where it falls down and rests upon the bottom of the bin?

A. It certainly is.

Mr. Dickinson: That is a theory.

Q. In the theory of the centrifugal machine, the air through the pipe is discharged into the machine itself, and the shavings fall into the bin from a small opening at the bottom of it?

A. Yes, sir.

Q. And the air goes out at the top?

A. Escapes at the top.

Q. So that the result is that the shavings and dust fall down in a pile and build up under the opening?

A. Yes, sir.

Q. And do not fill the corners of the room, simply because there is no way to whirl them around and shove them to the remotest part of the room?

A. They do not fall on the corners of the room, they build right

up in a pile, the same as they would drop from anything.

Q. Like a cone?

A. Yes, sir.

Q. That is what you mean when you say it would be necessary to elevate?

A. Yes, that is what I mean, so as to have the same storage ca-

pacity.

Q. Now, you have assumed in your testimony that, although you did not go through the mill, that that was a planing mill-the Backus factory?

A. Yes, sir. Q. Working in pine, ordinarily?

A. Yes, sir.

Q. The Murphy & Wasey Company is a chair factory, where they work mostly in hardwoods? 1842

A. Mostly in hardwoods and very dry woods.

Q. Thoroughly seasoned woods?

A. Yes. sir.

Q. And the dust is much finer and more difficult to handle than in an ordinary planing mill?

A. Very much so.

Recross-examination:

Q. Do you mean to say that Murphy & Wasey use more hardwood in their operations than Backus?

A. I do not mean to say anything of the kind. I can say that-

Q. That their lumber is drier than that of Backus & Sons?

A. I would naturally consider it was. We consider a chair and hub and spoke works the worst thing to handle in the country, on account of so much sandings.

Q. Did you, in making your estimate of the fineness of the dust, figure as though Backus & Sons did not use any kiln-dried hard-

wood?

A. That would not do it; they would use planers on that. use nothing very hard.

Q. Don't you think Backus & Sons use any sand wheels?

A. Oh, yes.

Q. Precisely the same kind of machinery as Murphy & Wasey?

A. No, I would not consider it as fine.

Q. You never have seen either, have you?

A. Oh, yes, I have seen all the sanding machines there are made in the country, for chairs or anything else.

Q. Have you ever been through Murphy & Wasey's?

A. Yes, I have, a half dozen times.

Q. You have never been through Backus'?

A. No. sir.

Q. But your opinion is that Backus' must be larger and 1843 the machinery larger than in Murphy & Wasey's? A. Why, naturally they would have larger machinery.

Q. And not as small machinery?

A. Not as small machinery.

Q. Do you know what goods they manufacture?

A. Why, according to what I saw about there I should say it is a planing mill, box factory and so forth.

Q. What do you include in the " and so forth "?

A. I don't know, I am sure; they might make anything that is made of wood; they could make chairs there as well as not, for all I know.

Q. Supposing they do the finest work that is done in wood-work-

ing in this country, would that change your opinion any?

A. Not a particle.

Q. The dust would still be coarser than Murphy & Wasey's?

A. As long as they are conducting a planing mill at all in connection with it, it certainly would; they would have it mixed with the shavings and the heavier planings, and lighter planings.

Q. Isn't the dust separated from the shavings and stored in a

different bin?

A. Do you mean over there?

Q. Yes, at Backus'?

A. I could not tell you anything about that.

Q. Would it under your system?

A. No, sir; they would go in together.

Q. What use would you make of the dust afterward?

A. Burn it. It makes the better fuel of the two.

- Q. You have no other plan for disposing of your dust except to destroy it by fire?
- A. We always consider it the better fuel of the two. 1844 Q. Suppose you had more than you need for fuel? A. Put it into bin. Get rid of it in any way you please.

Q. It is an article of merchandise?

A. In some cities, not all.

Q. It is worth saving? A. It is in some cities.

Q. There is a profit in it?

A. Yes, sir.

Q. Is it saved for fuel always?

A. Not that I know of. I have seen it used for bedding and packing.

Q. You did not look at the dust-room at Backus'?

A. I have not been in there at all. Q. Isn't it used for cushions?

A. It might possibly be.

Q. For making fireproof covering?

A. I could not tell you anything about that.

Q. You don't know anything about mixing it with asbestos?

A. I have seen it mixed with asbestos.

Q. Then it is an article of merchandise of considerable value?

A. I would have to be in the business to know how profitable it

was.

Q. But your dust-arrester brings it down and leaves it unseparated from the shavings?

A. Leaves it with the shavings; we generally put them right in

the boiler, eight cases out of ten, to save for fuel.

Q. While it is mixed with the shavings, of course it could not be used as an article of merchandise?

A. We put in a separate plant for that very often where 1845 we want to save the dust entirely, for nail-scouring or anything of that kind; put in a separate machine; it is no trouble to do that.

Q. Shavings are also an article of merchandise?

A. Yes, in some places.

- Q. Wouldn't they be worth a great deal less if the dust is mixed with them?
- A. I could not tell anything about that. I don't know what they use them for; they would, perhaps, in a great many things.

Q. For horse bedding would you consider them as good with the

dust in?

A. I don't know anything about horses or their bedding. I have seen the shavings used for bedding.

Q. What use would you make of the shavings with the dust

mixed?

A. After getting through with the boiler we would have to find a use for them; it is something out of my line.

Q. You don't know what use they can be put to?

A. No, sir.

Q. Have you consulted with the agent of the Vortex Company? Was he with you when you made your examination?

A. I did not make any examination, only on the outside.

Q. Was he with you?

A. Yes, he was with me this morning.
Q. Any other dust-arresters represented?

A. No, sir, I have not met any other dust-arrester man.

Q. You and the Vortex, then, are the only ones that were represented?

A. I don't know, I am sure. It is something new to me.

Q. Your company is in litigation with the Vortex Company?

A. We are.

Q. But you are making a common cause against Backus?

A. Why, no, not making any common cause against Backus. I knew nothing about your trial until last night here.

Q. How did you happen to come here?

A. I came here on the Michigan Central train last night.

Q. Just to see the city? A. No, sir, I came here-

Q. What did you come for?

A. I came here, I supposed, on a little business of selling some goods.

Q. You came down to sell goods, then?

A. That was the supposition.

Q. I thought this was not in your territory?

A. It is not my territory.

Q. You came down to sell goods?

A. Thinking I was coming to sell goods, yes, sir. Q. Did you have any one in view to sell goods to?
A. No, sir.

Q. You came down to look over the field?

A. No. sir; I didn't come down to look at the field; I came by telegram.

Q. In response to a telegram?

A. Yes, sir.

Q. From whom?

A. Miller, of the Vortex Company, or of the United States Blow Pipe Company.

Q. He telegraphed you to come down to sell some goods?

A. That was the supposition. We had had some talk here a couple of weeks ago, and some letters passed between us 1847 about selling goods.

Q. When you got here what did he want of you?

A. To look up this matter here, not knowing anything about the Backus dust-arrester. In fact, I had not heard of it for five years.

Q. So you have come here as a witness through the indirect agency of the Vortex?

A. No, nothing of the kind.

Q. They invited you down here?

A. No, sir, I didn't come down for that purpose. I don't know that I would have come for that purpose. I didn't know anything about what I did come for when I came down here, any more than some talk we had had before, but not about this.

Q. When did you get the telegram?

Q. Have you got it with you?

A. No, sir. Q. Will you tell us what it said?

A. It said, Can you come to Wayne house tonight-can you be at Wayne house tonight, expenses paid?

Q. Signed by whom?

A. P. C. Miller. Q. Did you expect to sell any goods to Miller?

A. I expected to either sell goods to Miller or for Miller, I didn't

know which one. Q. When you go out selling goods generally, are you sent word your expenses will be paid?

A. No. sir.

Q. Did you expect to sell goods for Miller-sell the Vortex?

A. I might have done so, yes, sir; I have a perfect right to do so.

Q. You are the agent of a company that is at——A. I have been, supposed to be, until the first of this Sep-1848

A. Then you are not an agent now of this company?

A. I have been out several trips for them, yes, sir; I am not off their list.

Q. Are you their agent now, or are you not?

A. Yes, I am selling their goods.

Q. Then you are not in their employ?

A. Not as a salaried man.

Q. Do you sell on commission?

A. Yes; that is, if I do sell at all. I am supposed to sell on commission for this month.

Q. You are selling their goods as well as others?

A. Just as soon sell their goods.

Q. So you are not strictly their agent; you do not owe them allegiance any more than anybody else?

A. Not at all.

Q. You thought you were coming down to sell goods when you got this telegram?

A. I did not know what I was coming for, to tell the truth.

Q. When you got here whom did you meet? A. Mr. Miller.

Q. What did Miller tell you he wanted of you?

A. He said they were having a suit over the Backus dust-collector, and of course it was something new to me; I had not heard of the Backus dust arrester in years, and I said "What for?" "Why, something about the qualities between the Backus dust-collector"and he had to explain to me what it was, what the dust-arrester was. Of course, I knew as soon as he began to talk about it-over this difference between that and the-

Mr. Dickinson: Cyclones.

A. Or the same principle as the Cyclone. They are all the Cyclone principle. My idea was to give evidence as to the difference between the two machines, which I considered the safest.

Q. He told you that he wanted you to give evidence? A. He told me I would be expected to be called on.

Q. And that is the way you happen to be here?

A. Yes, sir.

Q. And the Vortex Company, then, are paying your expenses? A. No, sir, they are not paying my expenses that I know of. There has not anybody promised to pay my expenses yet.

Q. You expect to get your expenses under this telegram?

A. I certainly would expect to.

Q. From whom?

A. I don't know, I am sure; I have not the slightest idea.

Mr. BAKER: He may not get them at all.

Q. So that you don't know that Mr. Miller in any way represented the union depot company in sending for you?

A. No, sir; I certainly do not.

Q. Did he take you to talk with anybody before you-A. No, sir; I had not talked with a man since I came here.

Q. Not even with Mr. Baker?

A. No, sir. I saw Mr. Baker about five minutes, and he asked us to be down here at half past nine.

Q. Did he talk to you about what testimony you would give? A. Not any more than introducing me, and my knowing about this machine and using it years ago.

Q. He did not know what you were going to testify about?

A. No, sir.

Q. That explains his putting you on the stand. 1850 is all.

Redirect examination:

Q. You have no interest in this litigation in any way?

A. Not the slightest.

Q. You came here at Mr. Miller's request because you were acquainted with him, and supposed he had some business with you?

A. Yes, sir.

Q. And you simply found out that you were wanted to testify in this case upon this subject?

A. Yes, on the subject of the difference between the two separators. Mr. Miller and I used to be in the same company together.

Q. How many other men travel for the Allen & Curtis Company?

A. I think we have six other men beside myself; I won't be sure. We had until the first of this month; up to that time.

Q. And Mr. Miller has been traveling for four or five years for the Vortex? A. No, I think he has been running his own business. He uses

the Vortex machines.

Q. All you endeavored to do was to simply explain the state of the art and to give your testimony in a disinterested way?

A. That is all.

Col. ATKINSON: You got an idea that this was a suit in which the merits of the Backus dust-arrester and the one you had been selling yourself were involved?

A. That is the only thing I could think of.

Q. Of course you are interested in maintaining the reputation of your own goods?

A. Why, certainly.

Mr. Baker: I have only one other witness, but he is not 1851 prepared, and I would ask that your honor let the case stand over.

136 - 55

The Court: I think I will let the matter stand over till morning. Col. ATKINSON: Well, one of the jurors, I understand, said something about wanting to go away tomorrow.

Mr. Dickinson: This matter has been suggested by me before, and I think at least the jury ought to be consulted, because they

are an independent tribunal.

The COURT: I am always quite willing, Mr. Dickinson, to conform to the wishes of the jury as long as they are reasonable, but I think I will hold this jury to the same strict lines that I would hold any other jury.

Mr. Dickinson: To that statement-

The Court: The reason I make this remark at this time is that you may have an opportunity to take an exception to the ruling.

Mr. Dickinson: Yes, and we do take an exception to the ruling and the remarks of the court. We make the claim that under the constitution of the State the jury is an independent tribunal, specially constituted, independent of any court or judge, and that that has been the construction of the constitution put upon the clause by the court of last resort, and by all other courts of the country having similar constitutional provisions.

The Court: I shall regard this jury as a common-law jury and shall control them as a court, and they will have to submit to all the orders of the court. I do not know as I can state it any more fairly or any more concisely. I want to give you the benefit of an exception. I know there is some question about it, and I will say that the jury will have to conform to the orders of this court.

Mr. Dickinson: Then your honor better direct a verdict now.

The COURT: No, sir.

1852 Mr. Dickinson: Your honor is familiar with the case, al-

though you have not heard the testimony——
The Court: That remark is entirely uncalled for, Mr. Dickinson, and must not be repeated.

The jury were then excused by the court till Monday, October 9,

Mr. BAKER: Under the circumstances, I would like your honor

to advise the jury again about talking.

The COURT: You want to understand, gentlemen of the jury, as I stated before at the beginning of the trial, that you are not to hold any conversation, either among yourselves, or permit any conversation with any outsiders, in reference to the matter here pending. You want to listen to the testimony as may be offered and as it may be admitted by the court, and the arguments of counsel. I don't know whether I shall give you any charge in this case or not. I possibly may. If I do, you want to reserve all discussion in regard to this case until after you are sent to the jury-room.

Adjourned.

Monday, October 9, 1893-2 p. m.

Mr. Baker: I produce the two agreements referred to in the testimony of Charles M. Heald, and will read them in evidence, as follows:

"Whereas, the Detroit, Lausing & Lake Michigan Railroad Company owns the following-described tract of land, to wit: The southwest corner of the Woodbridge Street farm, so called, private claims twenty-two (22) and two hundred and forty-eight (248), being one hundred and fifty feet (150) on Woodbridge street or the River road and running back the same width to the Detroit river, and also ten

(10) feet on the westerly side thereof, running from said street or road to the river, making a width of about one hundred 1853 and sixty (160) feet by about three hundred and fifty (350) feet in depth; and whereas, it has been deemed best to use the said

depot grounds in common between the Michigan Central Company and the Detroit, Lansing & Lake Michigan Railroad Company, and,

Whereas, it was absolutely necessary that this should be done in order that the Michigan Central Company should be able to use all of its grounds, and also that this company should be able to make available its own grounds, and therefore the tracks are laid all over the said tract in pursuance of a plan for the common occupancy of the said grounds, and make all the station grounds of both parties available to the greatest extent possible, and,

Whereas, also, the D., L. & L. M. R. R. Co. desire to use the track of the M. C. R. R. Co. from the point of junction of the tracks of the two companies to the common station grounds in the city of Detroit,

Now, therefore, this indenture, made and entered into by and between the D., L. & L. M. R. R. Co., of the one part, and the M. C. R. R. Co., of the other part, this sixteenth day of August, 1872,

Witnesseth, that the said party of the first part agrees that the said tract of land described above shall be included in the station grounds of the M. C. R. R. Co., to be improved and used as a portion of the same and in such a manner as will best accommodate the business of the station, but to be used by both companies as the business of both may require, and as may be expedient, and the said second party agrees that the trains of the said first party may and shall have the right to run over the road and tracks of the M. C. R. R. to and from the said junction of the two roads to and from the said station grounds, and shall also have the right to use the said grounds for its business, and trains and switching, and mak-

ing up trains, and the passenger-house, upon the terms herein 1854 set forth, such usage to be under the rules and regulations of the M. C. Co., which shall be made for common convenience, and not to discommode the business of the said first party. The stipulations and agreements above specified shall be in force until changed by common consent, the title of each party to its land not being affected hereby, except in so far as this instrument provides for a common use of the same, and

Whereas, the use of the said party of the first part of the said grounds and tracks will be small as compared with that of the second party, probably forever, though it is hoped it will be much

larger than at present, and

Whereas, it is not possible to fix a compensation at the present

time which shall be fair in the future, and

Whereas, the business of the said first party is now in its infancy, and its road is new and yet to be completed, and its business developed, and therefore cannot afford to pay for the use of grounds

such rent as by and by it may do.

It is therefore agreed, that it shall pay the said second party all the amount which its own land put into the common station grounds may be worth, that is, it shall receive no compensation therefor, and the use of said grounds by the M. C. R. B. being considered a part of the rent which the said first party shall pay for the use it may make of said tracks and grounds of said second party.

It is further agreed, that in addition to the contribution of the use of said land, the said first party shall pay to the said second party one-half the gross earnings from all its business of every kind upon the tracks of the said second party between the junction of the two roads and the said station grounds, prorating all of said business,

both local and through, of every description, and fixing said amount of gross earnings by dividing it pro rata according

to the distance it may be carried on each road; and it is further agreed that the said grounds shall be under the general control of the M. C. R. R. and that the said company shall have the right to admit other companies to the use of said depot and station grounds, upon such terms as it may think reasonable and proper, but so as not in any way to embarrass the business or limit the grounds to be occupied by the D., L. & L. M. R. R. Co., so that it

cannot conveniently do its business.

This contract shall continue so far as the clauses relative to compensation are concerned for a period of five years at or after which time the compensation to be paid for the occupancy of the station grounds, over and above what may be the fair value of the use of its own grounds shall be, the question of compensation shall be revised and such new basis fixed as shall be deemed fair and reasonable, and which may be a permanent basis; but if a permanent basis is not agreed upon, the basis shall be revised once in ten years, or afterwards at the request of either party, and in case the parties cannot agree upon the compensation to be paid permanently, the compensation for ten years shall be agreed upon if possible, and if that cannot be agreed upon, then the matter shall be referred to three men, one of whom shall be selected by each party, and they two shall choose a third, and the award of the three or a majority of them shall settle the compensation to be paid for the next ten (10) years, and the amount fixed by them shall be the amount of rent which shall be due and payable under this agreement, and

Whereas, the said D., L. & L. M. road is new and the construction is not yet complete, and its value is yet unsettled, it is mutually agreed that the time for the payment of the said rent shall com-

mence July 1st, 1872.

In witness whereof, the said parties have hereto respect-1856 ively affixed their respective seals and caused the official signatures of their respective presidents to be appended this, the day and year above written.

(Signed)

H. H. SMITH,
President D., L. & L. M. R. R. Co.
JAMES F. JOY,
President M. C. R. R. Co.

Whereas, under the provisions of the above agreement, bearing date of August 16th, 1872, entered into between the D., L. & N. R. R. Co. and the M. C. R. R. Co., by which entrance to certain station grounds of the M. C. R. R. in Detroit and other facilities were granted to said D., L. & L. M. R. R. Co., it was therein stated that the compensation to be paid by the D., L. & L. M. R. R. Co. to the M. C. R. R. Co. for the facilities above referred to should be fixed at the end of five (5) years from July 1st, 1872; and

Whereas, certain questions have arisen under said contract which it is deemed for the interest of both parties thereto should be more

clearly defined; and

Whereas, the D., L. & L. M. R. R. Co. has been organized under the name of the Detroit, Lansing & Northern Railroad Company;

now, therefore, this agreement,

Witnesseth, that the said M. C. R. R. Co., in consideration of the stipulations set forth in the contract above referred to between the D., L. & L. M. and M. C. R. R. Co's by which the use of certain grounds at Detroit belonging to the Detroit, Lansing & Lake Michigan Railroad Company should at all times be open to the use of and constitute a portion of the yards of said M. C. R. R. Co., as provided in the contract above referred to, and in consideration of the performance of the other articles of this agreement does hereby grant to the D., L. & N. R. Co. the right to enter and use its main tracks from Grand Trunk Junction to Detroit; No. 3 track at Grand

Trunk Junction, used in transferring freight traffic to and from the Canada Southern and Lake Shore & Michigan

Southern Railroad Companys; the tracks leading to the Michigan Car Company's shops to Detroit, bridge & iron works, to Dwight's lumber yard, to the stock yards, to Shultz's stave mill, to Hammond, Standish & Co. and Willard Parker & Co.'s packing-houses; also the north track from Tenth to Fourteenth streets, as well as the tracks leading to the elevator and the dock property referred to in the agreement of August 16th, 1872.

Said M. C. R. R. Co. also agrees to make up the passenger trains of the D., L. & N. R. R. Co. and to sell their tickets at its passenger depot in Detroit and its Detroit city office, and to check baggage at its depot in Detroit of passengers desiring to go via the Detroit,

Lansing & Northern railroad from its depot at Detroit.

In consideration of the foregoing the D., L. & N. R. R. Co. agrees to pay to the M. C. R. R. Co., in monthly payments the sum of \$9,200 per annum, bills for same to be rendered monthly and payments to be made on or before the fifteenth day of each month for

the preceding month.

It is hereby agreed and understood that in consideration of the above and other agreements herein set forth, and the performance of the same, the employees of the said D., L. & N. R. R. Co., while working upon any of the grounds of the said M. C. R. R. Co., shall be subject to and under the control of the said M. C. R. R. Co., and shall comply with the rules of the same, and for violation of such rules shall be removed upon complaint of the managing officer of said Michigan Central Railroad Co. And further, that in selling

the tickets and checking the baggage of said D., L. & N. R. R. Co. and making up the trains of said D., L. & N. R. R. Co. the M. C. R. R. Co. shall not be held responsible for any errors or damages which may arise from carelessness on the part of its em-

ployees or from any other cause; and said D., L. & N. R. R. Co. will hold said M. C. R. R. Co. harmless from any suits for damages which may be brought against said M. C. R. R. Co. by reason of any injuries which any employees of said D., L. & N. R. R. Co. may receive while working in or upon any of the station grounds of said M. C. R. R. Co., whether such injuries may arise from carelessness on the part of said employees of the M. C. R. R. Co. or otherwise; and, in further consideration of the agreements above set forth and the performance of the same, the said Detroit, Lansing & Northern Railroad Co. hereby agrees that they will not in any way, directly or indirectly, compete with said M. C. R. R. Co. for any business whatever, whether such business may be destined to or through or consigned from or through a point common to said M. C. R. R. Co. and said D., L. & N. R. R. Co., or whether such business shall originate on or be consigned to, from or through points competitive to said M. C. R. R. Co. and the Chicago & Lake Huron or Chicago & Northeastern Railroad Companies, including Detroit and Chicago; and further provided that neither of the above clauses are to be construed so as to prevent the D., L. & N. Co. from taking business, both freight and passenger, to or from Detroit, from or to any station on the line of its present railroad, whether such business be competitive with said M. C. R. R. Co. or otherwise; and provided further, that they shall not be construed to prevent the D., L. & N. R. R. Co. from taking business to or from Detroit, from or to any other railroad with which it may connect for such points or stations on said other railroads as are not reached or touched by the said M. C. R. R., its branches or leased lines.

And it is further agreed that the pooling agreement at present existing between the two companies, parties hereto, relating to competitive business to and from Detroit, Grand Trunk Junction and Lansing and North Lansing, copy of which is hereto attached, shall be maintained on the present basis for a period

of ten years from the date of this instrument.

And it is further agreed that the facilities given as above set forth are all the facilities to which said D., L. & N. R. R. Co. are entitled to under this agreement; provided, however, that in case any necessity should arise during the ten years next following the date hereof requiring additional facilities at Detroit, or between Detroit and Grand Trunk Junction, belonging to the M. C. R. R. Co. to be granted to the D., L. & N. R. R. Co., the same shall be subject to further just and equitable negotiations between the parties hereto.

At the end of every ten years from the date hereof the terms upon which said D., L. & N. R. R. Co. are admitted to the tracks and grounds of the said M. C. R. R. Co., and the facilities to which the said D., L. & N. R. R. Co. shall be entitled for the next ten years, as above set forth, shall be subject to readjustment, and if the parties hereto cannot agree, shall be left to arbitration, each party

selecting one person and the two so chosen to select a third, and a

decision of a majority of the three to be final.

In witness whereof, the parties hereto have set their official seals and caused the signatures of their respective presidents to be hereto attached on this, the first day of November, A. D. 1877.

This contract to relate back to the first day of September, A. D.

1877.

MICHIGAN CENTRAL R. R. CO., SEAL.

JAMES F. JOY, SEAL.

President D., L. & N. R. R. Co. CHAS. MERRIAM, Secretary.

I hereby certify the foregoing to be a true and exact copy 1860 of the agreement on file in the office of the auditor of the D., L. & N. R. R. Co., at Grand Rapids, Mich., between the M. C. R. R. Co. and the D., L. & N. R. R. Co., of August 16, 1872, and November 1, 1877.

CHARLES M. HEALD, General Manager D., L. & N. R. R. Co.

October 6, 1893.

Subscribed and sworn to before me this sixth day of October, 1893.

> ERNEST N. WELLER, Notary Public, Kent Co., Mich."

Mr. BAKER: Mr. Heald desired me to state that when he testified that the rent was \$10,000 he was mistaken slightly, that it was only \$9,200, as shown by this next agreement which I will read, as follows:

"Memorandum of agreement, made between the Michigan Central Railroad Co. and the Detroit, Lansing & Northern Railroad

Company, March 31, 1891.

Witnesseth, whereas, the Detroit, Lansing & Lake Michigan Railroad Company, being the owner of certain property described in an agreement entered into between the aforesaid company and the Michigan Central Railroad Company, bearing date August 16, 1872, the use and occupation of which by the latter company under said agreement, was in part consideration of the joint use by the parties thereto of the tracks, depots and terminal facilities of said Michigan Central Railroad Company between West Detroit and Detroit; and

Whereas, said agreement was afterwards supplemented by an agreement (between the same parties, dated November 1, 1877, the said Detroit, Lansing & Lake Michigan Railroad Company being

then reorganized as the Detroit, Lansing & Northern Railroad Company), providing certain limitations, privileges and 1861conditions as the basis of the tenancy enjoyed by the said Detroit, Lansing & Northern Railroad Company of the tracks,

passenger stations and terminal facilities of the said Michigan Central Railroad Company between West Detroit and Detroit; and

Whereas, differences having arisen between the said Michigan Central and Detroit, Lansing & Northern Railroad Companies as to the rights, privileges and responsibilities existing under said agreements, said differences have been fully, fairly and satisfactorily adjusted by the parties in interest, H. B. Ledyard, president, acting for and in behalf of said Michigan Central Railroad Company, and Charles M. Heald, general manager, acting for and in behalf of said Detroit, Lansing & Northern Railroad Company, both of said persons being duly authorized thereto:

Therefore, be it understood and agreed by and between the par-

ties hereto that for and in consideration,

First, of the sale and transfer by said Detroit, Lansing & Northern Railroad Company to said Michigan Central Railroad Company of certain lands in a deed heretofore executed and this day delivered to said Michigan Central Railroad Company at an agreed valuation of ninety-six thousand dollars (\$96,000).

Second, of the payment by said Detroit, Lansing & Northern Railroad Company of the sum of twenty-five thousand dollars (\$25,000) to said Michigan Central Railroad Company, the receipt

of which is hereby acknowledged;

That the agreements above referred to, dated August 16th, 1872, and November 1st, 1877, are hereby discharged and canceled, and all the rights and obligations, privileges and responsibilities of both parties thereto are hereby declared to be canceled and at an

road Company shall have the right to occupy and use the tracks, station and terminal facilities heretofore used by it, and upon the same terms and conditions as heretofore for the period of two years from and after March 1st, 1891, at an annual rental of thirty thousand dollars per year, payable quarterly, it being especially understood and agreed between the parties hereto that the said Detroit, Lansing & Northern Railroad Company shall have the right to terminate the said tenancy upon giving thirty days' notice of their intention so to do, directed to said Michigan Central Railroad Company, its successors or assigns, at any time within the said period of two years, above specified.

In witness whereof, the parties hereto have caused the names of their respective companies to be signed the day and year first above

written. In duplicate.

THE MICHIGAN CENTRAL RAIL-ROAD CO.,

By H. B. LEDYARD, President.
THE DETROIT, LANSING & NORTH-ERN RAILROAD COMPANY,
By CHARLES M. HEALD, General Manager.

I hereby certify the foregoing to be a true and exact copy of the agreement between the Michigan Central R. R. Co. and the D., L.

& N. R. R. Co., entered into March 31, 1891, as filed in the office of the auditor of the D., L. & N. R. R. at Grand Rapids, Mich. CHAS. M. HEALD,

General Manager D., L. & N. R. R. Co.

October 6, 1893.

Subscribed and sworn to before me this 6th day of October, 1893.

ERNEST N. WELLER,

Notary Public, Kent Co., Mich."

The jury will remember the testimony of Mr. Heald, that 1863 this consideration of \$96,000 included two parcels, a smaller parcel in another part of the city, being put in at \$16,000, and the strip through the Michigan Central grounds at \$80,000. Mr. Heald did not know exactly where that strip was located, but it appears by this description that it was on the line of the Woodbridge farm, and you who are familiar with the map of the city will know where that is. It is in the vicinity of the crossing just this side of the Michigan Central crossing.

HENRY SPITZLEY, sworn on behalf of petitioner.

Examined by Mr. BAKER:

Q. Where do you live?

A. In Detroit.

Q. How long have you lived here?

A. It is now about 28 years.
Q. What is your business?
A. Carpenter and builder.

Q. How long have you been in that business?

A. About 45 or 46 years.

Q. Have you recently made an estimate in company with Mr. Dee and Mr. Finn of what it would cost to duplicate the Backus planing mill and box factory?

A. Yes, sir.

Q. Mr. Finn and Mr. Dee did the masonry work, I believe?

A. Yes, sir.

Q. And you have personally made an estimate of the wood-work and of the machinery?

A. Yes, sir.

Q. Can you tell us what it would cost to duplicate the building, all the wood-work that was included in Mr. Dee's estimate, separate from the machinery?

A. Yes, sir. (Referring to paper.) The wood-work outside of the

machinery is \$22,612.09.

1864 Q. That does not include any of the mason-work?

A. No, sir.

Q. But that includes all the wood-work, outside of the machinery?

A. All the wood-work and the painting and glazing and such as belongs to the building, outside of the mason-work and plastering?

Q. So that with Mr. Dee's estimate or Mr. Finn's estimate of \$27,000

137 - 55

or \$28,000, and \$22,000 that you have there, that would cover the cost of the building?

A. Yes, sir.

Q. Can you duplicate the building for that?

A. Well, I would take a contract for these prices to do it, if any-

body wanted to give me the contract.

Q. In your judgment and according to your estimate can the building be duplicated for that? Is that what it would cost at the present time to duplicate it?

A. Yes, sir.

Q. I suppose you are familiar with the kind of machinery they have down there?

A. Yes, we have a good deal of it in our shop, the same.

Q. You have a planing mill yourself? A. Yes, sir.

Q. Have you made an inventory of the machinery down there?

A. Yes, sir.

Q. And have you estimated what it would cost to buy that machinery all new and set it up there today?

A. Yes, sir. Q. Does that include the engine and boilers and everything connected with them?

A. Yes, sir, the engine and boilers and all the shafting and everything that belongs to the machinery work; outside of the machinery themselves, I take, wood-working machinery. Mr. Kramer estimated it with me.

Q. Will you tell us what the total estimate of the ma-1865 chinery, including the wood-working machinery and shafting and engine and boiler and all those things, amounts to?

A. \$67,748.09.

Q. In making this estimate, state whether you have made any distinction as between the prices of 1892 and the prices of this year, whether there is any substantial difference?

A. I base it all on the prices now.

Q. How much more, if anything, would it have been in 1892,

last year?

A. Oh, there would not be much difference. The wood-work and carpenter-work is a little less now on account of there being so little work. We are figuring it closer now than what we did in 1892.

Q. There is no substantial difference, then, between the two

years?

A. No, sir.

Q. And, as far as Mr. Kramer's estimate is concerned, I suppose he is here to testify to that?

A. Yes, sir.

Q. You have made the estimate in detail, just as if you were going to take a contract?

A. Yes, sir.

Q. And spent a good deal of time over it?

A. Yes, spent time; and I was very sure to make it as near correct as I could.

Cross-examination.

By Mr. DICKINSON:

Q. Have you included the sewers to the river?

A. Mr. Kramer figured all those connections to the river.

Q. Have you included them in your statement?

A. Yes, I have Mr. Kramer's statement included with this 1866 building.

Q. And you included the girders and iron-work over the boiler?

A. Yes, sir.

Q. Have you there with you your inventory on which you have made your estimate of the machinery? A. I have got the inventory right here.

Q. May I see it?

A. Yes, sir.
Q. Do you think you have got in all the machinery?

A. That is the wood-working machinery.

Q. I mean the wood-working machinery. Do you think you have it all in?

A. Yes, sir.

Paper referred to marked "Exhibit Spitzley, 1."

Q. Have you ever been yourself engaged in a business such as the Backus planing mill carries on there?

A. We have a planing mill ourselves.

Q. Where is your planing mill?

A. It is at the corner of Gratiot and Antoine.

Q. What is the capacity of your mill?

A. Well, our planing mill is for doing all kinds of builders' work, what belongs to a building.

Q. Hard and soft woods?

A. Yes, sir.

Q. Do you do anything else besides builders' work?

A. No, sir.

Q. Have you been engaged in any other planing mill?

A. No, sir.

Q. Nothing except that, and what you make in your planing mill is what is used in buildings?

A. Yes, zir.

Q. And did you tell us the capacity of your planing mill,

how many thousand feet of lumber it could cut? 1867

A. Well, I have not set up our work in comparison with any other mill. We do not work up so much lumber as mills like Backus' do, because they dress lumber and ship lumber, for sale. We only make such as we are using ourselves in buildings.

Q. Then you carry on your planing mill in connection with your

business as a builder?

A. Yes, sir.

Q. Then you do not do this ornamental and inside work for sale? A. Not for sale. We do the same kind of ornamental work for

the inside of houses.

Q. For what you use yourself?

A. Yes. sir.

Q. Do you make any cloth or winding boards: do you know what they are?

A. I don't know what they are.

Q. Known in the trade as cloth or winding boards?

- A. Sometimes we are getting out boards for tailors, for cutting on and such.
- O. Do you make flat and square pickets for pailings in your place?

A. Yes, sir.

Q. Fancy pailings? A. Yes, sir.

Q. Do you make what is called the pilaster finish?

A. Yes, sir.

Q. Mouldings and casings and baseboards and stair railings?

A. Yes, sir. Q. Shelving?

A. Yes, sir.

Q. Do you make printers' type-case bottoms?

A. Oh, we can make any kind of bottoms or any kind of 1868 boxes.

Q. I only ask you whether you are engaged in that?

A. Not as a specialty.

Q. Do you make them at all?

A. If they are orders, we will make them. Q. Do you make fancy and plain trays?

A. Yes, sir.

Q. Do you use those in building?

A. If they are used we will make them.

Q. But have you made any?

A. We make some trays sometimes, when they are ordered.

Q. Let me see if I understood you. Do I understand you correctly that you only have made them for your own uses in your building business?

A. For such buildings as we are building.

Q. Then you do not make printers' type-case bottoms, do you? A. Sometimes printers or other mechanics or other businesses come to our shop and order things.

Q. You do not make a business of manufacturing them to sell?

A. No, sir, we do not make any special business out of them.

Q. You only do any job work or by order?

A. Yes, sir; anything else, ordered. Q. You do not make them to sell out around the country?

A. No, sir.

Q. Do you make drawer bottoms and drawer slides and fronts?

A. Yes, sir.

Q. You do make them for your own business?

A. Yes, sir.

Q. Shelf boxes? 1869 A. Yes, sir.

Q. Do you make hat-drying frames for the hat business?

A. I don't know whether we have ever made any; we can make them.

Q. I am only asking you whether you do make them?

A. I cannot remember that we have made them. O. Do you make tobacco-drying racks there? A. I cannot remember if we made any of them.

Q. Of course you are a carpenter and joiner and you can make any such thing?

A. We can make anything made out of wood-work.

Q. How many men do you employ?

A. According to business. In the summer time from 100 to 150; now it is dull and we have only between 45 and 50.

Q. How many machines are there in your shop?

A. Somewheres from 15 to 18. Q. Do you make oilcloth rolls? A. If they are ordered yes, sir.

Q I am you whether you make them in stock, for sale?

A. No, sir; we do not make anything in stock.

Q. Wire-cloth rounds?

. No. sir.

Q. Picture-frame mouldings?

A. No. sir.

Q. Picture mouldings?

A. Yes, sir.

Q. In stock? A. Not in stock.

Q. You do not use them about buildings, do you?

A. Yes, sir.

Q. Don't you think picture mouldings and picture frames 1870 require special machinery?

A. No, sir. We have got the same kind of machinery as they are using.

Q. In that regard?

A. Yes, sir.
Q. You, of course, make all kinds of ceiling and flooring and finishing?

A. Yes, sir.

Q. And matched boards for all purposes?

A. Yes, sir.

Q. Do you make decking and boat-work?

A. No, sir.

Q. Do you do any marine-work at all?

A. No, sir.

Q. I suppose if any one wanted to build a boat or a deck he could not go to you to get it without having it made?

A. No, sir. We do not keep it in stock.

Q. Have you any machinery such as is required to make it?

A. We can make anything with our machinery.

Q. Do you make car siding?

A. Yes, we can make them. We do not keep them in stock.

Q. I simply want to know whether you make them?

A. No, sir.

Q. Do you make car roofing?

A. We do not make it.

Q. Car flooring?

A. No, sir.

Q. Do you make in stock specialties of step plank?

A. Do you mean for stairs?

Q. Yes?

A. We do not make a specialty of it. Q. Do you make cedar moth chests? 1871

A. We make them if they are ordered.

Q. You do not make them, do you? A. Not in stock.

Q. Have you made them?

A. Yes, sir.

Q. Stove boards?

A. Yes, sir.

Q. Do you make cutting boards?

A. Yes, sir.

Q. Maple flooring?

A. Yes, sir.

Q. Red and white oak flooring?

A. Yes, sir.

Q. Red and white quartered-oak flooring?

A. Any kind of flooring that is made.

Q. Do you make stock for furniture and piano factories?

A. We do not make any stock. Q. Do you make panels?

A. Yes, sir.

Q. Vaneers and all fancy woods?

A. No, we do not make vaneers.

Q. Have you any machinery to make vancers?
A. Yes, sir.

Q. But you do not make them?

A. No, sir.

Q. Yet your machinery would make them? A. We have got machinery to make them.

Q. Pattern stock?

A. No, sir.

Q. Water and liquid tanks?

A. Not in stock.

Q. Heading?

A. No, sir. Q. Battens?

A. Do you mean battens for doors and houses?

Q. Yes. A. Yes.

1872

Q. Store tables?

A. Yes, sir.

Q. Rollers?

A. Yes, sir.

Q. Tub and pail stock?

A. No. sir.

Q. Do you make them at all?

A. We have no machinery for tub and pail stock.

Q. Stretcher stock?

A. What kind of stretchers?

Q. Stretcher stock?

A. There are different kinds of stretchers.

Q. It is artists' material, called stretcher stock?

A. I cannot remember.

Q. Such as they use with oil paintings and all that sort of thing? A. We do not make anything of the kind in stock. We can make it, but we don't.

Q. You do not make vats, I suppose, as you do not make tanks? A. We have made some; yes, sir; but we do not make it in

stock.

Q. There could not any one come and get it of you now without having it made?

A. No, sir. We would have to make it first.

Q. Coffee cabinets?

A. No, sir. Q. Cornices?

A. Yes, sir. Q. Blinds?

A. Yes, sir.

Q. Do you make blind slats to sell? 1873

A. Not to sell. Q. Brush backs?

A. Not to sell.

Q. Do you make them any way in your business?

A. Sometimes there is such stuff ordered from brush-makers.

Q. Do you make trunk stock?

A. No, sir.

Q. Do you make trunks?

A. No, sir.

Q. Have not made them?

A. No, sir; only there is some specially made, then we will make them.

Q. Do you make curtain poles?

A. Yes, sir.

Q. I have no doubt you can go to work and make a trunk?

A. We can make anything that is made of wood.

Q. Whether you make them in stock, as a part of your business? A. We have the machinery to make them with, and hands.

Q. You make lath, of course?

A. Not plaster lath. There are different kinds of lath, you know.

Q. Have you the machinery to make it?

A. No lath machine; no, sir.

Q. Do you make any fancy shingle stock?

A. We cut our own shingles, and if there is any fancy shingling we make it. We do not make them in stock.

Q. You do not manufacture fancy shingles?

A. We do not keep them or make them for sale unless they are ordered or we have some of them to use ourselves. We make them ourselves, then.

1874 Q. Do you make car-door stock?

A. It is about the same as the other match stuff.

Q. Do you make car-door stock?
A. We do not keep it in stock.

Q. Have you made any?

A. We built a car, yes, last year for the electric company.

Q. The electric road?

A. Yes, that is the only car we ever built.

Q. Which road?

A. It is not for the road; it is for the shop up here making these motor cars. We made it once to try their motor. I think it is the Standard Company.

Q. Where is it running?

- A. I don't know where it is running. Q. Do you make the fine car linings?
- A. We do not make anything of that kind in stock.

Q. Coffin cases?

A. No, sir.

Q. Carboys and carboy heads?

A. I don't know what that means. Q. You don't know what a carboy is?

A. No, sir.

Q. Do you make piano and organ cases?

A. No, sir.

Q. Do you make cigar-box lumber?

A. No, sir.

Q. You make partitions, of course?

A. Yes, sir.

Q. Ready to set up?

A. Yes, sir.

Q. Lattice-work?

A. Yes, sir.

Q. Sash-covering stock?

A. Well, sashes might be covered with a great many dif-1875 ferent things. I don't know what you mean by that.

Q. Do you make it, have it in stock, or except as you need it in your building?

A. (Referring to window.) Well, this is a sash, and I do not see what sash covering—

Q. Sash covering—to put over the sash.

A. I don't know anything about that.

Q. Do you make wire spools?

A. No, sir.

Q. Do you make cove and bed moulding?

A. Yes, sir.

Q. Fence rails?

A. Yes, sir.

Q. Tank and vat plank?
A. We make them if we happened to have it ordered, not otherwise.

Q. Do you make staves and stave stock?

A. No, sir.

Q. Moulding boards?

A. Yes, sir.

Q. Cracker cases?

A. Not unless they are ordered.

Q. Crating stock?

A. We do not make anything in stock.

Q. Do you make it?

A. We have made crates, but we do not keep it in stock.

Q. Churn stock?

A. No, sir.

Q. Bridging?

A. No, sir.

Q. Crating heads?

A. I don't know what you mean by that. I suppose those are crates for eggs and such?

Q. Yes.

A. We do not make them. 1876

Q. Voting booths?

A. No, sir.

Q. Wagon boxes?

A. No, sir.

Q. You have not made wagon boxes?

A. Not unless we use one. Not for anybody else.

Q. Well, you do not make them, do you?

A. No, sir.

Q. Carriage and sled bottoms?

A. No, sir.

Q. Gun stocks?

A. No, sir.

Q. Do you make plug-tobacco butts?

A. I don't know what it means.

Q. Do you make tobacco caddies?

A. No, sir.

Q. Reaper platforms?

A. No, sir.

Q. Do you make ballusters and table legs?

A. Yes, sir.

Q. Lap boards? A. Yes, if they are ordered we will make them.

Q. You have not made them, have you?

- Q. Candy trays?
- A. Yes, sir. Q. Shoe racks? 138 - 55

A. Yes, sir.

Q. Stovepipe racks?

A. Yes, we made some of them, too.

Q. Bulletin boards?

- A. Yes, sir.
- Q. Window stools?

A. Yes, sir.

Q. Scrub and shoe blocks?

A. Well, we don't make them in stock.

Q. Do you know what they are—known to the trade as scrub and shoe blocks?

A. Scrub blocks-if there is a block a woman uses for scrub-

Q. Do you know the name of the thing known to merchandise as scrub and shoe blocks?

A. I don't know what it means.

Q. You would not know what it was if they were ordered?

A. If somebody would order it and show me what it means, I could tell you.

Q. O, yes, you are a carpenter and you could make most anything, I have no doubt. Do you know what window sticks are?

A. Yes, sir.

Q. Do you make them?

A. Put a stick in under a window.

Q. Do you make them?

A. Yes, sir.

Q. Do you make trip-hammer handles?

A. No, sir.

Q. Typewriter cases?
A. Not unless they are ordered.

Q. Do you make bed slats?

A. No, sir, not now, we used to make them.

Q. Do you make rab-ited siding?

A. Sometimes, not always.

Q. Square siding?

A. Yes, sir.

Q. Do you make it right along?

A. Sometimes, I say, not right along. Q. When it is ordered?

A. Yes, sir.

Q. Tub plank? 1878 A. Yes, sir.

Q. Car-door battens?

A. Yes, we can make them.

Q. Do you make them?

A. We can make them if they are ordered; we do not make them in stock.

Q. Now, to make all these things with facility, don't you think that you would have to increase your machinery at all?

A. We might have to have some more machinery, if you wanted to make those in stock.

Q. Do you make spool trays and condensed-milk trays?

A. No, sir.

Q. Door and screen stock?

A. We can make it, but we don't.

Q. Wagon axles?

A. No. sir.

Q. Fancy-pattern shingles?

A. We don't make them in stock. We make them only when we are ordered.

Q. Tobacco cases?

A. Yes, sir.

Q. Single and double novelty siding? A. I don't know what that means.

Q. Well, if it was ordered of you by that term, you would not know what it meant?

A. Unless a man tells me what it means. The expression I have

never heard.

- Q. Do you know what is called Philadelphia fencing?
- A. I don't know what they mean by that. Q. Do you make a step and riser plank?

A. Yes, sir.

1879

Q. Do you know what it is?

A. Yes, I ought to know that. Q. Do you make German siding?

A. No. sir.

Q. You know what it is?

A. Oh, yes.

Q. Do you make such articles as these as you do make of them from air-dried and kiln-dried lumber?

A. Yes, sir.

- Q. Chestnut? A. Yes, sir.
- Q. Butternut?

A. Yes, sir. Q. Black walnut?

A. Yes.

Q. Mahogany?

A. Yes.

Q. Tennessee cedar?

A. Yes, sir. Q. Florida red cedar?

A. Yes.

Q. Norway pine?

A. Yes, sir.

Q. Soft elm?

A. Not soft elm; we don't use any of that.

Q. Black ash? A. Yes, sir.

Q. White ash?

A. Yes, sir.

Q. Red and white oak?

A. Yes.

Q. Sycamore?

A. Yes, sir.

Q. Hard and soft maple?

A. Yes, sir.

Q. Black birch?

A. Yes.

1880 Q. Red birch? A. Yes, sir.

Q. Beech and cherry?

A. Yes, sir.

Q. Georgia, Florida, Arkansas and Mississippi pine?

A. Yes, sir.

Q. Do you have it in stock?
A. We do not keep it in stock, only a little. We will get some of it, not much.

Q. California redwood?

A. Very seldom we use that.

Q. Gumwood?

A. We do not use any of that. Q. White mahogany?

A. Yes, sir.

Q. Got it in stock?

A. We do not keep it in stock, but we work it.

Q. Where would you get it?

A. We can get it in New York and Philadelphia.

Q. White holly?

A. No, sir.

Q. Bird's-eye maple?

A. Yes, sir. Q. Hickory? A. No, sir.

Q. Do you work in hemlock and spruce?

A. Yes, sir.

Q. Do you make any cedar shingles?

A. No, sir.

Q. Cedar posts?

A. Cedar posts I very often use.

Q. Did you see the Preston improved combined power sawing machines, with extra saws, tools and attachments?

1881 A. I saw all the saws that were there. I don't know the name of every one of them, as they may call them.

Q. You didn't look at the names of them to see whether they were the improved or patented?

A. Yes, I seen a couple of saws there, they were improved.

Q. Did you take into consideration in looking at that machinery the improved machinery like this Preston improved combined power sawing machine, what you could reproduce it for or what it would cost in the market to get it?

A. Yes, sir.

Q. What it would cost in the market?

A. What it would cost in the market to get it.

Q. Did you take into consideration that these machines might be patented?

A. Yes; they are mostly all patented.

Q. Then, if you could not tell a Preston improved combined power sawing machine, how could you tell what valuation to put upon it?

'A. Well, I went and inquired where we bought our machinery, at Jenks'. He deals in machinery, and he told me the prices of

those things.

Q. So that you looked at the machinery. You had no such machinery in your shop?

A. No, sir.

Q. Then you would go around and inquire of the dealers?

A. I inquired of dealers in just such machinery. For instance, there are some of those planers where Backus got them from Boston. I wrote a letter to those people.

Q. Take this machinery at Backus', would you consider it pretty

fine?

A. Good machinery.

1882 Q. Did you see any machinery that you knew the value of without making an inquiry?

A. I knew the value of them from what we bought of some of them; what we have in our shop ourselves.

Q. You say you inquired as to the others?

A. Yes, sir.

Q. How many machines did you see in Backus' shop that were such as you had?

A. In Backus' shop they have got a sticker, two stickers, such as we have; that is, ours is a different patent; a different pattern.

Q. As to those, did you inquire the price of them that you found in Backus' of a different patent from yours?

A. Yes, I inquired.

Q. I have asked you to tell us, if you please, what you found in Backus' shop, the value of which you knew anything about without inquiring of anybody?

A. There was all these small saws. For instance the cut and rip

saws.

Q. Oh, those things that are not patented?

A. Well, there are some of them patented and some not—all run about the same price.

Q. About how many did you see?

A. I cannot remember unless I look at my list.

Q. You can have your list. (Handing Spitzley Ex. 1 to witness.) Let us see what you saw there in that shop in the way of machinery that you were so familiar with you could tell its value without inquiring from anybody. You understand that?

A. Yes, sir.

Q. Without going out to anybody and asking the price, that you are familiar with in your own shop?

A. We have one large moulder and matcher that I knew the price of by our own machine.

Q. What did you set it down at?

A. \$470. And then they got a small one, \$130.

Q. That you know of yourself?

A. Yes, sir. Then there was a band-saw filer; we have one also. \$75; then there were 17 rip and cross-cut saws which I know the prices of.

Q. What did you put those down at? A. Some at \$45 and some at \$14 apiece.

Q. How many at \$45?

A. There was six of them.

Q. How many at the other price that you knew about yourself? A. Eight at \$44. Then there was another saw at \$14, and then there was a gig-saw, \$72.

Q. Eagan gig-saw?

A. I think it is Eagan. I didn't put down the name of that.

Q. Patented one?

A. They are mostly all patented. That was a patented one. Q. Was that an Eagan saw you put down?

A. I cannot tell. I didn't put the name of that saw down. There is a machine here—three rip-saws and three more of these cross-cut saws of the same price.

Q. What is the price?

A. \$44 and \$45, three of each.

Q. What else that you were familiar with?

A. There was a couple of cut-off saws, some swing cut-off saws, which I know; we were going to put one up.

Q. What was the price?

A. \$50.

1884

Q. Did you inquire about that?

A. We would have to inquire about all this machinery; we get a book or price-list from the different factories, we generally get the prices of these machines.

Q. Did you look at them? A. Some of them; yes, sir.

Q. You think you could get at the price, what you have put it at, the way the books put it down?

A. That is what we call the swing cut-off saw. Q. Did you see how it was set up by the Backus-?

A. I seen where it was put up; yes, sir.
Q. Didn't you notice that a table was put on there at right angles with the saw frame 32 feet long?

A. Yes, they had some long tables there, but they had nothing to do with the machine itself; wooden tables.

Q. The table was in connection with the machine? A. Yes, sir.

Q. Did you take that into consideration in estimating its value?

A. Not in this price; no, sir.

Q. Did you, then, in estimating the values take into consideration the cost of setting up and the material for setting up?

A. Yes, sir.

Q. I understand you did not take into consideration this table?

A. Not this long table. There are about four or five wooden tables which we generally put up ourselves; don't belong to the machines really.

Q. Did you estimate those separately?

A. No, sir.

Q. Didn't estimate them at all?

A. No, sir.

Q. Well, go on with whatever you saw there that you knew something of the value of without making an inquiry.

A. I think those were all the machines that I knew the prices of

without inquiring.

Q. And your estimated value of all the machinery in the shop was how much?

1885 A. \$16,891.

Q. And on that estime, the only articles in the shop of which you had knowledge you if without making inquiries you have just stated?

A. The other machines, exce, . those I stated just now, I had to

inquire about. I went to Jenks and got the prices.

Q. And you didn't take into consideration any peculiarities in the setting up or the value of those?

A. Mr. Kramer took the settings in, as I understood him.

Q. Did you see a blacksmith forge there?

- A. Yes, I seen a small blacksmith forge, but it was standing loose there.
 - Q. Did you take that into consideration?

A. No, sir.

Q. Did you estimate it at all?

A. No, sir.

Q. Of the total machinery you estimated at \$16,000 you knew the price of about \$1,400 worth. We have figured it up.

A. I didn't figure it up; it might be.

Q. That is what it amounts to. Did you see on the Eagan scroll-saw any extra attachments?

A. No. sir.

Q. Did you take those into consideration, any extra attachments?

A. I have not seen any on that saw.

- Q. Did you see a power wood-cutting machine there with extra saws?
- A. I don't know what kind of a wood machine is meant by that name.

Q. You would not know it by that name?

A. No, sir; I seen all the machinery, but I would not know.

1886 Q. Have you got any power wood-cutting machines in your shop?

A. As I say, I don't know what you mean by that name.

Q. Did you see any emery grinders there for sharpening tools. and knives and so forth?

A. Yes, sir.

Q. Are those estimated?

A. No, sir.

Q. You didn't put them in at all?

- A. I ain't got them in, no, sir. I seen one there, but I didn't put
- Q. How many rip and cross-cut sawing machines have you got in all told?

A. 28.

Q. You didn't see enough to make up 30 sets, did you?

- A. Well, there are some saws here I did not count in for what you say, there are some cut-off saws I didn't count in in those 28.
 - Q. Did you see any of Backus' patented or improved box trucks? A. I seen a good many trucks standing around there, yes, sir.

Q. How many?

A. You mean these small hand trucks? Q. Yes.

- A. I didn't count them.
- Q. Did you estimate them?

A. No, sir.

- Q. Did any one estimate them? A. I know nothing about that.
- Q. Did you see what is known as any New York single-surface power pony planers?

A. I seen two pony planers there, what they call them. I have got two pony planers in my estimate, but what they call them I cannot tell.

Q. Did you put them in as New York power pony planers?

A. I don't mention the name here.

Q. Do you have anything like them in your shop?
A. No, sir.

Q. You inquired for the price of those? A. Yes, sir.

- Q. Did you call them that when you inquired?
- A. I explained them to Mr. Jenks as well as I could.
- Q. You didn't examine them to see what the patent was?

A. No, sir.

Q. Did you examine them to see what the patent was before you asked the price of the people that you inquired of?

A. Yes, sir.

- Q. Did you see what the patent was before you inquired of the price?
- A. Yes, I seen them on the large planers, and I have looked at them. They are all the wood machines.

Q. Well, did you see any patent-

A. There was no—Q. You must answer the question. I want to ask you one thing at a time. The New York single-surface power pony planer?

A. I have not examined that pony planer through the name of it, as I stated before. I got it down on my price-list here.

Q. What did you get it down as, what name?

A. I just put down pony planer.

Q. When you ever made an inquiry as to what the cost of that was, did you ask the dealer what a pony planer would cost?

A. Yes. I went and asked him what a pony planer would 1888 cost, and he has got some of the improved patent, and he told me what the price was.

Q. But you did not tell him anything about the patent?

A. I had not heard the name; no, sir.

Q. You know in your business, don't you, that you have to pay something more for a machine that is patented?

A. Well, they are all patented, pretty near.

Q. You know that you have to pay more than you can set up such a machine for yourself.

A. They are all patented, some of them are later.

Q. You know that you have to pay more for such a machine that is patented than you can set one up for yourself?

A. I cannot understand that. They are all patented.

Mr. BAKER: He cannot set it up himself.

Q. Suppose a machine is patented. Don't you have to pay more for it than you would if you set it up yourself?

A. We do not make machinery ourselves.

Q. I know you don't, but don't you have to pay for the thing being patented?

A. They are all patented. I don't believe there is hardly a ma-

chine that is not patented.

Q. How about the pony machine; is there no pony machine that is not patented?

A. Not that I know of.

Q. Isn't one machine worth more than another? A. Yes, I have got the two prices down, too.

Q. Then in asking about the price of a pony planer without naming what patent it was-

A. Yes, I didn't-

Q. Do you think that the man you asked had the proper premises to give a correct answer?

A. He had the different kinds of ponies, and he told me the latest pony planer is worth so much more than the other 1889 one.

Q. What price did you take then; did you take the latest price? A. Yes, sir, for that one. There are too many pony planers there.

Q. Were they double-feed or single-feed pony planers?

A. That I cannot tell.

Q. What did you tell the man you inquired of to get the price, whether it was double-feed or single-feed?

A. I didn't ask him that.

Q. Did you notice that the pony planers in the Backus mill had pull-out rollers?

139 - 55

A. No. sir.

Q. Is that any improvement from the ordinary pony planer?

A. I suppose so.

Q. You didn't notice whether the Backus one had it or not? A. No, sir.

Q. Do you have them in your shop?

A. We have no pony planer in our shop.

Q. Did you see a lock-corner machine there-Backus' own patent?

A. Lock-corner machine?

Q. Yes, a lock-corner machine.

A. I don't know what it is.

Q. By means of which they may make a corner with that machine. Did you see any such thing as that?

A. No. sir.

Q. Did you see a Rogers rounding machine and counter?

A. I don't know what kind of a machine that is; not by the title of it.

Q. Do you know what a rounding machine is?

1890 A. Well, they are making a great many kinds of rounding machines; but what kind of rounding machine do you mean?

Q. At all events, you didn't see the Rogers machine to know it? A. I cannot remember that I seen a rounding machine; what they call it, or what they would be. I thought I seen all the machines in the whole building.

Q. Well, have you got any machine set down as one? There is only one in the shop, a pretty large machine, that is used for

rounding.

A. It might be. It is none of these other machines heregrinders and such. I have got several machines marked down, one machine at a time, but whether those are the rounding machines I cannot tell.

Q. Did you see any that appeared to be of Backus' patent in that

A. Backus told me that one of his planers-

Q. Not what he told you. Did you see anything that appeared to be patented by Backus?

A. No, sir.

- Q. Did you see a dado and groove cutting machine, with attachments?
- A. No, sir. They had some machines there where they made grooves; what I called matchers.

Q. You call them matchers?

A. Yes, small machines, where they match the box stuff-short box stuff. I don't know whether they call them that way or not.

Q. Did you examine to see whether they were patented?

A. No, sir.

Q. How many were there there of that style?

A. I think there was four. Q. Two of those small ones?

A. One-two. Yes, small ones. 1891

Q. Two what? Describe your own description?

A. Small matching machines, which I thought may be you allude

to as dado and groove.

Q. No, this is a large machine I am speaking of, a dado and groove cutting machine, Backus' improved power dado and cutting machine?

A. I have not seen them if there is any such there.

Q. Then you have only two of the matching machines?

A. Yes, sir.

Q. Would it surprise you to know there were ten in the shop?

A. If there are, I have not seen them.

Q. Now, in your estimate of the machinery, did you find any of them with extra heads and extra knives, and extra tools about them'

A. Whether I found any machines with extra-

Q. Yes, so that in case of breakage or disorder they could supply them immediately?

A. Oh, I suppose they kept them in a separate place.

Q. Are they estimated?

A. No, sir.

Q. You have not taken them into consideration?

A. No, sir.

Q. Has any one so far as you know?

A. None of these extra ones.

Q. Did you see any extra moulding knives where you saw the moulding machines?

A. I have not seen them; they have got things laying around

there loose that very likely I have not noticed.

Q. But didn't you see about these machines racks which contained extra moulding knives and extra tools, to the number I have no doubt through the mill of hundreds, in racks, ready to be supplied instantly?

A. Yes, I remember now I seen them.

Q. Did you take them into consideration? 1892 A. No, sir. I remember now I seen them.

Q. But you have no inventory or appraisal of them?

A. No, sir.

- Q. Where they have material to instantly supply any part of a machine, you have not taken those into consideration?
 - A. I remember now there is a little room off in one corner.

Q. No, but in racks near the machine?

A. Well, that is in racks.

Q. And you didn't take them into consideration?

A. No, sir.

Q. Did you ascertain from your examination that if any part of any machine gave way they could instantly supply the defect?

A. That is what Backus said; he had them. I suppose they have them.

Q. What was this little room you saw used for?

- A. There is a little room on one end of the building, on the second story, where they have such-
 - Q. In racks?
 - A. Yes, sir.
 - Q. Extra saws?
 - A. Yes, sir.
 - Q. Cross-cuts and rippers, and all that?
 - A. Yes, sir.
- Q. And you have only put down in your inventory the saws that are in actual use?
 - A. Yes, sir.
- Q. You did not put in a single extra saw or moulding knife or extra part of a machine of any kind?
 - A. No, sir.
 - Q. You have not got it in your estimate?
- A. No, sir. I can remember I seen that room with these extras, but I forgot to put it in.
- Q. I want to know if you saw an Eagan heavy power upright boring machine?
 - A. Yes, sir.

 - Q. You got that down?
 A. Yes, sir.
 Q. You inquired the price of that?
 A. There is a boring machine, or drill, I called it.
 - Q. Did you notice whether it was patented and whose it was?
 - A. As I say, they are all patented. Q. Did you notice whose this was?
 - A. I didn't.
 - Q. Have you got any such machine in your shop?
 - A. No. sir.
 - Q. Ever have anything to do with one?
 - A. No, we don't use them.
 - Q. Did you see mill or factory wagons and carts around there?
 - A. Yes, sir.
 - Q. Did you estimate them?
 - A. No, sir. I didn't know that I was asked to do that.
- Q. You didn't know that Backus had 28 of those of his own make?
- A. They had quite a number of wagons around there and light carts.
 - Q. Did you estimate the grinding stones?
 - A. No, sir.
 - Q. For the knives, peculiar stones?
 - A. No, sir.
 - Q. You didn't put them into your valuation?
 - A. No, sir.
 - Q. Did you see them?
 - A. Yes.
- Q. Do you know anything about the value of those 1894 stones?
 - A. Yes, we have a couple of them in our shop.

Q. The same kind?

A. Yes, sir.

Q. And you only saw one?

A. No, I think there were two, one in the lower story and one There is one small one and one bigger one.

Q. Did you see what is known as a picket heading or sharpening machine, a pretty large one?

A. No, sir.

Q. Used for that exclusively, for sharpening?

A. I see the saws; I thought they were doing that with those saws, what they had there.

Q. Used for picket heading exclusively, and sharpening?

A. No, sir; I cannot remember seeing an extra machine for that purpose.

Q. Did you see one of Howe's very large platform loading

scales?

A. Yes, there are two of them.

Q. Did you put those in your estimate?

A. No, sir.

Q. Or any one so far as you know?

A. I think that Mr. Kramer has got them.

Q. (To Mr. Kramer.) Mr. Kramer, have you got those?

Mr. KRAMER: No, I didn't take any scales.

Q. You didn't put them in?

A. That is right near the elevator?

Q. There are two of them. You didn't get them in?

A. No, sir.

Q. Did you see a knife balancing, grading and weighing machine?

A. A what?

Q. A knife balance; a very fine, delicate weighing scale. 1895

A. Weighing scale?

Q. Weighing scale for knife balancing in order to get at the weight?

A. No, sir.

Q. You didn't put that in?

A. No, sir.

Q. Well, it sometimes is a matter of some importance, isn't it, to get the weight of your knives accurate for the use on these machines?

A. Well, we never weigh them in our shop.

Q. But in the finest work, isn't it a matter of a good deal of im-

portance to get the same weight and same kind of work?

A. There is always the same size; we take the size of them. If we have newer planer knives-we generally keep them in the same size, and unless they are worn off, one more than the other, of course then we can get another.

Q. You know it is necessary to get them the same size and weight

in order to get uniform work in a mass of work?

A. I suppose so.

Q. And you didn't see those two knife balancing, grading and weighing scales?

A. No. sir.

- Q. Did you see an S. A. Woods power single-surfacing pony planer?
 - A. There were only two pony planers there, which I have down. Q. Oh, yes, those two you have told us about. Those were single-

surface power pony planers? A. There are only two in the whole shop that I can see.

Q. Then, if there was one S. A. Woods single-surface pony planer in addition to the two power pony planers, 1896 you didn't see it?

A. Not if there was a pony planer.

Q. You saw only two of any kind?

A. That is all the pony planers I seen in the shop.

Q. Do you know the S. A. Woods single-surface pony planer? A. No, sir, I seen a lot of Woods planers there, but I have never seen a Woods pony.

Q. You did nothing with the steam-engine?

A. No, sir. Mr. Kramer has that. Q. How about the ventilator?

A. Mr. Kramer took that.

Q. With the belts and blowers, and all that? A. Yes, sir.

Q. And the heaters he took?

A. Yes, sir.

Q. Did you see the patent steam sand-blast file-sharpener?

A. I seen a file-sharpener there-oh, no, that was a saw-sharpener.

Q. Did you see a steam sand-blast machine for sharpening?

A. No, sir.

Q. Mr. Kramer would not get that, would he?

A. I don't know.

Mr. KRAMER: Yes, I have got that.

Q. Did you get the patented automatic Springfield emery knifegrinding machine?

A. No, sir, that is what you were asking me before; I did not

have that.

Q. No, I have not asked you that before; this is another one?

A. No, sir.

Q. For the grinding of long planer cylinder knives-did 1897 you see that?

A. No, sir.

Q. Did you see the improved oil tanks with pumps?

A. I seen some oil tanks standing there.

Q. Are they included? A. No, sir.

Q. Has any one included them?

A. No, sir.

Mr. KRAMER: I have got the oil tanks.

A. Mr. Kramer has got a lot of these tools and one thing and another which I thought he was taking in.

Q. I suppose he has got the engine; I am passing that. You did

not take the extra saws for the small machines?

A. No, sir.

Q. Didn't include them at all?

A. No, sir.

Q. How many saws did you take in the first floor, do you remember?

A. You mean on the ground floor, on the basement floor? There is no basement: I mean on the ground floor?

Q. There is no basement; I mean on the ground floor?
A. That is what I mean. There was four large saws on segment, and three other large ones and a large band saw.

Q. That makes seven?

A. And then four rip-saws and three swing cut-off saws and a eircular saw-that is 13.

Q. How many on the second floor did you take? A. I marked the second and third floors together.

Q. Take them on the second and third together, how many did you get?

A. Twenty saws.

Q. Clear to the top?

A. Yes, there is only two more floors; there is the first 1898 floor. Q. Now, would it surprise you to know that there were up there

347 saws, above the first floor? A. Well, they must have them in a corner stored away, where I didn't see them.

Q. In your estimate of value you have estimated the single saws you saw at work?

A. I suppose in this you say 347, it must be those that are not in

the machines.

- Q. But the saw is worth just as much out of the machines as it is in?
 - A. As I said before, I have only the saws in the machines.

Q. You didn't estimate the others?

A. No, sir.

Q. They are worth just as much outside as in?

A. Yes, sir.

Q. Did you go into the filing-room to see where they were filing saws?

A. I seen the band-saw filer on the first floor.

Q. Did you see a filing-room where they were filing saws on the second floor, specially?

A. I seen a little room, as I stated before, in one corner, where there were saws on the shelves.

Q. Did you see what is called the filing-room?

A. I suppose very likely that must be the filing-room.

Q. Did you see-

A. Yes, I seen it, but I forgot. I was going to make a memorandum of it, but I forgot.

Q. There is a filing-room down there without a single shelf in the room. That cannot be the one that is in your head. Did you see it?

A. I cannot remember any other room for filing saws specially.

1899 Q. Then you did not see it or don't remember? Isn't that so?

A. That is so; yes, sir.

Q. Did you take into consideration the planing-mill office with

A. I was in the planing-mill office if it is a little office what is on the sawdust room.

Q. The foreman's office?

A. I suppose that must be it. I was in there.

Q. Did you estimate anything inside of that office?

A. I estimated all what belonged to the building in that.

Q. What belonged to the building, but not the furniture or desks or fixtures in there, did you?

A. I didn't estimate any furniture in there.

Q. What was there in there?
A. A small desk in there; it is a small room, and some chairs.

Q. Did you find the electric-bell attachment?

A. I had nothing to do with that; Mr. Cramer had.

Q. Did you see any of the Backus hand-power matching machines?

A. There are two little matchers, what you asked me before. I suppose that is what is meant by that, isn't it?

Q. No, it is entirely different.

A. It is a little bench where a man shoved the short boards by hand through. Q. Yes, that is it. How many of them did you get?

A. I got two of them, I think.

Q. Get at your maximum that you did actually get of those?

A. I only got two.

Q. If there were ten there would it surprise you?

A. That would surprise me. I remember there was four; I think there was a mistake made in the figures.

1900 Q. A bumping machine—did you see any of those? A. No, sir.

Q. I think I can show you what I mean by it by this picture. Did you see any of those? (Showing witness a photograph.)

A. Yes, that is the saw-table. Q. You called it a saw-table?

A. Yes, sir.

Q. How many saw-tables did you get? A. There is quite a number of them.

Q. You estimated them separately? A. No, they are not with the saws.

Q. I thought you said a little while ago those things you called tables you didn't estimate?

A. There is only two or three large ones, those swing cut-off saws,

a long table.

Q. Didn't you tell us a little while ago that as to the table that was there with one of those large machines that you didn't estimate it?

A. Yes, that is what I say; the swing cut-off saws.

Q. You didn't estimate the table at all?
A. The large long table I didn't estimate, but I think there are tables on the estimate.

Q. How many. Those were with the rip-saws?

A. Rip-saws and cross-cut saws; each one has got a table.

Q. You estimated those?

A. Yes, sir.

Q. How many?

A. There is 18 or 19 of them.

Q. Those are in connection with the rip-saw? A. Yes, each rip-saw or cross-cut saw has a table.

Q. Did you take into your estimate the rollers of those tables or gauges?

A. The whole table, gauges and everything, is fastened to 1901 the table.

Q. What did you put in the cost of those?

A. \$44 and \$45.

Q. Each?

A. Yes, sir.

Q. Including the saw?

A. Yes, sir.

Q. And including the rollers? A. Yes, that is the whole thing. Q. Rollers and gauge-table?

A. Yes, sir.

Q. That was in connection with the rip-saws. Did you in addition to that see what I have shown you, eight bumping machines, operating separately from the rip-saw tables?

A. I thought they all belonged to the saw there. They have some tables there where there is no machine on; that may be one of

those.

Q. That is what it is. It is not anything near any rip-saw; your rip-saw tables are all right?

A. They are smaller; they look like a saw-table.

Q. They were not near any saws?

A. No saws.

Q. That is what I call improved bumping machines, and there are eight of them and did you estimate them

A. Well, there are no machines, they are just tables.

Q. So you didn't estimate them?

A. No, sir.

Q. And those in connection with saws you estimated as a part of the saw apparatus?

A. Yes, the saw-table.

Q. Did you see a large power joiner or buzz planer, with extra knives?

A. I can tell you all the planers I got.

- 1902 Q. No, but this buzz planer, a very large machine?
- A. They have got some very large planers, three or four of them; but whether they call them buzz planers or not I cannot tell.
- Q. Isn't there any difference? Do you know what a buzz planer is?

A. That is the first time I heard the name.

Q. Do you not make any distinction between the other planers you have told us about and what is called a buzz planer or joiner?

A. I have not seen any.

Q. Did you see any of the sanding wheels?

- A. Sanding wheels—let's see. I cannot remember. I don't know what it means.
 - Q. Well, a sanding wheel is something that puts a fine finish on?

A. Sandpaper machine, you mean.

Q. Only it is a wheel instead of sandpaper?

A. No, sir, I didn't see them.

Q. Didn't estimate them, did you?

A. No, sir.

Q. The sanding of fine work is very important; this fine inside work?

A. It is with us.

Q. You sandpaper it in your shop, do you?

A. Yes, sir.

Q. Do it by hand?

A. Some by hand and some by machinery.
Q. Don't you have anything done by wheel?

A. No. sir.

Q. Does it occur to you that it would be a very great improvement if it could be done by machinery and a wheel?

1903 A. We have a sandpapering machine; we had wheels in the olden times. They used to have wheels altogether. There may be some of those there; I didn't notice.

Q. Well, you didn't see any, anyway, and you have not included

any of these, have you?

A. No, sir.

Q. Did you see a large band resaw for splitting boards?

A. Yes, sir.

Q. Is that in your list?

A. Yes, sir.

Q. How many?

A. There is one.

Q. Did you see what kind of a resaw it was?

A. No, sir. I looked for it, but I could not see any name on it.

Q. How many extra saws with it?

A. No extras with it.

Q. They are not put down, you mean, on your list?

A. I have not put any extra saws down on my list.

Q. They were right there. Not in any room, but right there by it?

A. No, I have not put any down; only what was on the saw. I

got a large band saw, \$1,100.

Q. Have you got any extra parts down for that?

A. No, sir.

Q. Isn't there right there by it; right just back of it-

A. I might have seen a saw hanging near it.

Q. No, but with extra parts of the entire machine right near it and just back of it, so that any part of that big machine could be supplied instantly by the man working the machine if it broke. Did you see them?

A. No, sir,

Q. You didn't estimate the value of them?

A. No, sir.

1904 Q. Did you see standing right with it, also, in case of any warping of any of the machinery, an extra steel anvil, with hammers, standing right by that big saw?

A. No, sir.

Q. Didn't estimate them either?

A. No, sir.

Q. Did you see a Huntington four-sided moulding machine with

the shavings connection?

A. As I said before, I didn't see all the names. I looked for several of them, but I could not find them. I have got a moulding machine down.

Q. What did you put down that resawing machine at, by the

way?

A. \$1,100.

Q. You didn't notice anything that would identify this Huntington four-sided moulding machine as different from any other moulding machine?

A. We have a four-sided moulding machine in our shop, and I

have got one here, and I have got the price of it down.

Q. What did you put it down at?

A. \$470.

Q. Is it the Huntington?

A. I don't know what name it is.

Q. You did not look to see what it was?

A. No, sir.

Q. Well, if they paid \$650 for the Huntington within a short time, you would think they had been cheated, would you?

A. Oh, I would not think they had been cheated.

Q. Where did you get your information that that was worth \$470?

A. I got my information from the machine we got and from

Jenks—asked him besides.

Q. Did you put that Huntington four-sided moulding machine down from your own knowledge?

1905 A. Yes, sir.

Q. Where did you buy your machine?

- A. We bought our machine from Fay. Q. What is the name of the machine?
 A. The Fay machine.
- Q. Is it patented?
- A. Yes, those machines are all patented. Q. You put this in at \$400?

- A. No, sir, \$470. Our machine didn't cost that much and I put \$100 on top of our machine, because I thought it might cost more.
- Q. Well, what you put down here as a large matcher and moulder you put down at \$470-that is what you have just been talking about?

A. Yes, sir.

- Q. But that is not the Huntington four-sided moulding machine?
- A. Ours is a four-sided moulding machine; it is not a Huntington; it is a Fay.

Q. Now, you put down underneath that one small moulder and matcher at \$130?

A. Yes, there is another one.

Q. Have you got one like that in your shop?

A. Yes, sir.

Q. You put that down from your own knowledge at \$130. A. Yes, sir.

Q. Did you make any inquiries as to the price of that besides your own knowledge?

A. As I said before, we have one of those large machines in our shop, and then I spoke to Mr. Jenks about it besides.

Q. You put it down at \$130?

A. I mean the large one. Q. I am talking now about the one you put down at \$130. 1906 A. The small one?

Q. Yes.

A. No, I didn't ask any questions about that. We got one about similar.

Q. Now, that was a Huntington machine? A. Well, that I don't know. Ours is not a Huntington. Q. You did not see any Fay machine at Backus'?

A. No. sir.

Q. If they had purchased that machine you got down there at \$130 and paid \$550 for it, you would be willing to change your mind or think that they had paid too much?

A. I would think they had paid too much.
Q. Because you prefer the Fay machine to the Huntington? A. I don't say I would prefer the Fay machine, because I don't know how good the other one is. Ours is a good machine.

Q. Did you see an S. A. Woods large moulding and matching

machine, with shavings connections?

A. Yes, there is one large 24-inch matcher.

Q. I am not talking now about the S. A. Woods single-surface pony planer; that is another patent, but I am talking about the Woods moulding and matching machine?

1117

A. Yes, there is one of those; a large one.

Q. How many did you see of the large ones, and how many did you put down?

A. I have got four.

Q. What did you put them down at? A. Three of them at \$1,600 and one at \$1,900.

Q. That is \$1,600 for the three?

A. Apiece-\$4,800. There is three in one place and there is one

upstairs. There are four.

Q. Don't you think that you are getting the pony planers 1907 and matching machines and the moulding and matching machines somewhat mixed?

A. Well, I don't know the names of the different machines.

Q. Well, how can you tell the fact if you don't know the names? A. All I know is these large machines there, I think, were all Woods' machines.

Q. You think so? If you do not know the names and you got your information as to prices by inquiring of Jenks, how did you tell Jenks what the machines were?

A. I did not get these prices of Jenks. I wrote a letter to where

these machines are made.

Q. Where did you write?

A. To Woods, of the Woods Manufacturing Company, of Boston.

Q. Where is the letter?

A. I guess I have got it with me.

Q. Have you got a copy of the letter you wrote him?

A. No, sir. Here is the letter.

Q. We are certainly talking about different things. (Reading letter.) "Messrs. Spitzley Brothers-Dear Sirs: Answering your inquiry of the 27th instant, will say we do not now make machines the same as we sold A. Backus, Jr., & Sons some years ago. price at that time for the one 24 planer and matcher was about \$2,000, and for the 2-30 double-surfacer about \$1,800. These machines were sold through our branch house, and we do not know here the exact prices. We are now furnishing new pattern machines, heavier, and of course more up to date, that take the place of these. The 1-24 machine would now be worth on cars here (Boston) \$1,900, and the 2-30 double-surfacer from \$1,500 to \$1,600.

This seems to be all we can say towards giving you values you ask for in your letter. Yours truly, D. A. Wood Machine 1908 Co. By E. N. Health, treasurer." Did you keep a copy of

your letter?

A. I don't know. I told our book-keeper to write and I don't

know whether he has a copy or not.

Q. On the strength of this letter you filled into your inventory and appraisal the price of \$1,900 for one and \$1,600 for another?

A. Yes, sir.

Q. And swore to that as a valuation?

A. Yes, sir.
Q. You could not tell yourself on any examination you made?

A. No, sir.

Q. And you wrote a letter down there, got this reply back, and then swore to the valuation?

A. Yes, that is so.

Q. And yet even on the machines you did inquire about, which seems to have been a planer and matcher and a double-surfacer, you put down \$1,900?

A. For one, yes, sir.

Q. On this valuation against Backus?

A. Yes, sir.

Q. When they informed you that it would be worth \$1,900 on the cars at Boston?

A. Yes, sir.

Q. Without adding anything for transportation or handling, did you not?

A. Yes, sir.

Q. And for the other you take the price at Boston without adding anything for transportation and put it on your inventory?

A. Yes, sir.

Q. Now, did you ask them the price of a matcher and planer, such as they use, in your letter?

1909

A. That is the answer: yes sir

A. That is the answer; yes, sir. Q. You used that term, did you?

A. Yes, sir.

Q. And, then, for the other machine you asked for a double-surfaces, did you?

A. Yes, sir.

Q. Kept no copy of the letter?

A. As I say, I don't know.

Q. Will you look and see just what you asked about?A. I can inquire and see whether a copy is there or not.

Letter referred to marked "Exhibit Spitzley, 2."

Q. You put down four machines like that, did you? A. Yes, I got four for \$1,600 and one for \$1,900.

Q. You gave on three of them the lowest prices and on the other

the highest?

A. One of them was \$100 and the other \$1,600, and I have got four of those \$1,600 and one \$1,900. As they say here in the letter, the machines they are making now are heavier and more up to date, so I thought certainly that would be satisfactory, because those machines would be better what they are making now than at that time. They were bought ten years ago.

Q. How many of them are there all told-30-inch machines?

A. Four; and then there is one 14.

Q. That makes five?

A. Four 30-inch machines, yes, sir, and one 24.

Q. That makes five.

A. And one planer and matcher; that is six.

Q. And you asked him for a planer and matcher?

A. I asked the price of a planer and matcher and double-surfacer.

1119

Q. What were they for? What did you ask him about; what

A. I say I asked him for the same machines that-

1910 Q. How did you explain to them?

A. I described them to him as the same machines he sold to Backus some nine or ten years ago.

Q. How did you know they were the same machines they made

for Backus?

A. That is the answer to my letter. I could not tell any more than that.

Q. How did you describe the machines you wanted information

about? What did you call them, the four machines?

A. I called them the 30 inch double-surfacer and the 24-inch

planer and matcher.

- Q. Now, you estimated three of those machines at \$1,600, didn't you?
 - A. Four and one at \$1,900, and one at \$1,300—that is the 24-inch. Q. Did you see there any 30-inch, eight-roll, broken-bar double-
- surfacers?

 A. Well, I seen four 30-inch surfacers. That is all I got on my list.

Q. That is what you are talking about?

A. Yes, sir.

Q. What did you say as to the four S. A. Woods large moulding and matching machines—did you see them at all?

A. I didn't see a large moulding and matching machine-not

four. I seen only one, a large one.

Q. Let us see if you would recognize the machine as to which you made the inquiry of Woods. (Showing witness photograph.)

A. I could not recognize it from this picture here.

Q. You would not know whether that was the machine as to which you wrote Woods or not?

A. No, sir.

1911 Q. (Showing witness another photograph.) Was that the machine you wrote about?

A. I think this looks like one of them.

Q. Well, that is like one of them?

A. That looks like one of them.

Q. Surfacer?

A. Yes, sir.

Q. Did you see or inventory five machines like that I now show you?

A. I could not recognize it from this here.

Mr. DICKINSON: Well, I will offer that in evidence; he says thi is the one as to which he wrote to Woods.

A. That is pretty hard for a man to tell exactly from a picture. It may be the machine, but I could not recognize it from the drawings.

Q I want to return and finish this. Does the picture I now show

you contain the machine such as you wrote to the Woods Company about?

A. I could not swear to it, not by the picture. I think this here is a smaller machine, that looks like that smaller machine; it looks so little from the end. Looking at it from the sides it don't seem to have so many rollers.

Mr. Dickinson: I will have it marked as the one I made inquiry about. He says he cannot tell whether that in the machine he wrote to Woods about or not.

Photograph referred to marked "Exhibit Spitzley, 3."

Q. You can see by looking at that whether that looks like any of the machines you saw?

A. Yes, that looks like that; a good deal like that.

Q. Like what?

A. Like the machines they had down there.

Q. What do they look a good deal like? What on your inventory—what do you call them on your inventory?

A. I call them three large planers and one large planer.

There are four of them, 30-inch, what they call double-surfacer.

Q. You did not write to him about those?

A. I wrote to him about those large double-surfacers, as the letter states. I don't know anything about the pictures.

Mr. Dickinson: I will have this marked as the one I last asked about.

Photograph marked "Exhibit Spitzley, 4."

Q. I am going to ask you now whether "Exhibit Spitzley, 4," looks like the machine that you described to the Woods Machine Company in your letter as a 2-30 double-surfacer?

A. I don't say I can say it looks exactly like it. It looks some

like it, but not exactly.

Q. This "Exhibit Spitzley, 3," looks like what you described when you inquired of the S. A. Woods Machine Company as a planer and matcher?

A. I cannot tell from these pictures; no, sir. When I wrote about these I asked them just for the same machines that they sold to Backus so many years ago. That is the best way I could ask them, because it is the same parties that sold them to Backus. Backus told me he bought them from him.

Q. Did you see an improved double eight-roller broken pressure-

bar double-surfacer?

A. I seen a 24-inch machine there, but whether you call it that way I cannot tell.

Q. What did you estimate that at?

A. I estimated that at \$1,300.
 Q. Where did you get your information to get that?

A. I got that from the other one.

Q. From what other one?

A. When I had the conversation with Jenks about the machines

he told me first. I thought he had the prices of them. I 1913 went to ask him, and he said he could not give me any prices, because he didn't think there was any agency here in the city, and I said I guessed I better write them, and when I got the answer I went back to Jenks and showed him the letter.

Q. This letter?

A. Yes, and I told him I forgot to ask about that 24-inch one.

And I said I suppose we will have to—

Q. So Jenks took a guess at it?

A. Of course he is an old machine man.

Q. So you both took a sort of guess at it and put it down?

A. We put it down because I know a 30-inch cost so much more

than a 24-inch.

Q. You did not know, did you, that that especial machine, a double eight-roller broken pressure-bar double-surfacer was built between Woods and Backus, on Backus' own suggestion of improvements, and was the only one in existence?

A. I didn't know that, no, sir.

Q. Now, the gang rip-sawing machines—did you see any of them?

A. I didn't see any gang saws there.

Q. If there are three sets of gang rip-sawing machines you have not seen them or included them?

A. I have seen three rip-saws, but no gang saws.

Q. Then if there are five-I said three—five gang rip-sawing machines, you did not see them or include them?

A. I have not seen any gang saws.

Q. Then there are three what are called power spur-and-pulley-

feed rip-sawing machines?

A. I seen three rip-sawing machines like the one you refer to. I don't know the names or expressions used to describe them. I have three large rip-saws here, \$1,125.

1914 Q. That was three, but you didn't see the other three I gave you?

A. I have got one segment rip-saw here, \$575.

Q. That is a resaw?

A. I don't know how they call them, rip-saw or resaw.

Q. Are you familiar with those saws?

A. No, we have none in our shop.

Q. You asked Jenks then?

A. Yes, sir.

Q. And he took a flier at them?

No answer.

Adjourned till October 10, '93, 10 a. m.

Остовек 10, '93-10 а. т.

The COURT: I will state to counsel this morning that I do not think there will be anything but detail this morning, and it will not be necessary for me to remain here. If any question should arise you may send for me over in the probate court. Judge Durfee is away this morning, and I have agreed to dispose of his business.

Henry Spitzley, recalled for further cross-examination.

By Mr. Dickinson:

Q. Did you see or have you on your list an improved swing cutoff sawing machine?

A. I got several cut-off sawing machines, but I don't know which

should be the improved one.

Q. A swing cut-off?

A. Yes, sir.

Q. How many did you get?

A. Four.

Q. You are sure you didn't miss one? A. I didn't miss any willingly.

1915 Q. No, I know that. I do not mean to reflect upon you at all.

A. I do not wish to have that done, because I would not do anything that I thought was wrong against either party, not for

any money.

Q. I am only trying to see the fact of your testimony on crossexamination, and see if you omitted anything by overlooking it. No one supposes here that you are going to swear to a lie. I do not, and I do not want to carry on the testimony with any such assumption. Well, if there were five in the shop, then you have omitted one?

A. I would have missed one; yes, sir.

Q. Now, you are familiar with these cutting machines?

A. Yes, sir.

Q. Do you have them in your own shop?

A. We have one in our shop, yes, sir; and we have another one, but not similar to this one.

Q. Did you notice that these were mounted on extended frames?

A. They were fastened overhead so as to swing.

Q. You do not have that sort of an attachment in your shop, do you, with extended frames?

A. We have one, but there might be some one that might be arranged a little different from what ours is.

Q. Did you notice whether they were?

A. Not what I have seen, no, sir.

Q. Did you notice the gauges on these swing cut-off machines?

A. There are gauges-no, there is no gauge on what I have seen on the swing machine. There are gauges on all the other saw-tables, but not on the swing cut-off.

Q. Then on the four you did see you did not see any gauges at all?

A. No, sir.

Q. How carefully did you examine these machines?

A. Well, I went over them several times, and took down the items and went there again repeatedly, when I thought I was not sure. I went there three times to look after the machines.

Q. But with the exception on your appraisal of a sum amount-

ing to about \$1,400, which you named as being familiar with, you saw many machines there you had not seen before, didn't you?

A. That is, I have not seen those machines down there. I have

seen similar machines.

Q. Did you examine the mounting of them?

A. Well, I didn't examine them so closely, no, sir. Q. Did you see them in operation, all of them?

A. Some of them, not all.

Q. I suppose they do use machines that you buy from the shop or works or from the patentee, or whoever it might be, for different purposes in that shop than you use them in yours, don't they?

A. Yes, sir.

Q. Don't you think that it would require some different equipment in order to use them for other purposes?

A. Well, for the same machine they may require something

different from what we are using.

Q. And those would cost, would they not?

A. Yes, sir.

Q. When you have estimated the value of a machine, have you taken into consideration the difference in equipment or improvements?

A. No, sir.

Q. Can you tell us whose make these four machines were, that you saw, the cut-off machines, in Backus' shop?

A. No. sir.

Q. Did you look at the machine to see what was stamped on it?

A. I looked at several, but I didn't look at them to see 1917 who made them.

Q. Did you find the machines you saw there were better or cheaper machines than yours were?

A. Well, I think they were about the same thing as ours. If I had thought it was any different I would have examined it closely.

Q. Can you tell us who made yours?

A. No, sir. We have several different makes of machines in our shop, and I would not know without going and looking at them now where they are all made. We have some made by Fay and some by Hammond & Son and one Eagan.

Q. Do you have counterweights on your machines?

A. We have a counterweight on one machine. Q. On this swing cut-off machine?

A. No, sir. Q. Did you see any on the Backus machine?

A. No, sir.

Q. You would not say they were not there?

A. No, sir, I would not say that.

Q. You said you saw no gauges, or didn't you notice them?

A. Not on these machines. I have seen gauges on other machines, but not on them.

Q. You did not see the gauges on these machines?

A. No, sir.

Q. Could you say they were not there?

A. I could not say. I may have seen them if I looked closer, if they were there.

Q. Did you see where the provision was made for stops in the ma-

chine and for rests?

A. I don't know. If a man cuts off, swings the saw, he has got his timber or board laying there.

Q. Did you see the machine in operation?

- 1918 A. Yes, I seen one in operation; that was on the lower end of it.
- Q. Did you see to what use Backus put these four swing cut-off machines?

A. I seen only one used there.

Q. Did you see the Greenly patent improved spur-feed gang rip-sawing machine?

A. I seen a heavy sawing machine. I suppose that is very likely this one: what we call a segment sawing machine.

Q. Did you notice the name of it?

A. I looked for that purpose, but I could not find the name.

Q. How many of them did you see?

A. One of them.

Q. That was a gang sawing machine?

- A. There was only one saw in it when I seen it.
 Q. Are you not talking about a resawing machine?
 A. I suppose they use them mostly all for resawing.
- Q. A large Greenly resawing machine you are talking about, are you not?

A. Just what you name, yes, sir.

Q. I am talking about a rip-saw, gang rip-sawing machine, not a

resawing machine.

A. There are four saws right near one another. One is what we call a segment, where the plate is put together in pieces and the other one is not cut in pieces. If they call them gang saws, I have seen them.

Q. Isn't that a resawing machine?

A. They do resawing with them, yes, sir.

Q. Then it is not a gang rip-sawing machine?

A. I think not; I did not say there was a gang saw.

Q. Or a rip-saw. A rip-saw is not a resaw?

A. Oh, yes, a rip-saw is a resaw. Resawing is ripping up a board, setting it up edgeways and running it through the saw; that is ripping or resawing. Call it just as you are a mind to.

Q. Could you saw a board two feet wide through a machine—

A. There is a machine in it, yes, I think will saw a two-foot board, that is the one—the large one, what I call the segment saw.

Q. Where did you see the sawing machine that you think I am talking about as the Greenly heavy patented improved spur-feed gang rip-sawing machine?

A. Down below on the first floor.

Q. Inside the building?

A. Yes, sir.

1125

O. Now I am sure you are talking about a different thing. Did you take into consideration or examine any machines outside the building, next to the fence?

A. There are several of them, yes, sir. There is some down near

the fence on the lower end.

Q. What did you call the one next to the fence, this way?

A. One cut-off saw, swing cut-off saw, and there is a cross-cut saw and a rip-saw, too. I think there are two rip-saws down there. It may be that one of the saws, what I call the rip-saw, is what you call the resaw.

Q. Did you see any machine there that was a rip-sawing machine that also had a resawing attachment, so that you could saw from

the rip-saw right on to the resawing attachment?

A. Well, very likely-

Q. Not very likely. I want to know just what you saw?

A. What I was going to say, there was four saws right alongside of one another, and it is very likely they have an attachment that I have not seen that is different; that was not on the saw when I seen it.

Q. It was not there when you saw it?

A. I say it may have been there. I never seen it. It was 1920 not attached to the machine when I seen it.

Q. Did you see the scroll or gig sawing machine?

A. Yes, sir.

Q. What did you put that down at?

A. \$72. We have one similar to that in our shop.

Q. Whose make—the heavy scroll gig-sawing machine?

A. I don't know.

Q. Whose make is yours?

A. I don't know whose make ours is, neither, unless I go and look at it.

Q. Is it an Eagan?

A. It may be, but I am not sure. There is an Eagan machine down there, a boring machine, that I seen the name on, down at Backus'.

Q. Well, we have been over that, haven't we?

A. That is the only Eagan machine that I seen there; that I seen the name of.

Q. You do not mean to say this was not one, this gig-sawing machine?

A. Oh, no, sir, I do not say so.

Q. Did you see what is called a Chicago improved beveled siding machine, with cutter attachment?

A. I cannot remember that I seen it under that name.

Q. You know what a beveled siding machine is, don't you?

A. Well, we have not got one in our shop. It might be there. Some of those other machines they cut siding with down there.

Q. Then you don't know whether you saw that or not, do you?

A. I don't know.

Q. Well, that would be a pretty big machine?

1921 A. Well, I don't believe any big machine slipped my observation.

Q. Did you see the shuking machine, improved combined shuking machine?

A. I don't know.

Q. Did you see what is called a shuk machine?

- A. I would not know it if I saw it unless they told me, because I don't know what the name means. There are so many names I don't know.
 - Q. Can you tell what the machine is?

A. No, sir.

Q. Don't you know what a box shook is?

A. No, sir, I don't know what that name means.

Q. Well, it is for holding them up and driving them together.

A. Holding up what and driving together what?
Q. Holding up the timber that goes into the box.

Mr. BAKER: The parts themselves are called shooks, aren't they, before a box is nailed together?

Mr. Dickinson: They are held together. At all events you don't

know it by shook?

A. I don't know what it is, I could not tell you; that is something outside of our business where I don't know anything about it, this special boxing.

Q. Have you ever been in Mt. Clemens?

A. Yes, sir.

- Q. Do you know that large mill of—his name is Shook, I think—on the river?
- A. I have only been there once and I did not have time to look around much.

Q. Where they manufacture nothing but shooks?

A. I have never seen that.

Q. Did you see there any wheel or swivel wood or kindling trucks?

1922 A. I seen a number of trucks there.

Q. Are they embraced in your estimate?

A. No, sir, I didn't know I was to put them in the appraisement, that is the wagons and trucks and all such.

Q. Did you know there were 65 of those heavy kindling-box trucks, with heavy wheels and swivels?

A. I didn't count them.

Q. You did not embrace them in your estimate, did not put them down or appraise them?

A. No, sir.

Q. Any more than you did the heavy truck wagons?

A. No, sir.

Q. Did you take notice of the heavy elevators?

A. Yes, sir, but I have not got them in my estimate. Mr. Kramer has got them.

Q. Outside of the 65 improved heavy kindling and box trucks, did you embrace in addition to the wagons I have told you of, the mill or factory trucks with axle wheels and swivels?

A. Not any trucks.

Q. There are 122, did you notice?

A. I don't know. There are quite a number of trucks around there and I didn't put them down. I did not know I was wanted to do that.

Q. You did not, either you or Mr. Cramer?

A. I don't think so.

Q. Did not put down the wagons or trucks in use? A. I don't think Mr. Cramer has for them neither.

Q. Did you know the Backus & Joslyn improved 54-inch seg-

ment inserted-tooth resawing machine?

A. You mean a circular saw? That must have been one of the large saws that I had down.

Q. Resawing machine-that is the one you had down?

A. Yes, sir.

Q. How many of those?

1923 A. There are four large ones there.

Q. That is what you told us about a moment ago?

A. Yes, sir.

Q. What did you put them down at apiece?

A. I got those four-\$2,225.

Q. Did you appraise them se-arately?

A. Yes, I got one—the one I suppose you were talking about just now, \$1,100, and the other three are just about alike, \$1,125.00—as much as I could see. I could not see much difference between them.

Q. There is one Backus & Joslyn, one Greenley & Dingler, one Backus & Graham, and one Backus & Huntington machine. Did

you get the names of them?

A. No, sir.

Q. You simply bunched them together as so many resawing machines?

A. The large one I got separate, and the other ones I got together.

Q. And appraised them each the same?

A. One is \$550. That is what I have got it; I have made a mistake. The large one I got at \$550 and the other three at \$1,125.

Q. That is the aggregate for the three?

A. Yes, sir.

Q. Now, did you appraise the Greenley & Dingler at more or less than the Backus & Joslyn?

A. Well, I cannot tell.

Q. You can't tell the difference?

A. No. sir.

Q. Did you observe any difference in the names of the machines?

A. I didn't look for the names.

Q. What distinction did you make among the three? Give us the highest and the lowest of the three you appraised.

1924 A. I could not tell you just now.

Q. I thought you put them down—

A. Oh, no, I got the one separate, \$550. That is the large one. and the other three I got down at \$1,125.

Q. Didn't you appraise them each separately?

A. I stood there and looked at them and I thought they were all three alike, about the same thing.

Q. So that you made no distinction, but appraised them all about an equal amount?

A. Yes, sir. Q. What is an inserted-tooth saw?

A. Well, that is pieces—it is a saw where a tooth can be put in separate.

Q. Are those pretty expensive saws?

A. Yes, sir.

Q. Are those kind of saws patented?

A. Yes; they are all patented.

Q. Of those three would it surprise you to know that one of them cost double what either of the other two would?

A. It may be that is so, I have not noticed it. I did not look for

the names of them and for the patent of them.

Q. You think it may be, but did you ever have those saws in your own shop?

A. No, sir.

Q. How did you get the figures that you put down?

A. As I told you yesterday, I went to Jenks and took his advice about it.

Q. Did Jenks have any other description of them save what you gave?

A. No. sir.

Q. You did not take the names of the machines when you went to Jenks?

A. No, sir.

1925 Q. What did you tell Jenks you wanted him to appraise

for you?

A. I told him there were three large saws, rip or resaws, and they were all very good, substantial make, and I told him the size of them, about three feet in diameter, and I told him to look over his catalogue for any such saws he had in his catalogue, and what they cost; and I explained the other one as the inserted-tooth, as you said, and he said that is what they call the segment saw; and I explained that to him and told him how it was, and explained the extre heavy frame and the holdings of it to him, and he told me that was-

Q. You told him they were three-feet resaws, did you?

A. Three of them; one is four feet, the big one, or a little over four.

Q. Will you testify positively that there is a single three-foot resaw in the mill?

A. I had my rule on one of them, and as near as I could measure it was three feet-18 inches on the side from the center.

Q. I suppose the fans and blowers and all are taken by Mr. Cramer?

A. Yes, sir.

Q. Did you see any tying racks for tying up shooks?

A. I seen some where they had these frames as you showed me on the picture yesterday; very likely that was some of them.

Q. Did you appraise them?

A. No, sir.

O. How many did you think there was in the shop?

A. As much as I remember now there might have been 14 to 16.

Q. And the tying rings?

A. I didn't see any rings.

1926 Q. If there were 115 tying rings you didn't see them and didn't appraise them?

A. No. sir.

Q. Did you see the iron drilling machine?

A. Yes, sir.

Q. What did you appraise it at?

A. \$45.

Q. Did you see the iron and wood vices?
A. Yes, but I think Mr. Cramer has got them.
Q. Have you got them on your appraisal?

A. Only got one iron drill; that is all.

Q. But the whole appraisal, you took down with Mr. Cramer, didn't you?

A. Yes, the whole amount, the gross amount. He has the differ-

ent items.

Mr. CRAMER: I have got the iron vices.

Q. You have no vices at all?

A. No, sir.

Q. Did you see a large machine downstairs that is called a traveling-bed ripsaw?

A. A traveling-bed?

Q. A traveling-bed ripsaw.

A. It might have been one of those saws that I seen down there that had a traveling bed; I didn't notice any traveling bed on there.

Q. Did you appraise it?

A. I appraised all the saws that I seen there, but I didn't appraise the bed.

Q. A joiner and rip-sawing machine, there is a pretty good view of it here—if you took that in? (Showing witness a photograph.)

A. I have got that here, but I didn't take the traveling bed. I have got the machine and saw but not the bed.

Q. Is the bed of any value, do you think?

A. Yes, sir. 1927 Q. Did you

Q. Did you appraise it?

A. No, sir.

Q. Isn't the traveling bed all there is to that except the saws?

A. Well, it is about the same as a table on another saw. The saw is fastened to a frame, and they have a bed in place of where 142—55

the others are; you shove it by hand, on a table, and this here moves along by machinery, and moves the lumber up to the machine.

Q. (Showing witness photograph.) You see here are cast ironin a traveling bed-cast-iron turned rollers?

A. Yes, sir.

Q. A great many of them?

A. Yes, and this is the timber it slides on.

Q. These rollers are cast iron, along the traveling bed?

A. I could not tell you, they may be.

Q. You did not appraise the machine as far as that is concerned?

A. Not the bed; no, sir.

Q. What did you call the machine worth?

A. Well, I suppose I have got that saw in with some of the other saws, \$44, or \$46.

Q. Now, there is a Prebble improved combined siding resawing machine, with a planer attachment?

A. I put down all the saws that I seen, but I cannot remember one with a planer attachment?

Q. You have not put that down? Well, it would be worth more with the planer attachment?

A. I suppose it would be worth more, but I have not seen any there.

Q. You have not got that machine down with planer attachment; you have not appraised it?

A. No, sir.

Mr. BAKER: He does not mean he has not got the machine down, he has not got the planer attachment.

1928 A. I might have the saw down, but I have not seen the planer attachment.

Q. You have not the combination down then?

A. No. sir.

Q. You have not appraised anything with a planer attachment?

A. No, sir, I have not seen any.

Q. You found this mill well equipped with fine machinery? A. Yes, sir, good machinery in that mill.

Q. Everything in good order?

A. Yes, sir.

Q. A first-class mill?

A. I think it is a very good plant.

Q. And very fine machinery for the work to be done, inside work? A. Yes, sir. I found very good machinery there; yes, sir.

Q. How many thicknesses of floor in the frame of the mill have you included?

A. Double inch and a quarter flooring.

Q. Of what material?

A. The lower floor is pine and the top floor is maple.

Q. And double flooring on each floor?

Yes, inch and a quarter.

Q. What thickness of floors on the elevators?

A. I suppose it is the same as on the other. I did not examine exactly as to that, but I suppose it is double flooring, very likely, two and a half inch flooring.

Q. Did you estimate the railroad tracks?

A. Yes, sir.

1929

Q. What did you appraise them at? A. 775 feet of private railway, \$999.

Q. And the bumpers?

A. Yes, sir. Q. You included those? A. Yes, sir.

Q. What did you appraise the bumpers at? A. I did not make a special appraisement.

Q. You just lumped them all together with the tracks?

A. Yes, sir.

Q. How did you get your information as to the value of the railroad tracks?

A. I got the price of the rails, the number of pounds to the foot, and I counted the ties, and saw how far they were laid apart.

Q. Did you charge anything for the excavation for the track, making the road-bed?

A. I figured that in the laying of the ties level-I took it kind of

that the ground was level. Q. You did not put anything in for the laying or preparing of the road-bed?

A. No, sir, I did not take that, because I didn't know how the

ground was when it was laid.

Q. And you did not, therefore, take it into consideration in appraising?

A. Did not make any extra charge for it. Q. Only for the ties and the tracks?

A. Yes, sir.
Q. Nothing for the laying of the ties?

A. That was included.

Q. For the laying of the ties, not for the road-bed?

A. No, sir; not for the road-bed; I could not tell whether it was a good bed or not before.

Q. Did you take the traveling-belt elevators?

A. Yes, Mr. Cramer has got them. Q. Did you include the stairs?

A. Yes, sir.

Q. And the ladders?

A. I included everything in the building that was made 1930 out of wood, that belonged to my part of it.

Redirect examination:

Q. (Referring to Spitzley Exhibit "1.") Is this the list that you made out showing your estimate in detail?

A. Yes, sir.

Q. That is, it shows your own estimate in detail as you made it?

A. Yes, sir. I have got the gross amount from Mr. Cramer in there, which I did not make myself.

Q. Now, in making this list, to what extent, if any, did you over-

look or omit things down there?

A. I don't believe that I omitted anything except several things here in the machines that I overlooked or omitted; otherwise I do not think I did omit anything.

Q. Did you endeavor to take an inventory of everything that was

in the building there?

A. Yes, sir.

Q. Did they furnish you with any list?

A. No, sir.

Q. Did they help you at all in making it up?

A. No, sir.

Q. Do you wish to be understood as having omitted any of those large or small wood-working machines that were in that building?

A. I don't think that I omitted any large machines in there, what

amounted to much.

Q. Of course you didn't go into these small rooms and examine

what repairs they had on hand?

A. No, sir, there was quite a number of small things around there I didn't take into account, I didn't mark them down; and also about these trucks and wagons and all such; I didn't think it was required of me.

Q. That is the outside property?

A. That was moved all around, I suppose, through the mill and on the outside just as they are using them around there.

Q. And of course many of the machines that Mr. Dickinson has referred to by name are not on your list by name, but are here as a matter of fact?

A. Yes, there is a good many of them I didn't know the name of

as they have got them.

Q. And the items of your appraisal are set forth and they are added up in this Exhibit Spitzley "1"?

A. Yes, sir.

Q. So that if there is anything omitted it is only necessary to add it to it?

A. Yes, sir.

Q. Will you state whether a considerable portion of this machinery appears to have been in use a good many years?

A. As much as I could understand from Mr. Backus they bought

most of the machines about ten years ago.

Q. And in regard to these Boston people, you called their attention to machines that they had sold, as I understood you?

A. Yes, sir, I seen the names of the machines on there and I could not find out here in the city what they would cost, and so I wrote to Boston about it.

Q. Will you state whether old machinery that has been in use ten years is as valuable as new machinery with the later attachments or improvements?

A. Well, I don't think so. They are always making improvements from year to year, improving all the machines they are making.

Q. And I suppose there is some wear on these machines?

A. Yes, sir.

Q. And they wear out like other things in the course of

A. Yes, sir, and maybe a little more so, if they are run 1932

strong.

Q. From your knowledge of the machinery down there, and you have looked it all over, what, if any, percentage of depreciation would you place upon it by reason of its age and the use to which it had been put?

A. Well, I should judge that the machines that were bought about that time, if you take the life of a machine, say 25 years, they

have used about two-fifths of them.

Q. You would consider the machinery down there that has been in use ten years has worn away about two-fifths of its value?

A. Yes, sir. Q. That is, as compared with a brand-new machine, such as you might buy now?

A. Yes, sir.

Q. And as I understood this letter from Boston, they gave you the prices for the new machine they had put in the place of those old machines?

A. They state in that letter what the price was at that time and what they are charging now for improved machines, and I put

down the price of the improved machine.

Recross-examination:

Q. I think, in giving the price of the Boston machines, you stated on cross examination that you did not put down the freight or transportation because you thought the wear of the machine would offset the freight?

A. I doubt that, whether the wear of the machine would offset it.

Q. Well, you did say so, didn't you?

A. That the wearing of the machine would offset the freight?

Q. Yes.

They would offset it a great deal more. 1933

Q. Didn't you say that on cross-examination?

A. I cannot remember if I said so. If I did say so, I did not wish to express myself in that way.

Q. What reason did you give for not adding the freight to the

machines on the price-list you got from Boston?

A. I might have said that they would go in as an offset, but not

for the full offset; that is what I meant.

Q. Don't you know that in the fine planing-mill shops where the machines are running and kept in first-class condition-you found these all in first-class condition?

A. Yes, sir.

Q. That after a machine has been run for a while in a regular business, where the competition is sharp, that it is worn, that the machine does more uniform work?

A. It may if it has been used a year or whatever time is allowed to wear off the sharp edges and such, but when you keep on using

it, it will wear out.

Q. It will wear out in about twenty-five years?

A. That is my opinion, ves, sir.

Q. In a well-kept shop with knives and saws, is it not your experience and is it not common knowledge that the machines which have been in use in the mill are better when they have been worn say for five or ten years?

A. No, sir, I do not think for that length of time. I think they

are better after being worn maybe a year or two.

Q. Well, they do keep their machinery in first-class condition down there, don't they?

A. It looked so to me, yes, sir.

Q. Do you know the product of their mill?

A. No. sir.

Q. You don't know its repute as to being uniform and doing firstclass work?

A. I know they are doing good work down there.

1934 Q. First-class work?

A. Yes, sir.

Q. You say the life of machinery is about twenty-five years?

A. That is as near as I can judge by my experience in our shop. We have had machinery before we burned out-we burned out about eight years ago-and some of those machines after we had had them running a number of years were worn out, and we were talking about renewing some of them if they had not burned up.

Q. Did you see any machines in the Backus shop that were worn

out?

A. I did not see them all running. There was some wear on them,

Q. Did you see a single machine in Backus' shop, old or new, that was not in first-class condition to do its work?

A. As much as I seen they were in good, first-class condition.

Q. Well, a machine that is in good, first-class condition and does its work well, does uniform work, first-class in every way, is as valuable as a new machine, isn't it?

A. It is, if it is not much worn, yes, sir. Now, there is one thing, you know, you take for instance the cog wheels, and all that-

Q. You do not mean that the wearing of a machine prevents its doing first-class work?

A. If it is not worn out so much, they are doing first-class work.

Q. Now, I understand you to say that Backus did not assist you any. You do not mean to say that Backus did not offer to, but that you refused?

A. Oh, no, I didn't refuse; Backus said that he would assist me.

Q. You didn't accept, did you?

1935 A. I did not say that I did not want his assistance.

Q. You did not tell him——
A. I did not tell him to come along and show me or give me his assistance. I did not ask him that.

Q. Didn't he ask you three or four times if he could not be of assistance to you, and ask you if you wanted him?

A. The old gentleman asked me-

Q. You did not ask them for any list or assistance?

A. No, sir.

Q. They offered their assistance to you?

A. They told me if they could assist me in any way they would do so.

Q. You did not tell them anything about which you wanted assistance?

A. No. sir.

Redirect examination:

Q. One question about this wood-work. I see it comes to \$22,612 09. That is the building or buildings proper?

A. Yes, sir.

Q. Will you state whether that estimate is upon the basis of its being new?
A. Yes, sir.
Q. That is, you would duplicate it for that?

A. Yes. sir.

Q. If you were appraising the present cash value of those buildings, what percentage of depreciation would you put upon it be-

cause of its age and the use to which it had been put?

A. Well, there would not be much depreciation there, because the roof is the main thing that would depreciate, and the roof, as I understood them, they put on new about a year or two ago, and I was on the roof and it seemed to be all in first-class condition.

Q. Are the buildings there just as good as they would be 1936

if they were built brand-new again?

A. Not exactly, because there is some wear on it; it would not be

exactly as good.

Q. But this estimate is based on the theory that everything is new?

A. Yes, sir.

Recross-examination:

Q. Did you take into consideration in your appraisal the cost of setting up these many machines?

A. No, sir.

Q. What is to be added, for the expense and cost of setting up, to the value of a machine as set up? It is worth more set up, of course, than it is in the shop?

A. Oh, yes, it is worth more set up than what it is coming from

the shop.

Q. How much more is it worth to set up?

A. Some machines cost more and some less. I understood Mr. Backus to say that some of the machines were set over and they put in stone foundations. Well, now, the stone foundations and all that-I thought those foundations would all be taken in by the mason-work.

Q. You don't know, then, how they were set up? A. I don't know only what Mr. Backus told me.

Q. He did not tell you there were any stone foundations? A. He told me that some of them were stone foundations.

Q. Which Backus told you that? A. That was the old gentleman, I think.

Q. Can stone foundations be used in a planing mill? Isn't it necessary to have timber foundations, the heaviest oak?

1937 A. I am mistaken about the stone foundations—that was

put under the columns.

Q. Now, a machine like these fine planing-mill machines, where the finest work is cone, a stone foundation would be too rigid, would it not, and isn't it true that they have to be set up on the strongest and firmest oak foundation?

A. Well, it may be in some cases.

Q. You do not mean to be understood now by the jury that under the machinery they have any stone foundations?

A. No, sir.

Q. And yet they are strong and firm?

A. Yes, sir.

Q. Did you know the kind of foundations they were?

A. I didn't examine the foundations.

Q. And didn't take into consideration in your estimate the foundations?

A. No, sir.

Q. In your appraisal of the buildings or machines?

A. The flooring under the machines-I figured all that.

Q. Just the flooring?

A. The flooring, yes, sir, and the sleepers.

Q. You didn't figure the foundations under the machines?

A. No extra foundations.

Q. Isn't it true that in some of those machines the foundation costs half as much as the machine itself, to lay it properly for fine work?

A. I don't think so.

Q. What would you add for the setting up of a machine, one of these large, strong machines for fine work?

A. In those machines where they are setting down in the basement, if they have any extra foundation it might cost from \$5 to \$10 to a machine.

1938 Q. For heavy oak foundation?

A. Yes, sir.

Q. And including the setting up?

A. Well, the screwing down of the machine, if the foundation is made, of course that is not much of a job.

Q. How about the second floor?

A. I have not seen any extra foundation on the second floor. I don't believe there is any.

Mr. BAKER: We offer in evidence Exhibit Spitzley " 1."

Mr. Dickinson: We will object to it and to all the testimony of Mr. Spitzley, except as to such as he has given on his own information, and we move to strike out his testimony except as to that that he claims is of his own knowledge. And we object especially to any evidence which he has introduced as information from Boston or Jenks, as hearsay testimony, and move to strike it out. And we object to this list, Exhibit Spitzley "1," on the same ground.

EXHIBIT SPITZLEY "1."

Estimate of A. Backus, Jr., & Son, Planing Mill and Office and Additions.

Mill:	
243,676 feet lumber and labor	\$5,656 21 1,926 00 434 00
Doors and windows	844 50
Stairs and partitions	84 20

Anthony F. Cramer, sworn on behalf of petitioner.

Examined by Mr. BAKER:

Q. Where do you live?

A. Detroit. I have lived here 22 years.

Q. What is your business?

A. I am a machinist; have been for 33 years.

Q. Do you know all about steam-engines and shafting? A. Yes, sir.

Q. And such machinery as Mr. Backus has down there in his mill?

A. Yes, sir.

Q. You have manufactured them and dealt in them for a good many years?
A. Yes, sir.

Q. Have you made an estimate of what his engine and boilers and the apparatus or machinery connected with them is worth?

A. Yes, sir.

Q. And also the shafting that runs through the mill?

A. Shafting, hangers, belting, coupling and so forth, all the transmission.

Q. Have you made that in detail; have you got a list of it?

A. No, sir, I have not got everything in detail. I got all the shafting and pulleys and hangers, but I did not think it necessary. The engine and boilers and these things I figured up, but it takes quite a good deal of paper to figure it on, and I threw that in the waste-paper basket.

Q. As you went along with your figures you merely kept the amount?

A. Yes, sir.

Q. What is the total amount of all your estimate?

A. Engine, boilers, pumps, injector, water-supply pipes, steam pipe, heating and drying apparatus, fire apparatus, shaving and blower pipes, \$19,660. Shafting, coupling, hangers, pulleys, belts, belt-tighteners, elevators, conveyors, iron doors, pneumatic delivery, sprouts, millwright-work and general power transmission, \$8,585.

Q. Those two amounts, then, cover your estimate?

A. That covers my estimate, yes, sir.

Q. Now, you have some figures in detail?

A. I have figures in detail and have the memorandum, what I put down for estimation; there is the shaftings, pulleys and hangers. Q. Will you state whether or not these estimates of yours are

based on what it would cost to duplicate them?

A. I figured them to duplicate them, everything. Q. So that they would be all new upon your estimate?

A. All new.

Q. I suppose a boiler depreciates some by use. Does a boiler wear out?

A. Oh, yes.

Q. So that an old one is not as good as a new one?

A. No, sir.

Cross-examination.

By Mr. Dickinson:

Q. Did you find the boiler set in pretty good foundations? 1944 A. Yes, sir.

Q. Well set?

A. Yes, sir.

Q. All the work in first-class condition? A. Yes, everything in first-class condition.

Q. Does it cost more to set a boiler sometimes than the cost of the boiler?

A. Of course, sometimes it may cost more; it depends upon the foundation.

Q. It is well set, is it?

A. Well set.

Q. You didn't see anything in the machinery there in that mill that was not first-class in every respect, did you? A. No, sir, everything was in very good shape.

Q. What is your firm at present?

A. F. Huetteman & Co.

Q. Are you a member of the firm?

A. Yes, sir.

Q. Where is your place of business? A. On Sherman, near Hastings, now.

Q. You manufacture boilers?

A. No, we do not manufacture boilers, we only handle them; we manufacture engines.

Q. Did you ever manufacture boilers?

A. No. sir.

Q. How did you appraise the boilers in there?

A. Appraised them by the list and by the weight. We handle boilers most every day. The cost of a boiler depends upon the weight; we do not need to figure it out, as we have the list of every boiler and the price.

Q. By the make?

A. Yes, sir.

1945

Q. Did you appraise the platform loading scales-Howe's? A. I did not.

Q. Or any one, to your knowledge?

A. I don't think so; I didn't see them at all. My attention was not called to them.

Q. Did you appraise the grinding apparatus, stones and frames, for knives?

A. I appraised that one in the engine-room, yes, sir.

Q. Did you appraise any more?

A. No, sir.

Q. You didn't appraise the one in the shop?

A. I didn't appraise any machinery except the belt elevator and so forth, connected with belting and shafting and pulleys.

Q. Did you appraise the other knife balancing and weighing scales?

A. No. sir.

- Q. I understood Mr. Spitzley to say that you did, or that he left them to you. What are these boilers? Give some description of them.
- A. Well, they are 54 by 16 feet boilers, common tubular boilers, with general-sized dome.

Q. Whose make? A. That I don't know.

Q. Was the name on the boiler?

A. I didn't see any name on the boiler. I measured the breeching but I did not know the name.

Q. Whose make was the engine?

A. Made by the Riverside iron works, I think. Q. It is a sliding-valve automatic cut-off engine.

A. Sliding-valve engine.

Q. Was it extra heavy, in the language of the trade?

A. Well, the engine itself is not extra heavy. They have a very heavy band wheel. It is heavy, although the engine is in proportion.

Q. What is the size of the shaft?

1946 A. I think it is nine and a half inches. Q. And the governor?

A. Nine inches.

Q. What is the belt wheel?

A. Fourteen feet six by thirty-two inches. Q. How many exhaust connections?

A. Well, there is a main exhaust running to a heater first, and from there to a kind of receiver and purifier.

Q. What is the size of the exhaust connection?

A. Ten inches diameter, riveted pipe. Q. What is the make of the feed-pump?

A. There was one Hughes and one Worthington, steam pumps.

Q. Did you appraise the sewer to the river?

A. No, sir.

Q. Their water connection?

A. I got a three-inch pipe from the river up to the engine-house.

Q. How much did you put in for that three inch pipe?

A. I don't know; I remember, though-

Q. What did you put it in at?

A. I appraised the connection to the river and the other lead pipe together, the whole water connection, something like \$1,400.

Q. Water connection to the river and the other water mains from the city? Do you know how deep down the pipe is-water pipe? A. I estimate that about eight feet, the average.

Q. How did you get the information?

A. I went down to the dock and looked how deep the water stood there, and stepped it off and got my length. I don't think they had to go deeper than four feet or five on the river.

Q. How many thousand feet to the kilns?

1947 A. I will have to figure that out first-5,300 feet of small pipe for each kiln, and there are four kilns.

Q. How did you get at that?

A. I counted the coils and measured the length of the coils.

Q. If there is actually a mile and a half of pipe in each kiln, 8,000 feet, you would be astonished, wouldn't you?

A. I don't see where they were. The engineer was with me when we measured it. And we measured it as close as we could.

Q. You only estimate, then, 5,300 to each kiln?

A. I got them 6,300. I don't know whether I got the right length.

Q. Did you estimate it at 5,300 or 6,000? A. I figured it at 6,300; 1 got four kilns.

1143

Q. Do you leave it there, 6,300 feet? A. That is all the pipe I got there. Q. Have you got the large pipe in?

A. Yes, I got all that.

Q. How much have you got, and what is the size of the manifold pipe for each kiln?

A. Eight inches. I got 351 feet of eight-inch pipe, and 351 feet

of four-inch.

Q. What other pipe have you got?

A. I got a pipe for the heating in the shop on three floors. I have got the heating of the office, pipe underground.

Q. Is that all included in your estimate?

A. Yes, sir.

Q. You have included in your estimate all the pipe in the shop and in the kilns?

A. As I measured them; yes, sir.

Q. And pipes to the river and to the offices?

A. Yes, sir. Q. You found, did you not, that Backuses did not use the 1948 water works, they do all their pumping from the river?

A. Yes, sir.

Q. Did you find the exhaust-steam injector, feeding boilers?

A. Yes, sir.

Q. What make?

A. Shaffer & Buttenburg.

Q. What did you estimate that? A. List price; I could not say exactly what it is, about \$120 or

something like that. I think it is No. 8. Q. Did you include in that the pipes, valves and water connec-

tions?

A. No, sir, I figured them separate.

Q. Have you included it in your separate list?

- A. Yes, I got all the connections between the pumps and the boilers.
 - Q. In connection with the exhaust-steam injector?

A. Yes, sir.

Q. Do you know what the price of the Shaffer & Buttenburg exhaust-steam injector is?

A. I think it is \$120, on that size; I don't know.

Q. What size?

A. I think it is No. 8.

Q. Well, you know, don't you, from your examination?

A. No, sir, I don't know exactly. It may be \$200 for all I know now. I know I put it in at the list price because there is only 30 % off on those injectors and it costs about that much to put on the necessary valves.

Q. You found a patent belt-tightener and frame there, didn't you?

A. Yes, sir.

Q. What did you put that in at?

1949 That is the list price, though there is forty off A. \$111.

Q. You say there is a list price for that sort of thing?

A. Yes, sir. Q. Who makes it?

A. It is made by all the firms who manufacture pulleys, shafting and transmission.

Q. You mean a machine like this one you saw at Backus'?

A. Yes, a belt-tightener.

Q. Have you put in the power ventilators, blowers, belts, pulleys and connections?

A. Yes, I got three ventilators, blowers for shavings, suction fans.

and one blower for heating, and I got the piping.

Q. What did you put them in at?

A. I put the fans in at \$180 apiece without the pipe.

Q. Did you put in all the connections? A. I put in all the piping; yes, sir.

Q. Belts?

A. Yes, I got every inch of belt.

Q. What did you put in that whole ventilator apparatus at?

A. That I could not say now. I didn't keep that separate. didn't put my figures separate because I didn't think it was necessary.

Q. You cannot tell now what your estimate was?

A. Not exactly. I had to inquire for the price of the Sturdeman blowers. I know what they are, and the exhaust pipe, 24-inch-all piping I figured at about \$4 a foot, between four and five dollars per foot-at \$4, I think, I took it all. There is some laying in the ground covered with wood and the others running on the outside to the shavings-room.

Q. Can you tell us how much it came to at your figures?

A. Not unless I figured it up again, exactly. 1950

Q. How many blowers did you figure?

A. I figured three in the shop and one in the back of the boilerroom; that is, three suction fans, shaving blowers, and one for heating purposes in the kiln.

Q. Did you get more than one ventilating blower?

A. Then I figured two more. I don't know for what purposes they are used; wooden blowers, five in all I got.

Q. Whose make were the boilers?

A. I could not find out; I didn't ask either. Q. Don't you know McGregor's boilers?

A. Yes, they are made in town here. I think they were made by McGregor; it does not matter who makes them here.

Q. What price did you put on that engine?

A. I put on the engine and foundation in the neighborhood of There may be \$50 over \$3,000; the engine and foundation, and small fixtures around it, governor, tightener and so forth. think the engine I put down at \$2,250 or \$2,100, \$800 for the foundation. There is a very large foundation.

Q. What did you put the fixtures down at?

A. That includes extra fixtures.

O. Just tell us, if you can, what you have included with the

engine.

A. I got included with the engine all fixtures that go with it now. Governor, lubricator, all the oil cups, and on an engine like this what they have there; belt-tighteners go with every governor now for the governor pulley.

Q. You included the belt-tightener? A. Belt-tightener for governor pulley; yes, sir. Q. Did you include the exhaust connections?

A. Yes, sir; and I figured separate.

(). And the steam connections?

A. Yes, sir.

Q. And the sewer connections and water connections? 1951 A. Yes, sir.

Q. Did you include the heater and pumps? A. The heater and pumps are separate.

Q. You appraised them separately, did you?

A. Yes, sir.

Q. What did you estimate that big fly-wheel?

A. The weight of it?

Q. What did you appraise it at?

A. I appraised the weight of it at 6,000 pounds, at 4 cents a pound.

Q. Did you include the fly-wheel in your estimate of the value

of the engine?

A. Yes, sir, at the cost of it. I estimated the whole engine at 8 cents a pound; weight of the engine between 24,000 and 25,000 pounds, at what a good engine costs to build, 8 cents a pound.

Q. What is the governor worth?

A. I don't know; I guess an eight-inch governor is worth about \$250 now.

Q. Did you estimate the furnaces in connection with the boilers?

- A. I did not estimate the furnaces, but I figured the boilers with a full flush front. There is very little front to the boilers now, the way they are arranged, and I think the breeching and the whole front they have now would come up to the cost of four full fronts. That is the way I estimated it. I estimated full fronts for each boiler.
- Q. You did not take the furnace as they have it then and esti-
 - A. No, I estimated the full front, crates and everything-fixtures. Q. You theorized upon it and put on what it would be at full

A. Yes, sir.

- 1952Q. You did not estimate the furnaces as they were in the Backus mill?
- A. No, sir, I did not estimate only the iron floor and iron-work in the fire-room. That I estimated.

Q. What was the breeching estimated at?

A. About \$330. 144_

front.

Q. And water tank behind?

A. I got that in, the receiver, at \$375. Q. Did you estimate the chimney?

A. The ventilating pipe?

Q. I mean the brick chimney.

- A. No, sir, only the foundation under the boiler and engine.
- Q. Did you estimate the galvanized pipe that leads through the dry kilns?

A. Yes, sir.

Q. At what did you put that in?

A. I figured at the weight of it and put it in at a shilling a pound.

Q. How many pounds?

A. I could not say now. If I had known you would have asked me that question I would have kept it separate, but I didn't.

Q. What did you put in the automatic grinding machine at, for

the grinding of planers, sylinder knives, and so on?

A. I think it is \$125.

Q. Did you include in that the counters, belts, pulleys, and appliances for working it?

A. Yes, sir.

Q. Did you measure all the belts in the mill?

A. I measured all the belts.

Q. How wide is the engine belt?

A. 30 inches.

1953

Q. How long? A. 74 feet.

Q. How thick?

A. Double thickness. Q. Did you appraise the oil tanks and pumps?

A. Yes, sir; I got the oil tanks.

Q. With the pumps?

A. I got the oil tanks and pumps as they are in the engine-room.

Q. What did you put them in at?

A. I put them in at new price, but I couldn't say now.

Q. You can't remember?

A. No, sir; I think about \$7 or \$7.50 a tank; I got four oil tanks.

Q. What did you put the big engine belt in at?

A. \$686, 50 off.

Q. Did you include the gongs, bells and whistles in the engine?

A. I have got them; yes, sir. I got an electric bell and gong. Q. In addition to the price you have fixed for the engine?

A. That is included in pulleys and fixtures in the engine-house, oil tanks and all. I put that all together because they did not tell me to keep it separate.

Q. Did you estimate the steam drum that goes across the boilers?

A. Yes, the horizontal connecting drum.

Q. Did you put that in in the price on the boiler? A. I figured that all in the boilers, boiler settings. Q. You don't know what you estimated it at?

A. I think at \$260 or \$270. I figured at the weight of it, about.

O. Did you see the large horizontal condensing boiler for the return water and steam?

A. What I call the receiver; yes, sir, I have got that.

Q. What did you estimate that at? 1954

A. I think it is \$220 or something like that.

Q. Don't you know what is called the water trap for the valves and fittings?

A. Yes, sir.

Q. Did you estimate that separately?

A. The engineer gave me the size of the water trap. I put that all in with the heating and water connection.

A. What did you estimate the blower apparatus there at with the

exhaust fans?

A. I think it is \$1,100.

Q. Did that include all the piping?

A. That includes the piping and the housing of the pipe. Q. Where did you get your information to appraise that? A. I had to inquire from the works where it was made.

Q. From whom did you inquire?

A. Huvett & Smith.

Q. What did they tell you about it?

A. They could not give me the prices, they said they did not sell it, so I knew of an apparatus that was sold to a brewery a little smaller, but I got the size of fan and the amount up there and figured it out myself, I think it is second hand.

Q. What did he put it in at?

A. \$1,100.

1955

Q. What did Huyett & Smith tell you?

A. They did not give me any price. They wanted to know the size of the kilns, what it was used for.

Q. Did they give you any price?

A. No, sir; I didn't give them the size of the kilns; I didn't figure on it, and I didn't want to let them go to the trouble. don't know whether that was made for the size of the kilns there or not; it is a six-foot fan.

Q. Did you estimate the dust-arrester?

A. No, sir.

Mr. Baker: That is in the wood-work, I suppose.

Q. Did you estimate the wood-carrying belts?

A. Yes, I got the wood-conveyor. Q. What did you get that in at?

A. I don't know. I got them about six or eight or nine dollars a foot; I don't know which. I got one 14 feet center, two 24-inch pulleys and 1 94-foot center.

Q. What did you appraise it at?

A. I could not say; I think about five or six dollars a foot.

Q. What did you include in it, what other items?

A. That is included, I think, in the belting, the last item. Q. You included in the belting, then, the carrying apparatus?

A. I got it named conveyor-shafting, coursings, hangers, belttightener and conveyors. That is in the \$8,000.

Q. Can you tell us what your estimate of all the belting was?

A. There is 2,131 feet.

Q. What can you buy that for a foot? A. I got \$4,262, list price-50 off.

Q. Whose belt did you figure on? A. I figured on oak-tanned leather belting.

Q. Did you figure on single or double belts? A. I figured the belts as they are, some single and some double.

Q. Did you figure them all at so much a foot? A. No, sir; I figured the double belts double price.

Q. What did you figure the double belts at?

A. I figured them list price.

Q. What was that?
A. It is according to what size the belt is. 1956

Q. Those belts in Backus' mill, that is what we are belting, is list.

A. The price of belting is 50 off the list, and double is list. Q. Very well, what did you figure your double belting at?

A. At what I can buy new belts for.

Q. Well, what was that; that is what I want to get at.

A. I gave you the price awhile ago. Q. Well, double belts saparately?

A. It will take me some time to figure that out? Q. What price did you put it in at; can you tell? A. I got all the belts together, figured at list price.

Q. Whose make at list price?
A. The list on belting is all the same all over the country.

Q. No difference in prices?

A. No, sir; there is only a difference in discounting, and that is very little.

Q. I wish you could give me, if you can, the price per foot.

A. The price per foot of belting?

Q. On double belting such as in the Backus mill. What did you appraise it at? You have got it figured in here in your appraisal? A. All the belting; yes, sir.

Q. What did you put it in at?

A. I got 385 feet of six-inch single belting.

Q. At how much?

A. At list price. I have not got the list with me. Q. You cannot tell what price you put it in at? A. No, sir.

Q. Can you tell us the double-belting price?

1957 A. No, sir, not unless I get a list. The list is the same in all belt manufactured, only different on the discount. The discount now is 50 and 10, and I figured 50 off. I allowed the 10 for putting up the belts. I can bring a list here if you want it.

Q. The list is not evidence. I want to get at what you put them

in at, accurately.

A. All the lists are alike.

Q. What is your total feet single and double belting?
A. Well, I got \$1,111.32.

(). I am asking for the feet, my dear sir, of single belting and double belting.

Mr. BAKER: Length or square feet?

O. It is always length in belting, I think.

A. 1,244 feet of double belting. Q. How much of the single?

A. I got 3,572 of single.

Q. What did you estimate the double belting at so much a foot?

A. At list price.

Q. Then you had only one price for all the double belting per foot?

A. I figured all the double belting out per foot. Q. And all the single belting at so much per foot?

A. Yes, sir.

- Q. You made no difference; there was no difference in the price of the belting, was there?
 - A. There was only the difference between the double and single. Q. That is the only difference you made between the double and

single belting per foot? Is that right? A. Yes, sir.

Mr. BAKER: You don't mean that if it is 30 inches wide or 4 inches wide it is the same price?

A. No, sir.

Mr. Baker: That is what he means.

Q. I want to get at whether you figured the double belting 1958 at so much a foot, the same price per foot?

A. The same price as per list; I figured six inch six inch belting, and thirty-inch thirty-inch belting.

Q. Then on the double belting you figured so much at one price and so much at another?

A. Yes, I got different widths. Q. And so with the single?

A. Yes, sir.

Q. Did you estimate the pulleys and hangers?

A. Yes, sir.

Q. How many pulleys?

A. Well, I don't know. There is quite a few.

Q. I want to get your estimate of the pulleys and hangers, and what is the other scientific name?

Mr. BAKER: Just get a dictionary of machinery and read it off. Q. No, just take the pulleys and see what they are. We want to know what they are, the pulleys and hangers.

A. I got the hangers here. I don't know the number, I got the price.

Q. What is the price you got the hangers at?

A. \$1,044.

Q. That is all the hangers?

A. Yes, sir.

Q. Now, can you tell us the price you got all the pulleys down

at and give us the number. Did you appraise them separately or with something else?

A. I figured every pulley separate.

- Q. They appraise at different prices, do they?
 A. Yes, I figured them according to the price-list. I got them \$1,810.
 - Q. Now, have you figured on the idlers?A. Yes, the idlers are included in here.

Q. You included them at the same price?
A. I got the idlers here at \$540, put up.

1959

Q. For all of them? How many belt-tighteners?

A. I see you say idlers. You ask me for belt-tighteners.

Q. Yes; separate from the pulleys.

A. I got 24.

Q. \$540 is a pretty good price for idlers, I think. Did you take in the fire-hose throughout the building?

A. I got 600 feet of fire-hose.

Q. Did you appraise that separately?
 A. Yes, sir, at list price, but I don't know what that is.

Q. It is all in your \$19,000?

A. Yes.

Redirect examination:

Q. What is a pulley?

A. It is an iron rim with arms fastened to the shafting, where the belts run through.

Q. What is an idler?

A. It is a pulley too; it is put somewheres to either steady a long belt or else for a shifter, to run a belt on or off, and for a tightener. An idler should not be called a tightener.

A. Yes, put up a frame with a pulley in it and so much weight on it and drop it down onto the belt to tighten it onto a pulley.

Q. I suppose you have two wheels side by side and part of the time the belt runs on one and part of the time on another, and is one of them an idler?

A. Some call them an idler; they ought to be called loose and tight pulleys.

Petitioner rests.

Adjourned till October 11, '93, 9.30 a. m.

1960

Остовек 19, 1893-9.30 а. т.

Mr. Dickinson: May it please the court and gentlemen of the jury, we desire to renew the motion to which reference has been made heretofore during the trial, and we desire to raise all the questions again. Does your honor desire me to restate them-those I have made at every stage of the proceeding, and which are set out in the pleadings on file?

The Court: I have ruled upon them.

Mr. DICKINSON: I desire to simply renew them. You do not care to let me restate them?

The Court: It is not necessary.

Mr. Dickinson: And we protest against the proceedings on these grounds, as stated before, simply to renew the protest upon the grounds which I think have been made emphatic before, and especially this, that the claimant has acquired everything that it sought by this proceeding, has built its structure and has paid the consideration therefor, having everything it seeks in the proceeding, and that there can be no constitutional way by which this proceeding can be regular.

The Court: I would have to overrule that, Mr. Dickinson, for the reason that the supreme court has passed upon it and I should

have to follow the opinion of the supreme court.

ABSALOM BACKUS, sworn on behalf of respondents.

Examined by Mr. Dickinson:

Q. You are the Absalom Backus, Jr., named as respondent here, are you not?

A. Yes, sir.

Q. Yourself and A. Backus, Jr., & Sons are the defendants?

A. Yes, sir.

1961 Q. Principal defendants. James N. Dean has no interest, I suppose?

A. No, sir.

Q. And William H. Davison?

A. No, sir.

Q. You have been defending the proceeding to condemn the property sought by the petitioner, filed January, '91, have you, in this case?

A. Yes, sir.

Q. Will you state whether, since the filing of that petition, the petitioner, The Fort Street Union Depot Company, has built the structure and taken possession of the property?

A. It has.

Q. Precisely in every respect as it sought to do by its petition which it first filed against you?

A. I so understand.

Q. Will you state whether, and, if so, when you were paid by the union depot company for the property so taken possession of, for the building of the structure?

Mr. BAKER: I will make a formal objection to that as immaterial.

A. About the 26th of January, '92.

Mr. BAKER: Note an exception.

Q. Will you give me the amount paid for the realty and the amount paid for the damage due the corporation of A. Backus, Jr., & Sons?

Objected to as immaterial and incompetent. Objection overruled. Exception for petitioner.

Q. And the date?

A. About January 26th, 1892. The amount paid to me as the owner of the realty was \$17,850, and the amount paid A. Backus, Jr., & Sons was \$78,100 and something over.

Q. \$78,293, to be exact?

1962 A. That is correct, I suppose. The total amount paid was \$96,143.

Q. Since then has the Fort Street Union Depot Company been in the full possession and use of the property, running their trains over it and so on?

A. Yes, sir.

Mr. BAKER: I have no cross-examination—well, I will ask one question. I suppose you have got the money yet, Mr. Backus?

Objected to.

No answer.

Mr. DICKINSON: Well, you have not paid it back to them?

A. No, sir, and I never expect to.

Q. You have not paid it back to the union depot company, anyway?

A. No, sir.

Q. Have they asked you for it?

A. No, sir.

Mr. Dickinson: Now, if the court please and gentlemen of the jury, I move the jury and the court that this proceeding, this petition, be now dismissed on the ground that the petitioner in the proceeding has acquired everything it sought, has paid the compensation and has taken possession of and is occupying the property with its railroads. I would like a ruling of the jury upon that, your honor.

The Court: That . r otion has to be addressed to the court, Mr.

Dickinson, but I shall c errule the motion.

Mr. Dickinson: Your honor does not assume for one moment, knowing your honor's views—though I do not agree to your honor's full view having been sustained by the supreme court—your honor

ought to understand that when I make this motion and state the terms of it, I am offering no personal disrespect to the

court, but am asserting the theory which I propose to hold until the end of this litigation, which I think to be the right one, that the jury in this proceeding is a constitutional tribunal sui generis, with power to determine, under the constitution.

The COURT: That may be very true, but the jury will only de-

termine those questions that I shall submit to them.

Mr. Dickinson: I desire at this stage of the proceeding to ask the disposition of the jury, and your honor can discipline me in such way as your honor sees fit, within the lines of the practice and the rule as your honor understands it. Your honor does not permit me, then, to make the application to the jury?

MAKE

1153

The COURT: Certainly not, and the jury will only determine those questions that I will submit to them. And I will see that my ruling is carried out by the jury, also, Mr. Dickinson.

Mr. Dickinson: To that we take an exception. We insist that we have the right to go to the jury upon that question, and your honor declines to permit me to address the jury upon that motion?

The Court: Yes.

Mr. Dickinson: To that we take an exception. Does your honor pass upon the motion, then?

The Court: I will overrule the motion.

Mr. Dickinson: To that we take an exception. That being the case, may it please your honor, we shall, under protest, go into the testimony.

HENRY BACKUS, sworn on behalf of respondents.

Examined by Mr. Dickinson:

Q. What is your age?

A. Thirty-eight.

Q. Where do you live? A. Trumbull avenue, Detroit.

Q. How long have you lived in the city of Detroit?

A. About twenty-six years.

Q. How long have you been engaged in the business which is now carried on or has been heretofore carried on by the corporation known as A. Backus, Jr., & Sons?

A. I have been in the corporation since 1885, and I was with the firm before that, and I have been in their employ, so that altogether I have been in that business about 21 or 22 years.

Q. Nearly all your manhood?

A. All my life, practically.

Q. Been devoted to that business, has it?

A. Yes, sir.

1964

Q. Have you ever been in any other?

A. No, sir.

Q. Will you please state whether you are familiar with the mill property there known as the Backus mill, which has been referred to in the testimony of Mr. Spitzley and Mr. Cramer?

A. I ought to be; I built it twice. Q. It burned down once, I think?

A. Yes, sir.

Q. You were in active charge of it?

A. Yes, sir.

Q. Have you been the active man in the management of the business?

A. Yes, for a good many years.

Q. You have heard the testimony of Mr. Spitzley with reference to the valuation of the timber and frame part of the structures composing the mill?

A. Yes, sir. — 145—55 Q. Will you please state to the jury when the mill was last

1965 A. It was destroyed by fire about the 22nd day of October 1882, and was built from that time on until it was in running order, June cr July of the next year, 1883.

Q. What was the value of the structure in 1892?

A. You mean the entire plant?

Q. No, the timber part; referring to that part now that Mr. Spitzley had to do with and testified in regard to.

A. Somewhere between thirty and forty thousand dollars.

Q. You may tell the jury, if you please, by referring to different parts of the structure, itemizing so as to show them, the grounds of your valuation.

A. I understood just the wood-work was referred to when I an-

swered your question.

Q. I am referring now to the wood-work, and do you not in that include the timber?

A. I include the timber, and gravel roofs, and perhaps some slight iron-work in the building.

Q. Well, you can specify what.

A. All that pertains to the making up of the building itself.

Q. To the making up of the frame part?

A. Yes, sir. I do not include in my statement any plumbing or gas fixtures, or fixtures of any kind. In the first place, our foundations are very heavy and our mills has to carry terribly heavy loads and the framework is very strong. The timbers are 12 by 14 and very long, some 41 feet in length, and the building is well tied together with anchor rods; the joists are 3 by 12 and 20 feet long, very close together, making a very strong and substantial build-

The roof is the best gravel roof that we could procure. 1966 Q. I will ask you here whether the building wasn't specially built for you, from your experience, or did you call in

outsiders to build it for your occupancy?

A. Oh, no, sir; we had to build it ourselves.

Q. Build it yourselves according to the machinery and the building there?

A. According to the experience we had had in the business.

Q. Is it a sort of building that you could let out to carpenters or builders to construct for you?

A. Oh, my, no; we worked without any special plans; we were our own architects, our own engineers, and, to a large extent, our own master mechanics.

Q. You could not, then, advertise, say, for bids for this kind of

work for your business and get it put up by contract?

A. In that kind of business a man seldom knows just what he wants until he gets into it. He has to build a building as his experience teaches him in reference to his machinery and the load it has to carry, and there are many things that are hard to understand.

Q. Especially with reference to that particular business?

A. At the commencement.

Q. Well, proceed and give the jury the different parts of the building.

A. We have an elevator-house which is encased in brick, very heavy brick walls, which opens into the main mill building with large swinging doors. In this building are two large freight elevators which are constructed for carrying very heavy loads. The floors are double, the top floor being of hardwood. The frames are four sash each, and there are also other doors in this building which are very large and heavy, some three inches thick, hung

with the very best appliances, nothing that we bought but some of our own get-up. The hangings are not what we could buy—the boughten ones were not strong enough—and all through the factory it is the same way. The door hangings and such things are built very heavy from our own patterns. And then next to this elevator-room is a shed called the store-room, which is ironed up on one side with glass, the extreme length of it, to the top with a gravel roof and iron posts. The lower story of this building—shed I call it—is what we call our store-room, where we hold or carry a large amount, at times, of manufactured stock, and in this building, also, or adjacent in the elevator building, is a large Howe loading scale where we weigh everything that goes into the cars. Then our main building or mill proper—

Q. Hadn't you better take up the other and give your valuations,

if you are prepared to do so?

A. I can only do so through those sheets.

Q. (Handing papers to witness.) Yes, take any memoranda that you choose to refer to that you made yourself.

A. I will first take the mil-.

Q. Now, you please tell us, if you are prepared to do so, the omissions, if any, of Mr. Spitzley, when you refer to any part of it, and the mistakes of Mr. Spitzley, and a statement of the values.

A. Of the mill proper, Mr. Spitzley puts in the lumber and the labor, that is the rough timber, at \$23.20; that is the average of his price, where much of that timber today could not be bought short of \$28 or \$29.

Q. Well, in 1892?

A. The same in 1892.

Q. What is the difference there?

A. I have figured it on a basis of \$25, which is much below what my own convictions tell me it is worth.

Q. You know the timber that is in there, and therefore you know what it is worth?

A. Yes, sir.

1968

Mr. BAKER: Is that a thousand?

A. Per thousand feet; yes, sir.

Q. Just give the unit that you use, if it is a thousand feet or whatever it is, so that we will understand what price you are figuring.

A. Mr. Spitzley figured it at \$23.20 per thousand, and I figure it at \$25 per thousand. He makes it \$5,656.21 and I make it \$6,709.87. On the maple flooring he figures it at \$27.60. That maple cannot

be laid, from any experience I have had, surely at less than \$35

Q. The maple that you have put in there and that you know is in there?

A. Yes, sir. On the basis of \$35 per thousand I make it \$2,429 and Mr. Spitzley makes it \$1,926. This, you understand, includes the lumber and labor of laying the same. Now comes the gravel roof, which Mr. Spitzley puts in at 124 squares, at \$3.50 per square. It actually measures 131 squares, and I have failed to find any one who will put on a good roof at less than \$4.00. I got bids here recently for a new roof on our works, from every reputable builder in Detroit, and not a man would talk less than \$4.00 per square. I make the roof \$524 and Mr. Spitzley made it \$434.

Q. Can you tell the jury what the actual cost of the roof was

when it was put on-the last roof, put on quite recently?

A. That roof was put on when I was away from home; I was in Florida at the time.

Q. You have the cost of it here figured?

Q. I suppose the books show it? A. I could not say as to that.

Q. That roof was put on by days' work-was that the way it was done?

1969 Q. Yes, largely, and the party that put it on-I forget who it was-is not in the business here now, if I mistake not, Then there are 38 doors, 54 windows, one skylight, 260 sash, and one scuttle. Mr. Spitzley puts in the doors and windows at \$844.50, omitting the skylight and scuttle. I make that item \$10.74. Mr. Spitzley puts in the stairs and partitions at \$84.20. There are five stairs and partitions that requires 6,239 feet of lumber to build. Figuring the stairs at 75 cents per tread, they would come to \$63.75, and the partitions at \$25 per thousand would come to \$155.97, for a total of \$219.17 as against \$84.27. Mr. Spitzley puts in cupboards, closets and chutes at \$54. There are 32 cupboards. One of these Mr. Spitzley furnished himself and charged us about \$40 for it. The cupboards represent 2,531 feet of lumber, on a basis of \$50 a thousand, which I think very low, and which would come to \$126.55. Three closets, requiring 360 feet of lumber, at \$30 per thousand, \$10.80.

Q. What do you call these cupboards?

A. They are cupboards for the men for their tools.

Q. And the closets?

A. Closets where the doors open, the same as any closet would be, and the chutes are where we load our wood and shavings. There are six of those, which require 2,160 feet of lumber at \$30 per thousand, which would be extremely low at \$64.80, or a total of \$202.15, or \$14 left to pay for the remainder after paying Mr. Spitzley for his cupboard. There are 16 iron door fenders which Mr. Spitzley put in at \$4 each, \$64. I left it the same, although there is a great deal of labor connected with putting them up. We had to drill in two feet of brick-work for each fender, with good long bolts,

and fasten them up, and he has omitted the following: White-washing the mill, which cost us \$250. We contracted that 1970 out and paid one man \$100, and he got sick of his job, and we paid another \$150 for the two upper floors, making a total of \$250. Painting, 1,084 yards, \$216.80.

Q. You are speaking now of the omissions of Mr. Spitzley?

A. Yes. I recollect when we were building the mill we had to take out a builder's risk and insurance risk, which cost us \$192.

Mr. BAKER: What about that painting; was that omitted?

Yes.

Mr. BAKER: Let me get that builder's permit; how much was that?

- A. No, insurance risk, \$192. I have forgotten to put the builder's permit in myself. Conductor pipes, \$125, omitted by Mr. Spitzley. Seventeen benches, \$315.
 - Q. What are the benches used for?
 A. Those are the benches in the mill.
 Q. Connected with the working?

A. Yes, sir; nailing benches, and such like. I put those in with the mill, because they are there and they are wood. Of course, they are not machines. A total of Mr. Spitzley in the mill of \$9,062.91, and of my figures \$12,321.54. Now I take up the engine and boiler house or the engine and sawdust house, as Mr. Spitzley called it.

Q. This is still lumber and timber?

A. Yes. Mr. Spitzley made 11,132 feet of rough lumber in this building, and I make 19,435. Now, I say I make that. I have had a memorandum taken of everything in the mill, as near as I could, and summed it up, and this is the report. You understand perfectly well there is some of this work I could not do myself.

Q. That is the report of what is there?

A. Yes; the timber was figured up by other parties. Mr. Spitzley puts this in at \$24, and I put it the same as the mill, at 1971 \$25. Mr. Spitzley makes \$267.64, and I make \$485.87. Mr.

Spitzley makes 4,970 feet of flooring, and I make 6,412. I put that in at the same price that Mr. Spitzley did, \$20; he makes a total of \$105.90 for the flooring, and I make \$128.24. He makes 28 squares of gravel floor where it takes 39 squares to put it on.

Q. That is on the boiler-house?

A. On the engine and boiler house. I make that \$156 and Mr. Spitzley makes it \$151.50. The bond timbers, seemingly, have been omitted in all the figuring. There are a great many bond timbers put in the brick-work and wall, to nail our casings to and all of our other fixtures, which would represent a good many thousand feet of lumber in the plant. They seemingly have been omitted, and I have omitted them as well myself. Mr. Spitzley makes \$1,800 feet of lumber in another item in the uprights of the dust-arrester house; he figures 3,000 feet. His total is \$54 and mine is \$90. He makes 2,222 yards of burlaps, at 7 cents per yard, \$155.54. I call that the same. He has omitted the royalty for which we had to pay the Backus Company. I called that \$700, but I think we paid more than that.

Q. You mean the Backus-

A. Dust-arrester Company. That is the royalty for permission to build and use. He has put in doors and windows at \$75, and I make them \$128. He calls the steps \$4.00, and I find four steps, which would be seventeen treads, at 75 cents per tread, \$12.75. Mr. Spitzley puts in the bridging, platforms and runway at \$72. There are 2.732 feet of lumber in these and I have called it the same, \$72. Mr. Spitzley calls for 38 large blinds, at \$3 each, \$114, and I call that item the same. A few of the blinds have been taken down, but when they are all in place there would be 48 of them. We have them there, but I have made no notation of that. Mr. Spitzley calls for 23 iron beams, 24 feet long, \$345.

1972 Q. What are they?

A. They are large girder beams, T-rail girders, 23 of them, and ten of them are trussed. He has no account of the truss. those in at \$600 put in place. They are very heavy and represent a good deal of labor. He omits the following: Large ventilator pipe, from boilers to roof of dust-arrester, \$75; double ratchet shut-off for shutting off where the shavings come down. There are two wheelsthe shaft with pinions and trun-ions, and he omits the lightning rod, which I suppose \$35 is about right for. I recollect that is just what we paid for it.

Q. What is that double ratchet shut-off?

A. That is a rack and pinion, two rows of those, with a shaft running through a large wheel on each end and an iron floor, which shuts back to close the space between the shavings-room and boiler-room, so the fire cannot run back on us.

Q. What did you estimate that?

A. One hundred dollars; I think it cost all of that. One transom light, \$3.00; three skylights and frames, at \$3.00 each, \$90.00 These are small ones. Fourteen iron doors, at \$5.00, \$70.00. I think they cost a good deal more than that, but I have put them in at that estimate. At least, I do not think they could be replaced Painting, \$82.00. I have put in the star plates and anat that. chor rods at \$50. There are some 15 or 20 of them, and I should say they ran, some of them, clear across the building, and some 30 feet long with a plate on each end. Conductor pipes, \$37.50. floor in boiler-room and ten girders supporting the same, \$75. Giving a total of Mr. Spitzley's figures of \$1,294.58, and of my figures, \$3,178.36. Next comes the elevator-house. Mr. Spitzley makes 10,380 feet of lumber and labor at \$25, \$260.50; and 6,075 feet of flooring at \$25, \$181.50. These two items are at the same price; I put them in at the same price, \$501.05 for the two items. He

figures 101 squares of gravel roof, and my estimate is 12. He makes it \$36.75, and I make it \$48.00. Door- and windows

he puts in at \$182.50, and I figure them at \$293.00.

Q. On what do you figure those—your knowledge of the cost of

putting them in?

A. Yes. I should not be at all disappointed if Mr. Spitzley probably omitted them. It is a very difficult matter to go over that mill and not miss something.

Q. To a man that is not a builder? A. And yes, even the man that built it.

Mr. BAKER: How many doors and windows are there there?

A. Ten doors, 17 windows and 88 sash.

Q. Is that included?

A. I do not charge anything for the sash. They go with the windows at so much. There are two small sash which I have put in at \$1.50 each.

Q. That is all in your estimate?
A. Yes, sir. There are two large skylight frames, \$5 each, \$10; 12 large skylight sash at \$3.50 each, \$42.00.

Q. Were those omitted by him?

A. Yes, sir. There is also 415 feet of maple flooring which he omitted, at \$35 per thousand, \$14.52. Two partition sash at \$1.75 each, \$3.50. Painting, \$39; conductor pipes, \$50. I would say right here that our conductor pipes are very heavy, most of them being made of heavy galvanized iron, riveted and soldered. 480 square feet of sheet iron on ends of building above roof, 960 pounds at 3 cents per pound, \$28.80. Mr. Spitzley's total of this building it \$661.25, and mine is \$1,029.87.

Four dry kilns comes next. Mr. Spitzley makes 16,792 feet of

lumber and labor.

Q. Not so many feet of labor?

A. He puts it in as lumber and labor, and I have simply 1974 copied his statement from the testimony. I make 35,880 feet,

more than double. He puts this in at \$22 per thousand, and I have put it in at \$30 per thousand, for the reason that it has a ceiling overhead which is very expensive, and a great deal of bridgework, small stuff cut up into quite fine stuff for supporting our tracks and foundations. He makes 14,500 feet of flooring and I make 8,974. You see much less than his amount. But he omits the ceiling and there are 14,739 feet of ceiling evidently omitted. He puts this in at \$25, and I put it in at \$30. Mr. Spitzley's total of lumber is \$741.82 and mine is \$1,787.79. He has got the number of squares of roof in this building correct, 52. He makes this item \$182, and I make it \$208, the difference in the price of roofing. He puts in eight large sliding gates; those are very large doors at the front and rear of the dry kiln, at \$15 each, \$120. I have put them in at \$25 each, \$200. He puts in the chains, weights and pulleys on a basis of \$7.33 each. (You understand the way I get my average of his prices; I have had to make it myself, dividing his number of articles or feet into the dollars and cents, which he called it.) He makes this item \$117.60. There are 16 set- and I call them \$10 each set, \$160. His next item is air gates, and small doors, \$24. This item I have put in at \$46. There are four air gates and eight small doors; I added to it because of the amount of labor and material I thought it would take to build them.

Q. Did you build them or superintend the building of them?

A. Yes, sir. He has put in 1,500 feet of canvas. Those are the large tent-cloth canvas curtains which we have at the front of the kilns, to throw the draft down through the lumber. I call this item

\$30; his estimate is \$20. I had the yards of that all figured out 100 yards at 30 cents a yard. Painting, \$145.60. These two items I have just given you now are omissions, and conductor The total of Mr. Spitzley's figures is \$1,205.42, pipes, \$25. and mine is \$2,602.39.

I wish here to correct my figures a little on the engine and sawdust house. I should add 54 cents to my own, an omission in

carrying out.

1976

The next is the store-room alongside of railroad.

Q. You mean by the Michigan Central?

A. Yes, next to the Michigan Central, near it on that side. Mr. Spitzley makes 42,425 feet of lumber and labor, at \$24, \$1,018.20. I could not see why he should put that in at less than he did the \$25 on the other building. But I have accepted his figures, 27,600 feet of flooring, at \$30, \$828. That is about right. He has 47 squares of gravel roof, which is correct. He makes it \$164.50, and I make it \$188. He puts in the doors and windows at \$137, and I make them \$178. He puts in one pair of stairs, \$27-whereas he put in five pair of stairs in the mill, including all the partitions, at \$84.20.

Mr. BAKER: What do you put this at?

A. I call it the same. There is a little division wood wall there that takes about 600 feet of lumber to make, which I assume he has included in that item. If he has, he made it a very fair estimate. The following are omissions: 24 four-inch iron posts, with a cap at each end, brace rods and clamps. These posts are braced with a clamp around the post, and an iron rod running down to form the race, fastened to the roof of the building. I put those in at ten dollars each, \$240. One transom, \$3; painting, \$90; conductor pipes, \$15; 2,124 square feet of corrugated iron at 71 cents per foot, put on, \$159.30. The sewers and all that I have left out, of course, when he did; they have not been considered in any of the buildings.

Q. That is in Mr. Spitzley's estimate?

A. Or mine either. Mr. Spitzley's total of this building is

\$2,174.70, and mine is \$2,746.50.

Now, going to the sheds. The only difference between us on those is in the taking of them. He took them separately and I took them all together, collectively. The total of Mr. Spitzley's figures is \$4,488.69, and mine \$5,656.61. Now I will give you the corrections. He has put in the windows at \$12, and I have put them in at \$24. I am now giving you the sheds next to the fence on River street. The squares of gravel roof are correct. He makes \$53.80, and I make \$62, the difference in the price of 50 cents a square. In the shed next to the mill, the squares are correct. He makes \$126 and I make \$144, the difference being 50 cents per square. Then he calls the skylights \$90. There are six very large skylights with very heavy large sash, which I call \$25 each, making \$150. I have put the sidewalk in here, which we had to build and had to keep up, at 25 cents a running foot, \$63.75. Q. Is that omitted from his?

A. Yes, sir.

Q. Which one is that?

A. On River street. He puts in 260 feet of fence, ten feet high, with gate—there are four gates, but I have left that the same—\$260, \$1 per foot running he puts that in at, but he omits 60 feet of side fence, which is a high fence about eight feet, dividing our property from the property that Mr. Joy claims he bought here a short time ago, about 60 feet deep. That makes that item \$24, which he omitted. He makes 46 squares of gravel roof, \$161, and I make it \$184.

Now we come to the shed back of the office. The shed I just gave, which included the sidewalk and the fence, was the shed between the two tracks on River street, and I am now going to give you the shed back of the main office on Fort street, at the

1977 end of the mill. He makes that 35 squares of roofing and I make it 51; his total is \$122.50, and mine is \$204. He puts the large sign on top of shed at \$160. It is low enough, but I have left it the same. He includes in this shed back of the office one tank which is on top of the mill, so I have had to do the same, one eight by ten water tank. He puts it \$45. The tank is 10 by 12, with heavy hoops, connected, which cannot be done for less than \$100. Total amount of lumber given by Mr. Spitzley, \$58,067, on an average of \$24 per thousand, \$2,695.79; as against Mr. Spitzley's I make 90,382 feet, on the same average basis of \$24 per thousand,

Q. How is that?

\$2,169.16.

A. I have made a mistake in Mr. Spitzley's statement. I will have to give you the total amount on this, that is, on all the four sheds. I withdraw that statement. Mr. Spitzley makes in the shed next to mill and the shed between the two tracks, 116 house blocks, and I make seven more, 123. Mr. Spitzley's total for those sheds is \$4,488.69, and mine is \$5,656.61. He has put in one item of painting and glass, \$395, which I have corrected. There is no glass there, excepting the skylights, and I have called the painting \$120.

Mr. Robison: Does not this item cover what you say he has omitted of painting? This is the only item he has got in the whole

business?

A. He did not mean that. His painting and glass he puts in at \$395, and there would be no reason in that.

Mr. BAKER: For these sheds?

A. He puts in 775 feet of private railway, \$999.90. I make that item \$1,532.20. I make 90,382 feet of lumber in the four sheds, and he makes 58,067 feet.

Q. You figure the price per thousand the same?
 A. Yes, sir. It is a very hard thing to get at.
 Q. Is there any painting in the sheds?

1978 A. There is no painting on the sheds between the tracks, excepting the cornice and the posts, iron-work, of course.

Q. Might not Mr. Spitzley have included all that in that part of his statement, the grand item for painting through the mill, of \$395?

A. No, sir, I think not, because the painting would come to a good deal more money than that,

Q. At all events it is in there?

A. Includes painting and glass. The dollars and cents show that. be it one way or the other. I simply saw the mistake and corrected it, that is all.

Q. Does that finish the timber?
A. That finishes all of the wood-work that I am familiar with. I would say that when we built the mill we paid for that timber \$17 delivered. An agent of the same parties from whom we bought it came into the office the night before last, to sell me some lumber, and I asked him what this timber of the same size would be worth; I asked him for the list and he handed it to me.

Q. Is that from what you have made up this statement?

A. No, sir, I have not. I have made my statement upon the values of that timber way back in 1882, when we built that mill, remembering that the lumber cost me \$17, and yet today there is much of that lumber that cannot be bought at less than \$29 or \$30.

Q. Then you have used in your estimates the price of lumber per

foot at cost price?

A. I estimate the cost price in 1882 and '3.

Q. How much less was the lumber worth than in 1892?

A. Well, I should say at least \$2, and I do not know but \$3 per thousand feet, excepting the long timbers, and that I will give you some idea of here. We bought this lumber from Salling, Hanson

& Company, of Grayling, Michigan, just the square, heavy 1979 timbers, and we will take the item of 12 by 14 by 41. will call it 40. We paid \$17 delivered in Detroit, and their

price today is \$27 on the cars at Grayling, plus the freight, which would be about \$3 per thousand, which would make it \$30 delivered here, or \$13 more than we paid for the stock then.

Q. There is no change, material change, in the price of lumber

from 1892 until now?

A. No, sir, we have not found it any different yet. I have gone further still. I have averaged Mr. Spitzley's figures, taking all of the lumber in the mill, putting it all together at the price he has called it, including the hardwood, the maple flooring, and some oak flooring which I presume he put into the maple, but which is more expensive, yet I have called it the same, and it averages \$24.29 per thousand, including the labor put into the building, all of the buildings-mill, elevator-room, engine-room, sheds, etc., and if you take out the hardwood part the average is \$23.32; this, I suppose, includes nails, etc. I can give you a recapitulation of the whole building, if you wish, of the lumber, as far as prices are concerned. I will take, for instance, a start with the kilns. Mr. Spitzley makes the rough lumber \$22, flooring \$25, and I make it \$30. Engine and boiler house, Mr. Spitzley makes the rough lumber \$24 and flooring \$20. I make the rough lumber \$25 and the flooring \$30. Store-room, shed, Mr. Spitzley puts the rough lumber at \$24, flooring, hardwood, etc., \$30, and the elevator room he puts it all in at \$25. I call it the same. And the average of all of the sheds he

puts in at \$24, and I call that the same. In the mill he puts the rough lumber in at \$23.20 and the hardwood flooring at \$27.60. I put in the rough lumber at \$25, which is less than a large amount of it would cost, and the hardwood flooring at \$30; or, as I figure it, Mr. Spitzley, in the grand total, recapitulation of the whole woodwork of the buildings, puts in at \$18,887.55, and my figures

are \$27,586.01, and I consider that a very low price.

Q. That is the total wood estimated?

A. Yes, sir.

Q. In that wood estimate, as I understand you, you have estimated the lumber at the old prices of 1882, \$17?

A. At \$17 per thousand.

Q. Have you got any estimate of the timber that is in the mill at the prices of '92?

A. No, sir, I have not made an estimate in that way.

Q. About what difference would that make?

A. The present price of timber of those dimensions is very high. I think it would be fair to add two to three dollars all through.

Q. On all lumber?

A. On all lumber from two to five dollars. Hardwood flooring he has put in at \$27.60, and I cannot buy the flooring myself for that today. We sell maple flooring here in Detroit for about \$30. I called on Mr. Demann the other day and talked with him about maple flooring-one of the builders here-and I asked him what he figured maple flooring at, laid, regardless of his knowledge of what I wanted it for-that is, he did not understand my motive in asking it-and he told me he ought to have forty-five to fifty dollars for maple flooring laid, including the labor, nails and waste. There is a very large amount of waste, and it is all kiln-dried, the flooring is. We pay sixteen to eighteen dollars, and we have always calculated it cost ten to twelve dollars a thousand to kiln-dry, and perhaps allowing a trifle for the waste, that would make thirty dollars. We sell that flooring from thirty to thirty-five dollars, and sometimes we get forty dollars. Now, we cannot buy that same flooring and lay it, including labor and nails—and it is very hard

to lay, often have to drill it for the nails-we cannot get it laid for three dollars less than it costs, and I think my esti-1981

mate of thirty-five dollars is very low.

Mr. Robison: How much did you say Mr. Spitzley's wood estimate was of the whole business?

A. \$18,887.55.

Q. He has got it \$22,000?

Mr. Dickinson: I think he included in his estimate the masonry. This is the item of the framework. You will find he included in

there the estimate of the masonry.

A. I have found it to be an endless job. I have worked diligently for weeks, almost nights and days, to get this thing in form, and I have perhaps made a few small omissions, but not intentionally.

Q. In estimating your timber, which you say you have throughout the mill estimated at \$17, the price of cost, whereas the price now is \$24 to \$25-can you estimate the price of that lumber at present prices, or at the prices in 1892, and give us the addition to your own estimate?

A. Yes, I can give you the total amount of timber in that mill, as

figured by Mr. Spitzley and ourselves.

Q. You figured it at \$17? A. Yes, sir.

Q. Have you any doubt whatever, from your own knowledge of the business-you are shipping timber at your own dock there all the time?

A. Yes, we are handling a great deal of that kind of stuff.

Q. At your own estimate, from your knowledge of the prices in '92, there has been no change from then until now? I think you have some list there?

A. Yes, sir.

Q. You figured at \$17. Now, give us, if you please, the additional What is the total of the timber in the mill?

A. According to Mr. Spitzley's own figures, and not mine,

507,620 feet.

Q. What is the average price on that? A. On the total, \$24.29, including hardwood flooring and everything, and that includes the labor in getting the stuff off, raising it in place and laying it down.

Q. You have only put in the hardwood timber at \$17? A. No, sir, the building timber; but the hardwood at \$35.

Q. What I am trying to get at is the building timber, that he had done, and according to his testimony, and as I understand it in all your estimates, you have given us it at \$17, cost price?

A. Yes, sir.

Q. What amount of building timber is there in the mill?

A. There is probably 200,000 feet.

Q. And the price, you say, is \$24 at least?

A. You could not buy that timber today, taking it as it runs, at less than \$21. That would be about \$4 advance. You understand that does not include all light lumber.

Q. I understand that it only includes 200,000 feet, about \$800. A. That would be about \$800 advance. That is what I figured it last night.

Q. Have you taken up the masonry work?

A. Why, to no extent. I trusted to Mr. Finn and to Mr. Dee. I thought they were pretty reasonable men myself. They made a few omissions. Mr. Finn came to me the other day, after he left the court and wished to correct a few things, some omissions he had One was all the foundations under the twenty-five posts under the mill, and there were one or two small walls.

Q. There are some items that Mr. Spitzley included, having

1983 gotten them from an estimate by somebody else?

A. I have taken from the testimony there the figures of Mr. Spitzley, right off verbatim, or rather as they were on there.

Q. Have you had to do with the placing of the various machinery in that mill?

A. Why, I have not only had to do with the placing of it, but I

have been the inventor and getter-up of very much of it.

Mr. Robison: Now, I do not understand the difference between Mr. Backus' estimate and Mr. Spitzley's. You say Mr. Spitzley makes it \$18,000 and Mr. Spitzley has figured it here at \$22,000?

A. Oh, I beg your pardon, I see where the difference is-the office.

The office I have not had time to get at.

Q. He figured the office at how much—have you got that?

A. Mr. Spitzley figured the main office; he just says carpenterwork.

Q. Just read what the total is.

A. \$3,724.54. Does that make your statement correct?

Q. That is what Mr. Robison and I are both after. Now, in setting up this various machinery in the mill—mostly originally patented articles, I suppose—

A. Yes, sir, much that we buy is often patented, generally pat-

ented

Q. Does the cost of putting the article you buy in the mill compare with the value or cost of the machinery you have running in the mill?

A. You are speaking now of machines we have bought outright?

Q. Yes, sir.

A. No, sir, we have very much improved them.

Q. You have your own improvement?

A. Yes. There is scarcely a machine in that mill we have not had apart, taken down and made wrought-iron parts where they were cast iron, and added thousands of dollars

of expense.

Q. Then, does the most of the patented article, as put in the mill, bear any relation except as an estimate in making up the total value of the machines, to the cost and value of the machines in the Backus mill?

A. I can answer the question in this way. There is a great difference in the machines. Some machines we have lots of that repairs to do—

Q. Repairs or improvements?

A. Improvements. I call them repairs, but I mean improvements. I went up the other day and looked through Mr. Spitzley's mill to compare his machines with ours.

Q. Never mind that. The competition in the planing-mill busi-

ness is very close, is it not?

A. Very.

Q. And the margins very narrow?

A. Yes, sir.

Q. And you have made a success of the Backus mill, from your company and yourself working at it and constantly improving the machines, and supplying parts where you saw they were needed?

A. Yes, sir.

Q. Although you would buy the original patented article?

A. That is correct.

Q. Is there a single machine in that whole shop that does not

bear some improvement, from one to numerous in fact, and almost revolutionize the machinery or changed its general character of some nature, supplied by your experience in the planing-mill business?

A. No. sir, I do not know of any.

1985 Q. Could a mill be supplied with going into the market and buying machines and starting up anywhere?

A. No. sir.

Q. That would be a success?

- A. No, sir, it takes years to get down to a working basis. I would give more for the machinery which I had in my mill than for new machinery. I could not use the new machinery until I had gone through my experience. There are weak parts in any machine.
- Q. You have to adjust them to your own theories and experience?

 A. Yes, and the man that carries more lumber in a day finds more weak parts than the man that does not.

Q. A machine that you buy in the market has to be Backusized

to become a part of the Backus mill?

A. Yes, sir.

Q. And this is done at a cost?

A. Yes, sir.

Q. You heard Mr. Cramer's testimony?

A. Yes, sir.

Q. Will you now please state whether, listening to his testimony as to what there was in the shop, if you had not known that he was testifying to matters in your own shop, whether you would have known that you had any such material as he testified to here, from hearing it?

A. Well, I do not think that a man could get any idea of what we had there in the length of time he was at it, and yet he was at it

considerable time.

Q. Well, from his own statement of what the machines were, did you recognize them?

A. Oh, no, sir.

Q. You could not tell what machine he was talking about at any time?

A. Hardly.

1986 Q. Now, have you gone through his testimony with the care you have gone through Mr. Spitzley's?

A. I have not gone through Mr. Cramer's testimony to the extent to which I have Mr. Spitzley's.

Q. You have examined the matter of the machines as to which he was testifying?

A. As to which Mr. Spitzley testified, and to some extent those to

which Mr. Cramer testified.

Q. From Mr. Spitzley's statements of the machines, were his descriptions of them in your shop, descriptions of them representing their character as they actually are in the shop?

A. Oh, no, sir.

Q. You did not recognize, from his description?

A. I could not get any head or tail.

Q. What he was describing or what he was telling the jury about?

A. No, sir, it puzzled me a good deal.

Q. Now, take up, if you please, Mr. Spitzley's testimony as to the machinery in the shop, and tell us something of the machines there

are in the Backus factory?

A. Well, there are five S. A. Wood's—that is, machines built by S. A. Wood, upon instructions from us with our improvements—five, thirty-inch, eight-roll, eight-inch roll, broken pressure bar—we eall it broken, we mean divided—and broken-roll double-surfacing machines, which Mr. Spitzley, I believe, put in at \$1,600 each. That would not be far out of the way for the machines delivered on the cars at Boston. Then the setting up would come extra and the freight extra. One S. A. Wood's 24-inch dado.

Q. Now, take the five machines that you speak of and put in as delivered on the cars at Boston, at \$1,600, and subject to the wear

and tear-

1987 A. Yes, I heard Mr. Spitzley say that the wear and tear would make up for the difference in the freight.

Q. Now, what are those machines, as set up in the shop, worth?

What is the value of them as you have them in the mill ?

A. Oh, I do not suppose they stand us a cent less than \$2,000. Out of foundations—you see, we have to dig down into the ground and put in oak tires crosswise, and then put oak timbers on top and bolt them together, and place the machines on that and bolt it down to make it firm. If you did not, it would rack itself all to pieces.

Q. Then, have there been additions to those machines in the shop

that you have just referred to?

A. Yes, we have had to throw away the cast-iron wrenches that come with the machines and have wrought-iron wrenches made; and we have, in some cases, put in heavier arbors, and in a general way we have had to improve the machines; and it would be so with any machine we had. It has been my experience.

Q. In your mill, will you state whether you have, for those machines to which you have just referred to, parts ready for renewal?

A. Oh, a great many parts. We have extra tools, extra knives, extra dead-rests and pressure bars.

Q. You have them ready to renew parts, in your mill?

A. Yes, sir.

Q. So that there would be no stoppage?

A. Yes, we have to.

Q. You have them on hand?

A. Yes, in great numbers.

Q. Now, Mr. Spitzley gives only four of those machines?

A. I would say right here, that were we dependent upon 1988 sending to Boston for a little break in one of those machines to repair it, to get a new part and take its place, it might disturb us for a week or two.

Q. You have to keep equipped to supply the thing in the shop?

Mr. Spitzley only gave four?

A. Mr. Spitzley missed one of those machines. I do not know how he missed it, but he did.

Q. Now, with all extra parts supplied, the entire equipment of each machine, what is the value of them in the mill?

A. I consider those machines stand us \$2,000 apiece today.

Q. With the extra parts?

A. Yes. I should not consider that as far out of the way.

Q. Were they worth it in the mill in '92?
A. Yes, sir. You understand that when a You understand that when a part of a machine, one of these machines, gets in any way worn, we immediately replace it with a new part, and a better part, if possible, so that the machine is practically in better running order today for our business than a new machine would be if it were just set up. We keep the machines up in apple-pie order.

Q. With the machine that you have running in the shop, one of these five you have just spoken of specifically, is one of the machines in the shop you have equipped, ready for readjustment on any breakage or anything of that sort, running in accordance with the theories in existence in your shop-is it worth more or less than a new machine to put in?

A. To me it would be worth a good deal more.

Q. Well, worth to the mill?

A. To the mill, certainly; that is me. Q. Worth in its place more or less?

A. It is worth more. That has been by experience all my life.

1989 Q. How often are those machines rebab-itted?

A. Oh, they sometimes will run a year, possibly six months, if the men do not get careless at all and let them get dry; then they will run longer. It is a very expensive job to babbit one of those machines.

Q. Your estimate then on those five machines would be \$10,000?

A. Yes, they are worth that to us today.

Q. Take up the other items.

A. There is one 24-inch machine in the same class. That makes six altogether. And I should say that the difference between the price of that and a 30-inch machine ought not to be over \$200; possibly not over \$100. Yes, I guess \$100 is enough for the difference in the width.

Q. What is that worth, equipped in accordance with the testimony

you have given?

A. Well, that would be worth, say \$100 less than the others-\$1,900.

Q. Did Mr. Spitzley miss that machine, too?

A. No, he had that.

Q. He had that, so that we got it by showing him the photograph and having it identified?

A. Yes, sir.

Q. Now, have you a statement of the omissions of Mr. Spitzley of machines that you could not find he had seen at all?

A. Yes, I have a partial list.

Q. In his estimate of rip and cross-cut saws, he gave seventeen as the number, and put in the price of those seventeen saws as \$748. That would be at \$44 apiece, and a few of them he put in at \$45. Are there but seventeen rip and cross-cut saws?

A. There are thirty; he omitted thirteen.

Q. What is the value of those thirty rip and cross-cut saws, as

they are in the mill?

A. Well, they have cost us, I should say, at least \$100 apiece; that would be \$3,000. They are worth more than that. Those have my own improved appliances, built by myself. I cannot buy a machine in the country anything like them. They are not in the market; not a stock machine.

Q. Give us some idea of the improvements upon the rip and crosscut saws that you have, in addition to the original cost of them.

A. In our cross-cut saws we have a carrying table which is very important in cutting off, in order to enable one to cut off square. It is very seldom that you will run across a table that will do that. In fact I have never seen any myself that would absolutely cut stock square, and you could depend upon it, except ours. Then there are what we call yokes over the saw, to protect the boy from getting hurt that is standing over the frame. We will say the saw is here and his lumber is traveling along here. Here is a yoke up over the saw. Now, as his board is all cut excepting the last piece, he can pass that along just the same, clear passed his table, off his table entirely and beyond this yoke, carries it over the saw and then he cuts the last piece, instead of having to turn it over and look at his measure and make a mistake of a sixteenth or eighteenth of an inch. Then we have what we call a back gauge.

Q. To these same thirty rip and cross-cut saws?

A. To the cross-cut; about twelve of them. We have what we call a back gauge, which is a very intricate and expensive affair, for cutting short stuff. In case we have an order today and we have a lot of stuff—

Q. On every cross-cut?

A. Yes—for squaring off the ends; that is used on short instead of long lumber. Then we have a large number of what we 1991 call finger gauges, trip-gauges, that were my own get-up. I

worked years and years to learn how to handle that part of the business, and those will trip down. You can get eight or ten lengths of stuff; that is, you can set the gauges to cut eight or ten lengths, and you can cut any one of those and skip right over and the gauges will trip down. If you want to cut the last the longest length, all the other gauges get away; if you want to cut the first length, the others do not come in contact. There are rules set in the tables, both lengthwise and crosswise, and the tables are iron. The arbors are very heavy and expensive, and adjustable, and each cut-off saw has a tightener, which adds to the expense very materially, and then the gauge that holds the fingers is held very firm with bolts and screws. The rip-saws have a double worm attachment for raising and lowering the tables, and then safety splitters to prevent the boys from getting hurt, which is a very essential thing, 147—55

and what we call dead-set gauges, or rests, for ripping the stock against. There is a clamp here, and when we get it just right we have another clamp that we call a dead-set, to draw down here so that it cannot get away. Now, these grooved or V tracks of the gauges we have on our rip-tables are made of about three-quarters by three or four inch steel, and they have to be planed out at a very heavy expense, for this reason: We had many years' experience in using the boughten gauges, and I have been to Michel's, here in Detroit, and different ones that make the stock gauges, and they would not last us twenty-four hours. If you tighten down your gauge to hold it in place, it will break off.

Q. Now, these equipments in the mill he has put down at \$40 to

\$45 apiece?

A. Yes, sir.

Q. And omitted thirteen of those?A. He has omitted thirteen of them.

1992 Recess until 2 p. m., at which time the examination of the witness was proceeded with, as follows:

Q. Of the thirty cross-cut saws, is there any peculiarity of the saws at all in what is called the swing saw?

A. Yes, sir. The swing saw that we use, I do not suppose there

is another one like it in the country. We have five.

Q. Now, those swing saws cut in grooves, do they not?

A. No, sir. With a swing saw there is an iron frame that is held above, which gives it the name of swing. It has a large brace arm, and here is the saw on the lower end and the journal runs through there, and the belt or power is held up there and gives it a chance to vibrate like the pendulum of a clock.

Q. Doesn't it vibrate in a groove?

A. No. sir.

Q. On cross-examination Mr. Spitzley gives seventeen rip and cross-cut saws, and he referred to those, four of them he named in his seventeen and put in at \$45 apiece?

A. Those are entirely different things from the thirty I speak of. Q. I know, but he put them in at \$45 apiece; the machines as they were in the shop. Now, what is the cost of the swing and at-

tachment-the swing and the bench?

A. I could not replace them for \$200; I don't know as I could for \$250; they cost me over \$200.

Q. They are in fine condition?

A. Yes, sir.

Q. Better than new?

A. Very best condition; first-class and in good order in every shape and form. I was going to remark that those frames you spoke of, connected with these swing saws, are thirty-two feet long. The ordinary swing saw that a carpenter shop or sash, door and

blind factory would build or buy has the simplest kind of a table practicable, nailed together, nothing substantial about

it; whereas in our case this is made of the heaviest kind of hardwood timber, and the swing-table is thirty-two feet long. It

has sixteen legs. It takes 500 feet of lumber to build it, all oak and ash that is worth from \$40 to \$60 a thousand, and the labor upon that is worth as much as the lumber, or more. It has two bolts 32 feet long in it. It has 75 shorter bolts that are from two to three or four or five feet long. It has 92 mortices and 92 tennons, and you have got to bore 180 holes to put it together, and it has what we call a gauge-rod that is trued up, 32 feet long and an inch square of steel. It has four devices or irons that are gotton out with setscrews, enough to hold this gauge, and it has two of what we call cutting-plate irons; it has eight rest-irons and six supporting irons, and from eight to twenty gauges, besides the saw. This is the frame I am speaking of. The saw is an entirely different part of the machine. It acts differently, but when it is put with the frame it is one thing.

Q. He appraised it in his inventory as only the saw at \$45?

A. Yes. There is nothing like them in the country; it is all our own get-up. I have worked years. I studied over that machine for years and years to get it perfected, and I consider it perfected. You go into a sash, door and blind factory and they do not cut but one length at a time where we cut from one to a dozen lengths at a time.

Q. What would you call those five alone worth, of the swing-saw

attachment?

A. I consider those five saws would be worth \$250 apiece. I might state right here that those machines are not stock machines. You cannot buy them in the country anywhere; not made by Fay or Wood's, or any one.

Mr. BAKER: These frames that you make?

1994 A. No, sir, we have the only one in existence of its kind.
Q. Now, there was a Preston improved saw which Mr. Spitzley put in at \$90. What is the value of that.

A. You can buy that saw today on the cars at Battle Creek for

\$90, but not with the attachments I got on it.

Q. What is the value of the saw in place as you have it there?

A. That saw in place, with the attachments I have built to it, is worth today maybe \$200; maybe more.

Q. Did it cost that?

A. I paid \$90 for the saw and about \$40 or \$50 for the extra appliances they put on it, and paid the freight and setting up, and I have added a great many tools to it since—cutters and saws. I do not think \$250 would make it. I will put it at \$200.

Q. I notice that Mr. Spitzley, for his valuations, referred everything to a man named Jencks. Do you know what machines he

represents there?

A. Yes, he represents J. A. Fay & Co., of Cincinnati.

Q. How do they compare in value with the Wood's machines?

A. We use the Wood's, but our past experience in years gone by, when we did have Fay's, was that the Wood's machine was far superior for us. I would not buy a Fay machine today for myself, although there may be those that like them. We took our choice from the Fay's and Wood's and all of them, and we concluded to

buy the Wood's and pay the Wood's price. The Fay machine is

much cheaper than the Wood's; decidedly so.

Q. Well, can you give an approximate idea of the difference in their values? Mr. Jencks had given him the value of the machine by telling him what it ought to be, arriving at his conclusion 1995

- according to Mr. Spitzley's view of it-Mr. Spitzley asked Jencks for the price and he would refer to the price-list. A. Why, he naturally would ask what a machine about so and so
- was worth, and he would refer to the price-list and give it to him.

Q. The Fay price-list? A. Yes, certainly.

Q. What is the difference in valuation of the two machines, generally?

A. There is 20 to 25 per cent. in the market; that has been my

experience.

Q. He also put in the large molder and S. A. Wood's molder at \$470. Can you identify that so as to tell really what the value is? A. Yes, S. A. Wood's 24-inch combined surfacing and matching

machine and molder.

Q. What is the Wood's worth that he put in at \$470, on the information from Jencks?

A. You want the large molder? Q. I want the large molder.

A. I was giving you the matcher. One S. A. Wood's improved 14-inch combined matching and molding machine. That machine is worth as it stands today \$1,500 at the least calculation.

Q. What is the original machine worth in itself?

A. I do not know of any ever having sold at less than \$1,200 on the cars at Boston of the Wood's molder.

Q. You take your valuation, making \$1,500 from the equipments?

A. At least that. You understand me, I do not include the knives.

Q. I know. But the actual cost of the Wood's molder on cars at Boston is about three times his valuation?

A. Just about.

1996 Q. Did you include the knives in your estimate of \$1,500? A. No, sir.

Q. How much is it worth, including the knives?

A. You cannot class it in that way, for the reason that our knives are used in common between three or four machines. The same knife applies to four or five machines and I will have to put the knives in at another place.

Q. Now, there is a small Huntington molder, to which he testifies and which he said was worth \$130. What have you to say

about that?

A. That machine is worth at least \$700.

Q. What is the cost without any equipment of a Huntington small molder?

A. That machine we paid \$550 for at Newark, N. J. I do not think \$700 is enough.

Q. There is a feed-molder worth about \$130.

A. Oh, yes; not a molder, a little door-relisher molder.

Q. Fay does make a machine of something of that kind for about

\$130?

A. I think probably Fay does, and H. B. Smith; all the door and sash machine makers make those little light machines. Mr. Spitzlev has one that I should say cost \$130.

Q. But not a Huntington?

A. Oh, no, sir.

Q. What is it worth, with the equipment, on the floor of the shop?

A. I said \$700.

Q. It would cost at Newark \$550. Now, the band-saw files?

A. Filing machines.

Q. The band-saw filer, as he called it; the same as he used, he said; put it in at \$75. Has he got any such band-1997 saw filer in his shop?

A. I did not see any, and I looked for it the other day when I was

up there.

Q. What is a band-saw filer?

A. It is an automatic band-saw filing machine—emery grinder, we call it—that costs on the cars at Buffalo \$75. Then there is the freight and setting up and the connecting, and a great many extra tools you have to build to go with it.

Q. Equipment in the shop?

- A. Yes, the hammering bench, and you have to build anvils, and you have to buy hammers of different sizes for it.
- Q. What is the total of the whole thing with the equipment? A. The machine would cost about, I should say, not less than \$200 set up; that is with the hammering attachment that goes with it. You understand there are a good many appliances for putting band saws together that I include with that. I call the whole thing. The machine itself does not represent very much; it is the attachment that goes with it.

Q. That costs \$200 in the shop you say?

A. Yes, I will make it \$250.

Q. Why do you add on the fifty?

A. Because I happen to think there are the brazing tools that go with it that are expensive.

Q. What are they?

A. Where you braze the saws together—the silver.

Q. You use silver solder?

A. Yes, it is silver.

Q. Now, the Eagan gig-saw. What is that worth in the shop?

A. About \$125. Q. He is pretty liberal to you with that. He gives it worth 1998

A. This machine is worth \$100 that we got; it is the heavy size.

Q. You mean costs that?

A. Yes, on the cars at Philadelphia; and we have to put on some heavy frame-work to support it and to put it on the floor.

Q. It costs \$25 to equip it?

A. To put it on the floor and get it in running order; yes, sir. There are different sizes of gig-saws; there might be one worth \$25 and another one worth \$200.

Q. Yes, there are gig-saws and gig-saws. Mr. Spitzley put in no frames and tables. He said he did not inventory any or appraise

them?

A. No, sir.

Q. Those are part of the equipment of the shop?

A. Yes, part of the machine; a very important part. Without

those the machine would not be but of very little account.

Q. What are those frames and tables? How many of them are there, and what are they worth and what is their value in the shop?

A. You have in mind now the swing-tables or bumping ma-

chines?

Q. I mean the swing-saw tables.

A. I have included those in my estimate of the swing saws. That is what makes up the cost of the swing saws.

Q. And the bumping machines, do you include those?

A. I will give you those now. There are eight of those and they are worth \$20 apiece at least; eight box-board bumping or glue tables or machines. They are all ironed and tennoned and morticed together and substantially built.

Q. The total valuation is how much?

A. \$160. 1999

Q. Then there are four - five long tables that he did not estimate at all?

A. Those, I think, were included as swing-saw tables.

Q. There is a blacksmith forge omitted. He said he saw one there, but it was not set up, and he did not appraise it?

A. Well, that was a forge that cost us about \$30, I should say.

Q. Is it set up?

A. It is always ready; it is portable; it is carried around the same as you would a tub or anything else?

Q. Set up and in constant use?

A. Yes, sir.

Q. The power wood-cutting machine he did not estimate at all? A. That is worth about \$150.

Q. Of the emery grinders, he said he saw one but he did not estimate it. How many emery grinders are there and what are they and what are they worth?

A. Four. There are two there worth \$75 apiece and two worth

\$50 apiece, making a total of about \$250.

Q. He said he did not estimate any trucks at all, although he saw some trucks there. How many trucks are there?

A. Well, of the mill or factory trucks we call them, 120. They are a very large, heavy frame, with stakes, bolted together, with steel axles and wheels, and very heavy swivels. We have to have the swivels made to order at a heavy expense.

Q. What is the value of them or the cost of such trucks?

A. Not less than \$20 apiece, and we have 120, which would be \$2,400.

Q. Are those in good condition?

A. Oh, yes, sir. They have oak and maple frames and are very substantial. They are a great deal heavier and better than we could possibly buy. I have never seen anything like them.

Q. You make them for your own mill?

A. Yes, sir. There are 28 kindling wagons. Those are a two-wheeled truck, like a wagon, only with two wheels and a steel axle. He omitted those; they are worth \$20 apiece—\$560.

Q. Oh, well, a little item of three or four thousand dollars does

not matter.

A. Then there are ten of our own make; trussed box-moving trucks, wheels and swivels. Those would be worth \$10 apiece. They cost more than that, because I had to get them up and learn my way at first—\$100. Sixty Backus kindling swivel boxes; they are on wheels and swivels as well.

Q. What are they worth?

A. They are worth \$12 apiece, or \$720 at least. That is all of the

trucks, and those were all omitted by Mr. Spitzley.

Q. Now, pony planers. He said he saw two; one he should think would be worth about \$135 and the other about \$80.

A. Yes, we have three.

Q. What are they worth, and what is a pony planer?

A. It is a little machine for quick one-sided work, if you are only dressing one side; dressing a few panel boards in a hurry; it don't pay to set a large machine up for a small amount of work, and one of these machines is a Wood's 24-inch, with double feed and double pull-out roll. When I say double, I mean two behind the cylinder and two in front of the cylinder.

Q. How much does the Wood's machine cost?

A. That stands me down there \$450; all of that.

2001 Q. Apiece?

A. For the one, and the other two, \$300 apiece, or a total for the pony planers of \$1,050.

Q. Could you buy them and set them up for less—that kind? A. No, sir; I would not take a contract to do it for that.

Q. Mr. Spitzley did not see any lock-corner machines at all?

A. No, sir.

Q. Did not include it; it is not mentioned in his list?

Mr. Robison: He says he does not know what you mean by that.

Q. Well, it is not in his list; I cannot find it in his estimate. What is a lock-corner machine?

A. It is an arrangement for making a lock-corner work; a lot of saws where you run the board through this way (illustrating); it takes out this and on the opposite, to make it so that the two come

together, and you glue them together and make your box, or whatever you are building; it is no difference at all; that would be fanshaped, but these are straight.

Q. What do you put that down at?

A. \$150.

Q. Is that a patented machine?

- A. Yes, an improved machine. It is not patented; we built it ourselves.
 - Q. And the rounding machine. He does not include that?

A. The rounding machine is worth at least \$300.

Q. What is it?

A. It is a machine for turning curtain poles and flagstaffs and that class of work. We can turn anything from a quarter inch in diameter up to three or four inches, and for making our large rolls which we furnish the oilcloth manufacturers.

Q. Do you make a flag-pole with that?

A. We have made lots of them with that-not tapered, straight.

Mr. Baker: You cannot make them out of hickory with that? Mr. Robison: Mr. Backus does not make any hickory poles anyway.

Q. Can you make a hardwood pole with it?

A. Oh, yes.

Q. Make it in hard wood as well as soft wood?

A. Oh, better. We can make a pole of maple or oak a great deal better than of pine; pine is so soft it does not stand up.

Q. And your machine can make it either in hard or soft wood?

A. Yes, sir.

Q. What are you charging down there for Pingree poles?

A. Unfortunately we have not had any orders from Mr. Pingree for any.

Q. That is what is called the rounding machine. Is it a patented article?

A. Yes, sir.

Q. Do you know whose it is?

A. Rogers'. Q. The best?

A. Yes, sir.

Q. What is it worth?

A. \$300.

Q. Now, there are two dado or groove machines that Mr. Spitzley nor Mr. Cramer had not on their lists?

A. Those are worth \$100 apiece.

Q. Are those machines patented?

2003 A. No, sir, our own make. We got up the heads and arbors and tables and everything. All have an automatic lifting attachment of the table.

Q. Mr. Cramer and Mr. Spitzley saw two matching and grooving machines—thought there might be four—which they put down at \$65 apiece?

A. Yes, there are ten of those.

Q. Are the others equally good with the four he thinks he saw?

A. Oh, just the same thing. Q. What are they worth? A. They are worth \$250 each.

Q. Are they a patented machine?

A. No, sir, they are not patented; they are improved; they are our own build, our own get-up; we made the patterns and got them

built.

Q. Come to this matter of molding knives you mentioned. He did not put any estimate on them. He said there were some molding knives and knives lying around loose, but he put no estimate on them. He said he saw a room off in a corner that he didn't examine.

A. Well, the room off in the corner that he didn't examine is up on the next floor and is called our saw-filing room, and in that room

are about 300 saws hung up on pegs.

Q. What kind of saws? A. Circular saws for our various machines.

Q. Tell us some of the kinds of saws there are?

A. Rip-saws and mitre saws and cross-cut saws and saws for the Woods machine.

O. The same as he estimated here as he saw them in the machines at \$45?

A. Yes, sir.

Q. How many had you there of that kind of saws that he didn't estimate at all?

A. There are probably 350 saws—say 300 anyway, and 2004 that does not include those on the machines. The 300 saws would be worth \$1,000.

Q. Now the knives lying around loose he did not estimate at all?

A. Those were in cupboards on shelves. I inventoried them the other day and they go by the inch; we have to buy them by the inch. You can buy the standard knife, that is, a knife that will make something that is universal all over the country, for 60 cents an inch. These knives cost us more than double that.

Q. Made to order? A. Made to order.

Q. Solid or faced with steel?

A. All solid. We go to the blacksmith shop and give them an order for what we want and they forge it out to the best of their ability and then we take it and trim it up; they charge us for the steel and labor and forging and we fit the knife on emery wheels; it is a very tedious job and a very accurate job to carry out, and they cannot be made by us for less than one dollar an inch; I have called them \$1.00 an inch. And I took the precaution to go to De Mann's yesterday and ask him what his molding knives cost him per inch. He turned to his book-

Q. Who is De Mann?

A. A sash and door man on Trumbull avenue. He had them on his book \$1.10 as actual cost.

Q. Well, now, what are these knives lying around loose?

A. 3,017 inches of them, or a total cost of \$3,017. We put those 148 - 55

knives into three particular machines. Now, there are planer knives besides. There are 6,018 inches of planer knives. Those cost us and we cannot buy them for any less than 12 cents an inch—\$728.16.

Q. Now, we have had the Eagan gig-saw. There is an Eagan boring machine, is there not?

A. It is made by the same party, yes, sir.

Q. What is the value of that?

A. At least \$150. In that case I should include the bits that go with it.

Q. What do they cost new?

A. \$100 in Cincinnati.

Q. And you have included the equipment then in your estimate of \$150.

A. Yes. I don't know as that will cover it.

Q. It is conservative?

A. I think so.

Q. Another thing that all omitted were grindstones?

A. There are two of those. One is a power grindstone and one is run with a foot-treddle. They are not very expensive affairs and I presume \$30 would cover both.

Q. Machines for sharpening pickets?

A. That is a machine that comes from Ohio.

Q. Patented?

A. Yes; I paid \$40 for it, and I paid about \$10 for improving it, about \$50 it stands me.

Q. Now, the very large Howe platform scales both parties have

omitted?

A. Yes, that is a large loading scale which I bought of the Howe people; it is a very expensive rig to put in; it is heavy and has to have heavy timbers and heavy floors and arrangements. It is a scale that is worth \$200 on the cars, and I suppose \$50 additional would probably put it in—call it \$250.

Q. What are knife-balancing scales?

A. Knife-balancing scales, two of them. Call them \$20 for the two, one of them cost \$18 and one cost \$5 or \$6.

Q. They didn't see any sand blast. Have you such a thing as

that there?

A. There is one sand-blast machine patented, down there in the engine-room, called the sand-blast file-sharpening machine. It is a machine we run our files through before we use them; it takes the rough edge off a file and makes it cut like a razor and our men don't like to use a file unless it goes through that machine first, and we can sharpen the files over two or three times before we have to have them recut. We paid \$150 for the patent and to get it up probably about \$50 more.

Q. You mean you paid for the patented machine?

A. For the machine patent, including the machine; yes, sir—\$450.

Q. You did not buy out the patent for the sand blast?

A. No, sir; pretty near, though.

Q. You had to pay this price to get it?

A. We had to pay that price to get it. I would not go without it for a good deal more.

Q. You do not mean that you bought the patent right?

A. No, sir, I bought the patented machine. Q. Automatic knife-grinders, they didn't see?

A. One patent improved Springfield automatic knife-grinding water-emery machine. That is worth about \$300.

Q. Good condition?

A. A1, sir. Many of its parts have been made new and heavier and all refitted and a new wheel on it. It is automatic, and it takes the knife up and tells the knife when it has got enough and stops it.

Q. The eight bumping machines, or tables, I think we have gone

over?

A. Yes, sir.

Q. And the 18 or 19 saw-tables we have passed over. Now, Mr. Spitzley didn't know anything about what a buzz planer was. I

tried to show him a picture.

2007

A. Mr. Spitzley has one at his factory, I see. He perhaps don't know it by its name. It is called a joining or buzz

planer: it goes by either name.
Q. They didn't see it. It is not among their list, that I can find.

What is it worth?

A. \$150.

Q. The sanding wheels they didn't see. What are they worth?

A. \$150.

Q. What is the large resaw?

A. That is a very heavy machine for resawing lumber up to three feet wide—forty inches wide. We have our blades for that 22 gauge and 19 gauge, and I am now getting some 24 inches in thickness. We get better results on our stock on wide lumber, but it is not near as fast. It is a slow machine compared with our big circular saws. The circular saws will feed the lumber from 60 to 100 feet a minute where this machine will feed from 25 to 60 feet a minute.

Q. How many of those are there?A. Only one, with five extra blades.Q. What is the band saw worth?

A. About \$1,200, besides the blades, which come to \$25, or \$20, maybe, apiece.

Q. Now, in addition to the small Huntington, was there a Huntington four-sided molding machine there?

A. Yes, sir.

Q. Is that a patented machine?

A. Yes, sir; that machine cost us on the cars down in New Jersey either \$500 or \$550; \$550, I think.

Q. He gives you \$130 for it?

A. Yes, and then there is the freight to add.

Mr. Robison: \$470 he gave. You asked him if they paid \$650

if they didn't pay too much, and he said if they did they got cheated.

Q. Well, you paid \$550?A. They are worth \$500 to \$550 on the cars, and they are 2008 worth \$700 set up. I mean bolted down and ready to run. I do not mean the countershafts, or pulleys, or anything of that sort; nor molding knives. Then we have extra heads with that machine; in fact, of all the machines.

Q. How many of the S. A. Wood's 30-inch planing machines are

there?

A. Five.

Q. Mr. Spitzley said there was but four. Now, of those he gives you four Wood's planing machines and puts them in at \$1,600?

A. That is the first thing you gave me before dinner-five of

those machines. He omitted one.

Q. Well, you know you have five?

A. Yes, sir.

Q. Very well. Are they all worth about the same thing?

A. All worth about \$2,000 apiece as they stand, including the labor of setting them up and so forth.

Q. I didn't ask you about the Wood's matching machines?

A. There are two of those-14-inch.

Col. ATKINSON: Matching machine and molder are the same.

A. No, sir; there are two S. A. Wood's 14-inch combined surfacing matching and molding machines you have not mentioned yet.

Q. Tell us about them.

A. Those are a very similar but a more expensive machine than the molder, and are worth very near as much as the 21-inch machine. The 24-inch machine Mr. Spitzley put in, I think, at \$1,900, and he puts in the 14-inchat \$600 less. I don't know just what the

difference is, but I would not assume it to be over \$150, possibly \$200 less; but I want to say here that they are built 2009probably stronger than a wider machine in proportion;

more iron in them.

Q. We have had the Wood's planing machine, 24-inch cylinder?

A. You have had all of those excepting these two matchers, 14inch, and those would be worth on the basis of \$1,900 on cars in Boston for the 24-inch, about \$1,700 in place, or \$3,400 for the two.

Q. Is there anything in the foreman's office that they didn't look into?

A. Yes, there is the desk, black walnut, and fixtures of the office, gas and electric bells.

Q. What is the whole equipment worth?

A. Oh, \$100 probably, taking the bells and everything in there into account.

Q. Now, the Greenly gang rip-saw they didn't have?

A. Greenly heavy patent improved spur-feed gang rip-sawing machine, yes, sir.

Q. What is the value of that? A. That machine has an extra attachment for manufacturing beveled siding.

Q. What are they worth?

A. That machine is worth \$300. Q. Then he didn't find any siding machine?

A. That is a Chicago Prebble improved combined siding and resawing machine, with planer attachment; that will take a piece of siding, dress two sides, run it through, and make two pieces of beveled siding at the same time.

Q. He didn't have it all; what is it worth?

A. That is worth \$500. That is, in place, you understand, with the foundations in.

Q. What is the shooking machine?

A. A shooking machine perhaps better be called a shook table or stand, it has a mechanism connected with it that perhaps would make it a machine. We have five of those. They are for shooking up the material in the factory. They throw a lot of stuff in the box like that, a man puts his foot on the lever, it draws them up tight, makes them a square bundle and then he nails them up ready for shipment-makes what we call a shook.

Q. What are they worth?

A. \$20 apiece.

Q. What are the kindling boxes?

A. Those I have given you. He omitted those. I gave them to you with the trucks.

Q. Is there a drilling machine?

That is a small machine we have there for drilling our knives, for balancing. If our knives get too heavy on one side of the cylinder we have to take a little out of them, we drill them with that, and for ordinary drilling work. That machine set up and with the drills is worth \$100.

Q. Do you know anything of the cost of the sewerage there?

You know something of the construction of it?

A. Yes, I know we have a large and very expensive sewer; our office sewer we dug clear through to River street.

Q. You draw your own water from the river?

A. You mean the pipes from the river?

Q. Yes. Can you give us the valuation of that?

A. I don't think that water pipe could be put to the river today for \$2,500. I know it cost us more than that when we put it through and I don't think it could be done any cheaper. It is a very expensive job; it would have to be all sheet spile, it is quicksand there, a poor foundation to work in.

Q. I think you have the only connection there of that kind from

the river front?

A. Yes, excepting the Michigan Central railroad.

Q. I mean any manufacturer. Now, on the estimates they 2011have given us on the engine and boiler machinery, and so on, can you give us anything on the shafting and pulleys, and so on? Can you give us anything on the cost of those?

A. Yes, I can give you my idea. I ought to know something about it. I don't think the engine could be replaced today as it was when we got it for less than \$4,000. I do not mean set, I mean at

the shop. We paid \$3,500 for the engine, and we had a great deal of extra work to do to it. We have put in a new and much heavier main bearing box, or pillow block, we call it; it has cost us over \$4,000. Then we have put in a new follower; it has a new wristpin, and made addition to the engine to make it stronger, to the extent of a thousand dollars or more. Then there is the foundation, which represents a good deal of money, which probably cost to put in about \$800.

 $\hat{ extbf{Q}}.$ Is there any post foundation underneath ?

A. No, sir; all heavy stone foundation, about 12 by 30.

Q. I mean pile foundation.

A. No, sir; we went down as deep as we could consistently, built it up in cement, and then we had to dig a very heavy place again and put in a very heavy wall for our outside bearing box, in the wall, and built a pit for the fly-wheel and cement that up. probably cost a couple of hundred dollars more. Then we have two pumps that have cost us \$800, the two of them. I do not mean the original cost of the pump; I mean getting the pumps set and connected to do their business.

Q. What are they called?
A. Steam pumps. Then there is a steam injector, which Mr. Cramer, the other day estimated at list price, \$120. The list price is a great deal more than that. That stands me over \$300, 2012

yes, I will add another fifty, \$350, at the least calculation. That is a No. 8, Shafer & Buttenberg, German patent exhauststeam injector for forcing water into our boilers. The machine, set up with the connections, has cost us all of \$350. If I am not mistaken the list price is \$285, but I can verify that with the price-list which I have at the office. I was going to say that the original cost of the pumps and the injectors was very little compared with the setting of them up, that the labor in putting up those pumps, etc., is far in excess of the cost of the machines themselves. It is very expensive work, pipe-fitting and valves. Now, in addition to that in the engine room, we have one upright copper-tube heater. It is what they call a steamboat heater, about two-inch tubes, filled with That has cost us over \$300. Then we have in addition to that another heater and purifier combined, at the back end of the boilers, that has cost us as much more, that is, another \$300. Then, we have a condensing tank, which is under each boiler. It is about five feet in diameter and twelve feet long or thereabouts, with connections, and represents about \$400. Then we have a trap and connections, which represent about \$75, and the plumbing on the boilers-we have four boilers which are worth-

Q. Those were omitted?

Mr. Robison: He does not say so.

A. Mr. Cramer put it all in a lump-boilers, engine, emery grinder, sand file-sharpener, and the fans in the mill, and a good many other things.

Mr. Robison: He said he estimated them separately, but he did not keep the figures.

A. Those boilers all had new steel bottoms and new heads and new flues and new valves and new pop-valves, and are in first-class condition and are insured in the Fidelity & Casualty Insurance

Company. Those boilers will cost \$2,000 apiece, including 2013 the setting and connection to the engine; \$2,000 apiece, sure.

Then there is a tightener to the engine. That is a double ratchet with a shaft and wheel for turning it up; a take-up wheel for the chain to run over the weight, a large flange wheel. That would cost at least \$175; it is very heavy. Then there is the main wheel on the main shaft, what we call the drive-wheel, that we drive from the engine, which the engine takes hold of. It is a large wooden rim, about six or eight inches thick, and a large iron hub and iron spokes, bolted together, gotten up specially for us. We tore two or three of them to pieces and we finally had this one built and put it up. It is not an ordinary wheel; it is a wheel that probably would cost \$100 to build.

Mr. Robison: Is this a fly-wheel?

A. No, it is the main wheel on the main shaft. Then we have a whistle that costs \$5. Then we have a gong that is to stop and start the mill, so as to avoid accidents. When it is ready to start at the noon hour the engineer first whistles and then the foreman of the mill rings this bell, telling him all is clear and to go ahead. That is a gong that cost us \$15. It cost \$18, but we will put it at Then there are four oil tanks and one filtering tank, which represent \$75. Those oil tanks are very large. Then there is a steam drum on top of the boilers to connect the boilers all together, which you have to have. These boilers are connected into it. drum represents at least \$600. There is a valve under each drum for each boiler, a shut off, so that we can run all the boilers all together or run two or three of them. Our boilers are all set in separate arches so that we can run one boiler or all. Then there are the engineer's vices and benches, and any amount of tools. It would be hard to estimate them. I do not think I would be at all out of the way if I stated that the tools in the engine-room, independent

of the engine, extra tools, would be worth \$500 at the least 2014 calculation. Then there is a traveling elevated track above in the ceiling, which is attached to one of the Trails and which has upon it a heavy chain fall for raising the pillow block and turning the engine off the center. This cost, including the chain fall, \$60. Then the tops of our boilers and our drum and the steam pipes are

covered, which I think would probably cost \$100.

Q. With asbestos?

A. Yes. Done by a party here in Detroit. I think H. D. Edwards did part of it and another party did some. I include in the boilers a mud drum. Each boiler has a mud drum and blow-off, and they are all connected with the sewer. Then in the engineroom there are two elevator fans. I will call them \$100 or \$50 apiece. I think that is all, outside of the hose and fire connections, etc.

Q. Have you summed up the valuation of the boiler and engine room yourself?

A. I have run over it a good many times, but I have not the figures summed up. It is somewhere between \$15,000 and \$20,000; nearer \$20,000; that is independent of the building.

Q. Have you estimated the equipment in the mill for piping the

dust and shavings?

A. Yes, there are three fans, and that work is very expensive. I don't think \$3,000 will cover the bill for the fans and piping in connection, delivering it into the shaving vault. That is independent of the dust-arrester or any part over that.

Q. It is absolutely essential to have your mill clear of all dust?

A. Yes, those tunnels under the ground, three of them, running the extreme length of the mill, about 30 inches in diameter. First, they are all made of wood and they taper. They are smaller at the extreme end than, near the fan. That is a rule we go

by in building fan pipes, as we get away from the fan to reduce the size. They are all built of about two-and-a-half or three-inch plank and ironed on the outside with round and flat hoop iron, and coated with tar on the outside and calked; and the ground is dug up and they are laid in there and our connections are made to them; they go to the fan. The inside is lined with iron. It is practically the same as building a galvanized pipe, only that it is better; it is more expensive; it is where we have our heavy machines and we have to have it solid. Therefore we built it of wood.

Q. You built that yourself?

A. Yes, sir.

Mr. Robison: That is what Mr. Cramer called the blower apparatus?

Q. Yes. Mr. Cramer had no idea of the inside equipment of them. Now, what is the cost of that equipment?

A. \$3,000. I do not think we could duplicate it today for a cent

less.

Q. Mr. Cramer put it in at \$1,100. Go on.

A. Now, there is a fan with which we dry our kilns when we want to force them. You understand our kilns are all filled under the floor proper with coils of pipe, miles and miles of pipe in them, and we have to blow our air when we want to force it with this We force in more air in connection with which the pipes give us. We can force the coils and get better results. Then there is a large open blower or heater and coil.

Q. Give your cost of those as you go along.

A. Mr. Cramer, I believe, gave his estimates from a second-hand one he saw at a brewery. Well this is not a second-hand one; it is a new one; and I do not think it could be replaced today for \$1,500; that is, connect it up with one of the main shafts of the mill. I will state that our steam pipe to our engine and throttle is eight-

inch and our exhaust is ten-inch. Then we have on top of the exhaust pipe what we call a water-catcher, or steam trap, with a three-way valve to shut off the steam and divert it

either to one direction or the other, to the kilns or through the mill,

or up to this exhaust pipe proper. The extra work to the kilns and from the engine, I think, could safely be put at \$1,000; the extra plumbing-work, the steam-fitting work and the pipe-work.

Q. What is the eight-inch pipe and ten-inch pipe worth?

A. Oh, it is worth I guess about \$2 a foot, or something in that neighborhood. I could not tell you exactly, but I know the elbows are very expensive.

Q. Do you include those in your estimate of a thousand dollars?

A. Yes. I do not know as a thousand dollars would do it; I don't think it would, but we will call it that. Now, I will say further that we have put on that engine since we got it a new patent Detroit Lubricator Company lubricator, that we paid \$50 for, which I am not going to say anything about; that is, I will include that in the engine.

Mr. BAKER: Oh, do not leave out anything like that.

A. And we have an oil pump. I am speaking of these things because they were put on the engine afterward. I do not include the main belt in this statement because I have put the belts all together.

Q. Well, take up the belting now?

A. The total belting in the mill—and I won't admit that I haven't missed any, they are a very difficult thing to get-but I have gotten the total of leather belting at \$3,864.13. That is the list, 45 off. Some of this belting we have only gotten 29 off. It is made specially heavy, double, and short lap, and out of the backs of the We have been very careful about that, to get the very best

belts made by Croul Brothers. Sometimes we only got 20 off, but ordinarily we can get 45 off, and that is the best we 2017

have been able to get the belt at. Of the rubber belting, I make \$1,133.46, or a total for the belting of \$4,997.65, as against Mr. Cramer's \$2,100.

Mr. Robison: No, he has \$4,262.

A. He gave the list as \$4,262 and he takes off 50 per cent., which leaves \$2,100. I have taken off mine, 45 per cent. and my total is \$4,997.65. That includes the belts on the machines and the new belting, about half a roll of new belting which we are cutting off every day.

Q. Does that include the engine belt?

We paid for that engine belt \$361.86 and we have tightened that engine belt up three or four times at an expense of eight or ten dollars each time, which makes the belt represent to us over \$400, and we would have to do it again were we buying a new belt today. We would have to go through that same trouble until we get the stretch out of it. Mr. Cramer put that in at \$343. He got the length of it within an inch.

Q. Now, take up, if you please, the hangers and pulleys and shaft-

ing?

A. Our hangers have cost us or could not be replaced today—the total number, 284, upon the basis upon which Mr. Cramer figured it, \$1,044 for the lot, which would be \$3.67\frac{1}{2} apiece.

Q. Well, give us the facts about that?

A. The facts of the case are, they could not be obtained for \$10 149 - 55

apiece at an average or anything like it. Some of those hangers cost us \$6, some \$8, some \$10 and some as high as \$20.

Q. You have counted them yourself, have you?

A. Yes, sir.

Q. And know them pretty well?

A. Yes, I think I do; I ought to.

2018 Q. Now, give us the pulleys. You have finished with the

hangers?

A. Excuse me. I include in these 284 the 51 boxes, which are equivalent to hangers, very heavy boxes, the box on the post in the engine-room, which probably cost \$30. It is a very heavy five-inch box; two wall boxes with cast-iron casings in the two walls, one in the engine-room and one in the main mill; sometimes we have to put a box in to support the shafting where we cannot get a hanger I have included all of those, they represent hangers so far as value is concerned. They do the same work and do represent hangers only they are called boxes. I should call them at least \$3,000, the hangers.

Q. You say you should?

A. I call them that; they are worth that.

Q. You bought them, didn't you?
A. Yes, sir.
Q. Bought such hangers as you wanted yourself?

A. Yes, we had the patterns made and had them built extra heavy.

Q. You attend to that part of the business yourself?

A. Yes, sir.

Q. So when you say you should call them, you mean they have cost you that?

A. Our hangers have cost us over that in the mill.

Q. Now, you can take up the pulleys if you have finished with the hangers?

A. The pulleys have cost us \$3,500. Q. Have you got the number of them?

A. I think I can give the number of pulleys. 357 pulleys and the tighteners and weights have cost us \$2,000 more and connectiontighteners and rods that go with them. The shafting represents probably about \$1,500; it would cost that to replace it.

Q. What do you call the shafting?

2019 A. The shafting is the line shaft and counters, that is, what you put the pulleys on; that is what carries the pulleys, what carries the power.

Adjourned until 10 a. m., October 20th, 1893.

Остовек 20, 1893-10 а. т.

HENRY BACKUS recalled.

Examined by Mr. Dickinson:

Q. We have gone through the machines as to which Mr. Cramer and Mr. Spitzley had been examined, or as to which an attempt was made to examine them, and the machines which they had attempted to describe and found they had actually omitted. Will you now state whether there are any machines as to which Mr. Spitzley or Mr. Cramer made no list or minute whatever.

A. Well, Mr. Cramer put in with the engines and boilers the freight elevators and the lumber elevators, where probably I should put them in by themselves; they do not belong in that department

at all.

Q. You say they omitted those?

A. They were not omitted. They were put in by Mr. Cramer with the engine and boiler plant, while in reality they perhaps do not belong there at all. No, I will change that. They are not put into the engine plant, but with the shafting and pulleys; into that list. There are two freight elevators for raising and lowering our stock, manufactured and unmanufactured material, from the ground floor up to the fourth story of the building. One of those elevators has cost us easily \$1,000, and the other one, say \$600. That would be \$1,600 for the two elevators. One is a much smaller elevator than the other; one about 10 x 22 and the other about 12 x 14.

Then there are two lumber-conveyors which cost us at least

\$1,000. One of them is 55 feet long and the other one 35 2020 feet long. They go up diagonally through the floor. think the jury saw them the other day when they were down therewith a power attached to them. There is a pneumatic delivery, which Mr. Cramer calls by that name. It is for carrying our orders to and from the office. It is a Root blower, a three-inch tin pipe with copper elbows, discharge and receiving boxes at the factory end and a receiving box at the office end, with power attachment, counter-shaft, friction, etc., which has cost us at least \$200. Then there are two wood-conveyors, one running at right angles with the other. They are on the fourth floor, and they carry our wood to the bin where it is sold. I am not figuring the belts in either case. These are for the conveyors, minus the belts, because I figured the belts in the building. I should put those at \$1,000-the two of They are a very expensive rig to get up. I should put one of them in at \$600 and the other at \$400. I am wrong there. I was figuring on the lumber carriers at \$1,000 instead of the wood-conveyors; one at \$600 and the other at \$400. The wood-conveyors would be \$600-the two. There is one wood-bundling machine for bundling wood. It is a patented machine, which comes from the East, at \$30. I forgot whether I gave you the traveling-bed rip-saw downstairs or not that Mr. Spitzley omitted.

Q. I asked as to that myself. I examined Mr. Cramer upon that

carefully and Mr. Spitzley.

A. There is one foot morticing machine, about \$25. One chucking machine. That is a chucking tool; there are two of them, \$8; and there is a punch for doing our tank-work, a very heavy punch, that is worth some \$40. There are three spur-feed saws. I forget whether you gave those to me yesterday or not. No. 7 on your list. One Greenly saw you called for yesterday, and there are two others.

2021 Q. Those are the machines I want, that we have not been over at all. You got a list of them?

A. There are three of those spur-feed saws.

Q. I will state for the information of counsel in following the examination, each part of it, that I examined yesterday as to the machines which had been identified in the cross examination of Mr. Cramer and Mr. Spitzley, and also to the machines that had been omitted as developed in the cross-examination of Mr. Spitzley and Mr. Cramer; that is, developed in endeavoring to identify the machines in their cross-examination, it appearing that they had not seen them at all; and we are now getting what has not been referred to before at all, which has been entirely omitted by Mr. Cramer and Mr. Spitzley, according to our examination, and which we had made no attempt to identify, because there was nothing on their list which seemed to be like them.

Mr. Baker: That cannot be so, because here are these two woodconveyors just referred to a little while ago at \$600, and they are on

that list.

Mr. Dickinson: There are two other wood-conveyors than that, are there not?

A. There are two wood-conveyors, two lumber-conveyors and two

lumber elevators.

Mr. Robison: Of course we do not admit, as I understand that all these things that you claim are omitted were omitted by him. He calls them different names, and he says repeatedly that he did not miss any of the big machines in the shop. You asked him for some rip, back-action, double jointed buzz saws that reached half way across the building-

Mr. Dickinson: Of course that is your claim.

Mr. Robison: And he didn't know them by your names.

Mr. Dickinson: We could not identify them in any other way.

2022 Col. ATKINSON: I do not remember any witness mention-

ing that one that Mr. Robison speaks of.

Mr. Dickinson: The only one that Mr. Robinson wanted to find out that was omitted was a jag-saw, and I had to inform him there was no such thing used in the planing business.

Mr. Robison: Yes, if there had been any, I guess you would have

found it.

The WITNESS: I would say that those swing cross-cut saws, as they are ordinarily put up, might be considered jag-saws; they go all over; but as ours are put up, they go straight.

Q. There are two of those spur-feed saws of another make? Mr. Baker: Those two that are omitted you claim?

A. I am giving you a list of what there is in the mill.

Mr. BAKER: That is what I thought. Q. That we have not been over before?

A. It is pretty hard for me to tell what we have been over. 1 have made a list out here of every machine in the mill and those we have not taken should be taken.

O. Those that have not been taken at all, that we have not been

over? A. I can give it to you right here. Of course there are a lot of other things omitted, in our view of it, like the hot-water pipes and so on, which you will come to afterwards. The wood-carrying chutes we did not get yesterday. That is the carrying belts that I have related. They are carrying elevators or carrying chutes.

Q. They are not included in the belting?

A. Oh, no, sir. They are on the roof, running over the roof of the dry kilns. The mortising machine we did not talk about yesterday.

O. The mortising machine is an omission?

A. Yes; the chucking apparatus is an omission.

Q. Give us the mortising machine? 2023

A. \$25. Chucking apparatus, \$8. That powerful punch I mentioned, \$40.

(). How about the iron and wood vices?

A. I have those in another place, I will come to them later. Two patent heavy Indiana spur-feed gang rip-sawing machines, which were not taken yesterday, \$200 each, \$400. That is what I stated a few minutes ago. There are three extension-table gang rip-sawing machines that are worth \$900, \$300 each.

Q. That are in no list given yet?

A. No. sir.

Q. Now we are getting to business.

A. The Root blower I mentioned this morning, and that was not That was the pneumatic arrangement. given yesterday.

Mr. BAKER: You say that was omitted yesterday, but you do not

mean that Mr. Cramer omitted it?

A. The pneumatic arrangement was included in Mr. Cramer's total or estimate. I have not stated the price of it yet.

Mr. BAKER: Mr. Dickinson wants to find out what is omitted from these other estimates?

Q. I want you to show what Mr. Cramer and Mr. Spitzley omitted besides those we have shown-

A. It is so mixed up in the way they give it that it is impossible

to tell.

Q. That is what I asked you to get. It is so mixed up in our papers as we have them that I wanted you to have them prepared?

A. I will see that nothing will be put in twice. I have a regular list and I am checking it off as I go along.

Q. Nothing that Mr. Cramer put in or that Mr. Spitzley put in or that we have examined before?

A. By taking a little time I can make out a correct mem-2024 oranda of the omissions alone, but it is put in such a form that it is almost impossible for me to pick it out. For instance, he has put that pneumatic delivery with the shafting, coupling, hangers, pulleys, tighteners, belts, belt elevators and conveyors, iron doors, spouts and millwright-work. Now, I have not any record here of this omission of Mr. Spitzley's, traveling bed, jointing and rip-sawing machine put in here. My list shows it has not been called for yet. That is a machine that is worth \$200.

Q. That is what I examined Mr. Spitzley about and saw that he had omitted?

A. Yes, sir.

Q. I have not asked you the valuation of that, but I will ask that now?

A. \$200.

Q. What is the name of that?

A. Improved traveling bed, joiner and rip-sawing machine.

Q. How long is that machine?

A. About 40 feet; here is a picture of it.

Q. That is the one that Mr. Cramer said he did not see. I examined him and showed him the picture and he said he did not see such a machine there. It is there, is it now, in the shop then and

A. Yes, sir

Q. Now, Mr. Spitzley put in these resaws-

A. Yes, he put in these resaws and he called them rip-saws. But you have not had me make my price except in one case.

Q. Very well, put your price upon those you have not priced.

A. There is one heavy Jostlin resawing machine, with a Backus improvement; that is a sectional saw, with the Backus teeth and other appliances for the machine. I will call that \$1,200. 2025That machine cost, with the saw, \$1,000. We had to pay the

freight on the machine from Boston and put it up. One Connel & Dengler resawing machine with the Backus saw and inserted teeth, put up, \$900. One Graham resawing machine, with the Backus improved tooth and saw, \$600.

Q. Are there four of those?

A. There are four of those.

Q. You said three?

A. Well, we got one yesterday. That is all of the machines.

Q. Let me ask you two or three things that you were examined about before, but have slipped my mind; according to my memory you had not put any valuation on. You said you were coming to the iron and wood vices for fitting tools, but you did not come to I cross-examined as to them and found they were omitted, as I remember?

A. There are 11 of them outside of the engine-room.

Q. They come under the head of tools in the engine-room, but outside of them, there are 11?

A. Yes, sir; \$65 total.

Q. Now, the Backus & Joslin 54 segment inserted-tooth resaw, what is the valuation of that?

A. That is the one I just put in a few minutes ago, \$1,200. machine cost on the cars at Boston, \$1,000, with the saw. there is the freight and the setting up of the machine, and paying cartage, which is a very expensive thing.

Q. Then the Connel & Dengler machine?

A. I put that in at \$900.

Q. What did Mr. Cramer and Mr. Spitzley put those at?

A. \$375 each.

Q. What did they cost?

A. They cost \$900 in the mill.

- Q. How much on the cars in point of purchase? A. That machine cost about \$700 on the cars.
 - Q. Now the Backus & Graham machine?

A. That I put in at \$600. Q. Inserted-tooth, is it?

A. Yes, sir.

2026

Q. What did Mr. Spitzley and Mr. Cramer put that in at?

A. He put in three of these saws at \$375 and one at \$550. put in one segment rip-saw, he called it, intended to be Jostlin resaw, at \$550, and three large rip-saws, as he termed them, meant to be resaws, at \$375 each, or \$1,125 for the three.

Q. Now the Chicago improved beveled siding machine. What is the valuation of that with cutter attachments, connected with the

sawdust exhaust?

A. I put that in at \$500 in place.

Q. Against what of his?

A. That was omitted. He put in one sawing machine on the first floor, \$44, and there is no sawing machine there unless it be this one; that is what I take it to be. One circle saw on the first floor, he has got it marked here, \$44. There is no saw-table of any kind down there, excepting that long traveling bed and this siding machine.

Q. Now, the bunting machines, eight of them?

A. I put those in at \$20 each, \$160.

Q. What is your valuation of the large buzz planer?

A. \$150.

Q. The sanding wheel?
A. I put those in, two of them, at \$150 for the two.

Q. The Woods and Backus broken pressure-bar double-surfacer?

A. Thirty-inch, there are five of the thirty-inch.

Q. Twenty-four-inch.

A. The twenty-four-inch was put in at \$1,900, one of them.

2027Q. What is the value of the dust-arrester? Have you got through with the machinery and articles there now?

A. I am through with the large machinery. There are some numerous extras and smaller articles here that I have a list of.

Q. Well, tell us what those are.

A. I have a great many which I have not put any estimate on yet. It would be a difficult matter to put an estimate on them. Q. Give us an idea of what they are, run through generally.

A. There are files, emery wheels, ladders, clamps, oilstones, wooden pails, nail boxes, measuring sticks, tank-hoop drivers; that is a machine for driving the hoops on these large railroad tanks; rules or measures, crowbars, box and pack planes, nail-pullers, lumber rules, tie-rings, key drifts, 14 and 18 inch roller screws; those are screws that we have to carry for raising and lowering the rollers of these large Wood machines, that are very expensive; pene hammers, that is, hammers for riveting, etc. Wrenches in large numbers, iron loading tramways, hatchets, saw-sets, saw anvils, punches, tie-rack hooks, belt-hangers, scarfers, knives, scrapers, studs and hooks, screw-bolt clamps for putting the bolts together, braces, bits and augers and all the appliances to go with them, belt-glueing apparatus, monkey-wrenches, jack-screws, chain falls. Then we have a good many extra gauges for our saws, extra gear wheels, and a large number of extra boxes for our hangers; we have that on account of when a hanger gets worn out, the babbitt in it, we rebabbitt a new box and slip and take the old one out; that saves time and annoyance. We have extra pulleys, extra cross-bars, extra truck and box castors. Then we carry, of course, sandpaper for sanding wheels, lanterns, lamps, water casks,

2028 wood and iron shovels, wood and iron scrapers, and we have a good many large baskets for cleaning up the mill with; hand saws, large iron plate strapping boards, extra Scheimer bits, saw hammers, large strapping plates, saw swedges, car-movers, hammers, the ordinary kind of hammers, diamonds for grinding our emery wheels.

Q. The ordinary kind of diamonds, I suppose?

A. No, sir, what they call, I think, a black diamond. It is set in a steel box, for turning up the emery wheels; they are very expensive. The last one I bought I think I paid \$16 for at Strellinger's. Oil cans for use around the machines, adzes, drill-knives, chisels, ratchet screw-drivers, steel ties, ratchet drills. Then we have twelve extra saws for resawing machines kept in constant readiness in case of a break.

Q. Outside of the stored saws?

A. Outside of those that are in the machines. Those are these large circular resaws with inserted teeth.

Q. Have they been included in your statement?

A. No, sir, they have not. Those are worth \$100 apiece at the least estimate; twelve of them, \$1,200. There are 626 hanger bolts, 321 hanger planks, 1,259 hanger plank bolts, 283 tightener braces. I have included those in my estimate with the tighteners; those braces cost \$1 apiece; that is as low as they can be bought for. I take the samples and go down to the blacksmith shop myself, and that is the very best I can do. There are four mule stands, which cost us, on cars in Philadelphia, \$45 apiece—\$180. There are 14 tight and loose pulley hangers, what Mr. Robison spoke of yesterday as idlers, which I have included in the hangers. Those cost \$60 apiece on board the cars in Philadelphia. That would be \$840, but that was included in my estimate yesterday of the hangers. There are four yokes which reach around the belts of our tight-

2029 eners, which I have also included in the tighteners. There are 50 iron braces in different parts of the mill, a large number of extra cutter heads, ropes, chains, tightener-shifter, chain-holders, shafts, dope cuts, oil-drip boxes, heavy wrought-iron brackets, lugs or eyebolts; those are all expensive because they are all made of wrought iron and gotten out to form. There are 1,800 extra saw-teeth for these resaws, which cost us on cars in Phila-

delphia seven cents each, or \$176. There are bunting or stop timbers to prevent breaking of the machines when we dump a load of lumber. That is about all I have here.

Q. On that list of tools can you put any valuation outside of

what you have given at present?

A. Here are a few more that I have omitted. There are Springer water-holders for holding our water, 925 of them. There are string reels, reels for coiling up and where we cut our rope for tieing; glue-heating furnaces and pots, one dope casting machine that I put in with the tools in the engine-room, four ground water shut-off stations, so that we can shut off the water from any part of the mill without freezing in winter; 16 tieing racks. There are any number of taper gauges which have cost us considerable money, which we use in getting out our work. They are gauges made of wood and screwed together, and they add considerable to the expense of our factory. One set of molding planes. It would be impossible for me to state the amount that those tools are worth without going over them a little more fully.

Q. Will you do that and bring in a result?

A. Yes, sir.

Q. Are you prepared to testify as to the length of pipe and the amount of it?

A. Yes, I can give you a pretty fair idea of it, I guess.

Q. Mr. Cramer I believe lumped the piping in the mill at \$1,400. Now, what amount of water piping is there?

A. You mean the steam piping?

- Q. Yes, the heater piping, the measurements. Give us the total measurements, if you will, and how is that situated—under the floors?
- A. Of the mill pipe and heating pipes there is 7,100 feet of one-inch pipe, 3,000 feet of three-quarter-inch pipe, 1,000 feet of half-inch pipe.

Q. That is in the mill?

A. Yes.

2030

Q. For what purpose is that used?

A. The one-inch pipe is used for heating purposes entirely; part of the three quarter-inch is used for heating and part for gas. There are three closets complete with all the appliances, one on each of the three floors; there is none on the top floor; 1,000 feet of twoinch pipe, 200 feet of three-inch pipe, 172 feet of four-inch, 100 feet of two and a half, 110 wall hooks, better known as pipe hooks, 14 manifolds; that is, for putting these pipes together to make a heating coil of it; couplings, valves, unions, etc., to connect the same. The total of that is \$1,119.74. Now, the plumbing proper; that is, the lead pipes and outside of the closets, \$700. The fire appliances, that is the stand-pipes all over the mill and the hose, including some 600 feet or more of two-inch hose, with the nozzles and couplings; total of the fire appliances \$600, or total of the mill, including the fire appliances and plumbing of the mill piping, \$2,419.74. In the dry kilns there are 6,336 feet of inch and a quarter pipe, 20,160 feet of one-inch pipe, 200 feet of two-inch, 306 feet of seven-150 - 55

inch, 384 feet of four-inch, 576 wall plates, 2,100 return bends, 680 feet more of inch and a quarter pipe, four seven-inch straight-away valves, four four-inch and four two-inch, one large iron condensing tank under west end of kiln, 30 feet of eight-inch pipe, three eight-

inch elbows, 760 feet of iron T rails, for tracks to the kilns, 48 trucks or cars for loading the lumber upon to pass it

through the kiln. These manifolds, or large pipes, which I have given, had to be tapped with 576 holes, drilled and tapped in their proper locations to receive our pipes; 100 feet of galvanized pipe, two elbows, one large 30-inch elbow and pipe, 15 gross of screws, railroad spikes, one keg. That is the total of the piping in the dry kiln.

Q. This is what Mr. Cramer put at \$1,400, I suppose?

A. Yes, including the mill. That is as I understood it. This mill and dry-kiln pipe was all put in by Mr. Cramer together. Mr. Cramer called the kiln pipe 6,300 feet, and then he changed it to 6,720 feet, my figures show.

Q. What is your total of the feet in the four kilns against his

\$6,720?

A. The total of the iron pipe in the kilns, not the galvanized iron, is 28,066 feet.

Q. Is that what he gave at 6,720?

A. Yes, sir.

Q. He probably got hold of one kiln instead of four?

A. The total of what I have given you for the dry kilns themselves is \$3,241.41. Now you want to add for plumbing, putting in this pipe, the labor, \$800 more, which makes a grand total of \$4,041.41. That is for the pipe in the dry kiln alone. The total of the pipe alone for the dry kiln and mill together is \$6,656.15.

Q. Have you the cost of the sewers?

A. Yes, it has cost all of a thousand dollars to put those in.

Q. Of the pavement on your own property?

A. That does not include the pavement on the street, that is the pavement in the yard.

Q. That is what I say, on your own property?

A. 1,200 yards at \$1.50 a yard, \$1,800.
Q. And the millwright-work?

A. Putting up the shafting and hangers and that part of the machinery, independent of the machinery, would be at least three thousand dollars.

Q. Cost that? A. Yes, sir.

By Col. ATKINSON:

Q. I suppose you heard the testimony of the witnesses in the early part of this trial as to the dust-arrester in use down at your plant?

A. Yes, sir.

Q. Will you state to the jury what experience you have had with dust-arresters in connection with your business, what trials and experiments you have made, and what your final action was?

A. Well, we worked a great many years to arrive at some way of getting rid of our dust, or rather catching our dust and keeping it from going onto our neighbors, which we finally brought about in 1882, if I recollect right, when we put up an appliance which worked so admirably that we were solicited from all over the country to sell our device. So we patented it before we were through the experimental stage and then we put them on the market, and when I was in Toledo some three years ago, I was in Mitchell & Rollins' large lumbering institution there and Mr. Mitchell said, Mr. Backus, there is the first device that I have any recollection of buying that has not cost me anything for repairs, or that I have not had to build over, and he said, Let us go into the room and look at it, the door has not been opened for over two years. We went up and it was as clean as could be expected; and we put them in a great many other places.

Mr. BAKER: What firm is that?

A. Mitchell & Roland. I have a letter from him which I received

two or three days ago, if you would like to see it. 2033

Q. What other places, as you recollect, use the Backus

dust-arrester?

A. C. R. & J. C. Wilson, carriage-makers in Detroit; there is one in the Empire Lumber Company-I don't know just where that is, but in the West, Wisconsin, I think, somewhere; one in the Clough & Warren Organ Company here in the city and in a great many places outside, I could not name them.

Q. That you don't recall?

A. No, sir.

Q. What kind of woods do you use in your establishment, with

reference to making the dust fine or otherwise?

A. We always have manufactured a good deal of hardwood, kilndried hardwood lumber, which probably causes and makes as much dust as anything you could work.

Q. One of the witnesses who was examined, in comparing your establishment with Murphy & Wasey, said they had a great deal

finer dust there than you had?

A. They may make more fine dust than we do of that particular kind of dust, sandpaper dust, or what we call sanding dust, but there is a great amount of fine dust thrown off from just the planing of lumber. You cannot find any finer dust than what you will find at our place down there. The pencil companies of New York, both the Eagle and the Faber, I believe, or the American, I forget, but there are two of them, had a great deal of trouble in catching the fine dust and our machine did catch it when the other devices could not.

Q. Will you state what experiments, if any, you made in your own business, before you adopted this dust-arrester that you are

now using?

A. We tried all manners of ways for catching the dust, with wire cloth, and by applying high power and openings in the top of our shaving-room, and various ways, and even building 2034an ordinary opening and putting this same cloth in front of

it, but it did not give us surface enough, it requires a considerable amount of surface to make it work freely, to give it vent.

Q. You say you tried different devices?

A. We experimented. We did not try any particular devices; we experimented by doing it in different ways until we arrived at this idea and we applied it and it has been a perfect success with us ever since.

Q. So that this is the result of long experience in the business? A. Yes, we have some of the finest testimonials that could be

gotten in relation to it.

Q. What can you say as to the testimony of the witnesses that such dust-arresters as yours chokes up with the dust and have to be frequently cleaned?

A. I was going to say that Mr. Miller, the agent of the Vortex, stated to me after we left the court-room, in the presence of another gentleman and in the presence of Mr. Sherwood, that our dustarrester was different from the one he put up, that he did not have to whip ours, where they did have to whip theirs. Ours does not choke up. I do not know that we have ever touched our dustarrester since we put it up.

Q. How many years has it been up? A. Right after the fire of 1882.

Q. So that for ten years-

A. Ten years to my knowledge and it has not been disturbed or whipped.

Q. What do you do with your dust?

A. We sell it.

Q. What is it sold for?

A. \$2.50 for a small one-horse load, delivered.

Q. What uses is it put to?

A. It is used largely for bedding, for packing, for making asbestos covering for boilers, used very largely, we have 2035 shipped it in car-loads away for that purpose, and also for the cleaning of floors. They wet the sawdust and throw the sawdust down to prevent the dust from arising.

Q. Is there a market value for all you can make, all you can

save?

A. Oh, yes, ten times.

Q. So that it is an article of merchandise and sells readily and is a source of profit?

A. It is a source of great profit to us, it is one of the principal Our refuse is one thing that we count on considerably.

Q. You spoke of adopting this dust-arrester for the purpose of keeping the dust from your neighbors. What, if any necessity is there for preventing the dust settling in the mill, what effect has it, if it is not taken up?

A. That is the idea of the exhaust blowers or what we call our Sturdevant blowers to send the air through these pipes and drive the shavings and dust away, to get the dust away from these machines. Then it is discharged into these sawdust and shaving rooms, two separate rooms, by separate fans and separate pipes. If

1197

we did not do that, our mill would be dust and dirt all over, and you could not walk through it scarcely. We would have to shovel the dust and shavings into baskets and carry them away, which would be expensive and very dangerous.

Q. Would there be any injury to your goods, the material that you have there, aside from the disagreeable features you speak of?

A. Oh, yes, certainly; it would cover all of our molding and fancy woods, it would injure them for sale in the market, most assuredly.

Q. Will you explain in what way?

A. The molding particularly, if any dirt or if they become 2036 at all damp or dirty—the top of the lumber ordinarily has the fine dust and as the planer knife strikes it to cut it, it knocks out all of that fine dust off the board and that goes with the shavings and there is great trouble, it is the small fine fibre.

Q. Is there any possibility of its staining the wood?

A. It would cover the wood surface and you could not brush it off and leave the wood clean. It is like in the finishing of woodwork, filling the pores with a filler, the same thing as that.

Q. Then it becomes necessary to keep a mill of that kind free

from dust?

A. It is a very important matter.

Q. Will you describe to the jury as near as you can, what this dust-arrester is they saw?

A model was handed to the witness.

A. There is a representation of a building, or our dust-arrester, as we have it on the mill. Now, the air comes in here, and rises up into those crevices between the bags or in the bags and the dust, the heavy part drops down, and the air goes out through this mesh of the cloth or burlaps above, both ways, and the air blowing through. Our purpose of having these slats on both sides is to leave a free circulation of air; if the wind blows from this side, it blows this way, and if from the other side, it goes this way, and it keeps those bags free, that frees them from dust, instead of whipping them with a stick as he said he used to do, and then did not do it successfully, but ours is continually free by the working of the air.

Q. By the force of the air, the natural currents of the air from

each side?

A. Yes, sir.

Q. And the dust then settles down through all those openings in the bottom?

A. It drops down there, what comes up there. The shavings drop down naturally—drops down into the sawdust-room, or the shavings-room below.

Q. What sort of a pile does it form below, fill the whole room or fall in the shape of a cone?

A. Filling the whole room.

Q. In that respect it differs from the metallic devices?

A. Yes. I can give you the idea, I think. We will say here that the cone dust-arrester, or Vortex, as Mr. Miller explains, calling this

the ground in that shop, whereas ours falls and fills the building all up throughout and we get many times the storage capacity with our device that they do with theirs, we do not have to carry our dust and shavings nearly as high as we would with their device, for the reason that we get rid of it and we get this extra storage.

Q. What effect has that upon the amount of power required to

work it?

A. To get the same amount of storage he has to go higher.

Q. Would that require a greater power?

A. Decidedly. It is like lifting a column of water; the higher you lift it the more power it requires. We had some experience with this. We put in at four different times a centrifugal dust-collector in our place—as you gentlemen noticed the corner was torn out of the dust-arrester building, where those blinds were, and there is where we tried our experiments. We put in this centrifugal device four times-we put in the pipe four times, and connected the device with it, experimented with it, and we found it emitting so much fine dust we could not stand it.

Q. By the centrifugal you mean the Vortex?

A. I worked for months at it-down there at 4 o'clock in the morning.

2038 Q. State whether that was the same kind of a device recommended by this witness.

A. Yes, sir. I was down there early in the morning and the minute the mill started I watched it.

Q. You tried that four times?

A. Yes, four different times. The back pressure we found to be so great that it was impossible, with our power, to run it. Our fan belt slipped, and even our engine balked on us.

Q. Have you had occasion to observe the working of the Vortex

device anywhere?

A. I don't know as I ever saw the Vortex; but as Mr. Miller said, they are all alike-the same principle. I have seen the Allington and the Curtis and the Smith and the Cyclone and another kind at Grand Rapids—it is right the reverse at Grand Rapids; instead of being built this way it is built this way (indicating), and the air goes over and comes out here and there and the dust goes down. There are probably twenty-five or thirty, and perhaps more, or perhaps not as many of those in Grand Rapids; but that would be my judgment. I have seen a great many; they are all over the city.

Q. After examining these different ones you have seen in operation, what can you say as to their comparative work with your

own?

A. Why, as I am situated, and with our kind of business, having had experience with them, you could not sell me one of the other kind; you could not give it to me.

Q. I suppose your object in adopting this dust-arrester was to get

the best thing you could in your own business?

A. Most certainly.

Q. Were the others known to you when you adopted this one?

THE FORT STREET UNION DEPOT CO.

A. There was nothing of that kind out at that time. There was a device in Chicago, gotten out to use steam.

O. Have all these dust-arresters been invented since your

mill was built?

2039

A. No, sir, I think not. I think this identical one, this McKay device, down in New York State somewhere, was patented before our mill burned up-the patent under which the Allenton & Curtis, of Saginaw, are working. I know they are all fighting at each other and straining to make a dollar.

Mr. BAKER: The centrifugal was not patented until 1885 or '6.

that was the testimony.

A. Well, it was the McKay patent in New York.

Q. The Knickerbocker Company in Jackson have been making the Cyclones as long as I can remember.

Mr. BAKER: Since you have been connected with the case?

Col. ATKINSON: Well, I have been connected with the case for

about thirty years.

A. I don't think they are mag any more of the Cyclones. I don't think the Cyclone is bein nade any more. Heizer & Son made that at Jackson.

Q. Well, do you think it would be practicable, if so, at an inconsiderable cost, to change your dust-arrester and adopt one of those

recommended to you by the witnesses in this case?

A. We could not run it with our present power, and we would have to have a great many of them; three of them would not do it,

and that would take even more power.

Q. So that to adopt the device spoken of by the witnesses here you would have to increase the power used in that part of your establishment?

A. Yes, sir. Mr. Smith, of Huyett & Smith, told me on the street here a few weeks ago, Mr. Backus, your dust-arrester is unquestionably the best. We make a dust-arrester, but it is expensive

and bulky, and yours does house the dust. I went up to

Widman's, where they had one of Smith's and I saw the engineer. I said, What have you got here, a dust-arrester, and he said, Or a thing that throws out everything onto the ground and the roof, all over. Don't it work? I said. Work-no, wait until I show you. And the minute he opened his door to shove the shavings into the fire, up went the shavings from the dust-arrester.

Q. That is the one at Widman's picture-frame factory?

A. Yes. And he said, You go down and look at Murphy's down there. I told him I had been to Murphy's and I saw two with a very large opening at the top, some four or five feet across, and you get with a dark background, against the brick-work and you can see a continual volume of fine dust shooting thirty feet high.

Q. Escaping into the open air?

A. Yes, they cannot catch the fine dust, they can talk all they are a mind to, they cannot do it, they do not do it. Some of them have a little pipe from the top. The air goes up here and they run a little pipe down into it and they have got it, I think, at Murphy's, but it does not do the business, the fine dust goes with the air.

is light and the air takes it with it. I have seen many of them here in the city and I have seen them all over the country and I have never seen any in my own experience that did not throw the dust all over the surroundings, where the places were not more or less covered with it-at Widman's it is so and at Force & Dickinson's place; I went there.

Q. Then you have no hesitation in saying from your experience that your device is the best and the only one adapted to your kind

of business?

A. It is the only device that will absolutely house the dust and give free relief to the fan. 2041

Q. What is the size of the building where your dust-ar-

rester is?

A. It is in the neighborhood of thirty feet wide by the sawdustroom forty feet deep and the shavings-room the same width, and sixty feet deep; I mean long, not deep. The dust-arrester is over the sawdust and shavings room.

Q. Have you ever tried the experiments spoken of by the witnesses here of having the dust carried below into the furnace?

A. Yes, and caught afire three times from it.

Q. What can you say as to the safety and advisability of that

plan?

A. I would not dare, after my experience, to put it in. We caught afire three times from that device and I tore it out the first time, and my father came home from the East and had it put in again and we caught afire again. I took it out again and he came home and put it in again, the third time, and I tore it out, and we had a pretty serious fire; and he said, I guess that is all right, you leave it out. The Lee & Holland Company, of Buffalo, I guess the largest institution of its kind-sash, door and blinds-have thrown out the boiler-feeding arrangement for burning dust and shavings.

Q. State to the jury how it becomes dangerous.

A. The fine dust will lodge along in the pipes, and if you go up on top of the building and throw off this fine powdered dust and the fire catches it, it will crawl right up over it, like crawling up over Niagara Falls-that is, you understand what I mean. dust will fall, and that is what is dangerous about it; or you keep it contracted in a building so it creates a gas or pressure, and then it is explosive and a fire will carry up this right along the pipe,

among this fine dust and get into your building sooner or later; but of course the device may have been improved

since that time, that part of it, but yet there have been cases where they have had similar experiences. Then, again, if there is a back draft, which is apt to be the case with any chimney of any factory-we even have drafts where the drafts are down, we have had them in years in gone by, and that blows the fire into these channels and blows it back into the shavings-room.

Q. You say you attribute three fires you had to this device?

A. Yes, we got afire three times, and each time it was traceable right to it.

Q. Then you consider it a very unsafe thing to do?

A. And understand me, we left a disconnected pipe. For instance, as we came through the shavings-room, we left a pipe here open so that when this hood was shut down these shavings would go into the shavings-room, and when we opened the hood that would strike this and divert down, and when this hood was open they would go in this pipe under the boilers. I received a letter from Mr. Mitchell, of Toledo, the other day, and one from C. R. & J. C. Wilson, and they speak in the highest terms of our device, and I would like to read them if it is proper.

Q. Well, if there is no objection you can read them.

Mr. BAKER: You may use that letter if we can be permitted to use some also.

Col. ATKINSON: Well, read it.

A. "Toledo, Ohio, October 4, 1893. Mitchell & Roland Lumbering Company, Toledo, Ohio. Gentlemen: Answering your inquiries of the 2nd inst., we have had the Backus burlap dust-arrester in use since 1885 and are more than satisfied with it. It has not cost us one dollar since its erection and works perfectly as a dust-arrester. Our planing mill is kept free from shavings by two large

fans both blowing into our shavings-house with your dust-2043 arrester, there is no loss of power or back pressure, and our premises are kept neat and clean as we could wish. J. C.

Mitchell, treasurer."

Mr. Wilson writes from Chicago, on October 6th, as following: "Before leaving Detroit I forgot to reply to your inquiry regarding your dust-arrester. We are pleased to state that the one we put in some 10 years ago on our Jones Street plant gave excellent satisfaction, so much so that when we moved our works some four years ago we took it apart and rebuilt it in the new location, where it now is in perfect working order. We know of nothing that will serve the purpose for which it is intended as well."

Mr. Wilson called me up at the time he moved this device and asked me what I would charge him for the device to move it. I told him that he had paid for the right to use the device and he had a right to move it, but I said, Before you put in a device of any kind you investigate all the other kinds thoroughly. He did investigate and he put in a centrifugal, and he took it out and put

the Backus one back, so he stated to me the other day.

Q. Of what material is the cloth that is used?

A. Eight-ounce burlaps.

Q. Some of the witnesses have spoken of cheese cloth?

A. Cheese cloth is too slimsy. Burlaps has a light fibre hanging down on the inside, which is one of the great features of it. There is a little fine fibre that reaches down and catches this fine dust and prevents it from escaping, whereas the cheese-cloth did not in Mr. Miller's device that he used to handle, the Kuche cheese-cloth arrester, as he stated to me after he left the court-room that day, whereas it was an inch and a half apart to obviate our patent, to get around our patent, and they built them straight up instead of building them in this fashion, large at the bottom so as to let lots of air in

them; they built them parallel and one inch and a half apart, and he said they would fill right up with dust and keep filling

2044 and choking the whole thing, and he said, Yours is automatic absolutely, there is no question about that, and I guess he would admit it today. I was going to remark further that Comer & Sons, of Cadillac, also have our dust-arrester and are very much pleased with it. I sent them new burlaps here a few weeks ago.

Q. Where is your dust-arrester manufactured?

A. We do not, as a rule, manufacture anything; we sell the royalty for putting up, let them erect it in accordance with the directions; we furnish the directions, and if they follow them as we give them it cannot but help but be a success.

Recess till 2 p. m.

2 P. M., OCTOBER 20, 1893.

HENRY BACKUS recalled.

Examined by Col. ATKINSON:

Q. At what time did you make these experiments with the centrifugal devices that you spoke of this morning?

A. It was after the Cyclone dust-arrester was in the field; I could

not state just what year, but I think about '85 or '86.

Q. How did you happen to do it?

A. A gentleman came along here from Jackson and he had a machine for which he had applied for a patent on, as I understood, and he wanted to sell the machine. We were looking for something if we could get any improvement, but we did not succeed in getting it.

Q. Do you know what machine that was?

A. It was a centrifugal machine built at Jackson.

Q. Like the Vortex?

A. Yes; practically the same thing. Q. That would be about what year?

A. 1885 or 1886, in my judgment.

2045 Q. Will you state whether you were induced to try it? A. We were induced to try it; he paid all the expenses of the shipment of the machine, etc., and he kept changing it and building it larger and smaller, but when he got through the dust came out just the same.

Q. What was the effect of your experiments as to the use of

A. We found that it took a great deal more power to run the machine, that is to deliver our shavings and get rid of the air with that machine than it did with the machine we had had in previously.

Q. As I understand, this dust-arrester is on the top of the building, and the dust and shavings settle down into the bottom into

bins?

A. Yes, sir.

Q. And the dust and shavings are all removed away from the building by carts?

A. What are not burned.

Q. What can you say as to whether the metallic device which would be higher up and requiring a greater amount of store-room below it, would or would not increase the fire risk?

A. Why it would increase the height of the building and the fire

naturally, just about the same proportion.

Q. In the same proportion?

A. Yes; that is, the proportion to raising any building; and then the danger, of course, is very largely down below.

Q. The danger is in the store-rooms for the sawdust and shav-

ings?

A. Yes, if a spark gets in there, it is all day with us.

Q. Something has been said about the dust being explosive?

A. Yes, sir.

Q. What do you know about that?

A. I know there are a great many sawdust-rooms blown 2046 There was a furniture factory at Owosso, Michigan, blew up.

Q. So that the lighting of a spark in that room, or a live cinder

would cause an explosion?

A. I could not say it would cause an explosion in there unless the gases were confined, but it would create and set fire to anything with which it came in contact.

Q. Well the principal danger then is in these bins or store-rooms

from communication with fire?

A. Yes, as much danger there as anywhere.

Q. And the sawdust and shavings have got to get down to these bins, no matter what device is used, I understand?

A. Yes, sir.

Q. And one advantage of yours over the other is that the bin is not so high and has not so much lateral exposure as it would have if the metallic device were used?

A. It certainly would have more up above; that is, if the build-

ing was raised up.

Q. Your dust-bin, as I understand it, comes very near the south line of your property?

A. Yes, within about four feet of the sidewalk.

Q. That is where there was a horse and wagon standing at the time when the jury examined the premises, I think.

A. Yes, sir. Q. That is where there was a horse and wagon standing at the time the jury went and examined the premises?

A. Yes, sir.

Q. And the sawdust bin is immediately in the rear of that, or

nearly north of it?

A. The sawdust bin-the doors that open there-the jury, I think, were in the sawdust-room there. The sawdust-room comes to the ground; the shavings-room does not come clear to the ground.

Q. How long have Backus & Sons operated this planing 2047

mill upon the premises where it is now situated?

A. The original mill was built there in 1871. I think the winter of 1871 and 1872.

Q. Is there any other property connected with your business immediately, except this lot on which this planing mill stands?

- A. Yes, sir, we have a warehouse on Fort street on this side of the factory, on the north side of Fort street, between Ninth and Tenth; we have a yard, 30 feet south of River street, between that and the river.
- Q. Now, are all these properties used together or used separately?

A. All used separately.

Q. With reference to each other, then?

A. Yes, sir; one would be of little account without the other.

Q. Your lumber yard is on what street?

A. It is on both sides of Eighteenth-and-one-half street.

Q. And runs from?

A. From River street to the channel bank. Q. How long have you had that property?

A. About as long as we have had the mill. We acquired both about the same time.

Q. What is that property used for mainly?

- A. That is for storing our lumber, receiving our lumber by
 - Q. You receive your lumber at the dock and store it there?

A. Yes, sir.

Q. Do you receive lumber also by rail?

A. We do some.

Q. But your principal supplies come by water? A. We calculate to receive our supplies by water. Q. How far is that from your planing mill?

2048 A. About a quarter of a mile.

Q. In what way is the lumber taken from your yard to the planing mill?

A. On what we term the dump wagons. Drawn up by horses. It is loaded at the yard and drawn up where we want it.

Q. It is all drawn up by wagons and horses?

A. Yes, sir.

Q. From the lumber yard on the river to the mill we have been talking about?
A. Yes, sir.

Q. Now, where is your warehouse that you speak of situated? A. It is situated on the north side of Fort street between Ninth street (or Trumbull avenue) and Tenth street.

Q. How long have you had that property?

A. That property was built right after the building of our new mill, after the fire of 1882.

Q. What do you use that building for?

A. That is used for storing stock from the mill. For retail trade largely, all overstock of the mill. For instance, if we ship a carload of lumber and we have a little stock left over that won't go in

the car, or that is not suitable, then it is sent over there. We have always aimed to sell down below at the mill.

Q. Is that an essential part of your business or not?

A. I should not know how to run the factory without the ware-

Q. Whenever you have any surplus of any kind that is taken over there and stored?

A. Yes, sir.

Q. And is that the place where you do your principal retailing now?

A. All the retailing we do now with the exception of what we do at Eighteenth-and-one-half Street yard is done at the 2049 warehouse.

Q. Did you have any retail trade that has been interfered with by this railroad in any way?

A. We had done considerable retailing on River street before the

railroad came there.

- Q. Was that conducted from your lumber yard or from the mil itself?
 - A. From the mill itself. Sold by the foreman of the mill.

Q. Does that continue?

A. Not a dollar.

Q. That has entirely disappeared with the building of the railroad there?

A. It has practically, if not all, left us.

Q. What is the size of your warehouse? A. The warehouse is 125 feet by 200 feet long, or thereabouts.

Q. About what was the cost of that building?

A. That represents about \$12,000. From \$12,000 to \$15,000. It is pretty hard to tell.

Q. What is the distance of that from the planing mill?

A. About a block and a half, straight. Q. In feet, about 600 or 700 feet?

A. From the planing-mill property, as we come around the other way to get to it-it would be a little further from the planing-mill front.

Q. It would be about how far?

A. We have to travel with our teams to get from the planing mill to the warehouse, I should say, about 1,200 feet.

Q. About a quarter of a mile?

A. Yes, 1,500 feet.

Q. About the same distance as your lumber yard?

A. Yes, sir.

Q. Do you own the land there? 2050 A. No, sir, father owns the land.

Q. Mr. Absalom Backus owns the land?

A. Yes, sir, he owns the realty.

Q. What is the size of the lot he owns? Is it practically all covered by the building?

A. Yes, sir.

Q. As I understand it, Mr. Absalom Backus owns all the realty?

A. Yes, sir.

Q. In all three parts of the plant?

A. Yes, sir.

Q. Now, what is the size of the lumber yard?

A. It is about 400 feet wide, and 1,100 or 1,200 feet deep.

Q. Is that improved?

A. We consider it so in our business.

Q. I mean have there been any improvements laid out on it. docks?

A. Oh, yes, we have built out there a very large amount of the grounds. We have filled it in and docked it out, and improved it.

Q. Can you give us any idea of the cost of the grounds there, the docks and improvements? I speak of the improvements now as apart, separate from the value of the land itself.

A. I could not give you an estimate on that. I know it is several

hundred thousand dollars.

Q. You mean a good many thousand or hundred thousand?

A. I mean a good many hundred thousand dollars.

Q. I mean the dock improvements themselves, apart from the value of the land?

A. Oh, I presume we have spent anyway on the docks \$50,000.

2051 Q. You think that much has been expended on the property over and above its value?

A. I don't know but a good deal more than that. That much any-

way.

Q. Is it important at all to you that these different parts of your plant should be near each other? Is distance of any importance? A. Yes, sir, it is very important that they should be close together.

If they are not we waste our cartage. Our teaming would eat us up. Q. Supposing your mill was a mile distant from where it now is, a mile away from your warehouse and from your lumber yard, how

would it affect you?

A. It would cause a good deal more expense in cartage, and we could not handle ourselves. I am now where I can get from one place to another very quickly.

Q. What is the storage capacity of your lumber yard?

A. We have had on that yard, oh, ordinarily about 18,000,000 feet.

Q. 18,000,000 feet?

A. That is the ordinary storage capacity of it.

Q. What is the storage capacity of your warehouse?

A. About 2,000,000.

Q. What is the cutting capacity of your mill per day?

A. We don't have any trouble in cutting 100,000 a day. That depends. It is like almost any other kind of business. If we are rushed we can do more. If we are not rushed we have to be content with doing less.

Q. But you have a capacity of at least 100,000 a day?

A. Yes, sir; that easily.

Q. Will you state whether or not different parts of your plant

have been built and arranged with reference to each other, and the conduct of each other—the mill, the warehouse and the lumber yard?

2052 A. Yes, sir, they constitute one institution. The three are

one.

Q. What effect upon the value of your property would the destruction of your planing mill have upon all your property?

A. If we were to be deprived of our planing mill we would have to quit as far as business was concerned. They all work in unison.

Q. Would it or would it not largely affect the value of the ware-house?

A. Oh, yes, sir, that would be inevitable.

Q. And it would render it less valuable, I suppose?

A. Yes, sir, we would have no use for it at all.

Q. How would it affect the value of your lumber yards and docks?

A. Why, carrying on the kind of business we are carrying on, depriving us of our mill, the rest of our property would be utterly worthless.

Q. Would the profits of your yard be more or less if your planing mill was discontinued, and you depended entirely on running it as a lumber yard merely?

A. It would be less. Decidedly so.

Q. Each part of this plant, as I understand, makes every other part more valuable?

A. Yes, sir.

Q. And the impairment in the value of one would more or less impair the value of the other?

A. Yes, sir, what affects one would affect the others.

Q. In other words, you have regarded the three as a unit?

A. We have always considered them together as a unit, as one institution, and our men work in harmony together, and our foremen assist each other.

Q. I was going to ask you whether your labor was arranged in each with reference to the three, whether there was an interchange of labor?

A. Yes, sir, we give and take all the time.

Q. Whether any impairment of one would seriously interfere with

the labors of the others?

A. If we should have to shut down the mill we should have to shut down the warehouse, and if we should have to shut down the warehouse we should have to stop the lumber yard. We could not run one without the other. They were built for that purpose, and it has been our life-work to get things in the condition they were in.

Q. You have been in this business from your boyhood?

A. I have known nothing else.

Q. And your father was engaged in the lumber business before you went into it?

A. Yes, sir.

Q. So that practically it has been the only business of the family within your recollection?

A. Have lived with it and grown up in it.

Q. Was this plant built up and acquired through inheritance, or purchased out of the business itself?

A. It was purchased out of the business itself, and it has grown up by our intelligence as well as by our hard work.

Q. So you have built up this business, and in it have practically acquired all this property?

A. Yes, sir.

Q. Have you had any other source of revenue to pay for this property except what you have made out of it?

A. No, sir, we have had to depend upon our own energies to build

up the business.

Q. And you have maintained yourselves and purchased and acquired this property?

A. Yes, sir.

Q. How are the profits of this business, close or large—the competition, I should say, rather than the profits, whether

the competition is sharp and vigorous or otherwise?

A. The competition in our business is like all other kinds of manufacturing business. We have to work very cautiously and carefully and work hard in order to make our ends meet and make anything. That, I guess, is the condition of everybody. And we have to get new ideas, and the best of machinery. We have to improve over our competitors, which we have succeeded in doing.

Q. How as to the volume of business done?

A. The more we do the better it is for us.

Q. But suppose a large amount of your trade is taken from you, could you afford, with such a plant as you have, to do a smaller

trade with the margins now allowed in business?

A. We have to run our business up to a certain limit, or else we are running behind; and if we do not do a certain amount of business, we are over the bank, on the other side. And we have to have our supernum-ary force, our engineer, foreman, master mechanic. We have had one or two men for years in the factory improving our machinery, reconstructing it, building it anew.

Q. Now, then, anything that would interfere with the volume of your trade would seriously affect it, and if it went to a certain extent would absolutely destroy your power of going on in business?

A. Yes, sir.

Q. You have to do so much before you reach any profit?

A. Yes, sir.

Q. And it is only on what you do beyond that line that you make any profit?

A. Yes, sir, that is it.

2055 Q. Will you state whether or not it is very necessary in the business, on account of the closeness of competition, to save everything like sawdust, shavings, wood kindlings, etc.?

A. That is our aim when we run full. If we could run full we would make a great deal of sawdust, a great deal of kindling, and it all has a sale. We have no trouble in disposing of it.

Q. Your plant has been arranged, then, with special reference to the saving of everything of that kind?

A. Yes, sir.

Q. What do you waste around your establishment?

A. We try not to waste anything. Of course, there is more or less waste, but we sell all our sawdust.

Q. And your refuse?

A. Yes, sir; we tie up some of our wood, and the rest of it we

deliver in loose form.

Q. Now, with reference to the realty, suppose the storage of the lumber was stopped at your warehouse, would it or would it not be as valuable for something else? Could you turn it to something else that would pay as well as storing lumber there?

A. I could not. I don't know what I could turn it to. I am not

in any other business.

Q. You don't know of any other business it could be put to?

A. No, sir.

Q. Will you state whether or not it has been built specially for

the purpose you have built it?

A. Yes, sir; it is all to carry heavy loads. Intended for heavy loads. Our lumber is piled on the ground to a certain point, and there are upright posts with horizontal timbers, and the lumber piled above that, some 25 feet high altogether.

Q. And it is built especially for storing lumber?

A. Yes, sir. 2056

Q. What kind of lumber do you store there?

A. We store dressed lumber principally. We have some fancy woods in the rough.

Q. In the main you have dressed lumber?

A. In the main. We mean to carry ceiling, moulding, flooring and manufactured material more than we do anything else.

Q. How would the stoppage of your business affect the value of

your real estate on which that warehouse is built?

A. Well, we should have some trouble, I presume, in disposing of it, or realize the price we consider it worth now in our business.

Q. Is real estate depressed or booming in that part of the city;

real estate that is not in use?

A. Well, of course, there is not much real estate moving these times anyway.

Q. And this real estate is well adapted, I understand you, for the

purpose for which you use it?

A. Yes, sir; we are 200 feet on the street and 200 feet on the alley. Our alleyways run through; we drive from the street to the alley; we do not have to turn our rigs around in the warehouse.

Q. You say the land of all the plants belongs to Absalom Backus? A. Yes, sir.

Q. And how does the corporation of Backus & Sons occupy them, under leases or otherwise?

A. We had a thirty-year lease of all the real estate from A. Backus, Jr., and I think some six years of it have expired.

Q. So that you have a 25-years lease, then, of the real estate still to run?

A. I think about 23 years yet to run.

2057 Q. What is the rent paid for the real estate where the warehouse stands?

A. One thousand dollars a year.

Q. And what is the rent paid for the real estate where the mill stands?

A. \$5,000 a year.

Q. What is the rent paid for the yard on the river?

A. \$12,000 a year.

Q. So that the actual rental of those plants, then, is \$18,000 a year?

A. \$18,000 a year, sir.

Mr. Dickinson: The corporation owns all these machines you have been testifying about, all the equipment?

A. The corporation owns all the buildings and their contents.

Q. Everything on the ground?

A. Yes, sir, on the three territories; and the business, everything except the ground.

A JUROR: Do you own the docks?

A. No, not the docks themselves. We lease the docks.

Q. And include that in the rent?

A. Yes, sir.

Mr. ATKINSON: Any buildings on the yard?

A. There is an office and a barn.

Q. And that belongs to the corporation?

A. Yes, sir; a new barn.

Q. Now, you do a retail business, as I understand you, at the lumber yard, to some extent also at the mill, and also at this warehouse?

A. Yes, sir.

Q. Have you any way now of distinguishing from memory the amount done at each?

A. I could not state exactly. I know we have a trade on the River Street front at the planing-mill factory, at the planingmill entrance, which our foreman has control of. He sells a good deal of stock there for cash. He gets a good many cash

customers, a good deal of the stock that is left over, and he, I think, could tell you better than I could. It is all gone, all gone.

Q. The retail business on that street is gone?

A. Yes, sir, every bit of it; driven it entirely away.

Q. That space was utilized by selling to customers who would

come with teams?

A. I will explain: We have a certain class of trade for stock that is manufactured in the mill which is rejected from the cars—a piece of board that is knocked off at the edge, a piece of ceiling tongue that is broken off, a piece of car siding that has some stain upon it, or defective piece that we cannot ship East to New York or Boston; we had a ready sale for all that on River street. But it is a peculiar thing that this overstock of a mill-a customer buying

such stock, a carpenter or joiner, will not go to a lumber yard for certain kinds of material when he can buy it at a planing mill. He has an idea he can get it cheaper, and it is very important to us to get rid of this stock at the planing mill. If we should haul it over to the warehouse we could store it for all time and never sell it, while we had a ready sale for it there.

Q. So that you practically lose the value of a large amount of

material by being deprived of that trade?

A. Yes, sir, we are deprived of that trade entirely. addition to that, we did sell some stock there, to a considerable extent, of lumber which went with this, that was not sappy or not turned out.

Q. You used to draw your lumber from River street around to the warehouse for storage. That you stored in the warehouse, as I

understand you?

A. Yes, sir. Q. Which way did you go; going west first to Twelfth 2059

A. We always went around by Twelfth street.

Q. Around by Twelfth street?

A. Always.

Q. And anything you draw there now you have to go around under the railroad instead of through the unobstructed street, as it was that time?

A. Yes, sir.

Q. Now, I want to ask you whether, in regard to your wagons and horses, etc., your business has been equipped with reference to the three different parts of your plant.

A. Yes, sir.

Q. So that, I suppose, you have aimed to have just enough animals and wagons to do the business in connection with these three

parts.

A. Yes, sir; a team will come up from the yard with a load, and will take a load from River street, or from the dock, we will say, to the dry kilns, and put it in front, and take his team right around back and load up with kiln-dry lumber and come down to the mill and take a load from there over to the warehouse.

Q. Now, if you were compelled to change the location of your mill

would it interfere with doing work in that way to any extent?

A. We should have to rearrange things, and you can count me out.

Q. You hardly know how it could be done?

A. I would not want to try it.

Q. You heard the testimony of the different witnesses here as to obtaining a piece of ground equally advantageous for the milling business within short distances from where you are located?

A. Yes, sir.

Q. Do you know of any ground that you could use in connection with the remaining part of your plant, lumber yard and warehouse, and that could be acquired for that purpose?

A. There is lots of ground that people could buy, and they could attempt to do something on it, but I don't know of a location where I could put myself in anything like the position I am in today, and life is too short with me to build. I have had a good deal of experience with-

Q. Do you know of any place near by so that you could use the rest of your plant in connection with it, where such a site could be

A. I don't know of any piece of ground that could be utilized. Q. Has this new railroad increased in any way your railroad connections?

A. No. sir.

Q. You have only the same railroad connections you had before?

A. We have the Michigan Central, which is ample for us. We have no difficulty in obtaining cars from any line.

Q. This union depot company's tracks are elevated tracks at your

place, so that you have no way of getting to them?

A. No, sir, it is practically a bridge or trestle to get over the Michigan Central tracks.

Q. In front of your property?

A. Yes, sir.

Q. I notice, in looking at your property, you have principally two ground floors, one from River street and one from Fort street; is there any advantage in that?

A. Yes, sir; it gives us the same advantage as though we had double grounds. We have two floors on the ground.

2061 Q. And if you had the unimpeded use of both streets there would be an advantage in both floors?

A. Decidedly.

Q. And is your mill constructed with reference to that?

A. We built the mil! in accordance to our situation. We used to load our boxes for city trade on River street, and after we moved our office up on Fort street and transferred our loading for our city trade onto the Fort Street end of the mill, we found we made a mistake, for the reason that as our doorways are situated there on Fort street, one here and one there (indicating), in backing in a team and dumping a load of lumber we are continually in the way of our loading boxes, and one team has to wait for another, and that is a serious matter, especially when a man is telephoning from uptown in a hurry, and I was contemplating the transfer of it back on River Street side, but this has knocked me out of that entirely. It has put a quietus on that. It has killed any possibility of that kind.

Q. Has there been anything of the frightening of customers'

teams as they come down on River street?

A. There has been a good many runaways there. One of our customers has been run away twice, and he said he would never come there again. I happened along there two weeks ago when I saw two of my men had left a saw, and they were gone out in the

street, and there they were holding a woman's horse, and the woman was trying to hold it, too; there were three of them.

Q. What do you consider the lumber yard down there worth, the realty, the 400 feet running from River street to the channel

bank?

A. It is worth at the least calculation, in my judgment, and in my knowledge, for our purpose, located as it is, we put a value on it, at least, of \$2,000 per foot front. It is very deep property. I think it is some 1,200 feet deep to the channel bank.

Q. What do you value the mill property at?

A. I have never considered it less than—the real estate—in connection with the advantages we have of shipping over the Michigan Central, we have excellent facilities, and I am told by the head vardmaster that we got cars during the car famine, we got cars when all our neighbors had to suffer from the fact that we are just beyond where they break up a train, break up the trains, and we get the loose cars as we want them.

Q. Right near the source of supplies?

A. Yes, sir. I have always considered that piece of property really worth \$150,000.

Q. What do you consider the realty where the warehouse is

worth?

A. That would be worth, probably, \$40,000. That is worth \$200 per front foot.

Q. That runs from Fort street to the alley?

A. Yes, sir.

Q. And it is about 125 feet deep?

A. 127 feet deep.

Q. And 200 feet on Fort street?

A. Yes, sir.

Q. Is not that valuation of the lumber yard high?

A. Why, it is a very large piece of property. I don't know where you could find a piece like it. I am, perhaps, more familiar with the mill property and the warehouse than I would be down there.

Q. You say your leases were made about when? A. 1885.

Q. Running for 30 years?

A. Yes, sir.

Q. That is the full life of your corporation, then?

A. Yes, sir.

Q. Your corporation, as I understand, are under obliga-2063 tions for these leases to pay rent that length of time for them?

A. Yes, sir.

Q. Now, Mr. Backus, we have had it from a number of witnesses, but not from yourself, as to the class of work down there in your mill, whether it is a coarse or fine class of work, or whether it includes both now and as it was before this structure was built. What class of work are you doing? I would like to have you explain that fully to the jury.

A. Our business used to be, before the trestle was built there, made up to a large extent of fine mouldings in oaks and in the fancy woods, and for house-finishings, oak and ash, and clear pine. and some white woods, and we absolutely had to give that up. We had to give up that part of the trade.

Q. That is the class you were doing at that time?

A. Yes, sir. Q. Now, I would like to ask you this: Whether upon that fine work the margins are close or otherwise, the competition sharp?

A. Not as sharp as they are on the coarser work.

Q. Then the profits would naturally be larger upon that kind of work?

A. Yes, sir. Q. What effect would the soiling or marring of that sort of work have upon its salability?

A. Well, it must be kept clean, that is all there is to it.

Q. It has to be kept clean?

- A. Yes, sir; if you muss or soil it you could not ship it away. If you did ship a man a load of goods of that kind he would not order another, and it is a question whether he would pay for the first load or not.
- 2064 Q. So it is work that has to be particularly clean, as I understand you?

A. Yes, sir.

Q. Then the soiling would affect it, would it?

A. Yes, sir; or any blemish.

Q. It would affect the salability of the property at once?

A. Yes, sir, that would spoil the whole thing.

Q. How many years were you engaged in that kind of work-particularly fine work?

A. We have always been in it more or less. We used to make a specialty of it, and since this new mill was built-

Q. Your new mill, then, was not a duplicate of the old one?

A. Oh, no, sir.

Q. It was an improved mill to meet your trade and the work you were doing?

A. We aimed to improve on the construction and we put in a great deal more machinery.

Q. Had you, then, a warehouse with the old mill?

A. No, sir, we didn't cater so much to that class of trade before the old mill burned.

Cross-examination

By Mr. BAKER:

Q. Mr. Backus, have you ever dealt in real estate?

A. To some extent, yes, sir.

Q. Whereabouts?

A. I bought the lot where I live, and I have bought and sold some real estate.

Q. Whereabouts?

A. I bought some on Cadillac boulevard, I believe, and I bought considerable of the property that father ownsQ. Did you ever buy any property on River street?

A. Not for myself.

Q. For anybody?

A. Oh, I bought a piece for father. I think that I know pretty near what real estate is worth.

Q. Do you know whether or not you have bought any property on River street, either for yourself or for your father, or the corpo-

A. I bought a piece of property several years ago on River street.

Q. What piece of property was it?

A. It was the piece just this side of where the shed now is, next to the mill; a little flat-iron piece; a small piece.

Q. Who did you buy that of? A. Mr. Appleyard, of Lansing.

Q. Is that a part of this mill property?

A. Yes, sir.

ration?

Q How many feet front did you buy?

A. I could not tell you exactly. I know I paid \$1,900 for it.

Q. How many feet front, 19? A. No, I guess there is 20.

Q. Do you know whether it was 20 or not, or are you just guessing at it?

A. About 20 is my judgment of it.

- Q. That is the extreme easterly part of the River Street frontage A. No, sir, that was next to the little strip of the Michigan Central?
 - Q. The Michigan Central had a strip in there about 17 feet wide?

A. Something like that.

Q. And that intersected your property; you had some east of that?

2066 A. No, sir, that was between us and the Michigan Central proper.

Q. Where was this 20 feet you bought, west of that 17 feet or east of it?

A. West.

Q. It was the extreme eastern part of the River Street frontage, was it not?

A. Yes, sir.

Q. Do you remember when the property next to Mrs. Stedley was bought on the other end of that frontage?

A. I recollect of having bought the Coveau lot away back in 1871 or 1872, somewhere along in there.

Q. What did you give for that?

A. Father bought that.

Q. Do you know what was paid for it?

A. I don't recollect that.

Q. Do you know how many feet there were?
A. No, sir, not in that particular lot I don't.

Q. Now, altogether you have got 238½ feet on River street, haven't you?

A. Yes, sir, in father's name.

Q. In your judgment what is that worth, the front, the real estate. regardless of the improvements?

A. Taking it with our business?

Q. Taking it with your business.

A. Taking it with the business upon it, it was worth, in my estimation, \$500 a foot front; that is, you understand, the advantages that we have there with the Michigan Central Railroad tracks, the frontage. It is a piece of property which we'ld be very hard to duplicate.

Q. You estimate it at \$500 a foot? That is what I want to

get at.

A. Yes, sir.

Q. Now, there is some Fort Street property, seventy-five feet; about how much is that worth a foot in connection

with your business?

A. I am figuring that property clear through. I am not figuring the Fort Street front at all. I figure the property as it stands at \$500 a foot, running clear through to the Fort street, taking it as a block.

Q. You would not include anything for the Fort Street frontage?

A. No, not in that.

Q. Part of it does not run all the way through. There is a jog in it, isn't there?

A. That makes up for the dock on the other side. There is a

corner off there.

Q. You think where your box factory is situated that that is worth \$200 a foot?

A. You mean the warehouse? Q. Yes, sir. A. Yes, sir.

Q. How many feet frontage?

A. That is 200 feet. It has no railroad facilities, and it only runs to the alley.

Q. And you have about 400 feet on River Street front at the foot of Eighteenth-and-a-half street?

A. Yes, sir.

Q. And that runs from Woodbridge street to the river?

A. To the channel bank

Q. And you value that property at \$800,000?

A. Yes, sir. There is not quite 400 feet.

Q. About that?

A. I say as a whole, taking that property I say that that piece of property was worth, if I had it to sell I should put it at \$600,000.

Q. \$600,000?

A. Yes, sir. Q. And you would not adhere to your previous figures of 2068 **\$**800,000?

A. There isn't 400 feet there. I was figuring on the basis of \$2,000 a foot.

Q. Do you consider that river frontage worth \$2,000 a foot?

A. I do.

Q. Now, Mr. Backus, have you made any estimate of the masonwork that would be necessary in order to duplicate your building there?

Col. ATKINSON: That we object to as not proper cross-examina-

Mr. Dickinson: We omitted all that, but not by oversight.

COURT: The rule, as I understand it, is, if the witness was placed on the stand and asked one question, you can go in the entire subject on cross-examination, or if he only produces a paper.

O. I only want to know whether he has made an estimate or not.

COURT: I think it is proper. Answer the question.

Col. ATKINSON: We will take an exception.

A. I didn't make any estimate of the brick-work, because I had plenty else to do.

Q. You have estimated the wood-work, haven't you?

A. I have had it estimated. I have not measured it all myself. I have had competent parties measure it for me.

Q. Who did you have estimate it for you?

A. Mr. Knapp, the yard foreman, took the contents of the woodwork all over the mill.

Q. So what you have testified to here, you do not testify to of your own knowledge in regard to the contents?

A. I do not testify from my own measurements, but I assume

them to be correct.

Q. You assume that Mr. Knapp measured everything cor-2069 rectly?

A. I can put him on the stand and verify the same thing.

Q. What else did Mr. Knapp estimate for you?

A. Mr. Knapp didn't estimate the values, only the measurements, giving me the number of feet in each building.

Q. Now, Mr. Backus, Mr. Spitzley estimated the wood-work at What is your estimate for the same, do you know? \$22,612.

Mr. ATKINSON: That we object to, as the witness has not stated he has made any estimate of the value of the wood-work.

Mr. BAKER: He has been testifying to it all the time.

Mr. ATKINSON: I don't think so. He has been testifying to the

equipments.

Mr. BAKER: Of course, there is a large amount of detail you have testified to here, but it is very unintelligible to me at any rate. I want to compare your estimate with Mr. Spitzley's. He estimated the wood-work at \$22,612; now, what is your estimate for that same work?

A. The office was included by Mr. Spitzley in that amount, and I have not included the office.

Q. You have not estimated the office?

A. Not yet.

Q. What is your estimate, not including the office? A. \$27,086.01.

153 - 55

Q. That includes increased values and increased measurements, does it not? That is the only difference between you?

A. Not altogether; there are some little matters. There is one matter of \$350 for painting and glass. I reduced that to \$120. Otherwise the increase has been in the value very slight. It is the amount of feet in the buildings largely.

Q. That is, as reported to you by Mr. Knapp?

A. As given to me by Mr. Knapp.

Q. But the only difference between you is the \$18,000 and the \$27,000?

Mr. Atkinson: There is the office also. Your estimate for the office is about \$3,000?

A. That is, on the wood-work of the building?

Q. Is that correct?

A. That is, as I understand it. Mr. Spitzley did not include the office. Mr. Spitzley's estimate was \$18,887.55.

Q. And yours was how much?

A. \$27,586.01.

A JUROR: May I ask counsel right here as to whether these details, these particulars between conflicting witnesses are essential in the case here, whether the jury will be furnished with these figures; because, if not, I want to take out my pencil and take them down.

Mr. BAKER: I shall have no objection to your having all this

testimony and looking it over at your convenience.

Mr. Dickinson: Under the practice here, you have all the testimony anyway. Of course, it is our duty to prepare that testimony for your convenience, and you are to certify to them, to the transcript.

(By Mr. BAKER:)

Q. Now, Mr. Backus, Mr. Spitzley's estimates of wood-work and machinery was \$16,891. What is your estimate of that?

A. I have not figured that up. I will do that tonight.

Q. Mr. Kramer made an estimate for engine, boilers and other items in connection with that sort of machinery of \$19,660. Do you know what your estimate for that same work is?

A. That stands the same as the other. I will have to take the

whole matter and figure it over, if that will do.

2071 Q. Mr. Kramer also estimated \$8,585 for shaftings, elevators, pulleys and so on; do you know what your estimate for that is?

A. It is not summed up in a total. I have the items, but not carried out.

Q. So you cannot give us any information about that until you add them up?

A. Until I add up the footings.

Q. Have you got that in the form of an inventory?

A. Yes, sir.

Q. Will you produce it tomorrow in the form of an inventory?

A. In what shape do you mean?

Q. I mean so we can understand what the items are.

A. I can give you a list of the articles with the prices which I

have set upon them.

Q. Now, can you give us the valuation, where you differ from Spitzley or Kramer, and the omissions separately, so we can see where the real differences are, so that we can compare it?

A. I will endeavor to do so.

Q. You differ from Mr. Spitzley to some extent upon values?

A. Yes, sir.

Q. And you can indicate those in this list?

A. Yes, sir.

Q. Where you put in a higher valuation, and you can also put in the omissions so that we can see just where the differences are?

A. Yes, sir.

Q. How much royalty did you pay on this dust-arrester of yours? A. My recollection is, we paid about \$800.

Q. Who did you pay that to? A. The Backus Co. 2072

Q. Who was the Backus Co.?

A. A. Backus, Jr., N. D. Backus and myself-a corporation. Q. That is, you paid that royalty to yourselves, then?

A. No, it went to meet the expenses of the institution the same as though we had sold it to any one else; treated it in the same way.

Q. How did you pay it, in money or credit?

A. I think it was paid in money.

Q. Do you know which one of you got it?

A. No, it went into the institution.

Q. Which institution?

A. A. Backus, Jr., & Son-, a corporation—a lumber firm.

Q. Wasn't it A. Backus, Jr., & Son-that owned this patent on the dust-arrester?

A. No, sir.

Q. Who did? A. The Backus Co.

Q. Well, who was the Backus Co.?

A. It was A. Backus, Jr., A. D. Backus, and myself.

Q. Was that a corporation?

A. Yes, sir.

- O. And it had the same stockholders as the A. Backus, Jr., & Sons?
 - A. A. Backus, Jr., & Sons were not a corporation at that time.

Q. You were in partnership at that time?

A. Yes, sir.

2073

Q. The Backus Co. was a corporation composed of the same parties?

A. Yes, sir, and likely to take any one else in with us at any There were two distinct institutions. time.

Q. What else did that company own?

A. They owned a boiler furnace.

Q. A patent?

A. Yes, sir.

Q. Where did they carry on business?

A. Detroit.

- Q. Whereabouts in Detroit?
- A. At the office of the firm.
 Q. What did its business consist of?
- A. Dust-arresters and boiler furnaces.

Q. Is that all?

A. That is all.

Q. Is the company in existence yet?

A. Yes, sir.

Q. Where did they carry on business? Are they still in business?

A. Yes, sir, if any business comes to it.

Q. How long since any business has come to it?

A. I don't know as we have—I guess within about two weeks.

Q. Who was that from?

A. John J. Bagley & Co., I believe.

Q. What did they want?
A. They wanted some grates for furnaces.

Q. Some of the box furnaces?

A. Yes, sir.

Q. For repairs?

A. For repairs. We have had orders from all over the country-Boston, New York, and all over.

Q. When did you get this dust-arrester patented?

- A. I think it was in 1882, just before or right after the fire. I think it was before the destruction of our mill in 1882.
- Q. Did you put up the present dust-arrester in 1882 when you rebuilt the mill?

A. Yes, sir.

Q. And it stood there ever since?

A. Yes, sir.

Q. Now, the experiments we carried on were before that?

A. No, sir, since.

Q. What did you experiment for if you had the most perfect thing imaginable?

A. To get a better arrester if there was one.

Q. If you got the best one on earth, why does it not sell?

A. It does sell, and stays where it is put.

Q. How long since you sold one?

A. Three weeks.

Q. To whom did you sell it? A. To Coomer & Sons, Cadillac. We shipped them some burlaps.

Q. You shipped them some burlaps?

A. Yes, sir.

Q. How long had they owned one of your dust-arresters?

A. They had had that in use about nine or ten years. Q. And you shipped them some burlaps for repairs?

A. No, sir, not repairs. I don't know whether they wanted them for new ones or not.

Q. Do you call that selling a dust-arrester?

Col. ATKINSON: I don't see how the question of when they sold the last dust-arrester can have any effect on the damage done by If it can, I cannot see it. It seems to be pure inthis railroad. quisitiveness.

Mr. BAKER: If we are permitted, we will show by this witness that this dust-arrester is an abandoned, played-out one. We will

prove it by this witness.

Col. ATKINSON: Go on and see if you can.

Q. Do you call sending some burlaps to Cadillac selling a dustarrester?

A. No, sir, I consider sending a burlap to Mr. Coomer 2075 a simple supposition that they are placed with the dustarrester.

Q. That is all, then?

A. And they paid us the money. It was all right.

Q. All you know about it is-

A. I say us, I mean the Backus Company got the money.

Q. You haven't been there to see what they have?

A. I have been past there, not lately.

Q. So that as far as your information goes they simply wanted to repair one they have got?

A. I don't know what they wanted of it. I assume it is for their

dust-arrester.

Q. How long was it since you have sold a right to erect one of those dust-arresters?

A. Why, I guess we have not sold a dust-arrester in about two

vears.

Q. Is it not true, Mr. Backus, that you have not really been in the business of selling dust-arresters since these new centrifugal-action dust-arresters came out?

A. It is true our attention has been taken up in other directions.

Q. You have not pursued that business?

A. We would if we had time. Q. You don't have time?

A. No, sir. We have been compelled most of the time to be in court.

Q. And you find that more profitable, I suppose? You undertook upon your direct examination, did you not, Mr. Backus, to give a list of your dust-arresters that were in use?

A. I stated a few of them.

Q. Can you remember any others?

A. I suppose I could if I were to stop and think about it. 2076

Q. Now, you know pretty well, do you not, where your

dust-arresters are?

A. If I were to go out into the business and put the money in it which these other men are putting in, and traverse the country as they do, I could put in lots of dust-arresters. There is no question about that.

Q. How many dust-arresters are there in the city of Detroit, in your judgment?

A. Oh, there might be 25, there might be 50. I hardly think

that number though.

Q. And of the entire number in use in this city, your kind is in use in three places, your own place, Clough & Warren's, and Wilson's; is not that true?

A. That is true; but we never tried to sell dust-arresters in

Detroit.

Q. And still you have got the finest one on earth?

A. We haven't time to attend to it. Yes, we have got the finest

one on earth. And the only one that will house the dust.

Q. Did I understand in your direct testimony that you thought it would increase the fire risk to put the walls of your dust vault eight or ten feet higher, and to put up one of these metallic dust-arresters, one of these centrifugal Cyclones or Vortex on top there and use it, that it would actually increase the fire risk?

A. I wish to be understood this way: If you carry a building four or five stories up, there is more risk than if there is one story.

Q. But compare the two buildings, and the two dust-arresters; you have a dust-arrester there with lattice-work where the wind blows through?

A. Yes, sir.

Q. When the mill is in operation a pressure of air goes through this lattice-work on both sides?

A. Yes, sir, there is.

Q. And the wind only blows through when it is not in operation?

A. The wind blows through at all times.

Q. Well, hardly?

A. The wind blows through whenever there is any wind.

Q. There is a heavy pressure of air going through there?

A. Oh, no, it is so large. There is no heavy pressure.

Q. All the air going through your plant has got to go through there?

A. Yes, sir.

Q. So that when the mill is in operation all the air that goes through your blowpipe into this vault has got to go through that burlap and out through that lattice-work?

A. Yes, sir, that is right.

Q. And as you conceive the danger is that sparks may fly in there where that burlap is and where the fine dust gathers on the outside?

A. It does not matter what kind of a dust-arrester you have got, the dust will accumulate around it, and you put a spark anywhere there is dust and it will set it afire. There is no question about that.

Q. I understood you to say that one of these centrifugal dust-arresters would increase your fire risk over what it is now?

A. I mean to say that if the building was built a story higher or two stories higher there is more risk. Q. There would be that risk, of course?

A. Yes, sir.

Q. Your father is the patentee of this dust-arrester?

A. Yes, sir.

Q. Do you know what year the patent was taken out? 2078

A. I just stated awhile ago, I think, 1882.

Q. When did you experiment with the centrifugal dust-arrester?

A. My recollection is either 1885 or 1886. Q. Who made those experiments for you?

A. I made them myself.

Q. You didn't apply to any one in the business? A. A gentleman in the business applied to me.

Q. Who was it?

A. Some party from Jackson. I can't give you the name.

- Q. What company was he connected with?

 A. I don't know. There was a party who came from Zanesville, Ohio; they were going all over the country.
 - Q. Can you tell us some way so we can trace this Jackson man?
- A. I can't tell you who he was. He came down with a dust-arrester and agreed to put it in free of charge.

Q. That was not Mr. Morris?

A. I can't tell you.

Q. You don't know who it was?

A. No, sir.

Q. Did he sell you some dust-arresters?

A. No, sir.

Q. Did he have any dust-arresters to sell?

A. Yes, sir.

Q. Did you put one or more of them on your property?

A. He wanted to try it. He made great claims for his dust-arrester, and he got permission of us, of the lumber firm, to try it.

Q. Why did you try it? A. We tried it on the mill.

Q. Whereabouts on the mill?

A. On this end of the mill, off over the shaving-room.

2079 Q. How big was that? A. About five feet.

Q. Where was it made?

A. Made at Jackson.

Q. And shipped down here? A. And reconstructed here.

Q. How long did you have it on there?

A. Oh, we had it on there until the fine dust flew all over us, and we quit.

Q. Don't you know how long you had it on there?

A. Oh, we were experimenting with it all the time, perhaps a month.

Q. About a month?

A. Yes, sir.

Q. You only had one of them?

2080

A. No, he changed the size of it, and gave us a larger one, and then, I think, he made it smaller.

Q. What was the shape of it, one that blew into the end or side?

A. It blew into the side, centrifugal. Q. Was the opening beneath small?

A. Yes, sir, it was small.

Q. Can you fix the date you did that? A. I could not tell you, it was so long ago.

Q. Do you know whether that was before or after the Cyclone or Vortex patent was issued?

A. It was after.

Q. How long afterwards?

A. I know that Cyclone dust-arrester built by Heyser & Sons, of

Jackson, was being sold at that time.

Q. You remember the testimony of Mr. Miller or Mr. Sherwood that they had to experiment considerably with that dust-arrester? A. Yes, sir; and they haven't got through yet.

Q. And it took them some time before they got it perfected?

Do you know when that was?

A. No, I don't know. When they get through with it it will be a dust-arrester just the same as it is now.

Q. Then they don't know any more about it now than they did

then-A. They are not getting rid of the dust. They are not getting rid of the back pressure.

Q. Theirs is a signal, complete failure, then?

A. No, I would not say that. I mean to say that they are not getting it down so it will do the business that ours will do.

Q. Do you mean to say no dust gets through yours? A. Practically not, so as to get out through the premises.

Q. Do you mean to say there is no dust all along that burlap on the outside there. When you get in and look at it is there not dust all around it between the frames?

A. Oh, there will be some little oozing out, but it does not get

onto the building.

Q. Some of the dust is so fine it is like motes in the air, it will go anywhere? There is no machine that will arrest it?

A. There is none that goes out in the air with ours.

Q. You seem to be positive; will you explain where that dust comes from on the outside of your dust-arrester?

A. I can explain that to you. That is where the bag got caught when the men were fixing it. When he fixed the bag he didn't clean it out.

Q. It comes from some repairs your men made there? Do you mean to say you can strike one of those burlaps and dust will not come through it?

A. I don't say that.

Q. Haven't you testified on this stand that the way you 2081 clean it out is by the action of the wind through them making them flop?

A. That is the way we do clear them.

Q. That is the way you do clear them, and when they flop, the dust adhering to them, won't some of it come through?

A. You can make a little of the fine dust come through; we don't

strike or flop them.

Q. The wind does that for you?

A. The wind does that for us, but the wind does not vibrate it to the extent that it would if you hit it.

Q. That does not change the fact that you have got to vibrate

those burlaps to shake the dust down?

A. The action of the wind is more mild. It does not shake it as

if you hit it. The wind does not throw any dust out of that.

Q. Do you mean to say your dust-arrester is so perfect that the dust will not come through those burlaps unless some workman goes and cuts a hole in it to make repairs?

A. No, but I do testify it is the nearest perfect of any I have seen. Q. You had in a large number of these dust-arresters all over the

country, did you not?

A. We had in a good many of them.

Q. How many of them did you ever sell? A. I could not state here, but I think about eighty.

Q. About eighty?
A. I think so.

Q. And of the eighty you sold you can remember only three or four?

A. Oh, no, I can remember more.

Q. Is it not true, as a matter of fact, that nearly all of the dustarresters you have put in have been taken out and supplanted by this new invention?

2082 A. I could not tell you anything about that. We have sold them, and got our money for them.

Q. Don't you know, as a matter of fact, that at least 90% of those you sold or put in have been taken out and new ones put in?

A. I don't know anything of the kind.

Q. Do you know that it is not so?

A. I don't think it is so.

Q. You don't think it is so?

A. No, sir.

Q. What do you know about it? Do you know of any being taken out and others put in?

A. I know of one, I think, was burned out. The parties' place

burned out, but they didn't have ours in.

Q. Then, do you mean to testify you don't know of any that was deliberately taken out and this new one put in?

A. I don't know of any except the Peninsular Car Company's. They put in the other device.

Q. There is one you do know?

A. Yes, sir.

Col. ATKINSON: They had yours in?

A. Yes, sir, but they didn't carry out instructions, and afterwards they put in thirteen or fourteen of the smaller ones, and kept putting them in.

154 - 55

Mr. Baker: That is the biggest institution of the kind in Detroit?

A. Yes, sir-

Q. So that you are compelled to admit, are you not, that the biggest institution in Detroit using dust-arresters have taken yours out and put in these new ones?

A. I could not see any reason for their taking ours out. Q. I don't ask you for the reason, I ask you for the fact.

A. I will tell you how that is: When there is a large amount of competition, and a good many men in the field, and a great many soliciting, a device may not be any better, and may not be as good, and yet they keep at a man until they get him to

make a change, but they can't get me to make a change.

Col. ATKINSON: You have no solicitors out?

A. No, sir.

Mr. BAKER: Did you ever have any out?

A. Yes, sir.

Q. How long since you withdrew them from the field?

A. When we got otherwise engaged.

Q. You got otherwise engaged about 1885 or 1886?

A. Oh, no.

Q. When did you get otherwise engaged, then?

A. About 1886 or 1887, along there.

Q. About 1886 or 1887, that is when these other canvassers came in the field?

A. Oh, that didn't cut any special figure. We stood just as good a show among the trade as any of them did.

Q. Who canvassed for you? A. Mr. A. Backus, Jr., largely.

Q. Any one else?

A. Yes, sir, we had a Mr. Phillips; I think that is all.

Q. Mr. A. Backus, Jr., traveled around the country putting them in?

A. We didn't put them in. We sold the royalty. We sent a man a little piece of paper with printed instructions, and a diagram, how to build it, and so much royalty on a machine when it was built and tried, and sixty days' time, and there was not a single instance that I know of in which we didn't get our money within ten days.

Q. What did you charge for them?

A. Twenty-five cents a yard for the right to put up the burlaps. We didn't furnish the burlaps.

Q. They had to buy their own burlaps?

A. Yes, sir.

Q. Where does Mr. Phillips live? A. Northville, or Lapeer.

Q. Does he live there now?

A. I could not say.

Q. What is his first name?
A. I could not say. He is a member of the firm of Phillips & Sons. They are out at Lapeer, I think.

Q. Whereabouts did he travel for you?

A. He went down through New York State, and Boston; in that locality, I think.

Q. Have you got a list in your office of those you put in or sold

the right for?

A. I don't think so.

Q. Do you know of any that was put in at New York city? A. I recollect two in the pencil companies being put in there.

Q. Which company?
A. I think it was the Eagle and the American, or the Faber, I could not tell you which. One put it in and the other saw it and they liked it so much the other bought it.

Q. Are those the only two you recollect of in New York city? A. There was some at Green Island, New York, and Newall, at Chicago. I don't recollect any more in New York.

Q. Ever put any in at Toledo? A. The Mitchell Lumber Company put in a big one there.

Q. Any others?

A. I think there was one or two others put in there, but I don't know the parties' names.

Q. A man by the name of Peters put one in down there?

A. No, sir.

Q. Where does he live?

A. Peters came up to Detroit himself and looked at ours, 2085 and said he was going to put it in. And he went back and put in a device something similar to ours, but he would not admit it was our device.

Q. He would not pay you for it?

A. He built one of his own construction, which infringed on our patent, as near as I could come at it.

Q. And he has recently taken them out and put in the Cyclone? A. I don't know anything about it, only what I heard.

Q. He never came and bought a right of you?

A. No, sir.

Q. Did the Diamond Match Company ever have one in?

A. Not that I know of; not ours.

Q. They never had yours?

A. No, sir.

Q. Did the Michigan Car Company ever have in yours?

A. No, sir; I know Mr. Dey always talked about having one of our furnaces in, but he could never get the depth of sewerage, the depth he wanted, but he wanted one badly.

Q. Do you think you can have those accounts made up by morn-

ing?

A. I will work all night on it. I have worked every night for a couple of weeks, and I guess I can stand it tonight.

Q. I will defer my examination on the different items until you get that made up.

A. I think I apprehend what you want.

Q. I want to compare these two estimates so it will be intelligible to the jury and the rest of us. I want to find out what Mr. Backus' estimate of this property is. I may want to ask you some questions in regard to it.

A. I think I will be able to give you just what you want.

Then adjourned to half past nine a. m. next day.

2086

Остовек 24, 1893—9 а. т.

Daniel R. Griswold, sworn on behalf of respondents.

Examined by Mr. Dickinson:

Q. What is your business?

A. My business all my life has been dry goods, but I am out of business just at present.

Q. Where do you live?

A. Battle Creek is my home.

Q. Will you state whether you have been at the Backus mill for any time of late since the erection of the superstructure?

A. I have been there more or less for the last two or three months. Q. Will you state where you have been located when you have been there in the mill?

A. I have been in various parts of the mill, a good deal of the time on the third floor.

Q. State whether you have made any special observation of the passage of trains and locomotives on that structure?

A. I have.

Q. When did you commence to make that observation?

A. About the first of September, 1893.

Q. Did you have any assistance especially devoted to observing the trains?

A. No, sir, no special assistance; there were other parties with me part of the time.

Q. Didn't you have the young men here?

A. Yes.

Q. How long did you take observation of the passage of trains?

A. Not continuously, but at different hours of the day since September 1st.

2087 Q. State whether memoranda have been taken of the observation of the passage of those trains?

A. Yes, sir.

Q. From day to day?

A. Yes, sir.

Q. Under your supervision?

A. Yes, sir.

Q. Will you please state, referring to the memoranda you have made, of the number of trains that passed, what has been your observation as to the passage of trains, referring to your memoranda of dates and so on?

A. Well, sir, I could not swear positively to the memoranda, as it is kept here, because I was not there at all hours.

Q. When you were not there Mr. Roach was?

A. Yes, sir.

Q. We cannot put two witnesses on at once, but I will supplement

your testimony with theirs.

A. On September 1st we were thirteen and a half hours and there were 85 engines that passed the property. September 2nd we were there 24 hours, and there were 135 engines.

Q. Engines with or without trains?

A. Some of them with and some of them without. On that day there were 135 engines, 313 coaches, 79 freight cars. On the 3rd, 12 hours, 44 engines, 98 coaches and 24 freight cars passed. On the 4th, about four hours, 6 engines and 25 freight cars. On the 5th, 8 hours, 44 engines, 83 coaches and 32 freight cars.

6th, 8 hours, 33 engines, 73 coaches, 27 freight cars. 7th, 15 hours, 91 engines, 198 coaches, 64 freight cars.

7th, 13 hours, 31 engines, 133 coaches, 64 freight cars. 8th, 24 hours, 127 engines, 332 coaches, 98 freight cars. 9th, 23 hours, 128 engines, 283 coaches, 109 freight cars.

9th, 23 hours, 128 engines, 283 coaches, 109 freight cars 10th, 5 hours, 14 engines, 32 coaches, 13 freight cars.

11th, 17 hours, 110 engines, 252 coaches, 29 freight cars.
2088 12th, 22 hours, 125 engines, 276 coaches, 100 freight cars.
13th, 24 hours, 145 engines, 335 coaches, 83 freight cars.

14th, 24 hours, 146 engines, 336 coaches, 115 freight cars. 15th, 24 hours, 142 engines, 323 coaches, 67 freight cars.

16th, 24 hours, 142 engines, 337 coaches, 102 freight cars. 17th, 24 hours, 96 engines, 224 coaches, 23 freight cars.

18th, 24 hours, 119 engines, 232 coaches, 80 freight cars. 19th, 24 hours, 129 engines, 308 coaches, 104 freight cars.

20th, 24 hours, 125 engines, 281 coaches, 94 freight cars. 21st, 24 hours, 134 engines, 333 coaches, 97 freight cars.

22d, 24 hours, 149 engines, 329 coaches, 97 freight cars. 23d, 24 hours, 136 engines, 327 coaches, 108 freight cars.

24th, 4 hours, 18 engines, 46 coaches, 19 freight cars.

26th, 7 hours, 40 engines, 75 coaches, 43 freight cars. 27th, 24 hours, 134 engines, 284 coaches, 109 freight cars. 28th, 24 hours, 127 engines, 271 coaches, 100 freight cars.

29th, 24 hours, 120 engines, 274 coaches, 92 freight cars.

30th, 24 hours, 123 engines, 300 coaches, 105 freight cars. Oct. 1, 21 hours, 83 engines, 186 coaches, 19 freight cars (Sun-

day).
2nd, 24 hours, 114 engines, 259 coaches, 77 freight cars.
3rd, 24 hours, 132 engines, 234 coaches, 99 freight cars.

4th, 24 hours, 129 engines, 290 coaches, 104 freight cars.

5th, 24 hours, 145 engines, 359 coaches, 54 freight cars. 6th, 24 hours, 120 engines, 233 coaches, 91 freight cars.

7th, 24 hours, 139 engines, 342 coaches, 94 freight cars.

8th, 24 hours, 81 engines, 193 coaches, 15 freight cars (Sunday).

9th, 24 hours, 119 engines, 248 coaches, 70 freight cars. 10th, 24 hours, 121 engines, 242 coaches, 105 freight cars.

10th, 24 hours, 121 engines, 242 coaches, 105 freight cars. 11th, 24 hours, 145 engines, 387 coaches, 94 freight cars.

12th, 5 hours, 22 engines, 56 coaches, 22 freight cars.

Q. That concludes the observation made by you and Mr. Roche? A. And other parties.

2089 Q. In your observation did you observe whether the locomotives that passed there threw smoke and sparks?

A. Sometimes, sir; very frequently.

Q. Did you take any observation of that? A. Yes, sir. Of course in the throwing of sparks by locomotives. you could not observe very much except in the night; during the

day it was not observable. We have a memorandum of that, sir. Q. The papers upon the desk are your daily memoranda?

A. Yes, sir.

Q. And this is the summary you have just given us?

A. Yes, sir.

- Q. Well, give us some information upon that point, if you have
- A. Now, we had memorandums of these when they were smoking excessively. Oftentimes they were smoking so furiously and the wind in the proper direction, that there was a great deal of gas emitted and it filled the mill full of gas.

Q. This black smoke?

A. Very dense black smoke, yes, sir. When they were just smoking in an ordinary manner we made no mention of it, it was when it was in an excessive way.

Q. Give us what you can, where the smoke and gas filled the

mill?

A. I have not a memorandum of that on this sheet.

Q. Give us what you have there?

A. On September 1st, according to our record, we were there 13 hours and a half and there were eight locomotives that passed without shutting off, exhausting; there were 21 of them that were smoking intensely, and four of them that emitted sparks, and they switched in front of the mill that day five times.

Q. What do you mean by switching?

2090 A. Well, they have two switches right there on the trestle, in front of the mill, and they run their trains up and switch them there.

Q. I think the only switching there is on the elevated structure is directly in front of the Backus property?

A. So far as I know.

Q. You observed that switching? A. Yes, sir.

Q. In the course of your observation, was it a common occur-

rence for them to switch in front of the mill?

A. They did that very generally throughout the month of September, but not so much since the first of October, and that was done principally in the evening in making up their freight trains. I will go on and give the table which I have made up here.

September 2nd, 4 engines that exhausted in passing, 5 that were

smoking intensely, and they switched twice.

On the 3rd we have a record of only one locomotive that was exhausting.

On the 4th we have 4, we have 1 that passed with the fire-box open, and they switched six times.

On the 5th 9 passed without shutting off, 3 smoked, 1 threw

sparks, 1 with fire-box open, and 4 switchings.

On the 6th, 10 that did not shut off, 3 smoked, and 5 switchings. 7th, 12 that did not shut off, 4 that smoked, 1 that threw sparks, and 4 switchings. I do not mean to be understood that there were four trains that switched, but they were switching there four times; it may have been making up one train.

Q. When you say they switched, you mean they stopped there?
A. Stopped there on the switch, yes, sir; the switch was turned

four times.

2091 9th, 5 that did not shut off, 8 that smoked, 1 that threw

sparks, and 10 switchings.

On the 10th, which we observed only five hours, 1 engine that did not shut off, 1 that smoked.

On the 11th, 4 that did not shut off, 13 that smoked, and 2 switch-

ings.

Q. You speak of the switchings being done largely in the even-

ing, when they made up the freights?

- A. Yes; that is, all the switching that I observed there at all. I did not see any passenger trains switched there, I don't remember that I did.
- Q. Now, as to the smoke that was there throughout the day?
 A. Oh, yes. You would not observe that so much, of course, in the night.

On the 12th, 38 that did not shut off, 9 that smoked, and 7 switch-

ings.

13th, 13 that did not shut off, 5 that smoked, 2 that threw sparks, 4 switchings.

Q. When you refer to the engines throwing sparks, that is when you saw the sparks, the fire, I suppose?

A. Yes, sir.

Q. At any time did you observe the falling of cinders during the day on the mill and in the mill property?

A. Yes, sir.

Q. Well, we will come to that later, so that the sparks were fall-

ing in the daytime but could not be seen.

A. On the 14th, 28 that did not shut off, 9 that smoked, 1 that threw sparks, and 2 passed with the fire-box open, and 3 switchings done.

15th, 22 that did not shut off, 19 that smoked, 1 that threw sparks, 2 switchings.

16th, 18 that exhausted in passing, 15 that smoked, 5 that passed with the fire-box open.

2092 17th, 11 exhausted, 10 smoked, 1 threw sparks, 8 with fire-box open.

18th, 11 exhausted, 14 smoked, 2 threw sparks, 5 with fire-box open, 4 switchings.

19th, 14 exhausted, 14 smoked, 1 threw sparks, 3 with fire-box

open, 12 switchings.

20th, 10 exhausted, 11 smoked, 2 threw sparks, 1 with fire-box open, 7 switchings.

21st, 7 exhausted, 13 smoked, 1 with fire-box open, 2 switchings. 22nd, 6 exhausted, 10 smoked, 5 with fire-box open.

23rd, 11 exhausted, 10 smoked, 2 threw sparks, 5 with fire-box open, 10 switchings.

24th, 3 exhausted, 4 smoked, 2 with fire-box open.

26th, 11 exhausted, 4 smoked, 3 with fire-box open, 4 switchings, 27th, 18 exhausted, 17 smoked, 5 with fire-box open, 12 switch-

28th, 18 exhausted, 151 smoked, 14 with fire-box open, 7 switchings.

29th, 27 exhausted, 18 smoked, 1 threw sparks, 12 with fire-box open, 1 switching.

30th, 33 exhausted, 23 smoked, 1 threw sparks, 16 with fire-box

open.

October 1st, 19 exhausted, 18 smoked, 1 threw sparks, 6 with firebox open.

2nd, 11 exhausted, 11 smoked, 4 threw sparks, 8 with fire-box pen.

3rd, 23 exhausted, 19 smoked, 1 threw sparks, 11 with fire-box

4th, 21 exhausted, 20 smoked, 16 with fire-box open, 1 switching.

5th, 25 exhausted, 32 smoked, 12 with fire-box open.

6th, 9 exhausted, 19 smoked, 22 with fire-box open.

2093 7th. 13 exhausted, 21 smoked, 29 with fire-box open, 2 switchings.

8th. 12 exhausted, 12 smoked, 1 threw sparks, 20 with fire-box open.

9th. 23 exhausted, 23 smoked, 9 with fire-box open. 10th. 24 exhausted, 20 smoked, 13 with fire-box open.

11th. 35 exhausted, 32 smoked, 1 threw sparks, 27 with fire-box open.

12th. 5 hours, 7 exhausted, 3 smoked, 7 with fire-box open.

Q. When you say they exhausted, you mean they were pouring out black smoke and gas?

A. No, sir, I mean they are using steam when they exhaust.

Q. They are discharging through the smokestack?

A. Yes, sir. Q. Puffing? A. Yes.

Q. Throwing steam and cinders?

A. Well, I could not testify to that, that they were throwing cinders, without I could see the cinders; but in the night I could see the sparks when they did throw them.

Q. In your examination about the mill, did you observe cinders after the passage of trains, in and about the mill, such as are thrown

from locomotives?

A. I did, yes, sir.
Q. And when the fire-box was open I suppose it threw fire from the fire-box?

A. Then the coals dropped out underneath. We saw those sev-

eral times where the coals dropped out from underneath the firebox and through the ties.

Q. How did you come to do this?

A. Well, I was here as a friend of Mr. Backus, and I was around about the mill, and took hold of it and done it, that is all.

Q. By Mr. Backus' requesting you, that a disinterested man should make the observations?

A. Yes, sir.

Q. And asked you to serve?

A. Yes, sir.

Q. And you had no connection with Mr. Backus, and are not in his employ?

A. Not in any shape, only as a friend.

Q. You simply had leisure and did this work, I requested to have it done?

A. Yes, sir.

Mr. Dickinson: May I, in this connection, read from Mr. Ellis' testimony on the last trial as to that grade in front of the Backus

property and have it admitted?

Mr. Baker: There is no necessity to read that, but I will state it and it may be taken as an admission. The grade of the elevated railroad, commencing on the old union depot grounds and running up to Twelfth street, is 52.8 feet per mile, and from Twelfth street to the Michigan Central crossing it is 22 feet to the mile.

Mr. Dickinson: And that is the grade, as admitted, as it passes

the Backus front.

Q. Now, in the passing of trains by there, have you observed the length of the trains in coming in, the passenger and freight trains?

A. Well, they will range all the way from three to ten coaches in the passenger trains, and the freight trains will run from 15 to 45 perhaps.

Q. You frequently saw them with the trains extending down as they passed there, and the engine comes up on the grade, past the Backus mill, with the train extending down past Twelfth street?

2095 A. Ordinarily in the evening they backed up from the

Q. Please answer the question. When the freight trains passed have you observed the length of the trains extending, as the engine approached, in front of the Backus property, that the length of the train extended down to Twelfth street?

A. Why, ordinarily they backed in the freight trains, and about the time the first car would reach the front of the property, of course the locomotive is out of our view, but I should think is down as far

as Twelfth street.

Q. And in coming in how is it?A. They back them in usually.

Q. Back them up that grade usually?

A. Usually, yes, sir. I think all that I have seen coming in, come in in that way.

Q. Passenger trains, on the other hand, come in with the engine at the front?

A. Yes, sir.

Q. And how far down do the long passenger trains extend?

A. Well, I don't know how far it is down to Twelfth street, but ten coaches will reach quite a little distance. The Wabash trains have been coming in with eight and ten coaches.

Q. You have observed them laboring somewhat coming up that

grade?

A. Yes, sir.

Q. As engines do?

A. Yes, sir.

Q. You have been where you could observe railroading all your life?

A. Yes, sir.

Q. And coming up the grade from Twelfth street, you have observed them laboring as engines will? 2096

A. Yes, sir.

Q. Throwing smoke, exhausting, and making a good deal of effort?

A. They certainly have, sir.

Q. Have you seen them having any special trouble coming up that grade?

A. Yes, there were a few times, particularly on a wet day, they had to make a good deal of effort to get up there.

Q. Have you observed, when you saw them switching, that they

make up trains right on this switch?

A. Yes, ordinarily when I observed them they pushed up the freight trains from the yard, perhaps fifteen or twenty cars, switched them in front of the mill onto the middle track, uncoupled the locomotive and ran back to the switch, switched to the side track and went on up to the station to get the balance of the cars that were up there, brought those down and left them on the main track, uncoupled, and would go back to the switch and switch onto the middle track, hitch onto the cars they brought from the yard, run them up to the switch, turned back and take them back onto the main track and couple onto the cars they brought from the station and go out.

Q. All done right in front of the Backus mill?

A. Yes, sir.

Q. Have you observed whether some cars are brought up there and switched in making up, that never go into the depot at all?

A. A great many of them; evidently when they bring up fifteen or twenty cars from the yard, they hitch onto them and go up to the station and get the cars there loaded, make up their train and go out.

Q. Make up their train right there on the switch without taking

their cars onto the switch and leave them stand there?

A. Yes, sir. 2097

Q. What class of freight did you observe?

A. They brought up cars loaded with lumber and granite and brick and lime.

Q. Cattle cars?

A. I don't remember that I saw any cattle cars.

Q. Just take the usual run, don't take any exception, but just the usual run of freight business as you have seen it?

A. Yes, sir.

Q. This is what you state?

A. Yes, sir.

Q. Lumber cars, stone and brick?

A. Yes, I have seen them.

Q. Any machinery?

A. Yes, sir.

Q. Heavy freight of that kind?

A. Yes; I remember one time they brought up a flat car loaded with car trucks.

Q. What is done with these heavy freights, carried into the depot?

A. No, sir.

Q. What is done there with them?

A. The train is made up and they go on out down the trestle, I suppose, and go off on the road.

Q. Have you seen cars, loaded with lumber, for instance, made up and standing in front there?

A. Yes, sir.

Q. Loaded with machinery?

A. Yes, sir.

Q. Loaded with stone?

A. Yes, sir.

Q. Loaded with lumber?

A. Yes, sir.

Q. Have you observed anything of the minimum or maxi-2098 mum time that trains and cars have been left standing in front there?

A. One train brought up there was left something over three hours.

Q. What was it?

A. Freight cars, loaded.

Q. How many cars were standing there?

A. Of course, I did not examine them to see if they were loaded; I supposed they were from the fact that they made up their train and went out with the train. That is the longest time I think I saw them stand there.

Q. On the average they would stand how long?

A. Half an hour, perhaps.

Q. Was this repeated in the same day?

A. Every evening, sir, usually. As I said, since October there has not been so many trains made up there as in September.

Q. Not since the commencement of this trial?

2099

A. No, sir.

Q. Probably not, but your observation through September was correct, was it?

A. Yes, sir.

Q. You are absolutely certain of the observations?

A. Yes; I think they are correct. Of course you understand that as far as this list I have read is concerned, every one of those have not been taken by myself, because I could not be there day after day for twenty-four hours, but they were taken by the young men that were with me.

Q. Have you observed in the passing of trains back and forth that after the commencement of this hearing they ascertained you

were keeping tally and were making observations?

A. Well, they seemed to observe that. Q. Did you have any conversations about it?

A. I don't think I did.

Q. What makes you think they observed that you were making observations?

A. Well, from the way they kept watch of us.

Q. What do you mean by that?

A. Whenever they passed the mill property they would be always looking out to see.

Q. Was that unusual; didn't they do that before?

A. They did not do that when we first commenced to take them. Q. What class of engines are there that go up there, what roads?

A. The Wabash, the F. & P. M., the D., L. & N., and the union depot company's locomotives.

Q. Are the heaviest locomotives used on the Wabash and Canadian Pacific in coming in there?

A. Yes, sir.

Q. What, use the heaviest, long-run locomotives?

A. Yes, when they come in with a train.

Q. You did not observe that the trains were all switched up there

by the union depot company engines?

A. They are not ordinarily. The empty passenger coaches were, I think, perhaps, but when the trains came in they were drawn in by the locomotives of the road.

Q. That is when the short or long trains come in up to the depot,

they are drawn by the heavy long-run locomotives?

A. The passenger trains entirely, sir.

Q. Let me call your attention to a conversation with an employé. Did you call attention at any time to their not shutting off and have a conversation with an engineer or switchman?

A. There was a man on the trestle there one day, but I 2100 could not tell whether he was a switchman or brakeman or

engineer.

Q. Never mind, then, it would not be competent unless you knew.

Did you see him turn the switch?

A. Yes, I saw him turn a switch. We mentioned the matter of their coming up without shutting off and he said it was impossible;

they could not run up that grade without using steam, without exhausting.

Q. Did you observe at any time that the numbers of the locomotives of the union depot company, the designations upon the headlight, were removed?

A. I did.

Q. Generally done on the locomotives?

A. No, sir.

Q. Only upon the union depot ones?

A. Upon those. I know at one time they were painted off. When I first saw them they were marked Fort Street Union Depot Company, I think, and afterwards the numbers were painted off on the headlights and the name was painted off, and it was painted The Fort Street Union Association, or something of that character.

Q. Will you say if that was a correct representation of the ordinary union depot engine before the designation was painted off?

(Showing witness photograph.)

A. That is one of them as I saw it first.

Q. Is that about the ordinary size of the union depot engines that are run up and down there?

A. Yes, I should call that one of the engines. Q. That was the designation upon the engine?

A. It was when I first saw them.

Q. (Showing witness another photograph.) Will you say if that is another of the same with the number painted off?

A. Yes, I should say they were.

2101 Q. Where in the photograph shows a line where the name originally stood?

A. Yes, sir.

Photographs offered in evidence and three of them marked Exhibits "Griswold 1, 2 and 3."

Q. Do you remember at any time in front of the Backus property that before the commencement of this hearing, or about the time of the commencement of this hearing, they had a switch building right on the tressle?

A. Yes, sir.

Q. Do you remember seeing it there?

A. Yes, sir.

Q. What became of it after the hearing?

A. Well, it was removed. I can tell you when it was removed. I have not the date upon this paper, but the switch-house was taken away.

Q. It was after you went to work to make the observations preparing for this hearing?

A. Yes, sir.

Q. Will you please state, with reference to the Backus building or any part of the Backus building, where the switch-house stood in front of it?

A. Well, I should think it was very nearly the center of their property, perhaps a little to the west of the center.

Q. The perspective of the photograph would seem to show it was beyond it. It was certainly in front of some part of their property?

A. It was between their dust-room and the main building of the

mill.

The photographs were shown to the jury.

Q. What did they do where the switch-house stood? Did they make any changes there in the track?

A. They made no changes, but I think they planked it

2102 over; I should judge so; the planking looked new in there.
Q. Will you please look at this photograph which I show you and see if it shows the switch in front of the Backus mill and the switch-house as it stood? The perspective is not good in the photograph. That would seem to put the switch-house further There is no doubt it did stand in front of the Backus propdown. erty.

A. That is a fair representation of it, looking down the track

instead of across it.

Q. I suppose you can see the place where it stood, where it is planked over?

A. Yes, sir, it looks like it, only it is looking down toward it

instead of across it.

Q. The switches that appear here upon the photograph are where.

with reference to the front of the Backus property?

A. Just near here, that you see there, a little east of the center of the property; there were two switches right back of the switch-house, and there is where they ordinarily did the switching.

Q. Right there also in front?

A. Yes, sir.

The photograph referred to is marked "Griswold 4."

Q. You see that behind the switch-house, as it appeared on the photograph, there were two switches?

A. Yes, sir.

Q. And in front of it, in front of the Backus mill, also was the switch that appears by this photograph?

A. Yes, sir, and that is some thirty or forty feet away from the

switch-house or more; perhaps 100 feet.

Q. Now, I show you this photograph and ask you if it is a correct representation of the Backus property and the switch-house, with a train upon the track? 2103

A. Yes, the locomotive and train is standing east of the

mill toward the station.

Q. The main building is there shown and the dust-room is shown?

A. Certainly.

Q. And the switch-house in the left-hand corner of the picture?

A. Yes, there are two switches there.

The photograph was marked Exhibit "Griswold 5" and shown to the jury.

Q. Did you ever observe any hot journals there, with the waste dripping down, afire, passing in front?

A. Yes, a train passed there one day with a hot box on the loco-

motive, burning very badly.

Q. Coming in, I suppose? A. Yes, coming in toward the station.

Q. And the tow dropping?

A. Well, I noticed that from the fire-box. Q. I say the tow from the hot box?

A. Oh, yes, the packing.

Q. And the fire?

A. Yes, sir.

Q. How often have you observed that? I suppose that is liable to happen at any time?

A. I never observed that but once.

Q. Now, have you observed, in the course of your observation, the drifting in of cinders upon the property?

A. I have seen cinders there; yes, sir.

Q. Can you give us any samples of the cinders that you have seen in front of the building during the course of your observations? Take September 7, for instance (handing witness a package).

A. These cinders were picked up on September 7th on the roof

of the shed next to the tressle; next to Woodbridge street.

Package marked Exhibit "Griswold 6." 2104

Q. Was it a familiar sight to you to see cinders about there in front of the mill?

A. Yes, a great many of them.

Q. On the mill and window-sills and in the mill?
A. Yes, sir, saw them frequently.

Q. At the time you made this special observation of the cinders, did you, on that day, put the cinders in this envelope?

A. Yes, sir. Q. They are the same cinders?

A. I suppose they are?

Q. Have you had it in your custody since?

A. Yes, sir.

Q. All the time?

A. Yes, sir.

Q. You say you suppose they are. Did you put the cinders in there?

A. Yes, sir.

Q. Is it just as it was when you put them in there?

A. Yes, sir.

Q. Look at the cinders and see if they are the same.

A. I looked at them, but I could not recognize the cinders as the same. I have no doubt they are.

Q. They are the same class of cinders you picked up on that

day? A. Yes, myself and Mr. Krombach. Mr. Krombach picked them up, and I put them in the envelope.

Q. You saw the process?

A. Yes, sir.

Q. You saw the cinders on the shed in front of the trestle?

A. I did.

Q. Now have you brought any samples of cinders that you picked up in the mill?

A. Yes, in the mill yard. We picked up some cinders 2105

right at the door of the mill.

Q. Are those the cinders you picked up in this envelope I show you?

A. We put them in this envelope. Q. Those are the ones?

A. Yes, sir.

Q. That is the door of the mill in front, facing the trestle?

A. Yes, sir.

Q. On the ground floor?

A. Yes, sir.

The package was marked Exhibit " Griswold 7."

Q. Did you at any time find any samples of cinders near the shaving-room?

A. Yes, I picked them up there several times.

Q. Well, we only want samples of every day, that is all we want in. Did you pick that up and where?

(Showing witness another package which was marked Exhibit " Griswold 8.")

A. I picked it up near the shavings-room door, between the shavings-room and the mill. There is an alleyway.

Q. You mean picked them up in the alley?

A. Yes, sir.

Q. Not in the end of the dust-room next to the street?

A. No, sir, away out in the alleyway?

Q. On the sawdust?

A. Yes, sir.

Q. How with reference to the engine-room, how far from River street. You picked it up, as I understand you, between the dustroom and the main mill, how far is that up toward the engineroom, half way?

A. Yes, I should think it was a little more than half way per-

haps.

Q. Are those the isolated instances, or is it a common thing 2106for the cinders to be about there?

A. I have seen them there very, very often.

Q. The wind blows them away when there is a strong wind?

A. I should presume it would have that tendency. We saw more cinders there after a strong south wind that blew them toward the

Q. Is it an ordinary thing for cinders to fall down there from passing trains?

A. I saw them there very often, almost every day.

Q. How about having seen in your peregrinations about the mill,

cinders upon the lumber, and soot?

A. I have seen that repeatedly, the lumber covered with cinders and black soot. Of course, it would show very much more plainly on planed lumber than it did on the rough lumber.

Q. Have you observed whether a planed board can be put out

there without being covered with soot?

- A. I have seen a load stand out there for an hour or two and be covered with soot.
- Q. Then again I suppose when the wind is off the mill, there would not be so much?

A. Certainly not.

Q. Have you yourself seen the smoke from the engines in the mill?

A. I have.

Q. To what density?

A. Well, quite dense, with a strong south wind during the summer when the windows were open, the smoke was very dense so that you could smell the gas very strongly. I noticed that several times.

Q. Have you observed the trains passing throwing smoke or not,

whether there is a shadow thrown in the mill?

A. Yes, a shadow like a cloud passing over the sun. 2107 Q. And the passing of trains or engines?

A. Yes, sir. Q. I suppose this is greater or less in accordance with the smoke or steam that is thrown out?

A. Yes, sir.

Q. And does the passing train, whether it throws smoke or not, cast a shadow upon the mill?

A. Yes, sir, it does.

Q. And upon the rooms in the mill?

A. Yes, a flitting shadow like a cloud passing over the sun, darkened for an instant and passed by. It has that effect.

Q. It has that effect in any case, whether there is smoke or not? A. Yes, more particularly on the lower floors than above, of course.

Q. Do you mean the two lower floors?

A. Yes, more particularly on the two lower floors.

Q. The main floor and the second floor where the main machinery is?

A. I have noticed it more there, yes, sir.

Q. Of course, you say that this shadow is thrown whenever a

train or engine passes?

A. At a certain hour of the day. Of course at night it would not be so noticeable. It was always observable, of course. Interferes with the light.

Q. How does the noise of the passing trains affect the conversation in giving directions or orders in the mill? Does it interfere

with the conversation?

A. Well, it would particularly near the front of the mill, the windows, when the windows are open.

Q. I suppose you have the room ventilated by open windows during the summer?

A. I presume so, they are open during the summer.

Q. The mill is principally lighted from the River Street 2108 side, is it not?

A. Well, I should think so, principally.

Q. Have you observed the effect of this trestle at all and made any observations of it and the railroad there in front, upon the lower ground floor, in regard to the light?

A. Yes, I have noticed that it cuts off the light very materially. Q. The trestle itself does there?

A. Yes, sir, the trestle and the passing of trains.

Q. I suppose the light is more affected when the train passes?

A. Yes, I observed it that way.

Q. Men would be at work and the shadow fall upon the work as they are performing it?

A. Yes, sir.

Q. Have you observed the men in setting the gauges? A. Yes, sir.

Q. In the fine work?

A. I have noticed them do that and noticed they would stop and wait until the train got past before they completed the work. noticed that yesterday.

Q. You have observed that at any rate so far as your observation

goes, that it did interfere with the setting of the gauges?

A. Yes, sir.

Cross-examination.

By Mr. BAKER:

Q. Do you live in Detroit now?

A. I have been in Detroit for a few months.

Q. How long have you lived here?

A. Well, I have been off and on here since about the first of April, not here all the time.

Q. You are in the employ of Mr. Backus, I suppose?

A. I am not. 2109

Q. Are you a relative of his?

A. I am not.

Q. What are your relations? A. Friendly.

Q. How long have you been acquainted with Mr. Backus?

A. O, for several years; I could not tell just the length of time. Q. What have you done for him in connection with this case beside watching this railroad down there?

A. Well, I don't know that I have done anything special. I

have assisted him certainly, etc.

Q. You have assisted him in preparing this case?

A. No, sir, I have not assisted him in preparing the case.

Mr. Dickinson: You assisted him somewhat in the inventory?

1243

A. I assisted him somewhat in the inventory, no further than in preparing this part of the case. I did assist him in this.

Q. Did you assist him in anything else?

A. In preparing the inventory.

Q. Anything else?

A. I don't think that I did, sir.

Q. You don't remember anything else?
A. I don't think that I did in anything else.

Q. You watched the trains down there, and the engines pass, personally, did you?

A. I did part of the time.

Q. Can you tell us how long it takes an engine ordinarily, as they run there, to pass along in front of the Backus property?

A. Well, sometimes they would go very rapidly, and sometimes they would go slowly. I don't think I timed them at all, I know I did not.

Q. You did not see how many seconds it took to go by?

A. I didn't hold a watch on them.

Q. Did the trains usually pass right by?

A. Ordinarily.

Q. That was the ordinary course?

A. Yes, occasionally the trains stopped, but not ordinarily.

Q. About how many miles an hour would they run, take a passenger train, for instance?

A. Well, I could hardly tell that; perhaps at the rate of six or

eight miles an hour.

Q. They did not go through there forty or fifty miles an hour?

A. I should not think they did.

Q. Something like six or eight miles an hour?

A. I should think so, perhaps more.

Q. And a freight train, when they are switching there, go about the same rate?

A. No, sir, they were very slow.

Q. The freight business was principally done in the evening when they were making up trains?

A. Ordinarily.
Q. Just at night?

A. Yes, ordinarily. Q. About six o'clock?

A. From seven to nine, perhaps.

Q. And the rest of the time the trains were principally passenger trains?

A. Yes, usually. Occasionally they would push up a freight car or two, something of that kind, but they were ordinarily passenger trains.

Q. Could you notice the character of the freight that 2111 was usually received at the freight shed at the union depot grounds?

A. No, sir.

Q. You could not tell anything about that?

A. No, eir.

Q. But lumber was not loaded up there?

A. No, sir.

Q. The only lumber and heavy freight you say you saw were on cars that were shoved up from the yard below, when they were making up trains?

A. Yes, sir.

Q. Would they make up a freight train on the center track?

- A. The cars that they pushed up from the yard they would switch onto the center track and leave them there until they went up to the station and got the loaded cars from there and brought them down on the side track.
- Q. I understand you then that the engine would bring up some cars from the yard, put them on this center track, leave them there and go on and get what cars were at the freight shed in the union depet ground, bring them down and put them together and go out?

A. Yes, sir.

Q. You don't know anything about the ownership of the engines?

A. I don't.

Q. You don't know whether the union depot company itself owns any engines?

A. I do not.

Q. Only that you saw the name?

A. That is all.

Q. And the name was changed in some of them?

A. Yes, sir.

Q. When was that done?

A. I cannot tell you the date.
2112 Q. Since the first of September?

A. No, sir, I don't think since the first of September.

Q. Along last summer some time?
A. I think along in the summer.

Q. The designation now is something that designates an association of some kind?

A. It would indicate that.

Q. At any rate, it is not the Fort Street Union Depot Company?

A. Well, they have some switch-engines.

Q. Do you know how many that are in use there?

A. I have seen only two, I think, that are marked in that way, that come up on the trestle.

Q. I know, but you can tell a switch-engine from an ordinary road engine?

A. There are switch-engines in the yard; I have noticed quite a number down there at work, but I have not been down there.

Q. Would these freight trains be handled by switch-engines?
A. Ordinarily by either one of the two union station engines or Wabash engine No. 43, I think it is, that is a switch-engine.

Mr. Dickinson: Not by the ordinary switch-engine you speak of down in the yard?

A. No, sir.

Q. It is a larger engine used for switching purposes?

A. Yes, sir.

Q. For a time they had a small sentinel box on the track there, and that is what you call the switch-house?

A. Well, they did have a box there, a switch-house.

Q. Just large enough for a man to stand in?

A. Oh, large enough for two or three men to get into-three or four, perhaps.

Q. About how big?

A. I should think it was eight feet square. I had not been to it, only as I saw it from the mill.

Q. It is represented there on the photograph?

A. Yes, sir.

Q. It is just large enough to hold one or two men and to protect them from the storm while he is awaiting work to perform in handling the switch?

A. Yes, sir.

Mr. Robison: If that is eight feet square, the man is at least four feet square?

A. I don't know the size of it. I should think perhaps five or six feet square.

Q. Where have they moved that to?

A. I don't know.

Q. It is not there now?

A. No, sir.

Q. The switching, I understood you, down there, has not been as much as before?

A. Not since the first of October or the last of September.

Q. Of course you don't know what has occasioned that change?

A. I do not.

Q. They have a freight-house in the union depot yards on the Congress Street corner that is in use yet, and freight trains are made up, are they not? Freight trains are made up there on that center track the same as heretofore?

A. I have not observed them for the last few days, but they did make them up when we kept this record, but not as frequently along

at the last.

Q. These cinders you gathered, you got some on the shed that is right alongside of the trestle-work?

A. Yes, sir.

Q. Some on the floor below near the mill doors?

2114 A. Yes, sir.

Q. And some near the shavings door?

A. Yes, sir.

Q. I suppose you swept them up with a broom?

A. I did not.

Q. How? A. Picked them up.

Q. You never swept any up?

A. Never swept any up.

Q. Picked them up one at a time?

A. Yes, sir.

Q. How many times have you done that?

- A. I could not tell you the number of times. Several times I found them there.
- Q. Now, you say that a train passing there makes a shadow about like a passing cloud?

A. Yes, sir.

Q. I suppose a cloud does go by there once in a while?

A. I have no doubt of it.

Q. Do you know what the directions of the compass are there?

A. Well, very nearly.

Q. Is the track east or south of the Backus mill?

A. The track is south of the Backus mill.

Q. Now, you say the smoke goes into the mill there somewhat when there is a wind from the south?

A. Yes, sir.

Q. The wind blowing up the river?
A. No, sir, blowing across it.

Q. How often have you noticed that?

A. Oh, several times during the time I have been there. I could not tell you the number of times, but quite a number.

Q. I suppose the wind blows most of the time across the river into the mill there?

2115A. In the summer I think that our prevailing winds are from the southward.

Q. Well, across the river, whatever that is?

A. Well, that is southward.

Q. The prevailing wind is from that direction?

A. I think ordinarily the prevailing winds are from the south. Q. I suppose the Michigan Central yard is in operation on both sides of this mill all the time?

A. It was the last I noticed.

Q. Were you ever in this property before the union depot's elevated structure was built?

A. I don't think I ever was.

Q. You do not know to what extent the smoke went into the mill?

A. I do not.

Q. Before this was built?

A. I do not.

Q. Of course, the Michigan Central engines are moving about in that yard right across the street, continuously since you have been there?

A. Yes, sir.

Q. A great many trains pass over that crossing along the east side of the mill?

A. I presume they do; I noticed a good many. Q. Hundreds of trains go by there every day? A. I think they do; I don't know how many.

Q. What do you mean when you say that the fire-box is open? Whereabouts do you mean that it is open?

A. Under the engine.

Q. You do not mean that it was open where the fireman was putting in the fuel?

A. No, sir.

Q. It was open underneath where they take in draft?

A. Where they take in draft and take out the coals or 2116 cinders as they go out-what is known as the fire-box.

Q. They have a damper underneath the engine, have they not, by which they take in air?

A. They can shut that up.

- Q. Sometimes that is closed when they come up there and sometimes it is not?
 - A. Sometimes I have noticed it closed, and sometimes not. Q. Well, you have seen no engine there burning wood?

A. I do not know that I have; I should think not.

Q. Did you write that letter I now show you?

A. That is my signature.

Mr. Dickinson: Now, if there is anything about that letter-Mr. Baker: I do not care about the letter coming out now; I will use that hereafter.

Redirect examination:

O. You have been asked with reference to the Michigan Central. Do you know the distance from the nearest Michigan Central track that is used for railroad purposes, from the main mill?

A. I do not know how far it is, but I should think to the main

track it is 150 feet, I do not know but more.

Q. You did not measure it, did you?

A. I never measured it, no, sir.

Q. What would you say, from your observation, as to its being 200 feet?

A. Well, perhaps three. I never measured it; I never took any special notice of the distance there.

Q. They have a shed on that side, and they have a side track in from the Michigan Central?

A. I think they have three side tracks.

Q. And along that side the whole distance the Michigan Central, of course, runs at grade, upon the ground?

A. Yes, sir. 2117

Q. There is a shed with a side to the Michigan Central the whole distance along, is there not?

A. Yes, sir.

Q. Will you look at that photograph I show you and see if that is a pretty good representation of the Michigan Central tracks with reference to the mill?

A. Yes, I should recognize it from that:

Marked Exhibit "Griswold, 9."

Q. Now, when there is no wind at all and the atmosphere is heavy, is there a falling of the smoke?

A. Yes, sir.

Q. When there is no wind at all the smoke may fall in there?

A. Oh, certainly.

Q. Now, looking out and taking an average day, like this, for instance, you find a majority of days are days when there is no wind either way-when it is quiet?

A. A great many such days.

Q. Upon those days have you observed that railroad smoke would fall?

A. If the atmosphere is heavy of course the smoke will fall to the ground.

Q. Have you observed there in front of the Backus mill, on those days that are not clear and bright, that the smoke does fall and go into the mill?

A. Certainly.

Q. The trestle-work carrying a locomotive, and the smoke being thrown out with the cinders, the heavy class of smoke falls?

A. Yes; and there is another thing, there is quite a draft; if you will stand there by the mill when there is no wind you will find quite a strong draft always there.

Q. And find the smoke coming in?

A. Yes, it would be in any case of that kind.

2118 Q. So that in the majority of cases when the smoke is thrown out it goes into the mill, doesn't it?

A. Unless there is a very strong contrary wind.

Q. Yes, but I say in the majority of cases, day in and day out, the year through.

A. Yes, sir.
Q. The smoke omits from the engine and goes in there?

A. Yes, very apt to indeed.

Q. Can you tell me now who there were engaged in making these observations? You have daily journals of them, have you, in this package?

A. Yes, sir.

Q. How many men aided in doing that?

A. Two young men, Mr. Roche and Mr. Youngs.

Q. Are they both here?

A. Yes, sir.

Q. They, with you, made these observations which you have summarized in the memorandum which you have read?

A. Yes, and Mr. Knapp was there occasionally.

Q. Is he here? A. Yes, sir.

Q. Now, Mr. Roche and Mr. Youngs and yourself made this daily journal, the observations of the trains you have testified to and which you have summarized in the paper which you have referred to, marked Exhibit "Griswold, 10?"

A. Yes, and I think the foreman of the mill, Mr. Krombach, was

there for several hours on different occasions.

Q. Are any of his memoranda here?

A. I think there are, yes, sir.

Q. You have made this up from them?

A. Yes, sir; and Mr. H. N. Backus was there and took some.

By Foreman BAKER:

Q. I would like to ask a question or two in regard to the 2119 making up of the trains on the switch. The witness testified that they are made up between seven and nine o'clock. Was the mill running or closed down for the time?

A. The mill was closed down at the time these trains were

made up.

Q. Then, as to these cinders that have been collected and are here in evidence, how many times were those cinders picked up to make that number you have in the envelope, the yellow envelope, for instance (referring to Exhibit "Griswold, 6")?

A. Those were all picked up at one time; they were gotten on the

Q. Do you know how long they took to accumulate?

A. I do not.

Q. You don't know whether it was twenty-four hours or six

months?

A. I don't know that. I should not suppose it would be six months, because I was there all the time and should have observed them if there had been any such length of time or been any number of days.

WILLIAM A. ROCHE, sworn on behalf of respondent.

Examined by Mr. Dickinson:

Q. What is your business?

A. I have been clerking for A. Backus, Jr., & Sons.

Q. How long have you been there?

A. Well, I was there for about seven months last year and I have been there since May of this year, with the exception of one month.

Q. Were you engaged from the first of September, through September and October, in taking observations of the passing trains?

A. Well, not the first of September; I started on the 14th. Q. You started on the 14th and aided in making these ob-2120 servations?

A. Yes, sir.

Q. And set down the result of your observations upon the memorandum here?

A. Yes, sir.

Q. And assisted Mr. Griswold?

A. Yes-well, Walter Youngs and I.

Q. Youngs and you assisted Mr. Griswold? A. Yes, sir.

Q. In the observations you made of the passing trains and of the exhausting and the other information you set down upon your memoranda, did you make a correct observation?

A. Yes, sir. 157 - 55 Q. You know that you are right?

A. Yes, sir.

Q. You heard the testimony of Mr. Griswold? A. Yes, sir.

Q. Are you positive that your observations in setting down the information from day to day, are correct, which you have made in conjunction with him?

A. Yes, sir.

Q. And what did you do with the observations after you made them?

A. They were turned into the office.

Q. Turned over to Mr. Griswold, I suppose, ultimately? A. Yes, sir.

Q. Have you observed the approach of trains there in approaching the front of the Backus property?

A. Yes, sir.

- Q. Have you observed any laboring of the engines in coming up the grade in front?
- A. Well, we could not see the engine on account of the dust-room, but we could hear it when it was coming up. Q. And as they came in front pulling the trains up?

A. Yes, sir.

Q. You have seen them laboring and exhausting? A. Yes, sir.

Q. What has been your observation as to the smoke going into the mill or falling upon the mill?

A. Well, with the wind across the river, if they were smoking to

any extent, the smoke was carried in through the mill.

Q. And how upon the heavy days when there was no wind on the elevated structure?

A. On a heavy day, if they were smoking heavily, the smoke settled beside the track down along the mill.

Q. In the mill during this season?

A. Yes, sir.

Q. Have you observed the gathering of cinders on and about the mill?

A. Well, I never noticed that.

Q. You did not give special attention to the cinders?

A. No, sir.

No cross-examination.

Walter H. Youngs, sworn on behalf of the respondents.

Examined by Mr. Dickinson:

Q. What is your business?

A. Shipping clerk for A. Backus.

Q. How long have you been engaged there?

A. About eleven years.

Q. Have you assisted Mr. Griswold in taking the observations of passing trains and the issuance of smoke and the switching in front of the Backus mill?

A. Yes, sir.

Q. And of the throwing of sparks, and when the fire-boxes 2122 were open, and so on?

A. Yes, sir.

Q. What did you do with the observations that you took? A. I made memoranda of them and put them on paper.

Q. And turned them over to Mr. Griswold?

A. Yes, sir.

Q. And what did you do with the observations that you took?

A. I turned them over to Mr. Griswold.

Q. Were those observations that you made correct?

A. As near as I could make them.

Q. Have you any doubt that you set down correctly the number of engines passing that you covered?

A. Yes, they are all correct.

Q. And the number of coaches and freight cars and the times the engine passed when it was not shut off and when it was exhausting and smoking.

A. Yes, sir.

Q. You have no doubt of the correctness of the memoranda you made of your observations?

A. No, sir, everything was all right.

Q. Have you noticed the smoke omitting from these engines as they came up?

A. Yes, sir.

Q. Have you noticed its effect upon the mill?

A. Yes, sir.

Q. Have you noticed that it entered the mill?

A. It has several times.

No cross-examination.

WILLIAM B. KNAPP, sworn on behalf of respondents.

Examined by Mr. Dickinson:

Q. Where do you live?

2123

A. 872 Lafayette. Q. How long have you lived in Detroit?

A. Thirteen or fourteen years.

Q. What is your business?

A. I am working for A. Backus, Jr., & Sons.

Q. How long have you been there?

A. I think perhaps twelve years, or eleven or twelve. At the present time I have charge of the yards below, the lumber yards, and also looking after lumber coming in, buying some lumber, etc.

Q. And have been engaged there for twelve years where you

have observed the passing of trains? A. During a portion of that time, yes, sir.

Q. What have you been engaged in the other portion of the time?

A. There was no railroad there when I first went there.

Q. No, but since the railroad went there, about ten years ago?

A. Ten or eleven, I think.

Q. What has been your business at the yard?

A. Well, I have charge of the yard. I am all over there and in the office and out doors.

Q. You have an office in the yard? A. Yes, sir.

Q. You were engaged for a short time in aiding Mr. Griswold in making these observations?

A. I was up there at the mill on several occasions when that was being done, yes, sir.

Q. Did you take part in it?

A. I did once or twice, only when some of the rest of them were away.

Q. Did you make correct observations of the passing of trains?

A. Yes, sir.

Q. And the emission of smoke and the number of engines that passed there, and whether the fire-box was open, and whether they were exhausting, and the number of cars, during the time you did take observation?

A. Yes, sir.

- Q. What did you do with the observations? A. Whatever observations I made are in there.
- Q. You made memoranda of them and turned them over to Mr. Griswold?

A. Yes, sir.

Q. Then some one else took your place for the day or when you went away?

A. I was only there on several occasions for a little while when some one else stepped away.

Q. When you stopped some one else came on?

A. Yes, sir.

Q. Your observations are correct? A. Yes, sir.

Q. You reduced them to writing?

A. Yes, sir.

Q. And you gave a correct statement to Mr. Griswold?

A. There it no doubt about the correctness of the statement as far as any memoranda I made are concerned.

Q. You are down there in the yard where trains pass to and fro a good deal, are you not?

A. Yes.

Q. Will you please tell the jury as to your observations as to the throwing of cinders by the passing engines, as you observed it in the lumber yard?

Mr. BAKER: I will take an exception to that as being in another place.

Q. It is competent, but I will make it a little more so. You are engaged in the lumber yard through which passed all trains and engines that pass up on this tressle, the track runs right down through this yard?

2125 A. Yes, sir.

Q. That goes up and meets the tressle below Twelfth street?

A. Not all trains that go up the tressle come in over that road.

Some trains come across from the Canadian Pacific road.

Q. Yes, but all the Detroit, Lansing & Northern trains come through the yard there?

A. Yes, sir.

Q. And the Flint & Pere Marquette?

A. Yes, sir.

Q. And the Wabash?

A. Yes, sir.

Q. How wide is the right of way through there? They pass through the lumber yard?

A. I think it is sixty feet.

Q. Now, have you observed from day to day, or from time to time, in your experience since the railroad ran through there, as to the quantity of cinders they threw and how far they threw them upon the lumber? They pass through the center of the sixty feet, do they not, that right of way?

A. Yes, sir.

Q. Have you observed the cinders upon the lumber?

A. Oh, yes, quite frequently; it is an every-day occurrence.

Q. Whether it is any part of your duty when the lumber is removed, to remove the cinders so that it is called to your attention?

A. Yes, that is something that has to be attended to always in

handling lumber, to keep it as free from cinders as possible.

Q. Well, do you find that these passing locomotives there throw cinders, and how far did you find the cinders upon the lumber; how many feet from the center of the track?

A. Well, of course as you go from the track they would be less, but the distance I do not know that I could give it that they would reach on either side.

Q. I do not want you to have it by measurement.

A. Perhaps 150 feet, or possibly 200.

Q. That you find cinders in the lumber; and to what extent as you approach the track, say within fifty feet, are the cinders upon the lumber piles?

A. There would be a good many at that distance.

Q. What do you mean by a good many?
A. I don't know as I could measure them.

Q. Give us some idea.

A. Well, the lumber would be covered pretty well over with them at that distance in a short time.

Q. How long a time?

A. Three or four days or two or three days.

Q. Then you have to remove them; it is a part of your business to watch the lumber?

A. Whenever the lumber is handled, yes, sir, they are removed. Q. Now, have you observed at what distance fire has burned into the lumber from the track, from the cinders?

A. I should say forty feet. Q. And to what extent?

A. The top of the boards, on the surface.

Q. Did you notice the cinders burn into the board?

A. I have noticed the cinders burned into the board perhaps one-third of their depth or half the depth of the cinders.

Q. And to what extent does this occur through the lumber yard through which these trains pass?

A. I have noticed it in several instances; I don't know how

many times.

2127Q. Can you give us an idea? I do not speak of the farthest to which cinders are thrown upon the lumber, but say fifty feet away from the passing trains; can you give us some idea of the extent of the cinders that are thrown?

A. Weil, I don't know how I could do that. They would sprinkle through, that is about all I could say. They would be sprinkled through at that distance very soon after the lumber had been piled

there.

Q. Would they permeate and get into the tiers?

A. Oh, yes, all through.

Q. You find it all through as you remove the lumber, and from your ordinary business you know it is all through the lumber as you remove it?

A. Yes, sir.

Q. Taking down the pile?

A. Yes, sir.

Q. It works through in the tiers?

A. That is right, sprinkles all through.

Q. Have you observed in the passing engines there, any engines that did not throw sparks in the night and cinders in the daytime?

A. No. sir.

Q. They do it invariably?

A. I never saw one that didn't.

Q. Will you tell the jury something of your observation of the lumber that comes in from Saginaw or elsewhere, as to the extent of cinders on the cars in the trip down merely?

A. Well, there would be a quart or two in most any open car.

Q. Of what class of cinders?

A. Fine cinders such as are thrown from the smokestacks of the locomotives.

2128 Q. Look at the contents of Exhibits "Griswold 6 and 7" and see if they are fair samples of the kind of cinders you saw?

A. Yes, sir. There would be with those a great many that would be much finer in addition to these.

Q. Yes, these are the large cinders; a great deal as fine as soot, I suppose, sifted in?

A. Yes, sir.

Q. You are accustomed to unload cars that come in with lumber, are you not?

A. Yes, sir.

Q. Is it anything to do with the duty of the inspector or person who attends to the unloading of the consignments of lumber to remove these cinders?

A. Yes, sir.

Q. From a quart to two quarts in an open car?

A. Yes, sir.

Q. Didn't you gather something down there like a pailful or so?

A. We did at one time, but not recently.

Q. Is there any change in the kind of cinders or quantity that is thrown by a passing engine now?

A. No, sir, not that I have observed; about the same variety all

the time I guess.

Q. Have you observed in the mill, when you have been up there, whether the engines in passing the mill throw smoke and cinders?

A. They do; yes, sir.

Q. Is there any difference to speak of in the character of cinders that are thrown from the locomotives on the tressle from those down in the lumber yard?

A. I have not observed any difference.

Q. In the passing of trains daily do they always throw einders?
A. I think they do; I never saw an engine that did not.
Q. And in the night these cinders seem to be alive and on

fire, of course?

A. Yes, in some instances.

Q. Have you observed the effect of the smoke upon the mill from the passing engines?

A. There is some there almost every day. Q. And that is the ordinary case every day?

A. Yes, sir.

Q. How about there being volumes of smoke in the mill?

- A. Well, sometimes engines in passing that point, as at any other point, I presume—at that point I know of—smoke worse than they do at other times.
- Q. Do you think their pulling up the grade has anything to do with it?

A. Well, whatever the cause is-

Q. The engine has more of a heavy load?

A. They throw more cinders if they are working hard.

Q. And more smoke?

A. They throw more smoke, I think, when they are not working

so hard; that is, it is more dense.

Q. You are frequently up at the mill; this is a part of the plant, the lumber yard—you are one of the employés in and about the mill?

A. I am back and forth several times a day.

Q. Have you observed the effect of the passing shadows on the light?

A. When these trains are passing, of course it casts a shadow, and

if they are smoking, why that darkens the surroundings to a certain extent.

Q. You have been in the employ of Backus & Sons and about there for 12 years and know about it before the building of the tressle?

A. Yes, sir.

- 2130 Q. What is the difference in your views on the light, as to the facilities with which the work is done?
- A. We had better light on that side of the mill before the tresslework there.

Q. Tell us whether it affected the light seriously?

A. Yes, it affected it quite considerably, especially on the two lower floors on the mill.

Q. Well, the second floor is where the fine machinery is? A. Yes, sir.

Q. What have you observed as to the throwing of cinders in and about the mill and around there, before the building of this elevated structure and since?

A. Well, I know that the cinders are there now, and I never saw

them before on that side.

Q. No trouble with cinders in there before, in the mill?

A. No, sir.

Q. No trouble before with smoke in the mill?

A. No, sir.

Cross-examination.

By Mr. BAKER:

Q. The lumber yard down there is just an open lot, is it not?

A. Yes, sir. Q. There are no buildings on it to speak of? A. No, sir, except a few small buildings.

Q. You pile lumber right close to the track?
A. Yes, to the line of right of way.

Q. And on both sides?

A. Yes, sir.

Mr. Dickinson: Is that a single track through that lumber yard? A. No, sir, I think there are what they call two main tracks and then there is another track that runs around onto Letts' coal dock.

Q. A switching track, and there are two main tracks? 2131 A. Yes, one each side of the center of the right of way.

Q. Trains go there back and forth continuously?

A. Yes, sir.

Q. The yard is open all the way to the river on one side and Woodbridge street on the other?

A. Yes, sir, except the lumber.

Q. And you have always piled lumber right close up to the track?

A. Yes, sir.

Q. Would you put any covering on top of the lumber piles?

A. Always cover it up.

3792

Q. That is, you cover it up with poorer lumber or arrange the lumber itself so as to shed water?

A. So far as it is possible, yes, sir.

Q. About how high do you build them there?

A. Oh, I think about 16 feet, perhaps.

Q. About the same hight of the smokestack of an engine?

- A. Well, I should say in that neighborhood; I don't know as I observed that.
- Q. Of course this track was in use for this purpose long before the new union depot was built?

A. Before the Fort Street depot; yes, sir.

Q. And the traffic, I suppose, has increased some since then, through the roads that come in there?

A. Yes, sir.

Q. They come through there oftener than before?

A. Yes, increased, I should think, perhaps thirty passenger trains or something like that each day. That is, a day of twenty-four hours.

Q. Do they do switching through the lumber yard?

A. Not to any great extent; they do some. Q. Is there a switch on this right of way?

A. Yes, sir.

2132 Q. A switch that goes to this Letts side track?
A. No. sir.

Col. Atkinson: This right of way you speak of is on the lumber yard?

Mr. BAKER: Yes.

Col. ATKINSON: At Eighteenth street, as I understand you?

Mr. BAKER: Yes.

A. There is a switch on Eighteenth street; yes, sir. Q. They do not do very much switching there now?

A. Every day a dozen times or so.

Q. A dozen times or so?

A. I never counted them, but I know they do switching.

Q. Is there a switch there on the right of way on the lumber tracks, from which tracks radiate into the freight yards of the old union depot company?

A. There is one; yes, sir.

Q. That is the switch they use?

A. Yes, sir.

Q. So that an engine that goes in there that uses that switch stands on the right of way in the lumber yard?

A. Yes, sir.

- Q. And considerable switching is done there up to the present time?
- A. Well, during past years. Since the tracks were built up to the Fort Street union depot they have done some switching there.

Q. But for some years before that they omitted to do switching there?

A. Yes, I think so.

158 - 55

Q. I suppose there is no mill or sawdust or shavings or anything around the lumber yard?

A. There would be some, of course, coming off the lumber, but

not to any great extent.

Q. The lumber goes right down to the dock and there 2133 is a ferry-boat that lands near by there, one of those big freight-boats?

A. The Landsdowne; yes, sir, just above.

Q. Just a little above, isn't it?

A. I think it is; yes, sir.

- Q. And then there are steamers going up and down there all the time?
 - A. Yes, more or less.

Redirect examination.

By Col. ATKINSON:

Q. You say you have charge of the lumber down there?

A. Yes, sir.

Q. And have you any work that connects you with the mill at any time?

A. Well, I am back and forth every day for one thing and an-

other.

Q. Are you acquainted with the way in which the lumber is taken from the yard up to the mill?

A. Yes, sir, loaded on trucks and hauled up there.

Q. Has that been interfered with any by the building of this track in front of the mill; does it make it any more inconvenient or dangerous?

A. Well, there is more or less inconvenience, of course, in the way

of dirt and smoke.

Q. You had the open street before and now you have to come up under the tressle?

A. Yes, sir.

Q. To drive up. In passing under the railroad, is there not a dripping from it onto the lumber?

A. Yes, the grease from the cars and the locomotives drops down

to some extent.

Q. Is there any dropping from the ties of accumulated grease and oily matter?

A. Well, I don't know that I ever noticed it. I know that 2134 the grease dropped down, but I never noticed whether it came from the ties. I suppose it came from the cars indirectly at least.

Q. Aren't there pans under this tressle-work for catching all those things?

A. No, sir.

Q. No pans have been put there, then?

A. Not unless it was done since yesterday.

Q. Now, your drivers ride on the loads, I suppose, as they come up from the mill yard to the mill?

A. Yes, sir.

Q. Do they continue to do that since the tressle-work was built, or do they have to get off?

A. Well, I have seen them walking. I don't know that I heard them say why it was; I don't think I did.

Q. You don't remember the reason for it?

A. No, sir.

Q. But you observed that they walked when they got up under the tressle?

A. I have noticed them walking on several occasions, but I never

thought anything about what it was.

Q. Do you know whether there is anything in the h-ight of the tressle or anything of that kind that compels them to get off and walk part of the way?

A. I never heard them say anything.

Q. You have not observed yourself enough to know?

A. No, sir.

Q. Have you had anything to do with taking lumber from the mill to the warehouse on Fort street?

A. No, sir, I have nothing to do with that.

Q. Do you know how that it is done of your own knowledge?

A. Yes, it is loaded onto wagons in front of the mill and hauled

along by way of Twelfth street to the warehouse.

Q. Is that done by the teams that are under your charge and supervision?

2135 A. Yes, sir.

Q. So that the same teams do all this transferring from the

lumber yard to the mill and from the mill to the warehouse?

A. The teams perhaps may start from the yard with a load and deliver it at the mill and then take a load to the warehouse and come back to the second floor, and stop and get a load there and bring it down by way of Twelfth street to the lower part of the mill and then back to the yard for another load.

Q. So that they interchange, then, from one place to another in

doing their work?

A. Yes, sir.

Q. Do you know anything of the retailing trade formerly carried on from River street with the mill?

A. I know they do some, but to what extent I don't know.
Q. What effect has this tressle-work in frightening horses?

A. Well, I don't know, not to my knowledge, no, sir. Q. You have not observed any cases yourself?

A. No, sir.

Q. The horses passing under there. You spend most of your time at the yard, as I understand?

A. The greater portion of it, yes, sir. If I have any business up

there I run up and attend to it and back again.

Q. You speak of the cinders falling and burning part way through some boards of lumber down in the yard?

A. Yes, sir.

Q. I suppose that necessitates watchfulness to prevent fire?

A. We are always watching for fires down there, of course.

Q. Now, if a cinder that has burned as far as you speak 2136 of in a board should light in the dust-room, what would be the effect?

A. Well, it would burn it up; it would be impossible to put out

Q. I suppose it would be more dangerous as the material became more combustible, like dust or shavings?

A. Yes, sir.

Q. Do those piles that you place along the right of way remain there a great length of time?

A. No, sir; they are constantly being changed.

Q. So that then you practically have green lumber piled along the railroad as a rule?

A. Just as soon as it is dry enough to use it is taken away again. Q. So that the dry lumber that would be likely to ignite easily is not left near the railroad track?

A. No, sir; if it gets especially dry before we wish to use, it is

taken away.

Q. That is what I mean. Well, these cinders that fall in the yard usually fall upon comparatively dry lumber?

A. Yes, sir.

Recross-examination:

Q. Did the cinders down there in the yard ever set any lumber afire?

A. Well, that I don't know.

Col. ATKINSON: I want to ask one question more, first. Have you had any fires at all?

A. At the lumber yard?

Q. Yes.
A. Yes, there have been three or four there.

Q. Three or four fires started from what cause?

A. Well, in one instance it was a fire that I put out myself; that was in the summer season and I should say about thirty feet from the track where we had been unloading some lumber,

the sawdust had jarred off the lumber and the fire caught in the sawdust there; it didn't burn to any great extent because there were men working right there and it was put out.

Q. What did it catch from?

A. Well, it must have caught from locomotives passing, because there was no other fire anywhere in the neighborhood.

Q. Then it is a fire that originated from the falling of cinders or sparks?

A. I attributed it to that; there was no other cause.

Q. Have you had any other fires?

A. There was a freight car caught fire there at one time directly after a train had passed it that was working very heavily, and there were two fires-

Q. A freight car standing on the track? A. Yes.

Q. On the side track?

A. Yes, sir. Then there were two fires in the lumber; whatever caused it I don't know; I was not there at the time; when I came it was burning; it was in the night in both cases.

Q. Do you know of any other cause than the passing trains?

A. No, I don't.

Q. Didn't you have a barn burn there?

A. I was away at the time; there was a fire there. I had forgotten that there was a barn burned up.

Q. That was in the lumber yard?

A. Yes, sir.

Q. Do you know how far that is from the track?

A. I think about 35 or 40 feet perhaps.

Q. Do you know whether that fire was attributed to the railroad?

A. I don't; no, sir.

2138 Q. You don't know the cause of it?

A. No, sir.

Q. Do you know of any other cause except the passing of trains?

Mr. BAKER: I object to that. He says he don't know what the cause was, it is not a matter of conjecture.

Q. Whether you ever heard of any other cause than that.

A. No, sir.

Q. If it was burned up from some other reason we don't want to charge it to the railroad company. In how many years have these fires occurred that you speak of?

A. Since 1883, I think, this road came through there.

Q. Since the railroad was built there?

A. Yes, sir.

Q. You say there is a constant watch kept to prevent fires?

A. Yes, both night and day.

Q. Only green lumber left there near the tracks? A. So far as it is possible to have it that way.

Q. Now, you know something of the material they use at the mill, I suppose?

A. Yes, sir.

Q. How does that compare as to being dry or green with the lumber down in the yard?

A. That has to be dry before it goes there.

Q. De you know whether much of it is kiln-dried in addition to the seasoned?

A. Well, the kilns are working all the time; what percentage is

kiln-dried I could not say.

Q. Is it of a lighter or heavier material generally? That is, cut up into smaller parts than down in the lumber yard?

A. Oh, yes, it is worked to the finisher.

Q. It would be more subject to ignite then?

2139 A. Yes, sir.

Q. At the mill than in the lumber down in the yard?

A. Yes, sir.

Q. I suppose around a planing mill that way there is always some little accumulation of shavings and combustible matter?

A. Yes, sir.

Q. It is impossible to avoid it?

A. It is impossible to avoid it entirely.

Q. In handling lumber is there a sawdust remaining on the boards, that gets shaken off as the lumber is handled, so that it accumulates around a mill of that kind to some extent?

A. Yes, sir.

Q. No board is ordinarily free absolutely from sawdust?

A. Not until after it is dressed.

Q. So that if you handle lumber itself there is necessarily a dust shaken from it?

A. Yes, sir.

Q. And when that is dried is it highly combustible or otherwise?

A. Very much so.

Q. Where are the kilns for drying lumber?

A. On the Fort Street side of the mill.

Q. They are quite large and extensive, are they—the dry kilns to the Backus plant?

A. Yes, about 75 by 90 or 100 feet, I think, there are four of them.

Q. Do you know what their capacity is at one time, the quantity of lumber they would take?

A. I think each kiln would take 60,000.

Q. That would be 240,000 altogether, then, full capacity?

A. I think so.

2140 Recross-examination.

By Mr. BAKER:

Q. When is the lumber put in these dry kilns, before or after it is worked?

A. Usually before it is worked, but sometimes after.

Q. It comes right up from the yard and is put in the kilns?

A. Yes, sir; that we usually haul directly from the dock front into the kilns. Sometimes the rough lumber from the yard is taken that way, the lumber that is ripped first, worked to width, and is taken from the River Street side to the kilns.

Q. Well, the lumber that comes up the River Street front is lumber that is worked in those machines on the first floor on River street, where it is resawed or dressed before it goes to the kilns.

A. It is ripped before going to the kilns, not often dressed before

being kiln-dried. Q. Ordinarily the lumber that goes through the dry kilns is hauled up the other way?

A. No, I think the greater percentage of it by far is ripped to width before it is kiln-dried.

Q. Then it is put into the kilns? A. Yes, sir.

Q. Well, do you not mean to say that the superstructure there is so

low that a man cannot sit upon a load of lumber and drive along there?

A. I never noticed it, I never thought anything about it until the

matter was spoken of just now.

O. And the lumber is all hauled up with trucks and heavy draft horses, I suppose.

A. Yes, sir.

Q. You don't use any of Col. Atkinson's fast, skittish trotters, down there?

A. Not often. Our horses are working there all the time. 2141 Col. ATKINSON: I wish there was some use for trotters, Mr. Baker, and we would both be better off.

Q. You haven't noticed any of those truck teams running away

with a load of lumber there?

A. None of ours have; aside from that I don't know anything about it.

Q. Well, this fire that you speak of that started in some sawdust, you think that was about 40 feet from the railroad track?

A. Why, I should say between 30 and 40 feet, I don't know as I

could tell exactly.

Q. Was it on the ground in one of the alleys between the piles or on the lumber itself?

A. It was on the ground.

Q. Where some sawdust had rubbed off the boards and had accumulated where the wagon had stood?

A. Where they had been unloading cars.

Q. You had unloaded cars there? A. We did at that time.

Q. And where the car had stood and the lumber had been handled, some fine sawdust collected on the ground?

A. Yes, sir.

Q. And you think that was 40 feet away from the track?

A. I should say about that.

Q. How did it get so far away from the track?

A. That is from the main track, I have reference to.

O. This is on the side track?

A. Yes, there was at that time a side track that run in there.

Q. A side track on the Backus property?

A. No, sir, a side track on the right of way, and lumber 2142 had been handled from it in that way, about 40 feet from the main line.

Q. How much sawdust was there accumulated?

A. The ground was sprinkled over with it, I don't know to what extent.

Q. At one time that ignited?

A. Yes, sir.

Q. Do you remember when that was, what year?

A. No, but I think that was about five years ago this fall.

Q. Now, you say that there was another fire or two fires in the lumber yard there in some lumber?

A. Yes, sir.

Q. When were they?

- A. Well, one of those I think was in 1885, and the other I think in 1886.
 - Q. How far from the track?

A. About 200 feet. Q. Which way?

A. South.

Q. That is towards the river?

A. Yes, sir.

Q. Did you have a barn there?

A. Not anywhere near where those fires were.

Q. But you did have a barn down towards the river?

A. Over on the other side of Eighteenth street.

Q. How far away from the track?

A. That is, I think about 30 or 40 feet. Q. Did that barn burn down at one time?

A. Well, it burned down while I was away, I was not at home at the time it burned. I know it was there when I went away, and the embers were there when I came back.

Q. How far from the barn were these two fires you speak of, one

in 1885 and one in 1886?

2143 A. I should presume three or four hundred feet.

Q. Where was the fire, how was it burning, whereabouts? A. It was on the edge of the yard, close where the Michigan Salt Company's shed now stands; that is, the railroad side of the lumber yard, and there were several piles of lumber burned.

Q. How far from the boat slip? A. I presume likely 200 or 250 feet.

Q. About half way between the boat slip and the railroad track?

A. No, I think it was nearer the track.

Q. You don't know how that fire originated? A. I don't.

Q. It was burning in the lumber itself?

A. Yes, sir.

Q. How much was consumed?

A. I think about 100,000 feet, one fire.

Q. That is one pile?

A. No, sir, several piles of lumber; one caught from the other, I presume.

Q. About 100,000 feet altogether?

A. That is my recollection of it; several piles anyway.

Q. Well, the same amount in both cases?

A. No, sir, the second fire burned only one pile, I think.

Q. How far was that from this other fire?

A. I think about 50 or 75 feet.

Q. Which way, towards the river or the railroad track? A. Towards the track.

Q. You don't know how that started?

A. I don't.

Q. About how many feet were burned there?

A. I think one pile, about 20,000 or 25,000 feet.

Q. Were those two fires in the night?
A. Yes, sir.

Q. Were you there the next morning?

A. I was there before the fire burned out—before morning.

Redirect examination:

By Col. ATKINSON:

Q. This boat slip you speak of—what was that used for? Mr. Baker leads us to possibly infer that the fires might occur from the cinders from some boat, instead of from the railroad. Did you have a boat that came into the slip there?

A. No, sir.

Q. You did not have any steamers come into that slip at all.
A. I think Mr. Baker had reference to the railroad slip.

Mr. BAKER: Yes.

Q. Oh, the railroad slips. How are those boats, high or low-pressure?

A. Low pressure.

Q. And they do not discharge any sparks, do they?

A. I never saw them, no, sir.

Q. You have never seen any sparks from the railroad ferries?

A. No, sir; the low-pressure boat does not exhaust through the stack; the high-pressure boat exhausts through the stack, creating draft enough to throw the sparks through the stack.

Q. That is the difference. Then these fires could not very well

originate from the sparks from the ferry-boat?

A. I never saw a spark come from a low-pressure boat, through

the stack.

Q. You say you never observed any from any of these ferries, as I understand you?

A. No, sir.

Q. You think you would be likely to observe them if they had occurred to any extent?

A. Yes, sir.

Q. Now, you take these three properties there that are under the management of Backus & Sons; what can you say as to their being used all together or as separate properties?

A. They are all together.

Q. All constitute practically one business?

A. Yes, sir.

Q. And if the mill should be destroyed would it affect in any

way the uses of the other property?

A. All the material that is used in the warehouse, or very nearly all, is prepared in the mill, and it is stored in the yard to be cured before being used in the mill.

Q. Then each part is essential to the whole; all are used prac-

tically together?

A. The three make one.

Q. And anything that affects the use of one affects the use of all, then?

A. Yes, sir.

Q. Your lumber yard there lies immediately adjoining the union depot grounds, does it not?

A. Yes, west.

Q. So that that is the first property west of the union depot grounds that remains in private hands, having a river front?

A. I think that is true.

Q. All the rest of the property from Eighteenth street up to Third on the river is in the hands of the railroad companies, or is there any intervening private ownership there?

A. No, sir, it is not; it is all railroad property.

Q. So that in case of a new railroad coming into the city, seeking private property on the river, the Backus property would be the very first that it could get west of Third street?

A. Yes, having a river front.

Q. That is what I mean. And this right of way that we have been speaking of runs across that property?

A. It does.

Q. About how far from River street? A. I think it is about 450 or 500 feet.

Q. From River street?

A. I think so.

Q. So that the Backus property has about four or five hundred feet in depth and about 400 feet on River street, between the railroad and River street.

A. The railroad divides the property about in half.

Q. They have a block, then, about 400 feet square on each side?

A. Just about that.

- Q. One has the river front and the other has the River Street front?
 - A. Yes, and both but up to the railroad. Q. The railroad cuts them in two?

A. Yes, sir.

Recross-examination:

Q. About how many thousand feet of lumber do one of these trucks carry in hauling lumber up to the mill?

A. I think about 3,000 feet.

Q. About how many loads will a team take up in a day?

A. Twelve loads; that is, from the yard to the mill.

By Col. ATKINSON:

2147 Q. Those loads are put up, I think, by other men, and are all ready for the teams to move with them?

A. Yes, sir.

Q. So that most of the day, then, is spent in their moving from one point to the other; the teams are not standing still to any extent?

A. Not at all, except to hitch and unhitch from one wagon to the other.

Q. Then, I take it, if your mill was much farther from your lumber yard you would require a great many more teams to do the business?

A. The team service would have to be increased with the distance.

Q. And would there be any other inconvenience that occurs to you besides the team service, from placing the mill at a greater distance from the yard?

A. Well, the nearer it is, the less expense.

Q. I suppose there is an interchange of labor also from one point to the other, and oversight?

A. If either place is short of help, the other furnishes help.

Q. That would be rendered more inconvenient by a greater distance of one part from the other?

A. Yes, sir.

Mr. BAKER: How long does it take a team to walk from the yard up to the mill?

Q. I think about fifteen minutes.

Recess till 2 p. m.

PETER HENKEL, sworn on behalf of respondents.

Examined by Mr. Dickinson:

Q. Where do you live?

A. On the corner of Fort street west and Fifteenth street.

Q. How long have you lived there? 2148

A. About thirty years. Q. How long have you been engaged in business in the city of Detroit?

A. It is now fifty years.

Q. And what kind of business have you been engaged in here?

A. In the grocery business principally.

Q. And other things?

A. Yes, provisions, the flouring business, milling business. Q. You have been engaged somewhat in buying and selling real estate?

A. Yes, more or less.

Q. You have seen the growth of the city, then, for fifty years? A. Yes, sir.

Q. And know real estate situations and relative values pretty well throughout the city?

A. Yes, sir.

Q. Do you know the property known as the Backus property on River street, where their planing mill is situated?

A. Yes, sir.

Q. You have been there and seen it?

A. Yes, I have been there many times. Q. You know its situation relative to the Michigan Central?

A. Yes, sir.

Q. And its proximity to the business center of the city?

A. Yes, sir.

Q. And with the railroad facilities and proximity to the river? A. Yes, sir.

2149 Q. Take the real estate there, what would you say was its

A. You see it is a very large piece of ground there, and adjoining the Michigan Central, and it is handy, and I think for manufacturing purposes it is worth about from \$90,000 to somewhat over \$100,000.

Q. You speak of the ground itself?

A. Yes, sir.

- Q. Without the elevated structure that now passes it on River street, and situated as it was before that structure passed, what is your opinion as to its being a very eligible site in the city for Mr. Backus' business?
 - A. I consider it an excellent site for the Backus business, of course. Q. In estimating its value you have put upon it only the value

of the bare ground, and not what it is to Mr. Backus?

A. I say for manufacturing purposes, probably for any other purpose it would not be worth as much.

Q. What, in your opinion, has the valuation of the property been affected, if at all, by the building of this railroad structure in River street along its front, with the passage of the trains of the union depot over it every day?

A. The depreciation, you mean?

Q. Yes.
A. You see, it is an obstruction to the largest front of that property, and a very large obstruction, almost a confiscation-I would call it a confiscation if I owned it, all that property, a perfect confiscation—and I consider it a damage at least one-half of the whole.

Q. Of the real-estate values?

A. Of the real-estate value, yes, sir.

2150 Q. What have you to say as to the damage it would be to the manufacturing business now carried on there—the business itself, outside of the real estate?

Objected to as immaterial and incompetent.

Objection overruled.

Exception for petitioner.

Q. The Backus mill property, now the planing mill?

A. I consider the damage about the same as I stated before.

Q. At least a half?

A. A half, yes, sir; because I think it is almost impossible for Mr. Backus to do any fine lumber business there in any shape.

Q. Why?

A. On account of the smoke, cinders, obstruction to the light; he could not handle fine lumber there at all.

Q. You are no way interested in the matter?

A. No, sir.

Q. And are not interested with Backus at all in business?

A. No, sir.

O. Since you knew you were to be summoned as a witness did you visit the mill?

A. I have been there many times.

Q. Have you been there since the structure was put up?

A. Yes, sir.

Q. Have you seen the effect of the smoke from passing trains vourself?

A. Yes, sir.

Q. And to what extent have you seen the smoke in the mill?

A. It darkens the mill, and it is almost impossible for Mr. Backus to keep the windows open on that side; the smoke will run through the mill every time a train passes, and those trains pass a good many times.

Q. Did you see anything of cinders around there?

2151 A. Yes; that is what I stated before-he cannot handle any fine lumber there.

Q. In your visit to the mill did you see the cinders about the

lumber?

A. Yes, sir.

Q. To what extent-enough to injure or mark it?

A. I seen the dust from the smoke in some of his fine lumber so that I could write my name on it, and it was all blackened up, it penetrated into the lumber-not that it was laying on the outside,

but it really blackened and penetrated into the lumber.

Q. Now, in buying the property for a manufacturing site, having railroad facilities as it has with the Michigan Central, and then having run by it this superstructure for the passage of trains of the union depot company, what have you to say as to whether, in your opinion, there will be a market for the property with that obstruction there, for fine manufacturing purposes?

A. Well, for fine manufacturing purposes it would be almost worthless; but for common, rough manufacturing purposes it would

be a very good situation.

Q. With your experience of fifty years in the city of Detroit, and your observation of the growth of the town and eligible sites for business purposes, manufacturing and otherwise, if you were looking for a site or desiring a site, would you buy such a place as that for fine manufacturing purposes?

A. Certainly not.

Q. Would not have it? A. No, sir; not the way it is situated now.

Q. Not with the superstructure by there and the running of trains as you observed it?

A. No, sir.

2152 Cross-examination.

By Mr. BAKER:

Q. What do you call fine manufacturing purposes?

A. Well, for instance, I would not put our mill there-flouring mill.

Q. A flouring mill is fine manufacturing, then, as you understand it?

A. Yes, sir.

Q. Your flouring mill is on the corner of Randolph and Woodbridge?

A. Yes, sir.

Q. And it is not anywhere near a railroad?

A. No. sir.

Q. Did you ever have a flouring mill alongside of a railroad?

A. No, sir; not that I owned.

Q. Do you know another mill in this city that is not alongside of a railroad?

A. No. sir.

Q. Do you know a flouring mill in the United States except yours that has not got railroad connections?

A. Yes, sir.

- Q. Whereabouts?
- A. Out in the country, I have seen some of them.

Q. Some country grist mill?

A. Yes, sir. Q. But I mean a large mill where they manufacture flour to a large extent-they all have railroad connections, don't they?

A. I hardly recollect any of them.

- Q. Have you ever been in Minneapolis, the greatest flouring center in this country?
- A. I have not been there. I know one thing, Mr. Baker, that when there is considerable smoke around our mill on Ran dolph street that we often have to close the windows.
- Q. That is from the manufacturing institutions in your vicinity? A. Also from the steamers that pass along there, and from the railroads also.

Q. Certainly.

A. I know that it is a great injury to the mill.

Q. If you have a flouring mill or manufacturing institution or residence in a thickly settled city, you are apt to find more or less of it, anyhow, aren't you?

A. Well, not in a thickly settled city. Q. Well, you found it down there?

A. I find it down there where we live from that very railroad. That railroad has depreciated my property down there over one-half.

Q. The railroad has?

A. Yes, that very railroad.

Q. How far is the Milwaukee railroad from your property?

A. I mean Fort street west.

Q. Where is your property down there?

A. On the corner of Fifteenth. Q. Oh, there is where you live?

A. Yes, sir; before this railroad passed along there we could hang clothing out to dry and we had very nice fruit, and now we hardly can grow any fruit at all on account of the smoke and cinders that are brought along there by this very railroad, we can hardly

keep a window up.

O. You would be a great deal better satisfied then if there never had been a railroad built down there or a manufacturing institution of any kind?

A. Well, I would not say that exactly. We had manufacturing

institutions there before.

Q. Now, don't you think it would be better to have these 2154 institutions all moved out of there so that you could enjoy your fine house?

A. Well, so far as living down there it would be better, yes, sir.

Q. Yes, it would be a great deal better? A. Yes, as far as living down there.

Q. And don't you think that your relation to the railroad, your proximity to it, affects your judgment some as to the damages, for instance, in this case?

A. Not at all.

Q. Now, you never run a planing mill, did you?

A. No, sir.

Q. Have you ever been in the Saginaw valley?

A. Yes, sir.

Q. Have you been in the planing-mill and saw-mill district there where railroads run right through the institutions and all about them and everywhere?

A. I have not been there since 1856.

Col. ATKINSON: I don't think there is any such case. Mr. BAKER: That shows you have not been there.

Col. ATKINSON: I have been there a great many times.

A. You asked me before if I have been in the Saginaw valley. I was there in 1856, but have not been there since.

Q. You were never in Minneapolis?

A. No, sir.

Q. What large manufacturing district have you been in? Have you ever been in Pittsburg?

A. Yes, sir.

Q. In the manufacturing district?

A. I have been in Cincinnati and Chicago and Louisville.

Q. They have about ten times as much smoke down there as we have here, don't they?

2155 A. Well, not any more than what there is in that vicinity where the Backus mill is.

Q. The more manufacturing institutions, the more smoke?

A. I presume there is.

Q. You say you think that property is practically destroyed for manufacturing purposes. Do you know that since this elevated railroad was built there the Diamond Match Company have made very large improvements on their property, that the mill had been idle for years and they have just improved it and remodeled it and put in a plant there.

Objected to as incompetent.

A. It probably would not injure the matches, neither the wood that they use.

Q. Yes, but it is a manufacturing institution?

A. Yes, sir.

Q. Don't you also know that since this superstructure was put up there, that the Peninsular Stove works have made very large additions to their works?

Objected to for the same reason.

Objection overruled.

Exception for respondents.

A. It has been a damage to them.

Q. Well, they go right on with their business and enlarge it?

Same objection, ruling and exception.

A. That I don't know.

Q. You have not been out there recently?

A. I have not been down there since a year ago.

Q. Have you been up River street since this superstructure was built?

A. Yes, but not in front of the stove works.

Q. And on the other end?
A. On the other end of Backus'; I have been there several 2156 times.

Q. Have you been under the railroad crossing there or been on the Michigan Central tracks?

A. Yes, sir.

Q. You go up as far as there and walk from there down to Twelfth street?

A. I have been as far as Backus', because I did not want to go any further. I do not like to cross railroads, and it is not a pleasant walk down there; I had no particular business.

Q. When did you make that visit?

A. Oh, that visit I would make almost every Sunday, just for my pleasure, when the weather is good I take a walk on River street and on Fort street.

Q. How far is it from your house to this railroad?

A. It may be 600 or 700 feet.

Redirect examination:

Q. You were asked about manufacturing institutions and flouring mills situated upon a railroad. Do you know of any manufacturing institution anywhere in the United Stated situated upon a railroad that does not work upon iron-work and things that cannot be affected by this sort of nuisance from smoke and cinders?

A. It has never been my particular business to look for anything

of the kind.

Q. They usually have a switch run in?

A. Yes, sir.

Q. And situated as the Backus property is to the Michigan Central?

A. No, it is very seldom they are so close up to the railroads.

Q. Now, did you ever know of any manufacturing in-2157 stitution of any kind situated alongside of an elevated structure that run by the second story?

A. Yes, sir, in New York city.

Q. What kind of manufacturing institutions there?
A. Well, mostly stores, I don't recollect manufacturing.
Q. What effect did it have upon that property there?

A. Well, this effect, that some of those business places rent for

about 25 to 50 per cent. less than they did before.

Q. And those very light passenger coaches of the lightest kind running upon a light trestle?

A. Yes, sir.

Q. Not heavy trunk lines with heavy locomotives. You speak of the New York elevated railroad?

A. Yes, sir.

Q. Used for passengers only?

A. Yes, for instance, on Greenwich street, I have been there before this elevated railroad was built there.

Q. Did I understand you to say that you had been in Minneapolis?

A. No, sir.

Q. Mr. Baker asked you the question whether you didn't know that the railroads ran right by the flouring mills. I will ask you a question, embodying the truth of the whole question as to the railroads, if you do not know that the mills are provided with stationary engines by which the cars are drawn up to the mill so that the locomotives never come near them?

Mr. BAKER: That is on the side tracks; I am talking about the railroads.

Q. On the side tracks they run the cars in, instead of taking the locomotive in that will throw smoke and soot, they run them in with a stationary engine.

A. They generally back them in, and the locomotive keeps away

from the mill entirely.

Q. The mills there run them in with stationary power and keep the engines out. That is all.

Recross-examination:

Q. Did you testify that you don't know of any manufacturing institutions alongside of a railroad except those that work in iron? Mr. Dickinson included some such thing in his question, and I want to know whether you so testify?

A. I don't recollect any.

Q. Do you know where the Pullman car works are out on the Milwaukee road?

A. Yes, sir.

Q. Do you know where the Peninsular car works are out on the Milwaukee?

A. Yes, sir. 160—55 Q. Do you know where the Murphy & Wasey chair factory is? A. No. sir.

Q. Right in a V of railroads?

- A. No, sir.
- Q. Do you know the Dwight planing mill and factory on the Michigan Central, hardwood lumber and so on; have you ever been there?
 - A. No, sir.
- Q. Then all you mean to say is that you do not happen to know of any such thing, that you do not know yourself of a wood-working institution that is alongside of a railroad.

Col. ATKINSON: Do you rank the Pullman car works and the Peninsular car shops as institutions not working in iron?

Mr. Baker: They work in wood-work, and the nicest wood-work in this country that I have seen.

A. But they use it themselves.

2159 Q. Use what?

A. The wood-work.

Q. Why, they make the cars in these car works.

A. They do not have it lying for sale or anything of the kind.

Q. Well, I do not know about that, I do not know how long they keep it; I guess they build under contract, and as soon as they are done they are shipped away?

A. I do not believe it will affect hard wood quite as much as soft

wood, as pine especially.

Q. What I was trying to get at, whether it was your idea that there were no such institutions, no wood-working institutions that wanted railroad facilities or that had railroad facilities.

A. I did not say so.

Q. You did not mean to testify that way? A. No, sir.

Q. How close is your dwelling to the Michigan Central?

A. That is, from the Fort Street bridge there, probably 500 feet. Q. Then you are nearer the Michigan Central than you are the union depot company?

A. Nearer the Wabash than to the Michigan Central.

Q. Are you not nearer the Michigan Central than you are the Wabash?

A. Nearer the Wabash.

- Q. I meant on a direct line. From the railroad bridge to your house, isn't it a shorter distance than it is from your house to the
- A. It is a shorter distance from my house to the Wabash, it is about six or seven hundred feet, and I think it is 1,500 feet from the Michigan Central.

Q. Was the Michigan Central there when you built your house?

A. I think it was, yes, sir. I did not build the house, I 2160 bought it.

Q. How long have you lived there?

A. Something like 30 years.

Q. In the same house?

A. Yes, sir.

Q. Was the Brooke & Daley saw-mill there when you built your house?

A. Yes, sir.

Q. What else was there on the river front?

A. There were several saw-mills there on the river front, but the cinders from a saw-mill is different from where they use coal; they use their refuse in a saw-mill, and it is different from using coal.

Q. Then the saw-mills did not obstruct the river view quite as much, I suppose. There was more open space so that you could

look at the river?

A. Yes, sir.

Q. There was a good deal of vacant property down there those

days, too, was there not?

A. Not any more than what there is now, but they did not obstruct the view quite as much as the Union elevator, it is a higher building.

Q. There is a block of houses built up on the block that lies between the River road and Fort street, isn't there, that used to be

largely vacant?

A. No, sir.

Q. It never was vacant in your time?

A. No, there were a good many small houses standing there.

By Col. ATKINSON:

Q. Do you know the other property used in connection with this mill by Backus & Sons, the lumber yard?

A. You mean the property further down the river, on Seven-

teenth street.

2161 Q. Yes, the lumber yard.

A. I think it is Seventeenth, or is it Eighteenth?

Q. Eighteenth, I think. A. Yes, I know that.

Q. And their warehouse on this side of the bridge over the Central?

A. Exactly; yes, sir.

Q. Now, do you know how they are used in connection with each other by Backus & Sons?

A. Yes, sir.

Q. Practically all used as one plant, are they not?

A. Exactly; yes, sir.

Q. Now, what, in your judgment, would be the injury to all that property, taking it as a whole, to its rental value by reason of this structure?

Objected to as wholly immaterial and incompetent. Objection overruled. Exception for petitioner.

A. I think if Mr. Backus has to give up one of the three, especially the mill, he would have to give up the others also.

Q. Take the three properties as a whole, used together, how would it affect their rental value, say, how does this structure affect it; what percentage, in your judgment, would it decrease the rental value of those properties?

A. That on Fort street probably would be entirely useless for any

other purpose.

Q. That is the warehouse?

A. Yes, sir; and on Seventeenth street, I don't know—the property would not be affected so much, because it is dock property and always would be rentable for something.

Q. Bring something?

A. Yes, sir.

2162 Q. But taking the three together, do you think the Fort Street property, the warehouse around there, would be practically rendered useless for any other purpose?

A. I don't believe that Mr. Backus could get along without all

three together.

Q. And the rental value of the mill, you say, would be decreased at least one-half?

A. One-half.

Q. And I suppose the other property would be rendered somewhat less valuable, although it might rent for something?

A. A good deal less.

Q. Now, what would be your judgment approximately of the injury to the other property, to the rental value? I am confining

myself to that now.

A. The warehouse—I could not say for what purpose that could be rented or used. It probably would be entirely worthless; they might have to take it down. The dock property could probably be rented for the same purpose, for storing purposes.

Q. Would it lose any portion of its rental value?

A. Not for lumbering; it could not be used quite as well, because the railroad runs along there, it is damaged along there also, but for stone and lime or anything of that kind it could be rented.

Q. But this structure running along River street injures the

lower property as well as the other, does it not?

A. It injures Backus' business entirely.

Q. Injures the whole business in all its parts?

A. Yes, sir.

By Mr. Robison:

Q. You said that your store was injured by smoke and cinders and one thing and another?

A. The mill.

Q. Where is that mill?

A. On the corner of Woodbridge and Randolph.

2163 Q. What railroad?

A. Well, the D. & M. railroad is close by there, not a great ways off.

Q. It is a flouring mill, isn't it?

A. It is further east, quite considerably east, where the locomotives stop-the yard I mean.

Q. That is a flouring mill?

A. And the steamers injure us more than anything else, the steamers that pass up and down the river.

(). How far is your mill from where the steamers pass?

A. Probably 300 or 400 feet.

Q. And the railroad-you don't think there is any injury from that?

A. The yard is considerably off.

Q. How far?

A. Oh, it is probably 800 feet off, or nearly 1,000.

Q. How far from the river, in front of your house, does the Wabash run down there?

A. It may be 400 feet.

Q. Now, are you not mistaken about its being further from your house at Fifteenth street to the Wabash road than it is from there to the Michigan Central on a direct line?

The Court: You got that reversed.

Q. He says it is further to the Michigan Central.

A. It is nearly a half mile on Sixteenth street to the Michigan Central.

Q. I don't mean on Sixteenth street, I mean across lots from your house to the nearest point of the Michigan Central.

A. That is still farther.

Q. The map does not show it.

- A. I think it does if you look at it close. You see, I live on the west side of Fifteenth and Fort, and the Michigan Central is between Eleventh and Twelfth.
- Q. When the Michigan leaves the bridge it runs in a 2164 diagonal direction, does it not?

Q. When you get directly opposite your house, running southwest, say?

A. I think it is both ways a half mile.

Q. Then the map I looked on is certainly wrong.

A. Well, I could not tell within a few feet.

Q. No, certainly not.

Col. ATKINSON: I don't think he gets your idea by both ways he means Fort street and Sixteenth.

A. No, I mean Eleventh street and Fifteenth.

- Q. The Michigan Central crosses Fort street at what street Twelfth, isn't it?
 - A. It passes between Twelfth and Eleventh.

Q. You live on the corner of Fifteenth?
A. Yes, sir. Q. Well, that is a little over three blocks and a half?

A. Well, they are good long blocks.

Q. Yes, but it is three blocks and a half?

A. Yes, it may be a little less than half a mile.

Q. But it is considerably further on Sixteenth street.

A. If you have a map here you can tell at once. I think it is

about the same distance on Sixteenth as it is on Fort.

Q. Between Twelfth and the bridge and Sixteenth the road comes nearer to your house—about half way between Twelfth and Sixteenth, take from the railroad and go across lots to your house?

A. Very little; yes, sir.

Q. You say that this railroad, in your estimation, has injured Backus' property one-half, there on the railroad?

A. On account of the Wabash, yes, sir—not only on account of the smoke, but the obstruction.

Q. Light and everything?

A. If you obstruct the front of my business place you might just as well have the whole of it in any shape, it don't make any difference where it is.

Q. The market here obstructed your view to your store?

A. It did, and I applied to the supreme court several times and it cost me over \$1,000 in lawyers' fees. The lawyers got the best of it and I got the worst of it.

Q. And the market stayed?

A. And the market stayed; yes, sir.

Q. You say that the property on Fort street is injured half in value?

A. I didn't say so.

Q. Well, how much do you think that has been injured?

A. I say if the mill was useless the property on Fort street would be useless.

Q. How much is it injured as it stands now?

A. I think it is injured just as much as the mill is.

Q. One-half?

- A. Yes, because if Backus uses that property on Fort street for storing fine lumber and handling fine lumber, if he has to bring it somewhere else than to his mill, it would certainly diminish it in value to Backus.
- Q. Well, you don't think the railroad down there—the railroad itself—injures that property up there, do you?

A. On Fort street?

Q. Yes.

A. I didn't say so.

Q. But it is because of the injury to the mill property?

A. Because of the injury to the mill property.

Q. He could manufacture fine lumber somewhere else and store it over there as well as he could if it was manufactured in this part of the city?

A. Well, but it would make so much more expense every day.

2166 Q. To draw it over there?

A. Yes, and that, of course, would be a big injury.

Q. You think it is injured one-half?

A. According to the situation now.

Q. Yes, just as it stands?

A. If Backus wanted to use that property in connection with the mill, I say it is injured one-half.

Q. What is it worth anyway?

A. But if you don't want to use it in connection with the mill it might be worth different.

Q. How much is it worth as it stands?

A. I could not tell you what it is worth. Does he own the real estate where the warehouse is?

Mr. Dickinson: Yes, he owns it.

A. I could not tell you exactly what the damage there would be. Q. Well, what is the property worth there? You have an idea of what property is worth on Fort street?

A. On Fort street, according to the depth of the lots, probably

worth in that vicinity \$100 or \$120 a foot.

Q. As it is now?

A. That is according to the size of the present lots.

Q. You think that property is worth from \$100 to \$120 a foot?

A. Yes, sir.

Q. And if Backus' mill—you think that is worth just as much as the property next to it—all property along there is worth about the same price, isn't it?

A. No, sir, no such thing as that; Backus' situation or lot there

is worth considerably more.

Q. Worth more than the property next to it, is it?

A. Yes, sir.

Q. What is the property next to it worth?

A. That is more than I can tell you, but what I saw sold there or what I heard, I heard that was sold to the Michigan Central and to the Wabash, I believe it has been sold at a very high price.

Q. More than it was worth?

A. Well, probably it is; I could not say. Some of it had been sold for five or six or seven hundred dollars a foot.

Q. Don't you know the market value of property right along

where Backus' warehouse is on Fort street?

A. I have not seen any sold there on Fort street, that is, on the other side of the bridge; I mean on the west side of the bridge.

Q. This is on the east side of the bridge?
 A. This is on the east side of the bridge.

Q. Along there where that warehouse is you don't know the market value of land?

A. I think the market value is from \$100 to \$120 a foot. Q. That is the same as you say Backus' is worth now?

A. Yes, where the warehouse is; I don't mean to say where Backus' mill is.

Q. If this elevated road had not gone along there Backus' property would be worth \$240 a foot, you think, where his warehouse is? It would be worth twice as much as the other property?

A. I think you are mistaken with me.

Q. You say that Backus' warehouse property is worth now from \$100 to \$120 a foot?

A. I say to Backus, yes, sir; it would be worth about half of it. in connection with your mill, you understand, to Backus-I didn't say that property was worth one-half; I mean for the purpose of using it in the hands of Backus.

Col. ATKINSON: You didn't say the market value?

A. I didn't say the market value.

By Col. ATKINSON:

Q. You have lived down there in that region for a long 2168 time, you say. From what direction are the prevailing winds in your part of the city?

A. The prevailing winds are generally southwest.

.Q. So that the smoke from the Michigan Central, even if it was as close as the Wabash, would not be likely to annoy your place?

A. No, sir, it has never annoyed me any before. Q. The Michigan Central runs to the northwest?

A. Yes, sir.

Q. And the other runs to the southwest?

A. Yes, sir.

Q. That is so also, isn't it, with the Backus property?

A. Yes, sir.
Q. Then have you had occasion to notice whether a road elevated like this structure is more liable to deposit cinders and dust than a road that is lower than the business property?

A. Yes, sir, it throws the cinders and smoke about three times as far as one on the ground, and especially with the Michigan Central,

it is deep.

Q. The Michigan Central is lower than the grade instead of being higher?

A. Yes, sir.

Q. And on the side that the wind carries the cinders from, rather than towards, the mill?

A. Yes, sir.

George W. Robinson, sworn on behalf of respondents.

Examined by Mr. Dickinson:

Q. Where do you live?

A. In Detroit. I have lived here for about 28 years. Q. What business have you been engaged in?

2169 A. Most of the time in the lumber business; all the time, I might say, or nearly all the time.

Q. You carried on a planing mill, did you not?

A. Yes, sir.

Q. And you are familiar with the planing-mill business?

A. Yes, sir.

Q. You have been engaged in all sorts of lumbering in the rough and in the manufactured state?

A. Yes; I have been dealing in all classes of pine lumber and sometimes hardwood, but chiefly in pine.

Q. Where have been your places of business?

1281

A. I have been operating a yard where the Wabash tracks are, the union depot company tracks at the foot of Twelfth street, or just a little below the foot of Twelfth street, between Fort and River, on Tenth street, and Twenty-fourth street and the Michigan Central railroad.

Q. Where was your planing mill when you were engaged in it?

A. Twenty-fourth street and the Michigan Central.

Q. Mr. Baker has said something about the planing mills of the Saginaw valley. Do you know something of them?

A. I know something of them; have been there a number of

times, in some of them.

Q. What kind of mills are they?

A. Well, the greater part of the planing mills of Saginaw and the valley are planing mills proper, and are not connected with other manufacturing institutions such as box factories, but the greater number of them are merely planing mills. There are some box factories but not many of them connected with the planing mills proper.

Q. They are small affairs comparatively?

- A. The greater number of them are; there are some very large mills.
- 2170 Q. Anything up in the Saginaw valley to compare with this Backus mill?

A. Not that I have ever been in.

Q. Have you seen any?

A. I have seen at a distance from the road the Germain property, which did look to be very extensive before it was burned down, but I never was in that property and don't know exactly what it was.

Q. You don't know what they did there?

A. No, sir.

Q. Now, are any of the planing mills there situated upon the

main track of a railroad?

A. Not that I know of; not that I have ever been in myself; they have side tracks. I think there are one or two small planing mills, very small planing mills, in Bay City that I passed going in, but they were very small affairs and I paid little or no attention to them; merely some local affairs.

Q. Do you know the Backus mill property?

A. Yes, sir.

Q. Do you know its relative situation to its lumber yard and its storehouse?

A. I am well acquainted with it.

Q. Do you know the whole thing is run together as one plant? A. Yes; all who are acquainted with the business know that.

Q. That it is one institution, one feeding the other and working

harmoniously together?

A. That is the way I have always understood it, and in fact have seen them haul from the yard to the mill and from the mill to the warehouse, as I understood, being located as conveniently together as they possibly could get them at the time the land was purchased.

Q. What have you to say from your knowledge and from what you know of the mill and the plant, as to whether it is advantageously situated in the city? I am speaking now of the time prior to the superstructure being built there, the elevated railroad.

A. I would say that it is arranged as nicely and as to as good advantage as anything I know of, or better than anything I know of in the city, the arrangement of the docks being near to the mill and the mill not very far from the warehouse, and the whole plant being in the heart of the city, was nicely arranged for business.

Q. Do you know of any more eligible plant for the business carried on, such as Mr. Backus carried on in the city of Detroit, than

he had there?

A. No, sir, I do not.

Q. Do you know something of the extent of the Backus business, and the amount of raw material he handled in connection with the capacity of the mill?

A. I have inquired of them.

Q. You compete with them in the lumber business to a certain extent?

A. Yes, if they have a good customer I try hard to get him. And the business is very large. That is, I have seen a number of teams hauling lumber from their docks to the mill, and the amount of lumber on the docks and the amount of lumber going into the warehouse, it must be a good large business.

Q. How as to their acquiring large assortments of lumber as they carried on the business up to 1893, prior to the building of this

superstructure?

A. I know they have brought in large quantities.

Q. Well as to working up large assortments of lumber and ac-

quiring them on hand?

A. I know that from the mill and the capacity of it that they have advantages in manufacturing that are not equalled by any other concern in the city.

2172 Q. Anything in the State, we will say.

A. Anything I have ever been in. There are a few of them I have not been in in Saginaw, but I think the Backus mill will compare favorably with any mill in the State I know of; it will compare favorably with any mill I have been in and exceed, I think.

Q. You have been in the mill as it was when it was running to

its full capacity, in the fore port of 1892?

A. I could not say whether I was ever in the mill when it was running its full capacity, but when it was taking in a large amount of lumber. I hardly know what the full capacity of that mill would be.

Q. But you would consider it very large?

A. Yes, sir.

Q. Running up into millions of feet?

A. Oh, yes.

Q. And what kinds of lumber were worked up there?

A. I have paid more attention to the pine lumber than I have to the hardwood, although I know they have been buying largely of hardwood and have seen considerable hardwood both in and around their mill and in the warehouse, but I have paid very little attention to that part of it.

Q. Do you know whether in this business such as is carried on in the Backus mill, or was carried on in the Backus mill, the competi-

tion is very sharp in the markets of the country?

A. The competition in lumber is sharp.

Q. The competition in the products of such mills as this is sharp, is it not, in the markets of the United States?

A. Yes, sir.

Q. And upon what must a concern of this kind depend for its

profits or its life?

A. Well, it would be very largely in manipulating the 2173 different grades of lumber and the working them and cutting

them to advantage.

Q. Narrow margins, I suppose?

A. Very narrow.

Q. And there must be a great volume of business in order to make it succeed?

A. Naturally, in the lumber business, there has to be a very

large volume in order to make a success of it.

Q. And is the manner of the arrangement of the mill and the appliances and machinery and that sort of thing a matter of importance in making both ends meet with these narrow margins?

A. Oh, yes; a mill and lumber business conducted without the

appliances necessary would be a losing operation.

Q. I suppose there is profit in the fancy work in fine woods, in inside workings—pretty good margins?

A. Yes, sir.

Q. Now, upon that class of work, inside or fancy work, suppose in the product there are some blemishes, does it affect the market value?

A. Yes, sir.

Q. Defects, blemishes or faults? And do discolorations affect it?

A. Yes, anything that will go to make a defect in the better woods affects the value of it. For instance, we may have a very nice piece of lumber that would be very nice for oil finish, but if there is a defect in it it has to be put into painted work which will not sell for nearly the price if it had no defects.

Q. A thing that has a small defect in it, it does not hurt the service of the goods, the actual utility of the goods, but does it not take off a percentage of from 25 to 50 per cent. in the salable market

values?

A. Yes, sir.

Q. Although the utility of it may not be injured by the blemish?

Q. It may be perfectly good for painted work when it is not good for oil finish. The greater part of good material is used for oil finish today.

Q. Have you any interest at all in the Backus matter?

A. Not a cent.

Q. Now, have you seen the workings of this superstructure and the railroads going up there?

A. Yes, I have seen them.

Q. In your judgment, does it affect the mill for the purpose for which it was carried on, prior to the building of the superstructure and these railroads running by there upon this trestle?

A. If it was my own individual matter, I feel confident that I

would try to move out.

Q. You would not attempt to carry on that kind of business that

Mr. Backus had carried on there?

A. I would not unless really compelled to, I would not with a view of thinking there was or that there could possibly be a profit in conducting a business hampered by the road as that is at

present.

Q. I suppose that the elements that exist there with the two or three or four roads running over there, and the concern being yet in its infancy, the union depot company having just started, I suppose the tendency will be worse instead of better in the increase of business in the railroads?

A. It would be natural to suppose so.

Q. Now, as a planing-mill man, engaged in planing-mill business, or in this fine wood-work such as is carried on there, would you, in looking for a site for the purpose of building a planingmill to compete with your brethren in that kind of business in the markets of the United States, erect a mill on this place, on this

superstructure? A. No, sir.

2175 Q. If this were given to you, if you could have the property or the site there and desired to erect a planing mill, would you take it if you were compelled to build a planing mill upon it?

A. No, sir, I would not.

Q. To do this fine wood-work, such as they do there?

A. No, sir, I would not.

Q. How was it before this structure was put up there?

A. As far as I could see there was not anything to hinder them from doing a profitable business; the docks were not away so far but what they could haul at a reasonable expense, and the street was open so that customers could come in and get what they might wish and people would have access to the mill; whereas, at present, all those advantages, except the nearness of the dock, are done away with, and I think if I were wanting to buy any lumber I would not drive around on the River road underneath that structure, nor undertake to go and see a man or firm, no matter how much I would wish to deal with them. I would not go in there to purchase lumber, that is annoying in a great many respects, and particularly to a person going in there; it is almost impossible to hear a conversation when the trains are passing; and ordinary tone of voice cannot be heard in the confusion.

1285

Q. You have observed the smoke and the pouring of the smoke down into the windows there at times from the passing trains?

A. In cloudy weather on a great many days the smoke falls; it

not only falls, but it makes it cloudy and dark.

Q. What have you to say to the need of light in this fine planing-mill business?

A. In order to do any good work you must have good light.

Q. Is it an absolute essential?

2176 A. It is absolutely necessary. You must have light or

you cannot do your work right in the planing-mill.

Q. In this case of light and steady light, are they not, in setting the gauges, liable to make a mistake and make these flaws in the work?

A. They are, and a machine may get out of order, as a machine will occasionally in running, and if the light is not good enough to detect it quite a quantity of lumber may be destroyed before it is

observed.

Q. That is, make these blemishes to which you have referred?

A. Yes, sir, a machine may get out of its proper gauge a very little, or may be off the center, or from anything that may be on a piece of board; there may be a chip, and if it is dark that may not be observed until several boards or pieces may be run through the machine, and just as many of those as are run through with that flaw in the planing-machine knife are spoiled, and they must be sent back and made into something else or else thrown away. It may be such a class of lumber or moldings that cannot be well made over, and they are culls instead of first-class in such a case.

Q. Well, the moment there is any considerable quantity of that, with the narrowness of margins and the competition in the trade, I suppose it takes off the profits and makes it a losing instead of a

paying business?

A. It takes but a short while to take the profit off from a thou-

sand feet of lumber.

Q. And make out of a large business a losing one instead of a paying business. Relatively, what is the proportion of profit made in molding as compared with other coarser lumbers, correct and perfect molding?

A. Well, the percentage is much higher. I can hardly say what would be a correct estimate. I will say this, that is where the profits of a business of that kind comes in; where a large

part of the profits come in is in the manufacturing of those

moldings and fine work; it is not in the coarser lumber.

Q. Running the ordinary business of a planing mill, without this additional instance of fine work in molding, is there any profit now in the condition of the trade?

A. It is so very small we can hardly discern it.

Q. But in making fine work I suppose there are other pieces that

come off that are used for culls or in coarser business?

A. Yes, that is correct; we may if we have proper machinery, and proper facilities and what might be quite a common board or even what we term a cull board, we may take from one side of it a

piece that would be worth more than the entire board, when it is manufactured into a piece of molding or casing that would sell at a higher price.

Q. Now, in the bringing in of lumber by railroad cars, with which you are familiar, will you state whether, from its progress over the railroad, the lumber is at all covered with cinders in coming in?

A. The lumber on flat cars, as it was usually shipped years ago and is occasinally shipped now, but very seldom, that is the better grades, has always a large amount of cinders on it, with the cars nearer to the engine, but in the rear end of the train, perhaps not very much, but if a flat car should happen to be near the engine, it is sometimes covered heavily with cinders.

Q. How near the engine?

- A. It might be anywhere from the first to the fourth or fifth car back. It would decrease in quantity as it would go back from the the engine.
- Q. In the bringing in of lumber into the city by rail, is it a part of the duty or is it not in the invariable rule that the first thing to do, if it comes in an open car, is to clean off the cinders?
 - A. If it is good lumber we always do that as far as we can.

Q. It is expected to come in with cinders?

A. Generally. We sometimes get in some with very little on.

Q. Is that the rule or exception?

- A. That is perhaps the exception. There is scarcely a car comes in but what has cinders on it.
- Q. That being so, what is the rule when fine lumber is shipped now?
- A. The rule, when we are shipping fine lumber, is to always ship it in box cars.

Q. What is the reason?

A. On account of the cinders and partially the weather, but the cinders have as much to do with it as anything, I think, that is in the rough state.

Q. Give the jury some idea of the amount of cinders that are

thrown from the engine upon these cars?

Q. As I stated, in cars away from the engine there is very little, but I think I hardly ever saw a flat car but what had some on, some finer and some coarser, but I have seen on cars that apparently were near the engine, in quantity, if I was able to judge, in size, as much as a half ton of coal cinders. They would not weigh so much—

Q. In bulk, gathered together?

A. Yes, I have seen them so. They would work down through the car until almost when the last board was taken off, we would find cinders, where they would work down through, and we have always to be very particular to sweep those off before we send them to a planing mill. We cannot get them all off always, but there is a very large quantity of cinders on those cars.

2179 Q. Are you familiar with the dust that arises in a planing mill?

A. Yes, sir.

Q. To what extent have you run planing mills yourself?

A. I have been connected with them for several years. I am not running any at present, but at different times I have been engaged in it and I think thoroughly understand the running of a planing mill.

Q. What is the character of this fine dust that is made in a plan-

ing mill, as to explosiveness?

A. As to that I have not any experience.

Q. Very well, we will pass that. Now, have you seen the character of the machinery in the Backus mill?

A. Yes, sir.

Q. What have you to say as to its character and perfection?

A. In my opinion the machinery in the Backus mill will equal any planing mill I have ever been in, if not surpass it.

Q. It is kept in first-class condition?

A. As far as it is possible for the observer to see.

- Q. Something has been said as to the cost of patented machines that are put in this mill. What have you to say as to the relative value of a machine bought at the shop, if you please, in Albany or wherever it may be procured, and the value of the machine as set up and running with the equipment added and adjusted in the Backus mill?
- A. As far as I could see, it would be very foolish for Mr. Backus to take out one of his machines that is in proper trim, having been properly adjusted, and take a new one from the shop and put it in its place. It would be very foolish indeed, I think.

Q. Well, put it in this way, relative to the cost of the ma-2180 chine as purchased in the market and the cost of the machine

as set up, and adjusted in the Backus mill, or as has been said, Backusized?

A. I consider that the machine properly adjusted is of more value than the machine bought.

Q. And the adjustment of it in the mill and equipping it costs considerably more than the original machine?

A. It costs considerable to set up a machine and put it in run-

ning order, even the best of them.

- Q. What is the relative value in this kind of business of a machine that has been tested in the mill and is adjusted in its relation to the other parts of the mill and machinery, and a new and untried machine?
- A. Perhaps I can hardly give a correct idea of the relative values but it is much more valuable.
- Q. Now, with relation to the cost and value of the machinery in the mill, as you have seen it in the Backus mill, running and in an adjusted condition, with all its equipments, what have you to say as to the value of that machinery, if the Backuses are compelled to remove the mill and take all the stuff out. What is the value of it, what would it be worth to sell, compared with its cost or value?

A. It is almost impossible to sell second-hand machinery, there is such an opinion about a great deal of second-hand machinery that is sold being worthless, which is worthless, not having been

properly taken care of, that it is a detriment to any second-hand machinery.

Q. Then I understand you that even Backus' machinery, taken out of the mill, and its adjustments, that it would be practically worthless in the market to sell?

A. It would depreciate very largely in its value. It might be worth something, but it would be so little that it would sell for very little.

Q. It would be something like a misfit coat?

2181 A. Or even worse.

Q. What would you say of this property irrespective of the superstructure of the new railroad, if that were away, what would you say was the value of this site, of the real estate outside of the plant—situated as it was with the side track connection to the Michigan Central, just as it is situated with reference to the center of the city, its situation relative to the river and other facilities of that kind?

A. The first part of my testimony would cover the question. Before the superstructure was placed there it was considered a valuable plant.

Q. But the real estate?

A. The real estate and the machinery and all connected with it was considered valuable and with the structure as it is now, in my opinion, not valuable.

Q. Would you care to place a value upon the real estate without

the mill as it was heretofore?

A. Well, I have placed a valuation on that property, but I have not thought much of it of late; but I think the valuation I placed on it at one time was from four hundred to four hundred and fifty dollars per foot.

Q. As a manufacturing site?
A. Yes, on the River road.

Q. That is, taking the front on the River road without reference to Fort street?

A. Without reference to Fort street. I have considered it, on account of it being such a Michigan Central frontage and available to the Michigan Central, that that offsets the narrow front on Fort street.

Q. Have you been there since this structure was up and seen the effect of the dust and cinders that you have referred to?

A. Yes, I have seen it.

Q. How often have you been there?

A. I have not been in the mill but once, I think, but was there long enough to convince myself—

Q. Were you there at the time of the passage of trains?

A. Yes, sir.

Q. When was that?

A. I was in there yesterday.

Q. Did you see the effect of the smoke coming into the mill?

A. Why, there was not perhaps as great a quantity of smoke yesterday as I have seen at other times when passing the property,

but there was more of an effect yesterday by the passing of trains and the darkening of the mill as the trains went by.

Q. Were you in the main planing mill, on the second floor or the

first floor?

A. Yes, sir.

Q. That is, I do not mean the ground floor?

A. I would not say that there was a great deal of smoke yesterday, but I have been past the mill a number of times when it was dark with smoke, and the smoke would fall instead of rise. That was not the occurrence yesterday.

O. Did you see the effect in the planing mill, in the body of the

mill, that the trains caused in passing it, of the darkness?

A. Yes, that is quite perceptible.

Q. So that you would judge from that as to the injury to the mill, from personal observation?

A. Yes, sir.

Q. Did you see anything of the cinders around upon the lumber?
A. I saw a large amount of dust—coal dust from the trains.

O. Soot?

A. Yes, evidently from the trains passing.

2183 Q. Upon what?

A. Upon planed lumber.

Q. In and out of the mill?

A. Yes, on trucks that had been running outside, which must be

run outside in order to be shipped.

Q. Then the testimony you have given has been from a personal observation, what you have seen of the workings of this railroad upon this mill, in reference to the planing mill?

A. Yes, sir.

Q. And to the damage in your judgment?

A. I have given it from my own observation and my own knowledge of the damage.

Cross-examination.

By Mr. Robison:

Q. You have known this mill for a good many years, haven't you?

A. Yes, sir.

Q. Been in it frequently?

A. Yes, sir, Mr. Backus used to do a large amount of planing for me at one time.

Q. When did that cease?

A. Well, about the time that I built one for myself several years

Q. You have never been in the mill since this elevated railroad was up but once?

A. No, sir.

Q. And that was yesterday?

A. That was yesterday.

162 - 55

Q. You went there yesterday, I suppose, to see how it was affected?

A. I went there to be more familiar with the actual work-

2184 Q. You went there to get facts to testify to today-in a proper way, I mean, of course?

A. I wanted to observe for myself.

Q. You did not observe any smoke yesterday to speak of?

A. No, sir.

Q. How long were you there?

A. Oh, I was there half or three-quarters of an hour; pretty well through the mill.

Q. How many trains passed while you were there? A. Well, I should say six or eight trains and engines.

Q. What time of day?

A. About four o'clock in the afternoon.

Q. You say they made a great deal of noise? A. Yes, sir.

Q. Interfered with your talking a great deal?

A. Yes, sir.

Q. Could you hear those big buzz planers running while the trains were going by?

A. The machines were not running when I was in there.

Q. Oh, the machinery was all stopped? A. The machinery was not running. Q. No machinery running at all?

A. No. sir.

2185

Q. You could not talk distinctly with Mr. Backus or with whom-

ever you were with when these trains were passing by?

A. That is a matter hardly necessary to testify to. Anybody standing down there, they make such a noise that as far as I am concerned, I have to stop talking.

Q. Do you think that with thirty or forty machines running, buzzers and planers, with all those running, it would matter much

if a train of cars went by, with talking?

A. It certainly would in front of the mill.

Q. In the main mill, I mean. A. It might not in the main mill.

Q. You don't want to talk out of the mill, it is in the mill.

A. No, sir; there is a great deal of business transacted and a great part of the work done outside in front of the mill.

Q. You say that since that structure was erected, teams cannot go down on the street?

A. Not with safety.

Q. People cannot go there and buy lumber? Mr. Dickinson: He says they would not.

Q. They cannot, according to his testimony. Of course there is a good reason why they do not go.

A. I think I said they did not.

Q. You are acquainted with all the departments of this business?

A. I am acquainted as one possibly can be with another's business.

Q. Have you ever been in the warehouse?

A. Yes, sir.

Q. When was that put up?

A. I think in 1882.

Q. When were you there last?

A. Well, some time during the past winter and spring. I cannot say just when, but it has not been long.

Q. You have purchased lumber from there, have you? A. Very little.

Q. Do you know about what their general business is?

A. In a general way.

Q. You say the cinders and dust, in your opinion, prevent the Backuses from doing any fine work in their institution?

A. I think I did not say that.

Q. I understood you so. They could not do it profitably? 2186 A. I think I said it would interfere. They may do a little fine work, but it would interfere very largely with the fine work they

undertake to do.

- Q. Do you think they can do any fine work there and do it in competition with other places more advantageously situated? A. I think it is very doubtful if they can do fine work at a profit.
 - Q. Well, you don't think they do any fine work now, do you? A. I don't know what else they can do with their fine machinery?
- Q. Well, they cannot do it profitably and you don't think they are working any, do you, at fine work now?

A. I think perhaps they undertake to ..

Q. You think they have some stuff up there in their warehouse, don't you?

A. Yes, they have some stuff there.

- Q. Fine work, moldings, or brackets or whatever they manufacture?
- A. I have not examined closely any time what they are keeping in their warehouse.

Q. You say the competition in this business is very close?

A. Yes, sir.

Q. And there is a small margin of profit at best, as I understood you?

A. I said there was a very small margin in the coarser grades

Q. Well, how about the business they do?

- A. Well, there may be considerable profit, ought to make considerable profit out of their finer goods.
- 2187 Q. Are they the only institution in the city that makes fine
- A. I think they have better facilities for making good moldings and finer work than any other planing mill in Detroit.
 - Q. But there are other planing mills making that kind of work?
 - A. Other planing mills making at it. Q. You are not running one, are you?

A. No, sir.

Q. Did you used to make good work when you were running?

A. I did in my own particular line.

Q. As good as they did?

A. I did in my particular line; I was merely in the planing-mill business.

Q. You had to have your lumber planed?

A. Yes, but it makes a great deal of difference whether I am merely planing lumber or making fine moldings.

Q. Have you had any conversation with them or either of them

lately about their business?

A. Nothing more than in a general way, as I may have with any

competitor in business.

Q. Have you any idea from what you have heard from them what business they intend to go into?

A. No, sir.

Q. You know they are going to give this up?

A. Well, I don't know it, but I know if I was there I would.

Q. Do you know that they are going to?

A. No. sir.

2188

- Q. They have not told you that they are going to quit? A. No, sir, they have never indicated that fact to me.
- Q. They are still planing down there and making moldings?

A. I think they are on short time.

Q. Didn't you see some very fine work in there?

- A. As far as the machine work is concerned I saw some very nice work.
- Q. Didn't the Backuses in going through there, show you some very fine moldings and hardwood?

A. They showed me some patterns they were making.

Q. That is fine work, is it?
A. Yes, sir.
Q. They did manage to squeeze that out in spite of this track in front?

A. It would be very singular if they could not do a little; it would be very singular, indeed, if they could not do some little; it is certain almost that they can get out some pieces that are not defective, but there are so many pieces that will be defective, that it will take the profit entirely off.

Q. And they cannot compete with other institutions?

A. I think not.

Q. Then they are going to quit, or else fail?

A. I have not said that.

Q. Well, it follows, does it not, from what you say?

A. No, sir.

Q. They cannot compete?

A. A man may have means enough so that he will not fail.

Q. If he keeps it up long enough he will fail?

A. He will certainly fail as far as profits are concerned.

Q. You say that property is worth \$450 a foot?

- A. I think I made that valuation at one time.
- Q. When was that?
- A. Two or three or four years ago.
 - Q. What is it worth now?
- 2189 A. As I said in my testimony, I have paid very little attention to it.
 - Q. You say it is not worth anything?
 - A. No, sir.
- Q. You say you would not take it as a gift? You think it has no value; it is not worth anything?
 - A. For that business it is not worth anything.

 Q. In your judgment it is not worth anything?
- A. It is not worth anything to me. I would not take it as a gift and run a planing-mill business there.
 - Q. Would you run a planing-mill business anywhere?
 - A. Well, I quit for good reasons.
 - Q. You had a mill somewhere in that vicinity?
 - A. No, sir, I had a yard.
 - Q. Where was that?
 - A. On Fort street, directly opposite their warehouse.
 - Q. You sold that?
 - A. Yes, sir.
 - Q. What did you get for that?
 - A. I got over \$30,000 for it.
 - Q. How much was there of it?
 - A. One hundred feet.
 - Q. How much over \$30,000?
 - A. Well, I got over \$30,000.
 - Q. \$75,000 is over \$30,000—how much?
 - A. I got over \$30,000.
 - Q. That is as near as you care to answer?
 - A. That is as near as I care to answer.
- Q. Why? Are you afraid it will criminate you to tell how much you got for it, or is there some reason you do not want to tell?
 - A. That is as near as I care to answer.
 - Q. You got over \$3,000 a foot?
 - A. No, sir.
 - Q. Oh, no, \$300 a foot?
- 2190 Col. ATKINSON: Where was that?
- A. Directly opposite their warehouse, on Fort street, running back to the River road.
 - Q. From Fort to the River road?
 - A. Yes, sir.
 - Q. How many feet was that?
 - A. 400 feet deep.
 - Q. 100 feet front and 100 feet on the River road?
 - A. Yes, sir.
 - Q. Running the entire depth, 400 feet?
 - A. Yes, sir.
 - Q. And you got over \$30,000?
 - A. Yes, sir.

2191

Q. Did you get \$35,000?

A. That is as near as I care to answer.

Q. Why?

A. I have a reason for not answering it. Q. Don't you know at all what that is?

A. I think it is not necessary.

Q. Well, it would be quite convenient if we knew. We are trying to find out what property is worth down there.

Col. ATKINSON: Why do you want to know?

Mr. Robison: To find out what property is worth down there. Col. Atkinson: You are funny fellows; been down there so long and haven't found that out yet.

Q. He says he knows what it used to be worth. It was not very much over \$30,000, was it?

A. It was so much that it was an object to me.

Q. Do you think it was worth more than \$30,000?

A. Yes, I certainly do.

Q. Do you think it was worth \$40,000?

A. Well, we did not get just all we thought it was worth.

Q. Then you didn't get \$40,000?

A. We will leave that for you to judge.

Q. Where were you engaged in running a planing mill?

A. On Twenty-fourth street and the Michigan Central railroad.

Q. Anywhere else?

A. That is the only planing mill I ever owned. I was engaged with and helped to build the planing mill of D. A. Ross & Co. on Franklin street east and Rivard and managed it for a number of years.

Q. You say that on cloudy days, or I suppose wet days (it depends on the condition of the atmosphere) the smoke settles down?

A. Yes, sir.

Q. And you have gone by on what street when you saw this mill enveloped in smoke?

A. I don't know as I said I saw it enveloped in smoke.

Q. I understood you to say so, what did you say?

A. I said, and it must naturally do it, that it was darkened with smoke. I was not in it on these days, I was along the street.

Q. The smoke settled right down on the mill?

A. It settled down, it did not raise as it does on a clear day; I

suppose we all understand that.

Q. What you wish to be understood is that in certain conditions of the atmosphere the smoke from this railroad settled right down on the mill and went into the mill?

A. It will darken the mill more than it will on a bright day.

Q. It goes into the mill? A. Yes, certainly it will.

Q. What street were you on when you noticed that?

A. On the River road.

Q. This was when the smoke would fall down from this elevated road. Is that recently?

2192 A. I have driven along there quite recently.

Q. You have been up and down by this mill a great many times before this elevated road was up there at all?

A. Yes, sir.

Q. You know the location of it?

A. Yes, sir.

Q. How far is it from there to the Michigan Central railroad, the main line?

A. I think on the River road, from the corner of the mill proper, the brick building, I would say 100 to 125 feet.

Q. How many tracks are there over there?

A. I should think they number about nine. There are quite a number of tracks.

Mr. BAKER: Thirteen.

- A. I am not positive about that. I know there are a number of tracks.
- Q. There are ten times as n: v trains cross over there as there are on this elevated road, in you udgment?

A. Ten times as big.

Q. I know it is big, but that is a big railroad.

A. They can hardly be doing ten times the business of the other four or five roads.

Q. There are two of them pretty small roads. There are only three tracks on this elevated railroad?

A. Three.

Q. There are a great many more trains pass in and out of there every day on the Michigan Central?

A. Yes, I think there is more business.

Q. And on one of those damp, wet days, didn't you see the smoke from one of those engines kind of settle down?

A. Not to any extent.

Q. Does the Wabash and Union Depot Company burn a different kind of coal from these other roads?

2193 Col. ATKINSON: They are on the windward side.

A. I think the effect has a great deal to do with that, which way the wind is blowing.

Q. Here is the Wabash road right in front of the Backus mill?

A. Yes, sir.

Q. Then over there across the street are these other roads, a lot of tracks over there?

A. There are some tracks, but no trains-store tracks.

Q. Engines run up and down there?

A. Very seldom. They run past back of the mill; they will back in there with a large number of cars; a train will fill up those tracks.

Q. This smoke, then, only settles with a southwest wind?

A. It will settle more; that is, we have more winds from the south.

Q. Once in a great while we certainly have a north wind, and an east wind?

A. Yes, sir.

Q. How is it the smoke will not settle with that kind of a wind?

A. It will settle.

Q. Didn't it used to settle from the Michigan Central? A. It was down near the ground then; it didn't settle. Q. It would just fall down and bank up against the fence.

A. From an elevation of 20 feet I think it will darken more than when the tracks are below the grade, below the Backus mill on the Michigan Central, while they are away above on the elevated.

Q. Then it would rise when it was a clear day, the smoke would

rise and darken Backus' mill, wouldn't it?

A. It would darken it, but the light that Backus has and has always had has been from the River Street front.

Q. How deep is the mill, do you think?

A. I have never measured it, but I should say 100 feet or perhaps more.

Q. He don't depend on his light from the back end of the mill,

the north end of the mill?

A. The machinery was nearer to the River Street front.

Q. Did you notice that very fine emery-grinding machine that sharpens the saws?

A. Yes, sir.
Q. That is up to the north end, isn't it?
A. The one I noticed particularly was not at the north end, was at the west side over in the engine-room.

Q. Didn't you ever think it peculiar that no smoke ever darkens

Backus' place except this from the Wabash road?

A. If there is only one side of a house or building to get light from, on the other three sides of the building the smoke will not darken very much. And there is no smoke from the Michigan Central worth speaking of on the River Street front. There occasionally may be a little from shunting cars on the Michigan Central tracks, just across the tracks.

Q. No cinders come from that?

A. I would not say that.

Q. No coal dust?

A. I won't say that.

Q. No soot?

A. I won't say that.

Q. This soot you saw on these trucks, that all come from the union depot company?

A. I did not watch to see it fall down, but I should judge so.

Q. You did not get covered when you went along there? A. It is impossible to travel along the River road there 2195under the road or on the bridge without having yourself covered with soot and cinders to a certain extent.

Q. Did you ever have an office downtown here?

A. Yes, in the Moffat block.

Q. Did you ever get your desk covered with soot in there?

A. No, sir.

Q. Never noticed it at all?

A. No, sir, I didn't.

Q. I think I will get you an office.

A. You might get part of the Preston Bank building now, it is a very good office, part of their office.

Mr. Dickinson: It could not have been very near the old Tribune building.

Q. How far from the railroad was your planing mill that you helped put up, Ross'?

A. That was very close to the railroad. Q. Did you do any fine work there?

A. Nothing very fine, just the planing of lumber.

Q. You did nothing there but planing?

A. Nothing but planing. Q. No molding machines?

A. No, sir.

Q. You kept lumber clean there, didn't you? A. Yes, tried to make it the best we could.

Q. Didn't the smoke and cinders come in there from the running

of trains by, and interfere with your work?

A. Not very much, from the fact that we had all our lumber on the side farthest from the railroad and the machines were situated on that side. It was only a one-story building, and we had light from that side.

Q. You had no openings toward the railroad?

A. Yes, we had openings; there were iron doors there and they were only open a part of the time. The lumber came in and the work was done on the other side of the mill.

Q. You put up a factory of your own?

A. Yes, on Twenty-fourth street and the Michigan Central.

Q. How near the railroad? A. Very near to the railroad. Q. Right on the railroad?

A. One corner came almost to the railroad.

Q. What became of it?

A. We took down the machinery and moved it to Tonawanda.

Q. Because the railroad interfered with the business?

A. No. sir.

Q. You could run one next to the Michigan Central all right?

A. Yes, sir. Q. You could run one next to the Grand Trunk or the Milwaukee?

A. Yes, sir.

Q. But as quick as one goes up on the union depot line it de-

stroys the business; that is about the way it is?

A. No, sir, the railroad has nothing whatever to do with it, but the location of the mill; and the road has a great deal to do with it; but in my own case, on Twenty-fourth street, all the work was done away from the railroad on the side from the railroad, 100 feet or more from the track.

Q. The smoke and cinders, when the wind is right, will blow that

way, won't they?

163 - 55

A. We happen to be on the side the wind was blowing-

Q. The wind don't blow from the west all the time. You used to shut down, I suppose, when the wind would blow from the north and east?

2197 A. If you are giving the testimony, all right.

Col. ATKINSON: You don't depend on the east for your light?

A. We depended on the west for our light in my own planing mill, and the work was done there. We might have a dark shed next to the railroad a great part of the time and only open when actually necessary. The location of the road has nothing whatever to do with the value of it.

Q. You say this machinery is of an extraordinary quality that is

in there?

A. I say it is right good machinery.

Q. There is nothing peculiar about it, however, that makes it of

great value?

A. Yes, there is. We may buy a cheap machine or a good machine, and I think every machine I have seen in the Backus property is a good machine. They are of the highest order of planingmill property; the whole mill is.

Q. Worth more than they would be new?

A. A great many of them are worth more to a mill having them properly set up and properly adjusted than they were when they were put in there. I think I examined the machines quite carefully, and I think every machine is in proper condition as far as I could see.

Q. But you say if he would have to stop now the machinery would

be worth nothing, that is, comparatively nothing?

A. Any planing-mill man knows that second-hand machinery, taken out of a planing mill and offered for sale, is not sold at a high

Col. Atkinson: And I suppose any machinery taken out would

be considered second-hand?

A. Yes, sir.

Q. Even though it was as good as new?

A. And then, too, the demand for that is only limited and it may be a long, long time before we would find a customer. Mr. BAKER: I thought the longer they are used the better they were?

Col. ATKINSON: They are if you leave them right there, as long

as they are kept good.

Mr. BAKER: You got about \$300 a foot, figuring both frontages, that is, you had 100 feet on River street and 100 feet on Fort street? A. Yes, sir.

Q. That would make 200 feet of frontage altogether?

A. Yes, sir.

Col. ATKINSON: Was there an alley between?

A. No alley.

Q. You used it all the way through for a lumber yard, didn't you?

A. Yes, sir.

O. 100 by 400 feet is not a very big lumber yard?

A. We had other property adjoining it, it was a very small lumber yard, we had a larger piece alongside of it.

Q. Was that planing mill you had on Twenty-fourth street near

the Detroit, Lansing & Northern road?

A. The Detroit, Lansing & Northern came in over the Michigan Central tracks at that time.

Q. Your planing mill was right between those roads, was it not?
A. No, sir. The Detroit, Lansing & Northern road came in over

the Michigan Central tracks.

Q. Were there not two railroads, one on each side of your planing mill?

A. No, sir.

Q. Wasn't there a side track on one side and a main road on the other?

A. No, sir.

2199 Q. Did you build that there?

A. Yes, sir.

Q. What did you build it on the Michigan Central for?

A. To have the advantages of the railroad.

Q. The advantages of the railroad?

A. Yes, sir.

Col. ATKINSON: Which side of the Michigan Central was that on?

A. On the south side.

Q. And you did your work on the opposite side?

A. No, sir, we did our work as well on the south side of the mill.

Mr. Baker: I suppose you got rich there and went out of the business?

A. I would have liked to.

Adjourned until next day at 9.30 a. m.

THURSDAY, October 26, 1893-9.30 a. m.

FRED. A. BAKER, sworn on behalf of the respondents.

Examined by Mr. Dickinson:

Q. I noticed in your cross-examination of Mr. Robinson yesterday, you asked him if he didn't know that this structure, the union depot Co. structure, and the trains passing the stove-works, that notwithstanding that they had increased their works recently; do you not know that before the union depot structure was contemplated the stove-works had bought the property for the increase, and bought the buildings?

A. I don't remember, Mr. Dickinson, whether they had purchased the property before the union depot enterprise was started or not, but about that time they purchased the property, and after the union depot was planned, and after it was well known, they proceeded to enlarge their plant, and have built a very large molding-

room.

2200 Q. They extended their whole plant through to Fort

A. Yes, sir, all the way through to Fort street.

Q. Even with the lot, the same width on Fort street as on River street?

A. I am not entirely certain, Mr. Dickinson, whether they have got the corner or not on Fort street, but they got all the River Street front, and they bought it after the union depot plan was started.

Q. You asked him if he didn't know that their structure passed by their front; will you please tell the jury what the union depot Co. paid them for taking possession of their front, and passing by on this railroad?

A. As counsel in that case I desire to take the formal objection that unless all those awards are to go in evidence, I do not wish to

answer-the question.

Q. I never did think it competent to go into those cases, but I call this out because he makes the statement to the jury in his particular style of cross-examination, as, "Don't you know that the stove-works increased their plant recently," etc. That would give the impression with the jury that they passed by there with impunity, without paying for it. That is the only object I have in the question, to remove any such impression left with the jury, and I ask the question, if he knows-he does know, because I think he paid the money-how much the union depot Co. paid them for taking possession of their front?

Mr. Robison: Mr. Robinson testified yesterday that this property was absolutely of no use whatever for manufacturing purposes because of the railroad going by there, and all Mr. Baker asked him was if he didn't know that other property in that neighborhood, that the railroad went by just as it did this, that in spite of the railroad going by, they had increased their facilities and enlarged their

plant.

2201 Mr. Dickinson: When we come to the difference in plants we will discuss the difference in the damage, but so far as the point is concerned that the impression should rest upon the minds of the jury by this matter interjected by Mr. Baker, that we have passed by there without paying for the right to take possession of the street, I think I am entitled to show.

The Court: There is a question in my mind as to wheti er this testimony is relevant or not, but I do not think the nature of this inquiry is such that any strict rule ought to be applied. I think there ought to be exceeding liberality in the introduction of this testimony under those circumstances. I will admit the question.

Mr. Dickinson: Very well, what did you pay for it?

A. We paid the award of a jury-

Mr. Robison: Wait a minute. Was there a jury award in that case?

A. Yes, sir.

Mr. Robison: Then I object to it on that ground.

WITNESS: There is no need of making that objection, because a

jury rendered the award. In that case my recollection is \$49,800, but it might have been \$48,900. It was just under \$50,000, and the company paid it and took an appeal to the supreme court, just as they did in the Backus case, and the appeal in the supreme court has never been disposed of.

Mr. Robison: Is it on the docket?

A. No, sir.

Mr. Dickinson: You also asked the same kind of question, and I shall confine myself to that, as to the passing the property in front of the Diamond Match Company. Do you remember the width of the property of the Diamond Match Company on River street?

A. I do not know. I don't remember the street, but it must be Tenth street—in the vicinity of Tenth street—that is the frontage of the old Richardson Match Company is on a street that runs north and south. They have a long frontage that runs to the Union mills, now occupied by F. L. Kidder.

Q. One long frontage?

A. Yes, sir, it is quite a long frontage; it is the length of a lot.
Q. And between it and the superstructure I think there is a side track from the Michigan Central there?

A. Either between it and the superstructure or right along the

superstructure; right under the superstructure is a side track.

Q. What did you pay the Diamond Match Company for the

privilege of passing?

A. Mr. Joy settled with the Diamond Match Company, and I

A. Mr. Joy settled with the Diamond Match Company, and I don't know what they did pay.

Q. Didn't you hear that it was \$25,000?

A. No, no. I probably knew at the time, but I don't recollect it now. I don't think it was as much as that. But Mr. Joy will know exactly.

Q. Very well. I have no further questions. I desired simply to counteract any impression by the peculiar way you put the ques-

tions vesterday.

A. All I called attention to, Mr. Dickinson, was the fact that they did go on and make these improvements. Now, I know nothing about the improvements of the Diamond Match Company, as—

Q. You know I was counsel for the Diamond Match Company?
A. Yes, you acted for the Diamond Match Company, and those improvements are there, and that is all I called attention to in the question.

2203 E. L. Thompson, after being duly sworn on behalf of the respondents, testified as follows:

Examined by Mr. Dickinson:

Q. Where do you live?

A. In the city of Detroit.

Q. How long have you lived here?

A. Since 1881.

Q. What is your business?

A. Lumber.

Q. How long have you lived in the State of Michigan?

A. Since 1866.

Q. What branches of the lumber business have you been engaged in?

A. Manufacturing, logging and selling.

Q. Manufacturing?

A. Yes, sir.

Q. In how many branches of manufacturing? Give us some idea of the branches of the lumbering business in which you have been engaged?

A. We take the trees from the woods to the saw mill and manufacture the lumber, dry the lumber, dress it, make sash and doors,

packing-boxes, molding, etc.

Q. Fine molding, and you have a planing mill and all that?

A. Yes, sir; in pine.

Q. You are familiar with the planing business?

A. Yes, sir.

Q. You have a planing mill?

A. Yes, sir.

Q. Whereabouts is that situated?

A. On the river Rouge in the suburbs of Detroit.

Q. Whereabouts on the river Rouge?

A. Just immediately beyond the village of Delray.

Q. And you make in that planing mill dressed lumber of all kinds?

2204 A. Yes, sir.

Q. Moldings?

A. Yes, sir.

Q. Where is it situated with reference to the railroad?

- A. The railroad passes alongside of it, a spur of the Michigan Central.
 - Q. The spur you use for a side track for your business?
 A. Yes, sir.

Q. How far is it from the main track of the Michigan Central?

A. Perhaps one-third of a mile.

Q. Do you know Mr. Backus' property?

A. Well, in a general way.

Q. You know where it is situated?

A. Yes, sir. Q. You have seen it?

A. Yes, sir.

Q. You have been in it?

A. Yes, sir.

Q. You know his yard?

A. Yes, sir.

Q. You know his storehouse? A. I know where it is situated.

Q. You know generally his business?

A. Inasmuch as a passing knowledge would be

Q. Besides you have been in the mill? A. I have been in the mill twice, I think.

Q. What would you say as to the character of the mill, as to its being a fine mill or otherwise? Give the jury some impression of your knowledge of planing mills, and the business?

A. I should say it was well constructed, a substantial and well-

equipped plant.

Q. In your business I suppose you do nothing in hard woods?

A. No, sir. Q. Yours is all soft wood?

A. Yes, sir.

2205

- Q. You know Backus works in all kinds of hard wood as well as soft?
- A. I have so understood. I don't know of my own knowledge. Q. You know the situation of the property with reference to the Michigan Central, do you not?

A. Yes, sir.

Q. The facilities there?

A. Yes, sir.

Q. You know its situation in the rear?
A. That is, the River Street side, do you mean?

Q. No, I mean the Fort Street side.

A. The factory proper does not reach Fort street.
Q. You know that practically it has two ground floors in the situation there?

A. Yes, sir. Q. Now, in the planing mill, what have you to say as to the need of a steady light in fine work?

A. It is very essential.

Q. You say it is very essential?

A. Yes, sir.

Q. Not merely convenient, it is absolutely essential? A. It is essential, and I would add also an ample light.

Q. Ample light?

A. Yes, sir. Q. Why is this required? A. From the nature of the work. The manufacture must be well done or it is not satisfactory.

Q. What have you to say as to its being necessary to have a

steady light in this contant work on the machines?

A. Well, I don't know as I would say a steady light is so essential in prosecuting the work of dressing lumber, but in adjusting a machine or putting it in condition to perform its work satisfactorily, it is certainly essential that a steady light be had.

Q. The machine is adjusted to the work in hand from time to

time all through the day?

A. It should be.

Q. Suppose there is a fault in the adjustment of the machine, even a delicate fault, upon fine molding, what effect would it have?

A. If there were nicks in the knives it would make the molding unmarketable. If the cylinder, for instance, was unbalanced, it would make a sort of corrugated surface that would make it unmarketable.

Q. Worthless for the purpose for which it was manufactured?

A. It would be. It might be revoked, perhaps, and then made some use of, but of course that would involve extra expense.

Q. Suppose any impurity like a cinder or foreign substance gets on the wood where the knives or tools cut it in the machine, what

effect would that have?

- A. Well, anything that lies on the surface of the wood is not apt to get in the knife from the rotation, but on the end of a piece of wood where the cinder or gravel or anything of that sort is attached, it nicks the knives and thus renders them unfit for their work.
- Q. Wherever a planing mill is, it is very necessary to keep everything clean?

A. It is to do good work.

Q. Suppose a piece has a flaw upon it, or mark upon it, does it detroy its market value at the full price?

A. It does.

Q. Even if it does not interfere with its utility?

A. Yes, sir.

Q. I suppose you could put up a molding around here with 2207 all the flaws in it, it would serve the purpose of a molding

just as well, but it would impair its value?

- A. Oh, yes, certainly; perhaps some person who was not so fastidious would buy it because it was cheap, but in the market it would be known as a cull.
- Q. And there are a great many small knives and tools around one of these fine planing machines?

A. Yes, sir.

Q. I suppose one of these fine tools that is kept continuously working all the day, is liable to do a great deal of damage, if the smallest tools get out of order?

A. Yes, sir; if it is neglected.

Q. The edges of the tool is very fine? A. They should be to do their work.

Q. To do proper work they have to be very fine?

A. Yes, sir. I would say I have very little experience in hard wood. I am speaking of the soft woods.

Q. Well, in hard woods, too, it would have to be much cleaner than in fine?

A. Yes, sir.

Q. Do you think there is a sharp competition in the markets of the United States in the planing-mill business?

A. There is.

Q. In what does success consist in the planing-mill business, in

the present state of competition?

A. That is rather a difficult question to answer. The conditions are so various, and there are so many elements entering into it, that it would be hard to give a direct answer.

Q. It is necessary to save everything and exercise the utmost economy, and to do good work?

A. Yes, sir.

Q. The man that does not do perfect work falls behind?

A. That would help to put him in the rear.

Q. I suppose it is more difficult to make what is known as first-class material than the coarser grades, is it not?

A. Well, in respect to their manufacture, the dressing and the

finishing?

Q. The product.

A. The quality depends upon the character of the stock used largely.

Q. But the output, I suppose the highest profits are made upon

the finest work, the fancy work, is it not?

A. Yes, sir, there is a larger allowance made for what it technically

known as machine-work in that class-

Q. And upon the fancy goods that are made in such mills, what have you to say as to its being saleable as first class if there is a defect caused by a defective tool or discoloration?

A. It would be rejected and classed as culls.

Q. What is the difference then in first-class work in the market

value of culls, and first-class materials?

A. In one case the first-class material would afford a good profit, and the other would mean a loss, not only on the labor, all the labor, but a considerable portion of the value of the material which entered into the article.

Q. Is it a part of the business, an art of the trade, to keep this

product clean?

A. Yes, sir.

Q. Any flaw or dirt upon it, or discoloring or marking it throws it out as first-class material?

A. It renders it generally unsatisfactory.

Q. And it impairs not only the value of the product itself, but the good will of the concern?

A. Yes, sir, it would be injurious in its effect.

Q. Now, in these planing mills, I suppose there is ordinarily, after the lumber is dressed, there is no provision made inside of the mill itself for storing the product, is there?

2209 A. That depends upon the concern. You might in an adjoining building, immediately attached, or somewhat de-

tached. There are various ways of doing that.

Q. There is no place in the mill itself?

A. Only for temporary storage.

Q. And where in the planing mill is the storage usually made of the finished product?

A. That would vary with the different plants.

Q. But it is not stored in the mill?

A. No, sir.

Q. There is some other arrangements made for storing outside of the mill?

A. Yes, sir, either in a building adjoining it, or remote, according to circumstances.

Q. I suppose you store this fine-dressed lumber outside of your

mill where you are, don't you?

A. No, sir; we have a long shed adjoining immediately to the right that we store it in.

Q. Do you know anything of the character of the dust that is

formed from a planing mill?

A. I know that it is very objectionable both in the mill and elsewhere, and it is dangerous.

Q. It is dangerous. Why is it dangerous?

A. From its combustibility and the danger of explosion.

Q. It is known to be as explosive as gunpowder?

A. I believe it is. I have never had an explosion. I have seen places where it did explode and did a very great deal of harm.

Q. Is it a part of the business to keep a storehouse away from

where the dust flies?

A. Yes, sir.

Q. That is a well-settled rule of planing mills?

A. As far as my experience is concerned it is invariable.

Q. Now, in working up the finer material in a mill, do you have it dry?

A. Yes, sir, it must be.

Q. It is to be not only seasoned, but dry?

A. It is essential to perfect finish that the lumber be thoroughly dry.

Q. And that makes the finest dust known?

A. Yes, sir, and on a day like this should it rain two or three hours continuously, the lumber will absorb the moisture so that it will not dress smooth.

Q. So it is absolutely essential to have everything dry?

A. Thoroughly dry.

Q. Do you know the Backus plant pretty well? Do you know the Backus plant relative to the superstructure and the elevated trains that go by there?

A. Yes, sir, I have recently visited it with a view of seeing it, and right after it was started I was there once. Before the building of

the viaduct I was there once.

Q. And knowing the character of the business there, what have you to say as to the effect of that superstructure with the locomotives, say from 50 to 150 per day passing there with trains of various kinds upon this elevated superstructure, upon the business of that planing mill? Also include in your view of it the effect of the superstructure upon the property as well as the passing trains.

A. Well, the cinders and dust due to the passing of the trains is very objectionable. I don't know that the noise would have any special effect one way or the other, but as a general statement I would say it was a serious annoyance to the business and an injury.

Q. An injury to the business?

A. Yes, sir.

Q. Have you been in there sufficiently so you can of your own observation say what the effect of passing trains is?

A. Well, I think there were two trains passed while I was in there. There was a jar, a vibration due to the passing of the trains, but I didn't see any black smoke. But I guess the engine was shut off as it went by.

Q. Did you see any effect upon the light?

A. At the time the trains passed I was not there—yes, I did too. I remember when the second train passed I was in the yards down on the River Street side and it did obscure the light. When the first train passed I was on the top floor and I did not observe any obstruction of the light.

Q. What effect do you think the steam exhaust as it pours out on an incoming train or an outgoing train would have upon the mill?

The steam itself we will say, regardless of smoke?

A. If the windows were open on that side it would be an annoynce.

Q. You cannot possibly get along in a planing mill in the summer time without having the windows open?

A. No, I should think not.

Q. You would have to have the windows open to let the dust

through?

A. I would hardly think it would be necessary to have the windows open for that purpose. There are conduits that carry the dust away, and the windows are not opened for that purpose.

Q. But the windows are made for air as well as light?

A. Yes, sir, for the convenience of the employés.

Q. And that is why all factories of this kind are made with a great many windows, is it not, for the air as well as for the light?

A. Yes, sir.

Q. What do you say as to the effect upon fine work in a mill of flickering lights, as might come from the passing of

trains, and from the consequent smoke and steam?

A. Having had no experience I could not say from practical knowledge. I should regard it as a general objection. It would interfere with close observation of the character of the work being performed.

Q. The machines move constantly; they go on forever during the

day? Without cessation?

A. Well, that depends upon their condition. The man who operates a machine is supposed to carefully watch his production,

every time, to see that there are no errors or faults in it.

Q. What do you say as to the passing of material underneath this structure where there are no fans or other arrangements made to catch the drift of the soot and the coal, and the oil, the grease that

comes from the passing trains?

A. I really have no experience, no knowledge of that. I should think as a general proposition, if you simply want an opinion, that if the lumber was simply hauled tra-versely through, there would be a remote chance of injuring the lumber, but hauling it lengthwise it would get more or less grime on the top tier of the boards.

Q. Would that injure it?

A. It might.

Q. If it discolored it, it would injure it?

A. If the lumber was afterwards to be dressed, it would remove that soiling.

Q. Suppose it was dressed material?A. It would certainly injure it.

Q. From your knowledge of the planing-mill business, and your opinion as a planing-mill man, knowing the situation there of these passing trains, and the superstructure there, would a planing-mill man take such a plant as an eligible planing-mill site?

A. There would have to be other specially strong inducements to warrant him doing so. It might be a strategic location for trade that would warrant him in prosecuting his business even under the disadvantages of surroundings. On the other hand if a man was carrying on a retail trade, I would not think he would have that place under any conditions.

Q. Do you know anything about the extent of Mr. Backus' retail

trade prior to the building of this elevated road?

A. I do not.

Q. If you wanted a planing-mill site, would you select such a site as this?

A. I would not.

Q. Would you have it at all for your investment?

A. No, sir, not at all for our investment.

Q. You have a large retail trade in your planing mill?

A. Yes, sir.

Q. You depend upon it largely?

A. It is quite a feature of the business.

Q. Retail trade with Detroit?

A. Yes, sir.

Q. What do you say, without the elevated railroad running by there, as to the eligibility of Mr. Backus' site for the Detroit trade—without the superstructure?

A. It would be very much more accessible.

Q. Is there any other site as valuable, to your knowledge, as that was prior to the building of the superstructure, with two ground floors, and its proximity to the center of the city and trade?

A. It had large advantages due to those conditions.

Q. And in the trade was reputed to be a very successful concern, was it not?

A. I believe so.

Q. Did you know the plant was conveniently located with reference to its lumber yard and storehouse?

A. Yes, sir, I think it was.

Q. A very eligible situation?

A. Yes, sir.

Q. Now, as a planing-mill site, whatever the value of the property, whatever it is, without asking you the value, because I am not informed you are advised as to that—taking the plant as it was and as you know it, situated as it was with the railroad facilities

furnished by the Michigan Central, the proximity to the center of the city, its relation to its lumber yard and to its storehouse, the character of the mill, and the character of its products, and the situation generally as it was before the building of this superstructure and the passing of the union depot trains, what in your judgment is that impairment of the value of the plant in percentage? I do not ask the value of the plant, but what in your judgment is the impairment of the value of the property the plant, with this superstructure and these trains passing over there? You are quite aware, too, there is a grade in front of the Backus property, as there is none above there. It is level above there, but directly in front of the Backus property there is a grade of 20 feet to the mile, and down to Twelfth street there is a grade of 12 feet per mile. And in front of the Backus property there are three switches permanently therethere to stay.

A. I would like to qualify my answer to that question. I would say that the value for the business, as it is now situated, would be in my judgment from 30 to 40 per cent. less than it was before. That is due to the separation of the yard and shed. The impairment is not as great as it would be if those were adjacent to the

planing mill. In other words, if their storehouse was immediately adjoining them on the west, for instance, I think it 2215

would be larger.

Q. Taking into consideration the very narrow margins in planingmill work and the large volume of business to be done, and taking into consideration the fact that on the finest work the profit is larger, don't you think the impairment of 30 or 40 per cent. would make out of what was a successful business a losing one?

A. It would be very liable to.

Q. The impairment of 30 or 40 per cent. would be very liable to ruin it?

A. Yes, sir, it would.

Cross-examination.

By Mr. Robison:

Q. It is usually considered, is it not, that there is a very close competition in this kind of business?

A. Yes, sir.

Q. The margin of profit is not very great, is it?

A. Let me understand your question. Do you mean a jobbing shop, a shop that dresses lumber by the thousand for somebody?

Q. I mean in the business Mr. Backus is doing, and other people in the city doing in the same kind of business, the profit is not very great is it?

A. It is not on the dressing of lumber. However, with a retail trade, the dressing business is an incident, the same as the team-

Q. There is a close competition generally in the lumber business of all kinds, is there not?

A. Yes, sir.

Q. Both in undressed and dressed lumber?

A. Yes, sir, there is.

- Q. You do about the same kind of work in your mill that Mr. Backus does?
- 2216 A. I don't know as we do as fine work. I am not sufficiently familiar with the details-

Q. What fine work does he do that you do not do?

A. I understand they manufacture largely the hard woods.

Q. Don't you do just as good work as he does in the soft woods?

A. Yes, sir, I presume we do.

Q. You have a sale for your stuff in the city? A. Yes, sir.

Q. And you do see in competition with Mr. Backus?

A. Undoubtedly.

Q. And you admit, don't you, that you make just as good moldings?

A. We make moldings that are satisfactory to the trade.

Q. You think just as good as his?

A. I have no reason to doubt it, although I have never made a comparison.

Q. You have as good machines?

A. We have as fine machines as can be bought.

Q. Have any of them got the Backus attachment on them?

A. I don't know what the Backus attachment is.

Q. Nobody else does, because they are secret; but has he given any of his attachments to you? Do you know any of his plans for running machines that are secret?

A. No, sir, I do not.

Q. This competition in the business has been close, has it not, for several years?

A. Yes, sir.

Q. According to your judgment then, with the value of this great plant down there depreciated from 30 to 40%, it is impossible for Mr. Backus to do business down there in competition with other places, is it not?

2217 A. I don't know as it has impaired the value to sell-

Q. No, but its value as a plant for the purpose of manufacturing? If it has knocked off 30 or 40% of his facilities for doing business down there, or the value of it as a plant, he can't compete with the rest of you any longer, he has got to move?

A. It is a disadvantage to him undoubtedly.

Q. Ain't you surprised that he continues business there?

A. I would not want to answer that question in the affirmative: if it was my case, I would have ceased doing business there years ago.

Q. You don't know how it does go, only from theory?

A. No, sir.

Q. You would have moved years ago? A. I would, certainly.

Q. Why, this thing has only been up a few months.

A. I would want the yard adjacent to the mill.

Q. Has this running along of the railroad there, made the yard any more inconvenient to the mill?

A. It involves the hauling of the lumber under this viaduct. It

increases the difficulty somewhat.

Q. How?

A. By the frightening of the teams-

(). It does not appear that Backus ever had any teams run away. A. I don't know that he has, but ordinarily it would. I took that

in view in the consideration of my estimation of the depreciation of the property due the viaduct. That is, the teams were obliged to pass back and forth under the viaduct, and it is certainly as hazardous-

O. You are aware there are about 13 tracks in front of the Backus

property?

A. Yes, sir, but he don't have to cross them.

Q. But the engines run along there frightening the horses. 2218 He don't have to cross this elevated road either, and you know there are thirty or forty tracks the other side of it, the main line of the Michigan Central?

A. Yes, sir, they are separated, however, by a high fence that re-

moves the exposure of the teams to fright considerably. Q. It is all theory that Backus' teams are frightened?

A. On my part it is. I never saw a load of lumber go under there

that I recall now, but it is a general proposition.

Q. Then your idea of the value of this place is affected somewhat by the location with reference to the storehouse and the yard, is it not, the yard in particular?

A. The yard particularly.

Q. You don't thing a location of that kind is a good one, anyhow?

A. It would not suit me, I will say.

Q. You want a mill right in connection with your yard, immediately adjacent, to save hauling?

A. Yes, sir.

Q. And in your opinion taking the distance this mill is from the yard and the elevated road all put together makes it worth thirty to forty per cent. less than it would be if it were in the yard and no elevated road? That is what you mean?

A. Well, I took the separation into consideration, as I said before.

Q. In fixing the depreciation 30 to 40 per cent.?

A. Yes, sir.

Q. You don't think the cinders and stuff from the engines going along will hurt the lumber a great deal, do you?

A. I should think it would hurt it a good deal.

Q. Discolor it?

A. Yes, and in addition to discoloring it, if the lumber 2219 were to remain out any length of time, it would get so mixed with the lumber as to impair the cutting, as I said before, it would dull the knives, and cause the lumber to be imperfectly manufactured.

Q. But you must remember this lumber is not sorted on those

premises. There is no storage capacity here. This lumber is up in the yard. Now, no great amount of cinders would get on the lumber drawing it down from Eighteenth street to this mill, would there?

A. Not ordinarily.

Q. You have a storehouse besides your yard, haven't you? A. Well, they are in connection.

Q. Where is that?

- A. On the Rouge. The warehouse is simply an extension of the mill.
 - Q. Yours is the Delta Lumber Company?

A. Yes, sir.

Q. Haven't you a big yard somewhere else?

A. Yes, sir, up Gratiot avenue, but that is exclusively a retail

Q. What do you keep there?
A. Molding of all sorts.

Q. How do you get it from your yard there?

A. Altogether by rail.

Q. Do you have much difficulty with the cinders and soot and dust and one thing and another from the cars getting it from the Rouge?

A. We ship it in box cars altogether.

Q. But where you are loading and unloading it, do you have

much difficulty in keeping it clean?

A. We are fortunately situated. We load our cars inside, in a building, which is entirely shut off from passing trains or anything of that kind.

2220 Q. Where is your yard located with reference to the railroad?

A. It is located directly back of the planing mill.

Q. I mean your retail yard.

A. Oh, the railroad runs 850 feet alongside of it.

Q. Is this lumber you have in there in an absolutely tight building?

A. As to the ra Iroad, yes, sir; that is, the dressed lumber. The coarse lumber, as in all yards, is open.

Q. And the soot and cinders do not seem to affect that coarse lumber, does it?

A. We let it take it anyhow. Q. And you manage to sell it?

A. Yes, sir.

Q. Your dressed lumber is in open sheds?
A. Yes, sir. There is a street there, we will say, (indicating) the sheds are open to the street here and closed on the back, and next to the railroad it is closed, and also next to Beaufait street on the west. It is thoroughly tight.

Q. There are doors there on the side towards the railroad?

A. No, sir, it is absolutely tight.

Q. You run your cars into the yard and unload from the car right into the shed?

A. Yes, sir, the cars do not come down in the yard as far as the shed. They come down within three or four hundred feet and then we take it up on the trucks.

Q. When you are unloading from the cars don't you find a great deal of trouble from the cinders from the engines passing?

A. There are a series of lumber piles intervening which shuts off the soot and cinders to a considerable extent.

Q. You manage to keep them there for that reason?

A. We have so far. 2221

Q. To keep the soot and cinders off?

A. No, sir, we put it there because there is a space there we could occupy, and of course we are glad to have the obstruction as a general preventative.

Q. You have a great many different machines up in your shop

there?

A. Yes, sir, several.

Q. Do you know how many?

A. Well, I could not say offhand; probably 15, may be 20.

Q. Of all kinds?

A. I don't say all kinds. That is a very broad term.

Q. Working every day?

A. Yes, sir.

Q. You have to adjust them frequently during each day?
A. Yes, sir, some of them. Some of them are under adjustment all the time, some one or another.

Q. You have to change them to adjust them to different mould-

A. No, sir, ours is principally for wholesale. We run an adjustment as long as we can. We set a machine up and it is kept on one sort of work for two or three days, and from time to time the knives are sharpened. As they work back continually they get shorter and we have to set them up again, and that is where the finest adjustment comes in, so as to keep the first piece of lumber that is dressed and the last one exactly alike.

Q. How is your light there?

A. It is good.

Q. Don't you find it difficult to set these knives accurately, for instance, where there is a cloud passing over the sun? Don't it throw such a shade in there that you cannot set your knives accurately?

A. No, we have all one side open to daylight. 2222

Q. You don't have to have an absolute clear day in order to set the knives?

A. No, sir.

Mr. Dickinson: Suppose the cloud, instead of passing miles and miles away up in the sky, passed within forty feet of your place?

A. It would doubtless make it dark. Ours is a one-story building, about 16 feet high at the eaves, a little higher than this room, and the whole of one side of the westerly side is glass eight feet wide, the whole of the easterly side is doors about eight feet high opening from the ground up, and above these doors are numerous

165 - 55

windows all along, and in the center are transoms of glass, and that

is five feet high.

Q. A gentleman yesterday who had been down there watching this institution for two or three months and observing the effect of the passing of trains over that viaduct stated that when a train went by it had the same effect as a cloud passing over the sun. A shadow was cast through the building the same as we have all observed, the shadow of a cloud passing over the sun. Now that you say don't have any serious effect down at Delray?

A. It would not at our mill, but I would not like to say what the effect would be there. The conditions are not at all similar between Mr. Backus' and ours because he has light only on the south side, while on the west he is in the dark, and on the east he is in the dark, because he has awnings on the sheds there over the tracks on which

he unloads his cars.

Q. Do you think Mr. Backus could run his mill down there without any great difficulty on days when there were clouds passing over the sun, say a hundred or so a day? Say the viaduct was not there,

do you think it would interfere with his business?

2223 A. No, not sericusly.

Q. Then, if it is a fact that the passing of a train over that viaduct has the same effect on the light in Mr. Backus' mill as the passing of a cloud over the sun, then that would not affect it seriously, would it?

A. It being closer to the building it would impede the light more

than a cloud way up in the air.

Q. That is your opinion?

A. Yes, sir.

Q. But suppose you had been in the mill and stayed there for months and found it had the same effect, then you would not say that the passing of a train over the viaduct would not affect the light in Mr. Backus'.

A. On that supposition I suppose I would not. If that was the experience of this gentleman you speak of. I don't know anything about that myself. The train would certainly darken the

building more than a cloud would.

Cross-examination.

By Mr. BAKER:

Q. Mr. Thompson, one or two questions: How many acres have you in your lumber yard down at Delray?

A. About fourteen acres.

Q. Is your mill on the same fourteen acres?

A. Yes, sir.

Q. That is, your entire plant is about fourteen acres?
A. Yes, sir; the mill is located in one corner. It is not a rectangular piece, it is triangular.

Q. You have the River Rouge on one side?

A. Yes, sir.

Q. And what railroad?

A. A spur of the Michigan Central on the westerly side.

Q. And the Lake Shore?

A. No, just the Michigan Central.

Q. It goes on one side of it? 2224

A. This it the northwest corner, (indicating) the Michigan Central goes in there about 100 feet and turns off. We have our own private track, 1,100 feet, running straight to the River Rouge. Along this side is the River road, so called, and the plant is 800 feet this direction, 1,300 feet on the River Rouge, and 1,100 feet along on the railroad, and only about 100 feet of that is used by the railroad company, the rest is our private track.

Q. There is 100 feet of the main track of the Michigan Central

runs along your plant?

A. Yes, sir-

Q. When did you locate there?

A. About eight years ago. Q. About eight years ago?

A. Yes, sir.

Q. Do you remember what you paid for the land?

A. Yes, sir.

Q. Have you any objection to telling us?

A. I don't know as I have. I paid \$600 an acre for it. That was in an entirely crude state, without any docks or any improvements of any kind.

Q. Was it necessary to locate where you would have railroad

A. There were no railroad facilities there then, but we brought them there.

Q. It was near the railroad?

A. Yes, sir.

Q. And you also have navigation on the Rouge?

A. Yes, sir.

Q. So that vessels can come to your property? A. Yes, sir; there is 16 feet of water there.

Q. You receive by water and by rail?

A. Our receipts are almost wholly by water.

Q. Where from?

A. From Lake Michigan largely.

2225 Q. And your planing mill and storage-room is close to the railroad on this same property?

A. They are immediately adjoining.

Q. Your lumber yard is right close to your mill?

A. Yes, sir, there is 100 feet of clear space maintained from the mill to the lumber; the lumber is around there.

Q. How do you handle your lumber when you feed it to the mill?

A. On two-wheeled trucks.

Q. You don't have to have any team?
A. The trucks are drawn by a horse.

Q. A single horse?

A. Yes, sir.

Q. Low trucks?

A. The wheels are about three feet high.

Q. How many thousand feet can you put on a truck?

A. Oh, I think our loads are from ten to twelve feet high; probably 1,200 feet.

Q. Are the trucks level?

A. They are simply two wheels with a little frame about three feet wide and four feet long; and then we have what the boys call a Morman hitched to the horse with a tongue. They go and hitch that to a single pair of wheels and tip the load down on the forward track, and he draws it in that way.

Q. You have a large number of these trucks, because your lum-

ber is fed right from the trucks?

A. Yes, sir.

Q. You don't dump the truck? A. No, sir.

- Q. You bring this truck up there and they feed right from that truck?
- A. Yes, sir. We load cars or anything else in that way; we use no wagons whatever. 2226

Q. How far do you have to haul? How far away is your farthest pile?

A. We will say 1,400 feet. I would say more than that, perhaps 1,600 feet would be the very remotest.

Q. Do these trucks run on a track? A. No, sir, on a roadway planked.

Q. You plank the alleys? A. Yes, sir.

Q. Yours and Mr. Backus' is among the largest in the city, I suppose?

A. Yes, I guess that would be true.

Q. Where is your principal competitors outside of Detroit?

A. Do you mean as to the disposal of our product?

Q. Yes, sir.

A. The Saginaw Valley, Bay City-

Q. Do you make what is known in the trade as box shooks?

A. We do not.

Q. Mr. Backus does?

A. Yes, sir, I think he does.

Q. A box shook, as I understand it, are simply the boards for a box already to uail together, am I correct?

A. Well, I don't know how Mr. Backus puts them up, but they are generally put in crates or tacks?

Q. Put together as you would sash?

A. Yes, sir, all the ends, for instance, are crated together-

Q. It is customary, is it not, in these factories to make these boards and saw them, and have them so that all the carpenter has to do is to nail them together?

A. Yes, sir.

Q. And you can ship them all over the United States, and do?

A. Yes, sir.

Q. Simply to save space in shipping? 2227

A. Yes, sir. Q. Will you state whether or not they have large institutions of the kind in Bay City and Saginaw?

A. I believe they have.

Q. You are familiar with Saginaw Valley? A. Yes, sir, somewhat.

Q. You buy lumber there? A. Very little.

Q. You get your lumber where?

A. From Lake Michigan largely, our own production. Q. Have they large institutions of this kind in Chicago?

A. Yes, sir.

Q. Where they bring their lumber there and manufacture it up

in substantially the same way?

A. Yes, sir. I would say, however, that Chicago does not export so many box shooks as the cities of the Saginaw valley or those cities situated closer to the forests do

Q. Bay City is remarkably well situated for that business?

A. Yes, sir, and Saginaw also.

Q. They are really your warmest competitors, are they not?

A. Yes, sir; I think they are, so far as we know.

Redirect examination.

By Mr. ATKINSON:

Q. Mr. Thompson, I suppose the supply for Bay City comes largely by boats, does it not?

A. Quite a proportion, I believe, does.

Q. And it comes from substantially the same region as the lumber that comes to Detroit?

A. Yes, sir.

Q. Now, this railroad you speak of running alongside of your plant, is a mere spur for your own convenience, is it not?

A. Yes, sir, it was built originally for us, and afterwards extended to accommodate the Sulphite Fiber Company, the Sutton Manufacturing Company, and the Parker Rendering works.

Q. It is not a road for general travel?

A. No, sir. They visit us twice a day. They come in there in the morning and in the afternoon.

Q. It is practically your own property and subject to your own control?

A. Yes, sir. Mr. Baker: The Michigan Central comes within 100 feet of you? Col. ATKINSON: This 100 feet of the main track, does that run by your windows?

A. It runs by the entrance of our grounds; by our windows on

the storage end of the planing mill.

Q. But not where your machines are and where you are at work?

A. No, sir.

Q. It is on a grade?

A. No, sir, it is level.

Q. It is not an elevated track?

A. No, sir.

Q. And doesn't come up in front of your windows and above them, the same as Mr. Backus'?

A. No, sir, the top of the cars is just about level with the bottom of the windows; perhaps there might be a foot onto the windows.

Q. And in your store-room I suppose the necessity for light is not

so great as in your work-room?

A. No, sir.

Q. You consider it would be a decidedly different thing to have an elevated track built up so as to run close to the windows on the sides where you are working, and with a tremendous number of trains passing constantly by you?

A. I would certainly.

Q. You would consider it as a very much more serious injury,

would you not?

A. Yes, sir, I would like to say that if the trains passed on a level with the bottom part of our windows we would have to put in skylights—we have but one story—because we depend on the light coming from these high windows, and the light comes in on the top of the cars where we are loading our lumber inside of the mill.

Q. If an elevated track of that kind was put immediately in front of your windows, with a large number of trains passing, would you stay there at all and attempt to do a planing-mill business?

A. That would depend again. If I could get a better site I

should not.

Q. You would consider it a bad site?

A. I certainly would consider it a very unfortunate occurrence.

Q. And very injurious?

A. Yes, sir.

Q. Your usual experience teaches you to believe that railroad trains will frighten ordinary horses?

A. Yes, sir, very often.

Q. And would you regard such a place as Backus' with this elevated railroad immediately in front of his River Street front as fit at all for a retail trade of the city where teams of different persons would come down and buy the lumber they wanted?

A. I should not. In fact, I don't believe, sir, there would be a

great many customers that would go down there.

2230 Q. Customers, at least, would be timid about driving their teams in there?

A. They would be.

Q. In prosecuting the business in the retail trade there, would not the noise and other annoyance of the railroad on that side be very great?

A. Well, I think the principal damage would be in frightening

and disquieting teams of the people that came there.

Q. Making it an undesirable place for any one to come to?

A. Yes, sir.

Q. I suppose if a man's team should run away he would go to another place the next time?

A. Undoubtedly.

Q. Now, how do you supply your retail trade in the city from Delray?

A. We haul it. Q. By wagons?

A. Yes, sir.

Q. And about how many loads could be drawn from your place to the center of the city, say in a day?

A. About two.

Q. Now, in that respect, Mr. Backus would have great advantage

in length of hauling, would he not?

A. Yes, sir, and I would say that is the reason we started this yard on Gratiot avenue, so as to get in town. We did a comparatively small trade from Delray. We do not desire to do a retail trade there.

Q. This cartage, when it is of any great length rapidly swallows

up the profits, does it not?

A. Yes, sir, it does.

Q. So it is an advantage to be near the customers or those who consume your goods in the retail trade?

A. It is.

Q. Now, with reference to your lumber yard, you say you pile your lumber right alongside of the railroad track?

A. Yes, sir.

Q. Where is that done?

A. That is done inside of the planing mill on the extension that reaches to the River Rouge.

Q. That is alongside of the spur track?

A. Yes, sir.

Q. Do you mean your lumber piles are piled alongside of the

main track of the railway?

A. No, sir; there is no main track of the railway except this \$000 feet I spoke of which crosses the corner of our property, the other is a private switch of our own.

Q. That is this place where the cars come down twice a day?

A. Yes, sir.

Q. It is not like the main track where trains are passing constantly or anything of that kind?

A. No, sir.

Q. Would you consider it decidedly different if your lumber was placed alongside of the track that four main lines of railway—and liable to be operated upon by dozens and hundreds possibly of railroads in the future as affecting the use of the property?

A. I should use it if I had to.

Q. But you would consider the danger greater and the injury greater?

A. It would be greater and the injury would be more serious.

Q. When you get lumber by rail it is brought in open cars, I suppose; and you find it sometimes covered with dust and cinders?

A. Always in fact.

Q. That is to be swept off?

2232 A. It should be removed with a great deal of care else it will dull the knives.

Q. If it was dressed lumber it would almost spoil it?

A. Yes, sir, if it was fine lumber; if it was sheeting boards it would not make much difference.

Q. Your retail yard in the city, is that located on the railroad?

A. On the belt line.

Q. Not any main line?

A. No, sir.

Q. Located where how many trains pass during the day?

A. About 8 or 10 perhaps.

Q. Not anything like the Michigan Central or the union depot?

A. No, sir.

Q. Those main tracks that Mr. Robison asked you about of the Michigan Central that were near Mr. Backus' place before that time, do you know how his property is situated as to the dust or cinders coming in from the Michigan Central?

A. Only as I have seen it there, he having two tracks between the Michigan Central and his building on which he places the cars into — he puts lumber and having the shed projecting over it, it pretty nearly excludes the cinders and dust.

Q. He is pretty well protected, then?

A. Yes, sir.

Q. What is your experience with prevailing winds—whether they are from the southwest?

A. I should think they would be in the summer season generally

southerly; the winter, generally northerly.

Q. He does not depend for light on the side of the Michigan Central to any extent?

A. Yes, sir, they load their cars there.

2233 Q. I mean in the mill?

A. No, the light is from the south side, the River Street

Q. Then there are skylights in the θ on the Michigan Central side?

A. Yes, sir.

Q. You consider when you say 30 or 40 per cent. damage to this plant, you consider the damage less from the fact that the yards or warehouse are all remote from the mill so as not to be affected by this superstructure?

A. Yes, sir.

Q. But considering Backus' situation, that his lumber yard being so remote is where he is compelled to lay the lumber along under this superstructure. Does it not affect that property of its usefulness?

A. Which property do you allude to?

Q. The two down on the river, it being so situated that he is compelled to bring the lumber to the mill and go along under this

superstructure, is not the value of the lumber affected as well as the mill?

A. It would be for his use; not as a lumber yard.

Q. If it was used separately?

A. Yes, sir.

Q. It would those three properties in combination, they are all affected by this superstructure?

A. They are to a very large extent.

Q. Because you have got to bring the lumber from the yard to the mill along under this superstructure, and then to haul it around by Twelfth street?

A. Yes, but I was not informed as to that.

Q. That is, their mill was so arranged to do that, and that would affect the use of the warehouse, the lumber yard and the use of the mill?

A. Yes, sir, as far as the feature of teaming is concerned.

Q. Now, how long have you known the Backuses? 2234

A. Oh, I guess I have known Mr. Absalom Backus 15

Q. They have all been at work in this business ever since you knew them?

A. Yes, sir.

Q. And devoting themselves to it?

A. Yes, sir.

Q. And having used these three properties so far as you know together, have they not?

A. Yes, sir.

Q. Is a warehouse for overstock a very essential thing in connection with a planing mill?

A. Yes, sir, it is a necessity.

Q. A large concern of that kind could not get along without some such convenience, could they, without a great loss?

A. It would be a great loss to them to be deprived of such facili-

Q. Now, to come to Mr. Robison's astronomy, I suppose clouds differ in density and heavy fogs would almost stop business in a planing mill, would it not?

A. That would depend. If they had a good electric light I guess

they could get along.

Q. I mean stop it, unless there was artificial light?

A. Yes, sir.

Q. Are planing mills often run with electric lights?

A. Yes, sir.

Q. They are fitted up specially with these lights for the purpose of running in dark weather or at night?

A. Yes, sir.

Q. I suppose that is expensive?

A. Certainly.

Q. Have you any idea what it would cost to furnish the Backus establishment with electric lights?

2235 A. No, sir, I have not.

166 - 55

Q. You haven't investigated it?

A. No, sir. We have our mill equipped with electric lights with a cost of about \$600, including the dynamo.

Q. You furnish your own electric light? A. Yes, sir.

Q. That is, the insulation cost about \$600?

A. Yes, sir, cost that to put it in, and I presume it costs us \$50 a year for lamps.

Q. You supply the power? A. Yes, sir, our own power.

Q. Is it an independent engine?

A. It is an engine that drives the fan that circulates the fan in the dry kiln.

Q. Then you utilize some excessive power to furnish the light?
A. Yes, sir.
Q. Which is the best, electric light or natural light for a planing mill?

A. I should prefer the daylight always.

Q. You use the electric light on dark days?

A. Yes, sir.

Q. How many lights do you use?

A. I think we have 80 in the whole plant.

Q. Have you any means of estimating the relative number that would be required in the Backus mill?

A. I have not; no sir.

Recross-examination.

By Mr. BAKER:

Q. Mr. Thompson, you were down there on the Rouge and were down there before you put in the electric light?

A. Yes, sir.

Q. Did you ever have a fog down there that stopped the

2236 A. I don't recall that we ever did.

Q. I suppose in some parts of the ordinary buildings for that purpose it would be necessary at times, late in the day or very early in the morning, to have artificial lights?

A. Yes, sir.

Q. Especially in the winter time when the days are short?

A. I think it is generally the fact that mills of that character operate only about eight hours in the winter unless they are well equipped with artificial lighting.

Q. Unless they are equipped with artificial lighting they have to

cut down to eight-hour time?

A. Yes, sir.

Q. And cost you about \$600 to equip your mill so as to run all night if necessary?

A. Yes, sir.

Q. And you have excess of power enough so the running expense is a very nominal matter?

A. Yes, sir.

O. Now, about this retail trade we have heard so much about. Do you know of any reason why people who go there to purchasethese retail buyers-why they could not use the court, the entrance to which is on Fort street, to the Backus property?

A. I suppose it would involve the elevation of the lumber to that

Q. It would require them to deliver the lumber at that side of the mill instead of the River Street side?

A. Yes, sir.

Q. Do you know to what extent the Michigan Central crossing interferes with his retail trade?

A. I don't. It would be a menace, undoubtedly.

Q. And that is a crossing of thirteen tracks, and the entire traffic of the Michigan Central passes over it?

A. Yes, sir. 2237

Q. That would cut off a retail trade that would come from the East on the River road largely, would it not?

A. It would interfere with it, undoubtedly.

Q. And the only conceivable effect upon this retail trade would be that of changing the point of delivery to it?

A. The suggestion of delivering it in the court would obviate the

necessity of going around this viaduct.

Q. What is the capacity of your planing mill per day; how many

thousand feet of lumber can you cut up?

A. Well, we could not cut up any hundreds of thousands. probably would dress 100,000 feet, as far as matching and surfacing, and so forth, is concerned, but in box shooks we probably could cut up six or seven thousand feet at the outside.

Q. But on the average, take the year through, how many feet of

lumber do you consume a day?

A. Well the word consume don't quite fit. Permit me to say that we don't consume over a million and a half feet of boxes and moldings, to which I take it you allude, in a year.

Q. I want to know about what your annual consumption of lum-

ber is in a year?

A. We handle about 30,000,000. Probably 60 or 70 per cent. passes through the planing mill in some form.

Q. Then you depend largely upon the wholesale trade, don't you?

A. Yes, sir.

Q. How many mills like Backus' would it take in this city to supply the retail trade of the city?

A. I could not answer that question. Q. Can you give us an idea about it?

I think there are about one hundred A. No, I could not. million feet of lumber used in Detroit. I presume four such 2238 mills as Backus' could easily do it.

Q. All the trade in Detroit?

A. Yes, sir, supposing they had the opportunity, but the fact is the largest amount of dressed lumber used by builders and contractors comes here in a manufactured form. For instance Saginan dealers send their lumber finished.

Q. The retail trade is not a very valuable part of your business!

A. It is an incident to it.

Q. Is not that substantially the case with the Backus plant?

A. I am unable to answer that.

Recross.

By Mr. Robison:

Q. Do you have a dust-arrester?

A. Yes, sir.

Q. What kind?

A. Allington, so called.

Q. The Saginaw concern? A. Yes, sir.

Q. Does it work all right?

A. Yes, sir.

Q. Why don't you get one of Backus'?

A. I don't know of any occasion to make a change.

Q. But it is the best there is. Do you know anything about how they are operated?

A. I have seen his and I have seen the models of the sort he sold.

Q. Do you think that this elevated structure down there would have any effect on his manufacturing dust-arresters and patent crates? Do you think he could do that down there just as well with the elevated road?

2239 A. I presume so, if he makes them; I don't know that he

Q. And of course, now that he is going out of his lumber business he will undoubtedly go to manufacturing dust-arresters?

A. That I don't know.

A JUROR: You spoke about the impairment of the business, it being 30 or 40% less, and then stated that in that calculation you reckoned the fact of the lumber yard being down where it was, so that the lumber had to be brought up to the mill, was the principal cause of that impairment.

A. Yes, sir.

Q. Supposing that lumber yard were located opposite the mill, or as near the mill as your lumber yard is, what would the impairment be then?

A. It would be perhaps 20%. I would make easily that dif-

ference.

Q. The other being because of their being obliged to draw the lumber up under this elevated railway?

A. Yes, sir.

Q. You would not make any difference in the distance of the yard, whether the elevated railway were there or not, if the elevated railway were not there and the lumber was not drawn up there?

A. Yes, sir, I would make a difference. I would say this, Mr. Juror, I don't know how many teams it takes to supply Mr. Backus' mill, but two horses and one driver supply ours. They will handle from 100,000 to 150,000 feet a day, and they have special facilities for doing it because they use what is known as dump wagons that unload themselves.

Q. Before this elevated railroad was built and while Mr. Backus was carrying on his business there, the lumber yard was right where it is now, so that the difference in this impairment

would be because of his teams having to draw this lumber up under this elevated road? That you think would be the disadvantage?

A. Yes, sir.

Mr. Dickinson: I don't understand you that the impairment you speak of, the percentage, would be ascribed merely to the drawing up under that superstructure, but to the darkening of the light, and the impairment of all the facilities of the planing mill?

A. Yes, sir, but I say perhaps 20% of this impairment would be owing to the drawing of the lumber under this superstructure.

Q. But you have no doubt that the impairment of the facilities of the mill would take off the profits and success of the business to such a degree as to make it a losing instead of a successful venture? Am I right?

A. It would amount to that.

Col. Atkinson: I suppose a lumber yard or source of supply to a mill of this kind is absolutely essential?

A. Yes, sir.

Q. You have got to have it somewhere?

A. Yes, sir.

Q. The only point is to get it as convenient to the mill as possible?

A. Yes, sir. It might be 100 miles away, but under great inconvenience.

Mr. Robison: You don't mean to be understood that that mill is worth 20% less because this lumber has to be hauled under this viaduct?

A. I say the impairment to the eligibility, to the site-

Q. That is because of its distance away?

A. No, sir, because of the necessity of hauling this lumber under the viaduct.

Q. You think it would be worth 20% less because the lumber has to be drawn under the viaduct?

2241 A. Yes sir, that is, if it was open.

Q. How far does it have to be drawn under the viaduct?
A. Probably 1,500 or 1,200 feet. It is equally dangerous to drive alongside of that embankment where trains pass. I know my horses are always frightened along there.

George L. D. Sutherland, sworn on behalf of the respondents.

Examined by Mr. Dickinson:

Q. I hardly need ask you whether you are one who frequently visits the Michigan Central Railroad yards, or whether you are in

the employ of the Michigan Central railroad. You are, are you not?

A. Yes, sir.

Q. For how many years have you been connected with the Michigan Central?

A. Forty-four years.

Q. In what capacity are you engaged?

A. I have charge of the repairs and cleaning.

Q. Cleaning cars that come in?

A. Yes, sir.

Q. You are the foreman of that department?

A. Yes, sir.

Q. How long have you been engaged there in that capacity for the Michigan Central?

A. I have been about thirty-five years at that.

Q. And what are your duties? Tell the jury so they can form some idea of it.

A. Examine the trains that come in, co all the repairs necessary, clean them, get them ready to leave..

Q. I suppose prior to the construction of the union depot, the F. & P. M. cars and the D., L. & N. cars came in there, did they not?

2242 A. Yes, sir, they used to, but not now.

Q. In your observation of the cars for so many years, you have had to do with closed passenger cars, have you not?

A. Yes, sir.

Q. And the Pullman and Wagner cars that come in?

A. Yes, sir.

Q. Will you please tell the jury what you find upon the carsclosed passenger cars-that come into your station there daily in the way of cinders?

A. Well, you generally find the hurricane decks and the plat-

forms pretty well covered with cinders.

Q. Is that invariably the case whenever they come in there, and are they always cleaned again before they go out?

A. Yes, sir.

- Q. How about the inside of the cars that are closed, as to cinders?
- A. Anywhere there is an opening the cinders get through. Q. Do you find them usually in the cars, on the cushions?

A. Yes, sir.

Q. They are cleaned as to cinders inside each time?
A. Yes, sir.

Q. And what is about the average of cinders upon each car as you take them off and clean them from day to day? What would you get off from the floor and the platform each day?

A. It would probably be half a pint; maybe a little more on

each car.

Q. Each car, however near or remote from the engine?

A. They are a little heavier up to the front end. Q. How long are these cars?

A. They are 45 and 50 and 60 and 65 and 70 feet.

2243 Q. What is the average number of cars in an ordinary passenger train?

A. From eight to ten; as high as sixteen.

Q. You find the cinders at the extreme end of the train as well as near the engine?

A. Yes, sir.

Q. And you find from a half a pint or more on a car?

A. Yes, sir.

Q. I suppose in the running of the train very many of the cinders blow off?

A. Yes, sir.

Q. Do you not find cinders inside of the cars where the windows have been closed, even?

A. Yes, sir, they will work through the ventilators, and so on.

Q. Now, the class of cinders you take off the cars that come in there, can you tell the jury if these are fair 3amples of the size? Look on them both (showing envelope filled with cinders).

A. Yes, sir, that is about the average size that we take off the

trains.

Q. In the yellow envelope, Exhibit "Griswold 6," is about the average size?

A. Yes, sir.

Q. Do you see anything of the cinders of the size I show you in Exhibit "Griswold 7"?

A. Yes, sir, we occasionally get them in the freight yard where they are switching heavy trains; but this other is the style of the ordinary cinders.

Q. They will run about that average, will they, in size?

A. Yes, sir.

Q. Now, you have been engaged in that yard for forty-five years, more or less?

A. Yes, sir.

Q. Will you please state whether you have ever seen 2244 a locomotive drawing a load that did not throw these cinders?

A. They all throw more or less cinders.

Q. Do they have devices attached to locomotives for arresting the cinders?

A. They have.

- Q. But have these devices been successful enough to prevent their blowing these cinders?
 - A. I suppose if they are kept in proper order they would be.

Q. Have they ever done it as a matter of fact?

A. No, sir, not on soft coal.

Q. They all burn soft coal, do they not?

A. I don't know what they burn on the union trains.

- Q. In the cars such as you have seen of the D., L. & N., the Canadian Pacific or the F. & P. M., have they burned anything but soft coal?
 - A. I have never seen them burn anything but soft coal.

Q. And you have often seen the F. & P. M. and the D., L. & N. trains?

A. Yes, sir.

Q. Do you know of any that burn hard coal?

A. No, sir.

Q. What is the effect of the throwing of the cinders by locomotives as to the difference to the number of cinders it throws when it is going up a grade, and when it is running on a level?

A. She is working harder going up a grade and usually throws

more.

Q. Considerably more?

A. Oh, yes, I should judge so.

Q. Have you ever known in your experience, and in your examination of cars, with reference to cinders upon them, and in your experience in the yard, have you ever known of any devices that have been put upon locomotives that have prevented

this throwing of cinders, as you have related, as yet?

A. They have a netting.

Q. Has it been successful in the preventing of the throwing of cinders?

A. No, I think not.

Q. Now, from your experience and knowledge and operation where do the cinders come from that you find upon the cars?

A. They all come from the locomotive.

Q. I suppose the heavier the load, the more it exhausts and the more it throws cinders?

A. Yes, sir.

Q. Have you ever seen a locomotive going in or out that did not throw fire from its smokestack?

A. I never seen one but what would throw fire.

Q. And about how far in your observation would the average spark, of course some will go further and some a less distance, but about how far is the fire thrown before dying?

A. It would go back to the second or third car before it goes

out.

Q. And that is how many feet?

A. One hundred and fifty feet or more.

Q. And if the wind is blowing at the side, or if the wind is heavy, I suppose those sparks go to one side?

A. Yes, sir.

Q. And I suppose the heavier the load the more fire they throw?

A. Yes, sir.

Cross-examination.

By Mr. Robison:

Q. The locomotives that are in use now don't throw as many cinders as they used to?

2246 A. I think they are kept in better order than they used to keep them.

Q. They have an apparatus that is supposed to arrest these sparks?

A. Some of them, not all.

Q. But it don't compare—this throwing of the sparks from engines now—with the engines that used to burn wood, as far as throwing cinders is concerned, does it?

A. No, sir.

Q. No comparison?

A. No, sir.

Q. There isn't any engines around these yards burn wood now?

A. No, sir.

Mr. Dickinson: And haven't for forty years?

A. We have two at Jackson yet, but they are not running. They have not run on the road for the last twenty-five years.

Mr. Robison: Don't any of them come up here?

A. No, sir.

- Q. And these cinders are heavy—they are not light—they are like charcoal?
- A. Some you will find pretty heavy. The cinders on the cars are just as they are in that yellow envelope.

Q. They don't blow off sideways very far?
A. Not unless the wind is blowing that way.

Q. It has to blow pretty hard, don't it, to blow it sideways? If you take shot and throw it up in the air it will come straight down, no matter how the wind is blowing?

A. Well, the cinders will go two or three cars behind.

Q. That is by the motion of the wind and the motion of the car?

A. Yes, sir.

Q. You take this paper of cinders and go out when the wind is blowing and throw them up, and they won't float off 50 or 60 feet, will they?

A. No, sir, I should say not.

Mr. DICKINSON: The wind will carry them off to the side by the force of the wind and the engine together?

A. Yes, sir.

Q. About how far will they carry them to one side, alive?

- A. I have noticed them go over the fences, and that is 200 feet and more.
- Q. Now, this device in use to catch sparks, is this a sample (producing two wire screens)?

A. Yes, sir.

Q. In use on the Michigan Central?

A. Yes, sir.

- Q. They have the finest devices known to the art on the Michigan Central?
 - A. Yes, sir, on some engines they have. Q. And these are the devices in use?

A. Yes, sir.

Q. What have you to say as to their burning out, getting ragged and being useless; how long does it take about?

A. Well, they get choked up; they get on fire, too, and it burns them out, and they don't renew them.

Q. They don't renew them whenever there is a hole in them like

that, they continue to use them?

A. Yes, sir. It is the duty of the engineer to report that at once.

Q. But practically they don't do it?

A. No, sir.

Q. So that practically they get burned through with holes so as to allow cinders to go through?

A. Yes, sir.

2248 Q. And practically they throw sparks and cinders, as you have stated, notwithstanding these devices?

A. Yes, sir.

Q. How about the majority of engines, do they have these on or not?

A. Our last new engines we are getting are a different style. They are constructed with a spark-arrester.

Q. Like this?

A. No, sir, not like that. That is from our old engines that we are running on a lot of passenger trains.

Q. Is there anything new in spark-arresters?

A. They claim so.

Q. Do they work so as to stop the throwing of sparks and cinders?

A. No, sir.

Q. Practically they do not work?

A. No, sir.

Recross-examination.

By Mr. BAKER:

Q. Where did these things come from (indicating screens used on locomotives for spark-arresters)?

A. I don't know.

Q. Did you ever see them before?

A. No, sir.

Q. You don't know what junk shop they did come from.

A. No, sir.

Q. And you are not an expert in building spark-arresters or dust-arresters and engines?

A. No, sir.

Q. You simply know that they have not yet got a device that is perfect, that can arrest them all?

A. Yes sir.

Q. But it has gradually improved, has it not?

2249 A. Yes, sir.

Q. And they use a varie'y of apparatus connected with the engine for the purpose of reducing it to a minimum?

A. Yes, sir.

Q. Do you know what the size of that mesh is?

A. I do not.

Q. You say it is the duty of an engineer as soon as there is any defect in his engine to report it and have it repaired?

A. Yes, sir.

Q. They don't always do it; railroad men make mistakes sometimes?

A. They have made some lately.

Q. You are at the head of the department that cleans cars down there?

A. Yes, sir, cleaning and repairing them. We have full charge of all passenger trains coming in and going out.

CHARLES KRONBACH, sworn on behalf of the respondent-.

Examined by Mr. Dickinson:

Q. Where do you live?

A. I live in the city of Detroit here.

Q. How many years have you lived here? A. I have lived here twenty-one years.

Q. What is your business?

A. I am foreman in the Backus planing mill.
Q. And how long have you been engaged there?

A. It is going on eighteen years now.
Q. You have charge of the machines?

A. Yes, sir.

Q. Upon all the floors?

A. No, just the lower floor.

2250 Q. You are familiar with the class of work that is done there?

A. Yes, sir.

Q. Familiar with the machines?

A. Yes, sir.

Q. Is it a part of your duty to see that the men keep to their duty in adjusting the machines and keeping them clean and in perfect order?

A. Yes, sir.

Q. From day to day, how is it as to your being in the shop, as to the time you are in the shop from day to day?

A. I don't understand you.

Q. You are in the shop what hours every day?

A. From seven in the morning until half past five in the evening. Q. Your watch, then, is from seven in the morning until half

past five in the afternoon as foreman in charge of the machinery?

A. Yes, sir.

Q. And have to see that the work is got out right?

A. Yes, sir, I have to see that the work is got out right, and I get the orders from Mr. Backus, and I see that the orders are filled and that everything is done right.

Q. You were there before the building of this superstructure, were you not? The building of the elevated road, the union depot, the railroad company's structure down there?

A. Yes, sir.

Q. You know how the mill was before the building of this super-structure?

A. Yes, sir.

Q. Will you please look at this picture I show you and see if that is a correct representation of the River Street front of that mill as it was before the building of that superstructure?

A. Yes, sir; that is right. Q. That is as it was, is it?

A. Yes, sir.

The photograph referred to is marked Kronbach Exhibit "1."

Q. What have you to say as to the requirement of light in your business?

A. We have to have all the light we can possibly get.

Q. And your light there on your floor came in from the River Street windows before the union depot structure was erected?

A. Yes, sir.

Q. On the south side of the mill?

A. Yes, sir.

Q. Now, will you please tell the jury whether the building of this superstructure and the passing of trains has affected the light materially for the purposes of running the machines there, or has it impaired the effectiveness of the machines and the work of the men?

A. Well, it does a lot of harm.

Q. In what way? Try to tell the jury in your own way.

A. It requires a lot of light around the machines to set up the machines in the first place. That is for fine work. We have to have machines that require from 14 to 20 knives and some of them are little bits of knives, and some of them larger, and every knife has got to be in its place. It can't vary the thirty-second of an inch or it would throw the molding out of shape, and the next knife would catch the same spot perhaps and the molding would be spailt.

spoilt. And if the knives are not in good shape, and in the right place the molding is spoilt. We can see a little bit

better by the gaslight, but it ain't very good light.

Q. Suppose one of the smallest knives of the machine which is working is out of gear or out of position the thirty-second of an inch, and is not observed by the workmen at the machine, how many pieces will be spoiled inside of a minute, when the machine is running its capacity?

A. In a minute will be about 40 feet.

Q. About 40 feet of lumber in a minute will be destroyed?

A. Yes, sir.

Q. And that may have been if there is a moment's carelessness on the part of a workman, or a moment's oversight?

A. Yes, sir, they have to have good light then to see that right

off. If they don't see it right off the stuff is spoilt.

Q. Have those things occurred in the mill since the building of this superstructure?

A. Oh, yes, sir.

Q. Frequently?

A Pretty often. We have had lots of trouble.

Q. More than you had before the building of the superstructure?

A. Yes, sir.

Q. Have you observed in the machines there under your charge in the hands of the men the interposition in the work of impurities like cinders?

A. Yes, sir.

Q. Tell the jury about that, if there is anything about that.

A. We find these cinders pretty regular. We find them all over the floor; not inside the mill but outside. We have the rip-saws on the outside, two rip-saws, and they rip the lumber up in 2253 small strips, say two or three or four or five inches wide, and

we lay that on the truck, and after we get a truck-load, about 1,000 feet, we run it inside the mill through the planer, and by these cinders falling all over the place they naturally drop onto that lumber, and when it is taken inside and run through the planers, the heavy rollers generally press these cinders inside the lumber, and after it gets up to the knives it dulls them, and also makes a mark in the lumber.

Q. It marks the goods?

A. Yes, sir.

Q. Is this matter of frequent occurrence?

A. Yes, sir.

Q. Will you please state whether the soot, the dark soot, gets upon the lumber so that the ordinary observer won't observe it without rubbing upon it?

A. Well, if you rub on it you will generally see it.

Q. But will the ordinary observer see the soot without making a rub on it?

A. Well, you have to look pretty close, but the cinders you can see.

Q. And they do get into the knives the best you can do?

A. Yes, sir, they get pressed into the boards and the knives will work against them.

Q. And all care is exercised to prevent it in the mill, is it?

A. Yes, sir.

Q. Caution is enjoined upon the men about getting any impurity

A. The man who runs the machine, he generally shakes the cinders off, he turns the board over, but at the same time the cinders get in there anyhow.

Q. Have you ever discovered, arising from this cause, that there

were nicks in fine knives?

A. Yes, sir.

Q. The edges turned?

A. Yes, sir.

Q. What effect does it have upon the product if the edge, or the point of the edge, or we will say, to use your own expression, the thirty-second part of an inch of an edge is turned; what effect does that have upon the product?

A. If it is a molding, it is spoilt.

Q. Why?

A. Because then it is a cull.

Q. It is spoiled because it will not fit with the balance?

A. Yes, sir, and you might say it is worse than a cull; nobody can use it for anything.

Q. Has this occurred since the building of this superstructure?

A. Yes, sir. Q. Now, Mr. Kronbach, did these imperfections occur prior to the building of this union depot structure and the running of the union depot cars?

A. No. It is the light. We cannot see inside there now.

Q. The light has been changed? A. Yes, sir.

Q. But did you have these troubles from cinders before upon the knives?

A. Not that I recollect.

Q. You had no such trouble before?

A. No. sir.

Q. Is it a matter of frequent occurrence, or only rare occurrence that you have this trouble now?

A. Yes, sir, it happens every day, more or less.

Q. And such a state of things did not exist prior to the building of the union depot structure?

A. No, sir, we used to have a light where we could see the 2255 defect. If you have a bad light you can't see it and they let it go, and it runs along fifteen or twenty minutes before they get on to it, and all that lumber is spoilt.

Q. Is it a part of the duty of the men to see that this raw ma-

terial is kept clean and free from impurities?

A. Yes, sir, that is the rule, to keep it clean.

Q. Now, will you please tell us what you find upon the dressed product of the molding, and so on, the fine lumber, that has resulted since the building of the superstructure, when it has been stored outside of the mill or deposited for shipment or taken for shipment?

A. It has happened sometimes when we have filled an order, and piled the lumber on the outside that if we don't get the car just at the minute we want it we find that the lumber will be all black

afterwards.

Q. You have to take it outdoors to ship it anyway?

A. Yes, sir.

Q. What is the practice in the mill as to the loading of a car, where is the lumber piled before loading?

A. We have to pile it on the outside. Q. Was that the practice formerly?

A. Yes, sir. Every car is inspected and we can't see well enough inside to inspect the lumber.

Q. Do the men get through as much work as they used to, even

on the class of work they are doing now?

A. No, sir, because they are troubled more or less with the knives.

They have got to shut down oftener and fix the knives, and it all takes time.

Q. What have you observed in the passing of locomotives as to

the throwing of smoke and steam?

A. They all throw it. Sometimes it ain't so bad as others. Sometimes they throw an awful volume of smoke, and it darkens the place inside.

Q. Does it come inside in the summer when the windows are

open? 2256

A. Yes, sir.

Q. Come right through in the mill so that the cloud is perceptible in the mill?

A. Yes, sir; we notice the smoke inside. Q. You are the foreman on that floor?

A. Yes, sir.

Q. Did you have charge of the retail trade for the mill?

A. Yes, sir; I sell lumber there too.

Q. What have you to say as to the customers of the mill, before the building of the superstructure, as to what sort of trade you had?

A. The trade is decreasing.

Q. But before, did you have a good trade in the city of Detroit? A. Yes, sir; I had a good trade.

Q. How was the trade carried on, where were the customers found? A. They generally came down there with their teams, and I had to work up stuff that was not ready, and rip it for them, and they

waited for it until it was finished and put it on their wagons. Q. Was that a considerable trade?

A. Some days I sold over \$400 worth, and some days probably not over \$25 or \$50. I can't tell what was the average.

Q. It ran a fair daily trade in that class of business, did it?

A. Yes, sir.

- Q. How has it been since the building of the superstructure and the operation of the railroads there? What has been the effect upon that retail trade?
- A. I have been losing all the old customers I used to have. They are afraid to go around there because their horses get frightened.

The horses generally don't like to stay there. Q. Whatever the reason, the trade has gone? A. Yes, sir. 2257

Q. Has there been any runaways down there?

A. Yes, sir, quite a number of runaways down there. Sometimes the horses would not get away. One time a man was down there with his lady. He stepped inside and the lady was sitting in the buggy and the horse jumped off over the sidewalk, into the next man's yard; and one time there was a lady down there and the gentleman went in to see the engineer; I guess he was an insurance agent. I saw the lady and told her that it was dangerous to stop there on account of that viaduct, and she said she thought her horse would not get scared at anything, but I told her it was a different

thing than being alongside the railroad. If the railroad is right over the horses where they can't see it they will get scared sooner; they hear the noise and it kind of sets them wild. So I went off in the engine-room, where that man was and told him it was dangerous to leave the buggy out there, and he says, "Well, I don't think my horse will run away." When I came out I saw two of my men had left the rip-saw they were working at, and each one had ahold of the horse, and the horse was rearing up, and the lady happened to get out in time without being hurt any.

Q. Are you the foreman in charge of the sawdust and shavings? A. Yes, sir.

Q. Was that sold also to retail customers that came there?

A. Yes, sir.

2258

Q. What has become of that trade?

A. They don't come so regular now. It is decreasing.

Q. Has there been any recent cases of runaways there? about last Saturday, during the trial of this case?

A. Yes, sir, Mr. Backus told me-Q. You didn't see it yourself? A. I didn't see it. I was not there.

Q. Never mind, then, if you didn't see it. One of your customers, was it, that was run away with twice and finally backed out?

A. There was one customer down there—that was the time they built this viaduct. They were driving piles in there and had machines running, and they had a big hole dug there about 8 feet square and about 6 feet deep.

Q. That was when they were building it? A. Yes, sir.

Q. Did he afterwards come down since the road was running?

A. Yes, sir.

Q. And did his horse run away? A. Yes, sir; he tried to run away.

Q. Has that man been down there since?

A. No, sir.

Q. What was his name?

A. That fellow's name is Deitlow.

Q. A carpenter?

A. Yes, sir.

Q. What about the other customer you were telling about?

A. I had a customer down there not long ago, he asked me if I could get him out a lot of molding for a double store that required lots of molding, and I told him Yes and he came down, and I told him right away that he should be careful about his horse and he told me his horse was all right, it was used to railroads. He got along twice that way, and the third time he tied his horse outside of these posts, these columns, whatever you call them, under the viaduet, and he came inside, and I was getting out some stuff, and I seen him running outside, and I looked out and he could

not get anywhere near his horse because his horse was fright-

ened so it was rearing up and kicking around so he could not get anywhere near it. He has been down there since, but he always stops now on Twelfth street, right in front of the Scotten building, and I have to carry the lumber down there.

Q. How do you carry the lumber down there, by hand?

A. Yes, sir.

Q. You load his wagon by hand from the mill to Twelfth street?

A. Yes, sir.

Q. How far is it down there where you have to tote the lumber?

A. Well, he don't take so much now.

Q. Why couldn't he come in down by Fort street?

A. Well, I don't see him. I don't want to tell him where to go. I carry the lumber where he stops and that is the end of it.

Q. Have you any facilities for delivering lumber on the north

side of your shop?

A. We can run it from the elevator and out through the yard. Q. And that would necessitate the employment of labor and changes in the elevator and the removal of the lumber?

A. Yes, sir. Q. You would have to attend to it?

A. Yes, sir.

Q. Would that take you away from your other duties as foreman in the shop?

A. Yes, sir.

Q. At all events customers don't come down that way; they don't come down Fort street?

A. No, sir, we had one down there once and I have not seen him

since. 2260 Q. During the building of this structure down there, how long were they at it; how long was the street out of condi-

tion there? A. I don't recollect. It was quite a while. It was months.

Q. Was it about a year they were at it down there, tearing up the street and putting in their stone foundations for their columns along the street?

A. It was a long while, but I can't tell exactly how long it was.

Q. What effect did that have upon your business during the construction of that structure and the tearing up of that street?

A. It hurt the business. We could not get through with our own teams and outsiders would not think of trying to get there.

Q. How long is it since they got the pavement down there and the sewer filled in?

A. It is repayed this summer. I don't know exactly how long ago. I can't tell.

Q. During that period of the situation of the street, did that result in great damage to Backus, and inconvenience them in sending out their lumber?

A. Yes, sir, it was a great damage. We could not get through the way we ought to.

Q. Can you give us anything of the distance which the sparks

will go into that place?

A. Well, I don't know. I find them all around the factory on the first floor. I find some upon the roof and all over.

168 - 55

Q. Do you know of an instance of your finding them upon your self, even this morning?

A. Yes, sir, this morning I found one or two of them on the rim of my hat. One of them dropped off my hat as I was stand-2261 ing talking with the engineer, and he seen it and he asked me what it was, and I took off my hat and I found another there.

Q. Where were you talking with the engineer at that time?

A. I was in the engine-room.

Q. In this alleyway?

A. Yes, sir.

Q. In the door of the engine-room?

A. Yes, sir.

Q. Do you know anything about a cinder going into the alleyway up there in the engine-room and burning the engineer on the neck?

A. The engineer showed it to me.

Q. You didn't see that?

A. I didn't see it drop, but he showed me the spot where it burned him, and I had seen cinders all along in the alley there.

Q. Past the shaving-room?

A. Yes, sir; right there in the engine door.

Cross-examination.

By Mr. Robison:

Q. Have you got the cinder here, that one you found this morning?

A. No, sir.

Q. What did you do with it?
A. I dropped it.

Q. Hard coal was it? A. That is more than I can tell you. I am not posted in that kind of business. I could not tell whether it was hard coal or soft coal.

Q. How wide is the street in front of the Backuses mill?

A. I should say about 60 or 70 feet wide.

Q. You don't know how wide it is?

- A. No, sir, not exactly. Q. This picture, Kronbach Exhibit "1," that is the picture 2262 of the mill before the superstructure was erected, is it?
- Q. It looks just like that now, does it not, with the exception there is an elevated road in front of it? A. Yes, sir.

Q. There seems to be a lot of railroad tracks over in front of the mill, what tracks are those?

A. I suppose they are the Michigan Central.

Q. Do you know what they are? A. The Michigan Central, yes.

Q. How many tracks are there over there?

1339

A. I have never counted them, there are quite a number of them.

Q. And engines running up and down, back and forth there?

A. Not during the day.

O. There are thirteen tracks over there?

A. I don't see them in the yard very often during the day.

Q. They are not vacant tracks? They are in use? A. Yes, sir, they fill them up with cars.

Q. Where they make up trains?

A. No, they back their cars in there.

Q. Engines go in there and pull them out, don't they?

A. They don't do much switching in around there in the daytime. They must do it in the night-time, because in the daytime there are teams around there all the time.

O. There are some engines going back and forth there, aren't

there?

A. There might be some.

Q. Don't you remember you ever saw an engine in front of the Backus yard before this elevated road was built?

A. Oh, yes, I have seen them, but they don't switch there 2263 in the daytime much; they back their cars on there.

Q. The engines go in there after the cars, don't they? A. Yes, sir.

Q. Do they throw any sparks?

A. Not over the mill, as I can see. They are only in there nights as far as I know.

Q. Then if they do throw sparks, you don't know? You don't see them?

A. No, I ain't there nights.

Q. You don't know of any reason why the engines of the Michigan Central don't throw sparks as well as the elevated-road engines? They throw them wherever they go?

A. I suppose they are liable to.

Q. And if the wind blows from the south, it has been testified here, they will go 150 or 200 feet. When those sparks are thrown out of the engine they go up in the air a good ways, don't they?

A. Yes, sir.

Q. And the wind blowing from the south, they would blow clear over the Backus mill from the elevated road?

A. Yes, sir; we find them there.

Q. They go over the mill, and then in front of the mill; they come from the Michigan Central, don't they?

A. I say I don't see them switching there much during the day.

Q. It is very dark in your mill, you say?

A. Yes, sir.

Q. Your light comes from the south? A. Yes, sir.

Q. And the elevated road shuts it off?

A. Yes, sir.

Q. There are some windows on the east side of the mill? 2264I can count 21 windows there on this picture. Those windows are still there on the east side of the mill?

A. I ain't upstairs; I am in the basement.

Q. There is light enough, then, in every story except the lower one?

A. I don't know anything about the upper floors. I don't have anything to do with them.

Q. The upper floors of this mill you don't know anything about? A. No, sir, I don't have anything to do with them; only the first floor.

Q. How many teams have you seen run away down there since you have been working for Backus?

A. Four.

Q. Did you ever see teams run away there before this elevated road was built?

A. I won't say they all got away.

Q. You spoke of one or two rearing up?

A. Yes, sir.

Q. They succeeded in holding them?

A. Yes, sir.
Q. You haven't seen any of the teams actually get away down there?

A. No, not that they got away, but they are wild and nobody can hold them. They tie the horses up and they can't get away.

Q. A good many teams go by there yet?

A. I ain't out there all the time.

Q. Did you ever see any teams get scared out there except your customers'?

A. Oh, yes, I have seen horses get scared out there often.

Q. Did you ever see them run?

A. Try to run.

Q. But didn't get away?

A. No, sir.

2265Q. Did you ever see them frightened by the engines on the track over in front of the Michigan Central track?

A. No, not that I recollect.

Q. You never saw horses frightened near the Michigan Central track?

A. No, not that I know of.

Q. You say that your trade has decreased down there?

A. Yes, sir.

Q. About how much, in your judgment, to be fair about it?

A. Well, it seems to me that all the old customers went back on They are all gone.

Q. Then you are not doing anything?

A. No, not a great deal. We pick up some new ones once in a while.

Q. You are doing a pretty good busines up in the warehouse?
A. Well, I don't know anything about the warehouse.

Q. But a few years ago you didn't have the warehouse there?

A. Yes, about seven or eight years ago.

Q. Haven't you an idea that has something to do with the loss of your customers down thereA. No, sir.

Q. Backus is still making stuff down there?

A. Yes, sir.

Q. And selling it around town here? A. Yes, sir, he manufactures stuff there?

Q. And they sell it, don't they?

A. Yes, sir.

Q. There is a way of taking this stuff out on Fort street, isn't there?

A. Yes, sir.

Q. You can drive right in the mill from Fort street?

A. You can drive to the second, but not to the lower floor. 2266 Q. You mean the first one above the ground?

A. Yes, sir.

Q. They do drive right in there with the wagon?

A. Yes, sir, they can drive in there on the second floor. second floor is level with the ground on Fort street.

Q. They do drive in there and get lumber?

A. No, not that I know of.

Q. Don't they draw lumber in there upon Fort street?

A. We draw lumber into the mill to the machines for the planer, not draw it in to back it in from the door.

Q. What portion of the lumber comes in that way?

A. Well, as near as I can get at it there are two planers there and all the stuff they dress on there would be brought in from that side.

Q. How many are there below? A. Ten, I believe.

Q. And that all goes in from River street?

A. Yes, sir, from the River Street side.

Q. This lumber that is manufactured up above, that is drawn out on Fort street?

A. That is for the box trade. Q. You load that onto cars?

A. They tie it up in bundles and shooks and run it down the elevator and shove it on the cars.

Redirect examination.

By Mr. Dickinson:

Q. You have been asked about the Michigan Central grounds opposite the Backus mill as it was before the building of the superstructure of the union depot company; this yard of the Michigan Central opposite the Backus mill is all below the Michigan Central

crossing, is it not, the main tracks?

2267A. Yes, sir, it is.

Q. Is not that place, and has it not always been used for the storage of freight cars?

A. As long as I remember.

- Q. The end of the Michigan Central yard is on Twelfth street, is it not?
 - A. Yes, sir.

Q. And then from Twelfth to Third street is all Michigan Central property, is it not?

A. As far as I understand.

Q. Then from Twelfth street down to the Backus property is all union depot property south of River street?

A. Yes, sir.

Q. All union depot property?
A. Yes, sir.

Q. Now, is there in the yard opposite the Backus property any main trunk line of railroad at all running out of the city?

A. No. sir.

Q. No place over which a Michigan Central train runs, is there, below the crossing and in this yard?

A. Well, I won't say for sure.

Q. There is no trunk line of railroad track down there below the crossing of the Michigan Central and in that yard?

A. No, sir.

Q. Is there any Michigan Central track across Twelfth street?

A. Yes, sir, there is one.

Q. Only to make a connection with the Wabash, a single track?

A. That is all.

Mr. Baker: All the exposition trains went over there?

Mr. Dickinson: But there is no Michigan Central track, as such, leading out of the city, no trunk-line track running down that yard at all?

A. No, sir.

Q. And no main-line track nearer the river front running across Twelfth street?

A. No. sir.

Q. On the opposite side, before the building of the structure, there was a high fence opposite the Backus property shutting in the Michigan Central?

A. Yes, sir.

Q. (Showing photograph.) See if this is a good representation of the tracks of the Michigan Central and of the yard opposite the Backus property?

A. That is, as near as I can tell.

Q. That is the general situation, is it not?

A. Yes, sir.

Photograph marked "Kronbach Exhibit No. 2."

Mr. Baker: There is an elevator over in front of the Backus property, isn't there?

A. Yes, sir.

Q. Between the Backus property and the river?

A. Yes, sir.

Q. At the river?

A. Yes, sir.

Q. Now, there is a big railroad yard there and engines are working back and forth in that yard continuously, are they not?

A. No, I don't see the engines working very much in that yard, because they back the cars in from the east end into that yard.

Q. They are handling cars in that yard every day and every

night, are they not?

A. Yes, sir, to a certain extent.

Q. And their connection with the Wabash is through that yard, is it not; and don't they transfer their cars below where the Michigan Central crosses Twelfth street?

A. Yes, they run their cars across there.

Q. As a matter of fact, from Eighteenth-and-one-half street to Third street is all railroad yard is it not, and Mr. Backus' property below there to Third street is all railroad yard, is it not?

A. Yes, sir.

Court then adjourned to 2 o'clock p. m. same day.

2 P. M., OCTOBER 26, 1893.

CHRIS. KRAUSE, sworn on behalf of respondents.

Examined by Mr. DICKINSON:

Q. Where do you live?

A. In Detroit.

Q. How long have you lived in the city?

A. Thirty years.

Q. And what has been your business?

A. Machinist.

Q. Have you been engaged in the employ of Backus & Sons at the planing mill on River street?

A. Yes, sir.

Q. How long have you been in their employ?

A. Twenty-five years I worked for Mr. Backus there.

Q. And you are still there at the planing mill?
A. Yes, sir.

Q. What did you do there in that mill?

A. I fix the machinery and run the molding machines. We got a sticker and a big molding machine and when I get through with my machinery I run the molding machines right along.

Q. It is your business there to oversee the repairs of the machines, and keeping them in order and keeping the knives sharp, and so on, and looking after them?

and looking after them?

A. That is all I got to do.

Q. What hours of the day are you there; what is the time you spend there in the shop?

A. Sometimes it takes four or five hours when a machine breaks down, or something like that, to fix it up again.

Q. Where do you stay ordinarily during the day? What time do you go in the morning?

A. I get down at six o'clock and they start to work at seven o'clock.

Q. And you see that everything starts in order in the morning at seven?

A. Yes, sir.

Q. When do you leave the shop?

A. In the night-time at half past five.

Q. You are familiar, then, with the machines that are used in this fine work of all kinds?

A. All kinds.

Q. Now, you were employed there before the building of this railroad in front of the mill?

A. Yes, sir.
Q. You have been constantly there since?

A. Yes, sir.

- Q. Will you state whether in your business there, in the performance of your duties, you have observed the cinders getting into the knives in the mill?
- A. That is the way when cinders come in there; we got two ripsaws outside in the shed there, and then they rip that lumber and we get the trucks and put it right on the trucks.

Q. It is ripped before it goes into the planing mill?

A. It is ripped before it goes into the planers, it drops right in there and goes by the machine and we run it through.

Q. I suppose care is taken to keep it clean as possible. take care to keep it as clean as you can?

2271 A. Well, that is pretty hard sometimes.

Q. Will you please tell the jury whether you find that cinders do get into the knives and onto the lumber in the mill?

A. Yes, when the trains pass there then the dust and cinders

comes right down and drops on the lumber there.

Q. But in the practical working of the machines, have you been troubled with the cinders getting into the knives and dulling the knives?

A. When cinders comes in and lays on the board there and they go through there, they press it right in and then the knives touch it.

Q. Press the cinde s into the wood?

A. Yes, and then te knife touches it and it is all fine grinding or something like that and that makes a nick in the knife and you got to take the knife out and file it over or grind it over and set it up again.

Q. That stops the work so far?

A. Yes, sir.

Q. Suppose the knife is not taken out and you go on with it with that nick and impurity, what effect does it have? Why don't you let it go on?

A. We could not use those mouldings. As quick as we get nicks

in the mouldings the fellows would not take it.

Q. Does it ever occur before you see the nick in the knife or discover it that mouldings are damaged?

A. So quick as the nicks are in the moulding we got to put it in

the cull mouldings or sell it cheaper.

Q. Do you find that in that mill that sometimes the nick is not found out, so that damage is done to the lumber?

A. So quick as the knife runs over the cinders it gets a nick

Q. Isn't it discovered sometimes until damage is done to 2272 the lumber?

A. I don't know.

Q. Do you always find it out as quick as the knife gets dull or nicked, do you always find it out quickly or does it do some damage first?

A. I got a boy on the front there, and I tell him before I start the machine, and he takes that off and lays it on the side, and I got to tell that boy just like that, if the - nicks, when you see anything just let me know and tell me right off.

Q. You do not discover a nick, then, until it actually shows on

the lumber?

A. No. sir.

Q. Until the board comes out so that the board is damaged before you discover the nick?

A. Yes, sir.

Q. Now, did you have any trouble of this kind in that mill before the union depot company's track was laid by there?

A. No, sir.

Q. You were there just as constantly before the union depot was built, were you not?

A. Yes, sir.

Q. And you were in there every day before? A. Yes, sir.

Q. You never had that trouble before?

A. No, sir.

Q. Will you tell us whether the passing of the locomotives throws smoke into the shop; is there any trouble from the smoke or steam?

A. When the locomotive passes there and the air or wind drives the smoke down, and it comes in the doors and so on and a fellow could not see hardly nothing.

2273Q. You have seen it there so that there was a pretty thick

smoke sometimes?

A. Yes, sir.

Q. Will you please tell the jury whether, in working there in the mill with these fine knives and fine machines, what the need is for

A. The man who runs the moulding machines, he wants a good

daylight.

Q. Can he not get along with gaslight? A. It is not so good as a good daylight.

Q. Just tell the jury why he cannot get along without bright day-

light.

A. Sometimes I got a moulding to make, I use 14 or 16 knives in there, and each knife got to cut, and that is very particular to set the knives right in the machine so that they cut their distance there, and when they cut one wrong then the whole moulding is good for nothing, and that wants a good light.

Q. What do you think the effect is, are you troubled with want

of light there since the erection of the structure?

169 - 55

A. Yes; Mr. Backus said first, We want the electric light, and now we do not have it; we burn gas; I got two gaslights.

Q. Two gaslights to a machine?

A. Yes, but I like to get the daylight better than the gaslight. Q. And this has been a trouble since the erection of the structure. since the railroad was built?

A. Yes, since that we get no such light as we did before. Q. Now, do the trains make it dark when they pass?

A. Yes, sir.

Q. How about its being necessary to have a steady light about these machines?

2274 A. Sometimes when they set the moulding machines up and so on, and the train passes there, that stops my whole light off and you got to wait until the train passes; besides, I got the gas burning.

Q. Well, what do you think of the work done and the way the mill runs now, since the railroad was built along there, as compared with the way the mill run before the railroad was built along there?

A. Well, sometimes I got lots of bother from grinding knives, it thaks me so much longer to set a machine up, and then the light is

Q. Then you have constant trouble with the cinders? A. Yes, sir.

Q. Where did you learn your trade?

A. I learnt something in the old country. I was for a couple of years in Berlin; I learned something there and then I come over here.

Q. What did you go into here first?

A. I run a common machine first, and then after that Mr. Backus got a union machine.

Q. A common planing machine?

A. Yes, and then we got the big siding machine, what they call the union machine, and I run that for eight or ten years, and then I make mouldings besides already.

Q. What do you think, from your knowledge of the machinery, as to the kind of machinery and whether it is in good order and fine condition in the Backus mill, is it good machinery?

A. Good machinery, all good machinery. Q. Is it kept in bad order or perfect order?

A. All in perfect order.

Q. Will you tell the jury whether, when you get a new machine into the mill, it takes some time to get it in good order?

A. When we get a new machine in the shop for the first 2275couple of weeks it don't run so good as when we get it in good order so that everything is tight and solid.

Q. Now, up to the shop, which machine is worth the most, the machine that comes in new, when it comes in new, or the machine that has been in there and is adjusted and running for some years?

A. Well, I think the new machine is better when the machine is run for eight or nine years; there is lots of things which we fix over on the machine.

Q. Which machine now is worth most to the shop, the new machine or the machine adjusted and equipped in good order and running smoothly?

A. When the new machine is in for a couple of weeks I think the

new machine is better.

Q. Is there any machine in the shop that is worn out at all?

A. Not one.

Q. Everything is in first-class condition?

A. Yes, sir.

Q. Is there any part of the equipment missing in any place?
A. No, sir, we use it all in journals; we don't use no brass boxes.

Q. Everything is first class?

A. First-class machines.

Q. Now, of those machines in there—I don't know that I made myself understood; possibly I did, but we will find out—in those machines in there, are they added to and improved by the Backus method?

A. Yes, sir.

Q. Do they add improvements upon them?

A. Yes, sir.

Q. To do this work. Now, of the different machines, as they run in the shop, doing the work they do, is there any one of them 2276 that you would take out and put in a new machine of the same kind?

A. I don't know; I guess not. The machines we had are all just as good when we get new in the shop, and better, too.

Q. In perfect order?

A. Yes, sir.

Q. Would you value a new machine more than any single machine of the same kind in the shop? Take the machines as they are in the shop, would you value a new machine, bought today and put in the place of a machine of the same kind—would you take the old machine or a new one?

A. No, take the new one.

Q. Rather than have the old one?

A. Yes, sir.

Q. Is there any machine in the shop that you would now take out and put in a new one of the same kind?

A. Besides, the machine is run down so that we could do nothing

more with it.

Q. I say, take the machines as they are now, would you take one of those machines out now and put in a new one of the same kind?

A. Yes, when we could take and put a new one in.

Q. You mean you could do it? Do you need to do it, would it be any better?

A. When the old machine runs out we got to put a new one in place of it.

Q. Is there one of them that is worn out?

A. No, sir.

Q. Now, then, would you take out any machine that is running

there in good condition, as it is, take it out and put in a new machine if you could, if it is not worn out, and just as it is today?

A. No, sir, we would not take nothing out from those machines.

2277 Cross-examination.

By Mr. Robison:

Q. What is your regular business?

A. Machinist.

Q. All kinds of machinery?

A. Yes, sir.

Q. Manufacturing machines?

A. Yes, sir. Q. Where did you ever work making machines?

A. I don't make any machines; I am just in the lumber business, running these kind of machines.

Q. You don't make machines? A. No, sir.

Q. You work with machines?

A. That is all.

Q. What kind of machines?

A. Matchers and stickers, four-sided sticker.

Q. What is a four-sided sticker? A. To make molding out of.

Q. A molding machine?

A. Yes, sir.

Q. Matchers and stickers, and what else?

A. Then we got in there a four-headed big molding machine, a Boston machine.

Q. Those are the machines that you work?

A. That is the big molding machine, that is the most we do work.

Q. You don't know anything about engines, do you?

A. No, sir, not very much.

Q. Are you a machinist or are you a wood-worker?

A. A wood-worker.

Q. You don't know anything about machines yourself, except those you work upon there?

A. I got to fix the whole machinery up there.

Q. The machinery in the whole institution?

2278 A. Yes, sir.

Q. Do you fix that machine that grinds saws?

A. If a machine is broke down or something, the babbitt runs out, we got to take it apart.

Q. You can put the babbitt in, that is, all right?
A. I got my tools all there.

Q. You are the man that has charge of the machinery in the whole institution?

A. Yes, sir.

Q. Besides doing that, you also run these wood-working machines?

A. Yes, sir.

O. Did you ever get any nicks in any of these molding machines before that railroad was put up?

A. Not so much as now.

Q. There used to be some nicks once in a while?

A. We got lots more in now. Q. There used to be some?

A. Oh, sometimes one comes in or something like that.

Q. Did you ever work at any other place except at Backus'? A. I worked a year with Mr. Robison down on Woodbridge street there, on that side of the Milwaukee depot.

Q. Ross's place?

A. Ross's place, and then after that I worked 25 years now at Backus's place.

Q. You say that these machines that are in there are all in good

condition?

A. All in good condition, first-class machines, too.

Q. Well, you are not working them at all, are you, they are standing still, aren't they?

A. No, sir.

Q. You are not working much now, are you?

A. Oh, there is ten goes most every day downstairs. Q. You have charge of the machinery upstairs?

A. No, sir, I got two machines up there. We got just two 2279 big machines upstairs. I got charge over them, too.

Q. What are they?

A. They run that box lumber, to make box business.

Q. Planed?

A. Planing both sides.

Q. You have charge of those two machines? A. Yes.

Q. They are running all the while, are they?

A. They are running every day, both.

Q. You never used to get any cinders in there before the railroad went along?

A. No, sir.

Q. Didn't the lumber come in there sometimes with cinders on?

A. Now?

Q. Didn't it used to before this?

A. No, sir.

- Q. Didn't you ever have any lumber come in there on the railroad?
- A. We got some on flat cars and so on, I didn't see no cinders in there when it comes in the mill, I got nothing to do outside and I don't know.
 - Q. You have something to do with planing this lumber?

A. I got my business right in the shop inside.

Q. Are there cinders on the wood that comes to you in the inside?

A. Yes, sir.

Q. Are there not some on the lumber that comes on the flat cars?

A. I cannot tell that, that is more than I can say.

- Q. You never saw any on the lumber that came on the flat cars?
- 2280 A. Well, I got nothing to do with that. I have not been outside.
- Q. All you know about it is that there are some cinders on the lumber?
 - A. Yes, that comes inside the mill, I see it then. Q. But where it comes from you don't know?

A. No, sir.

Q. That has always been so, hasn't it?

A. I don't know, I can't tell; that business on the lumber, when they rip it, whether it comes on then or when it comes.

Q. You say you have to stop your machines sometimes, do you,

when the trains go by?

A. When I get my machine in good order and running I would not stop it. I would sometimes when I set up a molding machine and the train passes there, I got to stop then, I cannot see to put the knives in.

Q. How long does it take a train to go by there?

- A. Pretty near four minutes, or three minutes, or something like that.
 - Q. Three minutes for a train to go by there?

A. Yes, sir.

Q. Does it take as long as that for a train to go by that institution?

A. Yes, sir.

Q. An ordinary train?

- A. I don't know, I cannot count it all the time. The doors are open and I cannot look up.
- Q. That is a kind of dark hole where you work, anyway, isn't it?
 A. I cannot see nothing, I set my machines before all right enough.
 - Q. Are not all these machines back in the back end of the cellar?

A. We don't got nothing there.

2281 Q. What is there back under ground?

A. One band saw, that is all.

Q. Did it used to be nice and light in there?

A. Most of the machines standing out on the front doors; we don't got no machines—

Q. How far from where your machine stands is this railroad, how many feet do you think?

A. I don't know, I didn't measure that.

Q. You can estimate, you are a machinist and work in lumber and one thing and another, and you can give us some sort of an estimate, can't you?

A. I think that is pretty near thirty feet.

Q. Pretty near as far as from here across to the other side of the street?

A. No, sir.

Q. How far is it over there?

A. That is fifty feet or something like that.

Q. You think that railroad standing there darkens that institution, does it darken it any more than that building does this room?

A. Yes, it darkens more up than the building here.

Q. It darkens that institution more than that building does this room (referring to building across the street).

A. No, sir, it darkens that up more than this.
Q. It is not half as high, is it, as that building?

A. I guess that is one story anyway.

Q. No, this building over here is twice as high as that railroad, isn't it?

A. No, sir.

Q. How high is the railroad?

A. I don't know, I never measured.

Q. How high do you think it is? You know about how long a fourteen-foot board is, don't you?

A. Well, I think that is pretty near thirty feet high.

Q. The railroad?

2282 A. Yes, sir.

Q. Down there where you work?

A. Yes, sir.

Q. It is 21 or 22 feet, they say. There cannot any air or light come in under it?

A. No, sir.

Q. It shuts it all out?
A. Shuts it all out.

Q. You have to burn more gas than you used to?

A. Yes, sir.

Q. Did you have any gas fixtures in your place before this was put up?

A. Yes, sir.

Q. What for, if it was light enough?

A. I got one flame more now than I had before.

Q. When did you put that in?

A. That is three or four weeks or more, it is longer, I don't know for sure.

Q. Well, it got darker the last three or four weeks?

A. Yes, sir.

Q. That is because the days are getting shorter, isn't it?

A. I don't know about that.

Q. You have had gas in there all the while, haven't you?

A. Yes, we got gas in right along. Sometimes we work in the night-time and so on, and then we use the gas.

Q. It was not light enough to work in the night-time before this railroad went up. That did not seem to make any difference with it in the night.

A. Sometimes we break down a shafting, and it turns off, and we

got to do it in the night-time.

Q. Don't you use the planers there nights sometimes?

No answer.

2283 Q. I say you work nights there with the machinery making lumber?

A. No, sir.

Q. What time do you quit? A. Half past five.

Q. The year around?

A. Yes, sir.

Q. Don't get too dark to work down there some days?

A. When it gets too dark we light the gas.

Q. It did before this railroad was put up, didn't it?

A. Well, since it was put up we got less light than we did before. Q. I say you had to light the gas down there before you quit, before the railroad was put up?

A. In the night-time? Q. In the afternoon?

A. When I set up my machine, yes, sir, when a fellow has got to put knives in the machines, he has got to put the gas on to see.

Q. What time do you stop in the winter?

A. We run eight hours, now.

Q. What time do you begin?

A. Seven o'clock. Then we work till half past three in the winter.

Q. You work from seven till twelve?

A. Yes, sir.

Mr. Dickinson: Half past three is the time for shutting down in the winter.

Q. That is the time you always close in the winter, isn't it, half past three?

A. When we got lots of work, we work ten hours, too.

Q. Do you have about as much work now as you used to have? A. We got lots of work now on hand.

Q. About as much as usual?

2284 A. Yes, sir.

Q. Hasn't your institution kind of petered out down there, going to seed, playing out?

A. Play? I don't know.

Q. Well, that's all.

Col. ATKINSON: He means planing out.

Q. You say you have just as much work down there as you used to have?

A. Yes, sir.

Mr. Dickinson: That is, that he has.

Mr. Robison: Well, he has, he is running six or eight big planers that he has to take charge of. That's all.

Louis J. Burean, sworn on behalf of respondents.

Examined by Mr. Dickinson:

Q. Where do you live?

A. I just moved from 807 Fifteenth street to Delray.

Q. How long have you lived in Detroit or been engaged in business here?

A. Well, on for 14 years.

Q. What is your business?

A. Engineering at present.

Q. You learned that trade?
A. That is one of them; yes, sir.

Q. And you have been engaged in engineering for how long?

A. While I was in the city.

Q. Anywhere, how long have you been eugaged in it?

A. Well, I have learned the trade right out; that is, three trades, machinist and steam-fitter and engineer. I have been at it since a boy about that high.

Q. What is your age now?

A. I am 35 going on 36, or 36 going on 37.

Q. You are at present engaged as engineer at the Backus

A. Yes, sir.

Q. How long have you been engineer at the Backus mill?

A. Very nearly six years.

Q. You were, then, engaged as such engineer both before and since the erection of the union depot structure there on the River Street side?

A. Yes, sir.

Q. How far from the shavings-room is your engine-room, direct in that alley, between the dust and the engine room and the main building?

A. From the structure of the railroad to the engine-room direct? Q. From the door of the shavings-room, that is in that same alley,

the door of the shavings-room to the engineer's door?

A. Pretty well onto 25 or 30 feet.

Q. How far is the door of your engine-room from the elevated structure in the street?

A. I don't know the length exactly.

Q. About 90 feet?

A. Somewhere there, about 80 or 90 feet.

Q. You are in charge of the engine and boilers, and so on, there?

A. Yes, sir.

Q. Is that machinery in good condition?

A. All that I know of; yes, sir.

Q. I mean that you have charge of?

A. Yes, sir.

Q. A good, first-class engine?

A. Yes, sir.

Q. Boilers in good condition?

A. Yes, all excepting the joints.

2286 Q. What do you mean by the joints? A. That is the connection between the boilers and the valves and cross-drum. There is a valve in between the cross-drum and the boilers.

Q. Where the boilers connect with the steam drum?

A. Yes, with the cross-drum.

Q. What is the matter with them?

A. They leak.

Q. What is your explanation of this difficulty that you speak of;

what makes it leak?

A. Well, we didn't have any trouble at all to speak of before they drove a certain spile out in the street for the viaduct, and they almost shook the whole mill, and that had a great tendency, I should judge, on the boilers, from all appearances, from that time. I have never had tight joints since then.

Q. Have you tightened the joints?

A. Yes, I have repacked them several times.

Q. How often are you obliged to attend to that, to repack them and tighten them?

A. Since that we have repacked it about three times, and have

the material there to repack it again.

Q. You say you had no such difficulty prior to the building of the superstructure?

A. No. sir.

Q. And you had an effect there in your boiler-room upon the engine and these joints from the driving of a pile that was driven in the street?

A. Yes, one of the spiles.

Q. As a support of the superstructure?

A. Yes. They could not drive it any further and they had to

saw it off, if I remember right.

Q. When laying their foundations in places, they drove piles down and set the foundations on the piles and then reared the iron column from that? 2287

A. Yes, sir.

Q. Now, do you notice the effect upon your engine-room of the passing of trains since that, as to the jar?

A. Yes, sir.

Q. It does jar you perceptibly when a train passes? A. Yes, hurts the engine quite a little when passing.

Q. Now, have you noticed the smoke and cinders coming from the passing trains?

A. I have.

Q. Give the jury some idea of the extent with which cinders come on you there, and smoke, and how far the smoke goes. Give us, in

your own way, some idea of it.

A. I have noticed the cinders first out on Woodbridge street, near Twelfth street; that is, in the morning on the snow last winter, as I walked along; come inside and could see them all over the snow away back as far as the fire-room and sometimes a trifle farther back beyond the chimney, closer to the stairs, and I have noticed them up on the roof and had witnesses with me.

Q. How far back?

A. On the roof close by the edge. Q. Close by the edge of what roof?

A. Over the sawdust department and the main building also.

1355

Q. What have you observed of the cinders upon the roof the sawdust department?

A. I could also state I was burned once in the face by one of them.

Q. Whereabouts were you standing?

A. Right at the engine-room door, about three feet outside.

Q. Did you see what it was?

A. Yes, picked it up and it was warm and burned by finger also.

Q. After the passing of the train?

A. Yes, sir. 2288

Q. And have you seen the smoke come in around that building?

A. Yes, very often.

Q. Give some idea of the density of the smoke that you have

seen very often?

A. Well, some of the smoke is light and other smoke is very heavy and black, when the train is coming up especially, and when they are going out of course they fire up fresh and the smoke is very black. At times rolls around there when the wind carries it over in that direction, the same as it did the day when it burned me in the face, and then also coming from the west, when the wind is from the west, it blows in my engine-room window.

Q. And does this carry soot?

A. Yes, sir.

Q. To what extent?

A. Well, I could not say so much about the soot, only it drops on my cup there on the bench in the engine-room every day, when the wind comes from the southwest like or from this direction.

Q. Comes from up the river way?

A. Yes, sir.

Q. Now, did you pick up some cinders on the roof of the enginehouse or the roof of the shavings-room?

A. Yes, sir.

Q. What did you do with the cinders you picked up?

A. Put them in an envelope.

Q. Is that the envelope which I show you?

A. Yes, that is my signature.

Q. Did you put them in that envelope at the time?

A. Yes.

Q. Look at the cinders and see if they were those you picked up and when you did it.

A. Yes, those are the cinders I picked up.

2289 Q. Where did you find them?

A. Some on the main building and some on the shavings department.

Q. How far back?

A. Right close by the cupola where the dust blows in, and others on the main building close by the edge.

Q. How far back on the main building? At the time you picked

up these cinders did you see anything of any of the wood-work being charred?

A. There was this piece of wood, yes, sir, and the cinders was laying onto it. (Picking piece out of the envelope referred to.)

Q. The small piece of wood or a large piece?

- A. I should judge an inch. There was a cinder that had charred it like that. There was a cinder laying as if it had burned this hole in it.
 - Q. How far back?

A. I should judge that was about three or four feet from that cupola where the dust goes up into.

Q. That is about how far back from the street?

A. I should judge that was 25 or 30 feet from the rails. Of course it is much higher than the rails.

The envelope referred to was marked Exhibit "Burean 1." Another envelope was shown to the witness.

Q. When did you pick those up you are now looking at?

A. April 12 of this year.

Q. Where did you pick them up?

- A. Between the engine-room window towards the door and the fire-room door. The engine-room door is in between the two. One of them also is the one that burned me in the face.
 - Q. On the ground? A. Yes, sir.

2290 Q. Your attention was called markedly to it, one of them

burned your face?

A. Yes, it burned my fingers too, when I picked it up. I will show you the one if you wish. That is the one. (Selecting cinder from envelope.)

Q. That is the one that did the business on your cheek, is it? A. Yes, and I have a good notion to sue for it too.

Q. At that time when you were burned, you picked these up from the ground and others right there?

A. Yes, sir.

Envelope marked Exhibit "Burean 2."

Cross-examination.

By Mr. Robison:

Q. Is your engine in good condition down there?

A. Yes, sir. Q. Runs true? A. True.

Q. Haven't you had trouble; isn't it out of order; isn't that engine frequently out of order?

A. No, sir.

Q. A second-hand engine?

A. No, sir.

Q. In good, perfect shape.

A. Yes, sir.

Q. In every way? A. In every way.

Q. Just as good now as it has been for the last year or so? Worth as much?

A. Just ask that again.

Q. Do you think it is worth as much now as it was a year and a half ago?

A. Worth more.

Q. Why? A. Because it has been kept up in shape right straight 2291 along, improved.

Q. But you say the joints are out of order?

A. That is on the boilers and on the top part of the engine. When speaking of an engine we do not speak of the joints.

Q. The engine is right near the boilers?

A. No, sir.

Q. How far from the boiler is the engine?

A. About twenty-five feet.

Q. Well, then, it is right there in the same building?

A. In the same building.

Q. In the engine-room, or boiler-room, or whatever you call it, it is all in one room?

A. No, sir, two different departments.

Q. Which is nearest the railroad, the boiler or the engine?

Q. And yet you say this spile-driving and the rattling of these cars over this elevated road has racked your boilers so they leak?

A. Yes, sir.

- Q. But it does not knock your engine out of line, but it runs as true and perfect as it ever did?
- A. The engine is tied and cannot be pulled out of order by anything.

Q. Tied to what? A. The foundation.

Q. But the foundation is in the earth there, isn't it?

A. Yes, the body of it is.

Q. But this rattling or shaking of this road ninety feet away has knocked the foundation of your boilers so that they are out of kilter and leak?

A. Yes, sir.

Q. But it has not affected your engine at all?

A. It has affected the joint on top of the engine, but not 2292 affected the engine itself.

Q. Has it affected the joints on the boilers?

A. On top of the engine there is half a dozen joints there and a pipe runs across and connects up to the boilers.

Q. How could it affect these joints up there if the engine has re-

mained perfectly solid?

A. Well, sir, it does on account of the boilers moving.

Q. And the boiler farther away from the railroad than the engine?

A. Yes, sir.

Q. And it has shaken the boiler so that it leaks and the engine remains perfect?

A. Yes. I could explain that if you wish.

Q. I would like to understand that.

A. We will say the engine lays in the engine-room like that; the pipe comes up here across the way, square joint clear through; now, she runs back here, the pipe does, and connects to a cross-dome here—call this a cross-dome there (referring to table), and one boiler here, and one here and another there and there; well, then, the boiler sets on rolls, plates under these lugs, and the engine connected there, to a certain extent, horizontally—it does not affect the boilers on account of its being on rolls, but let the earth shake under the boilers of this, like heavy thunder, the same as it does there, and it settles the mortar, that is, it crumbles the mortar under these boilers, and one sags and another sags, and then, of course, it twists the pipe and one boiler goes this way and stays there, and I have to jack it up, and the other boiler goes that way, and that makes the leak on the engine.

Q. On this pipe?
A. Yes, sir.

Q. Then isn't that a result of defective foundations under the boilers?

A. It is only caused by this shaking; yes, sir. Q. You say it is the mortar that is the matter?

A. The mortar works loose every time a train goes by.

Q. It is not the earth itself?

A. Of course it is the earth that shakes first, and then the brickwork.

Q. You say that heavy thunder does it sometimes?

A. No, sir. I say it is like heavy thunder; we ain't had no heavy thunder in the last two or three years.

Q. Nothing that would shake that mortar?

A. No, sir.

Q. Nothing but these cars running over there?

A. It is a fact; you go there and you will see it yourself.

Q. You think it affects it worse by being put up on those spiles than it would if it was on the ground, don't you?

A. Well, they are there, and of course I have not been in any place where they were down on the ground; I have not had the experience of it right alongside a railroad.

Q. You have been alongside of this road ninety feet distant from

where trains of cars run along?

A. Yes, sir.

Q. Trains of cars run less than ninety feet from you by the end over on the Michigan Central?

A. Yes, sir; they are not on spiles.

Col. ATKINSON: Do you mean less than ninety feet from the Central plant?

A. They are more than that.

Mr. Dickinson: Two or three hundred feet.

Q. Don't you suppose they would shake the earth over there? A. I don't know anything about that there; they don't 2294 shake the boilers or don't affect the engine.

Q. You say it is not on spiles?

A. No, sir.

Q. Then you have come to the conclusion that the fact that these are elevated on spiles shakes the earth more than they would if built on the ground?

A. I say the railroad is elevated on spiles there-

Q. I say the fact that this road is elevated on spiles shakes the earth more than it would if on the ground?

A. Yes, sir.

Q. Have you any theory of why it does that?

A. Yes, sir. Q. Explain that.

A. The reason why it does more so there than any place I have seen, there is one or two columns west of the Backus mill that the piece that runs clear across runs away up, and the track is set right on there. There is a place there the rails go right across like that, and that goes away up to the rails, the girder. Now, over there closer to the Backus mill there is another girder that comes and sets on there, and the rails set on there, and the views that I have taken from that, that it has a tendency—there is a weak spot there.

Q. In the earth?

A. No, sir.

Mr. Dickinson: In the structure.

Q. Oh, yes.

A. In this structure I have taken particular notice to it.

Q. There is a weak spot in the structure?

A. Yes. I am a pretty good mechanic myself and I can explain As the cars are going that way it has a great tendency to shove that structure along with it, more so right where this weak place is. Then it does this way, although when a train goes 2295

this way it bunts right up against this place here, that is, the girders that comes this way, runs along with the track. You see, that start two or three of the pillars that side of the Backus mill. The structure is there to be seen for itself.

Q. And for that reason it shakes the earth more?

A. Yes, and you will find it so some winter morning.

Q. And you think it will shake the earth that way ninety feet distant from where the post stands?

A. Well, it shakes the wires on the bridge there sometimes pretty

Q. Clear over on Fort street?

A. No, sir; from pillar to pillar.

Q. It shakes the wires on the structure, but it don't shake the wires on the telegraph poles set along in the ground near by?

A. Yes; that is what I was explaining to you; right there it

shakes the wires a great deal more than it does any other place on the same structure.

Redirect examination:

Q. You know quite well, do you, whether you have this jarring effect or this breaking of the mortar before the structure was built?

A. No, sir; we didn't have it.

Q. Did you see anything of those cinders coming upon the property before the structure was built?

A. No, sir.

Q. What do you burn in your furnace, wood or coal?

A. We burn some fine kindling and shavings.

Q. You burn no coal?

A. No, sir.

Recross-examination:

Q. You say that when your window is up, dust and ashes 2296 and cinders and smoke and one thing and another will settle in your water cup?

A. I didn't say that. Q. What did you say?

A. I said there was soot; there is no ashes.

Q. That is all? A. That is all.

Q. Don't throw ashes or anything of that kind?

A. No, sir.

Q. Any ashes settle around there at all?

A. No, sir.

Q. You do considerable firing there of your own? A. Yes, sir.

Q. Don't any smoke come out of your chimney?

A. Very little.

Q. It is all consumed?

A. Pretty much all consumed. Q. There does some?

A. There does some; yes, sir.

Q. Do any cinders ever come out of there?

A. No, sir.

Q. Any coke or coal?

A. No, sir.

Mr. Dickinson: You don't burn coke or coal?

A. No, sir.

Q. These engines that you have seen along there-none of them burn wood?

A. I have not been on the engines.

Q. Did you ever see a wood-burning engine on this road?

A. No, sir.

Q. What railroad did you see them on?
A. I have seen them on a great many railroads.

Q. Here around this mill?

A. No, sir.

Q. That is what I mean of course.

A. No, I have reference to other railroads.

Q. These are pine shavings you burn? A. Yes, sir.

Q. Almost altogether, and little blocks of wood, too?

A. Sawdust, a great deal of sawdust.

Q. Kindling?

A. There is some little kindling.

Q. As big as your thumb?

A. Oh, yes, bigger than that, some.

Q. As big as your fist?

A. Yes, but they burn up clean.

Bernard Standley, sworn on behalf of respondents.

Examined by Mr. Dickinson:

Q. You live in Detroit? A. Yes, sir; born here.

Q. Like Mr. Godfrey. What is your business?

A. Foreman for A. Backus, Jr., & Sons.

Q. In what department?

A. In the cutting-up department.

Q. Whereabouts is that? A. Third and fourth floors.

Q. How long have you been engaged in that business?

A. I have been engaged with Mr. Backus 26 years, and what little other time I have put in when a boy I worked in the same business, only a trunk business, on the same principle.

Q. What is done in the cutting-up department, and how does it get its material to cut up? Just give us an idea of the working you have, the system.

A. In the first place I get an order from the office that we want

a half-inch car, we will say.

Q. What do you mean by that? 2298 A. A car-load of half-inch lumber, cut up into boxes. Well, I get the dimensions, size and everything, and I would go to work and make out a ticket and send it to the docks that I want 10 loads

of inch and a quarter lumber, to make half-inch stuff. Q. Is that about what you call half-inch lumber, a fair sample

(showing witness a board)?

A. Yes, sir.

Q. That is what you mean when you need half-inch lumber?

A. Yes, sir.

Q. Go on.
A. Then it is brought up to me, and when I think that the ten loads are all-

Q. It is brought up to you in the raw state?

A. In the raw state to the first floor. I give them the orders down there of what I want, half inch, dressed two sides, and they

171 - 55

go to work at it and send it up to me through this elevator that you saw. I put it on the trucks and take it down to the saws ready to be cut.

Q. Take it from which floor?

A. From the fourth floor down to the third floor to be cut up to those dimensions that I received, and when I consider there is ten loads up I commence to look at my car and I find I am about two or three loads short. I got to give another order for another five loads, so I find that by being short that way I have lots to contend with in the dressing of lumber, and it don't dress up in thickness or something like that.

Q. When did you find that to be so?

A. Within about a year and a half; most, I think, I saw was in this time.

Q. Have you had that difficulty in the matter of the cutting up of lumber before the tressle-work was built?

A. Once in a while there would be a knot get into it, but it would be only two or three boards, perhaps, a day or a week.

Q. Since the building of the superstructure there what has been your experience with the cutting-up shop there under your orders?

A. It has been a matter of perhaps a wasting of 2,000 feet of lumber a week, and extra help.

Q. What was the average waste prior to the building of the superstructure?

A. It would not average hardly nothing.

Q. Give us some idea as between 2,000 feet since the superstructure was built and trains running; what was the difference?

A. Oh, perhaps a board a day, or something like that.

Q. How do you find it as to getting a great quantity or a little of it before you discover it? Now, give me an idea of the quantity that comes to you. You have had it sent down to be cut up, and in what way does it come back to you? It doesn't come board by board?

A. It goes through a process, so that I don't discover it until perhaps two or three days afterward; we have so much ahead that way, you cannot notice it until it is matched; when we run over to the matchers there is where we have the contention of this thin and thick lumber, and after it is matched there is the thinness and thickness and we have to take those boards apart and make it right.

Q. It goes into stock?

A. It goes right into stock.

Q. Have you been down to investigate and find out what the

difficulty is?

A. Yes, I have gone down there; yesterday afternoon is my last time down there; it is such a distance to run down it is discouraging sometimes.

Q. To run down from your floor-

2300A. Away down to the first floor where they do this work. Q. Since this began to come in upon you, about 2,000 feet a week, did you investigate to find out what the difficulty was?

A. As near as I could. I would go down to the machines and see the foreman about it, and he said he would try and correct it; I asked him what it was, was it the machine, and he said No, we are burning lights all the timelhere, he said, You must not think that I can do the work as I used to, he said, That is impossible.

Q. Is it a question of light in adjusting the machines?

A. That is true.

Q. That you have found from your investigation?

A. Yes, sir. Q. You are positive of that from your 26 years' experience in this business?

A. Yes, I noticed men take the boards and they denied it and they said it is not so; and we have taken the board outside the door

and we have seen it there.

Q. In this business the product that you made was of uniform thickness and well matched before, was it, about like that? (Showing witness samples.)

A. That is about the grade of work we would naturally do.

Q. That is the grade of work you did do? A. Yes, sir.

Q. And that is a matched-piece sample of the kind of work you sent out?

A. Yes, sir.

Q. When were those made?
A. Made all of two and a half or three years ago.

Q. Did you bring any samples of the work that is done today?

A. Yes, I brought three pieces.

Q. In getting these samples did you try to select bad 2301 samples, or did you take them as they come? A. Oh, no, I just looked at the end of the trucks; you can pick

them right out in that way. Q. About 2,000 feet a week, you think, is bad and scattered through

the stock?

A. Oh, yes, we would pick out that all right.

Q. (Showing witness a number of boards.) Will you pick out some of the samples of work that turns out badly as compared with

what you used to, that you brought yourself and selected?

A. Yes, what we call the 2,000 waste, when it gets into work like that. (Selecting board.) What I mean by waste is this: We have to take this apart now and take it over to the small planer and dress it down to a thickness that will take out all this thin and make it of an even thickness.

Q. There is a waste of lumber from doing that?

Q. The machines in proper adjustment make this even, the same thickness?

A. Yes. This is what we call the face side.

Q. What do you call the other side?

A. Well, it ought to be both face sides. (Selecting another board.) That is what we call perfect work, some of our work today. That come right from the same truck, right under it.

Q. Come off the same truck?

A. The same truck, the piece matched right before it.

Q. There is a piece of good work and this is a piece that came right under it, and that you say is imperfect work?

A. Yes, sir.

Q. What do you do when this comes up to you and you find out?

A. We just take the piece that way and knock it apart 2302 that way and a boy runs to the matcher and gets a piece of the proper thickness and brings it back and puts it onto this and we put it together.

Q. You have to duplicate the labor throughout?

A. Duplicate the labor throughout, and while we do that the machine stands idle; this piece there is to one side and I have two boys running the machine and they dress it down to a thickness that will bring it to an equal thickness.

Q. In making these selections, have you taken them as they come on the trucks or on the piles, looked at the ends and found

them?

A. Just looked at the end of the truck and noticed them; you can see the thinness right there; I generally do that before the nailer gets hold of them, because it saves trouble.

Q. Will you please tell us whether you have as good men as you

used to have?

A. Why, the men are so long with us, they are pretty much the same.

Q. You have not changed your men?
A. Not much.

Q. The same old men in charge of the machines?

A. About the same.

Q. So far as the machinery is concerned, you have heard of no defect in that?

A. Not a particle.

Q. All in perfect running order?

A. Yes, sir.

Q. But in the fine adjustment of the machines runs these inequalities, in the false adjustment?

A. Yes, I attend to that myself, changing the thickness, to adjust

exactly right.

2303Q. To what extent has this annoyance been present in the class of work you have done throughout the mill; has it

been a constant and serious matter?

A. Yes, it has; it aggravated me so sometimes that when I thought I would like to get a car off, when I find the defects in there I could not possibly stop it because the car had to go; I know we received orders from those parties, and that we would like to have their orders, and I expected to hear from them every day, but of course as luck would happen I presume that they-

Q. You positively had no such trouble before?

A. As I said, very little.

Q. Have you had a great many complaints about the character of work?

A. I didn't let it go that far; I would always correct it myself;

I made that a study and a point.

Q. Has the work generally gone out as satisfactorily?

A. Once in a great while we would hear of a little complaint,

that was all.

Q. But it has increased the cost of the good product very largely, has it not, this duplication of labor and resetting of the machines?

A. Yes, sir.

Q. And delayed the work of the machines?

' A. Yes, sir.

Q. Delayed the mill altogether in every way?

A. Why, yes, it has.

Q. Now, in addition to these samples that you picked out, have you got a lot of this stuff that is imperfect there so that any one can see it?

A. Within the last few days I have picked out about 2,000 feet.

Q. You have laid out there now?

A. Mr. Backus is kind of complaining, the work not going off satisfactorily, and I thought I would keep these 2304 pieces and show it to him.

Q. You got a lot more there? A. Oh, yes, I got lots there.

Q. How many of those matchers have you got? A. Six. We have three, but they are doubled.

Q. How many on the lower floor?

A. Well, I have not got anything to do with that, but they have got four there.

Q. Ten altogether? A. Ten altogether.

Q. This work is done in which this trouble occurs on what is called matching machines?

A. Yes, hand matchers.

Cross-examination.

By Mr. Robison:

Q. You say Backus has been complaining considerably about the way the work was going on?

A. No, sir, the labor it took, the labor we have and the amount of work has not been turned out.

Q. You have not been doing as well? A. No, sir.

Q. He has been kicking, so to speak, for some time, has he?

A. Well, I thought I could show him this and show him where the defects laid.

Q. You picked those pieces out to show him?

A. I not only picked those out, but I picked considerable long, 14 and 18 and 12 foot lumber.

Q. Where is that?

A. Down in the factory.

Q. When did you pick those out? A. In the last three or four weeks.

Q. To show him?

2305

A. Yes, sir.
Q. That is the first his attention has been called to it?

A. No, I have been showing him this right along.

Q. He never found any way of removing it?

A. He told me to attend to that, I had charge of that, he had time and would not trouble with it. Q. This is done on some of his machines that has got his pate

arrangements on? A. I don't know as he has got any patent on those machines

all. Q. Well, the defects in this is in the planer?

A. Yes, sir.

Q. Is this all done on one planer, do you think—these boards?

A. That I don't know, I could not tell you that. They have g three planers on the first floor; which one of them done it I do know.

Q. Do you think any one planer did it?

A. Well, not one certain planer. I should judge they have done it.

Q. Don't you think it has been done by having one planer pla ing one thickness, and another, another?

Q. If a board goes through one of those planing machines, it bound to be the same thickness?

A. No, sir.

Q. What is the occasion of that?

A. Their pressure bar works loose or a chip gets under it, but whe this work is done (referring to board) the pressure bar is perhaps little loose, and by going in and adjusting those machines, it pretty dark, and they got to look at the machine-

Q. When it is once adjusted it will stay there?

A. It will.

Q. It will stay there just as long as it would before the elevated road was put up?

A. No, sir.

Q. You think the elevated road knocks that adjustment out?

A. Yes, I think the jar would.

Q. And knocks chips in under it? A. No, sir, I would not say it would do that, no, sir.

Q. Did you ever try lighting a candle to see about adjusting the things?

A. In my department we do not do that.

Q. But down below where all this damage is done? A. I won't go any farther than my department. Q. That does not come out of a regular planer?

A. Yes, sir.

Q. Do you say there is a machine down there that could run thing of that kind without being set on purpose to do it?

A. That is right.

Q. You think the elevated road causes boards to be run through a planing machine down there in such shape as that, or because it is so dark they cannot see to adjust it?

A. A man has got to try boards like that, and cannot see.

Q. Did you pick out the worst you could find?

A. No, sir, I got 2,000 feet down there.

Q. As bad as that? A. Worse than that.

Q. All done on account of the darkness down there so that you could not see how to adjust?

A. That I would not say about the darkness.
Q. That is your theory. That is the only possible theory on which you can lay it to the elevated road?

A. This cutting up of this is beyond me.

Q. Don't you think that the man running that planing 2307 machine was elevated rather than the railroad?

A. I won't say nothing about that.

Mr. Dickinson: Are you looking for your jag-saw?

Mr. Robison: I guess I have found it, by George, and that is all there is about it. He says this board comes through a regular ordinary planing machine, and it is caused to run out in that shape on account of this elevated railroad.

Mr. Dickinson: There is no doubt about it at all.

Mr. Robison: There is in my mind.

WITNESS: You ought to come down there some day, and you will

Mr. Dickinson: Well, you cross-examine these men and-Mr. Robison: I would like to cross-examine you on that.

Mr. Dickinson: And you will find out whether these men are honest or not—all of them.

Q. Are these ordinary samples picked out? (Referring to sample blocks.)

A. Yes, I was instructed to get out samples of this thickness.

Q. What were those got out for?

A. For samples to send to different parties, to see the thickness of the lumber.

Q. You probably picked out as good samples as you could get?

A. Cut up a board like that.

Q. You got one joint, made a perfect joint and then it is sawed in two?

A. Yes, sir.

Q. If it was not just the right thickness the first time, you would run it through a planer so as to get it exactly right?

A. No, sir, this has not been. That is some of the work 2308 right there.

Q. What do you do with this in order to make it perfect now? (Referring to another board.)

A. We cannot make that perfect unless we take and run it down to quarter inch, both pieces.

Q. You could not have made out of those pieces any of these

joints here, such a sample as that?

A. No, sir.

Q. They are not the same kind of lumber. If that had been a perfect kind of joint you could not make such a character of joint as that?

A. That is our heavy work, by running it a trifle slower it will

do the same work.

Q. The lumber itself is of such a nature that it could not present such an appearance as that?

A. No, sir, the lumber is clearer than that. There is clear spots right in here that would give you the same samples exactly.

Q. This is better than your ordinary work, is it not? A. No, sir, I don't think so.

Q. You think a year and a half ago all your box-work was as good as this?

A. No, sir, I did not say that.

Q. Don't you suppose these big knots and rough lumber that you have in these samples here has something to do with the shape this comes out in?

A. No, sir, I don't think so. As I said, once in a while there would come a few pieces that a chip would get under the board.

By Mr. BAKER:

Q. I want to ask one question. Do you think these two boards went through the same planer? (Taking one of the samples and separating it in halves.) 2309

A. Well, that I won't swear to, I received the boards in

that way.

Q. You received them in that way. What is your judgment as to whether they went through the same planer or not?

A. They must if they came up together. Q. How do you know they came together?

- A. One planer is sometimes on half inch and the other planer is on seven-sixteenths, and so where they come up they are often together-
 - Q. How many boards go through the planer at once? A. Sometimes one, sometimes two, and sometimes three.
 - Q. Was this tongue made on this when it came up to you?

A. No, sir.

Q. And this groove? A. No, sir.

Q. You make that upstairs?

A. Yes, sir.

Q. Here are two boards of substantially the same timber and one is thinner than the other?

A. Yes, sir.

Q. How could those get through the same planer and be of different thicknesses?

A. Well, that is the work they do down there, that is the work they do and send it up to me.

Q. How do they set these planers? Is there a gauge, or can they

make a different measurement?

A. Oh, yes, they can do that, there is a gauge to set it.

Q. Is there any difference in the nature of the timber as to whether some of it will come out more than the others of the same thickness?

A. Oh, yes, a cross-grained piece, or something like that.

2310 Q. A cross-grained piece will come out thinner?

A. Yes, a cross-grained piece would come out a little

coarser than a smooth-grained.

Q. There is a man down there that is supposed to adjust these planers so that they will cut the same thickness all the time?

A. Yes, sir.

Q. You do not run a planer yourself?

A. No, sir, only a little one we have on the same floor.

By Mr. Robison:

Q. Isn't the knives of the planer set solid?

A. The planer solid?

Q. Yes, the knife that turns?

A. Yes, sir.

Q. That is, it don't lift up and down on the end?

A. It ought not to.

Q. How do you account for that? (Showing witness board.)

A. Well, I don't go into those details.

Q. It has got to do that in order to plane a board that thickness, it has got to set on a pivot in the machine?

A. I am just telling you the amount of stock I get like that within a year or a year and a half, the amount of stock I get to contend with.

Q. Now, that was set to plane a half-inch board, was it not?

A. Yes, sir.

Q. At the end of the planer that that went through it certainly was loose in some way?

A. Well, I cannot go into those details.

Q. It must have been, must it not?

A. Well, no, I don't think so.
Q. I would like to know how it would go through a space a half inch thick and come out that thickness?

Mr. BAKER:

2311 Q. Are there different knives that go across the board?

A. No, one solid, straight knife.

Q. It is set solid like that, isn't it?

A. Set solid.

Q. In order to get it as thin as that knife edge is there on this board, that thing has got to drop down like that?

A. In my experience with planers, I don't think so.

Q. Well, there may be some other way, but I would like to know how?

Mr. BACKUS: We will explain that.

A. That is not my department.

Q. You cannot explain it?
A. No, sir, I cannot explain it, only I am telling you the contention I have with the lumber I cut up, the amount of labor I got to waste.

Mr. Robison: There is no disputing here; we will have to admit that there is some almighty mean-looking lumber.

Mr. Dickinson: Oh, well, we put it up on you.

Mr. Robison: If that is the kind of machines Backus has got down there, he better take off some of his patents.

Mr. Dickinson: Your witness Spitzley said they were finely

adjusted machines and in perfect running order.

Mr. Robison: This work must have been done by some of those

Mr. Spitzley omitted.

Col. ATKINSON: If you are going to take a man's property, you ought not to abuse him, Mr. Robison.

By Foreman BAKER:

Q. Those two boards that are matched there, they come up separately into your room?

A. No, sir, they come up together.

Q. I mean they are apart and you connect them together?

A. Yes, sir.

Q. You don't know that both those boards went through 2312 the same planer?

A. I am most positive they did, because they came up at the

same time, and on the same truck.

Q. Suppose there are two planing machines planing the same thickness of lumber?

A. They very seldom do that. We have three-eighths and sevensixteenths and half-inch and nine-sixteenths, all pretty near alike, and we are pretty careful.

Q. (Referring to board in question). That is about a sixteenth of

an inch difference?

A. About that.

By Mr. F. A. BAKER:

Q. I suppose you know that the foreman of the machine, the man that gauges the machine, is constantly adjusting and changing it so as to get it right?

A. Before he could do that it would generally require a board.

Q. That might go through there just at that time? Suppose he puts through a board and finds it does not cut the same thickness, and those two boards come to you?

A. To me.

Q. He has got to adjust his machine?

A. When I come down I tell him this lumber is not right, and he stops his machine and goes to work, and I go upstairs.

Q. Wherever he makes a change in adjusting it, it is liable to produce that situation or that condition?

A. Hardly. If a planer is entirely clean I do not think it would. Q. That is, if it is cutting a little scant and he adjusted it to

make a full thickness, it would not show up in your room?

A. No, sir.

Mr. Dickinson: This lumber that comes up to you, comes 2313 up on the order for half-inch or quarter-inch uniform thickness?

A. Yes, sir.

Q. And goes through the machines that have that order?

A. Yes, sir.

Q. What is the standard finished lumber? A. Three-eighths is about the standard.

FREDERICK SANTAG, sworn on behalf of respondents.

Examined by Mr. Dickinson:

Q. Where do you live?

A. Detroit.

Q. How long have you been here?

A. Over twenty years.

Q. How long have you been in the employ of the Backus Company?

A. Pretty near fifteen years.

Q. What is your business there in the Backus mill?

A. Running machinery. Q. Do you run the planer?

A. Yes, sir.

Q. How long have you been engaged in that business?

A. On the machinery?

Q. Yes, and this business, on the planing machine. A. Fifteen years.

Q. Will you please explain to the jury, by giving a description of the machine-work, how such a thing as that happens. This is a board which I show you, which comes upstairs on the order for three-eighths, the thinnest that is made. Will you explain to the jury how, in that planing machine, such an inequality as that arises?

A. Well, the machinery is all right, only sometimes it 2314 chips that right under, and the man that takes the lumber off he don't see it, and the other board is run through, and sometimes they come from upstairs and tell us something is wrong.

Q. They do not see it until they put the boards together?

A. No, sir; of course, we cannot see it down below there. Q. How long does it take before they can discover the difficulty when the boards go through separately? You run through two of this width, do you not, through the machine?

A. Two at a time.

Q. Now, going through separately, what is done with them when they go through the machine?

A. Well, they send them upstairs.

Q. Do they go on a truck first, a lot of them?

A. Yes, put them right on a truck.

Q. Separately?

A. Yes, sir. Q. They are not matched there?

A. No, sir.

Q. They go through separately and go upstairs. When is the first that can be discovered that they are not of the proper thicknesswhen they come to match them?

A. Sometimes their man can see it that takes the lumber away. Q. But it is running constantly. How long does it take a board

like that to go through the planer?

A. A second.

Q. And you are running probably 120 pieces to the minute, are you not-two of these pieces every second?

A. Yes, sir,

Q. So that you may get through there 160 in a minute, all with the same defect; is that so?

2315 A. Yes, sir.

Col. ATKINSON: A second is a very short time.

Q. About how many of these will you run through in a minute?

A. I don't know-long boards?

Q. I mean take the long boards; you will will probably run that through in a second. How many boards, long boards of the full length?

A. Forty-eight feet.

Q. About how many in a minute?

A. In a minute 48 feet of lumber, that makes twice two boards.

Q. Four boards?

Mr. Foreman Baker: Twelve-foot boards.

Q. Four 12-foot boards?A. Fifteen inches wide, two goes through there.

Q. Four, 12 feet each, is that right?

A. Yes, that is right.

Q. Now, what have you to say as to the necessity of having light about those machines?

A. Well, it ain't very much light now like it used to be before.

Q. And in the business you must have light?

A. Yes, we got to have sometimes light, when it is dark then we got to have some light.

Q. What light is necessary to do this work perfectly in a planing machine, in the adjustment of a planing machine?

A. The daylight is the best.
Q. You know of this imperfect work being made and sent up, don't you?

A. Yes, sir.

Q. What is your explanation of the defective work, what is the reason for this defective work going upstairs?

A. It is most about the light.

2316 Q. The trouble is about the light?

A. Yes, sir.

Q. Did you ever have such trouble in this sort of work before the structure was built there and the trains were passing?

A. No, sir

Q. Now, will you tell the jury how that edge of this board comes

up thin like that?

A. That is cut down below and the boards come right along and the knives are sharp and that goes right smooth down and you cannot hear it at all, and the man that takes it off sends it upstairs and it goes so fast through the machine the man don't take any notice.

Q. How does it come to be thin on the edge?

A. A piece sets under it; a little chip sets right under it.

Mr. BAKER: This is what he means: A board gets under the edge of it like that (adjusting two boards).

A. No, sir, not like that; a little chip sets under it.

Q. A chip or something gets under it. How big a chip will it take to make that thin edge upon one of those knives?

A. Well, not quite a quarter of an inch; about a quarter of an

inch.

Q. A little chip will do it?

A. Yes, sir.

Q. Every one can see that, of course, if it is a big chip that takes the whole corner off, then a man can hear it; but when it is a small chip a man cannot hear it.

Q. He should be able to see, should he not, and have light enough to see the adjustment and see the chips or whatever there may be; it is necessary for him to see and hear clearly?

A. They are all right.

Q. It is necessary, is it not, for him to see clearly and have plenty of light on these machines?

A I can't understand.

Q. If you have got light you will see this quicker?

A. Yes, sir.

Q. Have you run the matching machine downstairs?

A. Yes, sir.

Q. What have you to say as to the need of light in making a matching?

A. Only when we want to change knives or something; you

cannot see very good.

Q. You must have good light for the matching machines?

A. Yes, sir.

Q. How long does it take to make a change in the knives?

A. On what kind of a machine, I want to know, a planer or a matcher?

Q. A matcher?

A. Well, it takes pretty long, just the same, what kind of work a man wants to get out.

Q. How long does it take to make a change? Take your own way to tell any change you please.

A. Well, I could not tell; it is just how the work is.

Q. Can you make a change better if you have a good light? Must you have a good light to make the change?

A. Well, of course, when I got a good light I can make it faster.

Cross-examination.

By Mr. Robison:

Q. Is the body of these planers iron or wood?

A. Well, I suppose, I don't know what it is exactly, but it is iron.

2318 Q. They are about as wide as this table here, or some of them wider?

A. Thirty inches; just as long as the knives are.

Q. You take a board and shove it right along like this (indicating with board on table)?

A. Yes. sir.

Q. And if this was the knife here?

A. Yes, the rollers come first, two rollers on top and two on the bottom.

Q. If a man is attending to his business there he will see whether there is a chip under it like that (illustrating)?

A. You cannot hear it; those machines are 16 feet long, I suppose.

Q. There is another man on the other side taking it out?
A. Well, yes, but he don't have no time to listen to that.

Q. Can he not tell by feeling if that board is not being cut right, if he is attending to his business?

A. I don't know.

Q. How many boards like that would probably run through the planer before you would find it out—three or four thousand feet?

Col. Atkinson: They run very quickly.

Mr. Robison. We know how quickly it is done, it is 48 feet in a How many feet like that would run through before a man would notice it, do you think? (Referring to board.)

No answer.

Q. Is it so dark back in there that you cannot see a board planed off in that shape?

A. Yes, in some places where I am it is dark too, but there a man can see-

Q. It is so dark you cannot see that?

2319 A. Yes, in some places. Some places you cannot tell nothing about it, before they get maybe half a dozen boards upstairs and they come running down and tell me. Then they stop the elevator and then the machinist comes back to the machine to look it up and then he says what the matter is and he has got to look after it, and then he cannot find out nothing, and then he has got to get a light and light up the gas and look for it.

Q. This railroad has made it so dark there you cannot see? A. Yes, sir.

Q. You used to see all right, didn't you?

A. Yes, sir.
Q. What made this trouble then before? You say you used to have such trouble as this, only not so much of it. If there was plenty of light for you then, how did this happen? Carelessness, isn't it?

A. I don't understand it very well.

Q. Well, I don't know what a good word for that is. If you were attending to your business it would not happen?

A. That is no difference, not there.

Q. What kind of a thing is this? (Referring to another board.) A. A man can hear that when that breaks off, there is a knot on

that. Q. What did you run it through in that shape for, if you could

hear it all right?

A. That makes a noise, but not such a board like that. Q. Did you fix those boards up on purpose to show?

A. No, sir; I didn't bring any.

Q. This is some of the regular work-that is done down at the Backus establishment?

A. Oh, I know I made some already like that.

Q. Much?

2320 A. Oh, yes.

Q. How much? A. I can't say how much.

Q. About how much do you suppose?

A. Well, I couldn't say that.

Q. How long have you been working for Backus?

A. Fifteen years.

Q. In that 15 years you have made considerable of it? It is something that is liable to happen in any planer, is it?

A. Yes, sir.

Q. Down at Backus' and every other planing mill? Did you ever work in any other planing mill?

A. No, sir.

Q. You have been in them-well, never mind, that is all.

Redirect examination:

Q. How fast do they remove the lumber from the planing machines? Who attends it, a boy?

A. No, sir, a man.

Q. How fast does he remove it?

A. Just as fast as it comes out of the machine; a man don't get no time-

Q. He has to take it and put it on a truck?

A. No, sir, just take it and send it right upstairs, right up through the elevator. When a man handles 48 feet a minute-

Q. He has got to take it to the elevator, has to lug it over to the elevator?

Mr. Foreman Baker: That is the slanting elevator right there.

A. That is it.

Q. If he looked at it in removing it rapidly he might see a 2321 thin edge like that, but suppose two boards come through the same planer with that defect, he would not be apt to see it very rapidly, would he?

A. No, sir.

Q. Although that is a bad piece of work and no good?

A. That is no good at all.

Q. He must keep the two boards together when they come out of the machine?

A. Yes, sir.
Q. They must be put together when they come out?

A. Yes, sir; and each side has to be even.

Q. So that as the two boards come out, what does he do, lay them together and put them in the elevator?.

A. Yes, sir.

Q. The two must go together to be matched?

A. Yes, that is it.

By Juror Safford:

Q. Is this lumber split and planed at the same time as it goes through the planer?

A. Yes, the resaw splits it.

Q. Splits it and planes it at the same time?

A. No, sir; it has got to be resawed back first, and then it is got to go through the planer.

Col. ATKINSON: They are separate operations?

Mr. Dickinson: It goes from the resaw directly to the planer? A. Yes, sir.

Q. Now, let us see what the process is. As it comes from the resaw, then they come up two pieces?

A. Two pieces.

Q. What is the process of their reaching the planer, those two pieces; who takes them?
A. I do.

Q. You take them out of the planer?

A. Yes, when I am there.

Q. You take them directly from the resaw, the same two pieces, do you?

A. I don't take them from the resaw, there is another man that takes them away from the resaw.

Q. But he brings the two pieces directly to the planer? A. Yes, sir.

- Q. So that the two pieces of board are kept together from the time of resawing until they reach the upper floor, both kept together all the time, to reach the matcher?
 - A. All the time, yes, so long as they be made. Q. Until they are matched and put together?

A. Yes, sir.

A JUROR: Is this lumber resawed before it is planed at all? Mr. Dickinson: Yes, it is, as a matter of fact.

By Mr. BAKER:

Q. You don't mean that the same two boards pass through the planer at the same time?

A. No, sir; I would not say that.

Q. That is, they start with an inch and a quarter board and put it through the resaw and saw it in two edgeways?

A. No, sir; they saw it before they dress it.

- Q. That is what I resan; they take a board off the trucks and put it through one of those saws that splits it right in two, up and
 - A. That is before I get it. Q. That is a resaw, isn't it? A. Yes, sir.

Q. And then it comes over to you to be put through the planer?

Mr. Dickinson: They come in the same piece.

Mr. BAKER: I know, but the same two pieces do not go together all the time.

Mr. Dickinson: Yes, they do.

Mr. BAKER: Do you pretend to say that those pieces constituted the same inch board? (Referring to two pieces of 2323matched board.)

Mr. BACKUS: No, sir.

Mr. BAKER: That is what I am getting at.

Mr. HENRY BACKUS: I happen to know those two are from the

Mr. BAKER: They may happen to be, but you take an inch board and resaw it and dress it, and those two pieces do not always stick

together, they might go through.

Juror Safford: The way I understand it, you take two pieces of board, run it through the resaw and put it through the planer. If I understand it right, this is not in the planer but in the resaw in not splitting even.

Mr. BACKUS: No, it is in the planer. It is because a chip is

under.

Mr. BAKER: What I am getting at, take that board there, whether those are the two sides of the same board, and I don't understand that it is. If it is I would like to see how they do it.

Mr. Dickinson: Those pieces come from the resaw.

Mr. BAKER: Of course, but you do not necessarily put together the same board, the two pieces of the same board.

Mr. BAKER: Wouldn't it be a good plan to put some witness on

that does understand it?

Mr. Dickinson: This man understands it perfectly.

Mr. Baker: He evidently does not understand the language.

Adjourned until next morning at 9.30 a.m.

Остовек 27, 1893—9.30 а. т.

FRED. A. BAKER, recalled for cross-examination.

Examined by Mr. Robison:

Q. Mr. Dickinson asked you yesterday about the price at 2324 which the union depot company settled with the Diamond Match Company, or the price they paid, and I believe yesterday you could not remember. Have you refreshed your recollection any since then?

A. Yes, they paid for 210 feet frontage \$16,000.

Mr. Foreman Baker: Did they buy that land absolutely?

A. No, for the right of way in front of it. 210 feet for \$16,000, or \$76.18 a foot.

Q. Was that a settlement or a verdict?
A. That was a settlement.

Q. Do you know the price that any of the other parcels along there in the neighborhood?

A. Yes, I know what the verdicts were or what was voluntarily paid for the whole line of the street.

Q. There is a map here that shows the different parcels?

Col. ATKINSON: If your honor please, I would like to interpose an objection to this that the testimony is incompetent, there being no showing that the other property was situated like this property, and also that it is a matter between other persons.

Mr. Robison: This is cross-examination, if your honor please, this is testimony that was brought out by the respondents yesterday,

and certainly we are not bound to stop there.

The COURT: I think I will admit the testimony.

Mr. Dickinson: I would like to say a word to complete the record.

Mr. BAKER: I desire to call attention to this, you brought out the two highest parcels.

Mr. Dickinson: That is because you interposed the statement-Mr. Baker: That would hardly justify, because I did not claim

we had not paid for it.

Mr. Robison: His question was not for that purpose. That was simply to show that in spite of the railroad going

in front there other people had proceeded to improve their property, and to show that the passage of this elevated railroad did not destroy the property there as you claim.

COURT: As I stated yesterday when the offer was made, I question very much as to whether that was competent or material, but I admitted it upon the grounds, as I stated then, that I did not think very close lines ought to be drawn in a proceeding of this kind, as far as the admission of testimony is concerned. And in view of the admission, it strikes me, that I ought to admit this testimony now.

Mr. Dickinson: In this connection as a further objection to the incompetency, in order to fix the record, we object on the further ground that the measure of damages in cases of this kind is not confined to the real estate, but that over and above that, it has always been considered a minor question, and reference has been had distinctly to the injury to the business involved, and our other objection is that there is no property upon the line of the road, by which the road passes, similarly situated to this in regard to being up grade in front of it and having switches in front of it, and also on the ground that this is a planing-mill property which is liable to be more damaged, according to the testimony, than any other kind of property, and that there is no similar property along the line of the road; and in this connection, I call your honor's marked attention, as I did not have the privilege of arguing the question before your honor at the last hearing, to the leading case, and ask your honor to examine it. In the case of The G. R. & I. R. Co. vs. Weiden, 70 Michigan, 395, Judge Campbell, in delivering the opinion, said: "Apart from the money value of the property itself (meaning the real estate), they were entitled to be compen-

asted so as to lose nothing by the interruption of their business and its damage by the change, by the abating of it or by the injury to it present and future. A business stand is of no value to the owner of the business without regard to whether he has the fee of the land or not, and any diminution of the business facilities as they are carried on lead-to serious results for which he is entitled to compensation." In these condemnation cases the loss of locations, of particular locations, they destroy the business altogether, and whatever damage is suffered by the business as well as to the realty must be compensated. Appellants (that is the property-owners) are not legally bound to suffer one dollar's damage because of the petitioners' action in running a railroad by the property. The railroad can only be authorized to take possession upon making compensation for all of the losses.

The Court: There is no question about that. I am familiar

with that case.

Mr. Dickinson: But now we are going into the question in this case of the damage to the realty in other places, where there is not a similar business, no similar business, none that can be so affected, and situated entirely differently, this having a grade in front, and

also switches in front of it.

The Court: It strikes me that those are matters for the jury to consider As I remarked a moment ago, I question very seriously the competency of that testimony in regard to what was paid to the Peninsular Stove Company for going along in front there, but I admitted that testimony. Of course, as far as the damage to the realty is concerned, that is merely one of the items to be taken in consideration in an enquiry of this kind. If a person's business is damaged, as stated by Judge Campbell and as read by you, that is

a matter which the jury will have to take into consideration.

2327 In view of the admission of the testimony yesterday in regard to the Peninsular Stove Company, it strikes me that I will have to admit this testimony and let it go to the jury for what

it is worth.

Exception for respondents.

Mr. Robison: Now, I offer the map in evidence.

Q. This is a map, is it not, of the elevated railroad?

A. This is a map showing the line of the elevated road and the property on each side of it, the property on the north side being marked with the names of the owners.

Q. That on the south side being the Michigan Central Railroad

Company's?

A. Yes, sir. The elevated road strikes River street just this side of Eighth street and the first property affected, as being on the line of the street, is the property owned by George H. Hammond. It is 45 feet front on River street and is on the northeast corner of Eighth and River. Mr. Hammond has a meat-storage house there, and the elevated road goes pretty close to the corner of the building, within three or four feet of it. He accepted in compromise of that, \$2,500 for the 45 feet.

Q. And what is his business?

A. He has a meat-storage house there, the meat being delivered on a side track that runs along River street underneath this structure from the Michigan Central track.

Q. In your judgment, would the smoke and cinders and dirt and filth and one thing and another hurt meat as much as lumber?

Objected to as incompetent.

Mr. Robison: Well, I don't care about that.

A. I do not care to testify about that.

Question withdrawn.

A. The next property is the Diamond Match Company property, property that was built up by D. M. Richardson and used 2328 for a match factory. You all have seen the property undoubtedly, and it has a frontage on River street of 210 feet. The south end of it is on the street, that entire building on the 210 feet, and some yard room there. That was settled without any litigation and without any award, and as I say, they accepted \$16,000 for the 210 feet.

Mr. Dickinson: Are you positive that was all that was paid for

the whole deal?

A. That was the way it was reported to me. If there was something more paid it is unknown to me. It is possible that Mr. Dickinson may have received something in addition.

Mr. Dickinson: If I did I accounted for it.

A. Certainly.

Q. That would not be the Diamond Match Company's damage; that was Dickinson's damage?

A. No, he was counsel for the Diamond Match Company here in Detroit.

Mr. Dickinson: You don't know anything about my desire to have the figure kept down low for the effect on other property?

A. Well, I did not negotiate the settlement, it was made by Mr. Joy. The next property is the old Union mills, a flouring mill, and the elevated road goes right by the doors where they grind, where their purifiers and apparatus are. It is a large high brick building,

you all remember it. That was tried before a jury; they have 140 feet, and the jury awarded them \$21,250. They manufacture flour; that is the sole purpose of the main building, and the rear part of it they use for a linseed-oil plant. The next property is that of the Peninsular Stove Company, which was referred to yesterday, and which includes the property that George W. Robinson owned and used for a lumber yard. It has a frontage of just about 300 feet.

2329 Mr. Dickinson: Let us understand. When Mr. Robinson used that for a lumber yard, was it at the time of the con-

demnation?

A. No, sir, he was supposed to own it at the time.

Q. No lumber yard there then?

A. No, sir. One parcel of that is marked to William B. Moran, but before the union depot proceedings this property had all passed to the Peninsular Stove Company.

Mr. Robison: Including this of Mr. Robinson's?

A. Including that of Mr. Robinson's, so that there is a foot and a fraction less than 300 feet of it. They have the old glucose works turned into the stove works and have a large molding-room there, their principal molding-room is upon this street.

Col. ATKINSON: Stove molding?

A. Yes, sir. A very large room there for that purpose, and the jury awarded them about \$49,000, a little less than \$50,000. say, that case is still pending in the supreme court. From the Robinson lumber yard to the corner of Tenth street were a number of dwellings. Some of them were small and the buildings were not of much value, except a brick building that was owned by George W. Wetherbee; and those cases were all settled. George Kunze owned the first 25 feet and he accepted \$1,000, or \$40 a foot. George C. Wetherbee for 25 feet, on which was a brick dwelling-house, accepted \$1,500, or \$60 a foot. Hylet Barker owned the next parcel, with a building of not much value on it and he accepted \$1,000, or \$40 a foot. Frank Hildebrand owned the corner on the corner of Tenth street, which was a dwelling-house, and he had a saloon on the first floor. He had 25 feet and accepted \$1,500, or \$60 a foot. Since then that property has all passed to the Peninsular Stove Company, so that they own the whole frontage. Crossing

Tenth street, the first property owned on the north side of the street is the flour shed of the Michigan Central Railroad

Company. They own 166 feet of frontage there, and across the railroad crossing and near Mr. Backus's they own 47 feet more. That was condemned in a proceeding before the commissioners, and the commissioners awarded them \$10 a foot.

Mr. Dickinson: That is for running by their yard?

A. No, sir, for running by their flour shed. There is 166 feet.
Mr. Dickinson: You include this side of the track, all west of
the track of the Michigan Central?

A. They made the same award for both sides, but I am not referring to the south side of the track at all, it is on the north side. On the north side of River street the Michigan Central railroad

owns 166 feet, just as we get to the crossing, and they have a flour shed there; and on the other side they have 47 feet, and they have some sort of a little house there they use in connection with the road. As I say, they were awarded by the commissioners \$10 a foot.

Col. ATKINSON: Let me understand where that is, that 47 feet?

A. There is 17 feet right next to Backus.

Q. Oh, it is the piece next to Backus?

A. Yes, sir.

Mr. Robison: These commissioners took the place of a jury?

A. Yes, sir.

Q. Under the law, when there is a contest between two railroads, there are commissioners appointed or was this agreed upon?

A. Under the law unless a jury is demanded by the respondents in a case, commissioners are appointed. The commissioners were George H. Barbour, M. W. O'Brien, of the People's savings

2331 bank, and Col. Hecker, of the Peninsular car works. The next piece of property belonged to Mary Specht, and that was disposed of by buying the property. Mr. Joy testified as to the general facts. And then selling it to the Michigan Central Railroad Company. It was bought for \$8,000 as I remember it.

Q. How many feet?

A. 27 feet. We bought the property for \$8,000 and sold it to the Michigan Central Railroad Company for \$6,500.

Mr. Dickinson: \$8,500.

A. It may have been \$8,500, but it is either \$1,500 or \$2,000 that we deducted for the damage and then let the Michigan Central have it for the balance of the consideration. I did that all myself, and I will give you the exact figures. The next property is the Backus property which is before this jury. We then come to a piece of property—the jury may have noticed a jog in the back of the property, and there is a back yard in the jog and a common kind of dwelling in front, which belongs to Barbara Stedly. That was an award of a jury, and they awarded her for 65 feet, \$2,615.20, or \$42.30 a foot.

Mr. Foreman Baker: Does she live there?

A. She lives there as I remember. The next piece of property belongs to Louis J. Specht and Mary Specht, two parcels 27½ feet each. In that case the jury awarded each of them \$1,100, or \$40 a foot. Those are some very common buildings upon them, dwellings, that is, if they are occupied at all. I doubt whether those particular ones are occupied at all now. The next piece of property at the time we commenced the proceedings belonged to Barbara Baxter, and that is the property that Mr. Randall purchased and turned over to Mr. Joy. I don't know just what that was.

Q. That was a political consideration?

2332 A. I don't know. Mr. Joy has told you what there was to it, he took it off Mr. Randall's hands.

Q. Mr. Randall bought it for accommodation and Mr. Joy took it from him?

A. Well, I don't know what he bought it for, I do not care to state.

Q. If you did know?

A. No, sir. The next property belonged to Margaret Specht. She had 23 feet and that is marked here, and, as I remember it, was vacant property. There was not anything on it at all, and she was awarded \$713, or \$31 a foot. The next piece of property is marked to John Wineister. He lived at Howell, connected with the bank out there. That was disposed of for \$1,500 on a settlement.

Q. How many feet of it?

A. Fifty-one.

Col. ATKINSON: Was that vacant?

A. No, sir, there are some buildings on it, but it might just as well be vacant, the lot would be worth more if the building were off. The next piece of property is 40 feet, that belongs to Jacques Ruhlman, half of it, and the other half to his wife, Rachael Ruhlman. That was an award of a jury. They occupied that for a residence, with a saloon, as I remember it, upon Fort street, and some tenants upon River street. They were awarded \$50 a foot, or \$1,000 for each twenty-foot lot. The next piece of property is owned by Catherine Hartser, with a frontage of 40 feet and some kind of a building, not very valuable, upon it. She was awarded \$40 a foot, or \$1,600. The next piece of property belonged to A. G. Boynton, of the Free Press, and a Mr. Boutell, and they had some sort of a manufacturing institution in there, I don't just remember what it

was. The union depot structure passes south of the River road at that point, so that the superstructure is nearly the

width of the street from the property, and they accepted \$20 a foot, or \$917.40. They had 45.87 feet. The next piece of property is 72.59 feet, and belongs to Mr. Joy. He testified as to the purchase of it and the object of it. Of course I do not know what they paid him, if anything; I do not suppose they paid him anything. That goes down to Twelfth street, where the superstructure is entirely out of the street, so that we have all of the property involved in this whole controversy.

By Juror CLARK:

Q. On that piece of land near the Backus property that Mr. Joy bought, was the price at which the union depot company paid agreed upon between the two companies?

A. The piece that Mr. Joy owned?

Q. Yes. From what you stated I should think it was between 25 and 30 per cent. which was allowed in the difference in the purchase of that in the damage?

A. I don't remember; there is no evidence in the case.

Col. ATKINSON: \$1,500 out of \$8,000.

A. I don't remember that Mr. Joy has ever received anything. Q. Mr. Joy stated he bought it for \$8,000 and said there was an

allowance made for the damage?

A. Oh, you mean the piece out by the Michigan Central. Certainly, that was a piece of property that was a flat-iron piece; I

will show it to you. That is this piece of property marked here on the map, and of course this line ran back to these tracks of the Michigan Central here.

Q. What I was getting at, according to your statement it was

about 25 or 30 per cent.?

A. It was either \$1,500 or \$2,000, one or the other. I will get the exact figures. Of course that property was peculiarly situated and we bought it because we could dispose of it to the Michigan

Central. They wanted it and had been trying to buy it for years, but had never succeeded in doing it, and when we found out what we could sell it to them for we bought it.

Redirect examination.

By Col. ATKINSON:

Q. This Hammond property, you say, has 45 feet front on River street?

A. Yes, sir.

Q. Did it run through to Fort street?

A. I think not.

Q. What was the number of square feet in the Hammond property?

A. That is more than I know.

Q. Well, would you just see if you can obtain that?

A. I don't think the rear of the lot lines are marked here.

Q. I suppose it would be about half the depth, or does it run to an alley?

A. My recollection is that property probably runs back from 125 to 150 feet, maybe not more than 110 feet. I could not tell exactly, but it would be the length of a lot down there.

Q. Well, it would run half way to Fort street?

A. Yes, it would be proper enough to consider the property as Q. About half the depth of the Backus property?
A. Yes, sir. running half way back.

Q. Now, that was used, you say, for a meat storage?

A. Yes, that is the only use I saw it put to. A freight car stands on this side track-

Q. What kind of a building is there on it?

A. A brick building.

Q. How large?

A. I think it is only one story; it might possibly be two low stories.

Q. And is the meat taken in on cars? 2335

A. There is a refrigerator car stands right on this side track in front of the building and the refrigerator cars have tracks on them where they run the beef around on little rollers overhead, and they are tracks that run from the car, that are adjustable, and can be run from the car right into the building, so that a man goes in there and takes a quarter of beef and shoves it right through.

Q. That is a building that is kept close for the purpose of keeping the meat cool?

A. I should judge it was kept at a low temperature.

Q. Light and air would not be particularly desirable for such a building?

A. I think cold is what they want principally, and reasonably

pure air.

Q. Now, that was an agreement, was it, between Hammond & Company?

A. That was adjusted.

Q. Was there a condemnation proceeding threatened?

A. No, I don't think there was, any more than the property-owners down there were generally informed that if no settlements could be made the company would be compelled to commence proceedings?

Q. The company would condemn? A. Yes, sir.

Q. And the condemnation proceeding takes considerable time, all these condemnation cases?

A. Took a long time.

Q. So that if a man was put to a great delay and expense in resisting, if he tried to litigate with the company-

A. He would be put to a large expense and so would the com-

pany, a very large expense.

Q. And do you know whether Mr. Hammond, having owned the 45 feet there, was influenced a great deal by the ex-2336pense that it would cost him?

A. I am sure I cannot tell you what influenced Mr. Hammond. Q. It would have cost him over \$100 a foot, would it not, to con-

test it?

A. Well, if you take one of these cases and litigate it through, I think it would cost \$2,500 for the property-owner, if you went to the supreme court.

Q. You cannot tell whether Hammond was buying his peace or

whether he was getting full value for his property?

A. Of course I don't know what influenced him. I know that he settled and the company was willing to, because it would cost the company fully that amount to go through the condemnation proceeding.

Q. The company have counsel by the year and other parties have to hire them for a short time? And I suppose they would probably

cost more?

A. There is not much difference, I guess, in the compensation, one way or the other; it is a pretty expensive business all around.

Q. A pretty expensive luxury?

A. Yes, sir.

Q. Mr. Hammond, too, had special relations with the company, and with the railroad?

A. I could not say that. Of course Mr. Hammond and the beef companies generally are large patrons of the railroad.

Q. They depend a good deal on the railroads for accommodations

and for their rates, etc., so that their relations in a business way are quite intimate with the railroad company?

A. Well, that depends largely upon the railroad companies and the temper of the man. Sometimes the more a man has to 2337do with the railroad companies, the more he is disgusted. and I cannot tell you how Mr. Hammond looks at that.

Q. Such a business as his, requiring dispatch and cars and accommodations, it would behoove a man like Mr. Hammond to be on good terms with the railroads if possible?

A. I do not think he would be specially antagonistic as long as

he was getting proper service.

Q. Well, his kind of business would require prompt and proper

service?

- A. Of course the shipment of beef requires rapid service and it is a large business. The beef trains from Chicago and Boston to New York are one of the large items of railroad business, as I understand it.
- Q. Do you know anything about the interstate-commerce case, in which Mr. Hammond appeared for one of the railroad companies?

A. No, sir.

Q. In which it appeared that there was a discrimination in his favor against other shippers?

A. I know of no such case.

Q. Well, let us see about the Diamond Match Company; what depth have they?

A. I think that goes through to the alley.

Q. That would be half the depth.

A. There may not be an alley there, although I think there is.

The Peninsular Stove Company has the Fort Street front.

Mr. Dickinson: The Peninsular Stove Company comes in behind them. I think you are right about the Diamond Match Company going back to the alley.

A. They go back to an alley, whether a public alley or one they have opened for their own convenience, I don't know.

2338 Q. They go half the depth, then, the Diamond Match Company, of Backus?

A. They are half the block.

Q. Have they railroad connections to their establishment?

A. All that property, from the Hammond property down to the Michigan Central crossing, has a side track that was put in under the management of Mr. Richardson. The original grant was made by the common council to Mr. Richardson.

Q. And that side track connected them with what road?

A. The Michigan Central.

- Q. What do they do in the Diamond Match Company establishment?
- A. It was a match factory when Mr. Richardson owned it and it is a match factory yet.

Q. Is it in use?

A. Well, at one time it was not in use, when the Diamond Match

Trust was first organized, I think for some years, they did not make matches there, but I am not certain.

Q. Was it in use at the time this compromise was made?

A. I think it was, but I am not certain.

Q. Which way does the Diamond Match Company front?

A. I should judge the main entrance to their building is upon

Eighth Street.

Q. Now, do you know how they are situated with reference to light from other sides than the side on which this structure was built?

A. Well, of course they have that end of their property, the

Eighth Street end.

Q. They have Eighth street clear, and does the building 2339 run to the alley?

A. I think it does, but it may not quite.

Q. Do you know anything about the relative machinery in a match factory and a planing mill?

A. I never was in a match factory and I could not tell you.

Q. So that you are unable yourself to give us any parallelism between the two kinds of business?

A. Nothing, except that it is a wood-working institution.

Q. Except they both work in wood?

The character of the machinery with which they split matches I have heard something about, but I do not know anything about it. I never saw one of the machines work.

Q. How long has this match company been in actual operation

since this structure was built, if you know?

A. Well, I say I could not tell you. I think they have done some work there all the time.

Q. It is, I suppose, in the match trust? A. They operate it when they want to. Q. It is idle most of the time, isn't it?

A. I don't think that is so, that it is idle most of the time. think they are doing some work there most of the time.

Q. Well, it is not running up to its full capacity, as it was in Mr.

Richardson's day?

A. You are asking me something that I do not know but little about. What I called attention to before was, they have recently made large improvements there.

Q. Now, we will take the Union mills. What depth was that? A. Well, that property goes back to the Peninsular stove works property. I should say it went back about 140 feet; 2340

that is my recollection of it. Q. That would be about half the depth, then?

A. Yes, sir.

Q. That was 140 feet wide?

A. That is 140 feet wide.

Q. About 140 feet square, then, and was that an award or compromise?

A. That was an award.

Q. Did you conduct the proceedings?

A. Yes, sir. Q. \$21,250? A. Yes, sir.

Q. Do you know what the Union mills paid for the entire property when they bought it?

A. I did know, but I have forgotten now.

Q. About \$28,000, was it not?

A. No, it was something more than that. It had been abandoned for a number of years; that is, it had been a failure as a flour mill. A firm down in Buffalo owned it and Mr. Kidder and his partner came here from Minneapolis and I think they bought it on a foreclosure of a mortgage and then put in some \$75,000 worth of machinery, and have run a flouring mill there ever since.

Q. \$75,000?

A. I think it was something like that. Mr. Dickinson was in the case; he put in a lot of machinery; it may not have been more than \$40,000, but they put in this improved milling machinery they have nowadays.

Mr. DICKINSON: The total equipment of the mill, re-equipped en-

tirely new, was just \$22,000.

A. Well, they made other improvements.

Mr. Dickinson: Whatever they did in the oil department is another thing, but the testimony is \$22,000 there and a flouring equipment.

2341 A. I would not undertake to state what they did do, but they made large improvements.

Q. What kind of a building have the Union mills?

A. They have a large, tall, brick building, with windows right along this superstructure along the street.

Q. This railroad runs practically in front of it, then?

A. Runs right close to it, only a few feet to it.

Mr. Foreman BAKER: Does it run any closer to this mill than it does to the Backus property?

A. Yes, you can almost touch the superstructure from their building.

Q. Their building is built out to the street?

A. Yes, and the Backus building is forty feet back.

Q. You paid them \$21,250?

A. Well, the jury said we should pay that.

Q. I suppose you paid it?

A. Yes, we paid it. There was testimony in that case that it would affect the manufacture of flour in some way in discoloring it.

Q. And I suppose that was one of the elements the jury consid-

ered, probably?

A. Well, I don't know just exactly what they did consider. They made that award, and we wanted to get through with it some time or other, and it costs us five or six thousand dollars to try one of these cases and we paid it.

A. Well, in addition, I suppose, to the award, you paid their ex-

penses of contesting it?

A. No, sir.

Q. In these cases where awards were made, has there not been an allowance for expenses?

A. Not in this controversy. Judge Reilly ruled that attorney fee

was a taxable attorney fee.

Q. So that a party, then, in contesting, loses the expenses, with the exception of ordinary attorney fees?

A. Yes; in those old cases we were in, Colonel, where they 2342 made an allowance, they only allowed one-tenth part of what the lawyers charged.

Mr. Dickinson: One-tenth part of what the services were worth.

Put it that way.

Q. I know we did pretty well when we contested it.
A. I think we always try to do the best we can.

Q. Now, with reference to the Peninsular Stove Company, the superstructure runs in front of their place, and I suppose about the same distance that it does from Mr. Backus'?

A. Well, somewhat more; it is 300 feet.

Q. About the same distance from their building? A. Oh, no; their building is right down close to it.

Q. Comes up close to the street?

A. Close to the superstructure, and their molding-room is right on the line of the street. You can touch it with a ten-foot pole, anyhow.

Q. What depth is there?
A. Their property, as they own it, runs through to Fort street.

Q. There is an alley in the center, is there?

A. No, sir, I don't think there is. If there ever was one they have closed it up. They use it as all one main stove plant.

Q. They have practically the same depth as Backus?

A. Yes, sir.

- Q. They would have about 300 feet wide all the way through there to Fort street?
 - A. I think it is about 300 feet; 280 or something like that.

Q. They were allowed \$48,900?

A. Yes, sir.

- Q. What machinery did they have on the side where the structure is built?
- 2343 A. Well, they had a great many elements of damage that they figured in on us. The principal controversy was over the molding-room; that was one of the main items.

Q. How did it affect the molding-room?

A. Well, they had a large amount of testimony indicating that it would jar the molds, and we had a large amount of testimony that it wouldn't do anything of the kind.

Mr. Robison: Do you know if they are still molding there?

A. They are still molding.

Q. Well, there was a large amount of testimony that there would be a jarring and vibration from the passing of trains, was there?

A. Well, there was some testimony to that effect, but I would not care to express an opinion about it.

Q. Well, I do not care to have you. I never knew a railroad

attorney yet who thought there was any truth in anything said against the railroad company.

A. Well, I hardly want you to put me in that category.

Q. But anyway, the jury, on the testimony introduced in that case, allowed them about \$50,000. What other elements were there

for damage besides the vibration?

A. They had a nickel-room, a place where they did nickel-plating, right close to the superstructure, that is, right next to the south part of their building, with a door through that goes down to the floor, there is a door, if you look right out onto this superstructure as it exists, and they had a place there where they hang stove-trimmings in a fluid and nickel them.

Q. Their plating room?

A. Yes, sir. And then above they had a pattern-room and a good many rooms there where they used the light that would come in these side windows, and then they claimed all the damage that anybody could claim in such a case.

Q. One of the elements then was for darkening the building?
A. That is what they claimed.

Q. The other for the vibration, and what else? I suppose the

dust would not have affected their work?

A. Well, another item. They said that when these molders were working in this molding-room and a train went by, they would all stop and look at it.

Q. That is, it would distract the attention of the workmen?

A. It would distract their attention.

Q. Any other elements?

A. Well, I cannot remember it all, but I can say generally that if there was any way that damage could occur, it was not omitted.

Q. That I suppose was a mere matter of humor on the trial about the men being distracted. The principal claim was for vibration and the closing out of the light, was it not?

A. Well, I could not say what was considered by the jury. I could not say what they really based their award upon. This tes-

timony was in the case of course. Q. Kunze had 25 feet you say.

A. Yes, sir.

Q. How deep was his?

A. It goes back half the way, if I remember right. His may

possibly go the whole distance.

Q. He had a dwelling on that and accepted \$1,000? have cost him five or six thousand to contest it if he had not made peace with the company?

A. No, sir, it would not cost a property like that for a small piece. Of course, down below there we did have con-

tests and they all combined.

Q. You would have to have precisely the same litigation for a small piece as for a large piece?

A. It would depend on who they employed and how far they

went with the litigation.

Q. Well, if they surrendered without much of a contest it would

1391

not cost them so much. Now, do you know who made the settlement with Kunze?

A. Well, I do not just remember now that particular settlement,

but in a general way I had charge of it all.

Q. Do you know whether that was the actual consideration paid?

A. Well, I think this was managed in this way: The Peninsular Stove Company wanted that property and they were willing to give \$100 a foot, and the owners were willing to sell it for what they could get from the stove company and what the union depot company was willing to pay them, and in that way it was all closed out, except, maybe, Mr. Hildebrand's. They may not have settled with him.

Q. I am speaking now of the Kunze matter. Then the way that was settled was to buy the property of him and sell it over again

to the Peninsular Stove Company?

A. No, sir, we did not buy the property; they could make this sale.

Q. You combined to buy it

A. No, sir, we did not come to buy it. It come about in that way and so we did not have to ritigate it. The stove company was in the market to buy.

Q. They bought it?

- A. Well, we settled with these property-owners individually and then they sold to the stove company upon such terms as they could agree upon. I knew at the time, but it is about \$100 a foot; some of them may have got a little more.
 - Q. So that they practically parted with their property?
 A. That is so, unless it is Mr. Hildebrand, on the corner.

Q. How was it with Wetherbee?

A. Wetherbee had a brick building, and we settled with him for \$1,500.

Q. Did he sell to the stove company?

A. Yes, sir.

Q. And Barker did the same thing?

A. I believe he did.

Q. And Hildebrand the same?

A. Well, the stove company may have paid more. He had a saloon there and they were anxious to get rid of the saloon; they did not want it near their works.

Q. What I want to get at is, Kunze, Wetherbee, Barker and Hildebrand, instead of selling the easement to pass the property, practically all disposed of their property so that they ceased to be interested in it?

A. No, sir, they did not. In selling the easement they sold the easement of the property, and then sold to the Peninsular Stove Company.

Q. Was it a part of the understanding by which the easement was acquired that they should part with the rest of their interest?

A. No, sir, it was not. I merely state that as a fact that they did make these sales afterward.

Q. It had nothing to do with the arrangement at the time?

A. I don't know what actuated them. I know that the union depot company and the Peninsular Stove Company did not act

together, but they all had this property, and the union depot 2347 company was willing to pay them certain amounts and the stove company to purchase.

Q. Did they have a sale to the stove company in view at all at the time of this settlement, do you know?

A. I don't know how far those negotiations had progressed. Q. Do you know whether they had been mentioned at all?

A. I do not.

Q. Now we come to the Michigan Central flour shed. They have

166 feet there that they run their trains up to, I suppose?

A. They have a side track that runs by this flour shed and then they have this Richardson side track that goes up there, and they have a side track that goes into the flour shed, I think. There is one marked here on the map.

Q. What kind of a building have they on that property?

A. They have a one-story shed forty or fifty feet wide and about 150 or 60 feet long.

Q. Which side of River street is the shed on?

A. On the north side.

Q. Before leaving the Peninsular Stove Company plant there, how were they situated with reference to light, aside from the River Street light?

A. Well, in their main building there they received their light

on the south side.

Q. Any other side where they had light?

A. I don't remember just exactly of how many windows they have on the east side, but they have some.

Q. They run to Tenth street, don't they, between Eighth and

Tenth? Do they run to any of the cross-streets there?

A. They do. They run to Eighth street, and it is up on the Fort Street corner a half block from the superstructure.

Q. So that down on River street they do not go to Eighth or Tenth, any cross-street there?

A. No, sir.

Q. Did they have a large court inside for light inside their property?

A. On the Fort Street property, on the jog north of the Diamond Match Company, they have a large foundry-room there, which is

Q. My question is whether they had a court which gave them ample light inside their property aside from this front?

A. There is an alley that runs up there that they drive into, but there is no court.

Mr. Dickinson: A big yard inside, isn't there?

A. Down on this vacant property and on the Fort Street front there is a large yard.

Q. Was all this 300 feet occupied by buildings?

A. I think it all is except this ten-foot alley; there is a passageway.

Q. No, but was there 300 feet of front of buildings on River street?

A. I think there is, but it may not be quite 300 feet.

Q. It is substantially all built up there?

A. Yes; that is, with this new molding-room they put up.

Q. Is there and difference between the distances from the Peninsular Stove building and the distance from the Backus line? I do not mean the Backus building now—does the railroad come, any nearer to one than to the other? I think the structure in each case comes right up to the line, does it not?

A. The superstructure is built on the line of the curb.

Q. Of each?

Q. So that the line fence on the Backus property, between the property and River street, would practically stand where the wall of the Peninsular Stove building stands?

A. I think so. The sidewalk there may not be of the same width

in both cases, but it is not a wide sidewalk.

Q. There would not be a material difference?

A. No, sir, there is no substantial difference.

Q. Now, what is the grade in front of the Peninsular stove works?

A. I don't remember just what it is.

Q. It is less than it is in front of Backus'?

By Mr. Dickinson: There is no grade in front of the stove works.

A. I don't think there is any grade that amounts to anything.

Col. Atkinson: That is also very much nearer the depot, is it not, so that trains would naturally run slower both ways in front

of the Peninsular Stove Company?

A. Well, I could not say whether trains at that point would be going any slower or not. It is quite a ways up to the depot from there.

Q. Do you think they would not be slowed up when they passed

the Peninsular stove works, going in?

A. They would slack up, of course, when they get into the yards. I don't know how fast they do run. Some of the witnesses here testify that they run about six miles an hour.

Q. In front of Backus'?

A. Yes, sir.

Q. You do not know, then, whether they would be running any slower or not naturally when they get as far as the Peninsular Stove Company?

A. A man would naturally assume that they would slack up, but just how a man handles an engine and where they slack up is be-

yond me.

2350 Q. Haven't you railroad experience enough to know they usually stop exhausting when they slack up?

A. I don't know anything about it.

Q. So that there would be less cinders and dust. That would be the natural effect, would it not, in slacking up?

A. I suppose the natural effect of shutting off the steam would

Q. That there would be less dirt thrown from the engines?

A. I should suppose so, but I don't know.

Q. Now, we come to the Michigan Central Railroad Company, The Michigan Central Railroad Company's shed, you say, is there, and that they got \$10 a foot front from the commission?

A. Yes, sir.
Q. Did that include nothing except the shed?

A. There was a separate award for that.

Q. They actually got \$10 a foot, didn't they, for the entire distance from Twelfth street?

A. No, sir, that is on the south side.

Q. Well, on the south side, all the way from Twelfth street, for running along their tracks, didn't they get \$10 a foot?

A. Different amounts were awarded on the south side.

Q. How much did they get altogether? A. Altogether it was about \$28,000. Q. About \$28,000, instead of \$1,660?

A. That is for the entire frontage. Of course this viaduct runs on the side of their property for the whole distance.

Q. Runs right along their yard practically?

A. And cuts off a triangular piece at the corner of Twelfth street.

 Q. Took a piece of their property?
 A. Yes. That is, it went over a piece of their property. 2351 Q. But that land was occupied by tracks?

A. There was a track there they had to move or shorten. Q. Did you buy the land from them, or the right of way?

A. We took a right of way over it.

Q. How high is this shed of the Michigan Central's?

A. One story.

Q. And that is made for storing flour in barrels?

A. That is what they call it, their flour shed. Q. It is not a manufactory of any kind?

A. No, sir; it is just the place where they store freight, princi-

pally flour.

Q. When you speak of flour you do not speak of flour open at all?

Q. When it is taken in there it is in barrels?

A. Yes, sir.

Q. So that it would not be affected by dust?

A. I should not think it would. Q. It is a low building, is it?

A. Yes, sir.

Q. They run their trains right under this superstructure up to the flour shed now?

A. No, sir. I think their side track by which they reach the flour shed is on their property; it is not in the street.

Q. This flour shed is some little distance back from the structure?

A. Yes, I think there is a side track between the street line and the shed, or it may be on the other side.

Q. At that point the superstructure practically runs between the Michigan Central yards proper and this side track?

2352 A. Well, of course, this superstructure covers the roadway

on River street.

Q. That would be between this side track and the Michigan Central yard?

A. Certainly, but I guess their side track is on the north side of the flour shed and the flour shed comes down very close to the street.

Q. Now, I see by referring to the old records that the compensation to be paid by the Fort Street union depot to the Michigan Central railroad for the right of way, as ascertained and determined by us—this is from the east line of Twelfth street to the westerly end of the westerly approach of the passageway—shall be \$8,250; then the right of way to construct the viaduct on River street in accordance with the ordinance, \$15,750, and then the right of way on the north side along this flour shed, \$1,660. Those are right, are they?

A. I think they are.

Q. And there is another part of it that is east of the crossing, isn't there? As I recollect it, they made two different awards?

A. They had \$8,000 in one place and \$15,000 in another.

Q. And wasn't there one, another one, \$15,000 for just going over the crossing, or was that east of the crossing?

Mr. Dickinson: That was east of the crossing.

Q. I suppose there was also an award, but it does not seem to be here, for actually crossing their railroad tracks?

A. Of course, we had a great controversy with them about build-

ing that crossing there for teams.

Q. This does not seem to include the right of crossing their railroad, but running alongside of it?

 They were interested in that quite as much as the union depot company was.

2353 Q. That was arranged in some other way, I suppose?
A. The railroad commissioner directed the two companies to divide the expense.

Q. What were the elements of damage for running along their

railroad on the south side?

A. Well, they claimed it would interfere with their building freight-houses along there.

Q. Freight-houses on the side of the street?

A. Yes, sir. They brought in all the usual elements of damage, that it would interfere with their building, and that it would damage their property.

Q. How would it interfere with their freight—by interfering with

the approach?

A. I could not see that it did them very much damage myself.
Q. That was the idea; that it would interfere with the approach to the freight sheds?

A. I don't know what the idea was. Their testimony indicated

a damage of about \$250,000; they figured it out that way.

Q. And the commissioners allowed them only what is stated here?

A. The commissioners allowed them about \$28,000.

Mr. Dickinson: Of which \$1,660 only was for the flour shed.

Q. Well, we will call them in and see what they figured on, if you don't remember. Now, you spoke of 47 feet in connection with the Michigan Central flour — besides the 160 feet?

A. That was over on the other side and that was omitted from

the awards by accident in some way.

Q. That is not included at all in this?

A. That is not included at all in the award. The commissioners, in making up their report, omitted that; but the Michigan Central received \$10 a foot.

Q. I see this compensation for damages to said respondents resulting from the construction of said viaduct for teams and

foot passengers is not included in the award?

A. No, sir.

Q. That viaduct is also in front of Backus'?

A. Well, partially; that is, on the south side of the superstructure, and the bridge commences, where you can start to drive up onto it; in front of Backus', as I remember it.

Q. The approach is pretty well in front of Backus'?

A. Yes; that is on the other side of the superstructure. When you come up that street you can go right through over the Michigan Central crossing or up overhead, just as you are amind to, and that superstructure for teams is maintained by the two companies at their joint expense. There is a sidewalk on the north side and there is a stairs to go up.

Mr. Dickinson: Well, the viaduct is opposite Backus'?

A. Well, partially. I don't remember it exactly.

Mr. Dickinson: As I remember it, it commences at Twelfth street and gets up as high as it ever goes before it leaves the Buckus front. It approaches down at Twelfth street.

A. No, it is down by Mary Specht's.

Q. So that it is up even when it gets to Backus'?

A. Well, it is not on a level.

Q. Now we will go on with this interesting inquiry. We had this Specht 27 feet. That, as I understand, you bought for \$8,000 and you sold to the Michigan Central for \$6,500; all that you bought, except the right of using this superstructure in front of it?

A. That is what I did.

Q. You paid for that little piece \$8,000?

A. Yes, sir.

Q. Was it not \$8,500?

A. Well, it may possibly have been. My recollection of the difference is \$1,500. That was a piece of property that belonged to a Mrs. Specht, a relative of a John Babillion, a neighbor of mine, and I negotiated with her through Mr. Babillion, who is a relative by marriage.

Q. Of hers or yours?

A. Of hers.

Q. So that you attacked her through her affections, then?

A. Well, it was a piece of property that was practically worthless for what they had on it. They had a brick building on it; it was very doubtful whether you could get any rent for it; they did get a little for it, I suppose, but it was a triangular piece, with the Michigan Central property on each side of it, and in purchasing it the question was what it would cost the Michigan Central to condemn it, if they did condemn it, and what it would cost the union depot company to condemn a right of way in front of it; and the cheapest way out of it was to give them whatever they asked. They asked four or five times what it was worth.

Q. Oh, yes.

A. There is not any doubt about that and I will leave it to anybody who will go and look at it.

Q. Now, what is the size of the piece?

A. It is 27 feet front, and it may possibly be on one line 100 feet deep.

Mr. Juror Safford: I would like to ask if the eider mill was

on it?

A. I would be very glad if there was one there now. Q. I want to get at the size of that if I possibly can?

A. Well, sir, it is a small piece, and I can bring you the exact dimensions.

Q. It is about 27 feet front?

A. Yes; well, on one side it has got a short line and on 2356 the other side a long line; the Michigan Central track cuts it on a bias, as the ladies would say.

Q. You paid \$8,000 for it?

A. We paid under the circumstances \$8,000 or \$8,500, in order to

dispose of it and get rid of it.

Q. Well, were there any circumstances peculiar about that, beyond any other piece of property of the same size; were you in any way at the mercy of that old lady—this company—so that it could be imposed upon to any extent?

A. Of course it was a piece of property that anybody could see

the Michigan Central would want some time or other.

Q. Did she have any peculiar advantage over the company?

A. No more than any other property-owner who has property and wants to get the best he can for it.

Q. Most anybody that is selling property wants to get all he can for it.

A. Yes, and they take advantage of every circumstance, of course.

Q. If another man wants the property they usually take advantage of that fact to get what they can for it?

A. It depends upon their situation; of course some men are com-

pelled to buy and some are not.

Q. This piece was practically impounded by the railroad, was it not?

A. The Michigan Central owned on both sides of it, and on this bias also.

Q. You would not consider it at all as valuable as the Backus property, would you?

A. For any business purpose it had little value indeed.

Q. But for the railroads it was valuable?

A. Well, it separated a part of the property of the Michigan Central from their main line; it was something that I suppose the Michigan Central would be glad enough to acquire even

if they did not have any immediate use for it. It was something in their way there, and at any rate after some negotiations with Mr. Russell I succeeded in selling it to him for \$6,500.

Q. Then, as I understand you, these prices you have put in do not indicate the market value of the property; they only indicate what the parties, to avoid litigation there, accepted or paid in cer-

tain instances?

A. As I understand the market value of property, Col. Atkinson, it is what it will bring if the seller is not obliged to sell and the purchaser has not to buy; that is, perfectly fair conditions, but if either party is at a disadvantage, it is not the market value. Sometimes a man has property which is mortgaged, upon which the interest has become due, and he is not able to make his payment and has to sell for less than a man would who was independent and did not care whether it is sold or not; and the market value, as I understand it, is what it would fairly bring, all conditions being equal.

Q. It is also affected by the fact, is it not, when a man has a little property and he knows the railroad company will condemn it and he will be at considerable expense in litigation, and he has to take

less than he otherwise would to avoid litigation?

A. It is not my experience that they take less from a railroad

company than they would from any one else.

Q. You think in that instance he would not be affected by the fact that it would cost him a large amount of money to maintain

his position?

A. No, sir. The moment it is known that a railroad company wants a piece of property it doubles and trebles in value usually in the estimation of the owner, and that is illustrated in this case strongly.

Q. That, I suppose, is the general opinion of the railroad attornevs?

A. No, I think that is the general opinion of people generally, as far as my observation extends; that if you have a piece of property and a railroad company has got to have it you can make a very advantageous sale.

Q. These condemnations are made by juries, aren't they?

A. Yes, sir.

Q. Picked out from the community?

A. Yes, sir. Mr. Dickinson sold out without knowing who he was selling to, and we got his property at quite a reasonable price.

Mr. Dickinson: Do you swear to that?

A. No, sir.

Q. You better not.

A. I would not say that you did not know who you were selling to.

Mr. DICKINSON: You are under oath, and you better not say that. I got the market value of the property.

A. I think you did; yes, sir.

Col. ATKINSON: As I understand you, then, your statement with reference to this 27 feet is that you purposely paid a great deal more than it was worth?

A. Yes, sir.

Q. It was bought by yourself in your own name, was it not?

A. Yes, sir.

Q. You bought it for the railroad company?
A. I didn't buy it for the railroad company. I bought it for Mr. Mr. Joy furnished the money and I took the deed in my own name for the purpose of conveying it to the Michigan Central railroad if I succeeded in making the negotiations.

Q. There was also an award made in the Backus property, wasn't there, this very property that you have omitted from the statement

of awards?

2359 A. That is the case we are trying. Yes, sir.

Q. What was the amount of the award made there?

A. \$96,410, I think.

Mr. Dickinson: How much for the realty and how much for the damage?

A. About \$17,500 to Absalom Backus and the balance of about \$78,000 to the corporation known as A. Backus, Jr., & Sons.

Q. So that the award there that you paid at the time was about \$96,000?

A. Yes, sir.

Q. Did you make that payment yourself?

A. Yes, sir, very much to my regret.

Q. You paid that to one of the Mr. Backuses? A. I paid that to Mr. Dickinson, I think.

Mr. Dickinson: The checks were made payable to the order of Backus?

- A. Yes, sir, I handed the check to Mr. Dickinson, but that, of course, was without waiving any of our rights to the supreme court, and of a new trial.
 - Q. Was there any condition at the time you made your payment?

A. We did not have to make any condition. Q. You did not make any condition?

A. No, sir, we relied upon-

Q. You made no condition; the award was made, and you paid it and took the property?

A. We paid it, certainly, to go on with the work.

Q. Since then you have been in the full enjoyment of the property?

A. The company has.

Q. Well, I do not want you to think I am confusing you with any old union depot company. When I speak of you I refer in this case to your clients.

A. Certainly.

2360 Q. I do not want to mistake you for an establishment of this kind.

A. Well, I would be very proud to be responsible for such an en-

terprise. I am only connected with it as an attorney.

Q. Well, the enterprise is all right, but still you are worth more in the kingdom of heaven than a thousand union depots. Now, in the Specht case, there was 55 feet for which \$2,200 was paid. Was that an award on a compromise?

A. That is 65 feet there.

Q. There were two pieces there, 27½ feet each?

A. I am referring to Barbara Steadly, which is the next piece. Q. Oh, Steadly; yes, 651 feet. Was that an award or compromise?

A. That was an award. Q. How deep was that?

A. Well, I think her lot just goes back to that jog in the Backus property.

Q. About 100 feet, then?

A. It is more than that, I think; it is 110 or 120, something like that.

Q. That would be about half the depth or less-65 feet?

A. She got \$2,615.20, or \$42.30 a foot.

Q. For about 110 feet in depth, you think?

A. Well, whatever it is. It is half of the block there; about half of the block.

Q. That was used for an old dwelling?
A. There is a brick dwelling and some vacant land, as I remember.

Q. A little brick dwelling?

A. Yes, sir.

Q. That is back some distance from the street, is it not? 2361 A. Well, it is so indicated on this map.

Q. There would be no manufacturing of any kind interfered with?

A. I think the old lady lives there, but I am not certain.

Q. But no business interference, I mean, of any kind connected with it?

A. No, sir.

Q. Now, in the Specht piece below that?

A. Well, there are two parcels there, 271 feet eact, belonging to Mary Specht and L. J. Specht.

Q. They got \$40 a foot? How deep are they?

- A. I think they go back halfway, but I am not fully informed as to that.
- Q. Now, the Baxter piece. That is the Randall piece, that goes back halfway, I think?

A. I suppose it does.

Q. You don't know anything about that price, I suppose, beyond what Mr. Joy tells us?

A. No, sir, I don't know anything about it.

Q. Now, this Specht 23 feet of vacant property, how deep is that?

A. I assume that is only half of the block. That is vacant property at \$31 a foot.

Q. And Weineister, how deep was his?

A. I think that was somewhat deeper than the others, but not very much.

Q. Practically one-half?

A. Yes, all that property there. Q. And the Rohlman property?

A. Their property goes way through to Fort street, as I remember.

Q. They had a saloon on Fort street, and what did they have on River street?

2362 A. Well a bakery or something. They were in some business of that kind.

Q. What did they have on River street?

A. I think those are tenements, that are rented.

Q. Well, they got \$50 a foot, didn't they?

A. Yes, they were awarded \$2,000 for the 40 feet.

Q. Now, isn't that the same piece that Mr. Joy testified could be bought entire for \$50 a foot?

A. No, sir. I do not think he bought that property.

Mr. Dickinson: He said that it could be bought; that it was offered for \$50 a foot.

Q. That he was offered it for \$50 a foot, but there was actually \$50 a foot paid for the structure in front of it?

A. No, sir.

Q. How near did the structure come to this building?

A. Close to the building, just the same.

Q. Was the building close up to the street?

A. Almost.

Q. Thep are vacant houses?

A. I don't remember just what were there, but it seemed to me that those buildings there were originally stores.

Q. Stores down there?

A. Yes, they are built in the shape of stores; that is, with an entrance and door.

Q. A store entrance?

A. But just exactly how that property is occupied, I do not remember. He had tenants in there, a number of tenants, and the property ran throught to Fort street and they lived in front, I think. I think that is the property where there is a building on River street that is rented, and then you go in the back yard and there is a building in there that he rents.

Q. What was that, an award or a settlement?

A. That was an award; all those were.

Q. There was no business being carried on that, was there?

A. I am not certain, but I don't think there was.

Q. Now, Hartfer's lot, 40 feet. What was being done on that?
A. I could not tell you. I think that is a dwelling, but I am not certain.

Q. Was that an award or a settlement?

176 - 55

A. That was an award, as I remember it.

Q. Was there any building at all interfered or anything on the Hartfer lot?

A. Just the same as all those buildings there.

Q. Was there a building on it at all?

A. There was when this survey was made.

Q. Do you know whether it has been occupied since at all?
A. I do not. Of course all that property you can see is in a dilapidated condition.

Q. The occupation of this street by the railroad practically de-

stroys the property for almost every purpose, does it not?

A. That is a mere matter of opinion; but the property was in a dilapidated and unsalable condition before the railroad went there.

Q. That is, these pieces we are speaking of?
 A. These pieces we are speaking of around there.

Q. They were neglected, tumble-down old affairs, as a rule?

A. Yes, as a rule it was abandoned property, and I should judge it existed there as a sort of quasi-business property when the sawmills were down there.

Q. And since then has not been used for much of anything?

A. Except for the very cheapest kind of rentals.

Q. Now, Boynton & Boutell had some kind of a manufacturing establishment, you say?

A. Well, yes. That property was used for some kind of manufacturing institution. A Mr. Andrews located some kind of fluid works on that property, and when he abandoned it it passed into the hands of Boynton & Boutell, and they had something there, but I don't remember now.

2364

Q. Were they using it?A. Yes, sir.Q. What kind of a building did they have?

A. Well, I could not describe it, but not especially valuable.

Q. It is an old building that is boarded up, isu't it, with barn boards?

A. I should think it was a valuable building.

Q. They got \$20 a foot?

A. Yes, sir.

Q. At that point the structure is some little distance away?

A. There is a piece in front of the property with a long girder that runs over to the curb on the other side.

Q. But the actual railroad runs some little distance from that?

A. The actual railroad is almost out of the street there, but not quite.

Q. On the opposite side?

A. Yes, sir.

Q. This girder is made to sustain the railroad, and only put there so as not to have a foundation in the street?

A. As you go up Twelfth street that is the first girder you come

to; but there is no railroad track over it.

Q. You don't know anything about the purchase of Mr. Joy's piece there, and what he got for it?

A. I don't know as he got anything.

Q. In front of him the superstructure would practically

be on the other side of the street?

A. In front of him, in order to get out of the old uinon depot grounds on Twelfth street, they had to take a corner of the Michigan Central.

Q. So that the street remains practically undisturbed there?

A. Except for a very short distance, it is partially in the street.

Q. Mr. Joy also has the advantage of Twelfth street in connection with his property?

A. Yes, sir.

2365

Q. Now, do you know how long Mr. Joy had that property?

A. I do not, except that he stated here that he bought it along in '82 or '3, in there some time, when they talked of widening Twelfth street, and thought they would have a great passenger business at the foot of Twelfth street.

Q. Now, what would the Backus property be worth at the same

rate per foot that you paid for the Specht property?

A. Well, I have not figured that. It is a mere matter of figures. Q. The Backus property is more valuable for business purposes, is it not?

A. The Backus property is a valuable piece of property.

Q. Well, it would be more valuable for business purposes a good deal than the Specht property?

A. The Specht property had a value of a proportion; that is, an

actual salable value out of proportion.

Q. And somebody needed it?

A. I don't know whether they needed it or not; they were willing to buy it.

Q. Did you need the right of way in front of the Specht property any more than in front of Backus'?

A. No, sir. Of course the company needed it all.
Q. Just exactly the same necessity for use, then?

A. Yes, sir.

JAMES DWYER, sworn on behalf of respondents.

Examined by Mr. Dickinson:

Q. How long have you lived in Detroit?

A. A little over fifty years.

Q. You are president of the Peninsular stove works?

A. Manager.

Q. Have you been in charge of the works down there before and since the building of the union depot structure?

A. Yes, I built those works; or they were built under my super-

vision.

Q. Before the building of the superstructure you had your front on River street?

A. Yes, sir.

Q. Did you use that front in your business?

A. Yes, sir.

Q. In the ordinary course of your business it was constantly used.

A. Yes, we used that. It is shorter to get to the depots. We drive out that way.

Q. The people drove down there on business?
A. Yes, they come there for stoves sometimes—dealers come there.

Q. How has it been since the building of the superstructure as to

your use of that front?

A. Well, since that structure has been up there we have not used it at all. That is, we do not drive out that way with our goods, nor do our customers come in for goods in that way.

Q. Do you know why?

A. Well, it would be the danger of something dropping onto them or getting their horses frightened. They would not want to drive under there unless they are obliged to.

Q. It has operated as a discontinuance to your River Street

front?

A. Yes, we do not use it any more.

Q. Your frontage is even longer on Fort street than upon River street?

A. Yes, our frontage on Fort street is nearly 400 feet.
 Q. You know the general situation of the Backus property?

A. Well, somewhat.

Q. What have you to say as to the effect that structure has upon the Backus property, situated as it is?

A. I don't know that I get that question.

Q. You know the situation of the Backus property, with reference to the rear and the front on River street?

A. Yes, sir.

Q. That it has no front on River street except the office front there and roadway up, and that there is a hill on that side?

A. Yes, sir. Q. Will you please state whether the Backus property is so constructed as to make its front wholly upon River street, whether it has any front as a business except the corner of the street?

A. As it would appear to me, it destroys the use of the River

Street front of the Backus property.

Q. Is that property situated so that they can utilize any other front?

A. No, sir.

2368 Q. With convenience?

A. That would be where they would have to use it I should say, that could be used mostly for its greater length upon the street.

Q. What do you say the effect is upon the Backus property then, taking the plant right through, of the construction of this railroad?

A. Well, I should say in my judgment that it virtually destroys that street, that it don't give us the use of the street.

Q. The street in front of you has been practically abandoned for

a front, as a street?

A. Yes, and what I should be willing to do, what I stated before, I would do in a case of this kind, if they would take away their superstructure from that street, I would be willing to give them back all I received from them and give them \$10,000 in addition, because I should feel it destroys that whole front.

Q. Destroys the street facilities and roadway facilities entirely in

front of you?

A. Yes, sir.

(). Now, suppose your property was only half as large, and you had no other access to the street, or any convenient one, one like the Backus', do you think you could successfully carry on the manufacturing business of stoves there? Suppose you were located as Backus is substantially, with the frontage he has of 238.2 feet front, and situated relatively as his is, with reference to the property?

A. I would say, if I was obliged to conduct my business in that way, that it would be doing it under a great disadvantage. would almost prevent you from doing it, there is so much you have

got to depend on, carting in and out.

Q. Would it make it of so much disadvantage that you 2369 would not, if you were purchasing a new site for a stove works, buy such a site for stove works?

A. I would not think of purchasing a place in that locality at all

for a stove works.

Q. The tendency is, you think, to drive away trade approaching on that street, altogether, approaching the front?

A. Well, for a manufacturing purpose what you want is the very best facilities for light, and that interferes with our light.

Q. Does it interfere in your business with the light?

A. It does.

Q. Since it has been built? ___

A. Yes, sir.

Q. Is it a serious obstruction, a serious trouble?

A. Yes, while the trains are passing it prevents the men from working; that is, it stops them from working-the shadows-and it seems to have that effect mostly on a bright day.

Q. Now, you have to have your windows open for ventilation

during the summer, I suppose?

A. Yes, sir.

Q. Have you noticed the flowing in of smoke there?

A. Yes, we get some smoke and cinders through the windows. Q. Give us some idea of the amount, whether it comes in in clouds.

A. Well, I am not so much in the place there, and I would not of my own knowledge be able to say; but I have been shown the number of cinders by the foremen, the men that have charge of those departments.

Q. In what quantity do they come in?

A. They claim they come in when the windows are open, and we have a nickel-plating part there, and the cinders fall into the solution so that interferes with that considerably.

Q. They do come in there in quite large quantities?

Q. Situated as the Backus property is, what have you to say as to whether the superstructure, running along there, situated as it is, and remembering the shape and condition of the property, as to whether that is any longer an eligible site for any manufacturing business?

A. Oh, in my judgment it would not be desirable for manu-

facturing purposes, as far as my knowledge would go.

Q. And before the building of the superstructure was it an eligible site for manufacturing, with the Michigan Central connection, its full front and wide street?

A. I should think it was very desirable.

Q. Two ground floors, as it has?

A. Yes, sir; that would make it extra.

Q. And extra eligible site without the superstructure? A. It would make it, I should say, with their switching there,

very desirable.

Q. Do you know of anything anywhere near the center of the city and within access to the city, easy access, as eligible as that was

before the building of that superstructure?

A. Well, that I do not know. I do not know of anything that would be as good; that would look as good to me. Of course that place had been improved and fixed for their business, and in that way it would be worth more to them, perhaps, for their line of business than it would be for any other line.

Q. That is before the superstructure?

A. Yes, sir.

Q. You understand that this plant is run in connection with the lumber yard below and the storehouse above-the planing mill on River street that we have been discussing?

Did you understand that a part of the same plant is the lumber yard that feeds the mill, and the storehouse on Fort street,

in which their surplus is deposited?

A. Yes, sir.

Q. You understand that is run all as one plant?

A. Yes, sir.

Q. How, in your judgment, would the rental value of that whole plant be affected by this superstructure where they are running as one plant?

A. Well, my judgment would be that it would not be desirable

for that business on account of destroying their frontage.

Q. What, in your judgment, before the superstructure was placed there, was that property worth to the Backuses, situated, as it was, with the Michigan Central switch in and those facilities as they are, and that frontage as it was with two ground floors, running clear through to Fort street as it does before the incumbrance on River street by this railroad structure?

A. I should reply to that question by saying that there would be a value to it on account of their machinery and appliances for their

business. Of course that would bring a value to it that otherwise it would not have.

Q. But as to the value of the site, we will say, without the busi-

ness-of the real estate prior to this superstructure?

A. Well, do you mean to ask that question by including the

building, machinery and everything?

Q. No, irrespective of the building and machinery, just the real estate. You can take, however, into consideration the shipping facilities that existed there with the Michigan Central railroad and with River street free of obstructions, the property having two ground floors and running through to Fort street.

2372 A. Well, perhaps it would be worth about \$350 a foot. I

should say somewhere about that.

Q. It would be worth that as an eligible manufacturing site?

A. I should think so, yes, sir.

Q. Did you include in that estimate the fact that it runs through to Fort street, or would you put another valuation on the Fort Street front?

A. Well, I would include that on account of its great depth,

having two fronts.

Q. Include all at \$350 a foot?

A. Yes, that would be exclusive of any improvements they put on it.

Cross-examination.

By Mr. BAKER:

Q. You were a witness in your own case with the union depot company?

Cross-examination:

A. Yes, sir.

Q. You personally know, don't you, what your company paid for the property down there?

A. I do.

Q. You have a piece of property, have you not, that used to be used by Mr. Robinson for a lumber yard?

A. We have, yes, sir.

Q. Do you know what your company paid for that?

A. Yes, I think I do. Q. What was it?

A. I think it was \$33,000.

Q. That is for both frontages?

A. For both frontages, yes, sir. It was about \$33,000, I don't remember just what it was.

2373 Q. You also purchased the old glucose works, did you not?

A. Yes, sir.

Q. That is where your main storage building is?

A. Yes, sir.

Q. How does that Fort Street frontage compare in value with River street; which is the most valuable?

A. Well, I would say for our purpose that the River Street frontage would be the most valuable.

Q. I mean the value of the land. A. Yes, the value of the land.

Q. Do you use that side track that runs along River street?

A. No, sir.

Q. You have an independent side track that comes in from the Michigan Central flour shed, or by the Michigan Central flour shed?

A. Yes, somewhere in that neighborhood.

Q. What makes you think that for your purpose the River Street frontage is so much more valuable?

A. Its access to the depots, and then it is the incline it gives you

for flooring.

Q. Access to the depots in delivering goods?
A. Yes, sir.

Q. Now, you have an alleyway, have you not, near the glucose works there that you drive into?

A. We have.

Q. You can still drive in and out there, can you?

A. We do not do it, but we can. Q. Your case with the union depot company has not been finally disposed of, has it?

A. I think so.

Q. Well, it was tried and an appeal taken to the supreme court, but that has not been disposed of?

A. Well, I don't know of that.

2374 Q. You don't know of the legal part of it?

A. No, sir.

Q. You bought this Robinson property or some adjacent property there immediately after the union depot scheme was announced, didn't you?

A. No, sir, we did not. Q. Well, soon afterwards?

A. I don't remember how long after it was, but we had no knowl-

edge of the union depot when we bought that property.

Q. Is it not true, that just as soon as the union depot plan was announced and made public here that William B. Moran went off to New York and bought a lot of property there?

A. No, sir, it is not true.

Q. When did he go to New York?
A. He went to New York at the request of our board of directors.

Q. And purchased the property?

- A. Purchased the property for the purpose of manufacture.
- Q. Well, the deeds on record to William B. Moran show when it was done?

A. When the purchase was made?

Q. Yes.
A. They ought to show it.

Q. There was a contract, as I understand it, it would not showthe contract?

A. No, sir.

Q. He first made a contract?

A. I think there was a contract made first.

Q. And got the deeds afterward. Well, now, you have built a moulding-room right alongside of this superstructure, have you not?

A. Yes, sir.

2375 Q. How long is that on the street there?

A. I think it is 180 feet. Q. There is 180 feet frontage?

A. Yes, between 180 and 160. I am not sure about that.

Q. Almost solid windows on that side; that is, windows just about as close as you can put them?

A. There are windows about as close as we can put them.

Q. You also have windows on the west side?

A. Yes, sir.

Q. Have you skylights, too?

A. No skylights. We have windows in the roof, what we call the ventilation part or upright part of the roof.

Q. This moulding-room is on the second floor?

A. No, sir; it goes right up.

Q. How deep is it?

A. About 210 feet, I think.

Q. How many workmen usually work in there?

A. Maybe 275. Q. 275 moulders?

A. Yes, moulders and helpers, and others that are in there.

Q. A blast furnace is in one side of it?
A. The cupola sets near the center.

Q. Near the Fort Street side?

A. It would be a little closer to the Fort Street side, yes, sir; I think.

Q. That is, it is on that end of the building?

A. Yes, sir.

Q. You receive your coal and pig iron and such things on this siding that comes up by the flour shed?

A. From an elevation, yes, sir.

Q. That is between this molding-room and Fort street?

- A. That is why we built that molding-room floor in that way, so that we would not have to elevate the stock quite so
- Q. When you ship stoves by rail they are loaded there on that side track?

A. They are loaded in the cars there.

Q. So that you do not rely on the siding on River street at all? Mr. DICKINSON: They have their own switch right into the yard. Q. I say you do not rely on that siding into River street at all?

A. No, sir; we use our own switch.

Q. You also acquired the property on the corner there where these dwellings were?

A. Yes, sir.

Q. Paid on an average of about \$100 a foot for it?

177 - 55

A. Well, I have not in my mind now just what we did pay for it, and I could not say. We bought those several pieces at different times. I don't recollect now just what we paid for them. I recollect distinctly about the Robinson piece, because that was all in one piece and a large piece.

Q. I am referring to the smaller parcels down on the corner.

You occupy it all now?

A. Yes, sir.

Q. And you own all the way through to Fort street?
A. Yes, sir.

Q. So that you own everything in that square now except what the Diamond Match Company have got and Kidder & Company?

A. Yes, sir.

Q. Now, you say a train passing by there makes some shadow, I suppose?

A. Yes, sir; makes a very heavy shadow.

Q. And that interferes with the workmen in the room?

2377 A. Yes, sir.

Q. Just describe how that is.

A. Well, if a man is drawing his pattern from the sand, if he happens to get one side a little past the other, or if anything happens to come just at that instant, he has to distribute his sand, and in drawing his pattern it is a very delicate affair and he has to have good light to do it.

Q. Well, you got a large amount of light there, haven't you?

A. Well, we did have.

Q. You made it just about as light as you could make it?
A. We tried to.
Q. The superstructure itself does not darken the room perceptibly, does it?

A. It does.

Q. To what extent?

A. It darkens it. Of course, on a very bright day, we would not notice it so much, but on a dark day, a day like this, it darkens it very materially.

Q. And does the passage of trains there produce any jar in that

room, that moulding-room?

A. Well, we have not been running that part down in there lately, and I have not noticed it so much; I have not paid so much attention to that. I should think it would jar it some.

Q. What I want to know is, whether by actual experience it does

jar the floor of the molding-room any?

A. It jars the walls there and jars the mortar out of the wall. Q. The question is whether it jars the mould. There was some testimony-

A. It certainly must jar the mould when it jars the wall.

2378 Q. There is not any question about that?

A. No, sir.

Q. You have not observed it personally?
A. No, sir, we have not been working in that lower shop.

Q. That is, you work on the other end of it?

A. We work closer to the cupola, yes, sir.

Q. And this summer you have not been working to your full capacity?

A. No, sir.

Q. How many men would work in there ordinarily? Suppose you were carrying on your business in what we call flush times, making all the stoves you could make?

A. We would work nearly 300, I should think.

Q. You have been working about how many, 200 or 150?
A. Yes, we work over 200 in there. We put them on as the trade requires.

Q. During this summer you have worked the full hours, ten

hours?

A. Yes, sir.

Q. You have not cut down your hours any?

A. No, sir; instead of doing that we have shortened up some day. We will work four days a week and sometimes five and sometimes six; it depends on the trade.

Q. You have not worked the full number of days this last sum-

mer?

A. No, sir, our works have been idle for about six weeks. I think we have not done anything. Q. For about six weeks you have not done anything now?

A. This past summer.

Q. That, I suppose, is because of the state of the trade and the fact that you do not want to have a large stock of stoves on hand for this winter's trade?

A. Well, it has been because the trade did not require

2379

Q. And you have cut down your capacity on that account? I think that is all.

Redirect examination:

Q. You still use the old moulding-room?

Mr. BAKER: Of course there is another big room there?

A. Yes, we still use the old moulding-room.

Q. You have light from that court? There is a large space inside where the cars come in there? It is light between the mouldingroom and the Fort Street front of the building?

A. Yes, we have light all around our building.

Q. You get light from Eighth street as well on that side?

A. Well, the moulding shop does not front Eighth street, only a portion of it.

Q. I went in there and did moulding myself, you remember? A. There is a part of it that fronts on Eighth street, but not all of it.

Q. I got so I could make a good mould, too, didn't I, Mr. Dwyer?

A. You made a good attempt at it.

Q. Do you have the lights in the roof so that you can get all the light you can?

A. Yes, we aim to get all the light in the building that we can. Q. Mr. Baker has asked you about your getting an award, and whether you knew it had been appealed to the supreme court? You got your money unconditionally, didn't you?

A. Yes, we got our money.

2380 Q. Did you have a note from Mr. Baker that he would let it alone if you would give him back \$5,000?

A. Well, something of that kind had been reported to me. I did

not get anything personally.

Q. Well, you have not heard anything about any appeal being prosecuted in the supreme court, have you?

A. No, sir, I have not.

Recross-examination:

Q. You don't just - what has taken place in regard to that, do you?

A. No, sir. All I know with reference to that is, that we got a certain amount awarded to us and we got our money. Further than that I don't know.

Q. You do know, in a general way, that the case was appealed to the supreme court, do you not?

A. Well, I did not know it had been appealed. I understood they

had talked of doing it or it was to be done. Q. And you know there has been some talk about adjusting it

without litigating it further? A. I have heard something of that kind.

Q. But nothing has ever been done in regard to it?
A. No, sir.

Mr. Dickinson: How long ago was that payment made?

Mr. Baker: It was right away after the award.

A. I think it must be two years ago.

Q. You have not heard anything from the supreme court about it since?

A. No. sir.

Mr. Baker: The appeal has simply been taken and neither side have noticed it for trial. That is all there is of that. If you are specially anxious to try it in the supreme court, why notice it.

Col. ATKINSON: Why should the party who has received his money notice it?

2381 Mr. Dickinson: I have not had any notice of appeal, as far as I am concerned.

Mr. BAKER: You are not the attorney of record. The attorney of record is Mr. Conely.

Recess till 2 p. m.

2 P. M.

HENRY BACKUS recalled for further direct examination.

Examined by Mr. Dickinson:

Q. You have practically for the firm charge of the mill, haven't you?

A. I have always had, for a great many years at least.

Q. And are familiar with the machines and the workings of the inside of the mill?

A. Yes, sir; I am the man that gets up the largest amount of the machinery, and I have to follow up the business to see that it is

properly done. It is my department.

Q. Will you please take the lumber through the resaw and the planer to the upper floor, to the matching, the place where it is ready for shipment, this matched lumber? Take a board through

so the jury will understand it.

A. We bring our lumber up from our yard on the wagons and we dump it behind the resaws in the mill. Our resaws, you understand, are next to the doors; our planing machines are back from the door. It has to go through the resaw before it goes to the planer in order to bring it to a uniform thickness. Our rule has always been to dress our lumber after it is resawed, and we have to arrange

our machinery for that purpose, and we have got our start, 2382 our reputation, by having our work uniform and having our

work go together. As these samples indicate, they are worked in two pieces of standard thickness, and if you put them together they will match like that. Now, we take this board and resaw it, and then after this board has passed through the resaw, the man takes it in this way in his arm and holds it down, holds it together, in the planing machine.

Q. Both pieces?

A. Yes, sir; both pieces. It is necessary to keep these parts together for this reason: For instance, here is a large knot. If those boards are separated when they come to be handled upstairs, the man can only cut one board at a time, because he has to watch that knot-hole, and he can cut two boards at the same time, therefore our rule is to keep those boards together as much as possible. They go into the planing machinery, the same two pieces; they go up the elevator, the same two pieces; and they go to the saw in two pieces, carried in together all the time, and that is the rule to save ourselves labor and time.

A JUROR: In going through your planing mill, does it plane on

the upper and the under side at the same time?

A. No, sir.

Q. Then what is the advantage-

A. It planes both sides at the same time. It will be like this: We dress off this rough side; the resawed side is much smoother than this side, therefore we keep this next to the cylinder. These two boards are put through the planing machinery at the rate of about 60 feet per minute.

Mr. Dickinson: Is the planing machine so arranged that the rollers hold these fast on the planing machine?

A. Yes, sir; one there and one here. Now, the lumber passes through, and the man who takes care of it has to hustle to take it away or one board would pile on top of another; and he

2383 takes them like this and places them up this traveling carrier which you saw down there, and they are kept together that way.

Q. Are those same two pieces matched in the matching machine?

A. If it takes the two pieces to make the one width they are matched together, but ordinarily he takes two other pieces and puts up against them like that. We have our lumber gauges—it is of uniform thickness—with that we put this lumber in there to gauge it, to get the thickness.

Q. In which machine?

A. In the planing machine. We use that gauge to determine when our lumber is of the proper thickness. That lumber goes through the machine, is placed on the carrier and goes upstairs. Unless we have the best of light we cannot see to do this work—

Q. That is another branch of the subject. I only wanted to clear up what we could not get from our witnesses on the stand yester-

day.

A. We saw out the lumber first, and then we dress it so as to

bring it to a uniform thickness.

Q. Something has been said about its going through the resaw of different thicknesses. Can it do that in the resaw?

A. No, sir.

Q. Is the resaw so adjusted that it can vary the two pieces?

A. It has to come directly in the center.

Q. And does that automatically in the machine?

A. Yes, sir, it is a self-centered machine. I cannot say this piece is a fair sample, because I pushed it up and pulled it out, so that is not as perfect a job as it would be if it was continued through.

Q. If it was continued through, it would have been a more per-

fect job?

A. Yes, sir. My men are all German, and they are not very well educated; they talk German among themselves, and he could not explain it here very well yesterday. I understand them, perhaps, when a stranger would not.

Q. How does that come to go through uneven in the matcher-

of different thickness?

A. You mean to say, what causes this?

Q. What makes the defect?

A. The reason is the two boards are of different thickness and we use one gauge. The defect will of course show on the other side. You could match those two sides together (indicating with boards) and they would be pretty even, but the other you could not.

Q. But how did the matched stuff come through uneven? That

is not good stock, is it?

A. Oh, no, we cannot shift that. Q. Now, how does that come?

1415

A. It comes by not being uniform in thickness.

Q. How does that come about?

A. By the men not being able to see what they are doing, and he cannot keep the machine set with the nicety that he used to do.

Q. The machines were set with the same gauge?

A. Yes, sir, the same thing.

Q. And always should do the work the same, sending out the work of uniform thickness?

A. Yes, sir, we used to have our boards come out with perfect

uniformity.

Q. Those two boards go through the planing machine—the planing machine is gauged to give you three-eighths of an inch—and those two have come through the sawing machine and gone through the planer and come out as they are here?

A. Yes, sir.

2385 Q. Now, in the process, is there any way to discover that in the rapidity with which the work is done until it reaches

the matcher to match it—the different thickness?

A. I will explain that: It is a good deal like waiting until a train has gone by and then try to run and catch it. After the lumber has gone upstairs there will be some in the piles, in the racks, and there will be others at the saw, perhaps, before we could get onto that. If we could stop the thing the instant it occurred, we would not have this trouble to amount to anything. We used to be able to discover it almost at once, but it is utterly impossible for the men on account of the darkness to discover it for some time, and I am ashamed to say that I have found too much fault with my men for this poor work, when in fact it is owing to the changed conditions of things down there.

Q. When you attempt to take three-quarter stock, and it comes upstairs in that shape, gone through the same adjustment, and it is discovered when you come to match it, that it is three-eighths stock.

it makes bad stock, does it not?

A. Very bad.

Q. Is there a varying of the thickness as much as that?

A. Yes, sir, one-thirty-second of an inch is very unsatisfactory. Our shooks, as we used to put them up, we will say 10 sides of a box like this, we will say that we put our shooks up in 10 sides of a box in one package, or 10 of these boards in a pack. And we put nails down here to hold it for shipment, and when they get to their place of destination they are put together to make one complete box, and you can readily see the difference between good work and poor work. Our work never looked like that before, never in all our experience until this trouble, but since we have not had sufficient light, as a result we have to take the board out in the court next to the engine and get a gage on the board the best we can.

2386 Cross-examination.

By Mr. BAKER:

Q. Now, Mr. Backus, do you mean to say that when those boards went through the planer that the planer was set at the same gauge?

A. Yes, sir, sure pop, it has to be. You can't set a planing

machine that way, Mr. Baker.

Q. Here are two boards of two different thicknesses. Do you mean to be understood that the planer was of the same guage when they were dressed?

A. Yes, sir, those boards are uniform at one place, and that inequality is brought about by our men not being able to see what

they were doing.

Q. How does the inequality arise except from the way the gauge

is set?

A. You don't comprehend it. If you will come down there and stay 24 hours you would understand it.

Q. Just explain that to us, then. I would like to know how a machine works, with two boards dressed of different thickness?

A. It is because the chips get under there.

Q. Well, explain that then?

A. We will say here is our machine. This lumber is entered here the rough side up so as to dress it. If a knot or a chip breaks off at the corner of one board it will get under here and raise this up.

Q. Now, how does it get under?
A. By getting under and dropping.

- Q. It was just as liable to do that before the elevated road was there as it is now?
- A. Yes, sir, exactly, but we can't see as well now. We don't know it has happened.

Q. It is a big steel plate that the board runs on?

A. Yes, sir.

2387 Q. And you shove the end of the board right on that plate and the board may be warped a little, and the end does not always-

A. You don't und. Q. Then explain it? You don't understand it at all.

A. We put this board under the roller-

Q. But there is a flat surface made of steel it goes on?

A. Certainly.

Q. Does this sliver or chip get under on that plate or on top of the board?

A. It gets under here. It does not get under this same board as a rule, it catches the next board that comes along.

A JUROR: When the boys are running that board, do they have

a gauge?

A. Yes, sir, every half hour or hour between those intervals is the time they get caught. Mr. Baker: How often do you have to set those gauges?

A. If we want to set up a machine-

Q. But suppose you have set your machine for three-eighths and cutting three-eighths day in and day out, how often do you set that?

A. It may run for a day and it may run for an hour.

Q. Then it is like a threshing machine or anything else, it gets out of gear from time to time?

A. Not ordinarily.

Q. It requires constant attention to keep it set at just such a thickness?

A. Yes sir, and without the proper light I defy any man to keep

watch of it.

Q. When you get your gauge once fixed, why don't it stay fixed? A. It does stay until we change it. We don't change the gauge until we are through with this thickness of lumber.

Q. It won't change itself?

2388 A. No, sir.

Q. Won't it get out of gauge at all?

A. No, sir, not at all.

Q. Then what is the use of watching it after it is once set?

A. Of course the lumber comes out just the same; if any little

piece gets under the lumber it will produce this result.

Q. Suppose the gauge is set at three-eighths in the morning when you commenced working, all you have to guard against is these slivers?

A. After we stop at night we sharpen the knives—

Q. Every time you sharpen the knives you have to set it over again?

A. Yes, sir.

Q. And I suppose when they undertake to sharpen the knives and set it over again, they don't get it exactly the same?

A. Yes, sir; I have never known it to vary. We don't change

the gauges until we sharpen the knives.

Q. Then you don't have to give it constant attention during the

day?

A. We have to give the lumber constant attention, but that is because of the slivers or chips getting under there. It is not because the machine gets out of gauge. Our machine does not get out of gauge.

Q. That is just what I wanted you to testify to. All you have to do is to watch the slivers. When you get those knives set and

bolted down they are not very apt to change?

A. They don't change at all.

Q. What I want to know is whether running that machine, whether the bolts will unscrew, or whether it will get out of adjustment just because you are using the machine?

2389 A. Not on that machine; not on those machines. If you will talk about the molding machines I will talk differently.

Q. But on a planer you can adjust it and it is absolutely rigid; it never gives from the work it is doing?

A. No, sir, the knives never give.

Q. So you don't have to watch the gauge; you have to watch the

A. Yes, sir, we have to watch the refuse.

Examined by Mr. Robison:

Q. Have you got any moldings of different thicknesses where slivers got under

A. We haven't any here. We may have down at the mill. They

generally take those moldings and destroy them.

Q. Can you tell what causes that board to be thick at one side and thin at the other?

A. Yes, sir; the same reason as I have explained.

Q. That sliver?

A. Yes, sir.
Q. Is there anything except a sliver under it that will cause that board is to be planed that way?

A. I don't know of anything else.

Q. How do you set the gauge of that machine?
A. Let me have that photograph and I will explain it. Here is a photograph of one of our machines. That is not the machine I am speaking of now, but it is one similar to it.

Q. This don't show the plane at all, does it?

A. There is no plane about it, there is a cylinder.

Q. The plane is a cylinder?

A. The planing knife is on the cylinder.

Q. How far from the rolls?

A. Just annexed to it.

Q. About how far? A. About a foot.

Q. How high up are those rollers? What is the diameter of a roller?

A. They are eight-inch rollers.

Q. And a foot from that is the plane?

A. Yes, sir.

2390

Q. How far from the end of the planer-this steel plate-how far from that does the man stand with the board?

A. The man that puts the board in?

Q. Yes, sir.

A. About 6 or 8 feet.

Q. He would have ahold of a 12-foot board in the first place, would he not, somewhere near the end?

A. No, right in the middle.

Q. But would be about 6 or 8 feet from the end of the plate over here?

A. Yes, sir.

Q. Then comes one roller two feet through?

A. Two rollers.

Q. And here comes the board in there?

A. Yes, sir.

Q. This is up eight inches?

A. No, the roller is down there. Here you put the board in here and there is the roller.

Q. This is eight inches up?

A. It is eight inches in diameter.

Q. The lower roll runs even with the plate? A. Yes, sir, practically.

Q. This is eight inches from the top of the plate?

A. Yes, sir.

Q. Then a foot from here is a knife? A. No, sir, there is another roller. Q. There are two sets of rollers?

A. Yes, sir.

Q. How far is the second roller from this? 2391

A. They are both alike, both duplicate; this roll is to pull the lumber through.

Mr. Dickinson: There are how many rollers on the machine?

A. Two sets.

Q. Four rollers?

A. Yes, sir.

Mr. Robison: A man standing over there six feet from the end of this thing, can be see back in there and see a sliver in behind the rollers?

A. Yes, sir.

Q. He has got to be 6 or 8 or 10 feet high to see over there?

A. Oh, no; you are tall enough to see them.

Q. You can see it by going around on the side and looking for it? A. We don't always notice it in that way. The man that takes the lumber from the machine is the man that would notice the imperfection.

Q. He is back in there in the dark? A. He is now, but he didn't use to be.

Q. There are always rollers between him and the slivers. He can't see over there?

A. He don't try to look over there.

Q. Whose business is it to see the slivers?

- A. It is the duty of the man who takes the lumber away to call attention to it.
- Q. It is not because it is so dark that he can't see the sliver, but it is because it is so dark he can't see the thickness of the board?

A. Yes, sir.

Q. The man who dresses the lumber, it is his duty also to watch the machine?

A. It is both their business to watch it.

Q. And they could always see these slivers before this ele-2392 vated railway was put up?

A. Oh, yes, sir.

Q. There was never any such trouble before?

A. No, sir, we caught it quicker. These slivers used to get in there just the same, but we detected it at once. Now we run 10 or 15 minutes, perhaps a half an hour before we get onto it.

Q. The least imperfection is just as bad, the one-thirty-secondth of an inch would make it just as bad?

A. Yes, sir, it would make it defective.

Q. You don't have very many boards as bad as that?

A. Oh, yes, a great many of them.

Q. Like this one I have been whittling on?

A. No, sir, we could hear that. We could detect that by the sound.

Q. Then the darkness you complain of don't affect the man tak-

ing away the lumber?

A. It affects them both. If the man has not sufficient light to attend to his business you can readily see he is under a disadvan-

Q. How far from the end of this bedplate is the knife?

A. About 6 feet, I should say.

Q. And you think a man standing 6 feet from the end of that, that is, from 12 to 14 feet from where this knife is, with these rollers in between, can see the slivers over there?

A. He steps to one side and sees them. Q. If he does, then it is light enough?

A. No, sir.

Q. Why don't you light a lamp down there?

A. We have the gaslight, but we can't see very well with that.

Q. Can't you light a match and go in behind and see it?

A. We don't allow matches to be lit in there.

2393 Mr. Dickinson: If you attempted to run this mill you would have it blown up in 24 hours.

Mr. Robison:

Q. You have a gaslight there?

A. Yes, sir, we have a gaslight there. Q. Have you ever blown up with it?

A. No, but you can't get that gaslight near enough to that ma-

chine to see anything.

Q. Why don't you have an electric light in there? How is it these other planing machines are run nights with electric lights, without any daylight at all?

A. Oh, well, they put in ample light, but they can't do near as well as by daytime. There is no factory in our line can run nights

and do as good work as in daylight.

Q. Don't you think by very small expense you could fix it by the electric lights?

Q. We could improve it, but we never could get back to the quality of daylight.

Q. But you could put in electric light?

A. I suppose we could put in electric light, but we haven't felt like putting in any more expense while this litigation is going on.

Q. It is in the cellar where you need the electric light?

A. No, sir. You can't get sufficient electric light in there to make it daylight.

Q. Don't you think you could get enough electric light in there to enable you to see these slivers?

A. It would help some, but we could not get men to work there

all day long with electric lights.

Mr. Dickinson: So far as the planing of the lumber is concerned and making this particular matched stuff; I simply introduce this to show the process.

A JUROR: I would like to ask a question. Can't you always tell by the sound of a planer when a chip gets in there?

2394 A. We can in this case. We cannot always tell. We can

when it gets to a dead edge like that.

Q. It makes an unusual noise, not a steady buzz?

A. On a very fine piece, but not where it is solid. If it breaks away you will hear it crack.

(By Mr. Robison:)

Q. How is it with this beveled edge?

A. Well we might and we might not tell by the sound.

A JUROR: Does that sliver remain on that table or does it go out with the board?

A. We have to stop the machine and take them out.

Q. Does it adhere to the bedplate more than it does to the board?

A. It will remain there and the board will pass over it.

Q. Is it a traveling bed?

A. No, sir.

Q. What holds the sliver there?

A. It gets against the edge of the machine.
Q. Does not the sliver travel with the board?
A. It stops up against the edge of the cast iron.

Q. Then it will only spoil the board where the sliver stops up against the edge of the machine? Where it travels along with the board it drops out with the board and the next board will be of uniform thickness?

A. Yes, sir. They are not little bits of chips of that size, but perhaps a piece of that size.

Q. What holds it there?

A. It comes up against the side of the machine and it can't get out and the board rides up on top of it like that.

Mr. ATKINSON: Then it does not go with the board, but remains

on the bed?

A. It remains there, but in some instances it might go out with the board.

A JUROR: If it went out with the board, the next board would be all right?

2395 A. Yes, sir, the next board would be all right. Sometimes before our attention is called to it we have perhaps two or three hundred feet out. They catch it just as quick as they can.

Mr. ATKINSON: I suppose as the board goes in over the rollers, there is nothing to keep the end absolutely down; it rises a little as it passes under the roller?

A. From one roller to the other, it will raise up, of course. would say again that were this all clear lumber, pannel lumber, it would not be so bad. It is the knotty lumber, it is our box lumber that causes this trouble to a great extent. It is these knots which break out and clog up. You take that same machine and pu through a thicker board, a seven-eighth, and we would not have this same thing to contend against. The thicker the lumber is the less trouble we have.

Mr. Robison: How high is this bedplate from the floor?

A. About as high as that. (Indicating the table.)

Q. How do you adjust those machines?

A. With a crank. There are setscrews and we loosen the set screws and run it up to the gauge on the side.

Q. You don't have to take a rule?

A. No, sir.

Q. The light don't affect you in that?

A. Oh, yes, sir, there is our trouble. A man may think his gauge is set perfectly when it is not.

Q. Where is this gauge?
 A. On the side about the center of the machine.

Q. Have you any machines of this kind over on the priside?

A. No, sir.

Q. Have you ever tried to change them around, put them on the east side?

A. Oh, no, we could not do that.

2396 Q. You say it is almost impossible to adjust them even

A. Yes, sir, to see your gauges. Q. How do you do it, anyhow?

A. We do the best we can. The man lights his gas to see that

Q. You do light the gas to see about that?

A. We have tried to, but we can't see it.

Q. The only way you have to do that is to cut and try a board? A. Yes, sir, take it out to the light. We take a board and run it through, and set our cylinder, and take the first board that comes

through to the light and see whether it is correct.

Q. You didn't used to do that?A. We never had to take it outdoors.

Q. Is it not light enough down there so you don't have to take it outdoors?

A. It is better on a light day. It is a great deal better on a light

day than on a dark day.

Q. Can you see what time it is by a watch down there on a dark

day?

A. Oh, no, Mr. Spitzley could not see the figures on his tape-line the other day. There was a train passing, and he had to wait until it passed by.

Q. You never know when to quit except by going outdoors to

see what time it is?

A. There is a whistle that tells us that.

Q. That is somewhere where this darkness does not affect it?

A. Yes, sir.

By a JUROR:

2397

Q. As I understand you, before this structure was built, when one board came through with a sliver you detected it right off?

A. Yes, sir, we detected it immediately. We had no trouble, but now it passes us some time before we detect it.

will say we have had the same men running these machines 15 or 20 years, and there is no reasonable excuse for a man not doing as good work today as he did ten years ago. We keep these men on these machines all the time.

JAMES A. JONES, sworn on behalf of the respondent-.

Examined by Mr. Dickinson:

Q. Where do you live?

A. Detroit, Canfield avenue.

Q. Where is your place of business?

A. 84 Griswold street.

Q. What is your business?

A. Fire insurance.

Q. Engaged somewhat in real-estate business, haven't you?

A. Very little for the last three or four years.

Q. And what amount of fire insurance do you write a year in your business?

A. You mean premium for risks? Q. I mean the amount of risks.

A. Oh, from four to five millions a year.

Q. You take premiums in that office, how much?

A. From \$124,000 to \$130,000 premiums. Q. You know the Backus property? A. Yes, sir.

Q. They have been insured in your companies, by your office?

A. Yes, sir.

Q. Have you examined the property for your companies with reference to the valuation of it from time to time?

A. Yes, sir.

- Q. And is it a part of your duty to keep advised as to value? 2398 A. Yes, sir, and as to machinery and the property we insure as near as possible.
- Q. We will take the Backus property as it stood; you insured it, I think, prior to the building of this elevated structure?

A. Oh, yes, I have insured it for the last 12 or 14 years.

Q. They have been insurance clients of yours?

A. Yes, sir.

Q. You know the present situation with reference to the union depot structure?

A. Yes, sir.

Q. We will take the Backus property without that, free of that structure on the street entirely, what in your opinion is the value of the property there, if you have examined it for the purpose of ascertaining its value, irrespective of the machines?

A. You mean the grounds and the buildings?

Q. Yes, sir.

A. I should consider the ground worth \$125,000, and the buildings somewhere in the neighborhood of \$45,000 to \$50,000.

Q. Without any machinery, engines and all that?

A. That includes the mill, the power-house and the office.

Q. And for the purpose of insurance in your companies have you formed any judgment of the value of the machinery in the yard?

A. We are carrying \$68,000 on machinery, which we consider

about 80 per cent.

Q. Sixty-eight thousand dollars is about 80 per cent. of the value? A. Yes, sir; it might vary from that if you come to figure it

down close, but that is the estimate we reached.

2399 Q. Now, will you please state whether, prior to the building of the structure, about what amount of insurance was

carried on the property?

A. There was in the neighborhood of from \$65,000 to \$80,000; \$65,000 would be an average they were carrying before this railroad was put up.

Q. Sixty-five thousand dollars an average?

A. Yes, sir; some years a little more, and some years a little less. Q. Will you please state if, by reason of the structure, they have

been required to carry more insurance?

A. They are obliged to carry 80 per cent. of the value more. They have an 80 per cent. insurance clause that in case of loss they have to take the place of insurance companies.

Q. Just explain to the jury what that is, that 80 per cent. clause.

A. Suppose a man had property worth \$10,000 and carried over \$5,000, in case of loss he would get five-eighths of the loss and he would have to stand three-eighths himself. He would have to stand the difference between eighty per cent. and the total; he would have to take that himself.

Q. Has that been so apportioned to the property since the build-

ing of this structure?

A. That took place a year ago last August.

Q. On what account?

A. That is the rule of the company. All manufacturing risks have to carry 80 per cent. insurance.

Q. And that has been so since the structure has been put up?

A. Yes, sir; in many places where they carry 80 per cent. they reduce the rate. In others they continue the same rate, but in this case they have raised the rate.

2400 Q. Will you please tell the jury the amount of increased rate, if any, by reason of the passing of the superstructure in front of their property?

A. Seventeen and a half per thousand, lacking it may be a few cents less than that, but in that neighborhood.

Q. Is that the increase?

A. That is the increase in premium. Their average rate before that structure was built was \$51, and today it is \$68.50, or very near that.

Q. Why has that been put upon the property?

A. They are afraid of the sparks of the passing engines on the elevated railroad.

Q. And on how many thousand has that increased to?

A. It makes an increase of their insurance premiums of about \$3,500 per annum.

- Q. Do you state that as wholly by reason of this structure?
 A. Yes, sir, the power-house was raised from 4½ to 8 per cent.
- Q. Nearly double? A. Yes, sir, nearly.

Q. Now, if you please, will you tell us the amount of insurance

they are obliged to carry on their buildings?

A. They are carrying \$30,000 on the factory proper, \$68,000 on the machinery, \$15,000 on the stock, \$7,000 on the power building, and \$10,000 on the machines, engines, boilers, etc. I think that figures up \$130,000.

Q. Then by reason-

A. The rate would have probably been reduced instead of in-

creased if it had not been for that structure.

Q. How much more does that cost? You say it would have been reduced but for the structure? Were all rates on manufactured property reduced?

A. Not all. It depends upon the exposure.

Q. The general rule was reduction?

A. Yes, sir, more insurance and less rate.

Q. This was considered an exceptional risk to which the rule did not apply?

A. Yes, sir.

Q. By reason of what?

A. By reason of the elevated road.

Q. Then in addition do they have to pay by reason of the elevated road, under that 80 per cent. clause, more for insurance than they would have to pay if the road had not been constructed?

A. They probably would have saved from \$4,000 to \$4,500 per

annum.

Q. Including the reduction and the increase? A. Yes, sir, the reduction and the increase.

(By Col. Atkinson:)

Q. The net loss to them now, as I understand, is something like \$4,000 a year on account of the railroad being there?

A. \$4,000 a year would be a fair estimate.

Q. Whatever there is of this insurance, you did not take it all in your company?

A. No, sir, I placed about one-third of it only.

Q. You placed that in your office?

A. I do not place all in my office. I place about one-third of it, and the rest is placed with different agents. Mr. Margaugh has about one-third of it, and Bierce & Sage—

Q. You place it for Backus with these other insurance com-

paies?

A. Not all, no, sir, it is a difficult matter to place it. About one company out of every four declines it.

Q. Don't want it at all?

A. No, sir.

Q. Do you find it extremely difficult to place insurance on the Backus property then?

A. Yes, sir.

Q. And your own companies would not take it at all, notwithstanding you have been doing business with them 2402 for the past ten or fifteen years?

A. Yes, sir, it is difficult to place it.

Q. Why is that?

A. They make the objection on account of the elevated road and the danger from sparks, that is the principal trouble.

Q. It is considered an exceptional risk? A. Yes, sir, I think they are short pretty nearly \$10,000 of insurance; they cannot place it in the city of Detroit.

Q. They have tried to place? A. Yes, sir.

Q. Do you anticipate in the future that they may not be able to get any insurance at all?

A. I think many companies now will refuse to renew.

Q. Why?

A. On account of the danger of sparks from the locomotives, sparks going into the warehouse.

Q. There is no risk as far as that is concerned from the sparks

from their own warehouse?

A. No, they have large smokestacks.

Cross-examination.

By Mr. BAKER:

Q. How long have you been in the insurance business?

A. Well, I don't know exactly; it is long before the old mill burnt down.

Q. Did you have insurance on them when it burnt up?

A. No, sir.

Q. Did the railroad set that on fire?

A. No, sir, they did not have the railroad along there then.

Q. Do you know what did set it afire?

A. No, sir; some internal cause, I do not know what.

Q. It was not from any outside exposure?

2403 A. No, sir.

Q. Now, Mr. Jones, you insured their lumber yard down there before the Wabash railroad was built there at all?

A. Yes, sir.

Q. And you have always testified in these cases when the railroad did go through you would increase the rate?

A. Yes, sir.

Q. As far as you could, you did increase the rate when it did go through?

A. Yes, sir.

Q. Now what companies do you represent?

A. The Western, of Toronto; the Fireman's, of New Jersey; the Eagle Fire, of New York; the United States, of New York; are some of them.

Q. Your company does business with Mr. Chapman's agency, the

insurance bureau?

A. No, sir, we do not belong to the board.

Q. Do you have authority in your companies to do business in Michigan?

A. They all have authority.

Q. Does Mr. Backus get any insurance outside of the State?

A. I think not; I do not think he has got a dollar. Q. You know Mr. Chapman, don't you? A. Yes, sir.

Q. You know he is an experienced insurance man?

A. I do not know anything about that.

Q. You don't have any business with that office? A. No, sir.

Col. ATKINSON: What office is that?

A. The board of underwriters.

Mr. BAKER: Don't they represent the bulk of the insurance business in this city?

A. Yes, sir, I think they have got about seven-tenths-2404 seven-tenths of the companies belong to them.

Q. To that agency?
A. That is not an agency. It is a bureau for selling rates.

Q. Who makes the rates?

A. He makes the rates. Q. Have you, in your business with Mr. Backus, in pursuance with your former testimony, increased the rate uniformly?

A. Yes, sir. Q. All around?

A. Yes, sir. Q. As long ago as the condemnation proceedings when the Wabash road went through there, before it was built, you testified you were going to do that?

A. Yes, sir.

Q. You have been doing that ever since?

A. Yes, sir.

Q. As an insurance man have you any explanation to make of Mr. Chapman's testimony that the risk down there has not perceptibly increased and they have not increased their rates?

A. On the mill?

Q. Yes, sir.

Objected to as incompetent and immaterial. Overruled. Exception for respondents.

A. Mr. Chapman has increased them; those are the rates made by Mr. Chapman.

Q. Do you swear that he has increased the rate on the mill?

A. On the power-house, and it increases the rate on the whole thing, and it makes \$17.50 increase on every \$1,000.

Q. That is when they increased the rate on one building, that

would increase it on another?

A. The average policy is increased from \$55 to \$68.

Q. Don't you know the only increase he has made is on the shaving-house?

A. On the warehouse.

Q. It is all one?

A. Yes, sir.

Q. Now that is the only increase that he has made, is it not?

A. That is the only one.

Q. Is that the only increase you have made?

A. Yes, sir.

Q. Every policy carries the same rate; so that it all arises from that power-house?

A. Yes, sir.

Q. But you don't increase the rate on the rest of it?

- A. No, sir, there is no increase on the mill, only the increase on the power-house brings the whole up to about \$17.50.
- Q. How much insurance have you got on that power-house?
 A. There are \$7,000 on the building and \$10,000 on the boilers and engines.

Q. How much have you got on the mill proper?

A. \$68,000 on the machinery, \$30,000 on the buildings, and \$75,000 on the stock in mill; I do not have it all.

Q. How much is in one company?

A. \$3,000.

Q. Is it not a fact on as large risk as that they divide it up in small amounts, into just as many companies as they can?

A. Certainly.

Q. And the most in one company is \$3,000?

A. I think so.

Q. And that is distributed over the different parts of the plant?

2406 A. Yes, sir, here is the form of the policy (producing paper). Every policy is pro rata, each item—

Q. How much do they have to pay on the power-house?

A. Eight per cent.

Q. What did they pay before the elevated road was built?

A. Four and one-half.

Q. How much did you carry there?

A. \$4,000 altogether.

Q. And now they have increased that to how much?

A. To \$17,000.

Q. Before the railroad was built they carried \$4,000 on it and

now they carry \$17,000 on it?

A. Yes, sir, they have to carry it now. They could not get a single dollar of insurance from any company unless they carried that amount on it.

- Q. Do you mean to say these companies insist upon having so much insurance?
 - A. Yes, sir, you could not get a dollar of insurance on it without it.

Q. Then they are anxious to insure it?
Q. They wanted so that in case of partial loss they won't be stuck for the whole sum.

Q. You contradict yourself.

A. No, sir.

Q. Then what you mean is this, that they will only pay a proportion, they will pay in proportion of their policy, to the value of 80 per cent.; you do not mean to say that a company that was insured in that property for \$4,000 previous to the building of the elevated road would insist that after the elevated road was built on their having \$17,000 insurance on it?

A. Yes, sir, I do mean to say that.

Q. They had insisted on having that increased insurance whether the property-owner wanted it or not?

A. Yes, sir, or else he would not get a cent of insurance.

Q. You are forcing them to take \$17,000 insurance where they only had \$4,000?

A. Yes, sir; the companies say you can have our policies on those conditions or else you cannot have any insurance.

Mr. Robison: That 80 per cent. operates on all manufacturing

institutions?

A. Yes, sir. Col. ATKINSON: It lessens the rate on others, but it has been increased notwithstanding that 80 per cent. clause on account of this elevated road?

A. Yes, sir.

Mr. Robison:

Q. You say-you formerly said you have \$4,000 on this powerhouse?

A. Yes, sir; formerly the companies did not dictate as to how much insurance a man could put on.

Q. Four thousand dollars was all he wanted on them?

A. Yes, sir.

Q. And at that time you paid 4½ per cent.?

A. Yes, sir.

Q. And now you charge 8 per cent.?

A. Yes, sir.

Q. So now there is 3½ increase?

A. Yes, sir.

Q. So all this elevated road increases on this insurance is 3½ per cent. on the \$14,000; it amounts to \$17.50 on \$130,000. It amounts to 31 per cent. on the amount that is increased?

A. That is averaged-

Q. What do you average it for; can't you find out how much

A. He has to pay \$17.50 now on \$130,000 average.

Q. He has to pay 8 per cent. on the \$17,000?

A. Yes, sir. 2408

Q. But that \$17,000 has not anything to do with the elevated road?

A. Yes, sir, it has.

Q. How much does he pay a year on the power-house?

A. Eight per cent. on \$17,000.

Q. That would be \$1,360?
A. Yes, sir; now, he paid 5½——
Q. That has nothing to do with this elevated road; I want to know how much more money he pays out a year because of this elevated road?

A. You will find about \$3,500.

Q. He pays \$1,360 altogether on the power-house?

A. Yes, sir.

Q. And you say the rates have not been raised on the rest of the property?

A. No, sir, only increased the amount of insurance.

Q. The elevated road did not do that?

A. No, sir, I did not say it did. I say that all manufacturing risks have to pay that.

Q. He takes three or four times more insurance than he used to?

A. Yes, sir.

Q. But not on account of the elevated road?

A. No, sir.

Q. It is because the companies have raised that—this amount?

A. Yes, sir. Q. He paid \$1,360 on the power-house?

A. Yes, sir. Q. How much did he used to pay?

A. Four and one-half per cent. on \$4,000.

Q. That is only \$180?

A. Yes, sir.

Mr. BAKER: You testified a year ago last August the companies, as to all manufacturing institutions, adopted this 80 per cent. business; it had nothing to do with the elevated

road at all?

A. I testified that if it had not been for the elevated road they would have reduced the rates.

Mr. Dickinson: So the net loss to them is about \$4,000 a year?

A. Yes, sir; this was an A No. 1 special hazard.

Mr. Robison: And that means good or bad?

A. That means good.

Q. It burned out two or three times?

A. It burned out once.

Q. You have paid insurance on it three times, have you not? A. We paid one loss on the mill and on some lumber.

Q. At the mill?

A. No, at the yards.

Q. It has been testified to that the mill got afire three times?

A. I never knew it to catch fire but once, and then we paid it. I have never been called on to pay but one loss on the mill.

Q. On account of this extra risk it is 31 per cent. on \$17,000?

A. Yes, sir.

Q. How much does that amount to; can you tell off-hand? That amounts to \$595 a year he has to pay them?

A. It has been raised from 41 to 8 per cent. I have not figured

I presume you are right.

Q. What are you mixing in the \$4,500 business for?
A. I say he pays that much more insurance now.

Q. If he would insure for \$4,500, he would have to pay still more, would be not?

A. Certainly.

Redirect examination. 2410

By Col. ATKINSON:

Q. Now, Mr. Jones, as I understand, this rule of 80 per cent. insurance has been adopted as to all such risks as this?

A. Universally throughout the country.

Q. But as the general rule the adoption of the 80 per cent. clause has resulted in lowering rates?

A. Yes, sir, all from half a cent to two and a half cents.

Q. On this particular risk the rates would have been lowered had it not been for the elevated road?

A. It would. Q. And so, from your knowledge of the business, you can say Backus & Son- are suffering the loss of about \$4,000 a year on the insurance, on account of this structure being near their mill?

A. Yes, sir, that is the best I can figure it.

Q. You have no interests in it, as to figuring it out accurately?

A. Not a bit.

Q. The object of this 80 per cent. clause is something like this: A piece of property is hazardous; no company will take over \$3,000, and a company will say we don't want to carry \$3,000 on that, and perhaps have to pay the whole \$3,000 in case of a loss, but if you will get others to get \$3,000 each up to 80 per cent., so they will share our loss, we will take it. Otherwise we won't insure?

A. That is it exactly.

Recross-examination.

By Mr. BAKER:

Q. Let me ask a question right here. Could not you apportion that \$4,000 among a number of companies just the same way? A. Certainly. 2411

Q. You do not mean to say a company forces a man to take

a certain amount of insurance?

A. I do mean to say that.

Col. ATKINSON: And I understand you to say that Backuses are in that position today; that is, they have not got up to 80 per cent., and in case there was a loss they would be treated as co-insurers up to within 80 per cent.?

A. Yes, sir, that is exactly the case.

By Mr. Robison: Suppose Backus was insured today for \$4,000 on the power-house; what would happen?

A. He would get only $\frac{1}{1}$ on the \$1,000, and he would have to stand the rest himself; he would have to stand $\frac{3}{17}$ himself.

Q. Do you insure other property around in that neighborhood? A. No, I don't think we have anything in that vicinity.

Q. Nowhere else on the line of this railroad?

A. No, sir.

Q. Anywhere near it?

A. Well, we have Backus' lumber yard. Q. How much is that raised?

A. That is 2½ per cent. Q. Raised 2½ per cent.?

A. Yes, sir.

Q. On account of the elevated road?

A. Oh, no, we used to carry it at 2 per cent.

Q. What raised that?

A. The railroad passing through it. There is a grade road passing through the lumber yard.

Q. It has been raised ever since it passed through?

A. Yes, sir; they had to put on this 80 per cent. insurance clause the same as the rest.

Q. Didn't you reduce the rate any down there?

2412 A. No.

Q. Wherever you reduced it or where have you reduced it, around what manufacturing institutions?

A. Oh, a great many of them. In Grand Rapids and Saginaw-A. I mean right at home; where have you reduced the rate?

A. Oh, a great many of them.

Q. Tell us some?

A. Oh, a hundred of them. I don't carry them all in my head. Q. Have you any in your head where the rate remains the same?
A. The McGraw boot and shoe factory.

Q. That is extra hazardous?

A. No, sir, that is an extra good one.

Q. Why didn't you reduce it, then, if it was an extra good one?

A. We didn't reduce it because it didn't stop in operation until

after this went into effect. It would have been reduced about 50 per cent. under this new system.

Q. Any other that you have not reduced?

A. Oh, yes, sir, there are a great many others. Q. You said—give us some others that you have not reduced?

A. We don't have many like Backus'. In Grand Rapids they have some forty furniture factories, and some of them have been reduced one-half.

Q. You haven't any other institution like Backus' here at home?
A. No.

Q. You have no other planing mill in town?

A. Oh, yes, we have Lafferty.

Q. How is that, has that been reduced?

2413 A. Well, that is a frame mill. Then we have Miles & Weeks.

Q. How is that, reduced or raised?

A. That is reduced a quarter of one per cent.

Q. Do you insure Henry George's mill?

A. No, sir. We have Spitzley's. We have reduced his from 6 to 5 per cent.

Q. You had Backus' pretty low all the time?

A. Backus' was a good risk. He had lots of room; no crowding. It was a good mill.

Q. A planing mill is a hazardous risk, anyway, is it not?

A. Not at the rate. I have just as soon take a planing mill as a dwelling-house if there is no outside exposure.

Q. It is certainly a hazardous risk?

A. Any wood-working factory is a hazardous risk. Anywhere where machinery is in use is a hazardous risk.

Q. You don't know of any fires that have been caused by this

railroad, do you? A. No, I don't know of any.

Q. And I understood you to say that you thought it was impossible for Mr. Backus to get his property insured there in the future? A. I think a good many of the companies will refuse to renew.

Q. Do you think any of yours will quit?

A. Two of them will quit. I have orders now to drop two when they expire.

Q. Who gave you those orders? A. The companies.

Q. East?

A. Yes, sir.

Q. Haven't they adopted a general policy of stopping insurance on property of this kind?

A. Oh, no, they insure it.

2414 Q. Do they have personal knowledge of this particular property?

A. Yes, they have personal knowledge of it. Q. Do they send on a man here?

A. Oh, yes, sir.

- Q. Have you tried any of the board companies? I understand you to say that Mr. Backus is unable to get all the insurance he wants?
- A. Yes, sir, every agent in Detroit has got insurance on that property, and I think every agent has companies on their books who have declined it.

Q. Would you be willing to pay a part of your percentage if you could get it placed right away?

A. Yes, sir. We get 10 per cent. commission, and I will give you all of it if you can place it. That will make you \$60.

Recross-examination.

By Mr. BAKER:

Q. Now, Mr. Jones, will your companies make you the standard policy?

A. All companies doing business in Michigan do.

Q. Your companies do

A. Yes, sir, mine are duly authorized.

Q. (Showing paper.) Is that the 80 per cent. clause to which you refer ?

A. Yes, sir, that is it.

Q. Is that in the Michigan standard policy? A. No, sir, that is a condition of the company's.

Q. Do you know by what authority they put that in? A. Their own.

Q. There is no law that authorizes it?

A. No, there is no law to authorize the form of any policy; but it is made, though.

2415 Q. In order to do business in Michigan they have got to comply with our statutes, and they have got to issue the standard Michigan policies?

A. Yes, sir, and they have all got them.

Q. That provision is not in the standard policy?

A. No, but it says any additional riders they may see fit to put

That is one of the riders.

Q. But this qualification of the liability upon the policy, in my judgment at any rate, is wholly illegal and void, and don't amount to anything, and I desire this put in evidence.

Percentage co-insurance clause is offered in evidence and marked Exhibit "Jones 1."

Mr. BAKER: I would like this introduced in evidence and copied in connection with Mr. Jones' testimony.

Mr. Dickinson: That is objected to as incompetent.

Mr. BAKER: The Michigan law provides a form of policy. WITNESS: I think you will find it has been tested heretofore.

Mr. Baker: Yes, I am testing it myself. I will read this 80 per

cent. clause.

" If at the time of fire the whole amount of insurance on the property covered by the several specific items of this policy on property, as described in each of the above items, shall be less than 80 per cent. of the actual cash value thereof, this company shall, in case of loss or damage, be liable for only such portion of such loss or damage as the amount insured under said items, shall bear to the said 80 per cent. of the actual cash value of the property covered by such items."

Mr. Robison: Do I understand that all the companies doing business in the city require that 80 per cent. clause?

A. Yes, sir.

Mr. Dickinson: I now ask your honor to tell this jury or 2416 to direct them, as in a common-law trial, that Mr. Baker's

statement that this is an illegal clause or condition of insurance should not be taken into consideration by them.

Mr. BAKER: That is a matter for argument.

COURT: I shall let the matter stand for the present.

Mr. Dickinson: Note an exception.

Col. ATKINSON: You have had some experience, have you, in real estate in the city?

A. Yes, sir.

Q. How many years did you pay some attention to it?

A. Oh, about 15 or 16 years.

Q. You know something about the local values of property about the city?

A. Yes, sir.

Q. Have you been acquainted with the way in which these properties of Backus have been used?

A. Yes, sir.

Q. That is, the connection of the three properties together?

A. Yes, sir, I know it well.

Q. They have all been substantially one plant, have they not?
A. Yes, sir, one necessary for the other.

Q. Have you observed yourself the elevated road since it has been built there near them?

A. Yes, sir.

Q. In your business have you occasion to investigate somewhat, and know something of other manufacturing business of other kinds throughout the city?

A. Yes, sir.

- Q. What in your judgment has been the effect upon all this property, taking it as a whole, the lumber yard, the mill, and the warehouse, as to its rental value, supposing you had to rent it
- now, or rent it without that elevated road being there, what 2417 in your judgment, even in percentages or in the lump?

A. I should think it would be half.

Q. You think the rental value of the property taken as a whole would be less than fully one-half?

A. Yes, sir, I do.

Mr. Robison: What do you think the actual cash value of the property would be?

A. Machinery and all included?

Q. Yes, sir, just as it stands there today, just the mill?

A. I think the ground without anything on would be worth about \$125,000.

Q. How much would it be worth if the railroad was not there?

A. Oh, it would be worth-well, I won't say-Q. How much is it worth as it stands for the purpose of selling?

A. Well, I don't think it would bring half that. Q. Well, I don't either. You think \$60,000 would be a big price

for it today? A. In the present state I think it would.

Q. How much do you think the mill and machinery would be worth there today just as it stands?

A. Well, the mill and machinery, they can wove them and they can't move the building very well. There would not be such a big depreciation in the machinery as in the building.

Q. When did you insure it last?

A. In March, I think, our policies expire. Q. How much is the building insured for?

A. \$30,000.

Q. How much the machinery? A. \$68,000.

Q. You insure it every year? A. Yes, sir.

2418

Q. And only insure it for only one year at a time?

A. Oh, the policies scatter along. They don't expire all the same month.

Q. But they are all yearly policies?

A. Yes, sir.

Q. Do you know how much it was insured for before—the powerhouse—you raised that from four to seventeen?

A. Yes, sir; I think somewhere around there. That has been carrying about that amount all along.

Q. There is about \$30,000 on the building? A. Yes, sir.

Q. They have not reduced it any on account of the depreciation in the price?

A. Well, I suppose they depreciate the value in making that 80 per cent. They estimate it every year and put on the 80 per cent. Q. But they insure it about the same price as they did before the

elevated road went through?

Mr. Dickinson: You mean the same price or the same amount? Mr. Robison: I mean the same amount.

A. Yes, sir.

Q. Then it has not depreciated in price so much but what they are willing to insure it up pretty well?

A. I suppose they estimate it every year.

Q. You give the value it is insured for, the building and the machinery aside from the power-house as \$98,000?

A. Yes, sir, I think that is about 80 per cent of the actual value.

Q. Of what it is worth?

A. Yes, sir; I think that is what they consider it worth.

Q. And you think the power-house and the engines are worth \$17,000 more?

A. Yes, sir; they have very fine engines, very fine machinery, very fine boilers.

2419 Q. What is the total amount of insurance they carry there?

A. \$130,000.

Q. And you say that is \$10,000 less than what they want?

A. They have not been able to place this. They have not been able to place only about \$120,000. They are trying to place the rest.

Q. They are trying to carry \$130,000?

A. They are carrying it now. Several companies have declined to reinsure 80 per cent of the value, and some of the companies within the last few months, after examining the property and after carrying it for 6 or 8 months, have canceled their policies. Franklin, of Philadelphia, went off. The Oakland Home, of California, went off.

Mr. DICKINSON: By that you mean canceled their policies?

A. Yes, sir, canceled their policies after a personal examination of the risk.

Q. Before their policies expired?

A. Yes, sir.

Mr. Robison: I suppose in fixing the amount of insurance you examine the property and fix its actual value?

A. We consider its value and then the assured put a value on it;

and in case of loss they have got to substantiate their value. Q. As I understand, they had not come down on their value since

the elevated road was built?

A. They have had to put in new machinery, which has maintained the value; very much like household furniture maintains its value by constantly getting new furniture. I don't think the building has depreciated much.

Q. That you don't know anything about whatever?

A. Yes, sir. Q. You guess at that just as much as any business you 2420 never had anything to do with?

A. Well, I have been through the mill frequently.

Q. Do you know anything about that lumber business?

A. No, I don't.

Q. You are as ignorant of that as of any other kind of business you don't know anything about?

A. No, sir.

A JUROR: In the cancellation of these insurance policies, was that done solely on account of the elevated road?

Mr. Dickinson: Then your value of the real estate, irrespective of the elevated road and of the machinery and buildings, is about \$255,000.

A. Yes, sir.

Mr. Robison: How many of those policies were canceled?

A. Oh, there has been probably—do you mean all along from the time of issue or lately?

Q. From the time they were issued?

A. Probably 20 or 30.

Q. When was the first cancellation?

A. Some were cancelled in September, some in August. Q. Have you ever had one canceled in years gone by?

A. Well, no, when the policy would be issued for the year it would run out and sometimes they would not renew them, but these policies were canceled on account of the exposure.

Mr. Dickinson: You have canceled 20 or 30?

A. Yes, sir.

- Q. And you get notices from some of your people that they will not renew?
 - A. Yes, sir.

(By Mr. Robison:)

Q. As I understand it, Mr. Backus will shortly be left without any insurance?

A. Oh, no, I would not say that. I will tell you where 2421 there has been two or three policies canceled within the last 60 days. Homer McGraw has had two or three policies canceled within the last 60 days.

Q. When these companies were looking for risks, didn't they go

to Mr. Chapman and ask him about this risk?

A. No, sir; they go and look at it themselves. They have their specials going through the country examining all the risks.

Q. Have you local agents here under you?

A. Yes, sir.

Q. You place this insurance yourself?A. I only placed about one-third of it myself.

Q. Who placed the rest?

A. Margah, Bierce & Sage, McGraw and Parker & Bonninghausen. I think every agent in the city has got a line of it.

Q. Is there any other institution in town that has trouble in get-

ting insurance?

A. No, except the Exposition building down there. They won't insure that.

Q. Because that is vacant?

A. Yes, sir.
Q. The Exposition building and the Backus property are the only

two institutions in the city that can't get insurance?

A. Oh, no, there are the fertilizing works, but I don't know of any other wooden warehouse. It is difficult to get the sanitary works insured or anything that is called a nuisance. That is called a moral hazard.

(By Mr. ATKINSON:)

Q. There are differences in the rates of your companies?

A. Not on this risk. The rates are precisely the same, and the policies are identical in every respect, form and rate and everything else.

Mr. BAKER: This \$17,000 on the power-house and engine, is that

supposed to be 80 per cent. of the value?

A. I suppose that is it.

Q. How do - get at the actual cash value when you come to adjust the loss?

A. They would have to substantiate it.

Q. Your theory is, they would make a correct statement?

A. Yes, sir.

Mr. Dickinson: And you put your estimate for the purpose of insurance at the minimum in the estimate?

Mr. Robison: In getting the amount of insurance you placed on this particular property, you took Mr. Backus' statement of the values?

A. Yes, sir.

Q. You didn't know anything about it yourself?
A. We have some knowledge.

Q. You took no expert down there with you to ascertain its value?

A. No, we get that if there is a loss.

Daniel Stewart, sworn on behalf of the respondents.

Examined by Mr. Dickinson:

Q. Where do you live? A. 140 High street west.

Q. How long have you lived in Detroit?

A. About 46 years.

Q. Are you familiar with River street?

A. Yes, sir, I own property there. Q. Whereabouts?

A. Between Sixth and Seventh.

Q. On River street?

A. Yes, sir.

Q. Have you been in business there? A. Yes, sir. 2423

Q. How long?

A. About 19 years.

Q. How long have you been familiar with business up on River street?

A. I was there pretty near all my life, seeing that I was employed by the Michigan Central, and passing there three times a day. was there all the time.

Q. Then you carried on a business there yourself?
A. Yes, sir.

Q. What was it?

A. Grain.

Q. Grain, flour and feed?

A. Yes, sir.

Q. And how much of a place did you have there, how much width on River street?

A. We occupied 40 feet, I owned 20.

Q. You rent 20 and own 20 and run back how deep? A. About 75 or 80 feet.

Q. Now, are you familiar with the street below, down as far as Twelfth street?

A. Yes, sir.

Q. Quite so are you not? A. Yes, sir.

Q. Been familiar with it for years?

A. Yes, sir.

Q. You know the Backus property?

- Q. You know its situation running through to Fort street?
- A. Yes, sir.
- Q. Seen it? A. Yes, sir.
- Q. Been on it?
 - A. Yes, sir.
- 2424 Q. Before the days of the elevated road?
 - A. Yes, sir.
- Q. What is the valuation of that property, the real estate itself? We will not ask you about the machinery, with which, I suppose, you are not familiar, are you?
 - A. No, sir.
- Q. But the real estate itself, that piece of real estate of Backus', and their buildings, what do you think it was worth before the elevated structure went through?
 - A. About \$500 a foot.
 - Q. It is a very eligible piece of property?
 A. Yes, sir.
- Q. Situated well with reference to the railroad and with reference to the river?
- A. Yes, sir. Q. Now, as to property on River street there since the building of the elevated structure, what have you to say as to its effect on property on the north side of River street?
 - A. It ruins it; that is all there is to it.
 - Q. You think the depreciation is very great from the effect of it? A. Yes, sir.
 - Q. Why is that?
- A. From the danger of fire from the locomotives and the closing up of streets and leaving it on an island.
 - Q. The street is not much used since the structure is built there?
 - A. No, sir.
- Q. Are the fronts of the property of any value upon that street since this structure was built?
 - A. I don't think it is.
- Q. It practically makes that property frontless property, as far as a street is concerned?
 - A. Yes, sir.
- 2425 Q. You say it has ruined the property. Can you give the per cent. of depreciation?
 - A. Well, I would not want to give one-half for it.

Cross-examination.

By Mr. Robison:

- Q. What do you think has ruined it?
- Q. In what way?
- A. By cutting it off so that nobody wants or can do business there.
 - Q. Why?

A. Well, I will tell you why. I had my warehouse filled with about 60 tons of hay in it and the elevated-road sparks put it on fire and burnt 60 tons of hay and 30 tons of straw. That is why.

Q. When was that?

A. The 16th of September. I think that is correct.

Q. Just a short time ago?

A. Yes, sir.

Q. Where was this warehouse? A. Between Sixth and Seventh?

Q. The road runs right alongside of you there?

A. The road runs within 7 feet of the corner and there are two lots between me and the corner.

O. You can do business in the street so far as drawing loads in

the street are concerned yet?

A. Yes, sir, or you can go around far enough.

Q. You can drive in the street just as you could before?

A. To drive under the structure, in my opinion, you would require three kinds of horses to do that with; either deaf, dead or blind.

Q. Is this the only railroad of this kind in the country?

A. I have not travelled much, I don't know.

Q. You never saw any other elevated road but this? A. Well, I am not sure. 2426

Q. You have seen them, haven't you?

A. I do think this is the first I have seen.

Q. In Chicago?

A. I have been in Chicago 40 years ago, not since.

Q. In New York city have you seen any elevated roads?

A. I have not been there.

Q. You know they do business in the streets there as they used to?

A. Oh, yes, I read of it.

Mr. Atkinson: Of course business can be done to a limited extent under those roads, but it is very much interfered with, I sup-

A. Yes, sir; you must have very quiet horses if you do it at all. Mr. Robison: Ain't you aware that it is the plan generally now of entering cities by elevated road rather than en the ground?

A. I don't know.

Q. Do you think this would be better if it came in the city on a level?

A. Yes, sir, and cheaper.

Q. Cheaper for whom? A. Cheaper for everybody.

Q. Do you think it would be better for the business, doing business on the street?

A. I know it.

Q. You think horses would not get scared so much?

A. I know it. They get the idea the locomotive is coming down, and it is a hard thing to do anything with them.

Q. Do you think property was worth \$500 a foot down there?

A. I think the Backuses' was. It is a peculiar lot. That is almost two planing mills in one, because the back part is 2427 high, and it makes two stories or better before you come on a level with the other part. So you have three floors there before you get up into the air.

Q. Are there two stories on the ground really?

A. No, I don't think it.

Q. One entering from Fort street?

A. I think you come in on Fort street level with the second story, if I recollect right.

Q. You enter on the ground from Fort street on one story and on River street one the other?

A. Yes, sir.

Q. It don't hurt the front of Fort street so much?

A. You must consider the height of your viaduct. When the train is passing it is pretty near it to the third story.

Q. How many feet high is it? Do you know?

A. I don't.

Q. Don't you know it is 14 feet in the clear there?

A. I don't. The car goes to the third story. I was there when they were passing, and it was perfect dark. You could see between the cars; it was yoop, yoop, yoop, and then you could see between the cars. That is what it was precisely.

Q. Was this a freight train you were seeing or a passenger train?

A. It was a passenger train, I think. It didn't take long to go by and then there was a perfect flood of light. You had the gloom of the viaduct afterwards, of course.

Q. How far from the viaduct was the room?

A. I would not be sure.

A JUROR: This gloom was down in the lower story, not above?

A. Oh, yes, sir.

Q. The bottom of the viaduct is even with the second story?

A. Yes, sir.

Mr. Dickinson: It is even with the floor of the third story.

Cross-examination

By Mr. BAKER:

Q. Mr. Stewart, where did you say you lived?

A. 140 High street west.

Q. Where is your place of business?A. 312 and 314 River street.

Q. Near what street is that?

A. Between Sixth and Seventh.

Q. How many years have you been there?A. Between 19 and 20.

Q. The Michigan Central yard is right opposite you?

A. Yes, sir.

Q. The viaduct does not come up to you, does it?

A. It runs in on the corner of Seventh.

Q. So it don't go in front of you at all?

A. No, sir.

Q. It goes back of you?

A. It goes behind.

Q. What kind of business do you carry on? A. Hay and oats and corn and bran, etc.

Q. You still in business there?

A. Yes, sir.

Q. And you have been in business there how many years?

A. Between 18 and 19 years.

Q. Have you brought an action against the union depot Co.?

A. No, sir, not yet. I hope to in the future.

A JUROR: In estimating the value of the Backus property, 2429 do you reckon the value in a lump from River street to Fort street?

A. No, sir, I value it like this; I base my valuation upon the sale

of the D., L. & N. property to the Michigan Central.

Then adjourned to 9.30 next day.

Остовек 28, 1893—9.30 а. т.

Peter Dupont, sworn on behalf of respondents.

Examined by Mr. Dickinson;

Q. Where do you live?

A. 340 High street east.

Q. How long have you lived in Detroit?

A. 50 years.

Q. How long have you been engaged in business in Detroit?

A. Since 1865.

Q. In what business?

A. In the building business.

Q. Were you formerly for some years foreman of the Pullman car shops when they were situated here?

A. I was of what we used to call the old Russell car shops.

Q. How long were you foreman?

A. A year.

Q. Are you engaged at all in setting up machinery and that sort

of thing?

A. In 1869 I went into the business of putting up—I was the first man that set up these blowers to convey shavings and dust from wood-working machines by the process of a fan or blower. I commenced in 1869 and I continued till 1874.

Q. Just five years?

A. Yes, sir.

Q. Are you familiar with wood-working machines? 2430

A. Yes, sir. Q. You have worked in wood all your life?

A. That is my line of business.

Q. And are familiar with the different products of wood that come from machines in planing mills and so on?

A. Yes, sir.

Q. And familiar with all machinery?

A. Yes, sir.

Q. Familiar with setting up and are now engaged in business which makes you familiar more or less with that sort of inside

A. Yes, of my own knowledge in the building business and I have some small machinery that I am running myself in my shop.

Q. You have done some business, I suppose, and purchased goods of Backus?

A. Frequently deal with them-occasionally.

Q. Where is your place of business?

- A. 340 High street east; I have my shop in the rear of my residence.
 - Q. You work in all kinds of fine inside wood-work?

A. All kinds of work.

Q. Now, you have been familiar with the Backus property how long?

A. In the neighborhood of twenty years.

Q. You have bought their material, I suppose?

A. Considerable.

Q. What have you to say as to the class of material produced by them, comparatively, for fancy inside work and for all kinds of wood-work, prior to 1892?

A. I find their lumber, such as to use an oil finish is not as desirable-

Q. Before?

A. Oh, found the manufacturing of the Backus lumber 2431 very nicely manufactured.

Q. Their moldings fine and inside fancy work fine?

A. Their moldings are very fine and their dressing is very fine, the journals of their machines seem to be substantial so that it leaves the surface clean.

Q. Give us some comparative idea of their work as they did it prior to 1892 as compared with other work in the market, whether it was standard?

A. Oh, the Backus manufactured material is above the standard in Detroit.

Q. And do you know from what that is caused?

A. From the good repair and good attention to machinery. Q. Have you examined the machinery in the Backus mill?

A. I went through a few days ago.

Q. You have seen it before without making any special examination?

A. I have already done some millwright-work; I put up the first

blowing machine they had.

Q. Now, tell the jury in your own way and in your own view of it, what you have to say of the machinery in the Backus mill from your examination?

A. I find by examining the planers, saws, resaws, cut-off machine-a device to save labor, such as I have never seen in any other mill-in their cut-off saws I find gauges, that whole surface of it springs back when the board goes onto it, and as soon as the board leaves it it springs back again, they could put in there one for a different length without having to set in their gauge, they are all set a number of them. It is the only one I have seen in the city of Detroit.

Q. Or anywhere else? Have you been in mills anywhere

else?

A. I have put up machinery in other States, New York, 2432 Michigan and Ohio.

Q. How does this compare-

A. I have never seen anything got up as good a device as I have seen at Backus'.

Q. Go on with anything else?

A. I find even in the rip-saws, where the rip-saw travels, where you put in the lumber, there is a fine little steel knife, to separate the lumber and to prevent a board from catching upon the saw and injure a man, or to prevent from squeezing the saw, all of which is very perfect.

Q. Many things in the Backus mill they have added from their

own experience and genius?

A. It is all from their experience.

Q. That you do not see in any other mill? A. That I don't see in any other mill.

Q. Now, as to the firmness?

A. There is quite a vibration in the whole mill; I have gone on all the floors.

Q. Fineness of adjustment?

A. All pulleys are well balanced, otherwise they would shake, everything is so well balanced and complete, the building so firm, there is no vibration in it at all.

Q. Foundation of the machinery?

A. Foundation of the machinery must be very good.

Q. How about the extra heavy hangers and that sort of thing to

keep the balance good.

A. I find the hangers very perfect hangers; they have also separate hangers to hang what they call the loose pulley, a sleeve pulley. Formerly in the case of a factory, with the loose pulley on the shafting, when the belt is thrown off from the main pulley on the loose pulley, there is a friction upon the shafting; in this case there is a sleeve and the shafting goes through a sleeve; it does

not have any friction, and the loose pulley is on that sleeve and with a separate hanger at great expense, so there is no fric-

tion when the machinery is not running on that loose pulley.

Q. Is this peculiar to the Backus mill? A. This is peculiar to the Backus mill.

Q. Do you find a great many arrangements of that kind to secure correct adjustments peculiar to that mill?

A. Peculiar to the Backus mill, we do not find in other mills bu very seldom.

Q. What have you to say as to the extra cost of these many ad

justments?

A. Oh, the adjustment of a large sleeve pulley of the kind with hangers and sleeves would cost from \$75 to \$80 per piece to make the adjustment.

Q. I think you sold Mr. Spitzley, who has been a witness here

his first shop, did you not?

A. The first shop that Spitzley Bros. operated I sold to them in either '67 or '68; the first little frame shop that they operated which I owned myself.

Q. Now, Mr. Spitzley has given us some testimony as to the floors

there in the mill. Have you examined the floors?

A. I have examined the floors.

Q. So that you knew the kind that there are in the Backus mill?

A. Yes, the top floors.

Q. It is a part of your trade, I suppose, to lay floors of that kind?

A. Oh, yes, we have to lay floors in all our buildings.

Q. What is the cost of laying such floors as you found in the Backus mill, laying the lumber and all, everything included, maple flooring?

A. You have reference to maple flooring?

Q. Yes, maple flooring, is it not?

A. The top floor is of maple, but underneath it is pine.

2434 Q. Tell the jury what the cost of laying these floors is, including the lumber, of course?

A. The maple floor laid would be worth in the neighborhood of \$38 a thousand.

Q. Now, then, the other flooring. You don't know the amount of it?

A. I don't know the number of feet, no, sir.

Q. Are the floors elaborately and particularly well laid? A. They are very well laid, substantial.

Q. Now, you observed the mill timber and examined it, did you not?

A. Yes, sir.

Q. Twelve by fourteen?

A. Big beams.

Q. Could that be put in in 1892 or at any time for \$24 a thousand?

A. It could not. It is worth \$6 per thousand for the framing alone, without the cost of material; just for the labor.

Q. What are they worth, laid as they are?

A. Those timbers in 1892?

Q. Forty feet long?

A. That is special billed stuff, and would cost about \$22 a thousand at the mill.

Q. Taking it right through ? A. Figuring it right through.

Q. And the labor in addition?

A. In addition \$6 a thousand for the framing.

Q. Does that include the freight?

A. It does not include even the nails or the bolts to bolt them.

Q. Does it include the raising of the timber into place?

A. Yes, I have framed timbers for \$6 a thousand.

Q. In giving the amount at the mill, which mill do you mean, the Backus mill or the mill where it is purchased? 2435 A. Yes, at the Rouge, at Salliotte's.

Q. Where it is purchased?

A. Yes, special billed stuff.

Q. That does not include the transportation to the Backus mill?

Yes, that is, Salliotte would charge A. Yes, have to be added. that much aboard the cars at their mills.

Q. Does not include the transportation by rail or whatever it is?

A. No, sir.

Q. Now, have you observed there in your trade with Backus, any difference in the dirt and soot upon the lumber since the building of the elevated road?

A. Yes, I have observed that the lumber is dark, black, a lot of

black soot upon it.

Q. And did you ever observe anything of this kind in your own knowledge of Backus' product prior to the building of the elevated road?

A. I have, I have been using Backus' products in the neighbor-

hood of twenty years.

Q. Did you ever notice this impurity upon the lumber as it is now, prior to the building of the elevated road?

A. No, not so great.

Q. You have seen some? A. I have seen a little, yes; that will accumulate, but not much; it is a great difficulty to use that lumber for oil finish now, it soils the men's hands and creates spots on the lumber.

Q. You bought largely, did you not, from the storehouse?

A. Mostly from the storehouse.

Q. You did not buy from the mill itself?

A. Not from the mill. I always give my orders at the storehouse on Fort street.

Q. Do you find anything on the lumber to impair the usefulness of it for oil finish at the storehouse, the product from the mill?

A. The product from the mill at the storehouse is black and we have to take great care to sweep it and wipe it off with rags, the shavings, to get the dust away before a man can put the plane onto it. Even the bottom of the plane will blacken up.

Q. Upon the Backus lumber?

A. And when you get through dressing a piece, it will make streaks upon the other.

Q. Now, have you seen the method of their transportation from the mill to the storehouse?

A. I have.

Q. Have you seen the lumber as it was in the course of transportation piled there at the mill?

A. I have seen it piled in carts there ready for-

Q. Have you seen there this soot upon it?

A. I have seen the soot upon it right in the mill.

Q. As it was being transferred out for transportation to the store-house?

A. Ready for the storehouse.

Q. Did you have any such difficulty as this about the soot upon the Backus product prior to the construction of the elevated road?

A. No, sir; not to that extent.

Q. To what extent?

A. Oh, there always is a little soot accumulated on lumber that lays a great length of time exposed outdoors, a trifle, but not enough to injure it; but at the present time there is an abundance or an accumulation upon it, a lot of it, and it stays on the hands.

Q. It actually makes the fine Backus product undesirable because it will not take an oil finish rightly, the best you

can do?

A. No, sir, it is very difficult to make oil finish with it.

Q. So that it makes that more unsalcable and undesirable, does it not?

A. Most decidedly.

Q. Now, did you use to go to Backus when you wanted to do an especially fine oil-finished job, before the construction of the elevated road, did you go to Backus for that kind of product?

A. When I wanted lumber, good clean lumber, I always went to

Backus for it for a special job.

Q. For that fine work. Is it or is it not true that since this sort of thing falls in their place there you go there for special work for oil finish?

A. That is, prior to that; yes, sir.

Q. Since then?

A. Well, not so very much recently. The only lumber I bought of him was flooring and ceilings.

Q. You found this such a difficulty you have had to buy other products?

A. Yes, very.

Q. You have dust so that it interferes with your purchasing?

A. It interfered with the finish.

Q. Although you were an old customer?

A. Oh, yes, for a number of years.

Q. Now, you know the property down there pretty well?

A. Tolerably well.

Q. You have been familiar with Detroit, as a man, for how many years, manufacturing sites and manufacturing businesses, especially in wood-work?

A. I have been in the manufacturing business since I was quite a young man. I went into business in 1865 and I have handled a large amount of property and now handle a great deal of property, real estate. I am handling all of Mrs. Barnard's property.

Q. What have you to say in the way of proportion of percentage, from what you know of it, is the injury to the Backus property there,

real estate and mill, taking into consideration its situation with its front on River street and your own knowledge of the property and of the business they formerly did, of the practical workings of the business since-what in your judgment is the depreciation if any, in the Backus plant?

A. The depreciation would be all of one-half.

Q. You know, do you not, they run in connection with the mill, and to make it run properly, the lumber yard below and the storehouse above, running as one plant?

A. Yes, the mill is the main guide, that supplies the other. Without the mill the others would be practically useless?

Q. Without the mill the others we A. Useless for the business at all. Q. For any paying business?

A. Yes, sir. Q. Will you please state whether, in your judgment, the value of the whole plant as one plant, has been impaired by the impairment to the mill property?

A. By the impairment of the mill plant it would affect the others to quite an extent. Of course the other could be used with the mill

elsewhere.

Q. But it is very conveniently situated with reference to this mill?

A. One of the best mill sites that there is I guess in the city of Detroit.

Q. Now, prior to the erection of the elevated railroad along in front of this property, if the Backuses desired to go out of the business themselves, the successful mill as it had been and **24**39 its condition and situation with the lumber yard and storehouse on Fort street, would have had a very fair rental value, would

it not? A. Yes, sir.

Q. The whole property together? A. Yes, sir.

Q. Do you think the whole plant as it stands, with this structure in front of it, from your knowledge of the effect of it, could be fairly rented today for planing-mill purposes, for wood-working purposes?

A. I do not think that that plant and the whole combined would

rent for half the amount of what it would previously.

Q. It is no longer desirable as a wood-working plant? A. Not at all; it is not desirable. I would not have it for a mill.

Cross-examination.

By Mr. Robison:

Q. Have you an idea of what the mill site is worth now, cash?

A. Mill and site?

Q. The real estate, without the machinery?

A. At what time do you want to place that value?

Q. Now, or a year ago now, since the elevated road was built or after it was projected, at any rate?

A. For that very purpose of a mill?

Q. For what it is?

A. I would not want to place a value on it for myself?

Q. You say it has depreciated in value, in your opinion, onehalf?

A. Yes, sir.

Q. Suppose it to be worth \$500 a foot now, it was worth a thousand dollars a foot before?

A. It would be that.

Col. ATKINSON: He does not mean to swear it was worth a 2440 thousand dollars a foot?

A. No, sir, I don't.

Mr. Robison: That is just what he is swearing.

A. You are saying that yourself.
Q. That is what I understand. Let us see if you don't say it? Col. ATKINSON: Where did you get the idea of \$1,000 a foot? A. You said when it was a thousand dollars a foot-

Mr. Robison: I am supposing it to be \$500 a foot. He said it is worth half new of what it was before, and if that doesn't make it worth \$1,000 a foot before, I don't know what it does. Well, at any rate, without any figures, it was worth twice as much two years ago as it is now?

A. Yes, sir.

Q. Then if it is worth \$250 a foot now it was worth \$500 then?

A. Yes, sir.

Mr. Robison: That is right, isn't it?

Mr. Dickinson: Now, you got it right. You do not intend to be unfair.

Q. To what extent do you think it has impaired the actual value of the lumber yard, what percentage do you think?

A. The valuation of the lumber yard would be based upon the

amount of business that that mill would be doing.

Q. Well, get it as near as you can. You say that the loss to the mill itself has impaired the value of the yard?

A. Yes, sir.

Q. Have you any idea of how much that is, what percentage you think it has taken off the actual value of that yard?

A. It has taken off some value, perhaps one-quarter.

2441 Q. Twenty-five per cent.? A. Yes, sir.

Col. ATKINSON: That is the yard itself?

A. Yes, sir.

Q. As used in connection with the mill?

A. Yes. I base my judgment in this way. If this mill could be removed to some suitable place, the yard could be used as it is now.

Q. Then, if the property is worth \$2,000 a foot now, in your judgment before this road went up there it would be worth \$2,500 a foot?

A. Yes, sir.
Q. You think that would be a fair price for it?

A. I think that would be fair.

Col. ATKINSON: A fair proportion?

A. A fair proportion. I have not stated any price on that property, you are supposing the value and I take you at your word. Mr. Robison: I wanted to see if I could not kill two birds with

one stone. There is testimony that it was worth \$2,000 a foot.

Col. ATKINSON: Now-

Mr. Robison: Mr. Backus said it was worth \$2,000 a foot. Now, where are you building principally, in what class of buildings?

A. Oh, I build some good class of buildings, put up some fine

brick buildings.

Q. What buildings have you put up this present season?
A. I have put up a brick house for Mr. Engle, hardwood finish.

Q. What Engle?

A. John Engle on Charlotte avenue. I have put up an elegant frame house on Alfred street that cost \$2,200. 2442

Q. Where have you been purchasing this lumber since this

elevated road weut along?

A. I have purchased some at Larkins', some at Backus' and some at the Scranton Lumber Company and Hunton, Myles & Weeks, the West Side Lumber Company.

Q. Hardwood and all?

A. Both; all kinds.

Q. You say that the buildings you are putting up now are hardwood finish, most of them?

A. Some of them, some pine and some oil finish.

Q. Mr. Backus has not been in the business of making hardwood much, has he? A. That is, we build some rooms of hardwood, such as kitchens.

Q. Backus has not been making hardwood?

A. Oh, yes, he deals in hardwood.

Q. Not to any extent?

A. Yes, maple floorings, etc.

Mr. Dickinson: We are going to show you the extent of it before we get through.

Q. That is all right.

A. I have bought cherry lumber there and ash lumber for finishing.

Q. Not lately?

A. Not this season. Q. Buy any soft wood of him?

A. Oh, yes.

Q. Moldings and things of that kind? A. No, sir; I make my own moldings. Q. What kind of wood did you buy of him?

A. Principally flooring and ceiling. I did get about a thousand feet of fine lumber, that is about all.

Q. Where is your shop?

A. 340 High street east; I have my carpenter shop there.

Q. You live in front and have the shop in the rear?
A. Yes, I have got a little shop, machinery to make my 2443 moldings; I don't manufacture my sash or blinds.

Q. How large a shop is that?

A. 30 by 20, two stories.

Q. You say that you started Spitzley in business?

A. I did not start Spitzley in business; I did not say anything of the kind.

Q. You sold him his shop?

A. Yes, but that is not starting a man in business?

- Q. That is, you were in business before he came along and went in?
 - A. That is what I mean.

Q. And that is what I mean.

A. Yes, exactly. Mr. Spitzley was capable of starting his business

himself; he paid me for his shop.

Q. Well, I thought you meant by that-well, never mind what I thought. Spitzley Brothers are considered among the prominent builders here in the city?

A. Yes, prominent good men; they are good people; good promi-

nent builders.

Q. They are among the most prominent builders in the city?

A. Yes, sir.

Q. Do more building, I guess, than you do?
A. I think they do. I do not devote my time only to the building business. I cannot do as much. I am handling a million dollars worth of property, and that keeps me pretty nearly busy.

Col. ATKINSON: I suppose since it ceased to pay so well you got

out of it, too?

A. I keep out of building business all I can now. I just accommodate a few customers.

Q. Well, you know Henry Spitzley?

A. Yes, sir.

2444 Q. He is considered a careful figurer and builder?

Objected to as incompetent.

Mr. Robison: I do not believe it is competent.

Col. ATKINSON: Why do you ask it?

Mr. Robison: I thought I might possibly be mistaken.

Col. ATKINSON: I wish you would have more confidence in your own judgment, and not ask a question that you do not think is competent.

Mr. Dickinson: I will rule it out. Will you take my ruling and

take an exception?

Mr. Robison: Yes, but with no exception.

Q. Would you be willing to take his figures on what he would be willing to construct a building for as pretty near correct?

Objected to as incompetent.

Mr. Robison: He has put different figures on here to what Mr.

Spitzley has.

Col. ATKINSON: It is not competent to ask one man if he will take another's figures.

Q. When were you down there last to the shop?

A. Wednesday of this week.

Q. Did you go down there then to purchase lumber or to look over the place?

A. I was going by that way, and I saw Mr. Backus and I went

in.

Q. You went in to look the place through?

Q. Was that the first you observed this machinery particularly?
A. No, sir. I have frequently; not so much of late, but I used to

frequently visit their mills.

Q. I understood you to say it would cost to put up those pulleys in the shop there in the shape they are in from \$75 to \$80 apiece? A. Yes, those large sleeve pulleys.

Q. That would be extra, putting them up in that shape,

2445 that much extra, do I understand you? A. That would be that much extra than to have a loose pulley on a shaft.

Q. And what would the whole thing cost? A. It depends upon the size of the pulley.

Q. Well, this that cost \$75 to \$80 extra?

A. The hangers increased the cost of the pulley; it is the hangers, it is the sleeve that slips through the shaft, so as to be taken off, the whole shaft, to take apart, which is very expensive.

Q. Would the size of the pulley make any difference in the

cost of it?

A. Yes, sir.

Q. Any appreciable difference?

A. Yes, quite a difference. It takes a bigger hanger to hold a large 36-inch pulley which would weigh perhaps 150 to 200 pounds, than it would a six-inch one.

Q. He has got better machinery down there than you have in

your place, I suppose?

A. Oh, yes.

Q. Does better work? A. Well, he does very good work. The machinery is stronger and that is why you can do better work; the heavier the machinery the better work you can do, and the tension of the machine is tighter.

Q. Better molders?

A. Yes, I got one small sticker, runs by electric motor; I have a light machine and when you do heavy work it vibrates, does not do as smooth work as a heavy shaft, where it does not spring.

Col. ATKINSON: Intended for lighter work?

A. Yes, sir.

Q. No reputable builder buys any lumber of Backus now, I suppose?

A. I don't know anything about it. 2446

Q. Any fine lumber?

A. I don't know anything about it. Q. Well, they cannot, can they?

A. I have not inquired of other builders.

Q. Well, they cannot do good work with his lumber?

A. Very difficult unless it is cleaned and swept.

Q. Swept, what for?

A. To get the soot off and the grit.

Col. ATKINSON: 'The cinders and soot from these engines?

A. You will have a piece of grit on top of a board and you pile another one on and it goes into the wood, especially into pine and you put a plane on that and it nicks your knife.

Q. You would not purchase any lumber of Backus for fine work

now, would you?

A. I would not like to with that soot and grit upon it.

Q. It is on the whole of it?

A. It is on every board that I have seen there.

Q. Well, then it follows, does it not-

A. By the time they put one board on top of another, soot settles on it.

Q. No builder can build a good building with his lumber, can he?

A. He cannot do fine oil finish with black lumber.

Q. With Backus' lumber there cannot be good work made, can there, according to your testimony?

A. By taking and cleaning it off and using more trouble with it

you could.

Q. It cannot be done as advantageously as it can with other lumber?

A. No, sir.

Q. He cannot do business in competition with other people, any lumber here, can he?

A. I don't think he can. Q. And has got to quit?

A. Well, I would want to.

Q. You have quit anyway to a great extent and gone into the real-estate business, haven't you?

A. Oh, I am doing some building business yet.

Q. Not very much?

A. No, sir; I haven't time to attend to it.

Redirect examination.

By Col. ATKINSON:

Q. Your attention, you say, of late years has been turned rather to real estate?

A. Yes; mostly. I am agent for three good capitalists of all their property, renting their land and selling and repairs for their buildings and building for them.

Q. That leads you, I suppose, to have a pretty thorough knowl-

edge of rental values?

A. To quite an extent. I have several houses.

Q. But you carry on your shop still and do some work?

A. Yes: I am obliged to keep a few carpenters.

Q. So that you have not lost your knowledge of the trade at all?

A. Not very much. I keep in very good practice.

Q. Enough to be acquainted with prices?

A. Yes, sir.

Q. And you do the building for those real-estate plants?

A. I have built a number of houses. I built three brick houses for Mrs. Barnard alone within three years.

Q. Furnished all the wood-work?

A. All the material.

Q. Doing the entire business?

A. The entire thing. Q. Of course you have to keep well acquainted with the 2448

mill, then, and the material?

A. Yes; while other builders—I have to go into competition as well as the rest, and then I am appointed superintendent of the others.

Q. Where the contract is awarded to them, you have to see that

the work is done right and the material furnished is good?

A. Yes, sir. Q. I suppose when you said you were 50 years in Detroit you meant that you were born here?

A. No, sir; 52. I was two years old.

Recross-examination.

By Mr. BAKER:

Q. You say you rent a great deal of property? Did you ever rent a planing mill or box factory?

A. No, sir.

Q. Do you know of any that ever was rented?

A. I have not any knowledge of any.

Q. You never knew of any? A. Of any mill being rented?

Q. Yes. A. I didn't know of any particular one.

Col. ATKINSON: They are usually run by the owners.

A. Except when I rent one myself.

Q. So you could not give us any information as to what the Backus mill would rent for?

A. No, sir; I could not. I don't handle that class of property.

.By Col. ATKINSON:

Q. What would be a fair return for real estate in the city of Detroit, what percentage on its value, according to your experience?

A. About 5 %. Q. Then real estate which returns a net 5%, is a pretty 2449

good investment? A. Yes, I think it is pretty good. I generally rent so as to bring

from 4 to 5%, net. That is, clear of all taxes.
Q. That, I think, is about the rule here, is it not, where property is rented?

A. Well, that is a rule that we go by.

Q. You speak of Mrs. Barnard. She is a daughter of the late Charles B. Moran and sister of John and William Moran?

A. Yes, sir.

- Q. And has a large tract of land? A. Yes, a large tract of laud.
- Q. Real estate that pays net 5% is considered good property?

A. Considered good enough.

By Mr. Foreman BAKER:

Q. You have bought hardwood lumber for oil finish of Backus before 1890 a good deal? That is, you have been dealing with them for twenty years?

A. Yes, sir.

Q. Did you buy from other parties as well as Backus & Co. during that time?

A. Well, I could say only a couple of cases, that I bought at other

places.

Q. During the last two years, have you bought bills of hardwood from them?

A. Excepting in hardwood flooring.

Q. Nothing but that?
A. Yes, such as maple and oak flooring.

Q. For all your other hardwood for oil finish you have gone to other parties?

A. I have gone to mostly the Scranton Lumber Co., and recently I have got some pine lumber there, too, for oil finish.

2450 Mr. Robison: Where is the Scranton Lumber Co.? A. They were on Franklin street formerly, between Dubois and Chene, but now they are at the foot of St. Aubin avenue and

have a large hardwood yard and they handle pine lumber, a good quality of pine lumber; they don't handle any billed stuff, but they handle finishing lumber.

Mr. Baker: While we are waiting, I might consume a little of the time in making a statement in regard to that Specht property down there. I have looked at the papers and know just what the figures are.

Mr. Dickinson: Very well.

Mr. Baker took the witness-stand.

Mr. Baker: It is merely to make accurate what I was answering about yesterday. The amount paid to Mrs. Specht for that triangular piece of property was \$8,500, and the amount that the Michigan Central paid for it was \$6,500, which left \$2,000 for the right of way. I got the impression from this map that the frontage was 27 feet, but I find on looking at the deed that I deeded 56 feet to them. In looking at the deed I find also that there was an alley alongside of this property of 12 feet that had not been conveyed. The Michigan Central had the lot right in the corner, a small lot, a flat-iron piece, and then there was a 12-foot alley, and then there was a lot which I bought of Mrs. Specht. The Michigan Central had a deed

of 17 feet and also had this triangular lot, but the 12-foot alley was there, and Mrs. Specht, who owned this lot, would have a right to have that kept open, so that in getting the deed from her I got a deed of the lot and also a deed of all her right in the alley of 12 feet, and then conveyed the whole thing to the Michigan Central.

Col. ATKINSON: So that although the deed is for a greater quan-

tity than 27 feet, that is what it practically carried?

A. No, sir. It carried more than that. It carried 27 feet 2451 and the 12-foot alley.

Mr. Dickinson: The right to the alley?

She had a right to have that kept open, and whoever owned that alley would have a right to have that kept open. If it was closed, it might go one-half of it to the Michigan Central and one-half to the lot-owner, but either one would have the right to have Then when the Michigan Central got this deed of it kept open. these 17 feet there was a misdescription in some way, so that my deed covered that, and when I called their attention to all this situation they gave me \$6,500 for it.

Juror Safford: What became of Eleventh street, that used to be

in there?

A. That comes down to that crossing east of that.

Q. Who got paid for that?

A. I don't know.

By Juror CLARK:

Q. Then there was an outlet from this small piece to the street? A. This piece fronted on River street and there was an alley laid out right alongside of it. That property belonged to the Specht estate and it had been subdivided and platted in a variety of different ways and right on the corner was a small triangular lot and there was an alley, and then this lot which belonged to Victor Specht, and which he willed to his wife and upon getting the exact situation of it, showing the condition in regard to the alley and the mistake in their description, so that my deed had covered what they supposed they had bought, they gave me \$6,500 for it.

By Col. ATKINSON:

Q. How many feet did you deed, do you say?

A. I actually deeded 56 feet.

Q. And the lot itself that you bought of Mrs. Specht was 2452 27 feet?

A. No, the lot originally was 44 feet.

- Q. What had been taken off it? A. They were supposed to have taken 17 feet off it as I remember it; 14 feet at one time and 3 at another.
 - Q. Who owned the 17 feet? A. The Michigan Central.

Q. Was that included in your deed?
A. That was included in my deed, because in the deed to the Michigan Central there was a misdescription.

183 - 55

Q. So that you included the 17 feet belonging to the Michigan Central so as to correct the previous description

A. Of course the Michigan Central had 17 feet or supposed they

had 17 feet, but it was not correctly described.

Q. Isn't that the 17 feet that is occupied by Mr. Backus?

A. Well, I don't know whether it is occupied by Backus or not, it may be.

Q. How is it used? A. There is a side track on it, I think. Q. That side track is Backus' side track?

A. I am not sure whether that is the one or not. It may be, but I do not say whether it is or not.

Q. You only got a quitclaim deed?

A. I got a quitclaim deed and gave a quitclaim deed. Q. So you would not remember who owned the property?

A. The actual property they got was 27 feet and the 12-foot alley, 39 feet.

Q. That is, they got the rights of the adjoining owner in that

alley?

A. Yes, sir, and they got their description corrected on the other end.

Q. You knew, I suppose, that Mrs. Specht had misde-2453 scribed the land in deeding it before?

A. When I came to look at the deed I could not tell whether it was really a mistake or not; that is, the descriptions overlapped each other and I took a quitclaim deed from her of the whole lot.

Q. You took a quitclaim? So then it put you in a position to correct the misdescription and deeded them this whole lot and also the rights in the adjoining alley?

A. Yes; that is, I got all their rights there, whatever they were.

By Mr. Dickinson:

Q. Before you left you made a statement yesterday in the form of testimony that the clause in the Backus property as to 80 per cent. was not authorized under the Michigan standard policy?

A. That was a statement as counsel.

Q. It went in as rather your statement of fact. Now, I give you

an opportunity to retract or withdraw that statement.

A. I will not do that on the stand one way or the other. As I said yesterday, when we come to that, that is a matter of argu-

Q. You know perfectly well, do you not, that the commissioner

of insurance has prepared a standard form of policy?

A. I know the commissioner of insurance has prepared a standard form of policy.

Mr. Robison: Wait a moment. Do you want this to go down as testimony?

A. No.

Mr. Robison: I object to this as immaterial.

The Court: It is a conversation between counsel that could go on as counsel.

Mr. Robison: Mr. Dickinson is proceeding to cross-exam-2454 ine Mr. Baker now.

Mr. Dickinson: It has passed into the form of testimony-in

contradiction of the witness.

Mr. Baker: I give no testimony as to the law, Mr. Dickinson. What I endeavored to do yesterday was to challenge the legality of that provision and leave it open.

Col. ATKINSON: We want to see if you do it now.

A. And I do it now as counsel in the case, challenge the validity of that provision.

(). Would you challenge it if it was authorized by the commis-

sioner of insurance?

A. That would depend on how it was done, where it is prepared, a standard policy, and if he has allowed certain changes-

Mr. Dickinson: Well, we will argue it if we cannot do it on the

witness-stand.

A. Certainly, that is what I said yesterday.

Col. ATKINSON: We could swear at the law, but seldom to it. The COURT: It would be pretty hard to swear what the law is. A. Of course, I just tried a case that involved the validity of a somewhat similar provision.

Col. ATKINSON: You have not got a decision yet?

A. Well, in one sense I have. Judge Hosmer agreed with me in regard to the validity of that provision. It was not exactly like this, but of the same nature.

Col. ATKINSON: That does not prove that your opinion is not

wrong.

Mr. Baker: I should want to look at it a little before I would

take any stand in regard to it in this case.

Mr. Robison: You do not withdraw anything you said yesterday?

A. No, sir.

After the jury had been dismissed, the court said : 2455

I am asked by Mr. (juror) Baker as to whether there is any objection to a juror going down and looking over the matter for himself.

Mr. Dickinson: We have none, certainly.

Mr. Juror Baker: The only question was whether a juror could go down singly or whether you should insist that the jury should all go together.

Mr. F. A. BAKER: I have no objection to any juryman going down and looking over that property with this qualification, that I should object to their entering into conversation with people there or with the Backuses.

Mr. Juror Baker: With anybody?
Mr. F. A. Baker: With anybody, but if the jury want to go down there and look the premises over, all right, but I do not think it would be right to talk with anybody there an one side or the

Mr. Dickinson: Agreed.

A JUROR: I would like to see the effect of those trains passing by there.

Mr. F. A. Baker: I would suggest that later in the proceeding when we got the testimony in, perhaps it would be well enough for the jury to go down in a body again. When they were there they did not understand what the case was.

Mr. Juror BAKER: That is the point.

Mr. F. A. BAKER: We will arrange to go there again some time during the week, toward the close of it, so that you can look it all over with the testimony and in the meantime, any of you going by there and who want to go by and look at it, I have no objection to your doing it as long as you do not talk with the people there or with anybody about it.

Mr. Dickinson: I would like it if Mr. Baker would not give any notice of any visits of the jury, if he will give us his 456 word that he will not give any notice to the railroads. I

want them to have the trains pass just ordinarily.

Mr. Baker: I do not think the men down there running that railroad know there is such a case.

Mr. Dickinson: We have had some experience before. Will you

do that, give your word that you will not notify them.

The COURT: I will say this, that as far as the jurors going down there is concerned, that no one can tell in advance if they go there singly and when they are going to go as a body—

Mr. Baker: I will ask the railroad company not to do anything in regard to it. They do not know there is such a case being tried

unless they have seen it in the paper.

The COURT: As far as the jurors going down there is concerned, when we arrive at that stage I will send them right down there and nobody will know when they are going.

and nobody will know when they are going.

Mr. Dickinson: That is all right. I will tell what they do, when
they go by they make motions now, to write it down, to the men in

the mill.

The case was then adjourned until 2 p. m. Monday, October 30th

Остовек 30, 1893—2 р. т.

Alfonso De Man, sworn on behalf of respondents.

Examined by Mr. Dickinson:

Q. Where do you live?

A. In Detroit.

Q. How long have you lived here?

A. Been here since 1871. Q. What is your business?

A. I am in the sash and door factory and planing-mill busi ness.

2457 Q. Where is your mill?

A. On Trumbull avenue.

Q. What kind of a mill have you?

A. I have a combined mill, you might say, as manufacturing

sash and doors in one part, the upper part, and the lower part exclusively applied to custom planing and so on.

Q. What is the size of your mill property there?

A. Well, the frontage is 150 feet and the main building I should say runs back about 55 feet.

Q. Have you railroad facilities in there?

A. No, sir, not any.

Q. You have been engaged in the planing-mill business and are familiar with it?

A. Yes, sir.

Q. Do you know the Backus mill? A. I do.

Q. You have been in it?

A. Yes, sir.

Q. How often have you been in it?

A. Well, during the construction of it we got out the frames and any factory-work that was required. So I had occasion to go there frequently at that time. Since that time I have not been very often at it; of course I have been very busy.

Q. Have you been in there lately?

A. I have been there today.

Q. Been there within a week or ten days before?

A. Yes, sir.

Q. Will you please tell the jury if you have examined the machinery in the Backus mill, if you nave looked at the machinery?

A. Yes, sir.

Q. And the shafting and all the equipments of the Backus mill?

A. Yes, sir, I have examined it thoroughly. 2458

Q. Will you please give the jury your opinion of the perfection of the mill, whether it is a good and first-class mill, and give us any comparisons you can as to the equipment and accuracy of the machinery?

A. Well, in my judgment it is the best mill I have seen anywhere, and I have seen a good many. Everything is put up in first-class style, without an exception, everything in it that I can see, and I have examined it now lately and it is as good as it can be made.

Q. The machines themselves you have examined?

A. Yes, sir.

Q. You found those in perfect condition?

A. Yes, all in good condition and perfect running order.

Q. Do you find the machinery with improvements for the accuracy of adjustment and for doing the fine work as good or better than any other mill you have seen?

A. Yes, I think it is in better shape, and there are some additional parts of the machinery there that I have never seen any-

where.

Q. That you have seen work and seen the advantage of? A. Yes, sir.

Q. Are the machines you have examined at least as good as new?

A. I think so, in my opinion.

Q. What have you to say as to the improvements upon the machines and their connection and relation with the other parts of the mill, as to whether they are better now in the mill, with these adjustments you have referred to, than a new, raw machine would be bought and put in?

A. Well, I think that some of the machines, that those who have been using wood-working machines know that there are some parts

that are sometimes too light and have to be remodeled a little, according to the work they have to do, and several parts of the machines there have been improved to that extent that they do the work fully up to what they are expected to.

Q. So that in that respect they are better than one put in new

and raw?

A. Yes, I think so. Q. Now, what have you to say in a mill of this kind as to the

need for daylight?

A. Well, light, of course, is quite an advantage to see how the machine operates, you know. The man that takes away from the machine, as well as the man who works it, has got to see to set his knives and adjust it, and the one that takes away has to follow the material up as it comes out and find out if anything is going wrong on a machine, so as to see that it keeps on working.

Q. Light is an essential? A. I think so, yes, sir.

Q. What have you to say as to cleanliness being an essential, the presence of grit and soot upon the lumber?

A. That is a very, very important matter in planing.

Q. In this fine work of a mill of this kind, in doing the fancy work, will you state whether any mar or flaw upon the work will affect the market value?

A. Decidedly so, because if any grit is upon the lumber that is put through the machine of course it dulls the machine and the work becomes imperfect, you know, right away. Of course you cannot keep it, it is almost a matter of impossibility.

Q. It shows itself in the product at once?

A. Yes, sir.

Q. And to have it marketable is it necessary to keep the lumber, after it comes from the mill, in a cleanly condition, unmarked?

A. Yes, especially marks of soot and things of that kind. Now any ordinary dust, for instance sawdust, would not hurt 2460 anything in lumber, or any other dust, but soot and that kind of dust is very detrimental, the dust of smoke or soot.

Q. Have you observed the effect upon the Backus mill of the superstructure of this railroad on River street as to its effect on the

light?

A. Yes, of course. I have been there today; I have been there once before, that is since the superstructure has been put up. is the second time, today and the other time, and it has of course affected the light very materially on the lower floors especially.

Q. Did you see anything of cinders about there at any time

since you have been there since the superstructure has been put up?

A. Yes, I noticed cinders thrown all over the yard and all over

between the buildings, picked up some today.

Q. Where did you pick them up today?

A. Some between the two buildings up almost to the chimney and then on a kind of a shaft next to the main building where the fans are, you know, and in that part there I picked some up and then I picked some up at the front door where they have their sawdust; that's the most-found them all over there lying on top of the fresh sawdust, cinders on top of it.

Q. You found there were cinders all about there?

A. Yes, sir.

Q. Have you got any you picked up?

A. I picked up some today. Mr. Backus came over to the mill and requested me to come over there and I picked up this just today noon. I picked up a few here that I have in the envelope.

Q. Did you pick those up yourself?

A. Yes, sir.

Package marked Exhibit De Man "1" and shown to the jury.

Q. Could you see the soot and cinders on the finished 2461 lumber?

A. Yes, sir.

Q. Out in the process of transferring?

A. Yes, sir; there are trucks next to the machine operating right along and lumber being piled up on them and the cinders lay right

on that.

O. From your knowledge of the planing-mill business, and from your observation of this mill and of its extent and situation, what do you say as to whether in your opinion the business of the planing mill and fine work, such as their machines are capable of doing there, can be successfully carried on with this superstructure there and the trains running by, with the soot as you have seen it and the smoke from the engine, the distribution of soot and cinders upon the lumber and so on

A. I think it is very detrimental in every respect, and I do not see how in the world they can do any good work in the shape it is

in there now.

Q. In your business and in this planing-mill business the competition is close?

A. Yes, sir.

Q. Care must be used to make good goods and as cheap as possible ?

A. It is most essential and especially where it affects the cutting out of the cream of the coarse lumber, of course, making nice strips and nice moldings and like that, and it is just cut and deposited where this thing is coming down on top of it and it is destroying the good lumber really that they get out of their culls and that they make into boxes. It destroys partly the value of it.

Q. What effect on lumber has it for oil finish?

A. It destroys it entirely.

Q. This mill is equipped for doing the best inside work of any mill you ever saw, is it not?

2462 A. I think so.

Q. And the best?

A. Yes, sir.

Cross-examination.

By Mr. BAKER:

Q. How far are you from a railroad?

A. Well, it is quite a great distance. I am on Trumbull avenue and Cherry, and the nearest railroad I can think of now is the Michigan Central, and that is a great distance from us.

Q. Fully a mile away, is it not?

A. Yes, sir.

Q. Where do you get your lumber?

A. We get our lumber mostly from Twentieth street.

Q. From the railroad or from a boat? A. Most of our lumber comes by rail.

Q. From where?

A. It comes from all over the State; a good deal from Bay City, and so on.

Q. Do you sell any by wholesale?

A. No, sir, retail.

Q. Entirely for custom-work? A. That is all.

Q. Did you ever operate a mill alongside of a railroad?
A. I never did.

Q. You have no experience with a railroad, then?

A. No. sir.

Q. How long have you been in the business?

A. I built my mill in 1882, I think, and I was in the business for eight or ten years before.

Q. You have been in the business fifteen or twenty years? A. Yes, sir.

Q. What kind of a dust-arrester do you use?

A. Well, I have a dust-arrester of my own. I don't believe 2463 there is anything like it anywhere.

Q. Have you got the Backus dust-arrester?

A. I have not.

Q. The burlap dust-arrester?

A. No, sir.

Q. Have you got the Allington & Curtis or the Cyclone?

A. No, sir, it is a rig I got up myself. I don't know of anything anywhere near like it. There is no impediment to the escape of the air that is blown into it; that is, it comes back. It is blown right into the shavings-house, and from the shavings-house, at the upper part, there is a vent, and then it comes down with the shaft and down into the ground, so that the air gets out, only it comes out downwards.

Q. You do not use any burlap or metallic dust-arrester?

A. No, sir.

Q. It is just a straight vent right through?

A. Straight vent, and then it comes down alongside the building. It is a high building. It comes down that air shaft and that drops all the light stuff there might be right on the floor and then gets out.

Q. That is, down on the ground at the outside?

A. Yes, entirely on the outside.

Q. How many men do you employ?

A. Well, anywhere from 45 to 50. It varies, you know, up to 60 sometimes.

Q. In busy times you would have about 60?

A. Yes, I think so.

MILES C. HUYETT, sworn on behalf of respondents.

Examined by Mr. Dickinson:

Q. What is your firm?

A. I am in the heating and ventilating business now.

Q. Have you been in the lumber trade? 2464

A. Yes, many years.

Q. How many years?

A. About 12 years.

Q. Whereabouts?
A. Most of the time in Detroit.

Q. What was the business that you were engaged in?

A. Dressing and shipping lumber, car trade.

Q. You did a planing business? A. A planing-mill business.

Q. Molding?

A. Yes, sir. Q. And what class of work did you do, fine inside work?

A. A high class of work. Q. Where was your mill?

A. At what was known as the Lake Shore and Milwaukee junction.

Q. What was the name of the mill? A. M. C. Huyett & Company.

Q. How long were you engaged in that business there?

A. Four years, from 1880 to 1884. I think I went out there in 1879.

Q. And you have been all your life familiar with the planingmill business?

A. Directly and indirectly been connected with it for about 20

Q. And you have lived in the city of Detroit how long?

A. 17 years.

Q. Are you familiar with the Backus plant?

Yes, sir. 184 - 55 Q. Do you know its situation there with reference to its railroad facilities?

A. I do.

Q. On the Michigan Central. Have you been inside the mill?

2465 A. I have.

Q. Did you know the mill prior to the erection of the union depot structure on River street?

A. I did.

Q. What have you to say as to the mill, its equipment, and as to its facilities for doing first-class work prior to the erection of the union depot railroad structure?

A. I considered it first-class.

Q. Can you give us any comparison as to its being equipped to do first-class work with other mills?

A. I should say there is nothing to equal it in Detroit or its near vicinity.

Q. One of the finest in this part of the country?

A. Yes, sir.

Q. You say it excels anything in Detroit or its near vicinity?

A. I do.

Q. In what respect?

A. In the number of the machines and the sizes of them and their ability to accomplish results and in the arrangement.

Q. They showed, you think, in the adjustment and in the addi-

tions, in the appliances, the hand of experienced men?

A. The planing machines are of the best quality that are made in the country. I had similar machines in my mill only Backus bought larger machines, which gave him a greater scope of work.

Q. And do you know anything of the class of work they did prior

to the building of the superstructure?

A. First-class work was what they were rated.

Q. All inside fancy work and in hard and soft woods?

A. Well, I don't know whether they did any—or how much 2466 coarse work they did outside of their box work, but their fine lumber was worked the same as I worked, that is, moldings and interior finish.

Q. All interior finishes they did?

A. Practically all interior finishes.

Q. In hard and soft woods?

A. They did some hardwood-work, I know.

Q. Now, what have you to say as to the need of light in a mill of this kind, whether it is an essential?

A. It is an essential element.

Q. That is daylight?

A. Daylight.

Q. What have you to say as to freedom of impurities of smoke and dirt?

A. Smoke and cinders will damage lumber.

Q. Is it a part of the business of the employés of such a mill to keep things clean?

A. It is.

Q. And to keep the product clean after it comes out, this fine product?

A. Yes, sir.

Q. And are these essential to the successful management of the business?

A. They are.

Q. Why is light so necessary?

A. First for the adjustment of the machines, and second, to enable the operator to discern defects that may originate in the knives by which defective work may be turned out.

Q And how about the observation of defective work as it comes

out?

A. In a poor light it could not be observed.

Q. I suppose different thicknesses might come out in different pieces without its being observed until they came to be shipped?

A. It would be very difficult in a poor light to keep the

A. It would be very difficult in a poor light to keep the adjustments as they should be for good work.

Q. You know the whole plant of the Backuses', their lumber yard and mill and storehouse?

A. Yes, sir.

Q. Run as one plant. What have you to say as to the advantages of this plant, this planing mill with its connections, the lumber yard and the storehouse, with two ground floors and its railroad facilities by the Michigan Central, prior to the building of the viaduct over other sites for the business?

A. That is, taking in connection their water front and its storage?

Q. Everything as you know the situation.

A. It could not be improved in my judgment.

Q. And how as to its situation for retail trade with the growing city of Detroit?

A. In my judgment it is a good location.

Q. What have you to say as to the competition in this sort of business they do there, in the product of their mill, as to whether the margins are narrow in the markets?

A. They are very close, that is the uniform testimony.

Q. I suppose that to make a large plant of this kind successful or a large plant of any kind successful depends largely on the great volume of business, economy in the work, the use of everything that is worked up and turned to good advantage, is it not?

A. It all hinges on these elements.

Q. And the utmost care in making a good product that will take with the market?

A. That is right.

Q. Any flaw such as comes from a dull knife in spots, or from want of proper adjustment of the knives or tools in the machine, affect the market value of the product?

A. It does.

2468 Q. Materially?

A. Yes, sir.

Q. If there is a defect of this kind upon a piece of lumber, does it throw it out from first-class grade?

A. It does.

Q. Makes a cull of it, does it not?

A. That is where they usually place them.
Q. Worth about half?
A. The seller usually has to take what he can get; he is at the

mercy of the buyer.

Q. If there is much of this sort of thing in the product, I suppose it takes off the profits and makes a failure of what might otherwise be a success?

A. Yes, sir.

Q. Spoils the lumber, does it not?

A. It does.

Q. Now, have you had any observation as to the effect of this elevated road in going by there, upon this plant?

A. I noticed that it was dark on the operating floor. Q. Did you notice from what the darkness came?

A. From the south side. It was darker than when I was in-I never noticed that there was objectionably darkness there in my visits prior to the erection of the elevated system.

Q. Prior to the elevated system it had its front and light from the River Street side? Was very light and bright, was it not?

A. It was ample, in my judgment.

Q. Since the elevated road you have been there and seen the passing trains?

A. Yes, sir.

Q. Does that affect the light? A. Yes, sir.

Q. It affects it so as to make it a disadvantageous place to carry on the business?

A. In my judgment it does.

Q. What effect, if anything, have you seen from the smoke

of passing trains?

A. I could see the effect on the lumber, finished lumber. The dressed lumber was marked so that the smoke and cinders depositing on it—it was damaged.

Q. I suppose this was the dressed lumber awaiting transfer?

A. Waiting for shipment.

Q. Did you look into the lumber to see whether this extended through to any extent?

A. Wherever it was exposed it was perceptible.

Q. What have you to say, considering the narrowness of margin and the sharpness of competition, as to this mill as it was before the erection of the superstructure and the mill as it is with the superstructure and passing trains, as you have observed it, as to whether the effect has been material and serious on the mill?

A. In my judgment it has.

Q. In the condition in which it is now, with the passing trains over that superstructure and the superstructure as it is, would it now be a desirable place for a planing mill to carry on this fine inner wood-work? Do you think a planing-mill man would take it for such a business now?

A. I do not.

Q. You have no interest in this matter at all?

A. None whatever.

Q. Have no business relations with Mr. Backus?

A. No, sir.

Q. Simply called here because you are familiar with the planingmill business as far as you know?

A. That is all.

Q. Will you give the jury your opinion as to the depreciation of the value of the whole plant by reason of this super-2470 structure there from what it was before? Do it by percent-

ages. A. Does that include the storage yard as well as the other?

Q. Upon the whole plant, the storage-room, the storehouse, the planing mill; taken as one plant for the business there carried on? A. Well, I should put it at half or near it. May I explain that?

Q. Certainly.

A. When they commenced switching through that lower yard I was through it then. That, I think, was while I was in business; in fact, I know it. Mr. Backus called my attention to the deposits of cinders and smoke in his stacked lumber in the storage yard, and it was a damage to it to sell it in the rough and a damage to it if it went to the planing mill, and made an important element of damage, inasmuch as a cinder would be constantly dulling the knives, knicking them and making the expense of dressing more and the incidental chances of damages that much greater.

Q. That was in the lumber yard below there?

A. In the lumber yard below.

Q. Now, irrespective of that. I am speaking now of the superstructure and not of the railroad that runs through the lumber yard, but the superstructure running up River street as it does and running by the mill.

A. I would consider it a damage of about one-half.

Q. And it affects the whole plant?

A. Certainly.

Q. Then you think it depreciates the planing mill one-half itself? A. For the purpose for which it was erected and used, yes, sir.

Q. Now, if it depreciates it half, you mean it depreciates it for the purpose of manufacturing this fine work, such as it 2471is occupied to manufacture?

A. That is my idea.

Q. How much depreciation there you think before it will become a losing concern, with a tendency to absolute failure and bankruptcy, in the present condition of trade, with the narrow margins and the competitions?

A. With the narrow margins, the sharp competition, the increased cost in insurance and the increased cost of manipulating the lumber owing to the smoke and the cinders and the trains, it would be a difficult thing for them to make a new dollar come back for an old one put in; I doubt if they can do it.

Q. You would not undertake to buy that plant or take that plant

and carry on a planing mill with the investment?

A. I would not take it if I had the money, under the circumstances.

Cross-examination.

By Mr. BAKER:

Q. Where was your mill situated?

A. At the Detroit & Milwaukee junction.

Q. On which track, the Detroit & Milwaukee or the Lake Shore?

A. On the Milwaukee track.

Q. And on the Lake Shore, too?

A. The Lake Shore was probably five hundred feet distant from the mill.

Q. It was in the V made by the two railroads?

A. Yes, sir.

Q. How far above Ferry street? You think it is where they stop there?

A. I am not certain.

Q. You know what we call the Lake Shore junction?

2472 A. Yes, sir.

Q. And the Peninsular car works are there?

A. The north line of the yard is Harper avenue, I think.

Q. Of whose yard?

A. Of what was my yard then?

Q. But what is there between you and the junction?

A. There are no streets down there until you come the Peninsular car works office.

Q. Which side of you is Murphy & Wasey?

A. North.

Q. They were farther north?

A. Yes, sir.

Q. So that the Peninsular car works were situated right at the junction and you were the next plant above?

A. Yes, I was the next plant above.

Q. And you fronted on the Milwaukee road? Was there a street between you and the Lake Shore?

A. No, sir; there was the right of way of the Wabash if I remember, which was 60 feet.

Q. From where?

A. From my yard to the Lake Shore.

Q. Then between you and the Lake Shore the Wabash had a

right of way?

A. From my yard west there was 60 feet right of way for the Wabash and then west of the Wabash is the Lake Shore right of way which is very wide there with no tracks on the east side of the main tracks.

Q. Well, it is all right of way then, is it not, from your property through to Russell street, all railroad?

A. No, sir.

Q. What is there besides?

A. The Peninsular car works backs up in there and the Huyett & Smith Mfg. Co., two and a half acres.

Q. They were in front of you on Russell street?

A. Between Russell street and the Lake Shore right of 2473 way.

Q. They were west of the Lake Shore and you were east?

A. I was east.

Q. And between the Lake Shore and the Wabash and the D. & M.?

A. Yes, sir.

Q. What did you locate in there for?

A. On account of its railroad—in the first place, because I had to move.

Q. Well, you had to move from where you were?

A. We owned that land when we went there. We did not expect to make it a permanent plant. We went there temporarily but by force of circumstances, and finding the advantages of railroad shipping, we stayed there.

Q. Did you need railroads in your business?

A. Yes, we did.

Q. You had an abundance of them there?

A. Yes, sir.

Q. Did you use them?

A. Yes, sir.

Q. Have side tracks into your yard?

A. I had one running in right in front of the mill.

Q. Where did your lumber come from? A. Partly by water and partly by rail.

Q. How large a planing mill did you have? What was the size of the main building?

A. Well, I have forgotten the size of it now, on the ground.

Q. Well, about how much, 200 feet long?

A. It was nearly 200 feet from north to south and about 80 or 90 feet the other way.

Q. Right alongside of the D. & M. road?

A. Alongside of the D. & M. road; a one-story mill.

Q. Did you have windows on that side? 2474

A. I had light all along that side and skylights overhead.

Q. Did you have windows right along by the railroad?

A. I had doors there that I would open up or close at will, but no windows on the D. & M. side.

Q. Your building was only one story high?

A. One story high, with skylights.

- Q. That floor was on the same grade with the railroad? A. No, it was on a level or a little above the car floor.
- Q. That is, your first floor was on a level with the car floors?

A. Or a little above, I think.

Q. So that a car on your siding there would be on a level with the floor?

A. The floors would be approximately on a level.

Q. Did you have a side track right alongside of the D. & M.?

A. Yes, sir.

Q. Between you and their main track?

A. Yes, sir.

Mr. Dickinson: How far was the main track away?

- A. I think there were two side tracks. My recollection is they had a side track and I had a side track between the main and the
 - Q. They have only one main track there, have they?

A. Yes, that is all.

Mr. Dickinson: How far was that?

Q. Did they have a side track on the other side?

A. No, sir.

Q. They had one main track and then you think there are two side tracks, one of which was yours?

A. Yes, sir.

Q. And on your property?

A. Yes, sir.

- Q. The other one was on the railroad property? 2475 A. Yes, sir.
 - Q. The right of way of the D. & M. there is narrow, isn't it?
 A. The ordinary width, I think, about 100 feet.

Q. You think it is 100 feet? A. Yes, sir.

Q. You never measured it?

A. No, sir.

Q. How far from your mill was it over to the first rail of the main track in your judgment? I don't suppose you ever measured it?

A. No, sir, but approximately it would be about 25 feet, from 25 to 30 feet.

Q. How long did you carry on business there?

A. Four years.

Q. When did you quit?

A. '84 or '85, I have forgotten which. Q. Anybody succeeded to that business?

A. I think it has been run as a shingle factory since, no general lumber business conducted there.

Q. It has not been run as a planing mill since 1884 or '85?

A. I understand most of the machinery was taken out.

Q. You sold it out?
A. Yes, sir.
Q. Where was your mill before that?

- A. I did not have a planing mill before that, I had my work done, custom-work.
 - Q. That was your experience in the planing-mill business?

A. No, sir, not-

Q. What kind of a dust-arrester?

Mr. Dickinson: Wait a minute, he says, No, sir, not-

A. I had been running a saw-mill, I had been in the general retail and wholesale business, having my planing done 2476 by a planing mill to which I would send the lumber and have it dressed.

Q. Those four years were the only years in which you ran a plan-

ing mill?

A. In which I was actively engaged in it.

Q. Did you have any dust-arrester in connection with your powerhouse?

A. No, sir.

Q. What business have you been in since then? A. I have been in the heating and drying business.

Q. Out on the Michigan Central?

A. No, sir.

Q. Whereabouts?

A. The business is all over the United States.

Q. And you have no plant?

A. No, sir.

Q. What do you sell?

A. Sell the machinery for drying and heating.

Q. You sell dry kilns?

A. Yes, sir.

Q. Patent on the dry kilns?

A. There was, yes, sir.

Q. Now, you saw the big planing machines down there on the first floor or the basement floor of the Backus mill, didn't you?

A. Yes, sir.
Q. Which end do you need the most light at, the end you shove it in or the end you take it out?

A. The end you take it up; you got to have it at both.

Q. Did you notice that Backus had new windows on that end, the end where you take it out, that there is a blind wall there?

A. I understand that.

Q. You don't think that would be a proper way to locate 2477 a machine anyhow, do you?

A. I would locate them just as he has them.

Q. If you had that property?

A. If I had that mill.

Q. You think you would need some light and you ought to have the most light at that end?

A. That is where you want the most light, but you could not handle the lumber advantageously.

Q. Not from River street?

A. Not from River street, and have the machines the other way.

Q. That is, he would have to put his lumber in if he wanted to reverse his machine and use the River Street front? He would have to deliver the lumber to the machines and carry it around and shove it back?

A. Yes, sir.

Q. He is at a disadvantage in not having any light on that side

A. He is as it is now. As it was before, in my judgment, there was sufficient light.

Q. Were you in there before to notice the light particularly? A. I was in there before frequently, before the superstructure.

Q. Do you swear that there was enough light there before this superstructure was built to run those machines properly?

A. In my judgment there was.

Q. Did you ever run a machine there?

A. I have been in there and have seen them running time and time again.

Q. You never run a machine there?

A. No, sir.

2478 Q. Or had anything to do with them except as you ob served as you passed by?

A. As a planing-mill man I would have criticised it on tha

point, I think, if there had been insufficient light. Q. There was light enough there, then, although that is a bline

wall?

A. In my judgment there was light enough.

Q. You say now that there is not?

A. There is not.

Q. And it is all due to this elevated railroad?

A. That is a damage to the light.

Q. Does the superstructure itself damage the light?

A. It does to a certain extent.

Q. Or is it the passing of trains?

A. Both.

Q. Which is the most?

A. The passage of trains, of course, adds to the limitation of

light.

Q. But in your judgment the superstructure, as it stands ou there in the street, perceptibly decreases the light at the north end of those machines?

A. It decreases the light in the entire basement.

Q. There is not any spot in the place where it is as light as i was before?

A. No, sir.

Q. Do you know how many feet away that is?

A. Well, I should judge about thirty or forty feet.

Q. Fully forty feet, isn't it?

A. No, I think not.

Q. About how far is it?

A. About forty feet.

Q. Does it decrease the light in that basement about as that building decreases the light here?

A. More so.

Q. A great deal more?

2479 A. Yes, sir.

Q. You can hardly see in there?

A. It is pretty dark.

Q. Did you have any means of lighting your premises out there?

A. No, I didn't run nights.
Q. Had no artificial light?

A. Oh, I worked nights sometimes, and when I did I used a lantern with a reflector, something like a headlight, only a short time in the busy season, when I would run nights.

Q. That is all unless Mr. Robison wants to ask you some ques-

tions.

By Foreman BAKER:

Q. How largely would electric lights overcome this difficulty you

speak of?

A. Well, that is a difficult question for me to answer satisfactorily. Of course you can overcome it, but as to the practicability of its use, I cannot answer, for I have had no experience with it. With the artificial lights that I used with reflectors I found the men could not do as good work and maintain as good adjustments as they could with natural light.

By Mr. Robison:

Q. Have you ever been in any of the big planing mills?

- A. Been in a number of the largest planing mills in the country.
- Q. Where? A. Saginaw.

Q. When?

A. About the time I laid out my mill plant.

Q. When was that? A. That was in '79 or '80.

Q. That was before the electric light came into operation?

A. Yes, sir.
Q. Have you been in a big mill lately?

A. Yes, I have been in large mills South.

Q. Lately? A. Yes, sir.

2480

Q. Have you been in any planing mill of any size whatever within the last year that did not have an electric light plant?

A. No, sir.

Q. They all have that, don't they, except Backus?

A. No, sir, they don't.

Q. Oh, I understand you to say you had not been in one that did not have it?

A. I misapprehended your question.

Q. What mills have you been in in Saginaw or Bay City?
A. I have not been in any there in two or three years.

Q. Only those South?

A. South. My business has not taken me into the Saginaw valley.

Q. You do not know that they all have electric light plants there, every one of them?

A. I do not.

Q. Every one of them of any size whatever?

A. I do not.

Q. How does this mill of Backus' compare with those at Bay City? A. Larger with but one exception.

Q. Larger than any in Bay City?

A. Except one.

Q. Which one is that?

A. That was burned down, but I guess it is being rebuilt, Germain.

Q. About how does this compare with Germain's?

2481 A. The Germain mill is much larger; he had it a sash, door and blind part which Backus has not.

Q. The box part of it is a good share of the Backus business?

A. It is a part of it; it is a part of others as well.

Q. Of Germain's? A. Yes, sir.

Q. And that is a mere incidental with his, isn't it?

A. That is for the utilization of what otherwise would be waste lumber.

Q. That is what this business is here, isn't it? It is waste lumber that is used mostly?

A. The box part of it is.

Q. You do think that Germain's mill is rather bigger than Backus'? A. It was. I don't know whether he is rebuilding on as large a

scale.

Q. Do you know about how many men he employs up there?

A. I do not.

Q. Don't you know that he employs 800 men up there working?

A. I do not; I don't know how many men he employs.

Q. Do you know Eastman & Company up there at Saginaw?
A. No, sir. I know of them, but I have no personal acquaintance with them.

Q. You don't know anything about their mill?

A. I don't.

Q. You say there is only one up there that you know of which is bigger than Backus'?

A. That is true.

Q. Will you undertake to say that there is not a great many up there bigger than Backus'?

2482Q. Will you undertake to say that there are not a great many bigger?

Q. Do you know Mershaw's?

A. Yes, sir.

Q. How does that compare with Backus'?

A. It is no such mill as Backus'. Q. Isn't it three times as large?

A. If it is it has been built up within the last three years.

Q. Well, within the last two years?

A. Well, is it possible.

Q. You don't know anything about the dust-arrester business?
A. I know something about them.

Q. Do you sell them?

A. I did, but not now.

Q. You are out of that business?

A. Yes, sir.

Q. You quit the planing-mill business entirely?

A. Yes, entirely.

Q. How many years ago?

A. Eight or nine.

By Col. ATKINSON:

Q. Have you ever seen a planing mill run with electric lights?

A. No, sir; I have seen saw-mills run with electric lights.

Q. Have you had occasion to notice how the light acts with reference to shadows?

A. I have.

Q. The differences in its operation in that way from the all-pervading light of the day?

A. I have.

Q. How does it affect work of that kind?

A. It is objectionable.

Q. I suppose the shadows are somewhat dense from elec-

tric lights?

A. The sharp contrast as between the shadow and the bright light and the eye rising on the bright light, which it must necessarily do, when you come to use it, then on what you want to use, temporarily it affects so that a person has not the command of sight that he would in daylight.

Q. They have not the accuracy or sharpness of vision?

A. Cannot have.

Q. It becomes somewhat painful also to the eye, does it not, the contrast between the dark and the light?

A. Yes, it does.

Q. The extremes. Now, we are trying to get at what the real damage to Backus & Sons is, and I suppose the question of the jurors and what I would like to know is, would it be possible or would it not for Backus to make up for the loss of the natural light by an electric light plant down there at any cost, and if so, about how much? Make it so as to put them in as good position as they were before to do the business?

A. He cannot equal the natural light at any cost for the work.

Q. So that you think at no cost, no matter how much they were willing to spend in it, could they put themselves in as good a position as they were before, with reference to light?

A. I should say no.

Q. And as I understand you also, this light is a very essential thing in that particular business?

A. It is.

Q. More than in some other lines of business?

A. Yes, sir.

Q. Is there any other way that they could overcome that that you know of?

A. Nothing except where I have observed it sawing lumber.

Q. Are electric lights at all subject to go out, accidents to the machinery or anything of that kind?

A. They are.

Q. They have not become so fixed that they are absolutely reli-

able then?

A. They are not. In the adjustment of the parts of a planing machine, if it was electric light that was used, he would have to have it movable so that he could move it to keep it in the proper position to get the light where he would want it. That is one of the objectionable elements.

Q. That is rather difficult with electric lights, to have them

movable?

A. That would be an expense.

Q. Mr. Baker has an idea that you can carry them around to the barns as lanterns. You can move them, I suppose, in the same way that this light here is moved. (Referring to hanging incandescent light in the court-room).

A. That would be the only way it could be made portable. Then

it would have to be lengthened out.

Q. I suppose in work of that kind the men often require both hands in the work they are at without having to carry a light around?

A. They require both hands in the adjustment of the knives.

Q. Then would it be practicable to work with these kind of

lights, except at a great disadvantage?

A. Not unless they had somebody to manipulate the light as directed.

Q. Then I suppose it would be necessary that the two wills would operate almost together, to make it convenient

to have it in the right place always. I suppose in your lumber yard up there, bringing the lumber especially by railroad, you would have occasion to notice a good deal of einders from the locomotives?

A. Decidedly.

Q. It is true that all locomotives usually on our roads here throw cinders and affect lumber in the way you speak of?

A. They do.

Q. That you say is a decided disadvantage even to rough lumber?

A. Yes, sir.

Q. Does the disadvantage increase or decrease as you refine the

product ?

A. The damage is more of course on the better grades than it is on the low grades because a part of the low grades is sold in the rough where general milling business is not done. I did not do any box-work, consequently there was a part of my rough lumber sold without planing.

Q. Box-work, as I understand it, is an introduction into planing mills largely to use a class of lumber that otherwise would be

largely lost?

A. Yes, sir.

Q. Do you ever in box work take out from the rough lumber nice clear pieces?

A. Yes, sir.

Q. So as to get some first-class stock for moldings and things of that kind, from a rather inferior grade of lumber?

A. Yes, sir.

Q. I suppose there is a profit in doing that, where you have the proper facilities for doing it?

A. Yes, sir.

Q. Now, as a business man, having no interest in this, and 2486 with your experience, do you know of anything that Backus & Sons can do with this structure down there to restore their plant to as good a condition as it was before this was built, at any loss to themselves than the percentage that you have fixed?

A. I do not.

Q. That is the minimum as far as you can judge of it? Now, have you had any occasion to observe the falling of cinders from the railroad, and whether they go up very high from the locomotives or whether they fall soon after leaving the mouth of the smokestack?

A. They are falling from very little above the height of the

smokestack and some of them will go up 30 or 40 feet.

Q. But the higher the engine would be, then the greater danger there would be of spoiling that material below; it is not so liable to rise into the windows if the road is low as it is to come down where the road is high, in other words, I don't know that I make myself clear there. Which would be the most injurious? A road down on the grade level with the lower floor there or one up where that is?

A. The one high up because its range would go further away.

Q. That is, throw the cinders further?

A. Further than it would if it was low down.

Q. You say the smoke is also an injury to the lumber? A. Yes, where it comes in contact with the lumber.

Q. Through soot?

A. Yes, sir.

Q. I suppose all smoke from locomotives would carry some soot? A. All does.

Q. So that you have given us, then, as conservative an 2487 estimate as you can of the actual loss?

A. I have.

By Mr. BAKER:

Q. Did you ever see a planing mill that was operated in the night-time with electric lights?

A. I have not.

Q. You never had any experience in the use of electric light, have you, any more than ordinary observation?

A. That is all.

Q. And you-never saw a planing mill with a movable electric

light that hung right over like that (referring to the electric light in court-room)?

A. No, sir.

Q. Don't you know, sir, that to go into the recesses of the machine. or in any other place that an electric light is superior to anything known?

A. If you put it in there.

Q. That is, you can put an electric light at places where you could not put a lantern or any other artificial light, couldn't you?

A. You could put it down to a smaller place than you could a

lantern.

Q. Don't you know that they perform internal surgical operations inside of men now that they have got an electric light to put in there to illuminate the parts of the body?

A. I know that.

Q. So that when you come right down to it, if you are in shape so that you can use it, it is one of the best lights known for such a purpose, and if you had a dark machine or a dark place in the machine you could illuminate it in that way better than you could in any other way, could you not, if you had to go in there for any. thing?

Col. ATKINSON: You cannot run a planing mill with a light that

would illuminate a recess of that kind.

Q. You say they cannot do it? But if light is so very 2488important and there are some places of a machine where you got to have light, it could be done in that way, could it not?

Col. ATKINSON: But in the adjustment of a machine, you do not

have to go in those internal places with the light.

- Q. I do not say you do, but I say in any machine where you did? A. Of course that would be dark in that kind of a machine.
- Q. A planing machine is not very difficult to adjust, is it?

A. It is.

Q. Describe that.

A. The knives are movable on a cylinder and the cylinder is fixed in relation to the bed.

Q. How is it adjusted in there? A. It is slotted so that it moves.

Q. What do you move it with, a crank? A. No, sir.

Q. What then?

A. You got to take a wrench and tap it, got to be gauged.

Col. ATKINSON: You are on two different operations.

Q. You don't know very much about these modern machines, do you?

A. I had modern machines, and Mr. Backus had the same kind.

Mr. Robison: Mr. Backus said he did his with a crank.

Q. How did you do it, with a hammer?

A. Usually did it, a man would adjust his tightening nut and gauge the knife and then he would tap it with a wrench until he got his adjustment to his guage and sometimes he would have to drive it back.

Q. It would depend on the accuracy in tapping it? 2489

Mr. Dickinson: They use a crank to raise the cylinder, but they always adjust the knife by hand. Q. Suppose you are running a machine and start in in the morn-

ing, how often do you have to adjust it during the day?

A. Every time you nick a knife.

Q. Every time you have to take your knives out to sharpen them?

A. Yes, sir.

Q. Do you have to do it any other time?

A. Every time you nick a knife, and you can sharpen the knife without taking it out. You may nick a knife, but not bad enough so that you can sharpen it with a file, but if it requires grinding you got to take it out.

Q. If you don't nick the knife you don't have to change it, do

you?

A. No, sir.

Q. Well, it is rigid?

A. It is rigid. Q. When you once adjust it you don't have to change it unless something of that kind occurs?

A. Change it if you change the thickness of the stuff.

Q. Certainly. Of course when you change the thickness you would have to readjust it?

A. Yes, sir.
Q. Whereabouts is this nut on the machine, on top or down

underneath?

A. They are practically on top. The cylinder is three or four sided, usually a four-sided cylinder, and you can usually turn your cylinder, and if your roll-there is a number of those nuts on each knife that holds each knife, and you can turn it so as to always have them on the roll side.

Q. Does the roll run in a slot; that is, the bearings of the rolls, the axle of the rolls-that is movable up and down?

A. I don't know which rolls you refer to.

Q. Well, the cylinder that the knife is on?

A. That raises and lowers, yes, sir, with a crank usually.

Q. The same as a wheel on a plow with a slot in it? You can move it up and down?

A. There is a slot in it, yes, sir, that goes between the two stand-

ards.

2490

Mr. Robison: He doesn't know anything about a plow.

Mr. Baker: Well, I am trying to describe something that I understand; that is all.

ABSALOM BACKUS, JR., recalled on behalf of respondents.

Examined by Mr. Dickinson:

Q. Where were you born and when?

A. Herkimer county, N. Y., on the 7th day of December, 1824. I am 69 years old.

Q. How long have you lived in Michigan?

A. Twenty-five years.

Q. What business have you been engaged in in Michigan?

A. Manufacturing lumber.

Q. You are the Absalom Backus, Jr., after whom is named the Absalom Backus, Jr., & Sons corporation?

A. Yes, sir.

Q. You were the founder of this business, the planing-mill business?

A. Yes, sir. Q. When did you found it?

A. 1868, I think.

Q. Where did you start it?

A. At the foot of Eleventh street, in the old Richardson 2491 match works, on the south side of the street.

Q. When did you transfer to the present site?

A. In the fall of 1871 and '2. We built the new mill on the

present site.

Q. Will you state whether you yourself studied and gave personal attention to the acquirements of the trade of this milling business?

A. I had to learn it from its incipient start.

Q. From the ground up? A. Yes, all the way up.

Q. You are yourself a practical sawyer?

A. Well, I have always been engaged in mechanics. I am a practical carpenter and joiner from away back, and I came to Michigan and established a manufacturing plant at Au Sable, making lumber, and then to create a market for that lumber I concocted the idea of starting a planing mill in Detroit where I would have a place for my supplies.

Q. Will you state whether your planing mill has been a success?

A. It has in the main.

Q. When did your boys come onto the stage to assist you in the planing-mill business?

A. I took my two sons into the company in 1877.

Q. Were they active in the business?

A. Always worked with me from the time they left their school.

Q. And you brought them up in this business, did you?

A. Yes, sir.

Q. I think you took this business through the panic and hard

times of 1873 and the following year?

A. Yes, I got through in some way. My boys were not quite as old, they were not old enough to help me very much at that time.

Q. But you carried it through without failure, paid all 2492 your debts and pulled through?

A. We got through and saved our plant.

Q. Will you state how many acres you got in the lumber yard below there?

A. I think there is about seven and a half acres.

Q. With your dock front?

A. Yes, and something like 400 feet front by a little over a thousand feet in depth.

Q. How much dock front or outside dock front have you?

A. A little less than 400 feet. It gives me with my slip 1,300 feet of dock front. The slip is 1,450 in depth by 35 feet.

Q. Do you include in this the 60 feet of dock front which the union depot company enjoined you from building?

A. Yes, sir. Q. You have succeeded in removing that injunction so that you use your entire front?

Mr. BAKER: I object to that; that is hardly material to go into any controversy down there.

Col. ATKINSON: It bears on the value of this plant and the injury

done to it.

Mr. BAKER: No, it does not.

Q. I want to bring to the attention of the witness his entire dock, his extended dock. You include in your dock front now of 1,300 feet the 60 feet which you have recently undertaken to build out?

A. Yes, sir. Q. Now, how much is there in the storehouse property on Fort street? A. 200 feet front by, I think, it is 238 feet.

Q. On a corner?

A. 200 feet front on Fort street and 138 in the rear.

Q. Now, will you please state whether this property, the lum-2493 ber yard, the Iplaning mill and the storehouse property, has been accumulated by you out of this planing mill business that you carried on at this plant?

A. It has all grown out of this business; I had no other busi-

ness.

Q. And what is your own estimate of the value of the lumber-

yard property, with your 1,300 feet dock front?

A. Well, it has not been offered for sale. I rent it for \$12,000 a year, which would be 4 per cent. on \$300,000. I would not think of selling it for any such price.

Q. That is the first property that is not occupied by railroads

from Third street down to your property?

A. It is the first property?

Q. It is the nearest property to the city in the hands of private owners?

A. Yes, sir.

Q. And you own it in one body?

A. In one body, yes, sir.

Q. Is there as large a piece of property as this any place between Third street and the city limits on the water front that does not belong to the railroad?

A. I could not tell as to that.

Q. You don't know of any below there?

A. I don't know of any. This property has a paved street right through the center of it, Eighteeenth-and-a-half street, running clear down to the water.

Q. I suppose we will except the Voigt property?

A. Yes, I don't know how large that is. I guess likely that is larger, that is down farther.

Q. You rent the lumber-yard property to the Backus Company

for \$12,000 a year?

A. To A. Backus, Jr., & Sons.

Q. And the mill you rent for how much?

A. \$5,000 a year.

Q. And the company own the structure and machinery? 2494 A. Yes, sir.

Q. So that you rent the ground for \$5,000?

A. Yes, sir.

Q. And the storehouse property you rent for \$1,000 a year.

A. \$1,000 a year, \$18,000 for the whole of it.

Q. Will you please state whether these rents are charged up as a part of the expenses and paid from year to year?

A. That is the way it always has been done. Q. Who pays the taxes on the property?

A. A. Backus, Jr., & Sons.

Q. That is on the real property? A. Yes, that is in the lease.

Q. Can you approximate the cost and value of the mill property that is situated upon this site, the planing mill, including the building and all the structures, machinery and boilers and so on; everything upon the bare ground?

A. In our late investigations it appears that it is about \$200,000.

I have always placed it at \$150,000 in my testimony.

Q. This mill property is unincumbered?
A. Unincumbered.

Q. And has been paid for out of the business?

A. Yes, sir.

Q. I think this property burned down in 1882?

A. It did.

Q. And on the valuation you were short about a hundred thousand dollars' insurance, were you not?

A. \$105,000. That was supposed to be the total and absolute

Q. You rebuilt the new mill then?

A. Yes, sir.

Q. How long did it take you in your business there, after 1882, to make up this loss and equip your mill and pay for It was a total loss, I think, to yourself and the insurance company?

A. Yes, sir.

Q. You had how much insurance?

A. I think it was \$38,000 and there was some \$25,000 of lumber at the time that was burned, stock.

Q. That was a loss?

A. Yes, sir.

Q. \$33,000 I understand your son to say of lumber in the mill?

A. Perhaps it may have been so.

Q. So that your total loss was about \$100,000, of your own loss?

A. It was absolutely \$105,000.

Q. How long did it take you to make up this loss and equip your mill and get on your feet again from the loss?

A. About six to seven years, in 1889 I think it was.

Q. Now, take your business as it is running, this planing mill, will you please tell the jury what it has netted per annum over and above of course the expenses and the rent and taxes, the net returns?

A. As I make it out, and this is not from the books, but from the amount of property paid out, it nets \$27,777 a year, figuring for 16 years. Of course that is the net percentage.

Q. It has paid the rents over and above this?

A. That is, exclusive of all expenses.

Q. Has it paid any salaries to the active managers?

A. \$3,000 apiece.

Q. It has paid them \$9,000 in salaries?

A. \$9,000 in salaries.

Q. That has been charged to expense account?

A. Yes, sir.

Q. And this \$27,000 is estimated exclusive of that, is it?
A. That is the amount of money that has been taken out of the business from time to time.

Q. Over and above the salaries and rents and all other expenses?

A. Yes, sir.

Q. Up to 1892, I suppose?

A. Yes, sir.

Q. Now, did you inherit any money or property?

A. Nothing.

Q. You commenced with your naked hands, did you?

A. Yes, sir.

Q. In what business did you commence?

A. I was a carpenter and joiner by necessity. I commenced when I was 11 years old.

Q. And have been at it ever since?

A. Yes, sir, ever since. I worked building the telegraph two years. All the rest of my life has been engaged in business for myself.

Q. How did this come to be put into a corporation?

A. Well, I took my boys in as partners in 1877 and then we finally concluded we would form a stock company and we started off; I think my boys had a trifle more than half of the stock so

that they had the advantage of me. They could keep me straight and I suppose that was the reason.

Q. You were for improvements and they were for letting well

enough alone, is that it?

A. Well, my boys have always worked hard and I have, too; we have attended to our business and we have been temperate and industrious and as prudent as we knew how to be.

Q. I suppose in your estimate of the cost of things, you do not include your own labor or the labor of your sons, do you?

2497 A. I think we never have.

Q. And yet you have been constantly and tirelessly at work all these years?

A. Well, each of us receives \$3,000 salary.

Q. I know, but how much of the boys and of your time has been put into the building, setting up of machines? You do not figure it, I mean, in the \$200,000, the cost of the property?

A. I think not.

Q. The time of yourself and of your sons?

A. I think there was no account made of our time.
Q. And yet you have been constantly at work?

A. Well, we draw our salary of \$3,000 a year.

Q. Yes, but that would not go into the cost of the building?

A. No. sir.

Q. I want to get at the cost of setting up your machines, where your time went in or the time you have spent in making improvements in the machines. Has that been charged to the cost?

A. I think not.

Q. And the making of this into a corporation was for the reason that you were advised that a partnership would dissolve the concern? And you wished to preserve it for your sons and family in case of your death?

A. As I understood it that was the proper way to arrange it so in case anything occurred the business would not have to be wound

up.

Q. That is, in case of your death?

A. Yes, sir.

Q. It has been, has it not, the life-work of yourself and your sons?

A. Faithfully.

Q. Now, tell the jury something of the care that has been given to keeping the machines perfect and to making the fine

work and to improvements.

A. This plant is the growth of a great many years of patient and persevering toil and has grown out of the necessities as they arose years ago, back thirteen years ago. I conceived the idea that if I had a machine properly made I could do a great deal more work. I went to Boston and after considerable negotiations, S. A. Woods built me No. I machine; said at the time, Backus, that is a machine that I cannot sell, nobody else wants that machine. I said, All right, Woods, I want it, I have got business for it; I want it built and what will you build it for? He would build it for \$2,200.

I finally closed a contract with him and he built me one machine, a thirty-inch double cylinder, dressing two sides at a time, broken roll-that is, a roll in two pieces, so that I could run in a thick board or a thin board and keep two boards going to the extent of thirty inches in width; then a pressure bar made in sections, so that let the piece be what it will, as it went into the machine it would hold it down, this pressure bar, some of the fingers would come up, and it would always hold the board down to the plate, the cast-iron plate or chilled-iron plate underneath. And it would carry the two boards continually without any interruption and they would both come out, so that they would come out two pieces. He built this machine and we set it to working. I immediately ordered another and he sent that. They ran successfully for about two years and then the mill burned down and I lost the machines. I wrote him immediately and he telegraphed me that he would come on immediately and see me. He came on here and I gave him an order for ten machines, seven of those large m chines, five of the large machines proper, and two large matchers n in all, we are running today of S. A. Woods' machines, It ik it is eleven, and count them the

2499 best there is in the marke. There may be some just as good, perhaps, but we have grown up with these machines, we showed him how to make them and we have rebuilt them time after time, some weak spot we would call his attention to and he has improved it, and today it is the outcome of the starting point that I gave him, and a year ago he said to me, Backus, I have sold fifty of those machines last year, the same identical machine that he said he would not ever sell any. It is very substantial and strong. We dress, I think, 60 feet a minute in length and twice that would be—well, you could dress 70 feet of lumber every minute. We calculate it is good for 50,000 feet a day, and on a wager it would run 80,000

feet a day, each one of those machines.

Q. How much is the total capacity or maximum capacity of your mill? With all the various machines, not alone planers and matching machines?

A. It would be safe to call it 300,000 feet a day of ten hours. We

never have done it.

Q. When you commenced life as a carpenter and joiner, all this molding and planing was done by hand?

A. Always.

Q. And planing machines and planing mills have been a growth

and you have grown up with it?

A. I have made many and many a door, hundreds of them by hand, sawed it out by hand and dressed it by hand, and I have paid six dollars a thousand for dressing, just surfacing lumber. I went at it and built a machine myself and made a success of it, and ran it a good many years.

Q. Where it was formerly all done by hand?

A. Yes, sir.

Q. Well, the planing-machine business and the molding-machine business, and all those we find in your equipment of the 2500 Backus mill, is the growth of improvement in the art and

labor saving in your own lifetime, since you were eleven years old, since you commenced as a carpenter and joiner?

A. It has all come out in my day.

Q. You have grown up with it, and watched it as it progressed. have you not?

A. I have. Such a thing as making a molding by machinery

was not known at that time.

Q. Now, as to your other molding machines and other machinery in your mill, is it from your own knowledge the most perfect of its kind today anywhere?

A. We have made it as perfect as we knew how. We have spared no pains, we have given it great strength and constructed the various machines so as to give us the most work in the least time.

Q. What is the capacity for storage in your lumber yard and

docks?

A. I think it is about 20,000,000.

Q. Your mill situated up on River street was selected to go with the lumber yard with reference with your business, was it not?

A. I got my eye on the piece and located there for the reason that

I could have good facility for shipping by rail.

Q. Shipping your product by rail and receiving your raw material by water?

A. That is the two things together. I bought them in 1871 and

'2, the real estate.

Q. And it is necessary for your mill to have a large assortment

of lumber convenient to the mill?

A. It was. In our business it is necessary that we should have large room so that we can assort in widths and thicknesses as well as qualities. We do that in order to economize labor. We sort our lumber up to the half inch on the yard, seven inches and a half,

eight inches, nine and nine and a half, and so on, so that when we get an order that calls for a box to be seven and a

half inches high, we go to the seven and a half inch pile and we do not bring in eight or nine or ten inch; that would necessarily

call for a great waste of lumber, but we economize.

Q. Mr. Baker constantly calls this a box factory down there. Will you state whether the making of boxes is anything else than to work up the material that cannot be used for anything else? Isn't it a saving contrivance, the making of boxes out of material to utilize as a part of the general plan all material?

A. Box shooks or boxes are usually made from a low grade of lumber, and our plan has been to utilize a low grade of lumber and refine it by ripping off one edge of a board, for instance, cutting a four-inch strip, or a six-inch strip, and in that way we raise the

grade.

Q. You raise the grade of the raw material yourself, do you not?
A. Yes, sir.

Q. By trimming it?

A. Yes, sir.

Q. And then the other material may go into boxes?

A. Yes, sir.

Q. So that you utilize the box-manufacturing part in working up the refuse that would not be good for moldings or fine inside work? Is that so?

A. That is the way we have managed our business, we always

used a low grade of lumber for the box.

Q. You make a higher grade of lumber out of a lower grade for the purpose of molding and so on, and you utilize the rest of the material in this way. You could not afford to do it any other way?

A. We could not do it out of this low grade.

Q. In that there is a profit and an advantage, isn't there?

A. That is the way we have arranged it. We raise the grade by manufacturing this lumber. We buy that cull board and take a strip four inches wide or six inches and make it into clapboards or ceilings, or anything we want.

Q. Where have you found your market?

- A. All over the Eastern and Middle States principally, some of the Western.
- Q. You have been accustomed to sell your lumber in the East, your manufactured lumber?

A. Largely.

Q. Have you had any trade in Detroit?
 A. We have quite a retail trade, a local trade.

Q. Did you have any trade at the mill on River street?

A. There was quite a large trade before they put this structure there.

Q. Exclusively on River street?

A. Yes, sir.

Q. That came there to you?

A. Yes, sir.

Q. How did that come?

A. There was a trade there. The people that traded there did not seem to know anything about our warehouse. Sawyer is the foreman at the warehouse, and Krombach is on River street. Krombach is a German and had a great many German friends, and those men came to give him their special trade, I suppose. We did a trade there that paid us all the way probably from two to four thousand dollars a year.

Q. Net?

A. Net, yes, sir. I mean the profits.

Q. That paid you about that, and how many feet of lumber was sold out there?

A. Well, I could not really tell you that. They came there and bought a little flooring or a little ceiling, and something for baseboards and for cornice, picked it out.

2503 Q. Came right there to the mill, and picked it out and bought it?

A. Yes, sir.

Q. It gave you a profit of from two to four thousand dollars a year?

A. I suppose it did, because our trade ran all the way from 25 to 30 thousand dollars a month.

Q. As high as \$75,000 profit in a year it has run?

A. I do not mean that. I say we did a trade of from 25 to 30 thousand dollars a month.

Q. A retail trade?
A. Trade all around, this was a portion of it.

Q. What has become of that trade since the building of the superstructure, that Krombach trade or the foreman's trade at the mill?

A. I am advised that it has left us. I have not seen it myself. because I am not there, but I heard Mr. Krombach's testimony the other day that the trade has left him.

Q. Have you examined enough into the condition of the business, as you have gone along, to know that it had left since the building

of the structure?

A. Yes, sir.

Q. You mean to say you only know from hearsay and inquiry because you did not attend to it personally?

A. I have no way to attend to it personally.

Q. But you know from the general run of the business that the trade has disappeared that paid you from two to four thousand dollars a year profit?

A. Yes, sir.

Q. Now, will you tell the jury whether the superstructure with the passage of these trains and so on, has affected your manufacturing interests there and how?

A. It is a most serious thing. It has ruined our lumber 2504The lumber trade has got to be given up. We cannot trade. hold ourselves together. If we send lumber out, if we are not very careful about it, we have trouble with it, and I think it will eventually drive us away from the lumber trade entirely and we shall have to give our attention to something else. By lumber I mean the trade to the lumber yard, I do not mean box shooks. I have reference to the factory itself.

Q. That is the dressed lumber that you have dressed in your mill.

the moldings and that sort of thing?

A. Yes, sir.

Q. And in that was a profit to your business?

A. That all helps. Of course there is quite a good many machines downstairs that are designed for that purpose.

Q. In what way have you been affected injuriously?

A. Well, I see that the insurance account has run right up. It scares me. I was looking it over and I have got my figures here, regardless of what Mr. Jones said, I have this all made up, and the way I have got it here, I find that it costs \$5,215 a year more to insure than it did prior to this structure being there, and I have made it up in this way. This one covers \$3,000 insurance on the powerhouse, and is raised $3\frac{1}{2}$ per cent., from $4\frac{1}{2}$ to 8 per cent., and it costs \$105 additional to what it did before. \$4,000 at 8 per cent. costs \$320, and \$10,000 at 8 per cent. costs \$800. This is \$17,000 on the power-house. Then there is \$50,000 on the main mill over and

pove that we were in the habit of carrying, at 5½ per cent., making 2,625.

Q. That you were compelled to carry in addition. Formerly you ere only compelled to carry \$80,000?

A. Now we carry \$130,000.

Q. The insurance companies required you to carry that increase? A. They required that we shall carry 20 per cent. The 505 total is \$5,215 additional insurance. Now, to produce that sum at 5 per cent., it is \$104,300. That is so much for insurnce. Now, in order to get light as we have got to have it, if we arry on this business, there will have to be an electric plant put in here, and I estimate it as costing \$3,000.

Q. Can you carry that on with an electric light?

A. I think we can put it in perhaps for \$3,000. I do not think e can manipulate it for less than \$1,000 a year, and I think that a conservative price.

Q. Have you seen the use of electricity in a mill yourself?
A. Well, I see it in general use all over the country.

Q. Do you think it can be efficiently used so as to do the business

s well as with daylight?

A. Well, I think it can be made effective, but it is a very searchng light and I do not know what the result will be on the eyes of he men. It will be very trying on the eyes of the men that are manipulating it. This electric plant to manipulate it will cost \$1,000, it will take \$20,000. You know that is for all time. They come here and take possession of this property of ours, and destroy t, and I am merely showing what is going to be the result. It paralyzes me. I don't know what I am going to do. It looks to me ust as if we were destroyed. This has been my life's work and I have made a success of it, a magnificent success, it has got to be admitted by everybody that we are a thorough success, and now to be destroyed, I have lost my ambition. I have not got half as much ambition as my boys have, but I have got just as much determination, perhaps. I hang right on, I never give up. Now, this thing, it is a terror to me and I am explaining it. Here is \$104,000 it costs, the interest on \$104,000, to pay the insurance alone. The electric light plant will take \$20,000, for it costs a thousand

dollars a year, and that makes \$23,000 set aside for your electric light plant. Now, there is the loss of our business on that street. It is gone. If we are making two thousand a year, I will take the minimum, it is equivalent to \$40,000. It is gone forever and we cannot get it back. That total makes \$169,300 that

it will cost to hold us as we were. Q. Well, do you know whether you will be held as you were with

the electric light? Have you ever tried it? A. No, sir, I did not. But I suppose we could probably get along

with it and accommodate ourselves to it. . Q. Is the light there so that it permanently and materially affects

the carrying on of your business, the passing of trains?

A. It is impossible, we cannot do it. We have put in a great

many gaslights. I think we have put on every machine now two. and yet we do it very imperfectly.

Q. In what way does the damage show itself?

A. Well, in the manipulation of the machinery. In setting the machinery, in keeping watch of the product, as it comes through. It is very important that the man, as this product comes through, should be so that he can see. If he does not happen to see an imperfection, perhaps we will run through three or four boards before we can find it out.

Q. What effect does the soot and cinders have upon the property,

upon the product?

A. It causes us a great deal of trouble, it dulls our knives and when we are doing nice work, we have to stop and file up this knife or sharpen it, and that takes time.

Q. How is it in the course of transhipment to your store-

house?

2507A. Well, if you wait until it is loaded on the wagon and goes out and it becomes dirty, of course that damages it.

Q. Has this affected your trade at all, this soot and dirt upon

the lumber?

A. I have been informed from a good many sources that people would not trade with us because of this difficulty. A man that we used to sell a great deal of lumber to-what was his name, I forget?

Q. Henry Backus will be upon the stand.

A. He used to trade with us and he said his work required oil finish.

Q. Do you know yourself that it does affect it?

A. Yes, very materially, no equivocation, it is absolutely so. You cannot get around it. The fact that that lumber is mussed up and dirty calls for extra labor to make it good, and when it goes out of our hands somebody else has to dress it and they will all object to it.

Q. What is the condition of competition in the business now? A. Very close.

Q. It always is close, isn't it?

A. It has always been very close since I have been in the business.

Q. I think you have survived of all the number of planing mills that were born in this city?

A. We have been since 1871 in this place.

Q. Will you please tell the jury whether it is essential that the product of the mill for inside work must be free from imperfec-

tions of all kinds in order to compete in the trade?

A. Our trade is what we call a jobbing trade; we sell to lumbermen largely and when a car-load goes to the East, to Boston or Philadelphia, or some place, we are at their mercy. If there is anything wrong, we have to accept the best terms we can. We cannot

quarrel with them. If they say we got to take off \$5 a

2508 thousand, we have to submit to it.

Q. Suppose you send out matched stuff that is uneven;

three-eighths-inch lumber is the order given, we will say, and lumber goes that is not of the same thickness?

A. If we sell seven-sixteenths and we send three-eighths, they write to us that there is a car-lead of lumber subject to our order.

Q. Not only upon that but on that special grade of lumber, it impairs your trade and your repute and the good will of the business?

A. We lose the trade practically. There are a great many men when anything of this kind occurs, who will drop you and never

say anything about it.

Q. What has been the practical effect upon your trade since the building of the superstructure? Has that been any different, in the volume of your trade, imperfections and complaints; has there been any falling off of your trade since the superstructure went up and trains commenced to run?

A. We have had to almost give up the lumber trade entirely.

Q. Is there any doubt about that?

A. Not any doubt.

Q. What do you embrace in the term lumber trade?

A. Well, flooring and molding, nice finish, casings, car siding, car roofing, and general house-building lumber for finishing.

Q. For oil finish?

A. Yes, sir.

Q. What does your trade now consist of, if there has been any change in the character of your business since this superstructure went up, please state what it is?

A. Well, it has gradually reverted more particularly to r shook trade. We have given our attention to that 2509 our shook trade.

because that paid the best of anything.

Q. It was formerly merely working up of the lowest grades?

A. No, sir; we never made our boxes that way. We always made our lumber out of large stock and we refined the lumber, as I have explained, by its taking a strip off the edge and that went into molding or flooring or clapboards or something of that kind.

Mr. Foreman BAKER:

Q. And the rest was used for boxes?

A. The rest was used for boxes; yes, sir.

Mr. Dickinson:

Q. I suppose in the lumber yard the lumber is assorted, is it not,

into high and lower grades?

A. We have to make grades according to the accepted methods in the trade, clear, second clear, selects, fine common, and then commons.

Q. And then as the lower grade of lumber comes up, as you have before stated, if there is any good pieces that could be used in the higher grade lumber, it was used, taken up?

A. We raised it in that way by ripping it.

Q. That is, you would make a great deal of high-grade lumber out of low grade that you make the boxes of?

A. Yes, sir.

Q. Then the lower grades you use for boxes?

A. Went into boxes and box shooks.

Q. You aimed to buy all lumber that would have good strips on it?

A. Always aimed to get as rich culls as we can.

Q. How far is the main track of the Michigan Central, over which their trunk lines pass, from the mill on the front corner, if you please?

2510 A. From the northeast corner of the mill it is about 80 feet. I had occasion to investigate that two years ago.

Q. Now, on the southeast corner, on the front?

A. It must be 400 feet.

Q. At the nearest point it is 80 feet away?

A. I think so; yes, sir.

Q. In what woods are your machines equipped to work?

A. All kinds of hard wood and soft wood.

Q. All inner finishes, either hard or soft wood?

A. Yes, sir.

Q. From the coarsest to the finest?

A. Yes, sir.

Q. Will you state to the jury whether, in your experience, and in the present condition of competition, it is or is not necessary to depend upon a large volume of business to make money?

W. We know that to be a fact.

Q. You cannot make money on a circumscribed trade, or a limited trade?

A. No, sir.

Q. You have been obliged to increase the volume of your business and make your margins very narrow to compete?

A. The larger your trade, of course, the better your margins will be. Your expenses are about the same; you got your engineer and

your foreman and your book-keeper.

Q. How is it in business, in successful business, prior to the superstructure being built, of your depending for the larger part of your profits upon the fancy inside work in fine lumber?

A. Well, we used to make moldings for pictures by the car-load, and wainscoting, ceilings, and moldings that are sold by the in chin

a retail way.

2511 Q. Have you tried, so that you know whether the men are able to accomplish what they did formerly in wainscoting, and fine trade?

A. I know it cannot be done. We have to have more help in the mill to manipulate this work. Even the ordinary work requires more men.

Q. But in this finer work?

A. This finer work we could not do it unless we have better light. We would have to rig up with electric light in some way before we will be able to do that work again.

Q. You do not attempt it now?

A. No, sir; it cannot be done unless you get good light.

Q. Is there any doubt of that?

A. Not a particle.

Q. You have been obliged to give it up? A. We have.

Q. Since this superstructure?

A. Yes, sir.

Q. Is there any other reason?

A. There may be a reason. We have not had as much trade in that line and we know very well we cannot do it as well as we used to. It is so dark there that in order to see how to do it we have to get in some extra light.

Q. You made stair railing there, didn't you?

A. We did.

Q. Do you make any now?

A. No, sir. Q. Casings?

A. Casings we make now.

Q. You made what is called the oil-finish lumber for oil finish,

pilaster finish?

A. We did, of course. If we have an order for it. But we got to be very particular about it. I would not have it understood that we give up anything, we do everything that comes, we do the best we can. We never hesitate to do any job that is

offered us, but we cannot do it with that economy that we used to do it.

Cross-examination.

By Mr. BAKER:

Q. When did you commence to buy property down there?

A. 1871.

Q. What piece did you buy when you first started?
A. I bought Darmstetter's.

Q. How many feet front did he have on River street?

A. Well, I cannot tell you.

Q. How much money did you pay him?

A. \$14,000, and a thousand dollars to parties to get them off. That cost me \$15,000, that lot of Darmstetter's.

Q. Now, of whom did you buy next?

Col. ATKINSON: Was this piece made up of smaller pieces before he bought it?

Mr. BAKER: Yes. Did you buy some of Coveyeau?

A. Yes, and I bought some of somebody else. Oh, you go on and tell the story and I will swear to it.

Q. You bought some of Coveyeau and some of Specht?

A. Yes, sir. Q. Mrs. Specht?

A. No, sir.

Q. Now, your recollection probably was a little better about those things in 1891, when you were sworn before?

A. That is right, there is no equivocation, I am going to tell it

just as it is and I can remember it.

Q. We are not raising any question about that. Do you remember that it is the fact or do you remember testifying that you bought the entire real estate that you own down there for about \$35,000? A. Something like that.

Mr. Foreman Baker: That is the mill property?

2513 A. Yes, that is in 1871 or '2.

Q. You didn't get it all at once?

A. No, sir.

Q. Do you know how many purchases you made?

A. Four pieces; and we bought the piece of Specht that the Michigan Central owns.

Q. You deeded that to the Michigan Central?
 A. Yes, sır; I only count four pieces.

Q. Now, your mill burned down in 1882, I think?

A. Yes, sir.

Q. At that time did you try to buy Mrs. Steadly's 65 feet that forms the jog there on your property?

A. Yes, sir.

Q. Did you not offer her \$8,000 for it?

A. I think that was the price we offered her. Q. Did she not offer to sell it to you for \$9,000?

A. She did.

Q. And you refused to buy it?

A. Yes, sir; we concluded we could get along without it.

Q. That runs back about halfway, doesn't it?

Mr. Dickinson: That is after you burned out?

A. Yes, sir. That runs back 150 feet. Q. And she had a frontage of 65 feet?

A. 65 or 66.

Q. And it ran back about halfway or a little more than halfway?

A. A little less, 150 feet.

Q. How far is it from the Fort Street line to the River Street line?

A. I think it is 318 feet.

Q. Do you know how long your line is on the Michigan Central? A. Well, it must be considerably more than 318 feet, it 2514 goes clear down. It commenced with the street and goes around, crooked; it must be 325 feet.

Q. Yes, and it may be nearer 400 feet.

A. 325 or 30 feet.

Q. Now, the Michigan Central railroad was there when you bought?

A. Yes, sir.

Q. You bought because it was there? A. Yes, sir.

Q. And you bought the strip of land that your side track runs on and then deeded that to the Michigan Central?

A. That is our No. 3 track.

Q. Now, you have got a storage shed, haven't you, that runs right

along the Michigan Central line, that is built on this retaining wall, there?

A. Yes, sir.

Q. There is a shed upon each side of the side track?

A. That is down near Woodbridge street.

Q. But up by Fort street it is on the line of the Michigan Central?

A. Yes, sir.

Q. And further down there is a slip that you use and you have a shed on each side of it?

A. Yes, sir.

- Q. An open slied, isn't it? A. There are two sheds there.
- Q. That is, there is no roof over the freight cars when they stand on the siding, is there?

A. There is no roof there where the car is.

Q. It is a sort of car slip on each side of the track; there is an open shed where you store lumber or anything you see fit?

A. Yes, sir. Q. Now, all the shipments that are made by rail from your 2515 place are made at that side track, aren't they?

A. On one of the three tracks.

Q. Are there three side tracks that go in there?

A. Yes, sir.

Q. Three side tracks you can use?

A. Yes, sir.

Q. Have you a shed next to all of them?

A. No. One track goes down next to the mill.

Q. This is close to the mill; there is a shed there, isn't there, that is up against the mill?

A. Next to the bank; one runs up from there to Fort street.

Q. Then there is an open space where the freight cars come in, and then there is another shed?

A. There is no shed over that; there is no shed over the No. 1 track.

Q. There is not any shed over any of the tracks?

A. No, sir.

Col. ATKINSON: I think they load on No. 1 directly from the mill.

A. Yes, this long shed is connected with the mill.

Q. Now, those slips are adjacent to sheds where you store the lumber that you are going to ship, or through which you handle the lumber that you are going to ship; isn't that true?

A. What are you talking about?

Q. I am talking about the Michigan Central side tracks there, to find out how you use those sheds.

A. We use those sheds to store our lumber in until we get a car-

load ready. Q. Put it out there until you get a car-load ready and send it off?

A. Yes, sir.

Q. That existed long before the union depot structure was proposed?

2516 A. Yes, sir.

Q. Just the same?

A. Yes, sir.

Q. With the Michigan Central running beside it?

A. With that track.

Q. Running diagonally along the property?

A. Yes, 400 feet away at the further end and 800 feet at this end.

Q. Certainly, but the space between the main mill and the Michigan Central main line is occupied by these side tracks and your sheds, is it not?

Mr. Dickinson: A locomotive never goes in there.

Q. I am not talking about a locomotive; they have to back their cars in there.

A. Yes, they back cars in for us. I should think perhaps it

would be better to have a map of it produced.

Q. I think you can describe sufficiently. What I want to find out is this: There are three side tracks you say you can use, and you have got sheds that are next to the tracks?

A. Between the tracks.

Q. Between the tracks you have covered sheds, haven't you, that have no sides on them, just a roof?

A. Yes, sir.
Q. You put your product in there, don't you?
A. Yes, sir.

Q. Before you put it in the cars?

A. Yes, sir.

Q. Or if you start in the mill with it, it goes through those sheds to go into the cars?

A. Yes, sir.

Q. That is what it was used for and what it was made for?

A. Yes, sir.

Q. Now, do you remember testifying on the former trial 2517 that that plant, machinery and all, cost you about \$150,000? A. I do.

Q. And that was true, was it not?

A. To the best of my knowledge at that time. Q. To the best of your knowledge at this time?

A. At this time I know better. I know it has now cost us \$200,000.

Q. You didn't know it then? A. No, sir.

Q. You got onto that recently. That is through Henry's figures, I suppose?

A. Well, my figures and his.

Q. That included the machinery and everything?

A. Mill and machinery.

Q. You figure the main mill at \$116,000, don't you?

A. That was what we called it; we had the bills to show, you know.

Q. You had the bills?

A. At that time you remember my testimony is that it had cost us, I believe, \$150,000. You will find that in the book. I firmly believed it was so; but I know now better than I did then; I know it has cost us \$50,000 more than that.

Q. You have figured that all out?
A. Yes, sir.
Q. Yourself?
A. Yes, sir.

Q. So that you know it positively?

A. Yes, sir.

Q. There is no question about it?

A. No, sir.

Q. Where are your figures?

A. I have made it from time to time; I can explain any 2518 particular thing you want me to; I will give it to you.

Q. Is that the only explanation you have got to make, that you have figured it from time to time?

A. No, sir; but when you come to look it over and compute it,

it will paralyze you.

Q. On certain bases it will, and on certain other bases it won't, of course.

A. When you come to look into it and figure up your molding knives, and you find there is \$6,000 there, you will be scared. They are worth \$1 or \$1.10 an inch.

Q. Of course you got all the knives you ever had there?

A. Well, we are making them all the time.

Q. You got all you ever had?

A. No, sir.

Q. What do you do with a knife when it wears out?

A. It very seldom wears out.

You keep it there to inventory, don't you? Q. You keep it t A. I suppose so.

Q. It does not ever wear out?

A. They are used to alter over; we can make members of certain molders using the same knife.

Q. In this increased estimate that you are getting up for this trial, you include every knife that is in there-that ever was there? A. All that are good.

Q. There are no bad ones there, nothing bad in the Backus institution?

A. No, sir.

2519

arm?

Q. Nothing of that kind?

Col. ATKINSON: Except the smoke and dust. Q. How many knives are there there now? A. Well, I could not tell you; I don't know.

Q. Fifteen or twenty thousand?

A. Oh, no; it is not necessary to have as many as that. Q. How many-about as thick as plowshares around a

A. They are solid steel-about three-eighths of an inch thick, and they are made at a great expense.

Q. Yes, they are made at a great expense.

A. There are cupboards to hold them. Q. What do they cost an inch? A. I think it is \$1 or \$1.10.

Q. You don't remember which one?

A. \$1.10.

- Q. That is, a planing knife that is ten inches long costs something like \$20?
- A. I am not talking about a planing knife, I am talking about a molder.

Q. Take the knife of a planer, a 30-inch planer, how much an inch do those knives cost?

A. I could not tell you. really; they do not cost so much as fine molding knives; I do not know; I cannot remember.

Q. Now, when did you make this lease?

A. You ought to know, you made the papers. Q. When was it? I am not the witness.

A. When you were my attorney.

Q. I am not the witness now, and you are.

A. It must have been 1885; is it? Q. '85 or '86?

A. Yes, I guess so.

Q. How long since you drew any rent on that lease?

A. It has been passed to my credit; I have drawn money when I wanted it.

Q. How long since you wanted any?

A. They have always paid me when I have asked them for it. Q. You do not mean to testify that you are in receipt

of \$18,000 a year regular rent on that property, do you?

A. That has been passed to my credit every year.

Q. It is all to your credit yet, isn't it?

A. Oh, no.

Col. ATKINSON: What do you want him to do, spend it if he does not need it, or save it?

Q. Do you mean to say that you are receiving that right along as a stranger would?

A. Just the same.

Q. It is entered up on the books, and when you want a few hundred dollars I suppose you go and get it?

A. If I can get it.

Q. If you can! You are not in the business any longer, you have turned it over to your sons?

A. I have turned it all over to my sons.

Q. Who fixed that rent?

A. It was agreed among us at the time you made up those papers.

Q. Who made the bargain?

A. It was amicably agreed, all around.

Q. Well, who were the parties?

A. The three parties.

Q. It is an agreement all in the family, isn't it?

A. Yes, sir, no one else.

Q. Now, do you mean to tell this jury as a business man, an old experienced business man, that you can run any lumber yard and pay \$12,000 a year rent?

A. We have.

Q. You have, but do you think a lumber yard can be carried on successfully and pay \$12,000 a year rent?

A. I guess if we did a good business we could do it.

Q. You would have to have a very good business, wouldn't you?

A. With a good business it could be done.

Q. Usually they put lumber plants where the rent is cheap and where the land is cheap, don't they, as a general 2521 thing?

A. We do not all see these things alike. I located my business to

suit my business and I think I made a success of it.

Q. Well, if they can pay such rent as that why don't they come up to Woodward avenue somewheres and have a lumber yard; is there any reason why they should not if they can stand such rents?

A. We would not have any occasion to do so. We don't want to

start any more lumber yards.

Q. Do you mean to tell this jury that that dock property down there is worth \$800,000?

A. No, sir.

Q. What is it worth?

A. At 4 per cent.-

Q. I don't ask you that question, that lease matter must stand on its own basis; but suppose you were to start out today to sell that property and you found somebody that wanted it, you don't think you could get \$800,000 for it, do you?

A. No, sir.

- Q. You know what the market value of property is, and I would like your judgment as to what that property is really worth, as vacant dock property?
- Col. ATKINSON: I object to this. I don't understand that the railroad company wants that property, but they want Mr. Backus to put a valuation on it. I don't think it is fair in a lawsuit to try the question that is involved in another.

The COURT: Isn't that one of the real questions in this case, the

question of the value of the property?

Mr. Dickinson: He has not sworn that it is worth \$800,000. Mr. Baker: Henry swore it is worth \$800,000.

Mr. Dickinson: No, he didn't.

Q. What did he swear to?

A. \$600,000.

2522

Q. Do you want to testify-a business man of your experience, having lived here as long as you have-are you willing to testify that that property is worth \$600,000?

A. It is worth what it will bring, I think.

Q. Now, I don't ask you that question.

A. I have given you my testimony that that property is rented on a basis of \$300,000.

Q. But that is that family lease.

A. It is not for sale.

Q. Where one pocket washes the other. I am talking about business; I am talking about selling that property to somebody that wants it, and what it is worth.

A. I think anybody could buy it for \$600,000.

Q. They could buy it for that?

A. Yes, sir.

Q. But suppose you wanted to sell it and was not forced to sell it, just simply wanted to sell it, and you found somebody that was not forced to buy it, just simply willing to buy, and that is what they say is the market value, what estimate would you put on it then?

A. I have got to take into consideration this great plant of ours. Q. I am speaking independently of that for the purposes of this

case; I want to know what that land is worth.

Mr. Dickinson: You cannot speak independently of his business. Q. I am not talking about your business because it is a great gold mine, but I am talking about other business. I want to get your judgment as to what it is worth.

A. In connection with the mill?

Q. No, sir, the saleable value of it.

2523 Col. ATKINSON: On the basis that you are there destroying the mill?

Q. No, sir, I am not asking Col. Atkinson questions, but I am asking you, Mr. Backus, and I want to get your honest judgment.

A. I don't know what your object is in getting me to say. You don't want to buy; if you want to buy I will treat with you.

Q. I have no doubt.

Col. ATKINSON: He really does want to buy, but not to say so.

Q. As cross-examination bearing upon your testimony in this case and the credit that is to be given to it, I would like to know your estimate of that property.

A. I have told you that it could be bought for \$600,000.

Q. You don't want to answer that A. Is it necessary that I should? You don't want to answer that question, do you, Mr. Backus?

Q. Not absolutely necessary; you do not want to answer it, do you?

A. I would like to accommodate you in anything that is proper.

Q. It is not to accommodate me. Now, one other question. What do you value that mill property at?

A. That mill property, if I could be let alone, is worth solid \$300,000.

Q. The land is?

A. No, sir, I mean the mill and the land.

Q. That is \$150,000 or \$200,000 for the plant?

A. It is about \$125,000 for the real estate, and it would make it \$175,000 for the other—taking the whole thing at \$300,000.

Q. Do you think that a planing mill can be carried on success-

1503

fully on a piece of real estate that costs \$125,000? It is too expen-

sive for any such business. A. If you would let us alone we were doing very nicely. 2524 Q. You were doing business, were you not, on what it cost

you?

A. Yes, sir. Q. There is some difference between \$125,000 and \$35,000?

A. Well, I have not looked at it-it has not been for sale, and was offered once, you remember \$150,000 for that real estate.

Q. Who offered that? A. Don't you know him?

Q. I do know him; Luther Beecher offered that. Did he have the money with him?

A. He was ready to buy it.

- Q. Did anybody but Luther Beecher ever offer you \$150,000 or \$125,000 for it? What was it? I didn't catch the exact sum.
 - A. \$150,000 he said he would pay us. Q. What year did he offer you that? A. Three years ago, was it not?

Q. That was when he was building his tunnel down there?
A. He wanted to buy it for the railroad companies; I suppose for the union depot company. I expect that was what it was for.

Q. Do you know in regard to that? A. I know he and Mr. Joy were over-

Q. Do you know anything about it?

A. Only what I surmise. Q. It is all surmise, isn't it?

A. Yes, sir.

Mr. Foreman BAKER: This was for the real estate alone? A. Yes, he says take off the buildings and I will give you 2525 \$150,000 for it.

Mr. Dickinson: You refused it, didn't you?

A. I did refuse it. That mill cost too much money and it was too valuable.

Q. That involved tearing it down?

A. Yes, sir.

Q. I suppose if it had been vacant at the time-

A. I would have let him have it quick.

Q. So that as a piece of real estate you don't value it at \$125,000, do you?

A. I do.

Q. Suppose your mill would burn up tonight, and you are old and are getting out of the business, what would you value that real estate at then?

A. I would sell it for \$100,000. I would, rather than to build up

again.

Q. Do you think you could get that?

A. I don't think I could, with that railroad there. If the railroad was not there I could.

Q. If the railroad was not there you could get that?

A. I think so.

Q. Will you tell us what business there is on earth that could locate on that and exist with such a capitalization for the land?

A. There is a mill situated so that I have 350 feet of front on the railroad, I have got three tracks, 500 feet of tracks right there on that railroad, and I can load on any of these tracks; then there are two ground floors; you cannot find such a place, you might go the world over.

Q. I know you could find some very convenient places for business, but when you come down to values, you got to depend on a

purchaser.

A. Yes, sir.
2526 Q. A planing-mill business could not stand any such capitalization?

A. It did stand it. Q. Is that true?

A. Yes, it is true.

Q. You only gave \$35,000 for it, so you say. Suppose you were obliterated today and you were going to start a planing mill; what I want to know, Mr. Backus, from you, is, as a practical man, whether you would start in with a piece of real estate that cost \$100,000. And I would like to know if the business will stand that

sort of a plant?

Col. Atkinson: Suppose you let him answer that in the morning.

Mr. BAKER: I am perfectly willing if the court is.

Adjourned till next day, October 31, 1893.

Остовек 31st, 1893-9.30 а. т.

ABSALOM BACKUS, JR., recalled for further cross-examination.

By Mr. BAKER:

Q. At the adjournment last evening I was asking you about the planing-mill business and whether if you were starting in to start a planing mill, to build a new planing mill, you would think it advisable as a business man to buy a piece of real estate that cost \$100,000 or over for the location of the mill?

Objected to as incompetent and immaterial.

Mr. BAKER: I have this witness on cross-examination.

Col. Atkinson: How can it be material? Now, your honor, I think that question is very misleading. These respondents have a plant located there; what are they to do with it? They are running a planing mill on it. Mr. Baker's idea that nobody, if

they wanted a planing mill, would buy it, should not affect their situation. They bought it when it was cheaper.

Mr. Baker: I should prefer to state my own ideas in regard

Col. ATKINSON: It seems to me that whether anybody would invest that much in a planing-mill site is not material. I suppose the inference that Mr. Baker wants to draw is that it cannot be worth as much as that because nobody would invest that much in

a planing mill. Now, that would be a very illegitimate conclusion. I cannot see how it is material to the issue at all as to whether anybody would invest \$100,000 in a planing mill, and I think it is misleading.

leading.

The Court: I think I will admit the question.

Exception for respondents.

Q. The question is, suppose you were going into the planing-mill business, suppose you were burned out, or sold out, or got rid of your property and you were 40 years old and were going into business again, is this business of such a nature that you could afford to, or that it would be good business for you to buy a real-estate site for it that would cost \$100,000 or more?

A. That business paid very largely up to 1882; it paid a percent-

age on a good deal more money than that.

Q. Will you please answer the question as to whether you would

do that?

A. It would depend upon the location. I located there because

it was very convenient for shipping.

Q. But would you locate now; would you pay \$100,000 or more for a piece of real estate? Would any sane man purchase such a piece of real estate to locate a planing mill on now?

A. No, sir, I would not. Regardless of the real estate I would

not put the mill there.

Q. I want to ask you that question with reference to the value of the property and not with reference to its surroundings; would you buy any piece of property for a planing mill that would cost \$100,000?

A. I have already paid that, Mr. Baker.

Q. We understand that, but I am asking you whether you would now in locating a planing mill in this city—

A. With the railroad in front of it?

Q. No, sir. I am not asking you anything about the railroad in front of it.

Col. ATKINSON: Do you mean without this structure?

Q. Without this structure, or without considering anything, would you put \$100,000 into a plant?

A. No, sir, I don't think I would.

Q. Well, I supposed that was true and I supposed you would testify. Now, you figure out a very large damage here, and you start out with the item of insurance. Do you know how much insurance you carried before the union depot was built?

A. I think it was about \$80,000.

Q. And you have increased that to \$150,000?

A. \$136,000. That is \$50,000 more.

Q. This 80 per cent. clause in the policies of the companies came out about the same time, didn't it?

A. Well, I cannot tell you.

Q. When did you first have it in your policies?

A. I really could not tell you. Q. You don't remember? A. No. sir.

Q. It was stated here that it was a year ago last August?

A. Well, Mr. Jones was the proper authority.

Q. But you don't remember?

A. I do not.

Q. Now, has that 80 per cent. clause got anything to do with

your taking \$130,000 worth of insurance?

A. What do I understand? We have to carry the 80 per cent. in addition. Then it doesn't cover it, it leaves us then exposed \$69,000 yet, uninsured.

Q. Did you attend to that insurance yourself?

A. No, sir.

Q. Don't you know that that \$130,000 is 80 per cent. of the supposed valuation of your property?

A. No, sir; I do not.

Q. Isn't it true that \$130,000 is supposed to be for the purposes of insurance, and unless it is challenged by the company in any way, 80 per cent. of the actual value of the property?

A. I suppose that is the usual way they look at it.

Mr. Foreman BAKER: That also includes the stock in the mill, that \$130,000?

A. Yes, sir.

Col. ATKINSON: It includes \$15,000 worth of lumber.

Mr. Foreman Baker: Yes.

Q. That is \$30,000 on the main building, isn't it? A. Have you got the schedule there? I cannot tell.

Q. Yes; and \$68,000 on the machinery and \$15,000 on the stock, \$7,000 on the power building and \$10,000 on the engine and boilers, and so forth, according to the schedule.

A. I guess that was right.

Q. Now, has that 80 per cent. got anything to - with your taking this \$130,000 of insurance?

A. We figure that that is eighty per cent. of the value. Then the

20 per cent. represents \$26,000.

Q. If you did not take \$130,000, your insurance would be reduced proportionately; that is the way you understand it?

A. This was figured before we had this inventory of machinery,

or anything of that kind.

Q. Of course that is the estimate that you and the companies made as the basis for the insurance?

A. On this basis it makes it that the insured property is \$156,000; \$130,000 and 20 per cent. more, that would make \$156,000.

Q. Your policies are in all for \$130,000?

A. Yes, sir.

Q. With this 80 per cent. clause inserted?A. Yes, sir.

Q. Now, upon that \$80,000 before this superstructure was built you paid 51 per cent.?

A. Five and a quarter per cent. and four and a half.

Q. What was the four and a half on?

A. The power building.

Q. I am not talking about that. I am talking about the \$80,000 on the main building. You paid five and a quarter?

A. Yes, sir.

You still pay that?

Q. You still pay that? A. Yes, with this 80 per cent. clause. Q. Do you know how your old insurance of \$80,000 was divided?

A. I don't.

Q. You don't know how much was on the power-house and shavings-house?

A. No, sir.

Q. Now, you have made some investigation of the electric light business, I suppose, with reference to your mill?

A. Nothing particularly.

Q. Where did you get your estimate that it would cost \$3,000 to

put in a plant?

A. It is my own idea about it, I have not investigated any. I know these things are pretty expensive; you got to have your engine and dynamo and we would have to have a great many lights.

Q. You have very powerful engine and boilers there, 2531

haven't you? A. Nothing big enough for that; we haven't got any power to

Q. Well, what authority have you got for this \$3,000 estimate?

A. My own judgment.

Q. And it is your own judgment that it would cost \$1,000 a year?

A. I know it, sir.

Q. How do you know it?

A. Because you cannot make the power; you cannot generate the steam and give the care you ought to for one cent less than \$1,000 a year. That is plain common sense. Those things cost money.

Q. Still you have no familiarity with the business, never put in

a plant and apparently-

A. Oh, I have seen them a hundred times.

Q. You have seen them, but this is entirely guess-work on your part?

A. Well, guess-work is as good as any if you guess right.

Q. Have you any way of telling us how much your retail sales in Detroit have been at any time?

A. No, sir.

Q. Have you any way of telling what your aggregate sales have been?

A. No, sir.

Q. Now, what do you call this lumber trade that you say you have lost; that is just the simple handling of dressed lumber?

A. As I explained yesterday, the lumber trade goes to the dealers all over the country.

Q. I know, but all there is to it, you bring it down in ves-2532 sels to your wharf down there, and you haul it up and dress it and match it?

A. Some of it is dressed and matched and some of it is not. Usually we dress everything.

Q. Sometimes they buy lumber right out of your yard?

- A. Not often. Most of the wholesale trade passes through the mill.
- Q. Of course, you haul it up there, and I suppose you sell in a year a large amount of dressed flooring, flooring that is matched and all ready to lay?

A. We sell some.
Q. But all you have to do is to draw that up and dress it and match it? You got one machine that will do that, haven't you?

A. We got three or four machines. Q. I say a machine that will do it all?

A. Three machines will do that.

Q. One machine will dress a board and match it at the same time?

A. Yes, sir.

Q. So you shove it through that machine and into those freight cars and away it goes? Isn't that the way?

A. We would haul the lumber up and run it through the ma-

chines and place it in the cars when we get a car.

Q. Suppose a man should come down there and buy of you 40,000 feet of flooring today, that is the process it would go through, would it not?

A. Flooring is a very small part of the business.

Q. I know it is a small part, but we can only get at your business in detail.

A. All right.

Q. And the flooring is a standard article that goes all over the United States, does it not?

A. Yes, sir.

Q. And it is just so with any molding; I suppose the moldings are of a variety of shapes, from the simplest to one that is complicated and expensive?

A. Molding is something that has got to be handled with great

care, and you got to have your machinery adjusted.

Q. Suppose you make a bargain with some one down East somewhere for a certain quantity of molding, three or four car-loads. Do you ever do that?

A. No.

Q. How much?

A. Perhaps a half a car-load, possibly a car-load, but not often. Q. Would you manufacture that when you delivered it or would you have it up in the storehouse?

A. We have to manufacture it from time to time. It would take

two or three weeks to manufacture a car-load of molding.

Q. That is of assorted molding; do you ever have an order of one kind for a car-load?

A. No, sir.

Q. But you would go to work for the most part and manufacture it after you got the order?

A. That is our rule. We make nothing in stock.

Q. And you do not keep a large stock in your storehouse, do you? It is more the remnants of your business?

A. What do you call a large stock?

Q. I mean the bulk of the product of your mill does not go to the storehouse?

A. No, sir.

Q. As I understand your son's testimony, you would have some remnants, a little over from the order, and they would go up there to the storehouse until you could dispose of it. Isn't that true?

A. That is the way, but at the same time we dress a great 2534 deal of lumber that goes right to the warehouse directly.

Q. Where you dress it not under orders?

A. Yes, sir.

Q. Where you dress it and simply put it up there to store it?
A. Yes, sir.

Q. You do not store large quantities of lumber down there in the mill, do you?

A. No, sir.

Q. Are you the patentee of your dust-arrester, individually?

A. Yes, sir.

Q. Do you remember the date that your patent was issued to you?

A. I do not.

Q. Long before your mill burned up, in 1882.

- A. I think it was in 1882, perhaps just before the mill burned
- Q. You testified at the former trial of this case in June or July, 1891, didn't you ?

A. Yes, sir.

Q. Did you testify on that trial that you did not think any of your dust-arresters had been put in in four years?

A. I cannot remember.

Q. Well, I will read the question: "With the exception of the Winona case, do you know of a man that has put this in for three years. A. I don't think any of mine have been put in in four years." Did you so testify? years."

A. If it is there I testified so, most assuredly.

Q. That was true, was it not? A. Why, I calculate everything that I say is true, Mr. Baker.

Q. And you adhere to that testimony?

A. I don't know of anything to the contrary.

Q. That is all I want to know. Four years back from 25351891 would take it back to '87, wouldn't it?

A. It would seem so.

Q. And you patented in 1882, and commenced the sale of rights for it in 1882?

A. Why, our testimony is all the way through that way.

- Q. So that you were in the business and conducted the business from 1882 to 1887?
 - A. It seems so.

Q. About how many did you sell altogether?

A. I could not tell you.

Q. Fifty or sixty?
A. Yes, I think so.

Q. Did D. M. Ferry & Company in town here have one of yours?

A. Yes, sir.
Q. They burnt down and built up again, didn't they?
A. Yes, sir.

Q. Did they put yours in then?

A. No. sir.

Q. They make their own seed boxes, don't they?

A. Yes, sir.

Q. The power-room, as you call it, is where the boiler and engine are?

A. Yes, sir.

Q. Is there a solid brick wall between that room and the shavings vault on the south?

A. The vault to the south is the sawdust-room. There is a solid brick wall running from the wall clear up to the roof.

Q. Isn't there a hole through it?

A. There is a door that is closed when we are not using it. It is a solid brick wall with a door that lets out into this place where we load the shavings when we sell them.

2536 Q. I know, but that is in the alley to the court, the door

to it?

A. No, there has to be a door above to put out into the wagon through this brick wall.

Q. That is out in the court?

A. No, sir, it is inside, as we open the door. Then there is a chute down here right in this place where they back the wagon in, as you open your door and put the shavings in, which goes down into the wagon, and then the wagon goes out here (illustrating).

Q. What I want to get at is, whether that wall that separates that

sawdust vault and the power-room is a solid wall or not?

A. It is a brick wall from the ground to the roof, with the exception of this one door.

Q. Where is that?

A. Right in the center of it, up on the second floor.

Q. It is in the engine-room?

A. No, sir.

Q. But it is not in the boiler-room?

A. No, sir.

Q. What do you use that door for?

A. That is where we shove the shavings down in, when we load them to sell, this wagon is on the lower floor and these shavings are on the second floor. We have to open the door and put the shavings in the wagon, and then the man draws them out and goes out with the shavings.

Q. The floor of the sawdust vault then-

A. That is on the ground.

Q. And from the boiler-room and engine-room there is no door

that opens into this vault, is there? It is on the next floor above, this door is?

A. Do you mean for the shavings?

Q. Yes.

A. There is a large opening, seven feet by four feet, where 2537 the shavings go down to the fire-room.

Q. Where does that come from?

A. From this overhead.

Q. Does that come right from the pipe?

A. Comes from this large store-room, comes through this big place and falls down here and lets the shavings down as the fireman wants them.

Q. Are they drawn in front of the boilers there directly from

this sawdust vault?

A. No, sir, from the shavings vault.

Q. Well that is from still farther away, isn't it?

A. No, indeed. The shavings vault is right square over this fireroom and the boilers and engine. The shavings vault is a long place, probably forty feet long.

Q. There is a long building there that is a shavings vault and sawdust vault and part of the engine-room. Now, is it true that a part of this shavings vault is right over the boiler-house?

A. And the engine.

Q. Right over that?

A. Yes, sir.

Q. And you draw it from that-

A. Right in the center of that place down into this place.

Q. This is entirely for shavings?

A. Yes, sir.

Q. Where are the sawdust vaults?

A. At the front end.

Q. The River Street end?

A. Yes, that comes clear to the ground.

Q. This wall that separates the engine from the sawdust vault is the solid wall that we have been talking about?

A. Yes, with a door in the center.

Q. On one side of it is the shavings vault and on the other 2538 side is the sawdust vault?

A. That is right.

Q. And up on the second floor there you can go from one to the other?

A. No, they are not connected. Q. That wall is solid then?

A. No, sir, the door-it is hooded over, as we open this door it opens into the shavings-room, and over there is the sawdust on the other side of the partition. When the door is closed the shavingsroom is entirely separate from the sawdust, whether the door is open or not.

Q. Is there a pipe that goes through that wall?

A. No, sir.

Q. One of those blowpipes?

A. No, sir.

Q. What is right north of the shavings-room and boiler-house a little ways?

A. Our dry kilns. Q. How far north?

A. Well, there is a dry kiln over the boilers. Then there comes in a room-

Q. Don't this shavings-room take all the room over the boiler?

A. No, there is a dry kiln there.

Q. That is in the main building, is it?

A. Yes, sir.

Q. That is covered by the roof of the main building?

A. Yes, sir.

Q. Then some feet away you have what?

A. A room there that has a large fan and a coil of four thousand feet for hot air.

Q. What do you do in there?

A. We blow the hot air into the four kilns there from that

Q. You do not put any lumber in that to dry? A. No, sir. 2539

Q. How high is the second floor in your mill above the paved court?

A. In the main mill?

Q. Yes.
A. I think it is about 13 feet, 12 feet in the clear, and then the timbers which would be another foot.

Q. Isn't there a floor which is almost level, just a couple of feet-

A. The first floor is level.

Q. The first floor is in the basement?

A. Yes, that is on a level with the outside surroundings. You can back a wagon into that floor.

Q. In the first place, in starting on River street you have a base-

ment there?

A. Yes, sir.

Q. Do you know how high that is between the joints?

A. Twelve feet between joints.

Q. Now the floor, I suppose, would be 13 feet?

A. Twelve inches for the timber and two inches for the floor, about 14 inches.

Q. That second floor and the paved court on the north side of your mill that you enter where you drive in there on Fort street, is on a grade, isn't it, on the level?

Q. On a level with the Fort street side, do you mean?

Q. Yes.
A. Yes.
Q. Then it is 13 feet—

A. Eleven feet now between joints. The first story is 12 feet and the second 11 feet.

Q. You have a storage shed over on the northeast side of that

court, haven't you? A. We have a shed there that we work, with machinery, 2540 that is a shop you might say; we have a planing machine

Q. You use it for storage or anything that comes convenient, I suppose, in your business?

A. Yes, sir.

Q. You cannot go from that shed into the main mill, can you, at the end of it?

A. There is a passageway there into the end of it.

Q. Into the elevators?

A. Yes, sir.

Q. So that you can bring up lumber or anything on those elevators and put it in that storehouse?

A. Yes, sir. Q. You would have to go down in the elevators before you would get on a level with the sheds you use in connection with the Central, that is on the floor below?

A. Yes, sir.

Q. How many feet is it between your power-house and the main mill where the blowpipes come across there?

A. It is about 15 feet, I guess.

Q. There is not anything in there except those pipes?

A. In that space?

Q. Yes. I see your pipes come out and go up and then over. Anything else in there?

A. The chimney.

Q. The main stack? A. The chimney, yes, sir. Q. Is in that space?

A. Yes, sir. Q. So that you have to go around it in order to get through there?

A. Yes, sir.

Redirect examination. 2541

By Col. ATKINSON:

Q. As I understand it, you leased your real estate to the company of which you are a stockholder with your sons?

A. Yes, sir.

Q. And those leases were arranged several years ago?

A. Yes, sir.

Q. Do you remember the exact date when the leases were arranged?

A. I do not, I think it was in 1885.

Q. Will you state whether those leases were arranged with any view to a possibility of such a road as has since been in front of your mill on River street?

A. No thought of it at that time.

190 - 55

Q. The old union depot was down on Twelfth street, at that time, was it not?

A. We supposed it was going to be on Twelfth street.

Q. What was called the union depot was down there, and the general understanding was it was to be there permanently?

A. It was so advertised.

Q. And plans of the depot that was to be built there published in the papers?

A. I think so, yes, sir.

Q. You were present, I suppose, at a number of the condemnation proceedings for the establishment of it down there?

A. Yes, sir.

Q. Do you remember that in all those the company took the ground that they were going to make a grand depot down at that point?

A. Yes, sir, at Twelfth street.

Q. There never was any intimation of such a building as this at the time these rents were fixed?

2542 A. No, sir.

Q. In fixing these rents will you state to the jury whether you had any other object than to arrange as between yourselves an equitable adjustment and rental?

A. No other object. It was arranged so that I was going to have

a permanent fund that I could depend on.

Q. It was a provision practically for your old age?

A. Yes, sir.

Q. Have you other children besides these two boys?

A. None.

Q. Then I presume the bargain you drove with the boys was not a particularly close one?

A. We thought it was equitable.

Q. And liberal towards them. Now, in taking that rent you have only taken out what you needed, the rest you have left in the business?

A. That is the way we have always done it.

Q. Simply having it credited up to you?

A. It is passed to my credit. When I want it I get it.

Q. What other family have you besides the two boys?

A. A Wife.

Q. So that that provision stands there at your disposition as you may see fit, at any time?

A. Just as I want it.

Q. Are the boys married?

A. Yes, sir.

Q. They have families of their own?

A. Yes, sir.

- Q. Now, the leases were drawn, were they, by Mr. Baker, at the time these arrangements were made?
 - A. Yes, Mr. Baker was the man who did this business for us.

Q. Mr. Baker was your attorney?

A. Yes, sir,

Q. And counsel at that time? A. Yes, sir.

Q. And had represented you, I think, in your other conests with the union depot company?

A. Yes, sir.

2543

Q. Below there. Then it was not a mere form-the making of his lease?

A. No, sir.

Q. But what you considered right among yourselves?

A. It was right and substantial.

Q. Do you still believe that it was an equitable and reasonable arrangement? A. I do.

Q. And that the distribution of the rents represented a fair return on the value of the property? A. Yes, sir. Q. And that was \$1,000 on the warehouse, as I understand it?

A. Yes, sir. Q. Which at 4 per cent. would represent \$40,000. \$5,000 on the mill, which would represent \$125,000. That is on the mill site?

A. That is on the mill site.

Q. As I understand it all these rents are on the naked land, with the exception of the dock you have down there?

A. Yes, sir.

Q. And the 4 per cent. would be on \$300,000, on the dock property—\$12,000 a year? A. \$12,000 on the dock.

- Q. How did the size of your lot there compare with the Hubbard & King lot which the company acquired down on the river?
 - A. Well, I don't know. This of ours is nearly 400 feet by 1,050. Q. Do you remember the extent of the Hubbard & King piece?

A. I don't know; I never knew.

Q. That was hardly as large as yours, was it?

A. I hardly think it was.

Q. Do you know what was paid for that?

A. I don't.

2544

Q. Now, that was immediately above you, was it, the Hubbard & King site, or was there one piece intervening?

A. I think there was a piece between them and us.

Q. Do you know whether they had as great a depth between the river channel bank and River street as you have?

A. They did not, it is not as deep.

Q. Do you recollect about the difference?

A. Well, I should say it must be two or three hundred feet; two hundred feet, probably.

Q. Well, I suppose you look upon the prospective value of that large block of land there of yours as pretty high?

A. I do.

Q. If a new railroad came into the city that would be the first place they could acquire on the river below the other railroads?

A. Yes, sir.

Q. And in many ways it has a prospective value that other property might not have. Is it difficult or easy to get a block of that extent on the river front in Detroit now?

A. Not easy. I obtained this, I think, from nine different par

Q. You bought small pieces?

A. Yes, sir.

Q. And put them together?

A. Yes, sir.

Q. In your mill site, too, as I understand it, you acquired from different parties?

2545 A. Four parties.

Q. I suppose you bought your warehouse from one person

A. One

Q. So that you picked up property from time to time so as to put it together and form this great mill plant?

A. Fourteen different lots. Q. Was that easily done?

A. It took many years, from '71 on till '86, or something lik that.

Q. You kept acquiring as you could?

A. Yes, sir.

Q. And I suppose had to agree upon a price with the owners?

A. Always, I didn't condemn one foot; we could not.

Q. What can you say as to whether all these acquisitions we made from time to time with a single end in view of establishin this business?

A. That was my aim from the starting point. It required larg storage.

Q. Had you an idea of establishing a permanent business the would run for years after?

A. That has been our aim always, making everything very sul

stantial and permanent.

Q. I think you told Mr. Dickinson that that was one reason for incorporating, so that the business should not be wound up by the death of either of the parties?

A. That was the object of incorporating, so that in case of m death there would be no stop, that everything could go right on.

Q. Or in case of one of the boys dying?

A. Yes, sir.

Q. Now, Mr. Baker tried to get you to put a price on this piece land below the union depot. Has it ever been for sale since yo bought it?

2546 A. It never has. It is part of our business and if we should take that off it would cripple us. I think I told M. Baker that \$600,000 would buy that lot, but that would leave of mill on our hands.

Q. Well, you would want a considerably larger sum for the lon account of the incidental injury that selling it would be to yo mill and warehouse.

A. That is the idea exactly; that is why I hesitated to set a price last night.

Q. In other words, they were bought to be used all together, and you could not sell any one of them without selling all?

A. That is the point exactly.

Q. Now, you say that mill, in your judgment, is worth \$200,000, the mill aside from the real estate?

A. It practically cost in good solid dollars about that amount.

Q. In the valuation you have given to the insurance company, as I understand your testimony, \$130,000 has been estimated as 80 per cent. of the value of the mill?

A. \$150,000; that is what we call the plant up to lately.

Q. \$130,000 is your insurance?

A. Yes, sir.

Q. Then to get at the estimated value you would have to add to that one-quarter?

A. Have to add the 20 per cent. That would be a fifth.

- Q. No, that is 80 per cent., and then you would add the other 20 per cent., which would be a quarter of 80 per cent. or a quarter of \$130,000, which would make \$32,000, and the total would be \$162,000.
 - A. Maybe I made a mistake then. That is the plant anyway. Q. \$162,000 was the estimated value of the property insured?

A. Yes, sir.

Q. That includes something, I think, on the stock, does it 2547 not?

A. That is calculated \$15,000, I think.

Q. That would bring it down to \$147,000?

A. Correct.

Q. Now, is there any property there which would not be covered by the insurance; do you know whether you have any insurance on the dry kiln?

A. I think not.

Q. Is there any of this insurance on the office?

A. I cannot really say, but I guess not.

Q. You have sewers, too, that are quite expensive, I suppose?

A. Yes, sir.

Q. The pipes to the river and the underground pipes and the retaining walls?

A. Yes, sir.

Q. All these things you do not calculate to insure at all?

A. No, sir, we do not make any insurance on any of those. Q. Then your insurance is simply against fire and that part of your plant which would be likely to burn and upon which you could obtain insurance?

A. That is it.

Q. Some of it you cannot get insurance on at all, I suppose? You never have carried any insurance on your dry kilns? They stand by themselves, a brick wall around them?

A. They are by themselves. I don't know whether there is any

insurance on them, but I think not.

Q. Not included in this \$130,000?

A. No, sir.

2548 Q. When you rebuilt I suppose there were a good many things left from the old building that were utilized in rebuilding?

A. Great many that were not taken into account.

Q. These sewers, retaining walls, the underground pipe and all that kind of thing were utilized in the second building?

A. Yes, sir.

Q. And when you estimated the cost of the second building, do you add this or do you simply estimate what money was put into it?

A. They were not added, there was no account made of it.

Q. Was that actually the money paid in making the second building, and that would not represent its value?

A. No, sir.

Q. Now, I suppose in estimating for the insurance up there you were not anxious to carry \$130,000 of insurance if you could help it, were you?

A. No, indeed.

Q. You only carried \$80,000 until this 80 per cent. rule which forced you to enlarge it?

A. We only carried \$80,000 until this exposure came up.

Q. This 80 per cent. rule requires you to do it, and you have to carry the \$130,000 to get any?

A. We have to carry it now on account of the exposure, we have

to insure eight-tenths as I understand.

Q. Then you consider it prudent, on account of the extra danger, to carry extra insurance as well as under the 80 per cent. rule which requires you to do it?

A. We consider it is imperative at least to carry \$130,000, and

that leaves the 20 per cent. to carry ourselves.

Q. You feel then yourself that the danger is much greater from fire there?

A. Very much greater.

Q. So that you do not feel like taking as much risk as you did before?

A. No, sir, I advised that we insure the full amount, as much as we could get.

Q. Have you any special reasons for believing that you are in danger of fire there?

A. From the daily exposure as we see it we cannot come to any other conclusion.

Q. You have had a great deal to do with lumber up the lakes, also, haven't you?

A. Yes, sir.

Q. Have you had occasion to observe from year to year the danger from fire, of railroads passing?

A. Well we have. Every season brings us a history of terror and destruction that grows out of these fires.

Q. Are these forest fires that we read of attributable, to some ex-

ent, to the railroads running through them?

A. Most always, the railways set fires on the road, and right here he other day I was in Indiana, the week before last, and they had surned my fences for half a mile, and they have come to me and aid we will fix this.

Q. Where is this?

A. In Miami county, Indiana.

Q. You have some property there? A. Yes, just half a mile. I gave them the right to run through his property without any compensation, and they promised to seep me a fence, but they have made me a great deal of trouble,

hey kill my stock.

Q. What I want to call your attention to as sharply as possible, as a man accustomed to this lumber trade and the railroads running through the country, is the danger of fire; you have been a witness to them?

A. Constantly.

Q. So that you naturally feel that your risk down here is very much greater on account of this railroad?

A. It cannot be otherwise.

2550Q. I suppose in making your estimate for insurance you were as conservative as possible so as to carry as little as you could help under the 80 per cent. clause?

A. We carried a difference between \$130,000 and the actual

value.

Q. You are practically your own insurers for that amount?

A. A certain amount, yes, sir.

Q. Have you ever heard any intimation from any one connected with the union depot company as to the increased danger of fire there?

A. I heard Mr. Joy tell us that he expected—we were quite liable

to be burned up.

Q. Where was that?

A. That was at Lansing. Q. That was while some legislation was pending there?

A. That was while Mr. Joy was arguing for an amendment to one of the laws, whereby he is made amenable for any damage that may occur by fire.

Q. He wanted that amended?

A. Yes, sir.

The union depot company, I suppose at that time, would have been liable and he wanted some change made?

A. That is it exactly.

Q. Was it in a statement to a committee of the legislature?

A. Yes, before that committee.

Q. That Mr. Joy stated he was likely to burn you ap

A. That they had paid Backus for his place and he did not want it so that they would have to pay him again.

Q. In case it was burned up?

A. Yes, in case it was burned up.

Q. Did he say anything of the likelihood of its being burned?

2551 A. Well, he spoke of that, that that thing might occur

Q. It might occur any time? A. It might occur any time.

Q. From what?

A. I suppose—he led us to infer from the passage of these trains.

Q. Do you remember his using the expression, carelessness of an engineer or anything of that kind might cause this property to be burned?

A. That was the general subject he was talking about, the passing of these trains, and he wanted to throw the responsibility onto the train that happened to do the mischief, the different railroads.

Q. The different railroads forming the union depot company? A. He said he might have applications for other railroads to come in here and he says if they should come here and burn Backus up, we have got to pay him, and we have paid him once.

Q. Do you remember he said he had paid you?

A. He paid us once he said.

Q. Do you remember any expression about its being settled for

all time, the right to pass there?

A. He spoke particularly of the making of the law, of the drawing of it by Mr. Meddaugh, that Mr. Meddaugh had embodied that clause in that law that made him amenable to damages that might occur, and he said, It is a bad law and it ought to be amended. And he says, For God's sake make this as it ought to be, and not leave us to pay for this property that we bought once before.

Q. You were present out there yourself?

A. Yes, sir.

Q. Do you remember making any reply to the statement 2552 that he had paid you for your property by showing a notice from Mr. Baker that the suit was open again?

A. Yes, sir.

Q. What was Mr. Joy's reply to that?

A. That he had not authorized any opening of the case.

Q. He considered it settled then for all time?

A. Well, there is the statement to the jury that he gave.

Q. His statement to the committee of the legislature you mean by the jury?

A. Yes, sir.

Q. That was a public hearing, was it, before a committee of the legislature?

A. Yes, sir.

Q. Do you know whether the law was amended or not?

A. I think that the jury tabled his application.

Q. That is the committee? A. The committee, yes, sir.

Q. You have been kept so much in court by this company that every body of men you see looks like a jury to you. Now you say the rates on your main building before this structure were 51 per cent., and they have continued to be so on the main building?

A. Five and a quarter I think it was.

Q. And the change that has been made then by the companies, so far as your main building is concerned, is in requiring the 80 per cent. clause to be complied with?

A. They told me if it was not for this structure along there they should remove that clause, and that would have been the same as

to reduce it.

Q. That would reduce the rate if they did not insist on the clause?
A. Yes, sir.

Q. Mr. Jones has already given us the reasons for that. You were unable to give Mr. Baker the extent of your retail trade on

River street?

A. Yes, sir. Q. You don't keep the books, I suppose?

A. No, sir.

2553

Q. And have not for some years given attention to the details of the business?

A. All I know about it is general observation. Q. You know that you had a large retail trade? A. Yes, sir.

- Q. And you know that you haven't that now?
- A. It seems that is the condition of things. Q. And I suppose you know in a general way that it was profitable to you to have it?

A. Yes, sir.

Q. And that you have sustained a loss by losing it?

A. Our trade used to be quite considerable from that point.

Q. And you considered it a good trade?

A. Yes, always.

Q. At least a useful trade in your business?

A. Yes, sir.

Q. As you answered Mr. Dickinson, you received lumber of different grades down in your yard on the river?

A. Yes, sir.

Q. That is assorted there carefully in accordance with the business?

A. Yes, sir. Q. The higher grades of lumber are taken to your mill and dressed and shipped off in what I should call the lumber trade, to different parts of the country?

A. Yes, that is correct.

Q. The lower grades are taken up and made into boxes, and from the lower grades you save such strips as you can to raise the grade?

A. We always strip off what we can to make it into moldings or casings.

Q. For instance, if you have a board 12 inches wide and 2554 one edge of it is knotty or faulty, but there are six inches of good lumber on the other side, you take those six inches off and save them for something better than boxes?

A. Exactly.

Q. And in making your purchase of stock you aim to buy lumber that will have that kind of thing?

A. That is our aim.

Q. One of your sources of profit, then, is in the assortment and saving of good parts of board that are on the whole affected?

A. Yes, sir.

Q. That is practically where the profit is in your business?

A. Yes, sir.

Q. If you did not do that you would not make anything on this lumber?

A. Yes, sir.

Q. That is where the profit is made out of the assortment and

skill used in saving the better part of the boards?

A. There would be a very small profit in the box department alone, it is so close, and it is followed by men that are novices, that practically they run to the wall a great many of them, before they know it.

Q. Now, in addition to boxes, you make bottoms for stoves and

things of that kind by covering the wood with zinc?

A. Oh, yes, that comes in the same category.

Q. And in that, if I remember right, when looking through the mill, when the jury looked at it, you cut those pieces just as thin as possible so as to get as many as you can out of the board?

A. To go into detail, we take an inch and a quarter board and

resaw it and then rip that again.

Q. So that out of an inch and a quarter you get four pieces?

A. Yes, sir.

Q. Do you know whether or not you get more than your com-

petitors in business, one board more?

A. Well, we have been in the habit for years of making two seven-sixteenths boards out of an inch; that is, with the eighth of an inch wide, we take the sawing and the two dressings, which is practically better than most of our competitors do.

Q. Now, this lumber trade is the dressed lumber of the better grades that you send to the different parts of the country, flooring

and stuff of that kind?

A. That is it exactly. That is usually a more desirable grade of lumber and a more expensive grade.

Q. Moldings are something that are cut as ordered usually?

A. Perhaps you get a quarter of a car. Molding is something

that goes into the money very fast.

Q. Now, is it necessary, or at least would it be desirable, in your lumber and molding trade, to be able to store your lumber down near the mill until you would have the quantity that you desired to ship, a car-load, for instance?

A. Could not do it.

Q. I say would it be desirable?

A. It would not.

Q. Where do you put it when you are preparing for a car-load or more, the lumber?

A. We set that out in the shed, but it would become dusty and dirty if we did that.

Q. Is that one of the difficulties now?

A. That is the extreme difficulty.

Q. In storing the molding-you say for half a car of molding you will take two or three weeks to make them, you could 2556 put them out there, but in the meantime they would become covered with this dust?

A. We would not try to put the mouldings out; have to keep

them inside and run over them, I suppose.

Q. Have you storage room inside?

A. No. sir; not to spare.

Q. So that it is a very great inconvenience to you to keep them inside?

A. Impracticable.

Q. You are compelled to do so on account of this structure?

A. We would either have to do that or draw them to the warehouse and fetch them back.

Q. Mr. Baker asked you if you stored large quantities of lumber

at the mill. Have you any facilities for doing so? A. No, sir, only in these sheds. These sheds are used for rough

lumber quite extensively. Q. Can you put dressed lumber there now safely?

A. No, the shed that is next to this large retaining wall-

Q. What are those sheds made for?

A. They are to store the lumber while we are shipping it. The one east of the mill and the one north of the mill is used for storing box shooks.

Q. Then they cannot be used at present to advantage for the very thing for which they were built on account of this dust?

A. No, sir. Well, we pile our rough lumber in there.

Q. But your dressed lumber in shipping you cannot store there? A. That we keep next to the mill outside ready for the car when There is one thing I wish to mention, the fact that we it comes in.

attempted to move our location when we burned years ago. It was represented to us that the Michigan Central wanted to

2557 buy our property and would do it and there was a location we could get to very great advantage up on the river, so we went and investigated, and located fifty acres below the fort, discussed it pro and con., and looked over the practicability of the thing, but concluded it was policy for us to remain where we were because we were central and near home and we had this property which gave us two ground floors and it was convenient and adjacent to our dock property and then we decided to rebuild.

Q. Now, I suppose in deciding upon the location as it then stood, your only object was to secure an eligible site and make money?

A. For a substantial trade that would stay by us.

Q. You had no idea of spiting anybody in going there with a lumber mill?

A. Nothing of the kind. Our trade had been very profitable up to 1882.

Q. Up to 1882, as I understand you, the percentage paid on that land-

A. Was very large.

Q. Was more than on a hundred thousand dollars' worth?

A. A good deal more.

Q. It ran up I think sometimes to \$70,000 a year profit? A. There were two years it went over \$70,000.

Q. That was the net profit?

A. Yes, sir.

Q. Do you know how much money you have been able to take out of the business since that time up to the building of this structure. I believe you gave the amount, \$27,000 and something a year for over 16 years.

A. I find I made an error in my computations. I should have divided by 13 instead of 16, which would have made it \$34,000 a

vear.

Q. That plant has yielded? A. Yes, sir. 2558

Q. Now, before we leave the insurance question entirely, I think Mr. Jones said that after the railroad ran through your yard below,

the rate of your insurance was increased?

A. Very extensively. I think it was about double or more. It was more than double, because instead of giving us a blanket policy, they divided the yard into four sections and we only got it covered on that section and if this section burned the others would contribute to pay a portion.

Q. So that the other sections would practically insure with him

of the section that suffered?

A. Yes; this extra insurance has practically absorbed and consumed, without attorney fees, all the money we ever got from the railroad company.

Mr. Dickinson: You make the jury all look at me? A. Oh, yes, but Mr. Baker ran the thing through.

Q. Mr. Baker worked for you until after the union depot company employed him?

A. That is it.

Recross-examination.

By Mr. Robison:

Q. All you want, if things will stop as they are now and let the lawyers go, all you ask for is just to pay the insurance. That is about all you want, is it not, and that is all you expect?

No answer. Q. Isn't that so? You say the rest of it goes to the lawyers any-

Col. ATKINSON: No, he has changed lawyers.

Mr. Robison: I know, but he is asking for bigger damages than he used to since he has changed lawyers.

Col. ATKINSON: He wants something for himself now. 2559 Q. When did you lease this property to Backus & Sons? A. I think it was leased in 1877 and then it was renewed in 1885.

Q. For how long do these leases run?

A. The 1885 lease for thirty years. Q. A good thing, a lease for \$12,000 a year.

Col. ATKINSON: It was leased for the life of the corporation?

A. Yes, sir.
Q. You leased it to the corporation for the whole thirty years for \$12,000 a year?

A. No, sir, for \$18,000 a year.

Q. \$12,000 for the property down below and \$5,000 for the mill, and \$1,000 for the Fort Street property; that is \$17,000. Where is the other thousand, where does that come in?

A. You did not study arithmetic.

Q. Oh, I am a thousand dollars out. But then a thousand dollars does not count for much in this controversy. You say you don't draw all that out?

A. I draw out what I want.

Q. About how much do you draw out?

A. When I have occasion to I draw out some. They have never

failed to pay me when I wanted it.

Q. Well, they could not help doing that. They make \$36,000 a year profit off it. There is lots of it to draw from. About how much of it did you draw out?

A. I have been in the habit of drawing my salary, and that is

\$3,000 a year.

Q. Then there is \$18,000 more coming? How much of that did you draw out?

A. Well, when I had occasion to use it I have drawn it out. I

have made other investments from time to time.

Q. You have not drawn anywhere near all of it out every 2560 year, have you?

A. No, sir.

Q. Have you drawn a third of it out? A. Oh, yes, a good deal more than that. Q. The first lease was made in 1877?

A. 1877, I think. Q. Now, then, can you not give us some sort of an idea of how

much you have drawn out? Col. ATKINSON: Do you think it is at all material? Suppose he left it all in the business, would it affect this question in any way?

Mr. Robison: Well, it affects his testimony somewhat, it seems to me, and I want to see how much money there is invested in there; 16 years at \$18,000 a year-there must be a pile of his money in there yet. If it isn't a competent question, all right; but I think it is.

Col. Atkinson: I do not see how that can affect anything. I

would like the judgment of the jury on that.

Mr. Robison: Well, we are not taking the judgment of the jury on law questions. You cannot tell how much you have drawn out?

A. I could not tell.

Q. Have you drawn half of it out?

A. Yes, sir. Q. More than that?

A. Yes, sir.

Q. Two-thirds?
A. You better let me up now. I don't know.
Q. There is a big lot of it that the Beckus Company owes A. Backus vet, isn't there?

A. Some.

Q. And you don't know how much?

A. I could not tell you how much.

2561 Q. This \$34,000-I thought it figured out \$36,000 yester. day, net profits?

Col. ATKINSON: \$27,000, he said.

Q. Now, there was this \$34,000 net profit for the last how many years?

A. 13 years.

Q. How much stock have you got in the concern?

A. Not a cent.

Q. When did you dispose of your stock?

A. I sold it in February, 1891.

Q. But you did have very nearly half. Then you are drawing. none of these profits at all?

A. No, sir.

Q. You own none of the stock? That is all owned by your sons?

A. Not for the past year and a half.

Q. How much stock did you own in that? A. A trifle less than half, 5,128 shares, I think.

Q. To whom did you sell it?

A. I sold it to different parties. I sold most of it to my two sons.

Q. What did you get for it? A. I got the par value.

Q. How much was the stock?

A. \$25 a share.

Q. How many shares were there altogether?

A. I may be mistaken. There were 12,000 shares, the amount of the whole capital, and I had 5,128.

Q. You sold yours for over \$125,000? A. Yes, sir.

Q. Did you get the cash for it?

A. No, sir.

Q. What did you take your pay in?

A. I hold notes.

Q. You have those yet?

A. Yes, sir. 2562

Q. You sold it at par?

A. Yes, sir.

Q. It was earning you about \$15,000 a year, was it not, and had been for the last 13 or 14 years?

A. I had a little less than half.

O. And you sold it for a little over \$125,000?

A. I think it come to about that.

Q. Do you know what interest those notes are drawing?

A. Seven per cent., drawn with interest.

Mr. Dickinson: It is only six.

A. Call it six or four, if you like.

Q. I know, but you cannot call it anything. What is it?

Col. ATKINSON: He says they are with interest. Q. I know, but you don't know what rate?

A. I could not tell you.

Q. Do you mean you don't want to tell or you don't know?

A. I don't know.

Q. You got \$125,000 of stock, sold to your two sons, that you don't know how much interest it is drawing? You were getting on your stock nearly \$13,000 a year profits?

A. I never figured it up.

Q. There was \$34,000 profit for the last 16 years?

A. That was before this railroad came in you were getting that?

A. Well, I sold out.

2563

Q. You kind of hornswoggled the two boys?

A. They are more ambitious.

Q. You got your stock into seven per cent. notes quick after this railroad come in? That is not so at all, is it? You didn't try to beat them?

A. I don't want to beat my boys.

Q. No, of course not. Now, this land you have rented down there for \$12,000 a year, do you know of any one else you

could rent to at that price?

A. My investments are made on general principles; the same as the union depot company's are. They have invested their money in the Third Street depot, and do you think that pays them a very big per cent.? But you could not buy it of them for six times what it has cost them, and it has cost them more than my plant did. Do you think you could buy a tract of land from the Michigan Central, right beside me, for \$5,000 a foot? No, sir, you could not.

Q. When you get through this argument, if you will kindly an-

swer my question-

Mr. Dickinson: I think that is a proper answer.

Q. Do you know of any one else that you can rent that land to?

A. I am not looking for it. I expect to make money out of that in the advance of price. I made those purchases years ago because I thought it was a very desirable location and my business required it, and because I happened to draw trumps, and it will get better instead of worse. That location is desirable, and I have a right to hold it at any price I want to.

Q. That is true.

A. If people don't want to buy it, let them let it alone. Q. Have you a price on it that you will sell it for now? A. I mentioned yesterday that \$600,000 would buy it.

Q. Would anything else buy it?

A. No, sir.

Q. Wouldn't you take \$550,000 today, cash? A. No, sir. I don't want money bad enough.

Q. Then you ain't getting much of a rent for it at that price?

2564 A. Well, I am going to get a million out of it by and by. Q. How much would it have been worth if this railroad had not gone there?

A. Our institution would have been worth \$500,000 more today.

Q. How much has it injured your mill property?

A. Practically destroyed it.

Q. Put it in dollars, how much would it be-\$250,000?

A. No, sir, I would not shrink it as bad as that. But it has shrunk, it has damaged the mill property \$150,000.

Q. How much the storehouse up there?

A. Well, I won't bring that into question. I could turn that into

blacksmith shops or something.

Q. Then it has injured your property on this lumber yard \$350,000. That must follow. You say it has injured your property \$500,000 and \$150,000 of it is on the mill. That leaves \$350,000 on the lumber yard?

Col. ATKINSON: That is not exactly what he said.

Q. Well, what did you say?

Col. Atkinson: Can't you recollect?

Mr. Robison: He said that this road had injured his property \$500,000.

Col. ATKINSON: He said if this road had not come along his whole property would have been worth \$500,000 today more than it is.

A. We have made it legitimately from our business. I remember very well that there were two years that we cleared over \$70,000 a year and how many years of that, \$70,000 a year, would it take to make up \$500,000?

Q. What two years were those? A. '80 and '81, I think.

Q. That is twelve years ago now?

Mr. Dickinson: The railroad came through there soon after that.

2565 Q. Well, the railroad coming through your lumber yard down there did not hurt the mill any?

A. Why, most assuredly.

Q. How?

A. It destroys our business; it knocked us right down from \$70,000 a year to \$25,000 or \$30,000.

Q. You got knocked down, of course, but how can you say that the railroad did it?

A. They destroyed my shop.

Q. Your lumber?

A. Yes, sir.

Q. You got pay for that?

A. Where?

Q. From the railroad.

A. Didn't I tell you a little while ago that the insurance and what we paid our attorneys together used it all up?

Q. Well, it is not fair to bring in what you paid Mr. Baker here.

A. Why, it is a fact, gentlemen.

Q. You think it injured your property down there \$350,000?

A. It figures up \$320,000.

Q. And you got \$27,000, was it not?

A. Well, that was the injury on that lumber in that particular place.

Q. How much did you get for the railroad going through there?

A. \$35,000.

Q. They took some of your land there, didn't they?

A. Yes, sir, sixty feet wide.

Q. Right straight through your whole piece?

A. Yes, cut me in two.

Col. ATKINSON: It took about 60 feet by 400, didn't they?

2566 A. Yes, sir.

A. Yes, sir.
Q. That is bigger than your mill, a good deal, isn't it?

A. What is bigger?

Q. There was more land taken out of your lumber yard than the whole size of your mill?

A. Oh, no.

Q. Your mill is how big-how many square feet? There are more

square feet taken out of your lumber yard, are there not?

Mr. Dickinson: In addition to that \$35,000 for passing through your lumber yard, how much did they pay after that for injury to your lumber?

A. \$27,000.

Q. Making \$62,000.

Mr. Robison: That was for injuring your lumber, ruining your business? But that was not anywhere near one year's business that you were allowed in that?

A. That has all been absorbed.

Q. Well, I know, but we are trying to get at what this ought to be, and I thought that maybe this would be some guide. How much land did they take of you down there?

A. 60 feet wide by about 400 feet long. This mill is 238 feet by

318 feet practically.

Q. Well, it turns to wedge shape. Do you know how many

square feet there are in your mill proper?

A. I never figured it up. It is 38½ feet by 150 feet and then about 68 feet a third on the center, it is pretty nearly 300 feet across.

Q. Couldn't you figure an average length and depth?

A. I have not gone into the merits of it. If you want to know practically it is about an acre and a half, I guess.

Q. How many square feet in an acre?

A. I don't know.

A Juron: About 4,250.

192 - 55

2567 Q. Then there are about twice as many feet in the mill property than in that land down there?

A. I should judge so.

Q. But the land through your lumber yard is worth more?

A. I should not look at it in that light.

Q. You call it worth \$2,000 a foot down there?

A. I never have.

Q. Perhaps I am mistaken. Well, \$1,500, but you do not claim the value of your mill property is worth that much, do you?

Mr. Dickinson: Aren't you getting too much arithmetic in

this?

Q. I don't know but I am, and I guess I'll quit on it. You claim they did raise the rates of insurance on your mill?

A. Yes, sir.

Q. But the figures remain the same, the rate?

A. On a part of the mill they raised it three and a half per cent. on the power-house.

Q. On the mill I am talking about now?

A. On the mill it is the same, but they retained that 80 per cent, clause which would have been removed if it had not been for this.

Q. It might have and might not.

A. That was the testimony of Mr. Jones.

Q. Mr. Jones has been doing business for you quite a while, hasn't he?

A. Yes, sir.

- Mr. Dickinson: That does not make a perjurer and a liar of him if he has.
- Q. I am not claiming any such thing as that at all, Mr. Dickinson; but of course we all know that men are prejudiced more or less and biased more or less without being perjurers and liars. Who fixed the values of that property down there? Mr. Jones and you, did you not?

A. We understand the values of the property better than anybody

else.

Q. How much was it insured for before this railroad came along?

A. About \$80,000, I think.

Q. You carried a good deal of the insurance then yourself?

Mr. Dickinson: A good deal of the risk, you mean.

Q. A good deal of the risk?

A. Yes, we could afford to do it then.

Q. How many years ago did you begin business down there at this location, at this mill?

A. In 1872.

Q. You burned up when?

A. In 1882.

Q. You had two fires before that, had you not?

A. I think there were.

Q. Then that is three fires you had there in ten years, and one was a total loss, was it not?

A. Yes, sir.

Q. Three fires in ten years before this railroad came at all?

A. Yes. Our mill was constructed very differently. The exposure was right in the center of the mill. We changed that, and when we put our power-house outside we did away with it.

Mr. Dickinson: You mean your power-house in the center of the

mill?

A. We had the power in the center of the mill before; it was all The shavings are what burned us up before. around us.

Q. You think it is the railroad that is causing these fires in the

northern countries, these great fires?

A. The railroads are setting a great many fires. I have 2569 seen it frequently when I have been on the trains; seen the fire set.

Q. But you did not consider there was any particular danger

from the Michigan Central road right there next to you?

They are on the ground and there is nothing there A. No, sir. There is no exposure there. My exposure is all on that can set. the west side of the mill, away from the Michigan Central.

Q. You have been in Saginaw and Bay City, the great lumbering

district of this State?

A. Yes, sir. Q. You have been along the line of the Flint & Pere Marquette?

A. Yes, sir.

Q. That is one of the roads that runs right into this depot?
A. Yes, sir.

Q. Have you been on their sidings?

A. Passed their sidings. I have seen their siding.

Q. Do you know that there are miles in those two cities where the railroads run right between the piles of lumber, piled as close as they can be, and escape the cars?

A. No, sir, I do not.

Q. Haven't you seen it?

A. No, sir. A mile is a good deal. You say miles?

Q. At least ten miles of railroad in Saginaw, running directly between piles of lumber, piled as close to the track as they can be, in Saginaw and Bay City.

A. I bave never seen anything of the kind.

Q. Well, you would be surprised, then, if you knew that was so?

A. Well, of course I should. I know it is not so.

Q. Of course you are mistaken.

Col. ATKINSON: You probably include the side tracks? 2570 Q. Certainly. I am talking about side tracks, together with the main track.

A. They have side tracks running into the lumber yards and

lumber on both sides.

Q. Do you know that there are at least ten miles in those two cities of solid lumber on both sides?

A. That is immense.

Q. Yes, and there are some mills up there that your mill would not make a good outhouse to, and don't you know that is so, and the lumber is piled up at least for ten miles?

Col. ATKINSON: Have you ever been in Sinaw?

Q. Yes, I have.

Col. ATKINSON: How in the world did you ever get around in

there among the lumber piles?

Q. Well, I rode and I will show you by and by. Do you know that in twenty years there has never been a claim for damage from these railroads from the lumber they run through, not one claim for fire?

Objected to as immaterial.

Mr. Robison: It is material in this way.

Col. ATKINSON: Do you expect to introduce any evidence on that subject?

Mr. Robison: Yes.

Col. ATKINSON: Do you expect to introduce evidence that there has been no claim up there?

Mr. Robison: Yes, sir.

Col. ATKINSON: In this case?

Mr. Robison: Yes, sir.

Col. ATKINSON: I desire to object to the question as immaterial. Mr. Robison: The witness will be here at noon. Mr. Backus has

testified, if the court please, to the great danger that arises from railroads running through his inflammable material.

I don't know whether your honor was in the court-room at the time or not, but he has said that all these great fires or a great many of these fires in the lumber district in the north have been occasioned by engines running through and setting fire, as they passed

The WITNESS: I beg your pardon, but I want to contradict you.

I have never said anything of the kind.

Mr. Robison: I wish the reporter would go back and read that. I think you are a little off. I think you did testify to that.

The Court: Answer the question.

Exception for respondents.

A. I don't know of any claims. But I know of several fires that have occurred right along from my own knowledge.

Q. In Saginaw and Bay City I am speaking of just now.

A. They had a very expensive fire two years ago and it was reported came from the spark of a locomotive.

Q. Who reported that?

A. That was the general report. And that was the impression we all got that it was set on fire-one of their heavy fires, I cannot tell you the particulars of it.

Q. Of course they have had some immense fires up there.

you have never had one caused by a locomotive?

A. Yes, I have. I had a mill burn once.

Q. On this road?

A. No, sir; on the Rome & Watertown road. Q. That is before you came here?

A. Yes, sir.

Q. Before you came to Detroit at all?

A. Yes, years ago. I saw a fire on the Alpena road that burned there, and I helped move the machinery out, and the trunks and things in it. That occurred from the fire of a locomo-2572 tive, and as I told you a little while ago, the fire down there in Indiana burned my fences off for half a mile this fall.

Q. The railroad had to keep it fenced?

Col. ATKINSON: It is a common thing to see a fence burning along the railroad?

A. Yes, a very common thing.

Q. How many years has this road been running through your property down there where there is lumber piled alongside of it? A. Ten years, I guess.

Q. Have any fires occurred down there?

A. I brought a small lumber yard into the court-room, if I remember right, a year or two ago and showed where the fires had burned into that lumber, burned holes.

Q. Have you had any fire down there?

Mr. Dickinson: He has had to watch it all the time.

Col. ATKINSON: Mr. Robison wants to know if you had any actual fires in your yard since the railroad went there?

A. I think we had one.

Q. Did you get the insurance on it?

A. Yes, sir.

Q. Did the railroad pay you?

A. No. sir.

Q. You could not show that the railroad did it, could you?
A. I did not pretend to do so.

Q. You have had fires after the railroad—there is not any question about that-three of them?

A. We had a fire burn our barn last summer set by the railroad.

Q. Where was your barn?

- A. At the foot of Eighteenth-and-a-half street, on the street right The barn was burned and three where this railroad crosses. horses and all our harness and some lumber. 2573
 - Q. You are sure that the railroad set the fire? A. We are sure of it, and we are going to prove it.

Q. When was that?

A. That was a year ago last August.

Q. You are waiting a good while before beginning at that.

A. No, sir, we have begun it. Q. Oh, the suit is commenced?

A. Yes, sir.

Q. Against what road?

- A. This union depot company and the Wabash. I saw fire catch directly from a train on the Bay City road when I was going from here to Bay City two or three years ago. The fire flew and struck in the grass and it ignited, and when the car that I was in got there, there was a fire nearly two feet over right off, right on the It is a very common occurrence to set fires.
 - Q. Well, it is not very common in the city, is it?

A. Well, I don't know.

Q. You have got the most exposed lumber yard in the city. haven't you, so far as railroads are concerned? You have railroads over you and under you and all around you?

A. I guess we are pretty badly exposed.

Q. Your property is of a very inflammable nature, ien't it?

A. It is up there at the mill.

Q. And in your lumber yard also?

A. Not so much so. We keep the lumber piled up away from the track and we watch it. We have a watchman there day and night, all the time.

Q. Yet, during all the years you have been here, with railroads running right around you, as close to you and as many trains as they do on the Michigan Central, you have not been set on fire by them?

A. By the Michigan Central, no sir.

Q. You don't know of any lumber yard or mill burned by railroads in this city?

A. Bridges were set on fire many times.

Q. That is very likely so; that is where the engine would run right along within six inches of the bridge?

A. Yes, sir.

Col. ATKINSON: Not six inches.

Q. A short distance, I will say; it may not be just six inches. There are thousands of cars of pure kindling wood piled up in these lumber vards?

A. I never saw it, and I guess you never saw it.

Q. Of slabs?

A. A thousand cars is a good deal. You say thousands of cars. You are a little extravagant in your expressions. You do not mean anything wrong, probably, but of course it is absurd.

Q. Of course I will admit that at present I am looking through magnifying glasses at these cars. There is a pile of it anyway,

isn't there ?

A. I wish you would confine your remarks, if you please-Q. Do you know of engines setting fire to any of those of your

own knowledge?

A. I have known engines to set fire in a great many places; and a fire will gradually increase and become an immense cyclone of flame, destroying everything ahead of it.

Q. You stated that you attempted to move your location when

you burned out?

A. Yes, sir.

Q. Why?

We were advised that we could get into another location and we looked upon it from various standpoints and concluded it was an impracticable thing. Here, as we are located, we can deliver six or seven or seven or eight loads, I think it is, a day of our boxes and probably five or six loads of lumber, and our neighbor, Mr. Thompson, delivers two loads a day. this was just this side of Thompson where we were locating.

Q. You mean car-loads?

Our location I say is immense on that A. No, sir, wagon-loads. account, being central, and it gives the control of a large trade that we would not have if we were off a large ways.

Q. You built a large warehouse up there to accommodate this

trade?

A. Yes, sir. Q. Have you ever thought that the location of your warehouse on Fort street and your storage of your manufactured lumber there had something to do with that falling off of your retail trade down behind that mill?

A. Oh, no.

Q. That had not anything to do with it at all?

A. Nothing whatever to do with it.

Q. And yet you wonder now that you do not sell as much from the rear end of your mill when you are selling thousands of dollars' worth from the storehouse up on Fort street?

A. I don't wonder at it at all.

Q. And you lay it all to the railroad?

A. We lay it all to the railroad. Q. You say you buy culls mostly?

A. Largely.

Q. Mostly, is it not, that is the lumber that you buy?

A. Well for our box department we buy a low grade of lumber.

Q. It is what you call cull lumber and you saw out the 2576

best part of it to make moldings?

A. That is to accommodate that class of trade. We have to buy good lumber as well. We have to buy a great deal of good lumber.

Q. I understood in answer to Mr. Dickinson, that you aimed to buy a cheap grade or lumber and to use it as you can?

But we buy some good lumber, the upper grades. A. Yes, sir.

Q. Oh, certainly.

A. We buy it constantly.

Q. You are attending not particularly to this box business, are

you?

A. That is what we have to depend on now, but there is not much profit in it; it is a very close business. We rip off these strips and there is really the practical economy of the thing to get something out of a low grade that will sell for a high price. These strips we take off and make casings and moldings and car siding and car roofing. A six-inch strip is perhaps worth more than the whole board would be.

Q. That you dress? A. Yes, sir.

Q. You say you cannot store that lumber in these sheds any more?

A. I did not say anything of the kind.

Q. I mean after it is dressed you cannot store it in there?

A. No, sir.

Q. Why?

A. Because of this dirt.

- Q. But no cinders came from these tracks over on the Michigan Central at all?
- 2577 A. No, sir; never had any trouble from that before in the world.

Q. Don't you think that it is a little remarkable that all these tracks run along there and no cinders come from the Michigan Central at all?

- A. No, sir, it is not remarkable at all. Because the draft up under that bridge—it don't come over here, and those trains coming along there—the locomotive is close to the ground; she is not elevated, but your place is 25 feet above it, and it comes down onto us, and as the witnesses testified yesterday and every day they have been on there, that have been there at all, they see the cinders lying on the ground. It is a very simple thing for you to come down there.
- Q. I have no doubt there are cinders there, but I have grave doubts about no cinders coming from the Michigan Central railroad.
- A. I have been there ten years, and I never saw any cinders come from the locomotive on the Michigan Central track.

Q. Not when there is a heavy east wind?

A. No, sir. Our place is 16 feet high, covered with iron—20 feet—about 20 feet high; that is, from the ground up to the top, and then there is a gravel roof over it, and the locomotive of the Michigan Central is passing away from it all the time.

Q. That is sheet iron?

A. Yes, and then our exposure is on the other side of the mill.

Q. Haven't you made some sheds right next to the elevated road?

Col. ATKINSON: On the front, you mean?

Q. On the front around there; some sheds in your yard?
A. There is a small shed, where we got some saws working, next to the road.

Q. There are some storing sheds next to it?

A. We are working there all the time. You go up there on the roof and you will find these cinders, great chunks of it, such as they showed you. You can pick it up and fill an envelope any time.

Q. Don't you store lumber under those sheds?
A. No, sir; not to store it, to manufacture it.

Q. But those sheds keep the cinders off it?

A. These cinders go right on it; you can come down there and see.

By Mr. BAKER:

Q. When was this hearing before the legislature out at Lansing?

A. Well, it was this past session.

Q. This last winter?

A. This last winter or spring.

O. Mr. Joy was there and yourself?

A. Yes, sir.

- Q. Mr. Joy made an argument before the committee?
- A. Yes, sir. Q. Did you? A. Yes, sir.

By Mr. DICKINSON:

Q. Mr. Robison has asked you about your fire risk down in the lumber yard, and you stated the increased insurance put upon you. Will you state whether the insurance also requires you to keep a watchman night and day?

A. Yes; they do.

Q. Is it customary in a lumber yard to keep a watchman?

A. No, sir.

Q. In addition then to the increased rates, the underwriters 2579 require you to keep a watchman all night and all day?

A. During the night, and during the day our men are there. The premises are never left alone; always some one there on the

Q. Your own experience shows the necessity for that.

A. Yes, sir.

Q. So that you actually do that, and you keep a watch night and day at the mill, do you not?

A. Yes, sir.

Q. You have been asked about the other fires you had when you had your power-house located differently. Now, from your experience of the fires and a planing mill and a risk from fire, is the location of the power-house, as at present, shown by experience, to be the best possible to avoid the fire risk?

A. We spare no pains to make it fireproof.

Q. It is from your experience?

A. Yes, it is.

By Mr. Robison:

Q. You can locate that power-house five hundred feet away if you wish to?

Mr. Dickinson: He has not got the room.

Q. You could almost put it over on your warehouse ground?
A. It would be an additional expense. That is why I tried to

buy Mrs. Stedley's lot. Q. Couldn't you put your power-house right over next to the Michigan Central, where there is no risk at all, and run your shav-

ings over there?

A. You are dealing in sarcastic remarks.

Q. No, I am not. I am asking that as a matter of fact. cannot, and if it is not possible and practicable?

A. It would be an impracticable thing for me because we 2580 are located, and we could not go on and build a new mill.

Q. There is no room over there where you could put a power-193 - 55

house next to the Michigan Central on your land? There is no place for it?

A. No, sir.

Q. So far as running the shavings that distance, you could do it well enough, could you not?

A. Yes, sir.

Q. Run that five hundred feet?

A. Yes, easy.

Col. ATKINSON: Are you speaking of the Michigan Central side of his mill plant?

Mr. Robison: Yes.

By Mr. BAKER:

Q. When did Mr. Jones commence to insure for you, before your fire down there?

A. Yes, a great many years ago. He has carried insurance, I guess, pretty much all the time since we have been there.

Q. He has always been your principal insurance agent?

A. Largely, I guess.

Mr. Dickinson: Have you succeeded in placing this extra ten thousand dollars you are going to place?

A. It seems to have been very difficult, it is not placed yet.

By Mr. Foreman BAKER:

Q. In figuring up your \$34,000 net profits for the last 16 years—

A. 13 years.

Q. Yes, 13 years, do you deduct from your figures every time \$18,000 of rent coming to you?

A. I do not take that into account at all. The way I arrive at my figures. We bought certain property, we built this mill, 2581 we know that this mill has cost so much and I figured in the

mill at \$200,000; then I have invested largely at the north and I have got a large mill up there and railroad and farm buildings, I have got a farm down in Indiana and I have made large improvements there, fenced it nicely and cleared it nicely. I bought it all out of this money. I put these all in, it is all paid for, \$444,000 and I divided by 13, the number of years and it gives me about \$34,000 a year.

Col. ATKINSON: That you have actually taken out?

A. That is the way I arrive at it; I kind of jump at it; of course

there is nothing very definite about it.

Col. ATKINSON: That is from the profit of the mill you bought a piece of land for instance, like that at the foot of Eighteenth street?

A. And my sons each of them have built a good house.

Q. You put a certain price on that, and will give you so much

profit?

Mr. Dickinson: Just what he has paid out, he has said that disjinctly.

Mr. Juror Safford: Do you own on both sides of Eighteenth street?

A. Yes, sir.

Q. There is a brick blacksmith shop on the corner? A. That belongs to Mr. Jones, does it not, this insurance man?

A. I think it does.

By Mr. Foreman BAKER:

Q. With reference to this business on River street, I think it was yourself or some one else replied that that business was worth from two to four thousand dollars net profit a year?

A. Yes, the trade on River street being done at a fraction of the

whole trade.

Q. You estimate it to be worth from two to four thousand dollars?

2582 A. From two to four thousand dollars.

Q. Mr. Krombach testified that some of that business was done now on Twelfth street. What is the reason that all of it cannot be done there?

A. Because he has to carry that lumber out on his men's backs, as I understood his testimony. His customers stop their teams on Twelfth street and they carry this lumber out to them.

Mr. Dickinson: What is the distance?

A. Three or four hundred feet.

Q. Could not that business be done on the Fort Street front?

A. It could be done, but it would involve the expense of getting it up on the elevators.

Q. If it was a business of two to four thousand a year net profits, would it not pay to do it?

A. It probably would.

Q. Another question with reference to that very thing. The business now, you say, is practically destroyed. What becomes of that cull lumber?

A. Well, it is piled up there in the warehouse; it is there now in great quantities. It accumulates all the time. It is a thing of not very much value; it is defective stock and it cannot be shipped.

Q. I understand that. A. We are selling it.

Q. As I understood it, people go down there and get it, small

dealers, pick out what they want of it and take it?

A. Yes, Mr. Krombach is a German, and his trade is among these Germans. They come there, and he has had quite a nice trade independent of our warehouse.

Q. Why don't they come to your warehouse just the same as they

went to River street?

A. Mr. Krombach is not there; he is at the mill.
Q. You have some one at the warehouse?

2583 A. Yes, sir.

By Col. ATKINSON:

Q. Isn't it usual for men requiring that particular kind of trade to come to the mill?

A. Yes, they come very often, every day.

Mr. DICKINSON:

Q. Whatever the rule or convenience is as to coming to Fort street, or to the warehouse, is it the fact that the people that did come there on River street come there no longer?

A. That is the fact; they do not come down there:

Q. Well, whether it is a matter of whim or a matter of taste, the business is lost, is it not?

A. It affects our trade quite materially.

Q. It takes that retail trade that Krombach had?

A. Yes, sir.

By Mr. F. A. BAKER:

Q. Did you say that Mr. Jones owns that blacksmith shop down there?

A. I am told be does.

Q. Mr. Jones testified for you in all your cases, didn't he?

A. I cannot tell you, really.

Q. Didn't he testify on your first condemnation case down there when they went through the yard?

A. He may have.

Col. ATKINSON: No, he was on the jury.

Q. Oh, he was on the jury in that case, was he?

A. Yes, he was on the jury.

Q. Outside of that case, didn't he testify in all your subsequent cases? Wasn't he a witness for you right through?

A. He has been in two cases.

Q. In this case when they tried it both times, and also in the case that involved the injury to the lumber down 2584 there?

A. I think he was.

Q. Now, when they condemned the right of way on that sixty feet they only condemned it for the passage of trains, and not for switching?

A. Yes, sir.

Q. And what you recovered for was because they switched in there for a number of years?

A. They injured our stock. Q. Because of the switching?

A. Yes, because of the switching.

By Col. ATKINSON:

Q. I want to ask you in regard to this Fort Street front. There are two lines of street cars, I think, on Fort street, or two tracks?

A. Two tracks, yes, sir.

Q. Electric cars? A. Yes, sir.

Q. How much space have you on Fort street for doing this kind of business?

A. I think the front is 68 feet.

Q. It would be very small in comparison to the front you had on River street for the standing of teams or anything of that kind?

A. No teams could stand there; they could drive into the yard.

Q. You would have to do that retail trade then in the court?

A. Yes, sir.

Q. Would that interfere with the conduct of your other business in there?

A. Well, we are always contracted; we had no room; we have a great many teams in there, a great many wagons of our own.

Q. Now, have you tried yourself as hard as possible to still 2585 keep that retail trade? Do you think you could manage to do it and have the same profits out of that substantially as you had before, by doing it in the court or on Fort street?

A. No, sir, for this reason: Mr. Krombach has his particular acquaintances and his trade has been exclusively from this other front. Q. Wouldn't he be on the same floor that Fort street would be?

A. No, sir, he is always below.

Q. Now, the storehouse has been running practically as long as the new mill, has it not, built about the same time?

A. The mill was built in 1882 and the storehouse in '85.

Q. And this retail business for some reason, whatever it may be, has not been built up at the storehouse?

A. No, sir.

Q. But was at the mill? A. Was at the mill.

Q. You know that fact, although the reasons for it you may not be able to give us?

A. The reason is, Mr. Krombach has his particular acquaintances;

he is a German.

Q. So that what you lost very largely is the trade that has been built up by Mr. Krombach?

A. That is what has left us particularly in relation to the retail trade.

Q. It cannot be done down there, and is not done? A. It is not done.

By Mr. Baker:

Q. Haven't you got an office at the store-room?

A. Yes, sir.

2586

Q. And a salesman there?

A. Yes, sir.

Q. So that if anybody was to buy anything all they have to do is to go there to the storehouse?

A. Yes, we always send them there.

Q. Do you use River street for your teams and wagons to stand in any?

A. We leave our loads in River street.

Q. What proportion of the traffic up and down that street goes over that viaduct for teams?

A. I could not tell you.

Q. Nearly all of it, doesn't it?

A. Probably most of it.

Q. That is, a man would rather drive up over there than go over the Michigan Central crossing?

A. Yes, sir.
Q. So that leaves that street free in front of you to be occupied by your teams and wagons about as much as you see fit, does it not?

A. Yes, sir.
Q. You would not interfere with anybody if you used it?

A. No, sir.

Q. Before that viaduct for teams was built there was a big traffic right across that crossing?

A. Not very much.

Q. Some of the heaviest teaming was done there?

A. Not much.

Q. Where did they go?

- A. They went up Twelfth street and up on Fort across, they did not run the risk.
 - Q. So that the travel has greatly drifted up to Fort street?

A. The teams all went that way.

Q. Since the Michigan Central crossing became so much used?

2587 A. It was an imperative command of ours not to pass over the Michigan Central railroad with our teams.

Q. With the increased growth of the city and the business of the Michigan Central, that constantly grew, the more dangerous crossing, didn't it?

A. Yes, sir.

Q. And the result was that the traffic went up onto the bridge very largely, even before the union depot was thought of?

A. Yes, sir.

Q. And since then they can use River street and they use it up over this viaduct for teams?

A. Yes. sir.

Col. ATKINSON: So that by building that you have diverted what little teaming there was by your front?

Mr. BAKER: Yes, and we left it for him. It is practically an ad-

dition to his property.

Col. ATKINSON: Mr. Baker's idea is that there is some great advantage to you by being permitted to let your teams stand under this structure. Isn't there an ordinance against it?

A. That viaduct leaks.

Q. Not the viaduct, but the railroad structure, or perhaps you call that the viaduct?

A. I mean the railroad structure.

Redirect examination:

Q. You say it leaks? Under the plans that were adopted and under the ordinance, as I understand it, they were to put pans underneath the viaduct. Have they done anything of the kind?

A. Nothing of the kind.

Q. So that if you should let a team stand there it is liable to have the drippings from the engines come right down upon it?

2588 A. That is a truth. And at the same time teams will not stand there; they will take fright, they are alarmed, and a man has got to hang right onto them and hold them. Even our teams that are there all the time would not stand it. They have to have some constant attention.

Q. Is there any advantage to you—I would like to have you think this carefully, now—that is, is the damage done to you in any way compensated for by the building of this viaduct for teams on

the other side of the street?

A. It is all a perfect nuisance to us. It obstructs our light, takes away our air. We cannot use this plant of ours. We have got to throw it up. We never will be able to carry on the lumber trade. This has been my life's work.

Q. You do not use that passageway for teams yourself?

A. Never have; no, sir.

Q. When it is used, it carries the teams by you each way instead of stopping in front of your mill?

A. Yes, sir.

Q. So that it never could be used for the purpose of trade in front of your mill?

A. No earthly use, sir.

Q. I suppose you have signs on your River Street front?

A. Who would see them now? Q. You had them formerly? A. Yes, we did have them.

Q. Your plans were to do business down there?

A. Yes, that was our ground floor, our main entrance to the mill. All the lumber came into the mill there; and our box department comes in from the other side.

Q. Have you, in making your estimates and in arranging your business, done everything you possibly could to lessen the injury

done by this railroad?

A. We have.

2589 Q. And you consider then the estimates you made conservative?

A. They certainly are.

Q. You have not tried to stretch them or make them extravagant?

A. No, sir.

Q. But you feel your business has really suffered by bringing this structure there?

A. The fact that this road is put there in front of us ruins our business.

Q. Mr. Baker referred to your previous testimony in this case. This is the third trial, I think, of this case?

A. Yes, sir.

Q. So it is the third time you have had to come into court and go through this fight?

A. Yes, sir.

Q. In this particular case?

A. Yes, sir.

Q. I think there were two trials as to going through your yard?

A. Yes, sir, it took nine weeks of our time last year.

Q. Have you had any experience as to whether or not the damage was increased after the trials were over, whether the railroad companies keep their word; whether they do what they say they are going to do at the time the cases are tried?

A. I can explain it and tell how it is. They were going to use locomotives that burned anthracite coal; they were not going to throw fire or smoke, and they brought an engine here from Fort Wayne, No. 35, with an expert to figure it, to show that the locomotive could not smoke.

Mr. Dickinson: Took the jury around on it?

A. Took us down to Delray and back, but she threw fire just the same, although they had an arrangement which threw steam onto the fire, which put it out to a certain extent, and they

were going to have fifty or sixty trains in a day, and it figures up now there are 145 in twenty-four hours; 145 locomotives pass in twenty-four hours, and they throw fire and smoke.

Q. Are they using the kind of locomotives they showed the

jury?

A. No, sir, they are using this bituminous coal; but they have shut off in front of our place, getting ready for this trial.

Q. Did they show the jury with what care they were going to pass your property in shutting off the fires?

A. Yes, they brought an expert here and he showed how it could be done.

Q. How has it been since that time?

A. They have run with their dampers open and thrown fire, and fire is dropping down onto the street; they throw cinders and smoke onto our place, the fire goes clear to the engine-room door, ninety feet away; it struck a man in the face and burned him and burned Mrs. Stedley.

Q. Have they run at all differently since this trial has been going

on?

A. They profess to shut off?

Q. When your property was condemned on the lower piece, you answered Mr. Baker that they should not switch on it, as I understand, that that was the understanding?

A. Exactly.

Q. Did they, as soon as the condemnation was through with, commence to switch?

A. They commenced switching and continued it and I remonstrated.

Q. Although they positively agreed not to do that in the other condemnation?

A. After four years I sued them for damage and Mr. Baker conducted my case.

Q. In this case, too, did not Mr. Joy and others representing this company, claim that these switches were not to be used for ordinary switching? A. Exactly.

Q. On the first and second trial?

A. Yes, they did.

Q. After the structure was put there have they been used for switching?

A. They have been making up their trains right along right in

front of us.

Q. So that I suppose you have no anticipation but what they will use this property in any way they see fit, after they get it?

A. That is what they sought to do and what they are going to do.

When they get possession we can step down and out.

Q. These promises are only made pending the lawsuit to be broken when it is over?

A. Only made to be broken.

Q. "Apples to the eye and ashes to the taste." That is all.

By Mr. Robison:

Q. You are talking about this pile of cinders that is around there, and this stuff that is dropping down all over your yard, and burning the men's faces. Does any of it come from your institution?

A. No, sir, none of it.

Q. Here is this Exhibit "Griswold 7," cinders picked up on the afternoon of the 26th of September around the door of the main mill. Will you just look at those cinders and see if you say those came from those engines?

(Referring to screens in the court-room.)

Q. Look at that piece there. Isn't that a fine charcoal? ing piece out of envelope, Exhibit "Griswold 7.") A. It may be. 2592

Mr. Dickinson: That is the one he pointed out as the piece it had burned.

Q. Look at this one here. Isn't that a piece of pine charcoal?

A. Yes, sir.

Q. And these pieces, and those pieces?

A. Yes, I should judge it was alike. Q. Keep them out by themselves. I want to see how much of Isn't that pine charcoal, all of it? this is charcoal.

A. Yes, sir.

Q. And that? A. Yes, sir. Q. And that?

A. Yes, sir.

- Q. And these, and these pieces I am showing you are all charcoal, aren't they? Try it on a piece of paper and see if it won't mark black, or on your hand. Now, where do you suppose these came from? Do you suppose that one of those engines threw those out?
 - A. I expect they did.

Q. Do you know of any of those engines coming through there that burn pine?

A. I don't know anything about that, I know that they threw

these out into our yard.

Q. Do you think that those locomotives that went over that viaduct threw that charcoal into your yard, or did it come down out of your smokestack?

A. I never saw any come out of our smokestack and I have been there for twenty years. For the past ten years we have a chimney

that don't throw soot.

Mr. Robison: I would like to call the jury's attention to these right here and have them look at the cinders I am showing the witness and see if it is not pine charcoal instead of stuff that came down out of these locomotives. This is the stuff he picked up in front of the mill; these others go with it.

Mr. Dickinson: While the jury are examining that, I will ask you, if when the engine is fired in the yard to start out, it is fired up with kindling?

A. That is the common way.

Mr. Robison: Do they fire them up to start out right in front of your place?

A. No, sir, they get fired up, and when they get out they throw these sparks in front of us.

Mr. Robison laughs.

Mr. Dickinson: That is very amusing, isn't it?

Mr. Robison: Well, yes, I thought it was kind of funny that an engine fired up and saved those cinders until it got opposite Backus'. (To the witness:) Do you say that before that gets fired up enough to get steam up sufficient to go from the yards of this union depot company up there, that the kindling is not burned up yet?

A. It is in nice shape to be thrown out onto Backus' when it

comes along there.

Q. You burn a lot of pine in your institution there, don't you?

A. I have told you a good many times I have never seen anything come out of my chimney. I have got the cleanest chimney in this city; the nearest perfection, the nearest perfect possible.

Mr. Dickinson: You got a smoke-consumer & A. I have got a furnace that burns that smoke.

Col. ATKINSON: What is the height of your smokestack?

A. I think it is 115 feet.

Q. A little higher than the locomotives? A. Oh, yes, a good deal higher.

2594 Col. ATKINSON: Where did you get your charcoal, Rob? Mr. Robison: I found it right here.

By Mr. Foreman BAKER:

Q. You speak about your horses being restive in front of your mill. What is the occasion of that?

A. It is the rumble of the cars overhead. They have not got used to it. If it was in the city of New York where all the teams had to go under this viaduct all the time they would get familiar with it.

Q. That is the point I had in view. Won't your teams, in the

amount of carting you have to do, get used to that noise?

A. Well, they probably will after a while.

Q. It is a fact, isn't it, that just as soon as a horse understands that anything, a noise or anything else, is not going to interfere with him or hurt him any, that he pays no more attention to it?

A. Yes, but in the meantime while we are learning him some of

as get killed.

Col. Atkinson: And I suppose you are constantly changing horses?

A. Yes, sir.

By Mr. F. A. BAKER:

Q. You do not mean to testify there is any substantial interference with your draft-teams going up and down there, do you, from that noise there?

A. The teams will fetch their load in all right because they have

somebody to attend to them.

Q. You do not mean to testify that your draft-teams, those heavy, logy horses, are especially afraid of that elevated road, do you?

A. They do notice it. Q. What do they do?

A. If you leave them without a driver they would go off, get started.

2595 Q. Almost any team would do that.

A. I don't put any particular stress upon that, Mr. Baker.

My teams will get familiar.

Q. You have had a good deal to do with horses in your lumber business, and once in awhile you get hold of a rattle-brained horse that you cannot do anything with?

A. We have got to become familiar with it.

Col. ATKINSON: Let him study law.

Q. It is rare, though, isn't it?

Mr. Dickinson: There is no other place in the city of Detroit that the teams can become accustomed to this elevated road, is there?

A. That is all.

Q. So that if a horse goes down there once a week he will get frightened?

A. That is the trouble.

Q. As far as yours are concerned, they will become familiar with it, because they are constantly there?

A. Yes, they will become familiar with it.

2596

By Mr. Foreman BAKER:

Q. This matter of your lease. Of the rent, you say that perhaps you drew out half that amount and left the rest upon the books, Does that balance stand as an indebtedness against the company?

A. It stands to my credit. When I draw any money it is charged to me, and this matter is credited to me. There is quite a large

balance now to my credit.

Q. That stands as indebtedness against the company until it is paid?

A. Yes, and I am selling them lumber. Our company owes me quite a large bill. I am selling them quite a large amount of lum-I sold them not a great while ago some twenty-five or thirty thousand dollars at one time.

Q. That is all I wanted to know, as to whether it remained as a permanent indebtedness or if, in the course of the year,

if you did not use it, it was brushed out?

A. Oh, no, it comes in just the same as if any of you gentlemen had it, it would be the same. I am treated just like a strangerand I think they sock it to me sometimes a little more than they do a stranger.

Mr. F. A. BAKKR:

Q. How much is the balance on the books now to your credit? A. I could not tell you.

Mr. Dickinson: We will show you exactly by the book-keeper.

By Mr. Robison:

Q. Is this \$34,000 a year a net profit?

A. Mr. Robison, I don't give it in that way. Col. ATKINSON: It is the money drawn out.

A. I simply showed what I have been doing. We built this mill; I completed that work up north and I fixed that over, put up new buildings and everything.

Q. Do you put all of that at cost?

A. Certainly at cost.

Q. Then it is a net profit?

A. It come out of that business.

Q. So much cash came out of the business?

A. Yes, sir.
Q. That does not include your \$18,000 a year rent?

A. Oh, I would not say, I don't know that.

Col. ATKINSON: That is not taken into consideration?

A. No, sir, that is not taken into consideration. I give it in a general way, that the money must have been made somewhere or else it could not have been applied.

Col. ATKINSON: It is the old Scotch rule, that you cannot pay out any more money than you receive.

By Juror CLARK:

Q. Do you think that an engine could be fired up at the round-house, at the Wabash round-house and then make steam enough to run in the depot and not throw the pine kindling that was used in the first place, out, until they began to work hard in drawing a train?

A. Well, it probably—it would be destroyed before it reached our place to a large extent. But a great many of these fires are perhaps

kindled right here close by us in the yard.

Q. I don't think you understand what I am getting at. Wouldn't the pine cinders or charcoal remain in the flues until the engine

began to work hard in pulling a train?

A. It is quite possible. I think it would. When they come up that heavy grade as they are pulling the train up their engine is about in front of us, and then they begin. They have put on the steam, and if they do, of course it is going to throw this coal, and if it happens to be a southwest wind it will throw it onto us. I was down there yesterday, and the ground is covered all around with these cinders.

By Mr. DICKINSON:

Q. How much less do you weigh since they began to harass you?

No answer.

Col. ATKINSON: I want to ask Mr. Backus a question that may be of some importance. The Michigan Central are using their side tracks across the road from you all the time, aren't they, on the south side of River street?

A. They are used for storing their cars.

Q. What I wanted to get at was whether, possibly, these cinders and some of the annoyance you experience could not be accounted for as coming from the Michigan Central on the south side of the street?

A. It could not be possible. These trains are made up at night there; back in on the side of their track, are where the teams come in. There are probably 15 or 20 cars, and when the en-

gine comes along she is away down there. She shoves those cars away, and our mill is there. That engine never comes anywhere near it. She is 300 feet away from our mill.

Q. They are not in the habit of using engines in front of your

mill, that would account for these cinders or dust?

A. No, sir. You could not possibly get an engine anywhere in sight of it. They are away at the end of the train. They take hold of these 15 or 20 cars, pull them out and shunt them in.

Q. I will ask you the general question, whether you can account for the annoyance you have attributed to this structure in any other way?

A. In no other way. There is no other cause or reason.

Recess till 2 p. m.

2.30 P. M.

HENRY N. Backus recalled for redirect examination,

By Mr. DICKINSON:

Q. Have you completed your inventory of the property the with the comparisons of the appraisals of Mr. Spitzley and Mr. Fit and Mr. Kramer?

A. Yes, sir.

Q. You have them there with you?

A. Yes, sir.

Q. In how many sheets have you it?

A. I have Mr. Spitzley's machinery account, marked sheet No. Mr. Kramer put up some of the machinery in the boiler and enging plant which I have put in this shape, and afterwards I have recapillated it to get it altogether.

Q. The paper I now hold marked sheet No. 1, is that an inve

tory of the Backus machinery and tools?

A. The part that Mr. Spitzley assumed to take? Q. The part that Mr. Spitzley assumed to take.

A. Yes, sir

2599

Q. And you have upon the other side the amount of Mr. Spitzley appraisal of the same property upon this sheet?

A. Yes, sir.

Sheet No. 1 marked Exhibit "Backus A."

Q. The total footings in your inventory of the machinery part the property is \$52,734.16?

A. That is correct. That is not all the machinery, but that is a

the machinery in that list.

Q. That is all the machinery that Mr. Spitzley undertook testimate?

A. Yes, sir.

Q. And for that same machinery the items from Mr. Spitzley estimate are \$16,891.90?

A. Yes, sir.

Q. Now, will you take sheet No. 2? That covers what?

A. Sheet No. 2 covers that what Mr. Kramer took—engine boilers, shafting, pulleys, elevators, etc.

Q. And you have taken the other side of Kramer's estimate haven't you?

A. Yes, sir.

Q. The Kramer estimate being \$28,250, and your appraisal of the property is taken item by item, is it not?

A. Mine is taken item by item.

Q. Of the property actually in the mill?

A. Yes, sir.

Q. \$57,703.80?

A. Yes, sir.

Second sheet marked Exhibit "Backus B."

Q. Of course there are a large number of omissions in the Spitz-

ley's inventory?

A. Yes, sir, and there are a few corrections in that as I will show you later, not in accordance with the statements I made the other day.

Q. You have taken them by actual items?

A. Yes, sir.

Q. Now, of the Finn estimate of the brick building, that is the next sheet?

A. Yes, sir.

Third sheet marked Exhibit "Backus C."

Q. The three sheets contain, do they not, Mr. Kramer's estimate of the engine and boiler house, the elevator-house, the store-room, the four dry kilns, the pavement in the yard, excavating, the office and factories, the picket fence, the other fence and sidewalk. Mr. Spitzley's estimate is \$22,612.09, and Mr. Backus' appraisal is \$54,485.42. Now, as to the estimate of the brick-work, of the masonwork, do you disagree at all with Mr. Finn's figures, with his estimate?

A. In a general way it is all right.

Q. But you take that in your inventory, do you not?

A. Yes, sir.

Q. So that the same estimate of Mr. Finn's on the mason-work and brick, \$28,384.08, you take without change?

A. Yes, sir, that is among—

Q. The fourth sheet is the summary of your inventory, and of the Spitzley, Kramer, and Finn inventory?

A. Yes, sir, that is the recapitulation.

Q. This recapitulation shows the valuation of the mill and buildings, mason-work, machinery, power-house, and everything included, at \$193,407.46, and the Spitzley-Kramer-Finn estimate total, \$93,137.17. Upon the third sheet you have made a memorandum have you, of additional price of lumber of 1889 as against 1892?

A. No, sir.

Q. You have not estimated that?

2601 A. No, sir.

Q. Or the labor of yourself, your brother or your father?

A. No, sir, it is not included.

Paper marked Exhibit "Backus D."

Mr. Dickinson: We offer these in evidence.

Q. What is your age?

A. 38.

Q. How long have you been engaged in this mill business?

A. I went in with my father when I was about 17 years of age.

Q. Been at it ever since?

A. Yes, sir.

Q. You have had much of the details of the mill now for how many years?

A. I have practically had charge of it almost from the time I went into it.

Q. You learned the machinery part of 1t, did you? A. Yes, sir.

Q. So you are skilled and can do the work or any part of it, can't vou?

A. I don't know of anything there I can't do.

Q. You have learned it practically from top to bottom?

A. I have. I have had to educate my men, and I have had to reconstruct and improve the machines, and use my ingenuity, and I have worked there diligently, putting in a great many hours.

Q. And have had no other business than this all your lifetime?

A. No active business.

Q. And about how much time have you devoted to it, how many hours per day?

A. You mean courting in the time I have put in the law?

2602 Q. No, I mean in the business itself.

A. Oh, I have put in from ten to twenty hours a day. I have worked all night sometimes, haven't gone home at all.

Q. So that your life has been devoted to this business in every

detail?

A. Yes, sir, that was years ago, when I was getting the business upon its feet.

Q. And of late attending to the business for the last five or six

years, how about the hours you have put in per day?

A. I have put in all my time. Sometimes I would go there before breakfast, and sometimes after breakfast, and remain there until noon, and then go to dinner and return, and remain there until night.

Q. When was this storehouse erected?

A. My recollection is 1883, right after we rebuilt the mill. I may

be mistaken in the year, but that is about the time.

Q. So that the whole equipment after it started to run, the running of the lumber yard, with the storehouse, and with the mill-A. Yes, sir, the three were built for one plant, for one purpose.

Q. Now, will you explain to the jury what you know—you are about the mill at all times, aren't you?

A. Ordinarily.

Q. You usually keep the men as long as you can; the skilled men have been with you for many years?

A. Yes, sir, the majority of our men have been with us from 15

to 25 years.

2603

Q. Will you please tell the jury what you know of this retail trade, of which something has been said, prior to 1892?

A. You mean on River street? Q. Yes, sir, on River street.

A. I know as a matter of fact it has all left us. I stated that the other day.

Q. But what was it prior to that time?

A. We had a very nice retail trade there which took away a certain class of stock which is very hard to sell anywhere else.

largely the offal, we might say, of the mill. I don't mean the shavings, and sawdust, I mean the stock. For instance, if we were filling a car with wainscoting, if there were some pieces that had been stained with sap, or not turned at the edge, we could sell it there where we could not ship it and could not sell it in our warehouse. As a result, we have had to stock it up in our warehouse, and it is utterly unsalable there.

Q. Prior to the building of the superstructure, did the teams go

down there to the mill, as a practice, for that trade?

A. Yes, sir, we had a very nice trade there.
Q. To whom would they apply for those goods?

A. Those were customers of our foreman, Mr. Kronbach, and friends of the men in the mill. It was that class.

Q. That invariably went to the mill?

A. Would not go anywhere else.

Q. Did that class of trade ever go to the storehouse?

A. No, sir, there has not been a single customer ever gone there since.

Q. Did they go to the storehouse before the building of this

structure?

A. No, sir, it is a different class of trade entirely.

Q. And yet the storehouse has been running practically ever

since the mill has been running, since the fire?

A. Yes, sir, that class of stock does not encourage the 2604 trade of our warehouse. We dislike very much to take it over there.

Q. But you have had to get it out of the way? A. Yes, sir, or have it absolutely ruined.

Q. Was the trade sufficient to remove that class of goods from your mill prior to the building of this structure; was it sufficient in volume to relieve the mill of that class of goods without storing it?

A. We always got rid of it, and in addition to that, we sold

through that a good deal of other stock.

Q. So that the customers who came to the mill was an entirely different class of trade from those who went to the warehouse?

A. Yes, sir. We had our advertising dodgers on our fence there; we had it painted on the fence to catch the people going by, and we caught a good deal of trade in that way.

Q. What did that trade amount to?

A. I heard father state here from \$2,000 to \$4,000 a year, and I should think that was a very conservative estimate.

Q. The gross amount of the trade?

A. Oh, I should think the trade there would amount to \$15,000 or \$18,000 or \$20,000 a year. It is pretty hard to tell.

Q. Does that trade still exist?
A. No, sir, it is cut right off.

Q. It is gone?

A. Yes, sir. There has been one exception. One of Kronbach's customers came down and told him that he would buy some stock if he would back the lumber up to Twelfth street, he would take it then, but I don't think he has been there since.

195 - 55

Q. This class of lumber, what do you do with it now?
A. We draw it over and stack it up in the warehouse.

Q. To get it away from the mill?

A. Yes, sir.

Q. Is it there now stacked up in the warehouse?

A. Yes, sir, and it is absolutely unsalable in that place.

Q. What is it made up of?

A. It is made of this ceiling, the car sidings, what we call rejected stock, that was the stock we sold down below. The long lumber we can sell more readily in the warehouse. If we shipped a car of ceiling we would always have a certain amount of that material left over, and that was the material that was accumulating on us down below.

Q. Have you examined to see whether any of that custom comes

up to the warehouse?

A. I have asked Mr. B——, the foreman of the warehouse, and he has repeatedly told me he didn't get a particle of it from any of his customers. They naturally would not come that way, because they are customers of the foreman, Mr. Kronbach, and they would not have any special object in going to the warehouse.

Q. Now, in the practical running of the mill what class of work, give us some idea, briefly, of the class of work you did there with

this fine machinery up to 1892.

A. It has always been our aim to court the better class of trade, such as moldings, facings, picture molding and fine finished work.

Q. Inside work?

A. Yes, sir, inside work and not altogether house-work, but picture-frame moldings and that class of material, and it has gotten to a point, and has been for some time, that I don't court the trade any longer. I just simply can't do it and I let up on it. I don't try to get it, don't solicit it.

Q. Why have you stopped?

A. I can't make it. I can't work it to any degree of advantage at all.

Q. Why?

A. Because we can't get the light right. We can't get the members of the molding right, and if we should get a car out I know it would be thrown on our hands. We don't care to try the experiments any more.

Q. In what way is it affected?

A. In the picture-frame work you have got to have perfect work. Your members must be perfect. They must fit. We must have the very best light, and the very best tools and machinery. We have the tools and machinery, but we haven't got the light.

Q. You have to have the very finest adjustment of these tools,

have you not?

A. Yes, sir.

Q. Accurate adjustment of the fine knives?

A. Yes, sir.

Q. And you have fine tools for making picture-frame molds and inside work of all kinds?

A. Yes, sir. Only the other day we were working on some teninch baseboards, and Mr. Kronbach said he would run out about thirty pieces, when he thought something was not right by the feeling, and he took a piece and went out and looked at it in the daylight and sure enough the edges were all split. The knives got out of trim, and he didn't notice it at first. And that happens quite frequently.

Q. Did you have a large trade in this sort of goods?
A. Yes, sir. That is where we looked for our profits.
Q. The box factory was to work up the odds and ends?

A. We have always aimed to select what we call a rich stock, stock that would run with good edges, no matter what the grade of the lumber was. In shipping we could use these good edges,

2607 that is worked up into this fancy material, and the refuse, the remainder of the board after we ripped off the good edge, goes into the box-work. Now we have to buy sufficient quantity of stock to make up, in order to work that up, the box lumber.

Q. Your aim was, when you did the finest of work there, to work

up everything even down to your dust and utilize that?

A. We sell our sawdust and shavings and kindling wood and

everything.

Q. So that every particle that came from your wood went into the hopper for sale?

A. Yes, sir.
Q. And what did you burn in your furnaces?

A. When we are running as we ought to, we run about half of our shavings, occasionally we burn sawdust.

Q. You don't burn pieces of wood at any time?

A. We burn our kindling wood sometimes, no hardwood.

Mr. Robison: The testimony was the other day that you ran in chunks—

A. No, sir, we never testified that we run in all of them, that was

the kindling wood.

Mr. Dickinson: Will you please state whether this effect has come upon you since the superstructure was erected and the rail-road passed by you there with these trains?

A. You mean the disturbance to our business?

Q. Yes, sir.

A. Most assuredly it has.

Q. Has that been the cause of your giving up of the fine-work trade?

A. Nothing else has caused it. I should be very glad if I could handle it, to go back to it, because it is the most profitable part of our business. It don't fill up our mill. When I go to Bos-

2608 ton and New York and Philadelphia, I am offered this trade right along, but I know I cannot take it. We cannot do this fine work any more.

Q. Is competition sharp in that trade?

A. Not so sharp as it is in the coarser stock. It is sharp enough,

perhaps, but I had rather get out one car-load of the finer work than several car-loads of the coarser finish.

Q. What other causes besides the proximity of the elevated road

are there to interfere with that business?

A. We can't pile any of our stock as we used to do before, as we always have done ever since we built the mill. We have three sheds. In the shed near the mill on the east side we always got out this stock by the car-load, and perhaps it would take a week before we got a car-load ready or until we got the order completed, and the interstate commerce, or rather the car service bill, as it now stands and has stood for several years, is a pretty severe thing on us, as it does not allow us to hold a car on the track but two days, or 48 hours. If it is on there an hour longer we have to pay our dollar a day car rental, and as a result, it necessitates our piling our stuff there and getting it all ready to ship, and then put it in the car. But I don't want any of it now. I could not pile it out there now, it would soon be ruined. It would be utterly impossible to do it on account of cinders and soot.

Q. Have you had any affected so that you had to reject for shipment your stock on account of the soot upon it or cinders upon it?

A. Oh, yes, sir, we have had to throw it right out, send it over to the warehouse with the rest.

Q. Have you a lot of that stock there with the marks upon it?

A. We have quit that long ago.

Q. Have you any of it in the warehouse now that has been thrown out on that account?

A. I think so.

Q. Have you had any difficulty that did not exist before from the grit getting into the machines, in this fine work—the cinders?

A. We haven't for a number of years had any such experience as we have had latterly. We had something similar to it in the yard some years ago when we had our trouble there, but we now have this stuff get in the mill, and of course when the knives get nicked, it is all up with us on that.

Q. Have you had considerable trouble with that since the elevated road was built?

A. We have been seriously affected by it.

Q. In this pine lumber that comes clean from the yard?

A. Yes, sir. The way we have difficulty to handle our business at the dock is to bring our lumber from the dock as much as possible, bring it up and rip it and put it in the mill and even in the process of ripping it accumulates there; but our greatest trouble is not with the rough lumber; our greatest trouble is with the lumber after it has been worked and in the process of working.

Q. Then you are entirely satisfied, Mr. Backus, that you cannot carry on the fine work there to advantage or profit at all as you

formerly did, and out of which you made the profit?

A. I don't think that man lives that can. I have been all my life at it and I must say frankly that I cannot now handle it. I don't see my way clear to do it. It does not give us any storage. We

cannot pile it outside any more, and we haven't room to pile it inside. It is an enigma to me.

Q. Were you ever troubled with cinders or soot prior to the build-

ing of the elevated road, upon your lumber?

2610 A. Not there; no, sir. Q. About the mill?

A. No, sir, never. I have never seen a locomotive in the Michigan Central yard across the way in all my experience of twenty years or since the tracks were put in there.

Q. That is the yard below the Michigan Central crossing?

A. Yes, sir, that is the yard on the south side of River street, way over past the viaduct. There is a track there which goes through from the Michigan Central to Delray, which the Exposition trains went through on.

Q. How far over is that?

A. That must be 400 feet from the mill. Q. That is over near the elevator there?

A. Yes, sir, close to the elevator, near the river; I think they come there at certain times, at noon or at night; they put one car through from the Michigan Central to the Wabash and they take the car out at Eighteenth street and it comes up the trestle to the depot.

Q. How do they get their cars in?

A. They start up above with their engines, perhaps with ten or fifteen cars, and hitch onto them and pull them out. The engine does not come in there. I never saw an engine in there in all my experience.

Q. And they never run through under full headway?

A. They could not. There is a bumper behind each track at Twelfth street, perhaps three or four hundred feet that side of us. Across the other side is the Wabash and they have reverse bumpers. A bumper here and one there.

Q. Were you not formerly troubled with cinders and smoke from

trains running by on the north side?

A. We are so arranged that we have never had any inconvenience from the Michigan Central in any form that I know

of.

Q. And you have now between you and the Michigan Central yard the superstructure and the viaduct for teams, between the yard and the Michigan Central yard opposite?

A. Yes, sir.

Cross-examination.

By Mr. Baker:

Q. As I understand, these sheets of paper you have submitted here show that your estimate is substantially \$100,000 more than Spitzley's and Kramer's.

A. I don't know anything about it. I have not compared the two

at all in that respect.

Q. Aren't these your figures?

A. Yes, sir, but I haven't noticed the difference. Practically, yes. over \$90,000.

Q. You think Spitzley and Kramer are out of the way \$97,000? A. Yes, sir, I know it. I don't think it, I know it.

Q. And your estimate of the brick-work is just the same as Finn's?

A. Well, I will tell you. I am not a brick mason, and I was with Mr. Finn when he was down there most of the time-

Q. Just answer my question. Do you take, in making up your \$193,407, Mr. Finn's estimate of the brick-work?

A. Yes, sir.

Q. So that there is a difference upon the wood-work and the machinery between your estimate and Mr. Kramer's and Mr. Spitzley's.

A. In that neighborhood; yes, sir. Let me take that paper a minute and I will clear myself upon that point. I don't wish to testify to anything that is not so. That is the way I make it, if my figures are correct, I mean to say, if I have figured it correctly.

Q. You have it all added up there, haven't you?
A. Yes, sir, it is all added up. 2612

Col. ATKINSON: Give me the total of Spitzley's and Kramer's and Finn's estimates, please.

A. Spitzley and Kramer and Finn's total estimate is \$96,137. Mr. BAKER: And Mr. Henry Backus' estimate for the same thing

is \$193,407.46?

A. I don't say that would build the mill.

Q. About how many thousand dollars did you leave out of that?

A. What do you mean?

Q. You say it would not build the mill; how many thousands of dollars did you leave out of that?

A. I meant to make that in a conservative way. I say in my

opinion that would not build the mill.

Q. How much would it lack of it? \$100,000? A. I think you might safely add 10 per cent.

Mr. Robison: That would be \$19,000.

Mr. BAKER: You would add \$19,000 to that?

A. Yes, sir; after you take my time, my father's time and my brother's time-

Q. Did anything else get away from you?

A. No, that is-

Q. You would add \$19,000 to that; that would make \$212,000?

A. Well, from 5 to 10 per cent.

Q. Which will you have it, 5 or 10 per cent.?

A. I say from 5 to 10 per cent. I cannot state that. I have not allowed anything for my own time, or my father's time or my brother's time, and we were there and the firm paid our time as salary.

Q. Can you tell us how much of that is for higher prices than

what the Spitzley inventory is?

1559

A. You would have to figure that out yourself, Mr. Baker;

Q. You can figure it out from these sheets, can't you?

A. It would be a pretty hard thing to do. I am worked to death

and I am not going to work any more.

Q. We will take a sample or two. Mr. Spitzley puts in four large planers, 30-inch planers, at \$6,400, \$1,000 apiece; you put those same planers in at \$2,000 apiece?

A. Yes, sir.

Q. Can't you buy the planers for \$1,600 in Boston?

A. I don't think so.

Q. Have you any reason to doubt that? What did you pay for them?

A. I can't tell you. I know the insurance company paid us in

1882 \$2,200 apiece for them.

Q. Mr. Jones adjusted that for you?

A. No, sir; we had a disinterested party make the adjustment.

Q. He was the agent who represented the companies?

A. I cannot say as to that.

Q. Do you mean to tell us that you have made up this estimate and you don't know what one of those planers would cost today?

A. They can't be bought for less than \$1,600.
Q. That is what I asked you, if they could not be bought for \$1,600. You just testified they could not be bought for that?

A. I did not—

Q. What did you testify to?

A. I said the machines would cost more than \$1,600.

Q. Do you know, Mr. Backus, what you can buy one of those machines for?

A. I have figured on \$1,600-

Q. Answer my question. Do you know what you can buy one of those machines for?

Q. Did you in making your estimate assume Mr. Spitzley was correct?

A. No, I assumed the price of the machine was \$1,600.

Q. Do you know what the freight is on one of them from Boston?

A. About \$65 or \$75.

Q. And the balance of your estimate of the \$400 is for taking it down to the shop and setting it up?

A. Exactly, and in addition to that the improvements we put

upon it.

Mr. Dickinson: The equipment? Mr. Robison: He said improvement.

A. Yes, sir, and the improvements. There is a molding machine there. Those things run into money faster than you comprehend. If you were in our business you would soon find that.

Q. Take one of those big planing machines, what equipment have you got on it? You talk about equipment; what is there you have

got on it?

A. We have made a very heavy foundation. We dug a very deep foundation.

Q. That is a part of your mason-work?

A. No, sir, not our mason-work. No stone about that at all, or brick.

Q. What is it?

A. Oak timber bolted together.

Q. How many feet of oak timber in that framework?

- A. Oh, there would be six or eight cross-ties at the bottom, then they would be probably eight to ten feet long, and then there would be some other heavy oak timbers lengthwise again, and they would be all bolted together. It is not the expense of the lumber so much as it is the labor.
- Q. Do you wish this jury to understand from your testimony that it would cost \$325 to set up one of those machines after you got it here in Detroit?

A. Oh, no, not the setting up alone.

Q. You say \$75 for freight. Of your \$400 that leaves \$325 just for taking one of those planing machines and setting it up down there. Do you wish to be understood that way?

A. No, sir.

Q. Where do you get that value?
A. There is the freight and the cartage and the setting up-

Q. You have figured the freight-

Mr. Dickinson: Let him answer.

A. I started to say we pay freight or cartage, we have to unload that machine and dig out this trench, and put in these foundations, which is a big job. We put the machine in place, and we have to line it up-

Q. What do you have to pay a man to excavate there?

A. It cannot be put up for one cent less than the price I have named, and I would not take the contract to do it for that,

Q. You include the shafting in that, do you?

A. No, sir, I do not.

Q. What do you include in that? There are \$325 not accounted for, and I would like to have you explain that.

A. You cannot do it short of the amount I have put on it.

Q. You ought to be able to tell us where that money comes in, where you would spend it. You certainly can build a very heavy timber foundation for \$100 for one of those machines. You can buy a good deal of oak timber for \$100. Now, how many cubic feet of timber would you have in there?

A. I don't know. They are pretty heavy. Q. What size of timber are they?

A. I think the top timbers are-I was noticing one the 2616 other night-about two and a half wide of oak.

Q. How deep are they?

A. They are about eight inches thick, very heavy timbers.

Q. And two feet wide? A. About two feet wide.

1561

Q. All one piece?

A. All one piece, that one ! speak of.

Q. How big is that?

A. As near as I could state now, it would be about 24 inches wide and about eight inches thick.

Q. How long?

A. Sixteen feet long.

Q. What is that, the top bed-piece, or what do you use that for?

A. That is the top piece the machine sets on.

Q. That is what I say; the top bed-piece. A. Yes, sir.

Q. You cannot tell us how many days' labor there would be on it or how much the timber would be?

Q. That is just a rough estimate of yours?

A. No, sir, it is my judgment. I am willing to swear to it. I have sworn to it.

Q. You cannot give us the details further than you have, can you?

A. I have simply stated it would cost that much money.

Q. Did you ever keep track of the amount it would cost to take one of those machines and set it up?

A. It would surprise you.

Q. Did you ever do it when it was being actually done?

A. I have always had an opinion of it and I gauge myself according to that. You will find I am not far out of the way. 2617 Mr. DICKINSON: Is that the thirty-inch machine that Mr. Backus ordered made first?

A. Yes, sir.

Mr. BAKER: Now, Mr. Kramer made an estimate on the building of \$2,131?

A. Yes, sir.

Q. And your estimate on that is \$4,997.65?

A. Correct.

Q. How do you make that difference?

A. I took 45 off; he took 50 off the latter, and I took 45 off, and 50 and 10 off the rubber.

Q. Did you call it the same amount?

A. No, sir.

Q. How much more did you make than he did?

A. I think I gave you the amount of feet in my testimony the other day.

Q. You don't remember now? A. No. I had it all made up.

Col. ATKINSON: Are these the correct measurements of the buildings?

A. Yes, sir.

Mr. Baker: You have a couple of matchers that Mr. Spitzley puts in at a thousand dollars apiece, and you put those in at \$3,400 apiece?

A. Yes, sir.

Q. They are 14-inch, are they?

A. Yes, sir; 14-inch flooring machines and molders.

Q. What is that \$700 for on each one? A. He can't buy it for a thousand dollars, or I either.

Q. How long since you bought one of those?

A. Those machines are worth-

- Q. Just answer my question. How long since you bought one.
- A. We have not bought one for about eight years. Q. How much did you pay for it?

A. They cost us all of \$1,400.

Q. Do you remember what you paid for them?

A. Yes, sir.

Q. How much was it?

A. You can't buy one of those machines-

Q. How much did you pay for those machines, if you can tell us?

A. We did not pay less than-

Q. I am not asking what you did not pay. I am asking you what you paid for them.

A. I don't know the exact figures. I know they can't be bought

Q. How do you know they can't be bought today?

A. Common sense tells me so.

Q. Is that all?

A. No, I know from my own judgment. He probably went to Mr. Foot, or Mr. Jenks, and asked him the price of a matcher, and he probably told him a thousand dollars. That is no criterion to go by. You will find they are worth every cent I have put them I had Mr. De Mann down with me to the factory, and he went off to the factory and looked this over with me-

Q. Just answer the question, please. Mr. Spitzley has an estimate here on 70 rip and cut-off saws at \$769. You say there are

30 of those, and they are worth \$3,000?

A. Yes, sir.

Q. How much do those machines cost?

A. We got those ourselves. I got them up myself. Got up the mechanism, the tools and everything.

Q. Those are your own estimate of what they are worth?

A. It is a very conservative estimate on them, indeed. I don't think the machines could be replaced for that much money. \$100 is too low for them, but that is what I put them in at.

Q. They are not anything you can buy in the market?

A. No, sir, we have not very many machines that you can buy in the market.

Q. Most of those machines down there you make yourselves?

A. Yes, sir; but not all of them. We have made a good many, and if I were to sell them I could sell them readily.

Q. Mr. Spitzley says this band-saw filer costs \$75 in Buffalo; you put that in at \$250?

A. Yes, sir.

Q. How big a machine is that?

A. It is a band-saw automatic filing machine.

Q. Cost \$75 in Buffalo?

A. Yes, sir, on cars in Buffalo.

Q. Where do you get the rest of that expense? What is the freight from Buffalo up here?

A. Three or four or five dollars.

Q. Now, where is the rest of this \$250?

A. The rest is in putting in this machine. In buying the machine, you don't get one-fourth of it. You will have to add pretty near four times as much to it. That is not a complete machine. We have to build the walls it runs on, the bracings, and the frame. We have got to counteract that down. We have to get the anvil and a plane and the frame and the bench for bracing our saws and filing them and hammering them. That includes the whole outfit for that department.

(). So that the equipment and the frame costs a great deal more

than the machine itself?

A. In that case a good deal more.

Q. You testified there was a rounding machine, which you use for turning, and you estimate that at \$300. Is that just an ordi-

nary lay?

2620 A. No, sir, that is a regular machine with feed-rollers. It is a very expensive and very intricate machine. A very complicated machine, and we have five or six extra heads with that, that cost me \$25 a head.

Q. All it does is to turn a piece of wood round?

A. Yes, sir, it makes it round before it gets through with it.

Q. You estimate the boilers down there at \$7,000?

A. \$7,000.

Q. How many boilers have you got?

A. Four.

Q. What are the boilers themselves worth before they are set up?

A. They are worth about—that is, without the mud-drum or without the breeching they are worth in the neighborhood of six or seven hundred dollars apiece; that is, the iron boilers. We have since put in steel.

Q. And the balance is for setting them up?

- A. The balance is for the setting of them up, and the fittings. There is a great deal that goes with them.
- Q. And that costs a good deal more than the boiler itself does?
 A. Oh, yes, more. I don't think I could replace it today for that.

Q. Did you effect this insurance with Mr. Jones?

A. No, sir.

- Q. Who did?
 A. I have nothing to do with the insurance. My brother did that.
 - Q. Newton? A. Yes, sir.

Q. You don't look after that at all?

A. The only thing I know about the insurance is that we were

insured two or three years ago in these wildcat companie these mutual companies of Minnesota and Wisconsin, an they all failed, and we found ourselves without any insu ance, so made up our mind we did not want any more wildcat in surance.

Q. When did you get good insurance?

A. We have had it ever since.

Q. When?

A. Two or three years ago.

Q. Did Jones get this wildcat insurance for you?

Q. What did you have when you burned up there in 1882?

A. We had good insurance at that time.

Q. But you quit Jones at one time?

- A. We insured in these mutual companies at one time. Q. You have had insurance all the time with Mr. Jones?
- A. No, I think there was a time we didn't have any with Jone Q. I suppose you took that mutual insurance because the rat they charged was a good deal cheaper?

A. Yes, sir, that is it, and we found we had no security.

Q. It was cheap all around, at both ends of it?

A. Yes, sir, and both ends were cheats, too, I think. Q. So you went back to Mr. Jones and he has placed it all since

A. No, sir, he has not handled it all himself.

Q. Who else has handled it for you? A. Three or four parties.

Three or four parties.

Q. You have a great many companies, haven't you?

A. I believe so.

Q. How many policies have you got?

A. I could not tell you. It is out of my department.

Q. Your brother handles the finances and the insurance, I sup pose?

2622 A. Yes, sir, ordinarily.

Cross-examination.

By Mr. Robison:

Q. What is the difference between you and Mr. Spitzley on th

estimate of the buildings alone?

A. If you will let me take that sheet of paper. We went through these and took them as accurately as we could. It is as near correct as I could possibly make it. Mr. Spitzley's total of the building was \$22,612.09. Mine is \$54,485.42. I say buildings, you under stand that includes other things besides the buildings proper. It the total amount of this estimate. It is what Mr. Spitzley has lef out, in addition to the difference in the estimate.

Q. Can you tell how much Spitzley left out?

A. He left out the sewers and the pavement of the yards-

Q. Can you tell how much he has left out?

A. No, sir.

Q. Mr. Spitzley said, did he not, he would put up that building for a certain amount of money?

A. No, sir, I don't remember his saving that. He may have said

so, but I don't recall the circumstance.

Q. Did you estimate the amount that this building was worth, on the same matters or the same things he figured on?

A. No, sir, he has left out much of it.

Q. What did he leave out? A. He left out the pavement of the yards-Q. How much is that?

A. That is \$1,800.

Q. Will it take you long to tell what he has left out?

A. No, it is not much of a job. These is excavating, \$9,000. That is where we built the mill, where the tracks are and where the mill is. We remember distinctly what that cost 2623

Q. That is included in your \$54,000?

A. Yes, sir.

Q. Has any one else given any figures on the excavating?

A. No, sir, that is what it cost us.

Q. Did you pay \$9,000 for digging down there?

A. Yes, sir; we recollect very well when we did it what it cost us, and it could not have been done for any less.

Q. Where did you dump that dirt?

A. We carried some of it in the Fort Street front, some of it in the docks. We made just as short hauls as we could make. Mr. Dickinson: You excavated about an acre of bank?

A. Yes, sir; we had to excavate the whole bank where the Fort Street end comes up in order to get the advantage of the two floors.

Mr. BAKER: There is a bluff there?

A. There was a very high bluff there, and also where the tracks are we excavated. And sewers, \$1,000.

Mr. Robison: That was included in this other man's estimate? A. No, sir, he states in his testimony he did not include it.

Q. Mr. Kramer says he did?

A. He says he didn't. He said it included the water pipe to the river.

Q. Well, a thousand dollars for sewer?

A. Yes, sir. Now, there is 80 feet of eight-foot picket fence and gates on the Fort Street property, \$60; 176 feet of board fence on the west side, \$70.40; 75 feet of sidewalk, \$18.75. And then there is our office fixtures complete, \$15,000.

Q. That is something Mr. Spitzley puts in at \$3,724.54? 2624

A. Yes, sir.

Q. And you make it how much?

A. \$15,000.

Q. For that little office down there?

A. That is not a little office. That is a nice one. That includes the fixtures and everything. It is finished as nicely as any building I know of.

Mr. BAKER: That don't include the brick-work?
A. That includes everything.

By Mr. Robison:

Q. Mr. Spitzley puts in the carpenter-work at what, in the office? A. He puts that in at \$2,700. He does not put in anything for lumber. I suppose he includes that in the carpenter-work. I think we paid Richmond & Harris, as fine carpenters as are in the city, or anywhere else, I think we paid them pretty near that amount for the carpenter-work, and we furnished our own material. He puts in the painting and glass at \$384. And he charged us for one of those little things himself, in the office, over \$250 for it himself, and he puts in the total paint and glass at \$384.25. Decorating and painting, \$300. We paid the man who did the decorating over \$300 and we furnished all the material. There are four or five coats of lead upon it, and the ceilings are all decorated, which you have seen, undoubtedly, and he puts in a charge of \$44 plumbing, and gas fixtures \$207. I put in a new closet-room last year that cost me \$140 besides the plumbing. And my gas fixtures have cost me more than he put in. Mr. Spitzley mistook the cornice on the office for wood. He thought it was wood; it is galvanized iron and cost me \$350.

Q. About how much a foot is it?

A. Oh, I should judge \$2.50 or \$3.50 a foot.

Q. Is that what it cost?

A. About what it cost. Marble mantel he puts in \$75. We have two marble mantels, he only got one, and the two cost us about \$400.

Q. How large is that office?A. It is about 28 x 40, I think.Q. How many stories high?

A. Two stories.

Q. 28 x 40, two stories high, and it cost you over \$15,000?

A. Understand it is very expensive-

Q. It cost you \$15,000, did it?

A. Yes, sir.

Q. Mr. Spitzley's estimate, at any rate, down there is \$32,000 too small; you have it at \$54,000 and he has got it \$22,000?

A. I have not figured the difference.
Q. He makes a difference in the lumber?

A. He makes a difference in the lumber.

Q. Mr. Spitzley is a pretty good judge of lumber?

A. He is under certain conditions.
Q. He has got the lumber too low?

A. He has not got it correct or anything like it.

Q. And you think he has a fair price for the putting of the building up, the construction of it?

A. What do you mean?

Q. By days' work, do you think he has a fair price on it for that?

A. He has not put it in in that form.

Q. Do you think he has included in his estimate a fair price for

labor?

2626

A. In certain things he has. He says lumber and labor so much. I stated the other day that maple flooring could not be laid for \$27. It is worth \$38. Mr. Dupont will tell you it is worth \$38.

Q. If Mr. Spitzley says he would lay it for that, then what

would you say?

A. Well, he would not take the job for that when you come down to it.

Q. He said he would.

A. It would bankrupt him if he did. You will find my figures

straight and square right straight through.

Q. I have no doubt about that, but I think you have swelled When you say that little office cost \$15,000, I say it is them. swelled.

A. Have you ever been in it?

Q. No, not with a view of carefully examining-

A. Come down and I shall be pleased to show you through.

Q. This lumber you speak of that you used to sell out in front. this Kronbach contract that he had, you say that this lumber sold out on River street to customers of Kronbach, almost entirely?

A. No, it wasn't almost entirely. Mr. Kronbach had his customers which he drew by the fact that he was foreman there. If he had been foreman in some other mill he would have drawn them

there. Q. He is not a salesman?

A. Yes, sir, he is a foreman and salesman. That is his duty. It has been his duty to sell what he could.

Q. And the profit you used to get on his sales amounted to \$2,000

a year?

2627

A. I should say it would come to a good deal more than that, but it is all right enough.

Q. And you used to sell down there \$20,000 worth a year?

A. Yes, sir, it is not only the loss of the profit, but the loss of the stock.

Q. How much was there sold down there, \$20,000 worth a year? A. I should think so.

Q. Ten per cent. was about a fair profit on it, was it?

A. No, we made more than that on that kind of stuff. Our profit down there was more than that.

Q. How much?

A. It would be 20 per cent. anyway.

Q. That amounted to about \$4,000 a year of loss down there on that one item?

A. Yes, sir.

Q. Because of this stock that has been taken away from this front end of the mill?

A. I think it has injured us all of that.

Q. Instead of selling it you have now to haul it and accumulate it in your warehouse?

A. I said we have to haul all we have left.

Q. What did you do with this material you used to manufacture what do you do with it now?

A. We don't buy it any more and then we don't have to sell it

Q. You neither manufacture now nor sell it?

Q. So it is not accumulating in your warehouse?

A. No, it is not accumulating now.

Q. When did it stop?

A. Oh, six months ago. We found out we could not handle our. selves to any degree of advantage at all and we stopped.

Q. You stopped buying this material six months ago, and they

stopped coming down there for the stuff six months ago?

A. No, one man was run away with twice and he would not come any more. They stopped-

Q. Who was that man?

A. I don't know his name. He is one of his principal customers down there.

Q. One of Krombach's?

A. Yes, sir. Mr. Krombach was in the wagon with him one day himself when the horse run away. The next time it took him in a neighbor's yard and brought up against the fence there.

Q. You didn't see that yourself?
A. I get all these facts from my men. I will tell you what I did see a week ago last Saturday noon. I got down to the mill and a gentleman was waiting for me and he says, I came down here for some sawdust, and your foreman ain't there, and he says, I am in a hurry. Well, I says, I will go down with you, and I asked him if his horse was hitched, and he said, No, he did not have to hitch him he would stand anywhere. And when we got down there his horse had gone away, and the last I saw of him he was making tracks for his horse down River street. He got his team finally-

Q. He left his horse unhitched to go up to the office?

A. Yes, sir.

Q. And the horse went away?

A. I will give you the gentleman's name if you wish?

Q. He left his horse unhitched?

A. Yes, sir.

Q. And he run away?

A. He supposed his horse was all right.

Q. He run away?

A. Yes, sir.

Q. He was unhitched?

A. I don't know whether he was hitched or not. Those things are happening all the time. I know he felt pretty ugly over it.

Q. What scared the horse?

A. There was a train passed over, and that is why I asked him if his horse was hitched.

Q. Where were you when the train passed over?

2629 A. Just as we were coming down the steps the train passed over, and that is what made me ask him if his horse was

hitched. He said his horse was an old plug and would not run

Q. Did you call his attention to the ordinance against leaving a

horse unhitched?

A. No, sir, that might not make any difference. The gentleman's name is Thomas Ryan. He lives at 112 Harrison avenue. It was 12.20 noon, Saturday, October 21st, 1893.

Q. What else have you got in that memorandum?

A. I took that down, that is all.

Q. Was there any damage done?

A. I don't know, sir, whether there was any damage done or

Q. You say you used to make fine inside work and can't now at all?

A. We don't try to.

Q. Why don't you try to?

A. We can't ship it. We haven't any place to keep our stock clean.

Q. Have you tried it?

A. Oh, yes, sir.

Q. I don't suppose the hard times has anything to do with your

manufacturing down there?

A. It naturally would now have some effect. If you take that trestle down there and give me a chance, I will risk the times. I am perfectly competent, I understand my business, and I can make a pile of money, but I can't be hampered all the time with such things as they have got down there. No man can make a success of that business there.

Q. How much do you want to make?

A. I think I could make a good snug sum.

Q. Well, how much? In two years, you say, you have made \$70,000?

A. I could make as much more.

Q. Right along?

A. Yes, sir.

2630

Q. How much have you made in the last year?

A. I could not tell you.

Q. Haven't you figured it up?

A. No, sir.

Q. Don't you think it would be an interesting thing to know how much you have lost during the last year since this railroad has been there?

A. I know perfectly well we haven't been doing a profitable business.

Q. You have been losing money?

A. Yes, sir.

Q. But you haven't taken pains to figure it up, you haven't taken pains to look at your books to see how much you have lost?

A. What could I tell you from my books, I should have to take an inventory and all that kind of business.

Q. Have you made any arrangement for going in any other kind of business?

A. No, sir, that is all the business that I know.

Mr. Dickinson: Do you intend to drive him out of business?

Q. Not at all. Have you looked for any other site for your planing mill?

A. No, sir, not since the factory burned in 1882.

Q. And yet you have known all the while this business was being conducted by you at a loss?

A. No, I don't say that.

Q. I understood you to say that you have been losing money?

A. I say we can't make money now.

Q. This thing is going to stay in front of you. You have got your mind made up to that, and you know you cannot conduct this business at a profit. Have you looked anywhere for a site?

A. I am doing the best I can—I am all at sea.

Q. You are all at sea?

A. I will frankly say I am all at sea. I don't know what move to make. I am stuck.

Q. Why haven't you looked around to see if you can't find some

other place?

A. What could I do? I think I would have to get you to do that for me.

Q. I think I could do it for you.

A. You could come down and run my business for me. Q. Well, I think I could run that part of it.

A. I have got my money in that plant; my bread and butter is there, and if some man would come along and give me a million dollars or more I might step out.

Q. Here is what I am trying to get at; in fairness you think you

are losing money; you have said that, do you believe that?

A. I know it.

Q. How long have you been losing money, and how long have you thought you have been losing money?

A. We knew we could not succeed when they came in there.

Q. Have you, since this thing has been put up there, looked around to locate your mill in some other place?

A. No, I have got my interest right there.

Q. And you want to continue to run it at a loss, do you?

A. I have no money to build a new mill with.

Q. And you want to continue running at a loss?

A. I am doing the best I can.

Q. But you have been doing the best you can and you have been losing money right along. How long are you going to continue losing money?

2632 A. When I find myself losing money on anything I have

quit.

Q. Have you quit?

A. I have quit on a certain class of material. I am trying my best, doing everything that any human being could do, and I am willing to work early and late and hard. I wish I could see my

way out of it. I would be very glad to.

Q. I presume I am prejudiced, but I don't feel sorry a bit. I dou't believe you are losing money that you think you are, especially as you have not investigated.

A. It is a pretty big thing to handle and unless it runs right, each department runs successfully, it will be a loss. It is a pretty big

enterprise to run successfully.

Q. Did you ever do any building yourself except this mill?

A. No.

Q. You are not an expert builder? A. Yes, I have built my house. Oh, I don't claim to be an ex-Q. You would not compare yourself with Mr. Spitzley as a builder?

A. I presume I have not built as many buildings as he has.

Q. Have you one in a hundred that he has? A. I don't know anything about Mr. Spitzley.

Q. You never have put up any large buildings except this mill?

A. I think Mr. Spitzley came down there in the first place with the intention of taking it pretty accurately, and he either got rattled, or something, I cannot tell what, for he missed a great deal of If he had taken a building of a quarter of that size he might stuff. have got it all.

Q. You say you are so arranged down there that you have 2633

never been injured by the Michigan Central?

A. Yes, sir, that is right. Q. How are you arranged?

A. We are away from the Michigan Central. We have side tracks of the Michigan Central, but the engines do not come in there.

Q. It runs along the corner of your yard?

A. Let me explain-

Q. No, maybe I can save time. Did you mean your location was such that the Michigan Central could not injure, or your buildings were so arranged?

A. No, our business and buildings are so arranged that the Michi-

gan Central is out of the way of it.

Q. That is, they are located away from the track; is that what you mean?

A. Away from where we transact our business. Q. And you could not change it down here now?

A. No, sir. Oh, heavens, no.

Redirect examination.

By Mr. ATKINSON:

Q. Now, Mr. Backus, I don't understand the difference between yourself and Spitzley to result entirely from a difference in valuation, but many things seem to have been omitted by Mr. Spitzley that you included in your estimate?

A. Yes, six this list shows it plainly, what has been omitted.

Q. Just run that over, if you have a list of the omissions?

A. I can run it over. I went through the omissions in the building the other day, you know, and I have this which I can give you as well to compare.

Q. What are those omissions now?

A. He has omitted entirely one of those large machines 30-inch machines-

Q. Give the valuation as you proceed?

A. He has omitted one 30-inch machine, \$2,000. He has omitted two extension-frame gang ripping sawing machines, \$600. He has omitted eight of our improved matching machines, \$2,000. He has omitted eight of our dumping or gluing tables or machines, \$160. I put them in at \$20 apiece. I can't possibly build them for that; I was looking them over the other day. He has omitted one joining machine, \$150. He omitted two of our improved sanding wheels, \$150. He has omitted one wood-cutting machine, \$150. omitted 13 of our cross-cut ripping sawing machines, \$1,300. For emery-grinding machines, \$250. One improved swinging sawing machine, \$250. He has omitted five Backus' shooking machines, \$10. Sixty swivel truck boxes, \$720. 120 factory trucks, \$2,400. I put those trucks in at \$100 apiece. It is a very low estimate. One blacksmith forge, \$30. 28 small wagons or carts, \$560. Two ground extensions and frames, \$20. One pick-charpening machine, \$50. One large loading platform scale, \$250. Mr. Spitzley claims he saw two, but we have but one. Two knife-balancing scales, \$20; one panel-planing machine, \$300; ten trussed-box trucks, \$100; one lock-corner machine, \$150; one rounding machine, \$300; two dado or grooving machines, \$200; one patent sand blast, \$200; one filtering tank, \$10; one wood-bundling machine, \$30; two traveling-bed rip-sawing machines, \$400; one sorting machine, \$25; two trucks, \$8; office fixtures, foreman's office, \$100; twelve extra resaws, with the Backus teeth, \$1,200; eighteen extra saw teeth, \$120; extra cross-cut and rip-saws, \$1,000; molding and planing knives, \$2,745.16. That does not include any second-hand knives, ordinary knives that

are not perfect. Iron and wood vices, \$65; one heavy screw 2635 punch and table, \$40; special and extra parts of machines, tools and appliances, \$6,000.

Q. What does that item include?

A. It includes that list I read the other day.

Q. Have you the total of them there?

Q. In some cases you value higher than he does, so that the difference would not show, the real difference between you?

A. No, sir.

Q. Have you the total of the omissions?

A. I have not a total of the omissions. I was going to remark he has put machines in here-well, take the siding and joining machine, he has put it in at \$44 and I put it in at \$500.

Q. Why do you do that?

A. Because it cost us that. It cost me \$500. He had taken it as a rip-saw, evidently, and he goes to Mr. Jenks and gets a price on

it and Jenks tells him about \$44. I assume that to be the case. It is a mistake evidently. I don't think it is intentional on his

Q. Is there any question but what you can point out to the jury, if they go down there, every one of those articles you have put down there?

A. Oh, no; no question about that.

Q. It is simply a question of taking an inventory?

A. That is all; it is a very big job for any one man to do. It has taken me a month from the start until now to do the best I could do with it.

Q. In making an estimate of your mill for insurance purposes, had you ever made a careful inventory as you have got on this occasion, or did you simply make an estimate?

A. I never made an inventory at all.

Q. You made an estimate then?

A. Yes, sir. 2636

Q. And upon taking a careful inventory you find the money you have actually invested there is largely in excess of the estimate you made for the purposes of insurance?

A. We had no way of knowing-we probably did not have over

a good half of the machines we have now.

Q. But you had some machinery? A. We have been adding right along.

Q. You have been adding to your machinery right along?

A. Yes, sir.

Q. So that the actual cost, as near as you can estimate it, is the figure that you have given, \$193,000?

A. It certainly could not be replaced for a dollar less.

Q. Have you, in giving any of those figures, exaggerated any of them?

A. I have not intended to, sir. I find in some cases I am much too low.

Q. The valuation you put upon your office strikes some of us as

pretty high.

A. I cannot help it, Mr. Atkinson, the money is there. It is a hard thing to tell what is there because you cannot see it. cannot tell how many joists are in there-

Q. Were there any pains taken to make it an extra building? A. They were a whole year building that office.

Q. Have you a vault in that office?

A. We have a vault that cost us over a thousand dollars, and have all the appliances in that vault. We have iron brackets and we have a burglar-proof safe, and we have a vault door that cost us \$450 from the Detroit Safe Company. We paid James Roach over a thousand dollars for finishing the inside wood-work. And there are about 75 or 80 lights of glass, of French imported plate glass-

Q. Have you speaking tubes and things of that kind which 2637 you have included?

A. Yes, sir; I am supposed to include everything. Much of that

work has been done by our millmen that have not come in at these prices, but I have included everything.

Q. And you are ready to say upon your oath that altogether there

are \$15,000 actually invested there?

A. It could not be replaced today, I don't think, for \$15,000,

giving us what we have got there.

Juror Baker: May 1 interject a question right there. I am a little puzzled to know just exactly how much bearing this particular thing has upon the issue at all. Supposing he should testify the counters of that office were plated with gold, and should estimate the expense accordingly. You see this matter of the expense of that office is purely a matter of just how much money a man might spend on it.

WITNESS: We have already spent it.

JUROR: Is it important for us to keep this in mind, in settling

this question?

Col. Atfinson: It would strike me, Mr. Baker, simply this way: Suppose you would conclude their business is so interfered with that they would have to move away to another location. Then they would practically lose the value of the office. It probably would not be worth as much for them to move away. In that respect it might become important. But the discrepancy between himself and Mr. Spitzley I wanted him to explain fully, because I didn't want him to appear to differ so much from Mr. Spitzley unless he gave his reasons why, and the valuation of the office struck me as high, and I thought I would ask him about it.

WITNESS: We built our office to encourage our Eastern trade.

Gentlemen coming from the East into our office would compare the looks of it, compare the finish and the wood-work with other offices, and perhaps we would get an order out

of it.

Mr. Dickinson: That is the usual object in having a fine office?

A. Yes, sir.

Col. Atkinson: I suppose you calculate to be there in business hours—in your office?

A. Yes, sir.

Q. And you took a pride in having offices that would make a good impression upon customers as they came in?

A. Yes, sir; and if I was going through it again I would do just

the same thing again.

Q. And it was specially fitted for your business?

A. Yes. sir.

Juror Baker: I would like to ask one question about the insurance upon this mill property. As it stands today it is \$120,000?

A. \$130,000.

Q. No, but \$120,000 actually on it?

A. Yes, sir.

Q. Of that amount \$15,000 is on the stock, that leaves \$105,000 on the plant complete?

A. That is right.

Q. Now, taking you and your brother in the business, and own-

ing the business and running it, taking the situation for the lumber yard, the location of it as it has reference to your mill site; taking your warehouse with reference to that mill site as being an accommodation all around; supposing that mill should burn down tonight, inflicting a total loss or the same loss that it inflicted in 1882, and you secured your \$105,000 dollars of insurance on the plant; now, taking the advantages that you have already with reference to your lumber yard and your warehouse, would you rebuild on that site?

A. It is pretty hard to state; I don't think I would. I 2639

know I would not with that thing there.

Q. We assume that is to stay there? A. Oh, no, sir; I would not rebuild.

Q. You would not rebuild?

A. Oh, no, of course not. I would try to get along some other way.

Q. You would go to a new site?

A. I would not know where to go. I would have to go out of business entirely.

Q. It would practically drive you out of business?

A. Yes, sir; that would cap the climax.

Q. I understood you to say that is positively the only site you can do business in?

A. No: I don't say that.

Mr. Robison: You say you would go out of business?

A. I would not know where to get another site.

Q. Would you look for one?

A. I am not in condition of health to build a new mill.

Q. Then you would not look for one?

- A. That would depend. I would have to be burned up to see. Q. But you are the same as burnt up now; you are doing business at a loss.
- A. I would have to be burned up now to realize my position. Q. You are worse than burnt up now, if you are running business at a loss there.

A. Well, we are not to blame for it.

EDWIN SAUNDERS, sworn on behalf of the petitioners.

Examined by Mr. Baker:

Q. Where do you live?

A. Saginaw. 2640

Q. How long have you lived there?

A. 38 years.

Q. What is your occupation?

A. Assistant attorney and claim agent for the Flint & Pere Marquette Railroad Co.

Q. How long have you held that position? A. I have been claim agent for 16 years. Q. And before that time what were you?

A. Before that I was employed by the land department, but was

performing duties in the land department and law department five years.

Q. So that would makek how many years you have been c nected, or you have been familiar with the claims against the company?

A. Well, I have been very familiar with them for 16 years, a any claims of any importance prior to that time for five years p vious, I would know of them.

Q. Now the Flint & Pere Marquette railroad runs from Bay C to Monroe and Detroit?

A. Yes, sir.

O. And it has a belt line that runs around East Saginaw a Saginaw city?

A. Yes, sir.

Q. And a main line that runs from East Saginaw to Bay City?

Q. And you have a large number of side tracks that go to diff ent manufacturing plants up there?

A. In Saginaw and Bay City, yes, sir.

- Q. Will you state the general situation of property up there w reference to fire risks alongside of the track, whether a great ma of the tracks are built upon roadways made of sawdust and slab A. Some are.
- Q. And at a great many points in the Saginaw valley is a the refuse on each side of the track, of kindling wood a sawdust and fine and small pieces of pine wood that cover the ent ground on each side of the track in many places?

A. That is so in many places, yes, sir.

Q. And this belt line that runs around the city is specially of signed for the benefit of manufacturing institutions? A. Yes, sir.

Q. There is a large number of planing mills on the line? A. There are several.

Q. And a great many lumber yards?

A. Yes, sir, I say there are several; I won't say there are a gre many.

Q. Do you remember Mershan's planing mill right in the corn made by the main line of the Flint & Pere Marquette and the Mic igan Central and the Grand Trunk and the C. S. & N.?

A. Yes, sir, I have known of it for years.

Q. That is right in the corner made by the roads, is it not? A. Yes, sir, near the corner.

Q. And then there is a large lumber yard and planing mill ne by owned by Mr. Wright, that is situated part way between Es Saginaw, the north side of the river at East Saginaw?

A. Yes, sir; it is about midway between the business center

what was East Saginaw, and Saginaw.

Q. With the main line of the Michigan Central running rig through it?

A. Yes, sir.

Q. That is their Jackson branch?

A. Yes, sir.

Q. Will you state, in your connection with the claim department of the Flint & Pere Marquette road, how many, if any, claims have been presented against that company for setting fire up there in the Saginaw valley during the years you have been connected with it?

Objected to as incompetent and immaterial.

COURT: Don't answer that question.

Mr. BAKER: What I desire to show is, if the court please-

Col. ATKINSON: I object to statement of counsel-

Mr. Baker: What I desire to show, although they run in the

Col. ATKINSON: Does the court rule that Mr. Baker can make an offer of this? It seems to me, your honor, this testimony is clearly incompetent. Whether or not claims have been made which have come to this gentleman's knowledge is entirely immatial, and it cannot prove anything; it cannot assist this jury one particle in coming to a legitimate conclusion as to the injury done here. Now, the question is plain enough. It is not ambiguous at all. The only object Mr. Baker can have in making the offer is practically, in case your honor excludes the testimony, to get the advantage of it before the jury, although excluded. And that I understand to be improper practice.

COURT: I will sustain the objection.

Mr. BAKER: Note an exception.

Q. You have lived there all these years?

A. I have lived there thirty-eight years excepting while I was in the army fourteen months.

Q. You have lived in the valley of the Saginaws? A. Yes, sir, both Saginaws, west side and east side.

Q. And you have been connected, as you have stated, with this railroad during all those years?

A. Yes, sir.

Q. Will you state whether or not you have learned in all those years of a single instance where the Flint & Pere Marquette railroad has set fire to adjoining property?

Objected to as incompetent and immaterial.

COURT: That comes under the former ruling of the court and I shall sustain the objection.

Exception for petitioners.

Q. Have you personal knowledge, Mr. Saunders, of the extent to which extra-hazardous property alongside of the Flint & Pere Marquette railroad in the Saginaw valley is endangered by the fact that a railroad runs close to it?

Same objection, same ruling and exception.

Q. You have had several large fires there?

A. There have been fires there.

Q. Is there a single instance in the history of the Saginaw valle where it was claimed those fires were caused by the railroad?

Objected to as incompetent.

Objection sustained.

Exception for the petitioners.

Cross-examination.

By Col. ATKINSON:

Q. You are an attorney at law, Mr. Saunders?

A. I am.

Q. Your business is in the legal department of the company?
A. Yes, sir, some.
Q. You are also a claim agent, you say?
A. Yes, sir.

Q. That is, you go and settle claims as rapidly as you can?

A. I do settle everything I can. Q. Make the sufferers believe that your heart is with then

2644 and that you come as a benefactor, and that you get out a cheaply as you can for the railroad company?

A. I don't pay them any more than they ask, as a rule.

Q. They keep a claim agent on each of these roads, do they not A. I think they do.

Q. And they have things to settle up from time to time?

A. Certainly.

Q. And it is pretty nice work, is it not, settling these claims?

A. Well, I would not say it was.

Q. You have got to be pretty nearly all things to all men whil you are doing it? A. There are other employments that I would prefer, but I hav

got into that groove and I have stayed in it.

Q. You have a belt line on your road around Saginaw?
A. Yes, sir.

Q. And suppose you have a great many side tracks to those mill around there?

A. We have.

Q. When you told Mr. Baker that the road was in some place constructed on sawdust and shavings and slabs, you didn't mean that was a proper way to construct a road?

A. It is not the best way if you can get other material.

Q. It is done in cases of great necessity?

A. Yes, sir, in filling in swamp, and putting this material in temporarily.

Q. That is only used where you can get nothing else?

A. Where we can't get anything better.

Q. You must have seen a great many fires caused by the railroad along the track?

A. Yes, sir, I have along the track. 2645

Q. Often ridden over it when the ties are on fire, and when the woods on each side are on fire?

A. I have seen such things.

Q. And it seems like passing through a corner of the infernal regions?

A. Not as bad as that, I don't think. I have seen occasional fires

along the side of the road.

Q. Then there are sparks flying from the locomotives that set fire to adjoining things?

A. Well, in my judgment there are very few sparks flying from locomotives, in the manner in which they are now constructed.

Q. What is it that sets these fires, friction or sparks?

A. I think there are more fires set by emptying the ash-pans than in any other way.

Q. That is done from locomotives?

A. Yes, sir.

Q. They empty their ash-pans and drop the live coals on the road?

A. They do in some places.

Q. In what other way do they get rid of their ashes?

A. That is the only way, of course. The way they are constructed now, they are made something like a window-blind with an attachment, and the engineer is running along the road, and he comes to a place he thinks favorable to dump his ashes, he pulls that lever attachment out, and it dumps the ashes.

Q. That may be done anywhere? A. Yes, sir.

Q. And that is one of the greatest sources of fire there is?

A. I think so.

Q. The sparks are likely to go out, as a rule?

A. The sparks do not get outside, as a rule, on the engines on our road. I do not know so much about the engines on other roads. We have screens, the extension front, so that the sparks that get out do not set very many fires, in my judgment.

- Q. They get choked up, don't they, these spark-arresters?

 A. Not that I know of. They may, but I could not say as to that. I don't think they do. They will, of course, if you don't clean them out.
- Q. I suppose, Mr. Saunders, that an engineer of a railroad company, in active service in running a locomotive, would know more about it a good deal than the company's lawyer?

A. Most assuredly.

Q. It is not a branch of our noble profession?

A. No, sir.

Q. And all you would be likely to know about it would be what somebody has told you?

A. What little I pick up talking with the men.

Q. You would be very apt in your opinion to take a favorable view to the railroad, would you?

A. Well, I think I can tell the truth as a witness without bias.

Q. And after how many years of railroad employment?

A. After twenty years, strange as it may seem, I think I can.

Q. But the bent of your mind during all that time has been on the railroad side of things?

A. I have been looking out for their interest; that is, for the

interest of the Flint & Pere Marquette.

Q. And the Flint & Pere Marquette is one of the roads that runs by Backus' mill?

A. Yes, sir.

Q. And a member of the union depot company?

2647 A. I think so.

Q. So that in that way you are incidentally connected with this combination?

A. I have nothing to do with the management.

Q. What planing mills do you say there are on the line of your road?

A. There are a large number. I could designate a good many of them, and a good many of them I could not.

Q. This big mill you spoke of, how long has that been up?

A. The Mershan mill was constructed as a small plant I should say twenty years ago. It has grown to be one of the largest in the country.

Q. Is the Germain mill on your line? A. It is on a spur on the belt line.

Q. What other mills up there on the main trunk line, is there

any?

A. I don't now think of any of the large mills that are on our line. There are other mills on the docks, which would be the same thing, I suppose.

Q. Do you know anything of their interior construction?

A. I don't.

Q. You don't know where they get their light from?

A. I don't.

Q. Nor how their machines are situated with reference to the railroad company's interfering?

A. No, sir. I think I have looked into them, but I could not

give any description of them.

Q. Do you know whether they have dust-rooms, and sawdust bins, and where they are situated with reference to the railroad?

A. There is one, I think it is called the Bay City Box Company what do you mean, dust-separators?

2648 Q. No, bins where they sell their sawdust. A. I don't know anything about that.

Q. You haven't noticed that as you rode along?

A. No, sir.

- Q. They are probably not on the railroad, then, or you would have noticed them?
 - A. They extend up pretty close to the line of the right of way.

Q. That is, the mill? A. Yes, sir.

Q. But I mean those bins for dust and shavings?

A. No, I don't know anything about them.

Q. Are those one-story buildings—comparatively small concerns?

A. They are comparatively small. I should say one of them was two stories, and I am inclined to think two of them are. not be positive about that.

Q. This mill of Mershan, is that on the main line?

A. It is a little way from the main line, I should say, the mill itself—it is in two or three portions—I should say it would average seventy-five feet from our main line. One portion of it comes within, I should say, fifty feet of the Michigan Central track and the Grand Trunk.

O. Is that the trunk line or the belt line?

A. The main line.

Q. About seventy-five feet from him?

A. I should think so.

Q. Do you know how the machinery is located?

A. I don't know anything about it. Q. Your road runs on a grade there?

A. No, sir, it runs on a level grade at that point.

Q. It is not an elevated road?

A. No, sir.

Q. And they have side tracks, I suppose, between your line? 2649 A. Yes, sir, we have side tracks running into the mills, into the lumber yards.

Q. You don't know whether they get their light from the oppo-

site side or not?

A. I don't know anything about that.

Q. Now, Wright's mill, where is that situated?

A. It is about midway between the business center of what was East Saginaw and Saginaw.

Q. That was a spur, was it?

A. That is on a spur. The F. & P. M. has a spur running up to it, stopping in the yard, and the Grand Trunk has a spur running up and stopping in the yard, and the Michigan Central has its main line running down through the yard, and also has sidings.

Q. How far does it run from the mill? A. The mill from the Michigan Central?

Q. Yes, sir.

A. I should say it was 250 feet from the planing mill.

Q. And on what you call a grade?

A. Level grade.

Q. That would not be at all like this one of Backus'? A. No, sir.

- Q. Have you anything on your line that is at all parallel to the situation down here at Backus'?
 - A. On account of the grade? Q. Grade and everything.

A. I don't know that I have.

Q. Nothing that is at all parallel? A. As far as that is concerned, no, sir.

- Q. Do you know of any one where they switch immediately in front of the mill?
 - A. Yes, sir, a great many.

Q. I don't mean switches for the side tracks, but where the main switches for three or four railroads, such as exist down there in front of Backus' may be found, with 150 trains or more a day, perhaps?

A. No, such business is not done up there at any point.

Q. Do you know of any where there is an upgrade in front of the mill, and where the road runs right by the edge of the property?

A. I don't know that I do. I think all the tracks in the Saginaw

valley, so far as I know, are practically on a level.

Q. So that you bring us nothing from Saginaw that is at all parallel with the situation that we are considering here?

A. Not with reference to that, certainly.

Redirect examination.

By Mr. BAKER:

Q. Now, Mr. Saunders, you testified on cross-examination that out in the country fires have been set by the railroad?

A. Yes, sir.

Q. Now, is that true as to the city, and in these manufacturing plants?

A. So får as I know it is not true.

Q. And the explanation of it is that up in the open country the engineers are not as careful about emptying the fire-boxes as they are when they are near dangerous property?

A. Well, I assume that to be the explanation, but I don't know.

Mr. Atkinson: Then it depends entirely upon the care of the engineer?

A. Yes, sir, largely.

Mr. Baker: Can you tell us whether it is customary for an engineer, when he is near dangerous property, to dump his firebox?

2651 Col. Atkinson: Objected to. The witness is not proved to possess any knowledge.

COURT: You may state as to whether you know.

A. I do. I know what the instructions are.

Mr. Baker: Do you know from observation what the practice is?

Objected to as incompetent.

COURT: I will admit the question.

Exception for the respondents.

Q. What is the practice as to dumping their fire-boxes, their ashboxes, in the vicinity of dangerous property?

A. I never saw it done but once. Q. In your entire experience?

A. Yes, sir.

Q. Where was that?

A. That was directly opposite the Mershan mill. I won't say directly opposite; it was west of, nearly opposite.

Q. When was that?

A. I should say it was at least ten years ago.

Q. Were you there going over the line and about the railroad continuously?

A. Well, I won't say that. I spend from one-third to one-half of

my time on the road, and the rest of the time in the office.

Q. In view of your cross-examination I will repeat my question as to whether or not, in your entire experience, any instance has been brought to your attention where a fire has been caused on that dangerous property by the railroad? It seems to me they opened up the very subject which will permit me to ask the question.

Col. ATKINSON: That I object to.

Mr. Baker: In addition to that I desire to show by him that in twenty-one years there has not a single fire taken place from such a cause. It seems to me, in view of the cross-

examination. I have a right to ask that question.

Question excluded.

Exception for the petitione

(Then adjourned to 9.30 ne day.)

November 1, 1893—9.30 a. m.

Mr. Foreman Baker: I would like to ask Mr. Henry Backus a few more questions.

HENRY BACKUS recalled.

Examined by Mr. Foreman BAKER:

Q. It is a matter that gives me a great deal of trouble and I want to be sure I am correct. If I understand your testimony yesterday correctly, you stated that you had ceased to seek orders for the making of fine moldings.

A. We have ceased soliciting that class of trade, yes, sir.

Q. On account of the difficulty in turning out first class work,

acceptable work?

A. We have no place to store it; it is not only on that account, but we have no place to store it; and be we ever so careful, our men in the mill there, and it takes two or three days to get out a car-load of that stuff, when you get it outside—

Q. You have actually declined orders that were offered you in

the Eastern markets?

2653

A. I would not attempt to take them. I have been offered orders by parties in the East, in New York, there is no trouble about my getting orders, no question about that.

Q. About what percentage of your gross business was probably

included in this fine molding?

A. That class of trade was about a third of our trade.

Q. And about what percentage of your net profits would

that be?

A. That would represent the larger portion of our profits; our

A. That would represent the larger portion of our profits; ou other business is practically incidental to that.

Q. Then is it the fact that in the declination of this business of fine molding you are thrown back, largely at least, upon the business of box-making, and other coarser work?

A. It forces us into that.

Q. Now, on another point. I take it that if the union depot company would agree to place you in another site and move you there, where you would get equal facilities with what you have now, without any expense to you, you would have no further controversy

A. That would depend on how the site was and the surroundings.

Col. ATKINSON: The question is everything equal.

A. I don't know where they would find it.

Q. But if it were equally good, that would be the case.

A. I should be very glad to be located in some other place, of course; but we have everything there now, and if it were to be destroyed tonight, we will say, by fire from a locomotive, what would I do? It would destroy my business. There is the trouble in rebuilding. We have made our own patterns, we were our own engineers, our own architects, as I said yesterday. Mr. Spitzley perhaps has built some buildings, a great many more than I have, yet I know how to construct a factory perhaps just as well as he does; I presume I ought to know, and I know my father is equal to the emergency, he has built a great many buildings. I do not wish to be understood as casting any reflection on Mr. Spitzley in any way;

I take him to be an honorable, straightforward man, who does as well as he knows how, but he has merely got con-

fused.

Q. Is it not possible then to get a location on Fort street upon the corner of a cross-street between your present site and your present lumber yard that would give you a frontage on Fort street and on a cross-street, that would give you ground-floor facilities fully equal to what you have now, double ground-floor facilities-isn't that entirely possible?

A. It might be possible in this respect, but we have built our enterprise there, with the surroundings and with our docks, and we have built a particular kind of structure, and now to go and change the thing in the least, of course we would have to learn our trade

again.

Q. Well, it would strike me that would not be a very large difficulty.

A. It all takes time and represents money.

Q. At the same time it would be possible to locate upon Fort street upon a corner between your present site and your lumber yard and get a front on both streets that would give you fully as

much ground-floor facilities.

A. As far as my interests go in the manufacturing, I should be very glad to have things different from what they are in, in some shape; that is all I can say. I am very much disturbed; I am worried to death from fire, I don't know what in the world to do; I went to Adrian the other day and I got out of the train, I saw a fire

and I went back; and I am even more disturbed this morning than

I have been.

Q. It is disturbing to any man that is trying to do justice between you two parties here, because it is an extremely difficult question. Now, as a matter of course, it would be a question of money simply. Your father figures the value of his real-estate site

at \$125,000, and he figures that because of his rental of \$5,000, on a basis of \$125,000. Now, taking the same basis for fig-2655

uring with regard to the cost of removal, would it not follow that you could remove or the railroad company could removewhoever did it-at a cost of \$850,000, and give you your net profit of \$34,000 a year?

A. I don't know as I comprehend your question.

Q. I am getting at your basis of figuring. If it should cost you \$850,000 to remove and get a place equally as good as what you have now?

Col. ATKINSON: I suppose you mean the three parts.

Q. No, \$850,000 would buy a new plant equally as good as this and enable them to realize a net profit of \$34,000 a year, and my idea is simply this, that it would not take anything like \$850,000 or anything approaching it, and yet that is the same basis on which Mr. Backus figures the value of his real estate.

A. I think I would be the happiest man in the world if I could

be differently situated from what I am now.

Q. I have no doubt of it.

A. From what I have seen. As far as moving our plant is concerned, of course our machines we have bought and they could be moved, but at a great expense, we would have to set them up again.

Q. But your total expense, if the railroad would put you in as good a position as you are now, your total expense would be the cost of the site, the cost of building and the cost of removing.

A. Of course I know nothing about the real estate, that is not in my department, we represent the building only, the business of the There is no question about my ability to handle the business and make it a very nice thing.

Q. And as you testified yesterday, you think if the railroad were out of the way and you were back again as you 2656were before, you could make \$70,000 a year, as you have

done?

A. I don't question it at all. I am away in advance from what I was years ago.

Q. Then as a matter of course that figuring at 4 per cent. would

figure the value of a new site at \$1,800,000 almost.

A. Yes. I was going to state in our business we have a great deal of competition, and we have no trouble in competing in one sense, because we can do a little bit better work than anybody else; I like competition of that kind.

Q. That of course is the reason why——
A. We are known by our chips, we take special pains and we have to, we are the only institution in the country that I know of 199 - 55

that has machinery for cutting stuff off square. I have been told that by manufacturers in Bay City, and all over; they have come to me and said, Backus, how is it you can do such work without mistakes? I take a train and go to New York and Philadelphia and solicit my own business to a great extent, I have no trouble at all.

Juror Safford: Did you make dock plank?

A. Yes, a great many of them.

Juror CLARK: Do you understand these figures that Mr. Baker has given?

A. I do not fully comprehend them now, sir.

Q. That is what I want to get at.

A. I do not comprehend it only in a general way.

Mr. Dickinson: Would you have the means, with the means invested now in your mill and the lumber yard and your warehouse and the mill site, would you have the means to purchase any such property as has been stated by Mr. Baker?

A. No, sir.

2657 Q. Included in the earning capacity of the property you would include the ingenuity and experience of three men, would you not, aside from your workmen that have been with you

for 15 or 20 years?

A. Yes, and I include in that a great deal of work that I could not do again. I must say that without me the institution could not be rebuilt, as I understand it, without my being there and engineering it, and I am not sufficiently strong to build another institution. I have spent all my life in that one, I have gotten it to perfection, and if it were to be destroyed tonight by fire, my patterns are all gone, my machinery is all gone, and I would have to spend months to replace it. It is a loss there practically, when we burn up.

Q. Mr. Robinson and the planing-mill men have said that the mill could not be removed without a loss, that the machinery itself, if taken out and taken out of its present adjustment with reference to the mill as it now stands, could not be taken out and be worth 50

per cent. of the value. Is that so?

A. Well, it would not be worth that, Mr. Dickinson. I will explain that. There are our lumber-carriers we will say, for instauce, they could never be taken out and replaced in another building, they are built into the building piece by piece, they come up through the floor diagonally. The carriers, part of them, could be taken off, but they would not fit another one; when you come to change a thing, you change it all.

Mr. Foreman BAKER: Simply make new ones?

A. Yes, and to remove our boilers would be a difficult matter, to realize anything out of it. It is not the expense of the boilers, it is the cost of setting them up, and the fittings and packing and mechanical labor and millwright-work connected with it, and such

things as that. The original cost is trifling.

Q. Now, in this connection, speaking of your ability to buy another such, with the planing mill here as it stands

and its relation to your other property, as it stands, in view of the fact that it is in dispute so far that the property has depreciated, so that it would not sell for a planing mill, no one would buy it—is there any way you can see by which, with all your money invested in the plant you could acquire means, when you have a plant that is disqualified and spoiled according to all the planing-mill testimony, can you think of any means by which you could get the money to invest in another site, except from this depreciated planing-mill property?

A. I would not know where to look for it.

Q. You could not borrow it on your security, for a planing-mill man would not buy it?

A. No, sir; I could not borrow a dollar.

By Col. ATKINSON:

Q. The same question occurred to my mind as to Mr. Baker's inquiry, whether you could not get a site, say, somewhere between the bridge over the Central and Eighteenth street where your lumber yard is, on Fort street, giving you plenty of light on Fort street and a large frontage on Fort street, as you formerly had on River street. It occurred to me that possibly there would be a disadvantage in leaving the Central connection there. I don't know whether that would be important or not.

A. We have always had the very best service from the Michigan Central, and as the head yardman, Mr. Best, told me coming from Buffalo a short time ago, he said, Backus, all through this car famine—we had a terrible car famine about a year and a half ago—you were the only man on the line that I know of that had

no trouble in getting cars, you have had cars where the others could not get them, for the simple reason you are where we break up our trains. We do our shipping over the Central. Q. Would you have any railroad facilities if you went down Fort

street anywhere between River street and Fort street?

A. No, sir, there is no railroad there, and no possibility of getting one there that I can see.

Q. There is no way even of getting a side track from the union depot company?

A. We could go the world through and never get such elegant railroad facilities as we have now.

Q. Even if they put a side track to you, it would have to cross River street?

A. Yes, sir. I consider our railroad facilities second to none in

the country as far as quick convenience is concerned.

Q. Then it would be in that respect, a site anywhere between your storage-room and lumber yard—it would not be equal to the

one you are forced to give up?

A. It is beyond my comprehension, I do not see how it could be

done or made equal.

Q. This question occurred to me and I would like to ask you—I don't know whether any one else would put any value upon it,

would it be possible to reconstruct your mill on the present ground so as to give you light from other directions?

A. No, sir, it would not.

Q. That would overcome the difficulties?

A. No, sir, not as we are situated.

Q. You could not take your mill down and reconstruct it?
A. No, sir, I would not know how to do it. I did the best I could, I have built it twice.

Q. Of course that would still leave the street impeded as far as Woodbridge or River street is concerned.

2660 A. Yes, sir.

Q. Beyond that it would be possible, by taking the mill entirely down and reconstructing it with light on the other side?

A. That is beyond my comprehension. We are peculiarly situated, our mill proper is down below Fort street. Fort street is away up here and River street away down there.

Q. I suppose reconstruction, even on the same ground, would in-

volve a very large sacrifice of the machinery?

A. Yes, if you could reconstruct it to a certain degree, it would take you years before you could get your hand in to know how to

Q. That difficulty does not strike me as so great, but you would have to remove your machinery so that you would lose your foundations and so forth.

A. Yes. I would not consider such a move as that for a moment.

Recross-examination.

By Mr. BAKER:

Q. What year was it you made \$70,000?

A. 1882.

Mr. Dickinson: The year before the fire.

Q. Was it not 1881?

A. Well, along there some time, '81 or '82. Q. What other year did you make \$70,000? A. I think it was '81 and '82 we did the best.

Q. The mill burned down in 1882?

A. Well, not till the winter, till the year was out.

Q. Can you tell what you have made each year since that?

A. No, sir, I have no way of doing that. Q. You don't know anything about it?

2661 A. I know in a general way we have for a great many years made considerable money.

Q. It is a good while ago, '81 and '82, is ten years. Can you tell this jury what you have made any year since then, except a mere estimate?

A. No, sir, I could not.

Q. You have been in the Saginaw valley, haven't you?

A. Yes, sir.

Q. Do you knew how any of the planing mills are located there?

A. Yes, sir.

Q. When you receive a cargo of lumber down there on the river, you load it onto wagons, do you not, and draw it to the different parts of the yard and pile it up?

A. On carts; the same thing.

Q. Well, carts or wagons. Then when you want it at the mill you load it onto wagons again and haul it up there?

A. Not in all cases.

O. Not even if you want it at the mill?

A. Understand that some of this lumber as it is unloaded at the

dock is hauled right from the dock to the mill.

Q. Did you ever see a planing mill or can you conceive of a planing mill where they take the lumber right out of the hold of a vessel, pile it onto a freight car and take it to a lumber yard right alongside of a planing mill?

A. Oh, that depends on a man's business and location.

Q. Well, it depends on his location, whether he has a convenient one or not, but that would not do you at all?

A. No, sir.

Q. Don't you know that the largest planing mill in the Saginaw valley, the Germain mill, is supplied with lumber in that way?

A. I know that the Germain Mill lumber is brought from wherever they can buy it; they are inland and I would not locate inland if you were to give me a plant, and without any water communication whatever. The lumber is brought down there, if it is brought by boats, and it is taken from the boats onto cars, and they pay the car switchage from there into their yard, and

then the lumber is piled from the cars into the yard.

Col. ATKINSON: That mill is burned up too?

A. Yes, sir.

Q. Don't you know that the Germain mill is located in back of Saginaw, not on the water front at all?

A. I do.

Q. And it is one of the largest mills in the United States, isn't it?

A. Why, I should so consider it; yes, sir.

Q. And don't you know that their lumber yard is right alongside of their mill?

A. No, sir, I don't; it is back of the mill.

Q. Well, back of the mill.

A. Yes, sir.

Q. And that they have tracks that run to the docks, that the belt line of the Flint & Pere Marquette runs to the docks?

A. No, sir; they have a track, a very long track, that comes out here, a spur.

Q. Certainly, they have a railroad track?

A. They have a railroad track.

Q. Their lumber there comes on a railroad track?

A. Yes, sir.

Q. And don't you know that they buy lumber in the northern part of this State just as you do and land it in Saginaw and take it

on board of freight cars out of the hold of the vessel, and take it u to their yard?

A. Yes, and that makes more expense than my way.

Q. You say it does. Don't you know as a matter of facthat the railroad companies don't charge anything for hau ing their cars up there?

A. I don't know anything about it. I assume they must pa something. I assume that railroad companies cannot do busines for nothing.

Q. They carry the product from the mill.

A. I would be very glad to get a railroad to do my business for nothing, if I could.

Q. What does the Michigan Central charge you for switching

car out of your switch down there?

A. That goes as part of the through freight.

Q. They don't charge you anything for backing a car in there? A. There is nothing they can get, it is only putting a car in, that is all.

Q. The Michigan Central takes away your entire product?

Q. You never have inquired of them whether they would no haul the lumber there to be manufactured if they had the privileg of taking it all away when it was manufactured? You don't know what kind of an arrangement you could make with them?

A. We are not situated so that it could be done.

Q. Isn't the Germain mill two or three miles from the river?

A. Yes, sir.

Q. In the back part of the city?

A. It is not a criterion to our situation in any shape or form.

By Mr. Dickinson:

Q. All the Central has to do with your cars is simply to show them right onto the tracks?

A. They put in an empty car; and I will say another thing, we

are not situated so that we could unload cars.

2664 By Mr. BAKER:

Q. I am not talking about your situation now, we will come to that later. I am talking about how a planing mill can be located The Germain mill in Saginaw is in the back part of the city, is not surrounded by buildings at all, in an open field.

A. I could not trade Germain's position for mine up to the time

of this trouble.

Q. His mill burned down this last season?

Q. Have you been there since he rebuilt it?

A. I didn't know it was rebuilt.

Q. He must be crazy when he rebuilt that mill there, according to your theory?

A. It depends on which side you take it. And I have heard you

state in court, Mr. Baker, a good many times with your hand raised that we had the finest mill in America.

Mr. Robison: Did you believe it?

A. I always said so.

Mr. Robison: He didn't swear to it?

Mr. Baker: It took an argument from your lawyer to convince you of it.

A. Well, it strengthened me a good deal.

Mr. Foreman BAKER: I would like to inquire if the witness ever found a lawyer that would not be ready to furnish an opinion if he paid him for it?

A. I would not say that. Mr. Dickinson and Col. Atkinson are

here.

Mr. Robison: If they were not here you would. But don't you know as a matter of fact that all the mills in Saginaw and Bay City have the lumber hauled from the dock for nothing?

A. They cannot help themselves, a man that locates himself

inland---

2665 Q. Do you know whether, as a matter of fact, all the railroads in that lumbering district haul the lumber to the mills for nothing?

A. I am not familiar with that.

Col. ATKINSON: There is no proof that anything of this kind occurs.

Mr. Robison: I am after proof.

Col. ATKINSON: Do you intend to offer proof that the railroads in Saginaw do business for nothing?

Mr. Robison: We can.

Col. ATKINSON: Do you intend to offer any such proof? If not, it should not be assumed in the question.

Mr. Baker: We have this witness on cross-examination.

Col. Atkinson: If the counsel say that they intend to offer proof of this, that this service is done for nothing, I will withdraw the objection, but I do not think they ought to assume it and try to make us all assume that, without any proof of it.

The Court: It strikes me that the examination of Mr. Backus has

gone about far enough, Colonel.

Mr. Baker: All I can say about our information is that the assistant manager of the Flint & Pere Marquette stated it to us to be the fact when we were in Saginaw.

Col. ATKINSON: I want an exception to any such statement. The Court: As far as the question that Mr. Robison puts is concerned, that was practically asked by Mr. Baker before.

Mr. Robison: He only asked as to the Germain mill. The Court: I think I will exclude it, Mr. Robison.

Mr. Dickinson: I will inform Mr. (juror) Baker and the jury that Col. Atkinson, Judge Marston and myself were offered \$5,000 for a favorable opinion in a will case, and we refused it because we could not do it conscientiously.

2666 The Court: We are aware in the opinion of some m there is no honest lawyer.

Col. ATKINSON: Mr. (juror) Baker is only joking, he knows l of honest men.

Mr. Dickinson: That opinion occurs to me.

The Court: That is all, Mr. Backus, you may stand aside.

Mr. F. A. BAKER: I will ask Mr. Dickinson if they got any la

yers to give such an opinion.

Mr. Dickinson: I will not reflect on any of my brethren, becau lawyers might honestly differ, but as we three could not hones give the opinion as desired, we declined the retainer.

NEWTON D. BACKUS, sworn on behalf of respondents.

Examined by Mr. Diokinson:

Q. You are in very bad health, I think?
A. Well, not very good.

Q. You are a son of Absalom Backus, Jr.?

A. Yes, sir.

Q. A man of family?

A. Yes, sir.

Q. What is your age?

A. Forty years.

Q. You are in charge of the office, are you not?

A. Yes, in charge of the office.

Q. Do you keep the books or superintend the keeping of the books?

A. I do not keep the books, we have a book-keeper. I superi

tend the keeping of them.

Q. Will you please state whether the rents of \$12,000 a year f the lumber yard, \$5,000 for the mill site and \$1,000 for the stor house have been regularly credited to Absalom Backus, Jr., since this lease was given?

A. They have.

Q. Have they been paid?

A. They have been paid as he wanted the money; for quite few months we paid him every month and then my brother and thought perhaps he was spending the money a little too fast of something and we did not give it to him every month.

Q. Has it been credited regularly every year?

A. Every season.

2667

Q. It has been credited to him every season right along?

A. That is it; yes, sir.

Q. Now, it has been credited every year-your fiscal year is the first of September?

A. Credited every month.

Q. Up to what time has it been credited regularly?

A. For last month and this month it has not been credited yet up to the first of September it has been credited.

Q. Has anything else been credited in that account? A. Oh, yes, we have bought considerable lumber of him. Q. At current rates?

A. Yes, sir.

Q. After having credited all his rents and lumber, what is his credit on the books?

A. We owe him something like \$54,000.

Q. Of which how much is lumber?

A. About \$14,000.

Q. So that there is about two years of rent undrawn?

A. Something like that; not less than two years. It may be a trifle more for lumber.

Q. It is about two years he has not drawn?

A. We got 62 cars this month or last September which is not credited.

2668 Cross-examination.

By Mr. Robison:

Q. He does not own anything in the mill at all now?

A. No, sir; he holds no stock.

Q. You and your brother own the whole of it? A. Own the whole of it excepting two shares.

Q. Who owns those two?

A. M. T. Bickford owns two shares.

Q. He is one of your men down there?

A. Confidential clerk in the office. Not a man, a woman. Q. The only interest Mr. Backus has in your place then is rent-

ing it to you? A. Yes, sir.

Q. That is your father?

A. Yes, sir. Q. This lease runs for 30 years?

A. Thirty years from the first of August, 1885; expires 1915.

Q. It is 23 years to run yet?

A. About 23; yes, sir.

Q. He is to get \$18,000 a year?

A. Yes, sir.

Q. You haven't the leases here?

- A. No, sir; I have not. Perhaps my brother may have them; I have not.
- Q. Then to him personally it does not make much difference whether the road goes through here or not?

A. I presume it does; if we do not pay him the rent he would

be out the rent; that is the way of it.

Q. But your corporation is liable for the rent; it does not make any difference whether the mill runs?

A. It would be doubtful whether he can collect. We are liable for the rent, certainly; we have to pay him the rent.

2669 Q. You have done a very profitable business ever since you have been there?

A. We have made money.

200 - 55

Q. So that there would be no trouble about his collecting the rent even if the mill should stop?

A. I don't know about that.

Q. You have made \$70,000 for two years and \$36,000 a year since; you must have that salted away somewhere where you can get at it.

A. We have the money invested in our plant down there.

Q. It is his plant.

A. It is not his plant; he owns the real estate only.

Q. He owns the building; all you own is the machinery?

A. We own the building and machinery, certainly; we built the building ourselves.

Q. Is there a provision in the lease that the building shall go to

the company after the lease expires?

A. I don't remember just what the provisions are in the lease.

Q. He has drawn out his \$18,000 every year except the last two

years?

A. Yes, he gets his money. I suppose if he would want \$2,000 this afternoon I would have to give it to him, or more.

Q. You said you shut down on him; you said he was spending

too much money?

A. We thought it was not necessary for him to have it the first of each month; he might be getting into too many outside things.

Q. Your father is calculated to be able to run his own business?

A. Yes, sir.

Q. And as a matter of fact his boys, too, yet?

2670 A. Yes, sir.

Q. The glove is on the other hand, isn't it? If he said he wanted more than \$18,000 you would probably have to give it to him?

A. No, because we got him in black and white on that; we don't

have to pay any more on that.

Q. Well, you could not buy any lumber or do any business without his help?

A. Oh, yes; we can buy lumber every day without his help.

Mr. Dickinson: Your credit is pretty good?

A. I can go to the bank today and get what money I want.

Q. He has not asked for any the last two years?

A. Oh, yes; I give him money every few days; he comes over and wants money to pay his house rent, and mother comes over and draws money on his account to pay her hired girl and grocery bill, and so on.

Col. ATKINSON: I don't understand that it is two years in a lump that is due him; you have paid him all his rent except what would

make about two years' rent?

A. Yes, strung along from time to time; he gets money whenever he wants it.

ABSALOM BAKUS, JR., recalled on behalf of respondents.

Examined by Mr. Dickinson:

Q. You had a fire down your way last night?

A. Yes. sir.

Q. What was it?

A. About six o'clock I was telephoned that they had had a fire at the Peninsular stove works. Well, I went right over and Mr. Dwyer called a man, their foreman, took a lantern and took me away

up into the fourth story next to the railroad, and showed me 2671 where the fire had taken on the mansard roof right within twenty feet of this property, fifteen feet of this track, and about 20 feet high, on the outside. There was a strong south wind, and it blew these cinders and sparks right on this roof, these shingles, and it inflamed and finally got through in two or three places. He showed me where it was put out; they took their Babcock extinguisher.

Q. Did you see the places that were burned through?

Q. How many places were burned through inside the roof?

A. I noticed three holes that were burned through the roof. asked him what that was, and he said, that is where we put some tin up to keep the water from coming down onto our goods. went away and two hours afterward or three hours and a half this fire broke out; they thought they had it put out, either that or it was set afire a second time.

Q. Then there was a strong south wind? A. Yes, sir.

Q. A pretty bad fire there, was it not? A. I see by the paper about \$45,000 loss.

Q. Now, is there any steam apparatus or furnace or anything in

that molding-room?

A. Nothing; their furnace chimney is away on the north side, as much as 50 or 60 feet from there. There is no possible exposure, only as it comes from these railroad trains; the engine as it goes by, she has passed our place, where they profess to shut off, and then he begins to slow down and he puts his exhaust on, and it necessarily naturally throws fire very strongly.

Cross-examination.

By Mr. Baker:

Q. You were down there looking at that?

2672

A. Yes, sir.
Q. That is, between the two fires?

A. Yes, sir.

Q. Now, the elevated superstructure that the trains run on is opposite what story there?

A. It is opposite to the second or third story.

Q. About on a level, isn't it, with the third story?

A. I should judge it would be.

Q. That is two floors up?

A. Yes, sir.
Q. When an engine goes by there the smokestack is about fifteen or twenty feet from this mansard roof?

A. Yes, about on a level with this mansard roof?

Q. So that when there is a stiff south wind it would blow the fire from the smokestack right against that roof?

A. Yes, sir.

Q. Right on a level with it?

A. Yes, pretty near.
Q. That was a shingle roof?
A. Yes, sir.

Q. And built up from the eaves like that (illustrating).

- A. Yes, sir. Q. What was on top? A. I never was up there.
- Q. You don't know what covered it. The fire was in the shingles? A. Yes, burned right through between the roof broards.

Q. The sparks got in the shingles, the fire was under the

shingles?

A. It was burned through. They told me that they went up there to get a barrel, and somebody saw it very opportunely and put it out, and they thought probably they had put it out; it was either set a second time or they didn't have it put out.

Q. The probabilities are that it was not put out under 2673

the shingles there somewhere?

A. Probably.

GEORGE O. ALLEY, sworn on behalf of respondents.

Examined by Mr. Dickinson:

Q. What is your business?

A. I have charge of the Peninsular stove works.

Q. You are foreman there?

A. Yes, sir.

Q. How long have you been there?

A. About 11 or 12 years.

Q. Have you observed the passage of trains over this tresslework?

A. Yes, sir.

Q. Will you please tell the jury whether you observed that they throw fire?

A. Certainly; yes, sir.

Q. It is a common occurrence that they throw fire?

A. Yes, sir.

Q. How far over will they throw it?

- A. That would depend on how strong the wind was. Q. Just give the jury some idea if it is a south wind.
- A. The south wind with the engine working hard would throw it over 50 or 60 or 70 feet there.

Q. You have seen them do that?

- A. I have not measured it.
- Q. You have seen it thrown?

A. Yes, sir.

Q. Have you seen many cinders around there thrown from these engines?

A. Yes, sir.

2674

Q. How far do they extend?

A. Well, it is hard to tell; the wind blows them along on the roof.

Q. Come over into the yard?

A. I could not say that.

Q. Well, there are great quantities of cinders?

A. Lots of cinders.

Q. Did you know of the fire last night?

A. Yes, sir.

Q. South wind blowing?

A. Yes, sir, and last night at the time of the fire. Q. And the roof was set on fire between the roof and the roof

boards? A. In the shingles.

Q. In how many places?

A. Well, the first fire was about five o'clock or a quarter to five and the second fire was about a quarter after seven, started in another place, as near as I could judge.

Q. It didn't start in the same place. A. No, sir, not as near as I can judge.

Q. Started on the roof boards?

A. I discovered it on the outside of the roof. Q. Trains passing constantly, I suppose?

A. Mostly all the time; yes, sir.

Q. And this fire was a pretty bad one; burned out your nickelplating room?

A. Burned the nickel-plating room and burned the entire roof off. Q. Did you have any fire in that part of the building at all?

A. No, sir.

Q. Didn't have any furnace within how many feet?

A. The other end of the building. Q. Any workmen up there?

A. No, sir; no occasion for anybody to be there.

Q. How did you happen to discover the fire?

A. The foreman sent a man up to get a barrel and when 2675 he went up and went over towards the front part of the roof he came back saying that the place was afire and at that time it had commenced to go through the shingles, and had burned in between the roof boards.

Cross-examination.

By Mr. BAKER:

Q. This was the old Union Mills building?

A. No, sir.

Q. What—the gluecose building?

A. It is the old Central Mills building.

Q. How long, according to your recollection, has that building been there?

A. I could not say; it has been there before I had anything to do with it.

Q. A great many years, hasn't it? A. Been there some time; yes, sir.

Q. And the mansard part, that is, the incline, is composed of shingles?

A. Yes, sir.

Q. And ordinary roof boards underneath?

A. Yes, sir. Q. And what is the top?

A. Tar roof.

Q. Gravel on it?

A. Yes, sir.

Q. About how high should you judge was this mansard roof, the part which is inclined, six or eight feet?

A. Nearly ten feet, between eight and ten feet.

Q. And a gutter at the foot of it?

A. There is a projection of about two feet.

Q. A cornice?

A. Yes, sir. Q. What was there at the upper edge of it, anything; a 2676 molding around there?

A. Just a molding around there.

Q. How long have you been down there?

A. About 11 or 12 years, since they were there.
Q. That flour mill was apparently an old building then, was it not?

A. It had been there a good many years I should judge.

Mr. Foreman BAKER: Wouldn't that roof be completely protected if instead of being shingled it was slated?

A. Well, it is a question.

Q. Well, it would be a great deal safer?

A. Probably would not be so apt to catch in the shingles.

Mr. Dickinson: As I understand it, it caught under the roof boards.

A. It burned the shingles through first.

Mr. BAKER: Have to go through the shingles first so that you could see it on the inside.

Mr. Dickinson: We rest.

Mr. Griswold, recalled for further cross-examination.

By Mr. BAKER:

Q. I showed you a letter the other day that you identified. Can you tell me how many of these you sent out?

A. I should think perhaps ten or a dozen.

Q. You recollect the letter, don't you?

A. Yes, sir. (Showing letter to witness.) That is my signature.

Q. They were all substantially the same?

A. They were.

2677

Mr. Dickinson: Are you going to put it in?

Mr. BAKER: Yes, as a part of the cross-examination. will read it in evidence.

" DETROIT, MICH., Sept. 18th, 1893.

Mt. Vernon Car Mfg. Co., Mt. Vernon, Ill.

GENTLEMEN: I understand you have had some experience with dust-collectors. Will you please inform me what your experience has been, which is the best device and if there is any device made from which any dust cannot escape? I understand there is what is called the centrifugal dust-arrester, but which takes a great deal of With the device you are using are your premises perfectly free from dust and does the arrangement you have prevent any possible danger of fire getting into your dust-room from any source and how much extra horse-power does it require to run the same? Any suggestion or information you can give me on the subject will be appreciated. Thanking you in advance for the same, I am,

D. R. GRISWOLD." Very respectfully,

That is all with this witness.

George H. House, sworn on behalf of petitioner.

Examined by Mr. BAKER:

Q. What is your business and where do you reside?

A. Saginaw. Insurance business.

Q. How long have you been in the insurance business?

A. Nearly 30 years.

Q. Whereabouts have you been in the insurance business?

A. At Lansing and Saginaw.

Q. What position have you occupied in the insurance business what do you do and what have you done? 2678

A. Well, I have been local agent, special agent, State agen t and inspector for the Michigan bureau at present.

Q. What territory do you have charge of?

A. Territory extending from the D. & M. road to the straits o Mackinac, taking in about one-half of the State.

Q. The eastern half?

A. The eastern half from that southern line.

Q. So that you take in the entire Saginaw valley?

A. Yes, sir.

Q. Do you fix rates, prepare surveys in the same capacity that Mr. Chapman does here?

A. Yes, schedule buildings; make what is called an advisory

rate. Q. That is, a rate that is adopted by the companies?

A. An advisory rate.

Q. Of course there is nothing compulsory about those rates?

A. No, sir.

Q. It is for the convenience of the companies in having a proper survey made?

A. Yes, sir.

Q. Will you state how you fix the rates, the basis upon which

you operate in fixing rates on planing mills?

A. Well, we have a basis rate which presupposes the very best constructed and equipped planing mill, and rom that basis rate we charge them for various deficits. Q. What is the rate for the best constructed and equipped planing mill?

A. Three and a half.

Objected to as not rebutting and immaterial.

The COURT: I will let the answer stand.

Exception for respondents.

Q. Will you state what this basis rate is?

A. Three and a half.

Q. That is for a planing-mill risk that is equipped and protected the best that is known to the art?

2679 A. Yes, sir, a brick planing mill and brick boilers, with very best equipments.

Q. What about dust-arresters?

A. Well, there is a charge for a lack of dust-arresters.

Q. But this basis rate of three and a half-is that fixed where they have improved dust-collectors?

A. Yes, sir.

Q. What kind are in general use?

Objected to as immaterial.

Objection overruled.

Exception for respondents.

A. In general use, that is, all I know about is the Allington & Curtis.

Q. That is a metallic arrester?

A. Yes, sir. Q. Acting centrifugally?

A. Yes, sir.

Q. About how many of them are in use in the Saginaw valley? A. Well, it would be difficult for me to tell how many are in

Q. I don't want the exact figures.

A. Well, I should say from 50 to 60, somewhere along there.

Q. What distinction do you make in fixing rates if a man has not got an improved dust-collector?

A. Well, they charge 50 cents on a hundred.

Q. A half per cent.?

A. Yes, sir.

Q. And the other things that would increase the risk on a planing mill would be other exposures?

A. Yes, sir.

Q. That is, if they had a frame power-house there would be an increased rate, and so on?

A. Yes, sir.

Q. I suppose in the Saginaw valley there is a large amount 2680 of lumber that is piled alongside of the railroads and is exposed to hazard?

A. Yes, there are a great many yards.
Q. There are planing mills that are right alongside or near to the railroads?

A. Yes, sir.

Q. All over the valley?

- A. Yes, sir. Q. Will you state whether or not insurance companies, or in your business there as an inspector of rates, whether or not anything is added to a planing mill for railroad exposure?
- Col. ATKINSON: I think what they do in Saginaw is immaterial, and I object to it on that ground.

Mr. BAKER: We don't think there is any point on the territory. The Court: Answer the question.

Exception for respondents.

Q. Whether you increase this basis rate of three and a half, whether there is ever anything added for railroad exposure?

A. We do not make a charge for railroad exposure.

Q. Why not?

A. Well, we do not consider since they burn coal that there is-

Col. ATKINSON: One moment. I object to that.

The Court: As far as the reason is concerned, I don't think that is competent.

Mr. Baker: It seems to me it is competent to find out the theory

upon which they act.

2681

The Court: Well, you may answer the question.

Exception for respondents.

- Q. State why you do not add something for railroad exposure?
 - A. Because we do not consider it a hazard. Q. At least, not enough to increase the rate?

A. Not enough to increase the rate.

Q. Now, I suppose you have noticed planing mills up there where these pipes were carried a long distance, where the dust was carried a long distance from the planing mill. About how many feet?

A. Yes, some of them two or three hundred feet.

Q. Some of them close by and some of them three or four hundred feet off.

A. Yes, there are such cases.

Q. It depends on how the man lays out his place and how much room he has got?

A. Yes, sir.

Cross-examination.

By Col. ATKINSON:

Q. What is it that is three or four hundred feet away?

A. What we call the shavings vault. Some of them are right against the mill or boilers and others are detached, and the shavings are blown into them.

Q. The shavings are carried that distance then?

A. Blown.

Q. How are they got into the fire afterward if they want to burn them?

A. Those are not burned as a usual thing, it is the surplus shav-

ings that are carried that distance.

Q. If they should want them to burn they would bring them

back in a wheelbarrow?

A. Without the boiler-house was with the shavings vault that distance away. We have such instances as that, four or five—I don't know—well, three or four hundred feet.

Mr. Baker: Where they put the boiler-house away off by it-

2682 A. Yes, the boiler-house and shavings vault together, some three or four hundred feet from the mill.

Q. What case have you got in your mind where the boiler-house

is three or four hundred feet away from the mill?

A. I should say that Jonathan Boies' was, at the mouth of the river in Bay county. I don't pretend to give the distance, but I should say that.

Q. How is the power communicated to the mill, have they got a

belt that long, or shafting?

A. No, sir, it is by steam, and the engine is in the planing mill.

Q. Then the steam passes through three or four hundred feet before it is applied to the engine?

A. Certainly.

Q. Is that a good plan to get power, do you think?

A. Well, that I don't know; Mr. Boies has adopted it, I don't know anything about it.

Q. You don't know how it works?
A. I don't know anything about that.
Q. There is a salt well there, isn't there?

A. He has a salt well, yes, sir.

Q. So that they apply the steam after they carry it a slight distance and use it again for the purpose of evaporating their salt or something of that kind?

A. I should presume they do, though I don't know anything

about it.

Q. You really have not got the inside of that establishment in your mind very well, have you?

A. No, sir, not anything more than I know where their boiler-

house is.

Q. You have seen the power-house and seen the mill, and you know they are a certain distance apart?

A. I have been all through it.

Q. Are you a judge of applying steam power, accustomed 2683 to doing that, so that you know how to get the most economical and advantageous results from it?

A. No, sir; it is not in my line of business.

Q. You would not be at present able to recommend people to have their power-house three or four hundred feet away from the place where the power was applied?

A. I know nothing about it at all; I simply tell the fact.

Q. How long did you say you had been in the insurance business?

A. Well, to be exact about it, it is 27 years.

Q. Are you in any way connected with any of the railroads?

A. Not at all.

Q. Doing any business for them?

A. Not at all.

Q. How came you to come and testify? Who got you?

A. Mr. F. A. Baker.

Q. An old classmate or something of Mr. Baker's?

A. No, sir.

Q. How did he happen to get you?

A. Well, I don't know how he happened to. Q. How did you learn you were wanted here?

A. Mr. Baker sent word to me.

Q. Do you know why you were called from Saginaw?

A. I don't.

Q. Were you acquainted with Mr. Baker before?

A. I have known Mr. Baker for some years; ever since he was a member of the legislature; got acquainted with him at that time. I lived at Lansing then and I have met him as I have met a great many other gentlemen off and on.

Q. Were you in the legislature, too?

A. No, sir; I was a resident of Lansing at the time.

Q. You were one of the men who was keeping his chickens 2684 shut up for the winter, I suppose?

A. Yes, sir.

Q. You have been acquainted with Mr. Baker ever since that time. Do you know of any other insurance man from Saginaw who is here?

A. I don't.

Q. Or from Bay City?

A. No, I don't.

Q. Now, you have charge of a large district of country, as I understand, and I suppose you have to travel over it from time to time?

A. Yes, sir.

Q. And you travel through those regions up there where the railroad runs almost through the forest. Have you ever seen any forest fires up there?

A. Yes, sir.

Q. Have you ever seen any that spread from the railroad track?

A. I have seen it around the railroad tracks.

Q. Did you have any theory as to how it originated?

A. I suppose that sometimes they catch from the railroads.

Q. So that railroads do sometimes set wood on fire.

A. I should presume they do.

Q. Yet they are not a hazard at all that is taken into account in insurance?

A. They are not with insurance. Will you allow me to explain that for a moment. Now, it would be in a forest fire for instance. you take lumber and locate it out in the forest, and it always rates higher on account of forest fires.

Q. Then you do calculate upon a risk?

A. On forest fires, yes, sir.

Q. You do not insure forests, do you?

A. Not forests, but there is property in forests that is in-2685 sured.

Q. You insure buildings out where there are woods near by?

A. Of course, you understand in that nothern country there are small mills, and more or less lumber scattered all through it.

Q. You insure the lumber and insure the buildings, I suppose?

A. Sometimes.

Q. Now, you take a place like Gaylord or Alger. Take the town of Alger, one of the thriving cities of the northern part of the State. You have been through there, I suppose?

A. I have been through there.

Q. Its suburbs are largely wooded as I remember?

A. It is principally woods there.

- Q. In insuring buildings at Alger, would you take into account the possibility of fires from the forests around, being near the roads?
- A. Yes, were I to rate a town of that kind. I never have rated it, but I should.

Q. What would be the danger from the forest?

A. Well, it is the forest fires.

Q. Now, is not one of the most prolific sources of forest fires the railroads?

A. That I don't know.

Q. But you would regard it as quite hazardous? A. It may be hazardous; I should presume it is.

Q. Haven't you often seen the ties burn up from fire communicated from the railroad in that region, and the fences alongside where there are any fences?

A. I have seen the fences, but I don't remember of ever having

seen any ties.

2686 Q. Suppose we come into the city. Have you any instance in Saginaw of where a railroad runs along at an elevation of 25 feet up to the rail from the ground, and where there are switches and switching being done at that particular point, and upgrade so that the engines have to struggle somewhat to make the rise—have you any instances of anything of that kind in Saginaw?

A. I don't remember of any instance where we have an elevated

railroad. Our country is flat.

Q. Now, you don't mean to have us understand that a railroad running along in that situation would not be a menace as far as fire was concerned, with a building alongside?

A. You mean with the elevation?

Q. Yes.

A. Well, we have nothing of the kind-

Q. It would drop its sparks around and on this building, and there would be some danger, wouldn't there?

A. Well, there might be a danger there.

Q. Take for instance the case that is testified to here this morning, our Peninsular stove works. They had a mansard roof, a shingle roof, a strong south wind was blowing and a railroad was immediately south of them, and these sparks and cinders were blown over against the roof and caught in the shingles and burned through, causing a large loss. Now, that would be a hazard that prudent insurance companies would provide against, would it not?

A. I should think they would.

Q. You would not consider that an insurance man fixing rates on property situated like that and subject to that danger would be doing his duty by the company if he fixed the rates at the same figures as though the railroad was not there, would you?

A. Well, the schedules that we go upon make no charge at all

for-

2687 Q. I am not asking you about your Saginaw schedules.
You are a peculiar people, anyway, but would you consider that the best thing to do? You have no such case in Saginaw?

A. No, sir, we have no such case at Saginaw.

Q. If you had such a case, would you not consider that kind of property less desirable for an insurance company, and it ought to pay a higher rate if it was insured?

A. Well, it would depend something on the kind of property and

what it was.

Q. Well, a man has a right to put there what he pleases. In this case there was a mansard roof that had been there so long that the witness cannot remember when it was put up; it was there before the railroad, and the mansard roof was burned by the railroad. Now, would not any insurance man that knew his business, looking at the situation, say that property should pay a higher rate on account of the proximity of this elevated road and the throwing of sparks?

A. Well, taking your statement as the case, I presume it would.

Q. You think in that case you would fix the rates higher?

A. I don't know that I should.

Q. You must have some special reason for not making a discrimination at Saginaw, haven't you?

A. No, sir; we use the same schedule that is used in the State at large; it is the Michigan schedule.

Q. You advise companies what rate to put on?

A. With the schedule that they furnish. They furnish the schedule.

Q. What kind of buildings do you fix these 31 % rates on?

A. We have but one in the Saginaw valley, and that is a planing. mill-I suppose you refer to it?

2688. You have only that that rate prevails on? Q. Yes. A. Yes, sir.

Q. What mill is that? A. Germain's new mill.

Q. How high is that?

A. One story.

Q. How far does the railroad run from it?

A. Well, his tracks that run into the yard run right beside it.

Q. Yes, but those are spur tracks?

A. Yes, he is out from the main line of the railroad, of course.

Q. It is not on a trunk line?

A. Not at all.

Q. Nowhere near a trunk line?

A. Not at all.

Q. It has no trains passing except those freight cars brought in for their own convenience?

A. None except their own.

Q. Where are they stopped, those cars, how far from the mill? A. They pass right beside the mill.

Q. And have a bump, I suppose, to stop them near the mill? A. They go clear through his yard.

Q. So that they run occasionally through there?

A. They simply come up from the river. Q. Do they run engines past and into his yard?

A. Yes, sir.

Q. But only for their own convenience?

A. That is all.

Q. To get their own freight?

A. That is all.

Q. I suppose with their own men in charge?

A. No, sir; the railroad men.

Q. The railroad company runs the engine in to take out 2689 the cars as they are loaded?

A. Yes, sir.

Q. Are you at all interested in dust-arresters?

A. Not in the least.

Q. The one usually used up there is one made there?

A. It is manufactured there.

Q. Are you acquainted with the relative merits of dust-arresters? A. Well, I do not claim to be.

Q. There are a good many different ones around there?

A. I think there are but two kinds up there. I know of two kinds.

Q. In the Allington & Curtis the air goes around; it is what is called a centrifugal dust-arrester?

A. Yes, sir.

Q. In Grand Rapids, I believe, to maintain the distinction between the two cities, the air goes the other way?

No answer.

Q. Do you know what dust-arrester is used in Grand Rapids?

A. No, sir.

Q. Do you know anything about the merits of the Backus dustarrester?

A. I do not.

Q. Do you know the Smith & Huyett dust-arrester?

A. There are two or three of those up there.

Q. We are trying to find out how much certain property in the city here is damaged. My clients are using the Backus dust-arrester. Would the rate of insurance be any less if we changed it for anything else that you know of?

A. I don't know what the Backus dust-arrester is and conse-

quently could not say.

Q. So that we cannot get any lower rate on that ground without further information?

A. I have no knowledge of it whatever. 2690

Q. Would a mill four stories high with a railroad elevated running by it on a level with the second and third floors be more hazardous than a one-story building?

A. A four-story rates more than a one-story.

Q. How much more?

A. The rule is twenty-five cents for each floor above the first.

Q. So that you start with 31 % and the next would be 31 the next floor, and the next 41?

A. Yes, sir.

Q. And so on? A. Yes, sir.

Q. Now, this basic rate, as I understand it, is on the most perfectly equipped planing mill of one story, the 3½ rate?

A. Yee, sir.

Q. And for all divergencies from that you increase the rate according to circumstances?

A. Yes, we charge for the various defects. Q. You add for open stairways, do you?

A. Well, it is not in the schedule, but it depends upon the construction of the mill and what they are doing. Sometimes I do.

Q. There is a close survey made so as to see what the exposures are. I don't care what they are, but anything that you think increases the exposure over a perfectly constructed planing mill is charged for?

A. Unless the exposure rates higher than the mill. We do not

charge for mills. Just let me illustrate.

Q. I understand what you mean.

A. The highest rated risk on a plant in the center. It exposes the balance.

Q. Suppose the dust-room is 30 feet from the railroad 2691 track and liable to have cinders drop into it, would that increase the rate?

2692

A. I never have charged for it; there is nothing in the schedule

making the charge.

Q. No, but that would be an exceptional thing. Would you fix the policy the same as if the dust-room was not in any such nearness to the railroad?

A. Well, our dust-rooms there, you know, are perfectly close, as

close as this room is, has to be.

Q. Well, but you have got to get your dust out somewhere. There is an opening, isn't there, to take the dust out?

A. No, sir, not with the Allington & Curtis.

Q. What do they do with the dust?
A. They separate it in the machine.

Q. What do they do with it?

A. They blow it into a separate place, or it drops in there.

Q. But they got to get it out when it is once in there?

A. They shovel it out if they want it. Usually it is blown right in under the boilers, with a self-feeder.

Q. Is it not an article of commerce with all those mills?

A. The shavings are after the dust has been taken out of them.

Q. Not the dust itself?

A. Not the dust itself. At least I never knew of its being used. Q. It would be a rather dangerous thing, would it not, to have a dust-room near a railroad where these cinders might drop in. That dust is explosive, is it not?

A. It would if the dust-room was constructed that way, but ours

are not constructed that way.

Q. Those are built after the railroad was there?

A. They are all built close.

Q. Yours are entirely different?A. They are tight buildings; it is blown in from the top.

Q. In this case long before this railroad came there or there was any idea of its coming there, Backus & Son had built their mill and their dust-room was only seven feet from the line of River street. They do not blow their dust in under the boilers, but they let it come down into the bin by itself. It is used as an article of commerce, they have a sale for it and make a profit out of it and they take it away with wagons, having a large opening on the side of the street so that the wagon can be backed in and they load it and cart it away. The railroad has since been built right along there, fronting at an elevation of about 14 feet in the clear, say 20 feet to the rail. This wide door is right on the street, there is an upgrade there also, so that the engines have to struggle in passing it; there are three switches in front of it, so that there is a liability for a live cinder to drop right into this dust-room if it happens to be open. Now, would you consider that a source of danger?

A. I should under those circumstances, certainly.

Q. It would affect the rate of insurance, would it not?

A. I should think it would.

Q. It ought to?

A. It would under that condition.

Q. You have no parallel case to that in the Saginaw valley?

A. No, sir, nothing at all; nothing of the kind.

Q. A great many insurance companies are withdrawing from your valley, aren't they?

A. Well, I don't know of any.

Q. You don't know of any that have withdrawn from there, refused to renew policies?

A. I don't remember of any now.

2693 Q. You have had a good many fires up there and some very disastrous ones?

A. We had one last spring in East Saginaw, in May.

Q. Bay City was pretty nearly all burned up? A. Yes, a year ago they had quite a serious fire.

Q. You are rather a scorched region and insurance companies have suffered very heavily there?

A. Yes, sir.

Mr. Robison: Insurance rates are lower than they are here.

Q. Are your insurance rates lower than they are here?

- A. I don't know what the rates are here, I never compared them and know nothing about them. They ought not to be, they ought to be on the same basis. The basis is precisely the same, I will say that.
- Q. Do you furnish rates for companies doing business here as well as in Saginaw?

A. Well, the same companies do business here, the same compa-

nies are in Saginaw.

Q. You have nothing to do with furnishing rates for this city?

A. No, sir.

Q. Are you acquainted with this 80% clause that is used in insurance requiring people to insure 80%? A. I know there is such a clause.

Q. Usually where that has been insisted upon the rates are lower?

A. Not with us.

Q. In view of their taking 80%? A. Not with us.

Q. You keep the rates the same? A. Yes, sir.

- Q. You are in the State of Michigan still, up there in Saginaw, aren't you?
 - A. Well, I think we are. Q. Not entirely independent?

A. No, sir.

2694

Q. Isn't the insurance business pretty uniform in all these cities? Is there anything peculiar about Saginaw?

A. Nothing that I am aware of.

Q. Have any of the companies up there introduced the 80% clause?

A. Yes, sir.

Q. Although they insist upon one's insuring for 80%, they do not lower the rate or give him any countervailing advantage?

A. No, sir; there is no change in the rate there on that account 202 - 55

Q. Have you had any reduction of rates there at all within a few years?

A. No, sir. There is a change of rates, of course, all the time;

some go down and some go up.

Q. Nothing like a reduction on any plan?

A. No, sir, no general reduction.

Q. The changes of rates are individual changes?
A. Individual changes, according to the hazard.

Mr. Foreman BAKER: Is this 80% clause generally applied to planing mills up there now?

A. It has not been.

Col. ATKINSON: It is not now so far as you know, I suppose?

A. Well, sir, it will be after this. The companies have ordered

A. Well, sir, it will be after this. The companies have ordered the application of the rule.

Q. It has not taken effect yet?

A. It takes effect today. We have a good many plants there, however, that have had the 80% clause on them some time.

Q. What is the object of that 80% clause?

2695 A. I don't really know that I am prepared to give that.

Mr. Foreman Baker: Isn't it a little curious that the insurance company should insist on raising on a risk of a man insured? Why should they not rather prefer to take just as little insurance

as they could on it? Why do they insist on raising?

A. I presume the reason is this. For instance, a man has a building which is worth, we will say, \$10,000. He says, Now I will only have a damage of \$2,000, he never anticipates it is going to burn up, so he puts on \$2,000 and when they have a loss the company is the total loser of that, they lose the whole \$2,000, while if he had \$8,000 insurance there it would be divided up.

Q. If there was only \$2,000 loss they would pay that between

them?

A. There would be more premium paid.

Q. It is a sort of an equivalent for a lower rate, isn't it?

A. Well, it is not so treated.

Q. By pulling down the losses?

A. I suppose they are trying to get their money back.

Q. They can afford to insure at a lower rate if they insist upon the 80% clause than if they did not?

A. Well, yes.

Q. So that they are not suffering any more than if they charged

a higher rate?

A. My impression is that one object was, at the present time the companies are losing money, and instead of advancing the rates higher they have required this 80% clause.

Q. It is an equivalent to an advance of rates?

A. It is equivalent to that, yes, sir.

Mr. Robison: Doing that universally as you understand?

A. Universally.

Q. So that if property such as you mentioned was worth \$10,000, for such property the company would let him take his own risk of \$2,000?

Q. And require the man to insure up to \$8,000?

A. Yes, sir.

Q. Then they would have three other companies to help them bear the loss, if there was only \$2,500 or \$3,000?

A. Yes, or the property-owner would carry it himself, just as he

saw fit.

Q. If the owner only took \$2,000 on them he would have to contribute for the other part of the \$8,000?

A. He would be a co-insurer.

Q. So that if he took just \$2,000 in a case of that kind he would have practically only an insurance of \$500?

A. That would be about it.

Q. And in case of a \$2,000 loss he would only get \$500, although he paid the rate for \$2,000. Well, I guess it is an honest business if everybody understands it. It is a little complicated, that is all.

Redirect examination.

By Mr. BAKER:

Q. You testified on your cross-examination that you have had a good many or a number of very big fires up there. Will you state whether or not they were occasioned by a railroad?'

Col. ATKINSON: Do you know?

Q. Well, you are in the insurance business.

Col. ATKINSON: I understand there are a lot of people looking for the man who knows how these fires are started.

Q. Has it come to your knowledge that any of those big fires up

there were occasioned by a railroad?

A. Well, the May fire was not occasioned by a railroad. I know that, I was right there when it started.

Q. The middle ground there in the river burned off there 2697 one time, didn't it, when they had a large amount of lumber on it?

A. This fire started on the middle ground at Saginaw.

Q. That is in the river?

A. In the river.

Q. And blew across into the town?

A. Blew down and struck the bridge, set fire to the bridge.

Q. When Germain's mill was burned, was that caused by the railroads?

A. No, sir; that came from this same fire.

Q. How far did that fire burn?

A. Oh, it was a mile over, I should say. Germain was much farther than that—that is, from where the fire first started.

Q. Germain's new plant he has just rebuilt?

A. Yes, sir. Q. That is a $3\frac{1}{2}\%$ risk, you say?

A. Yes, sir.

Q. There is a side track that runs right alongside of the planing mill, that goes into his lumber yard?

A. Yes, sir.

Q. So that engines pass on that side track in putting lumber into his lumber yard?

A. Yes, sir,

Q. Now, this 80% per cent. clause has no effect at all where there is a total loss?

A. No, sir.

Col. Atkinson: Why, yes, he loses 20%.

A. Yes, where there is a total loss. I took his question the other way.

Q. I guess you will find that you answered it correctly, if I understand it. Let us take a plant that is worth \$10,000 and you insure it for \$8,000, 80%. Now, if that burns up, the owner

2698 gets his \$8,000?

A. Yes, sir. Q. And he loses \$2,000?

A. Yes, he gets to the extent of his insurance, of course.

Q. So that if it is a total loss, he gets all of his insurance. Now, if it is only a partial loss, he gets in the same proportion under the 80% clause?

A. Yes, sir.

Q. That is, if there be a loss of \$2,000° and he is insured for \$8,000, 80%, he gets in that proportion?

A. He gets his \$2,000.

Q. He gets \$1,600, or something like, or \$1,800?

A. He would get \$2,000 in that case.

Q. Simply because he complied with the 80% rule?

A. Yes, sir.

Q. But if he had only \$5,000 or \$6,000, then it would be proportionate?

A. Yes, sir. Q. That is, on a piece worth \$10,000, 80% would be \$8,000, and if he insured up to the 80% clause he would get on a total loss \$8,000, or on a loss of \$2,000 he would get \$2,000. But if instead of taking 80% he took 40%, or \$4,000, and a \$4,000 loss occurred, how much would he get?

A. He is a co-insurer with the company up to the extent of

80%.

Q. He would get about \$2,000?

A. He would get just one-half his loss under that statement. He

is carrying the balance of it.

Q. That is, you take the 80% and with the amount of the insurance that he has actually got you make a fraction?

A. Yes, sir.

2699 Q. Then if he sustains a partial loss they pay him that proportion and that is all there is of it?

Col. ATKINSON: He receives in proportion to his loss as his insurance is in proportion to 80% of the value?

A. Yes, that is it in a nutshell.

Q. As you understood it that was adopted because the majority of the risks were partial losses?

A. That is my understanding of it.

Q. The majority of the losses were partial losses and the insurance companies are compelled to pay the whole amount and the insured bore no portion of it, and the business not being profitable they adopted this plan? Is that so in a general way?

A. That is the theory, yes, sir.

Q. Now, the railroads run right through lumber yards up there, don't they, with the lumber piled on each side?

A. The main lines?

Q. Yes.

A. Yes, in a very few places.

Q. In Wright's yard the main line of the Michigan Central goes right through it?

A. It does.

Q. In a good many places is it not true that sidings run right through a lumber yard like that?

A. Almost all the yards.

Q. Now then, do they have or not a very elaborate system of sidings there? They have a belt line that runs around the city, and you have to go to one siding to get to another manufacturing institution occasionally?

A. In some cases, yes, sir.

Q. You remember where the Germain mill is, they have a siding they go through by the mill property to get to the lumber yard.

Do you remember the Spencer mill right across the street?

2700 A. Yes, sir.

Q. So that that mill is on the same spur from the belt

A. Yes, sir.

line?

Q. So that they have to go by that property in order to get to Germain's?

A. Yes, they pass that on the belt line to get into Germain's.

Q. So that the engines are working on these side tracks for all these different plants from time to time as they have business there?

A. Whenever they have business, of course.

Q. There is a great deal of refuse alongside of railroad tracks in the vicinity of saw-mills, there are strips of territory where kindling wood covers the ground on each side of the railroad?

A. Yes, there is a great deal of refuse matter scattered around

there everywhere.

Q. There are a great many yards where there are piles of edgings that come from the mills pilled up there to be sold for fuel purposes?

A. Yes, they are not so very close to the tracts, however.

Q. Not right next to the track? A. Not right next to the track.

By Mr. Robison:

Q. It is a common practice there, is it not, to carry these shavings for some distance from the mills?

A. No, it is not a very common practice.

Q. There are several places where they do it, are there not?
A. Where the shavings vault is detached some distance?

Q. Yes.

A. There are a few, but very few cases.

Q. Well, Boies' mill you say, is about how far? 2701

A. Well, I should say it was three or four hundred feet. I have been over it a great many times, but I never paid any particular attention. I should say it was three or four hundred feet, though I would not be positive. It is a long distance, and that is the only one that has any such distance down there.

Q. Do you remember Mershan's mill?

A. Yes, sir.

Q. Are you acquainted with that?

A. Yes, he has three planing mills on his plant.

Q. A very large institution, isn't it? A. Quite a large institution, yes, sir.

Q. They have three engines there. How many are there, engines connected with the one system of boilers?

A. Well, two of the mills are run from one boiler, that is one

boiler-house.

Q. Power is conveyed there through pipes for a long distance, or some considerable distance?

A. It is not near as far as it is down at that Bay City mill.

Q. Not as far as the Boies mill?

A. No, sir.

Q. That is the farthest of any that you know of?

A. Oh, yes. Mershan's two mills, I should say, without being definite, were 75 feet apart, and then the boiler-house is off at one side and they both of them take their power from that.

Q. They all connect with the boiler-house?

A. Yes, sir.

Q. This Germain mill, you say, is a one-story building?

A. One story.

Q. That is the part that is insured? A. That is the part that is insured. Q. The rest of it is not insured?

A. It is not completed, what is called his factory building, his three-story one. They are putting in the machinery now. 2702Q. No insurance rates have been fixed on that yet?

A. No, sir.

Q. How high is that? A. Three stories.

Q. That is a very large institution, isn't it? A. Yes, sir.

Q. That is the biggest in the whole valley?

A. Yes, the planing mill is very large; it is 194 by 208.

1615

Q. Do you know how big this other building is?

A. It is 80 by 200 and something, I think. I don't remember. though he told me the other day when I was walking through with him.

Q. There are two of those?

A. No, sir. That is the Germain building you are talking about.

Q. There are two just alike?
A. That is his warehouse, the old building that was not burned.

Q. They are about the same size?

A. Yes.

Recross-examination.

By Col. ATKINSON:

Q. Do you put the same rate on the power-house as on the mill?

A. I do if they are connected or if they stand together.

Q. You make a single rate for the whole?

A. Yes, a single rate for the whole.

Q. If the buildings are separated you make a different rate?

A. Yes, if the buildings are separate. Not necessarily a different rate, but put a rate upon that.

Q. Is it usually higher on the power-house?

A. No, if the power-house is detached it would not be as 2703 high. I have not rated Germain's power-house because I am waiting for his factory. It will be much less.

Q. In our case here the power-house, as I remember, is rated by

the insurance company at 8 % and the mill at 51?

Then you take a brick boiler-house, of course, it A. Yes, sir. would rate-yes, I could rate it that way.

Q. You would rate it less instead of more?

A. Yes, detached.

Q. Can you tell us where the rule is different from here? A. I don't know anything about it one way or the other.

Q. What caused that fire at Wright's?

A. When was that?

Q. You spoke of a fire at Wright's lumber yard or planing mill?

A. Not that I know of.

Q. Wasn't there a fire at A. W. Wright & Co.'s, hasn't there been a fire there within a short time, within a few years anyway?

A. Well, I don't remember of any fire of any extent there since I have been in Saginaw.

Q. Didn't they burn out?

A. Oh, no.

Q. Do you remember a fire starting there and being put out?

A. I do not. I don't remember now anything about it. My impression is, too, that within two or three weeks I saw in the newspaper there was a little damage over there; which mill it was I don't know. Of course, those things are occurring, you pick up your morning paper and you see it.

Q. Do you remember whether that occurred from the railroad,

whether it was so reported?

A. No, I think that was in the mill.

Q. Was that at Wright's, but-2704

A. That was at Wright's, but I would not be positive; I am quite sure there was a little damage over there, but it was nothing we thought anything of.

Q. Do you remember anything of a fire at Brown & Ryan's? A. Well, that whole thing burned out there three or four years ago, down there by Owen's and all that.

Q. Were they near the railroad?

A. Well, the main line of the railroad was quite a distance from them.

Q. But they had a spur track?

A. All of these mills have a spur track.

Q. What one is on the main trunk line of a railroad?

A. A. W. Wright's.

Q. What road runs through there?

A. The Michigan Central.

Q. What is the extent of its right of way?

A. Well, the lumber comes very close to it. It seems to me it is not over 10 feet.

Q. Over 10 feet right of way?

A. Ten feet from where the lumber is piled up.

Q. That would be from the right of way, but how much from the center of the track?

A. It is right up close to the track. Q. Have they the 100 feet right of way?

A. I don't know what right of way they have, but the lumber is piled in there. I don't know anything about their right of way.

Q. On each side of the track, then, there is a lumber pile up to within a very few feet of it?

A. About 10 feet.

Q. What is the space left for the cars to run there, 10 feet?

A. It is a very small space, of course. I never thought of it nor paid any particular attention to it, only I know it runs right through the lumber there and the lumber is piled on each side of it.

Q. Do you think the right of way of the Michigan Central there

would be less than 100 feet?

A. I don't know anything about that. I know the lumber is piled nearer than that.

Q. It is piled on the right of way then? A. I don't know anything about that.

Q. Would you want to say that the lumber was piled so that the piles on each side of the track were less than 100 feet apart?

A. Yes, sir.

Q. Then there must be less than 100 feet of right of way or else it is piled on the right of way?

A. That may be. I know he piles in the streets; the city allows him to pile in the streets.

Q. Wright piles in the street also?

A. Yes, sir; I know that.

O. He is short of room, then?

A. Yes, he is short of dockage, they claim.

Q. You don't want to tell us it is prudent to pile lumber close up to where these engines are running all the time, do you?

A. I never have known any fire there from it.

Q. Well, you think it would be a prudent thing to pile this lumber right up to the railway track?

A. We do not charge Wright anything for it.

Q. I did not ask you that at all. You seem to be running business at a loss up there, according to your own account.

A. It looks that way.

Q. That is not our way of doing it here. Do you want the jury to understand that you do not consider it an imprudent thing to pile lumber right up to the edge of a railroad track where there are engines passing?

A. I never have considered any hazard to that lumber pile.

Q. Do your engines have fire-boxes open sometimes?

A. Yes, and drop live coals.

Q. They are like all other engines, though you would not consider it at all dangerous to lumber piled up against the track?

A. We do not so treat it.

Q. You have strong winds there, I suppose?

A. Yes, sir.

C. Outdoors as well as inside and still you consider that a prudent kind of business, to pile lumber right up to the track?

A. I have always considered it so.

Q. It is done at this yard of Wright's?

A. Yes, sir.

Q. That yard has been burned out once?

A. Not since I have been there.

Q. How many fires have they had there?

A. I don't know that they have had any of any account.

Q. Who else besides Wright piles his lumber that way? Perhaps it would put out a fire to put lumber there.

A. Que of Col. Gliss' mills.

Q. The main trunk line runs through his place also?

A. Yes sir

Q. How would the number of trains on the Michigan Central, as it passes through Wright's yard, compare with the number of trains on the Flint & Pere Marquette, on the Wabash, the Canadian Pacific and the Detroit, Lausing & Northern, all combined?

A. Oh, it would be very slight, of course, in comparison.

The Jackson branch passes over that road and the Detroit,

Lansing & Northern.

Q. How many trains a day does the Detroit, Lansing & Northern

run?

A. Well, there are three passenger trains each way over the Central and two over the Detroit, Lansing & Northern, and all the freights.

Q. That would be ten. And there would be the freight trains?

A. Yes, sir. 203—55 Mr. Baker: Do you mean the Detroit, Lansing & Northern?

A. The Detroit, Lansing & Northern.

Q. Where does it come? A. Through Alma. Goes to Grand Rapids. That is where we

make our connections, goes to Howard City.

- Q. You haven't answered my question yet, whether you consider it a prudent thing to pile lumber right up against the railroad
- A. I have simply told you what my practice was. I have so treated it as a prudent thing, making no charge for it in that case.

Q. Don't you think the cinders from an engine would sometimes

burn a board?

A. I don't know but it would; it never has to my knowledge.

Q. We have a number of people here who swear that they have picked live cinders from a board and they have burned into the board and have set fire to piles and buildings alongside. Now. surely that would be a danger to lumber as well as to a building?

A. It may be.

Q. But you don't increase your rate up there?

A. Not at all, sir.

2708 Q. You have a very large number of lumbermen up there as clients in your insurance business?

A. Yes, a great many.

Q. The companies rather compete for that business, I presume?

A. Well, some do and some do not.

Q. And treat the lumbermen as well as possible? Some don't care for it?

A. Some don't care for it.

Q. Why?

A. Because they are not writing that class of risks. Every company, you know, has its risks.

Q. They do not like the risks? A. Some risks they will not carry.

Q. Some companies do not care for that kind of risks?

A. No, sir.

Q. Others compete for it?

A. Yes, sir.

Q. You regard it as desirable yourself?A. Well, it is a gambling business.

Q. That expresses it, doesn't it?

A. Yes, sir. Q. You gamble for it?

A. Yes, that about expresses it.

Q. Would you just as soon insure a pile of lumber that was alongside of a track as if it was 100 feet away?

A. Well, if I was carrying it myself, I should say no; I should prefer it away.

Q. But if you were carrying it for an insurance company you should say what?

A. Well, the insurance company makes its rules; it makes the

lumber rates and it does not charge for it. They make their rate from experience.

Q. What do you make it from?

A. From their experience.

Q. You say if you were carrying it yourself, you would 2709 make it different?

A. No, I say I might consider it not as desirable; I did not say I would increase the rates.

Q. What would influence you in that?

A. There is fire there and I should prefer it to be farther off.

Q. In other words, there is danger always from a proximity of fire?

A. Supposed to be.

By Mr. BAKER:

Q. Have you got that little table that you make up rates from, where you start with the basis?

A. Yes, sir; that is simply on a planing mill.

Q. It starts with a basis rate of 31 and then it shows what you increase it on?

A. Yes, those are the different charges for the defects.

Q. I notice for a shingle roof you add 1 %?

A. Yes, sir.

Q. No watchman you add one-half of 1%?

A. Yes, there is a charge for that.
Q. No brick shavings-room you add 1%?

A. Yes, sir.

Q. If wall of mill has unprotected openings you add one-quarter of 1 % ?

A. Yes, sir.
Q. That is the way you go to work to fix a rate on a planing mill?

A. That is the way we arrive at it.

Col. ATKINSON: What is an unprotected opening:

A. Without iron doors. Q. That is, no windows?

A. Yes, openings in the walls without being properly covered.

Q. So that if you had windows next to the railroad the 2710 way to keep the rates down would be to close them up with iron shutters?

A. Well, if they should be protected from whatever the exposure is.

Q. That would spoil the light, wouldn't it. It practically prohibits windows on the sides where the exposure to fire is?

A. You take a boiler-room for instance-

Q. So that we could get cheaper rates by putting iron shutters on the windows and keeping them carefully sealed?

A. Against an exposure.

Mr. Robison: He don't mean that. Col. ATKINSON: I guess he does.

Mr. Robison: They would not have such an unsensible thing

Mr. BAKER: I will put that in evidence and it can be copied in the record.

Paper marked Exhibit House "1," and is as follows:

EXHIBT HOUSE "1."

Michigan Inspection Bureau,

Planing mill.

Name
Owner
Basis rate—3 50
Mill building (additions).
1. Each story above one 25 2. Shaft under floor 50 3. Shingle roof 50 4. Shingle roof painted fireproof paint 25 5. No blowers 50 2711 6. Blower, wooded pipes and no cut-off 25 7. Manufacturer of sash, blinds and doors 1 00 8. Manufacturer of boxes or carpenter shop 50 9. Frame building 50 10. Not whitewashed throughout 25 11. No watchman 50 12. Watchman, but no watch clock 25 13. Wood stoves properly set and pipes securely arranged 25 14. Coal stoves properly set and pipes securely arranged 10 15. Steam pipes not on metal brackets or without protection where they pass through floor or partition 25 16. Dry-house (in building) 1 00 17. Lighted by other than coal, gas or incandescent electric light 25
Boiler-house (additions).
18. Brick adjoining, with fire-wall above roof of mill, and cutoff

29. Metal stack, no jacket	50
2712 30. Metal stack on brick base, rising at least three feet	
above roof	10
31. Metal stack with good iron jacket	25
32. No spark-arrester to metal stack	25
33. No brick shaving-room	1 00
34. Brick shaving-room not cut off	50
35. If wall of mill has unprotected openings	25
Fire apparatus (additions).	
36. No extra force-pump and hose or public water works	50
37. Extra force-pump and hose in boiler-house	25
38. Less than 250 feet 2½-inch hose	25
39. No casks of water and buckets in mill	25
General condition	-
General condition	
Total	100
Examined	189.
GEO. H. HOUSE. Inspecto	or.

CHARLES H. Ellis, sworn on behalf of petitioner.

Examined by Mr. BAKER:

Q. Where do you live?

A. Detroit.

Q. What is your business?

A. Civil engineer.

Q. How long have you been in that business?

A. Since 1863 or 1864.

Q. Are you the civil engineer that built the union depot elevated road?

A. Yes, sir.

Q. Were you in the Saginaw valley last Sunday?

A. Yes, sir.

2713 Q. Did you go through the yard of the Wright mill referred to here?

A. Yes, sir.

Q. How close to the main line of the Michigan Central is the lumber piles?

Col. ATKINSON: I object to that as incompetent and immaterial. It seems to me that whether Mr. Wright pursues a certain course or not should have no influence on this jury. If he piles his lumber up there it may escape fire or may not; the fact that he does it does not carry with it any weight or not as to what should be done by others.

Mr. BAKER: We have the testimony of Mr. House in connection with that, that there has never been a loss there in 12 years.

Col. ATKINSON: We are having your statement with Mr. House's. I do not think this testimony is competent.

Mr. Baker: It seems to me we have a right to make comparisons of that kind.

Col. ATKINSON: Suppose it is burned up?

Mr. BAKER: It is not burned up. It stands there both sides of the track.

Col. ATKINSON: We are getting Mr. Baker's testimony, and I take an exception to the statement.

COURT: Answer the question. Exception for respondents.

A. As I said, I was in Saginaw last Sunday. I went to this location and walked along the line of the Michigan Central track from the street which crossess there, where the electric cars run, beginning at that point on the curve of the railroad, which is quite a perceptible curve (the degree of which I cannot state). There were 15 piles of lumber on one side and 17 piles on the other, ranging in hight from 10 to 20 feet at the 170.

hight from 10 to 20 feet at least. Those piles were within a 2714 distance of 420 or 430 feet; intermediate between these piles

tr

were driveways for teams.

Q. 420 feet from what?

A. From this street where these piles begin, going south or southwest a distance of 420 feet. These piles on the south were within seven or eight or nine feet, as I remember it, as I measured some of them. I measured one extreme from the center of the track, some ten feet, say, from the center of the track.

Q. Well, from the rails?

A. From the rail there were from six to seven or eight feet, just about that average distance all the way around. On the other side they were about twenty feet from the rail, from the other rail, making a throat through there through which the Michigan Central runs of about thirty-four feet in width. That is the width of the right of way, or whatever the way through there is; whether that is their property or not I do not know. That exposure I know was there some sixteen or seventeen years ago when I located the Saginaw branch of the Michigan Central railroad. We made a connection very near that point. I was at the same locality and we ran out the line of that in order to make a map of it. I know that not those piles, but similar piles were there, similarly situated, and the piles that I saw there last Sunday had marks on them indicating that for some purpose or other they were counted in 1890–'91; '93 I think it was; no marks previous to 1890, I think.

Q. Did you make a trip around on the belt line?

A. Yes. Well, what shall I say about it?

Q. You were on the belt line, and did you go down to Zilwaukee on the main line of the Michigan Central?

A. Yes, and on the east side of the river went down to Bay City.

Q. Do you remember down below Bay City the planing mill where the boiler-house and the shavings-room are quite a distance apart?

A. Yes, sir.

Q. Did you measure that to see how far it was apart.

A. I paced it. The buildings were as I paced them from 390 feet, more or less, apart.

. How large a blow-pipe between them?

. I think it was twenty inches, galvanized-iron pipe. . With a metallic dust-arrester over the shavings vault? . Over the shavings vault a round galvanized tank like.

. With an opening from the vault into the boiler-room?

. I presume so. You did not see that?

. I did not see it, but there must have been an opening someere, because at the other end in the planing mill was a blower arms leading to each one of the machines, one or two or three s to each machine, where they collected the dust by suction and blew it or forced it to the boiler-room.

Did you visit any other planing mills there in the valley?

. From Bay City to East Saginaw we passed right alongside the k of the Flint & Pere Marquette railroad, so that they were ly noticed, two small planing mills and a box mill marked the higan Box Company. I think that was the name. lently dust-arresters of that same kind.

. They were on the main line of the F. & P. M.?

. On the main line, and between South Bay City and Bay City oticed a planing mill just south of the Flint & Pere Marquette, at which the Michigan Central had track connections, and

6 those two tracks seemed to run through the mill. At Saginaw, at Zilwaukee and Carrolton-at Zilwaukee there was a nt in regard to the piling of lumber there at the Bliss lumber d, in the planing mill and lumber yard-

ol. ATKINSON: This I object to as immaterial.

OURT: It strikes me, Mr. Baker, we ought not to go into that.

Ir. BAKER: I do not care to go all over the Saginaw valley, but ill ask one other question, whether or not the planing mills up re are equipped with electric lights?

. Yes, I noticed the Mersham mills are fully equipped.

Will you state whether or not the planing mills up there have nections with the fire-box under the boilers and their blow-pipes

as to blow the shavings right into the fire-box?

1. I cannot say as to that. They have got connection from their dust bin that was in sight in that boiler-room, those tubes leadwhere there are automatic feeders. Whether they are connected h the blow-pipe, I do not know.

2. Whether they are actually connected with the blow-pipe, you

not see? I. No. sir.

Cross-examination.

By Col. ATKINSON:

When were you up there?Last Sunday.

Q. Who was with you?

1. Mr. Baker, Mr. Robison, Mr. Potter and Mr. Sanders.

- Q. You had F. A. Baker, and George Robison, and Mr. 2717 Sanders I suppose is the lawyer who testified here yesterday?
 - A. I did not see him, but I presume it might have been him.

Q. A ruddy-whiskered man?

A. He is the attorney of the Flint & Pere Marquette railroad.

Q. Mr. Potter?

A. Yes, he is the general superintendent of the Flint & Pere Marquette.

Q. I suppose you went up to see the country for the purpose of

giving testimony?

A. I went up at the request of Mr. Baker.

Q. You went up to see how things were working there?

A. Yes, sir.

Q. You thought you would see the work better on Sunday?

A. Hardly. No, I think I should have seen it better on a week day.

Q. Things were quieter, if anything, on Sunday?

A. They were quieter Sunday. Of course I would have been pleased to see the wheels in motion.

Mr. Robison: There is not so very much difference at Saginaw.

Q. You went up on a special train, I suppose? A. No, sir. The regular train Saturday night.

Q. Gracious! You had been up there all night, then, when you went out there on this trip?

Mr. Robison: Tell the truth, Ellis.

A. The night was not included in the day; it did not lap over into the day at all. Is that what you mean? You mean did the night business work into the day?

Q. The night business did not lap over into the day?

A. No, sir.

Q. Oh, I did not quite catch the astronomy of it.

2718 A. I did not know what you referred to, about the night That is a little out of the line, I presume.

Q. You went up there to come back and testify?

A. Mr. Baker requested me to go, and he requested me yesterday to appear here.

Q. To give testimony?
A. I presume so.

Q. You went through this Wright lumber yard particularly and measured these piles?

A. I went through there because I was very much interested in

that location.

Q. How wide is the right of way there?

A. I don't know, but I could ascertain from the Michigan Central railroad.

Q. Ten feet.

A. Oh, it must be more than that, because the clearance for the cars would now have to be at least twelve or thirteen feet. have a throat some thirty feet wide.

Q. This lumber must be piled on the right of way, if they have ne ordinary right of way?

A. Certainly.

719

Q. Then it is just brought there and piled up for shipment, I ippose?

A. Well, it has been there some time.

Q. How do you know?

A. Well, as I said, I noticed the marks that were about there.

Q. Who made those marks?

A. I could not tell you. The marks are as any lumberman would and as I have seen before, and I understand they mark their iles for inventory and counting. It marked the year, the month nd the day, and sometimes the number of feet in the piles.

Q. This lumber is piled out near the track for shipment and is on

the right of way of the railroad?

A. I don't know what it is piled up there for; for ship-

ment, I presume.

Q. You don't mean to say there have been piles there for shipent since 1890?

A. I did not say so. I said there were piles there in 1881 and in 9; similar piles.

Q. Then you did not mean to tell us that by the mark you could y this lumber had laid there since 1890?

A. Well, it is pretty good evidence that it did.

Q. That is what you want to be understood, then? A. Yes, that those marks were evidently put there in 1890, '91 nd '92.

Q. This is in Wright's yard where these piles are?

A. I don't know as it is his lumber. He may have sold it. on't know as to the ownership of the land or the lumber at all.

Q. What kind of lumber was it?
A. Pine lumber.

Q. What quality?

A. There was a general run of lumber, one and two inch stuff, 12, 4, and 16 feet long.

Q. Culls or good quality of lumber?

A. Of good quality of lumber, I should judge. Q. There is a throat there that the train passes through, about ow wide?

A. About 33 or 34 feet.

Q. Do you know any portion of the Michigan Central right of ay that is less than 100 feet?

A. Yes, I think I do.

Q. Where?

A. Well, there are certain places. You are confining me to exet testimony and I am speaking from memory now. I used to have some connections with the Bay City road. I think in 720 Bay City they have narrow widths of land, that is very often the case, where they are restricted, where the land is valable.

Q. I am speaking of the Michigan Central.

A. That is not any more of the Michigan Central than the Bay City is; that is the old Jackson, Lansing & Saginaw.

Q. What is the foundation of these piles, are they piled on the ground?

A. Piled on the ground.

Q. Tracks on both sides of the piles or on one?

A. Not there.

Q. A single track?A. That is a single track there, the main line. Q. Do passenger trains pass through that track?

A. Must have to.

Q. You passed over that track when you went up? A. Yes, I walked over it on Sunday.

Q. Where is the Wright yard proper?

A. It evidently begins at that street, possibly just before you get to it, because that middle ground, what used to be North Saginaw, is all one lumber yard. I could not say where he begins or where he ends.

Q. I am getting old, and I would like to know whether this is a part of Wright's yard, this right of way, or whether that lumber is

piled there apparently for shipment?

A. I said as to the ownership of the land and lumber I did not know. The lumber is there, but whose it is I don't know. There is some lumber on somebody's ground at that place.

Q. All you can say is that there is some lumber piled on the

right of way up in Saginaw?

A. Yes, sir.

Q. Apparently for shipment, and some is marked 1890 and some 1891 and some 1892?

1

2721 A. With the month and day.

Q. Who made those marks, you do not know?

A. I don't know.

Q. You were taken up there to go to see them and come to swear to the fact?

A. I don't know as to that. Q. Where were these marks?

A. On the side of the piles, as Mr. Backus piles or any other He can tell you better than I what they were there lumberman.

Q. Just what were the marks?

A. There would be, for instance, 1890, marked 20; that would be on a board half way to the end of the pile, where the headers come through; it would be the filling stick in there or half way on the other side; it would be on one or the other.

Q. You saw boards on the piles with those kind of marks?
A. Yes, sir.

Q. They were not all then on the same places on the different piles, relatively on the same places, that you saw the marks; there did not seem to be any system?

A. Yes, they were generally about the height of where they could

conveniently made and easy of observation and easy to find; t there for some purpose.

Q. You think the mark was made after the board was in that e?

A. I should judge so.

Q. Had you ever seen any one making those kind of marks? A. Yes, and I found also marked on some piles, in one place, for tance, the lower part of the pile, 1890, and above that I found number, 1892, and in another place 1893 higher up, for some purpose; inventories, possibly.

Q. So that in all probability these boards were in the yard

when the inventories were taken?

A. I should presume so. Q. Some of those marked 1890, 1891, and '92 and '93, all came t together and got into this pile for shipment; the same pile?

A. I don't think that is a fair inference. Q. I don't care what you think as long as that is the testimony.

A. No. I understand sufficiently to swear that I find it is almost iversal with lumbermen in their lumber yards to mark their es in a certain way and I have asked them what it was for, an rentory; they put the year and the month and the day and somenes the number of feet. It would not be fair to infer that these ards came out and were put in there in that prominent posin-

Q. You will have to listen if you understand? A. Without some purpose. Q. You cannot talk all the time. A. I am through.

Q. And assume to understand what I want you to give us infortion on. Did you find in the same pile boards of different dates? A. Yes, sir.

2. How many different dates did you find on the boards in the

ne pile?

A. As I said, I found no dates previous to 1890. I did not notice her in any one pile any duplication of the year. rk for one year and one year marked for another.

A. You don't want to argue this, do you? A. No, sir.

2. You don't care what effect your testimony has if you get at the facts? 23

A. Not at all.

Q. You found some marked 1890, 1891, '92, and '93 in the ne pile?

A. I think I did find them. I did not notice whether they were in the same pile, yes, sir.

Q. How are these piles covered, anything to protect them from weather?

A. As I said, some of them were 8 or 10 feet high and some 20

in any way against the weather?

A. Nothing further than the usual slant of ice piles. They were not hooded over, as some piles generally are.

Q. So that they are not like the piles that are put up to stay for

any length of time?

A. No, sir. I said your inference that they were for shipment

was evidently correct.

Q. I think I understood you to say that the piles showed they were being piled now, that the work was going on, only interrupted for the Sabbath, I suppose?

A. I could not say but that it was. These driveways for teams indicated it was to be taken off by teams. I do not think it was

taken by rail.

- Q. You don't know whether that lumber was brought in by the railroad and put there by Wright and placed there so that his teams could take it away?
 - A. I don't know anything about that.
 Q. Was any of that dressed lumber?

A. No. sir.

Q. Where does Wright get his supply of lumber?

A. I don't know.

Q. You had been up there often before?

A. Oh, yes.

Q. So that this trip was purposely to get testimony, then?
A. That is the same question you asked before. I went at
Mr. Baker's request and am here at his request. I suppose
that is the purpose.

Q. We have a maxim of law that when you are looking for testi-

mony you generally find it?

A. I suppose that is the purpose.

Q. How did you happen to go below Bay City to see this mill that

has its power-house three or four hundred feet away?

A. Well, we had been covering some other portions of Bay City, and I think Mr. Potter suggested that there was a mill there that was well equipped, and he made the remark that it was a point that both the Michigan Central and the Flint & Pere Marquette were so anxious to get into that they were tumbling over one another with their side tracks when it was built.

Q. They have side tracks there?

A. Everywhere side tracks in lumber yards; nothing else in Bay City and Saginaw.

Q. All through these lumber yards there are side tracks?

A. Everywhere, among the timber, docks, slabs and fields of lumber; nothing but side tracks, so close the car could hardly get by any of them.

Q. A trunk line does not usually run through the yards?

A. No, sir, not where they have room.

Q. About how many trains would pass over that line that you have been speaking of up here, compared with the line in front of the Backus mill?

A. I could say very closely if I had a time-card of the Michigan Central.

Q. Well, about what proportion?

A. Oh, I could not tell. I do not even know how many trains they run out of the Fort Street depot.

Q. One to fifty? 2725

A. Oh, more than that.

Q. One to twenty-five, locomotives passing? A. Oh, I should think more than that.

Q. Can you give us some idea?

A. I would rather give it to you closer than a mere wild guess.

Q. You want to be so exact you cannot give us an approximation? A. Colonel, I like to be as precise as I can with you.

(). Is there any upgrade there in front of where you pass through these piles?

A. I should judge not, I should think it was level grade.

Q. The point of all this testimony, I think if I understand counsel on the other side right, is to show by you that there is no risk from railroads?

Mr. Baker: That is objected to. It is not competent for the witness to testify to the point of testimony or the position of counsel.

Q. I want to know if you wish to be understood from the way you saw the lumber piles or anything else that you have ever seen in your life that you do not think that there is any fire risk from the proximity of a railroad?

A. I could not testify that pine would not burn, that slabs won't

burn, that sawdust won't burn, and that pitch won't burn. There was pitch hanging there on these piles that I could have lighted with a match and it would have gone; it is a tinder box there.

Q. If a live cinder touched that pitch it would burn?

A. If you put fire to it it would burn like oil.

Q. So that there is a fire risk?

A. When, you put fire to pine or pitch it burns. I am not an expert as to risks or exposure. I do not pretend to be. 2726

Q. Now, just lend me your ear?

A. Yes, sir.

Q. You assume in saying that pine will burn—
 A. Yes, sir.

Q. In connection with my question as to proximity of a railroad, that fire comes from a railroad. You say it does?

Mr. Dickinson: You nod your head. Speak so the reporter can get it.

A. I was waiting for the end of your question. I have not answered it.

Q. You have traveled over those roads a good deal?
A. Yes, sir.

Q. You have seen the woods on fire?'

A. A great many times.

Q. Apparently ignited from the railroad?

A. Evidently.

Q. So that there is always a danger from fire from passing locomotives?

A. I know it is a very common thing for locomotives to set fire

to the lumber woods; it is full of timber.

Q. And dry lumber would be a very bad thing to have the cinders light on?

A. Yes, sir.
Q. You have had fires in this city from the railroads?
A. I don't know. I never investigated them, and I could not testify as to facts of that kind.

Q. That has been the claim, has it not?

A. I presume so, yes, sir.

- Q. You have no doubt at all that this elevated railroad running along by buildings and throwing its sparks and cinders upon them increases the fire risk?
- A. Well, it depends whether it increases it from its exposure from other points. To answer you correctly, I was thinking of the elevated road in Chicago, the Alley road, where everything is exposed, and they do not seem to burn.

Q. I want you, if possible, to think of the elevated road here?

A. Yes, you take this road just as it is.

Q. We had a case last night.

A. Put a-

Q. Well, what were you going to say about the case last night?

A. I interrupted you then. Excuse me.

Q. I am willing to be interrupted.

A. I would say you have a case last night which there was testimony here about which I have just listened to. It was set by the locomotives. I could not contradict it.

Q. That may occur any time?

- A. Fire is liable to occur from a burning chimney; exposes are more where there is fire.
- Q. This Sunday trip, while I suppose it had many pleasant instances-

Mr. Dickinson: Especially in the night.

Q. And leaves pleasant memories, have not satisfied you that fires are not sometimes ignited by locomotives?

A. No, sir, I know they are.

By Mr. BAKER:

Q. It is a single track that the Michigan Central has through Wright's lumber yard?

A. Yes, sir.

Q. Is it usual for a railroad company to load and unload lumber on a main track?

A. No, sir, it is not.

Q. You do not mean to be understood that that lumber is piled out there to load onto cars on that main track?

A. Oh, no, I would not want to be understood as testifying as to any use that is going to be made of it. There are tramways, plank roads for teams, similar to what Mr. Backus has in his lumber yard.

Q. And Mr. Wright has a saw-mill there, hasn't he?

A. Yes, sir.

Q. It is on the river?

Col. ATKINSON: A saw-mill or a planing mill?

A. He has got both. I did not go into the planing mill and I could not give you the locations exactly.

Col. ATKINSON: Did you go through the mills; these planing

mills?

A. I went through some of them.

Q. And on Sunday?

A. Yes, when the doors were opened. There were one or two we could not get into.

By Mr. Robison:

Q. This lumber that is piled along the track in Wright's yard, is not a single line of lumber without any back of it?

A. No, sir.

Q. Isn't it a continuation of a lumber yard; the lumber yard begins back and runs as far up and as near the track as they can get?

A. It extends from there, excepting for the driveways between it,

down to his mills.

Q. But it is not a single line of lumber piled along the track?

A. No, sir.

Q. Back of there, there are a number of other piles?

A. Yes, sir.

Q. Now, this Wright's yard is not a single isolated case of lumber piled along the railroad track, is it?

A. Oh, no.

Q. Didn't you see many other places where the railroad ran through tunnels of lumber?

A. Yes, everywhere.

2729 Q. But this is the most pronounced case where the trunk line runs through it?

A. Yes, the most pronounced of any I saw.

Q. There are miles of it, are there not, where side tracks run through it in that way?

A. I should judge so.

Q. Did you hear a man up there make an estimate of the number of miles?

Objected to. Question withdrawn.

By Col. ATKINSON:

Q. I understood you exactly the opposite to what you now tell Mr. Baker. You told him, as I understood you, that these piles were not put there for the purpose of shipment apparently. You told me they were.

A. I think I was careful to tell you that I could not state.

Q. You do not mean then-

A. He asked me and I refused to be definite in regard to it.

Q. He has a way of getting you into trouble that way. You do not mean to change your testimony?

A. Not at all.

Q. You assented to his proposition that they were not there for the purpose of shipment; that the railroad never ships on its main track.

A. I said I could not testify as to that.

Q. What facility had the Central for shipping except its main track?

A. It has side tracks.

Q. Where are they, in connection with this that you speak of?

A. There are sidings on the south of these piles, between there and the river.

Q. Then you made a mistake in answer to a question I 2730 asked you before, as to whether there were tracks also on the other side of those piles. There are side tracks.

A. There are side tracks. I supposed you wanted me to answer your question exactly. There are side tracks back of the piles in the lumber yard.

Q. These piles then lay between Wright's side track and the main

track of the railroad?

A. Yes, I think there are side tracks over there.

Q. Whether they are there for present shipment or not you cannot tell?

A. I cannot tell you.

Q. Were the other gentlemen looking about at the time you were there?

A. They were there, ves, sir.

By Mr. Robison:

Q. Do side tracks run through the mills up there anywhere?

A. Yes, I saw a case where locomotives run through planing mills. Q. This Germain , ill, that has been testified to here, do you remember a side track unning into that mill?

A. Yes, sir.

Q. The whole length of it?

A. Well, they had a siding in one part of the L. I don't think they went through the mill.

Q. I mean the mill they are operating now? A. Yes, sir.

Q. Do you remember any other mills where the railroad ran through?

A. At Carrolton there are two tracks running through the Eastman mill.

Q. Entire length?

A. The entire length.

Mr. Dickinson: Side tracks? A. Side tracks, locomotives running through there.

2731 Col. ATKINSON: Those are not tracks for fast trains or general traffic through the mills, I suppose?

A. No, sir. At Spencer & Co.'s there are other side tracks running through those mills close to the planers.

Q. Do you know on the main line of the Flint & Pere Marquette

of planing mills located?

A. I testified to two between South Bay City and Bay City.

Q. Do you remember a place there where there are three?
A. That is the place. One on the south side, I think had no connection with the Flint & Pere Marquette; the Michigan Central

runs to that.

Q. Isn't there one place on the main line of the Flint & Pere Marquette where there are two planing mills right alongside of the track on one side and on the other another planing mill?

A. Yes, I spoke of those.

By Mr. Foreman BAKER:

Q. In the case of this lumber piled where there are three years minuted in the same pile, 1890 then would be nearest the ground?

A. Yes, sir.

Q. And '91 next?

A. Yes, sir.

Q. So that, you think, indicates that the piles, so far as 1890 is concerned, were piled there in 1890?

A. I assume it was. I assume it was an inventory mark.

Col. ATKINSON: Any difference in the color?

A. In the color, yes. Some of those piles had a seasoned color on it.

Q. Much darker?

A. Darker, yes, sir.

Q. It looked then as though the bottom of the old pile was 2732 left there and new lumber piled on top of it?

A. Yes, in some cases.

The Court: Anything further?

Col. ATKINSON: No, I was just thinking how slowly lumber sold up there.

Recess until 2 p. m.

WEDNESDAY, Nov. 1st, 1893-2 p. m.

George M. Brown, after being duly sworn on behalf of the petitioners, testified as follows:

Examined by Mr. BAKER:

Q. Where do you reside?
A. Saginaw.

Q. How long have you lived there?

A. Twenty-six years.
Q. What is your occupation?

A. Civil engineer. And superintendent of roadway and structures for the F. & P. M.

Q. What do your duties consist of?

A. I have charge of the maintenance and repairs of the tracks and buildings, bridges, etc.

Q. Suppose a new track has to be built anywhere, what have you to do with it?

A. Direct as to the work and the detail.

Q. You have charge of it?

A. Yes, sir.

Q. And you are connected with the Flint & Pere Marquette railroad?

A. Yes, sir.

Q. I suppose you are familiar with the other tracks in the Saginaw valley?

A. Yes, sir, I am.

Q. That is, East Saginaw, Saginaw and Bay City.

2733 A. Yes, sir.

Q. The Flint & Pere Marquette has a line that connects those two places?

A. Yes, sir.

Q. And it also goes across the river there on its way to Ludington?

A. Yes, sir.

Q. Are you interested in any other business? A. I am interested in the lumber business.

Q. What is your connection with that business.

A. Owner or half owner of a saw mill, and of timber.

Q. Can you explain to the jury how the lumber piles are marked? When Mr. Ellis was on the stand he testified there was some markings on the lumber. You are in the lumber business; will you tell us what that is?

A. Our practice is to mark each pile as it is completed with the day, the month and the year. So that we may know the age of the lumber, we also put on the number of the courses in the pile, and sometimes the number of the feet. That enables us to take an inventory quick at the end of each month in order to correct our insurance.

Q. How do the different markings come on the same pile?

A. Sometimes a pile may not have been completed; it may have been partly completed and counted at the end of the month, and then the following month may have been finished up higher, and the different markings would show the age of the lumber, and the amount of each.

Q. And of course if it was only built up part way there would be one marking, and afterward if it was completed or partly taken down there would be a different marking?

A. Yes, sir,

Q. Now with reference to the Flint & Pere Marquette system up there, have they a belt line that runs around the city?

2734 A. Yes, sir.

Q. What is that used for?

A. For regular trains and to reach the manufacturing plants on both sides of the river.

Q. Does that appear on the ordinary map of Saginaw?

A. Yes, sir.

Q. (Producing large map.) Will you show us on this map the belt line of the Flint & Pere Marquette? Just trace it around

there?

A. This being the depot of the Flint & Pere Marquette railway, and the location of their shops, starting from there, crossing the river to the west side, and running by some manufacturing plants, and in around here to the west side, following this line there we have a passenger station, which is called the West Side depot, or Court Street depot; going from there we pass on through here, and at that point we cross the Michigan Central main line, where we make convection with the Saginaw Valley trains of the Detroit, Lansing & Northern system for Grand Rapids and other points West, and then pass on with the main belt line, running down, reaching all these plants here and crossing the river to the east side, and up here connecting with these manufacturing plants, and out this way, connecting with the main line down to the depot. About 13 miles run.

Q. Which side is East Saginaw?

A. Here, on this side.

Q. Now, whereabouts on the line is the Germain mill?

A. It is right here.

Q. That is marked "E. Germain;" is that the location of it? A. Yes, sir, and here is the main line of the Michigan Central.

Q. What mill is this here?

A. Pratt (?) & Spencer's.

Q. Where is the Mershan mill? A. That is here in this Y, where they connect with the 2735 Michigan Central.

Q. Is this the main line of the Michigan Central?

A. Yes, sir.

Q. Where is the Wright property?

A. It is right here. The Michigan Central comes down Water street until it reaches the Wright property, and then it angles off through his lumber yard.

Q. You say that belt line is used for regular trains; passenger

trains or freight trains?

A. Both.

Q. But I don't suppose there are many passengers on it in a day?

A. I think there are five each way.

Q. It goes round the city, I suppose, to pick up laboring men and people who want to go out to the shops?

A. Yes, sir, passengers.

Q. And it also furnishes railroad conveniences for a large number of manufacturing plants?

A. Yes, sir.

Q. Does the main line of the Michigan Central on the Wright property run right through a lumber yard?

A. Yes, sir.

Q. How many years has it done that, to your knowledge?

A. Twenty-five or twenty-six years, ever since the Michigan Cen-

tral road was built. I don't remember whether it was 1868 or 1869 that that division was built there.

Q. Was it about that time?

A. Yes, sir.

Q. Will you state, if you can, about how many miles of sidings you have on the F. & P. M. system that runs through lumber yards and by planing mills, where the risk is supposed and claimed to be extra hazardous?

A. Of side tracks, in excess of thirty miles in Saginaw proper. Q. Then there is this Wright property where the main line; is there any other lumber yard where the main line runs through it?

A. Yes, sir, there is.

Q. Whereabouts are they?

A. Well, the Frost Lumber Company, where the Michigan Central and C., S. & M. runs.

Q. That is the Cincinnati, Saginaw & Mackinaw road?

A. Yes, sir.

Q. That is operated by the Grand Trunk?

A. Yes, sir.

Q. Comes up by Durand?

A. Yes, sir.

Q. They have an entrance in the south side of the city?

A. Yes, sir.

Q. And to what extent are there planing mills and box factories on the belt line and main line there?

A. I was looking over some of them last evening, and I saw where there were over three or four miles of main line passing within 100 feet of planing mills, and through yards adjacent to mills.

Q. Have you a map with you of the Wright property?

A. Yes, sir.

Q. Will you produce it, please? A. Yes, sir. (Producing maps.)

Q. Who made that map?

A. It is made by the engineer department of the F. & P. M.

Q. In your office? A. Yes, sir.

2737 Col. ATKINSON: I object to any testimony in regard to that map as incompetent and immaterial.

COURT: I think, Col. Atkinson, the objection is good.

Mr. Baker: We will take an exception.

Cross-examination.

By Mr. ATKINSON:

Q. You have been in the employ of the Flint & Pere Marquette railroad for how many years?

A. 27 years.

Q. Continuously?

A. Yes, sir.

Q. How are you interested in lumber?

A. I have a half interest in a saw-mill.

Q. You say a lumber pile is partially made one year and a little more is put on it the next year, and a little more on it the third year, and so on for three or four years, to complete the pile?

A. Sometimes it appears that way.

Q. It would not happen very often that way?

A. No, sir.

Q. It would be quite exceptional, would it not, Mr. Brown?

A. I don't know as it would.

Q. It is exceptional?

A. Certainly.

Q. It sometimes happens?

A. Yes, sir.

Q. How wide is the Michigan Central right of way?

A. Of my own knowledge, I could not tell you.

Q. You pile lumber along the road, I suppose, for shipment?

A. Yes, sir.

(). Is it usual to pile lumber for shipment part of one year and keep it three or four years before you finish the pile?

That is sometimes done.

2738 Q. The lumber is allowed to season, then, right by the railroad track?

A. Yes, sir.

Q. I suppose the point of your testimony is, what counsel intended to show by you is, that there is no danger from fires in a railroad running near lumber. It does not increase the hazard. Do you want us to understand that way?

A. I have not been advised as to what they want to prove by

me.

- Q. I am telling you now. You want us to understand that a railroad running by a lumber yard is not a source of danger?
- A. I know the general practice of all lumbermen is to pile-Q. Now, Mr. Brown, can't you say whether you so understand it or not?

A. I know from my own experience in my own yard-

Q. I am not asking you about that. What I want to understand, and it will save us lots of time if you will tell me, is whether you want us to believe that a railroad running by piles of lumber, close up to them, does not increase the fire hazard?

A. We do not consider that it increases it so that we are unwill-

ing to take the advantages of it.

Q. You want us to understand that it does not increase the fire hazard?

A. Not if due care is used in handling locomotives.

Q. Then it depends upon the care of the men who handle the locomotives?

A. A careless man could set fire with his locomotive the same as a tramp might start a fire with a pipe.

- Q. It is not an uncommon thing for men who run locomo-2739 tives to become careless and who have to be discharged?
 - A. I never heard of one in-

Q. Then that is one calling in which a man is never careless?

A. I was going to qualify my answer by saying by reason of any carelessness in handling the engine in a lumber yard.

Q. So that a man who is careless all along the line you think would be careful when he got in a lumber yard?

A. I don't admit men are careless all along the line.

Q. Never?

A. I admit men are sometimes careless, but as a rule men are not.

Q. We sometimes have people killed from the carelessness of men handling a locomotive?

A. You may call it carelessness or error in judgment.

Q. If a man was careless in opening his fire-box near a lumber yard, it would be likely to set it on fire?

A. Unquestionably.

Q. Do engines throw sparks in your part of the country?

A. They throw sparks to a limited extent.

Q. If that spark lights on a dry board it is liable to burn it?

A. It hardly ever lights-

Q. Did you ever travel through the country as far as Alpena?

A. I have never been to Alpena.

Q. Have you ever been up as far as Mackinac City?

A. Yes, sir.

Q. Have you ever seen any fires burning along the side of the road?

A. A great many.

Q. Fences are burned sometimes?

2740 A. Yes, sir.

Q. And fences are usually 50 feet from the line of the railway, are they not?

A. Usually from 35 to 50 feet.

Q. And they frequently are burned from fire from the locometive?

A. It is possible. I know they are burned from other sources.

Q. It is more than possible, is it not? It is the ordinary reason attributed for the fires, is it not?

A. Not always. In a new country where they are clearing lands—

Q. Of course, you can burn wood without having it lighted from a locomotive, but it is a very common thing to have fires set from locomotives?

A. I dare say it is in dry seasons.

Q. And are not fires sometimes lit fifty or sixty feet off?

A. I never knew of a case of that kind. Q. Did you ever hear of such a case?

A. No, sir, usually from the fire-box, not from the smoke-stack.

Q. Then you never heard of a case where the fire took place from the smoke-stack?

A. Not fifty or sixty feet from the road.

Q. Well, any distance? This lumber, I understand, is piled up

near the tracks so as to give the trains but little room in which to

A. I never saw a fire started from the smoke-stack of a locomo-

tive.

Q. We had a fire here last night that took place in the roof of a building near this elevated road up as high as the top of the smokestack. It took fire in the shingles; do you think that came from the fire-box or the smoke-stack?

A. It is so reported. I think the evidence showed it was

about 20 feet distant.

Q. Do you think it was lit from the sparks of the smokestack?

A. I could not tell you.

Q. You would not suspect it was lighted from the fire-box, would you?

A. No, sir.

Q. So that if it came from the railroad it must be from the smoke-stack?

A. Yes, sir.

Q. And twenty feet off it would be a source of danger?

A. It might be-

Q. Oh, give me the answer. Would it, Mr. Brown, be a source of danger within twenty feet? Never mind the map, just tell me. We are gathering up all the information we can for future use here?

A. I consider that shingles, within 20 feet of the track, as reported,

would add to the danger.

Q. Then where the roof is dry it would add to the danger?

A. Not where lumber was dry, but lumber and shingles, old shingles. Old shingles are entirely different.

Q. Where the lumber was fine enough, I suppose. Then you don't mean to tell us that locomotives do not increase the fire risk, and I suppose that is all your evidence is introduced for?

A. I never heard of its increasing of it, by reason of its setting

fires.

Q. Have you in Saginaw any parallel case to the one we are considering here, an elevated road running close to a large building throwing smoke and cinders on it and around it?

A. There is no elevated railroad running by manufacturing plants in Saginaw. The only elevated road I know of is run from a coal chute to the wood yard.

Q. That is through your own property?

A. Yes, sir.

Q. Then you have no experience of a parallel case to this one?

A. No, sir.

Q. Have you had much experience in lumber?

A. I was brought up in the lumber business from a boy.

Q. Is dry sawdust quite combustible?

A. No, sir, it does not dry very deep even in the warmest weather.

Q. You don't answer my question. I ask you if dry sawdust was quite combustible, and you say it does not dry very well. I say after it is dry, is it quite combustible?

A. What I meant is, as sawdust is deposited over surfaces-

Q. If it is dry it is quite combustible?

- A. Yes, sir.
- Q. And fine sawdust made from dry wood, kiln-dried wood, the greater fineness would be still more combustible, would it not?

A. I suppose so.

Q. And more likely to be lit by sparks? Haven't you been called in the service in any case to pay for damages done by your company for burning fences and crops?

e

t

8

8

f

2

A. No, sir.

Q. Your jurisdiction then does not extend out of the city?

A. Over the whole line of the F. & P. M. railroad, and for a number of years I settled all damages for fire claims of all descriptions.

Q. What kind of fire claims?

A. Everywhere we had any to settle. 2743

Q. For burning fences through the country?

A. Yes, sir.

Q. How wide is the right of way in places where you have burned the fences?

A. From 40 to 100 feet.

Q. Your track is in the center of it?
A. Yes, sir, usually.

Q. Do you remember any case where the right of way was 100 feet wide where you burned the fences?

A. I know where fences are they were burned.

Q. So that they were burned nearly 50 feet from the track?

A. They have run from the track to the fence?

Q. The fire would be communicated to the fence? A. Yes, sir.

Q. When were you subposnaed?

A. Yesterday. Q. What planing mill does the track pass within 100 feet on your road?

A. It passes within 15 feet of some mills.

Q. What mills? A. The York & Tillotson mill.

Q. Do you know how that is arranged with reference to the light, etc.?

A. Yes, sir.

Q. Is the track elevated there?

A. No, sir.

Q. How high a mill is that?

A. There is no machinery in the second story, although it is quite a high story.

Q. All the machinery is below?

A. Yes, sir.

Q. The railroad is on a level?

A. A light grade.

2744 Q. Is there any upgrade in front of it?

A. Yes, sir.

Q. How much a mile?

. Well, 40 feet.

2. 40 feet to the mile, and you do switching there, I suppose?

. A great deal.

That is the nearest parallel, is it, to the Backus case? There is one other point I consider more dangerous.

). One other point still more dangerous than that?

Yes, sir.

We will take that later on. What is the size of this mill?

If you will allow me to measure it on the map I will tell you ctly.

2. No, just tell us.

1. I should say it was 150 by 200 or more.

2. And two stories high?

A. I think the posts are at least 16 feet with an elevated part ough the center.

What is the roof made of?
A. Gravel roof, I think.

 What do they manufacture there?
 They dress all grades of lumber and manufacture molding, h, door-, blinds and, I think, boxes.

Where is their machinery located?

A. All on the ground floor.

- 2. On which side of the ground floor, next to the railroad or ay from it?
- 1. All over the ground floor of the mill site where the track runs m which they take the lumber from the cars to the machines.

?. Their own side track?

A. Yes, sir.

Q. I suppose they keep locomotives running through the mill all the time?

A. Only into the mill switching; they run by the end-

Q. Don't locomotives run into the mill? A. They do if they have occasion to.

2. And that is common?

A. Yes, sir; there is a track on each side of the mill.

A. That is for their own accommodation, is it?

A. Yes, sir.

15

Q. The trunk line does not run through the mill?

A. No, sir.

Q. And you say they do all kinds of planing there?

A. Yes, sir. The F. & P. M. and the Michigan Central both go there.

Q. How long has that mill been running?

A. I guess about four years.

Q. Whose did you say that was? A. York & Tillotson. Q. They work in all kinds of wood, I suppose?

A. Yes, sir.

Q. Have you ever run a planing mill yourself?

A. No, sir.

Q. Is there any one here from Saginaw that has, that you know of?

A. Not to my knowledge.

Q. Is the exhaust greater when you are pulling up a grade than it is when you are not, in a locomotive?

A. Yes, sir, usually.

Q. When the exhaust is greater you are more likely to throw

sparks?

A. I think that is the theory. I am not a locomotive engineer. The greatest danger to my mind in handling a locomotive is stopping and then starting up again.

Q. Stopping and starting?

- A. Yes, sir, after the fire has been still a little while, as they would be switching.
- Q. From your starting a train out after you have fired up is there likely to be more throwing of sparks for a short distance than there is after it has got well on its way?

A. I think so.

Q. So that when you are near the stopping point you are more likely to get the cinders?

A. When very near, yes, sir. Anything that is light is soon

thrown out.

Q. And when you are checking up or pulling upgrade and exhausting you have the same danger?

A. Not when you are checked up.

Q. When you are pulling up, then the cinders are scattered?

A. Yes, sir.

Q. Do you know enough about lumber to know whether or not soot is a desirable thing on the face of dressed lumber?

A. I should not consider it desirable.

Q. Locomotive smoke contains soot, does it not? A. My attention has never been called to any lumber.

Q. Have you never noticed any cinders on the cargoes of lumber as they come in, cinders and soot from the locomotives, on lumber brought in on cars?

A. On cars that are near the locomotives I should suppose there would be cinders on top.

Q. You would expect that?

A. Yes, sir.

Q. Would not also some cinders fall each side?

A. I would expect so.

Q. If you had lumber piled alongside would it not get covered with soot and cinders?

2747 A. Cinders might fall on it, but I don't think soot enough would fall on the lumber to damage it. If the board was

rolled over there would be no cinders adhering to it.

Q. We have a number of gentlemen here who receive lumber by cars and they seem to be under the impression that a great deal of cinders and soot fall on the lumber; are they all mistaken, Mr. Brown?

A. I do not say but what cinders will fall on cars of lumber. It is reasonable to expect it.

Q. But where cinders fall you think the soot would not come

down on the lumber?

A. I don't think cars moving in a train would be so covered with soot as to damage the lumber. That would be my judgment.

Q. Have you ever seen your trains cleaned out after they arrive,

after a journey, the passenger cars?

A. They are always swept and cleaned. Q. Have you ever noticed soot in them?

A. Yes, sir.

Q. Have you ever noticed soot on the window-sills of the cars? A. I have noticed fine dust, dust that will go wherever the air

will.

Q. No soot? Do you mean to tell us soot does not settle on your cars as they are moving? Do you not know that it will make you look like a black man before you get to the end of your journey, sometimes spoil your collars and cuffs and neckties? You don't mean to tell us that in your experience there is no soot of that kind, do you?

A. What I mean to tell you and what you asked me was, whether

soot will settle on lumber in its transit.

Q. It will settle on anything that comes in its way?

A. Yes, sir.

Q. And you think it an undesirable thing on the face of lumber, especially dressed lumber? 2748

A. I should think so.

Q. It would spoil the lumber for the best finish?

A. Yes, sir.

Q. It would spoil the lumber unless you wanted it for antique or ebony finish?

A. Well, I am not an artist, and when you talk of antique and

ebony finish I am not a judge.

Q. You say you have no planing-mill men with you down there? A. No, sir.

Cross-examination.

By Mr. Robison:

Q. These piles of lumber that are piled in Wright's mill are piled right along the track, are they not?

A. Yes, sir. Q. The track is used on the right of way—the right of way is

used by that company as a part of its yard, is it not?

A. I don't know who owns the right of way, that is, whether the Michigan Central has a mere trackage right or not. It sometimes happens that railroads have only a very narrow right of way. I know when the road was built there Mr. Wright's yard was there, and he has always piled his lumber in close proximity to the track.

Q. How near to the railroad?

A. I should say about 15 feet distance. You stand at one end of

that yard and it is a regular tunnel. You cannot see the end on account of the curve.

Q. Do you know how long that is?

A. The yard extends there for over 1,000 feet.

- Q. Has there been any fire in that yard from engines that you know of?
 - A. No, sir; not that I know of.

Q. Is he there now?

2749 A. Yes, sir.

Q. And you say this yard has been there 27 years?

A. Yes, sir.

Mr. Dickinson: Did you say the railroad has been there 27 vears?

A. Oh, no; I didn't say that.

Mr. Robison: How long has the road been there?

A. I don't know that. They cross the F. & P. M. main line, and the F. & P. M. main line was built in 1867, and we were there a year first.

Q. And this railroad has been going through this lumber yard

since 1868?

A. Yes, sir.

Q. Twenty-five odd years?

A. Yes, sir. Q. And the lumber has been piled there all this time in the same general way?

A. Yes, sir.

Q. There is the top of a pile taken off, I suppose, today, and tomorrow or next week it will be built up again?

A. Yes, sir, and it stands there until it gets dry and in good ship-

ping condition.

Q. And it may stand there a month or it may stand there three or four years, may it not?
A. Yes, sir.

Q. Is not this lumber inventoried once in a while?

A. I dare say it is.

Q. Do you know what these marks mean on these piles?

A. Yes, sir. The lumber is hauled from the yard to the planing mill by teams and dressed and shipped as they have orders for it, and all planing-mill men want to know the age of their lumber, whether it is air-dried or whether they have got to put in a kiln.

Q. Is this Wright's yard the only one in the Saginaw valley

where the railroad runs through the yard?

A. No, sir. In all the yards they run about as near to the lumber pile, alongside of it, close to it. 2750

Q. In whose yards?

A. In Van Auken's yard. Q. What road runs there? A. The Michigan Central.

Q. How near to the piles of lumber does that run?

A. Less than 20 feet.

Q. Any other yards that you think of?

A. Ducharm's yard.

Q. How near does that run?

A. The F. & P. M. runs within about 20 feet. The Michigan Central is a little further away. The F. & P. M. have a track between the C. S. & M. and the Michigan Central. The Marsham mill is on the triangle.

Q. The main line of all these roads runs right by these mills?

A. Yes, sir.

Q. Is that a large mill or a small one?

A. It is a large one.

Col. ATKINSON: How near is that mill itself to the railroad? A. His mill is divided up into different departments. There are

three or four different mills, each of them quite a large mill.

Q. Covering what?

A. Each mill might cover from 100 to 200 feet.

Mr. Robison: Do you remember mills on the main line of the F. & P. M.?

A. I could tell exactly on the map if you want accurate informa-

tion.

Q. Do you remember some mills on the main line, where there are two on one side of the road and one on the other, in close proximity to each other?

A. Yes, sir. Q. Whose are those? 2751

A. One of them is the Bay Manufacturing Co. and the other is H. P. Merrill & Co. It is not H. P. Merrill either-

Q. What do they do?
A. They do a general business.

Q. How near are they from the tracks?

A. They are not over 30 feet from the F. & P. M.

Q. And another one on this side?

A. Just about the same distance; not to exceed that.

Q. Whose mill is that?

A. I don't remember the name. Q. Same kind of business, is it?

A. Yes, sir.

Q. It is a fact, is it not, that there are miles and miles of track in those two cities running between solid walls of lumber on each side?

A. There are over 30 miles of side track proper running through lumber yards and mills and there are three to five miles running through lumber yards adjacent to mills.

Q. How wide do you say the right of way is at Wright's mill? A. I don't know.

Q. Can't you tell by your map?

A. No, sir.

Q. The map does not show that?

A. No, it shows the track and shows how near the lumber is to it.

Q. Did you make that map for the purposes of this trial?

A. No. sir.

Col. ATKINSON: I want to ask you, Mr. Brown, did not the Michi-

gan Central originally go around by Reese and not go through Saginaw at all?

A. No, sir, they went to Reese afterwards. The Detroit & Bay City road was built in 1872, I think-

2752Q. And was built through by Saginaw first?

A. No, sir, it went by Bay City.

Q. And this road from Saginaw to Bay City was acquired as a sort of side track for the accommodation of business places?

A. No, sir; from Saginaw to Bay City the Jackson, Lansing &

Saginaw road was built first.

Juror Baker: I am not sure that I understood you with reference to this York & Tillotson mill, whether you said there were two tracks running through the mill or through the mill yard.

A. Through the mill.

Q. Through the mill building? A. Yes, sir.

Q. Do they run locomotives right through it?

A. Yes, sir, they run cars through there. The main track runs within 12 feet of the mill.

Col. ATKINSON: How far through the mill do they go?

A. They would only have occasion to go in there to place cars as the millmen may want them.

Q. Is there a switch at the other end?

A. The switch passes continuously through the yard.

Q. I don't understand that. Does the locomotive go through the mill?

A. Yes, sir.

Q. How could it get back? How does it get back? Are there not bumpers at the other end? Has it got a switch to come back on?

A. There are no bumpers there. It continues right through the mill.

Q. And passes where?

A. It connects with the Michigan Central system on one side and the F. & P. M. on the other.

Q. And it is customary for locomotives to run through there, to change their tracks, and pass from the track of one company to the track of another company?

A. Yes, sir.

Q. Did you ever see a locomotive in there in your life?

A. No, not in the mill.

Q. Not in the mill?

A. No. sir.

Redirect examination.

By Mr. Robison:

Q. Let us see about that. The York & Tillotson mill is not the only one that locomotives run through?

A. No. sir.

Q. How many are there; a good many of them where the tracks run through the mill?

A. Yes, sir.

Q. Does not the track run through this great mill, this new one of Germain's?

A. I think one track, their shipping track runs through the mill.

Col. ATKINSON: It is a one-end track that runs through the mill?

A. That particular mill, yes, sir.

Mr. Dickinson: Do you mean to say that a locomotive ever to your knowledge went into a mill?

A. Yes, sir. Q. When?

A. I have known locomotives to go into Esterbrook's.

Q. Have you ever seen the locomotive in there yourself?

A. I built the tracks-

Q. Have you seen the locomotives in there yourself?

A. Yes, sir, I have.

Q. Running through?

A. Not running through. It is a one-end track. The locomotive went in there when the cars were so far in that they could not reach it without backing in to get it.

Q. The customary way is to back the cars in, to kick them in, not to head in and drag in the cars, but to push in a sufficient number?

A. It is not the rule. '

Q. The locomotive then comes and takes ahold of the cars, and does not necessarily go into the mill?

A. Sometimes they have to back in after them.

Q. Did you ever see that done?

A. Yes, sir. Q. When?

A. I cannot recollect the time.

Q. Have you seen it within five years?

A. Yes, sir.

Q. When? Give the court some idea?

A. Couple of summers ago, I think.

Q. You saw a locomotive go into a mill?

A. Yes, sir.

Q. Puffing; smoke and exhaust?

A. It don't move much without having more or less smoke.

Q. How fast did it go in?

A. At a moderate rate, oh, half as fast as you would walk.

Q. Move slowly in, couple on and pull out?

A. Yes, sir, pull out.

THOMAS J. HASCALL, sworn on behalf of petitioners.

Examined by Mr. BAKER:

Q. Where do you live?

A. Saginaw.

Q. What is your occupation?

A. Master mechanic of the F. & P. M. R. R.

2755 Q. How long have you been master mechanic of that road? A. Eighteen years.

Q. What are the duties of a master mechanic?

A. To look after the rolling stock of the road and machinery.

Q. Do you know anything about the locomotives?

A. Yes, sir.

Q. Can you build one?

A. Yes, sir.

Q. Can you run one?

A. Yes, sir.

Q. Can you explain to the jury the construction of a locomotive as they are made now-days, with special reference to the reduction to the amount of cinders that can escape from it? How do you build them to reduce that to a minimum?

A. We use what we consider the latest known appliance for reducing cinders and smoke to a minimum in a locomotive, called the extension front end, and in connection with that we use a brick arch in the furnace carried on water tubes.

Q. Explain that brick arch to start with. How is that placed in the fire-box? Is this diagram the sectional or side view of a fire-box to an engine?

A. That represents the section of a fire-box of an engine.

Q. Can you illustrate by this book, what do you call your brick arch?

A. Those are the tiles. This represents what we call a water tube running through from the throat sheet to the back sheet. The water circulates through that tube. This is what we call the arch tile—

Q. What is the purpose of that arch?

A. That arch is for the cinders to intinge against this brick arch, and when the arch becomes heated to a certain extent it prevents the dense volume of smoke. It is to help create a combustion in the fire-box.

Q. Does it not force the smoke from the coal here to the back part

of the fire-box?

A. It forces the smoke right over to the back part and it passes over and comes down through the flue, passes through these water tubes. We use three tubes on our engine; on some roads they use four. This fire-box is about 30 inches wide, this way, and here is a water tube here, and another one near the center, and one on that side, and these arched tiles are laid on these three tubes.

Q. And this represents the end of them?

A. Yes, sir, this is a section of the fire-box cut through the center.

That shows the bottom flue and that the top, and this is the stay against the flue sheet.

Q. So that the smoke and cinders from the coal pass up through

these flues and around the end of the arch to the fuel?

Q. And the theory is that it creates combustion there and consumes more or less of the cinders?

A. Yes, sir, it wears out to a great extent the cinders.

Q. When the cinders go into the flues it passes the length of the boilers through the flues, what do you have through the other end of the spark-arrester?

A. We have what we call a deflecting plate in there.

Q. Will you explain that? Is this the end of a boiler here?

A. This is the end of the flues. There is a row of them right This is what we call the dry pipe, this is the steam pipe through. running down through there, and this is the exhaust pipe and this

is the petticoat pipe, not in general use, it appears to be on this diagram. This is what we call a deflecting plate, bolted

2757 above the top of the flues, and drops down here?

Q. It is a piece of iron plate?

A. Yes, sir.

Q. Any holes in it?

A. No holes until it comes down here. Here we perforate this plate below the netting. That plate comes out and drops down within 14 inches of the bottom of that circle, which makes it less here, and runs right across 14 inches, to the center. This netting commences there and runs over here instead of running up there. We carry it right straight through on a straight line.

Q. What size of mesh do you use in that netting?

A. We use what we call three by three mesh. It is number 12 steel wire gauze.

Q. Does all of the smoke that comes out of the smoke-stake have to go through that mesh?

A. Yes, sir, it has got to go through there.Q. Do the cinders collect anywhere in this cinder box?

A. They collect in here.

Q. Does your engine exhaust into this smoke-stack?

A. Right direct.

Q. And that is an exhaust of steam?

A. Yes, sir.

Q. And I suppose that has some effect on the cinders to reduce the number and quantity of them?

A. Yes, sir.

Col. ATKINSON: Is that the effect to reduce the number and quantity of them?

A. The exhaust is to create a draught. Q. It increases the cinders, does it not?

A. It increases the cinders—you create a vacuum in here and that throws the cinders out. In the old device the cinders were on

the bottom and forced them out, but in this we create a 2758 vacuum in there which draws the cinders through. We are not forcing them through, but we are drawing them through.

Mr. BAKER: Does the steam itself have any effect on putting any of the cinders out?

A. Oh, no.

Q. Did you see some netting out here in the hall?

A. I saw some as I walked past, but I didn't notice it partieularly.

Q. Do you use a netting on top of smoke-stacks now?

A. Not of that kind. This is all the netting we have. Formerly with the old style of engine they had a big bell-shaped smoke-stack and a mesh across the top of it. What we call a diamond stack, diamond top, made with an opening of about 30 inches on top, then there was a cone in here, and then there was another part like that, and this netting would go from here to here.

Q. Now, Mr. Hascall, will you show me where the dampers are?

A. Here is one and there is the other.

Q. One on each end?

A. Yes, sir.

Q. So that you can take draught in there either way?

A. Yes, sir.

Q. Does it depend upon which way you are going?

A. Not all together. Sometimes they use the back damper going forward and sometimes the forward damper.

Q. What does this represent?

A. That represents the way the damper is hung. That is the

joint. This is hung on here, this raises and lowers.

Q. When an engine is in operation and the damper is open, there is a draught in it, I suppose?

A. Yes, sir, the exhaust that draws it up through the grates.

Q. That is the way engines are generally constructed at the present day?

2759

A. Yes, sir. Q. The extension front and the brick arch. Do you know of any road that uses any different device?

A. Some roads are using the diamond stack.

Q. What roads are they?

A. There are some on the Michigan Central and some on the Lake Shore, but they are equipping all their new engines with the extension front, straight stack.

Q. I suppose you are familiar with the state of the art of locomotive building?

A. Rather.

Q. That is your business. Do you know whether or not this is the latest improvement in this regard?

A. Yes, sir, I consider it the latest improvement. Q. You don't know of anything any better? A. No, sir, I have not found anything any better.

Cross-examination.

By Mr. DICKINSON:

Q. That is your own invention?

A. Why, no, sir.

Q. It is something that has grown up by your experiments on the

F. & P. M. road?

A. Our design is to test them on the road by experiments with the engines.

Q. How long have you had this device on the F. & P. M. en-

gines?

A. Ten years.

Q. Do you know whether it is also upon the D., L. & N.?

A. Yes, sir.

Q. And upon the Michigan Central?

A. Some.

Q. Do you know whether it is on the Pennsylvania road?

A. Yes, sir.

2760 Q. It is in use there?

A. Yes, sir.

Q. There has been an effort on the part of all the railroads for many years to reduce the cinders and smoke to a minimum, has there not?

A. The effort has been to reduce the cinders to a minimum as a fire protection and to reduce the dense volume of black smoke on account of the economy of fuel; that has been the effort.

Q. How many devices have been applied to this end?

A. Well, sir, that is a question it is impossible for me to answer.

Q. Are you not familiar with at least 1,000?

A. I was going to say that Clark could show you about 1,000, and C. W. Williams and those parties.

Q. You testified on the former trial, didn't you?

A. Yes, sir.

Q. Has the Pennsylvania put in this device since then?

A. Well, I don't know. They are using it right along.

Q. Did you testify on the former trial that the Pennsylvania had tried 561 devices for preventing the issue of cinders? Didn't you testify on the former trial in answer to this question, "Do you consider the Pennsylvania road, take it all in all, especially its eastern connection, we will say between New York and Washington—do you know it is reputed to be the best conducted road in the country?"

A. It was so reputed.

Q. Do they have this device?

A. I don't know.

Q. Do you desire to change your testimony?
A. No, sir, but I have no recollection of that.

Q. Did you, on the former trial, testify as follows: "Q. Do you know that the Pennsylvania road has tried 561 devices for smoke

consuming upon their road? A. Yes, sir." Did you so tes. tify?

2761 A. That is right.

Q. And to the question: "Has your device been offered to the Pennsylvania people?" And did you answer: "No, sir?" Did you so testify?

A. That is right.
Q. Do you know whether it has been put on the Pennsylvania since?

A. I was in the Altoona shops two years ago this winter and they were putting it in. All new engines were being equipped with

that device.

Q. Did you in answer to this question testify as follows: "Do you know of any one that has succeeded with a cinder and smoke consumer in avoiding cinders and smoke?" And did you answer: "I have seen it advertised by some road; I don't know what road, but I don't know personally. Q. Do you know of any one that has succeeded except yourself?" referring to this same device, and did you answer: "I didn't say that I had succeeded."

A. Yes, sir: that is right.

Q. You are constantly trying to improve these, are you not? A. We are to work at it all the time, making all the improvements we can, if we find any possible.

Q. But your trains still throw cinders and black smoke?

A. To a certain extent.
Q. They throw fire, do they not, still?

A. Not very much. Q. Not very much?

A. No, sir.

Q. Will you please state how it is, if it be true that the F. & P. M. cars, the D., L. & N. cars, closed passenger cars, coming into this station here, within the time your device has been applied. 2762covered with cinders so that a pint and a half to a quart of

cinders is taken out of each car? Do you know how it

comes about?

A. Well, sir, I shall have to see that with my own eyes before I would believe it.

Q. You would not believe it: A. No, sir, not until I saw it.

Q. Now, has there been any device—this is largely the product of your experiments, is it not?

A. Largely.

Q. Does that device or any other device prevent the throwing of cinders and smoke?

A. I never have seen any device and I can find none on record where the prevention of black smoke was entirely eradicated.

Q. And where the prevention of cinders was entirely eradicated? A. The cinders are reduced to a very small amount. You might call it dust more than cinders.

Q. How wide are the interstices, the meshes in your device?

A. I should say that the openings are 37 about of an inch square.

(). They burn out sometimes, don't they, and have to be re-

paired?

2763

A. They wear out.

Q. How often?
A. Oh, we have had them in engines for two years without any deterioration perceptible. That is all owing to the class of engines and the kind of work. Take a heavy engine, where they are doing heavy work all the time, and the netting will deteriorate in five or six months, sometimes less.

Q. Do you succeee in getting your engineers to report as soon as

there is a break in the meshes?

A. We do dot wait for engineers to report. We have a daily inspection. There are two men whose business it is the first thing in the morning to inspect every engine, that

the first thing in the morning to inspect every engine, that is, at the terminal point. Of course they do not strike every engine every day. Every fourteen days there is a general inspection made. The front end is opened up and a general inspection made of the front ends, and that is done by taking out the center plate on the side of the smoke arch and putting a lamp down in the smoke-stack so they can look down through the netting.

Q. I suppose the F. & P. M. road now, since you have had this device on for the last 10 years, the lumber shipped in on cars is not

covered with cinders as it used to ba; is that so?

A. Well, I have never looked at it.

Q. Never examined to see whether it is so?

A. No, sir, I have never had any business to do that.

Q. No business to see whether the cinders fall on the lumber?

A. No, sir.

Q. This device is on the Michigan Central?

A. I believe it is.

Q. The same device?

A. Yes, sir.

Q. Now, if cinders come out of the Michigan Central cars a quarter of an inch thick and a quarter of an inch broad; come out on these cars from their engines, you would be astonished, if they were used in this device, that it should be so?

A. Not at all, sir.

Q. If the mesh is only $\frac{7}{32}$ of an inch wide, how do the cinders get through?

A. I don't know anything about the size of the mesh that the

Michigan Central used.

Q. What size of mesh is on the Canadian Pacific?

A. I don't know.

Q. What upon the union depot engines?

A. I don't know.

Q. What upon the Wabash?

A. I don't know.

Q. What engines pull in the F. & P. M. trains in here?

A. The F. & P. M. engines.

Q. With this device?

A. Yes, sir.

Q. Now, you are master mechanic up there?

Q. Do you examine your engineer's work?

A. Yes, sir. Q. Was this device largely for the purpose of avoiding fire risks up in your country?

A. Not particularly. That was one consideration.

Q. Do you not instruct your engineers in running through places where there may be inflammable material, is it not part of their duty, especially on the Flint & Pere Marquette, to avoid all danger from fire?

A. Engineers are instructed to use all necessary caution.

Q. In approaching inflammable material?

A. At all times.

Q. But in approaching inflammable materials especially?

A. There is nothing I know of limiting him to that. He is in-

structed to use caution at all times.

Q. I will ask you this question, whether you did not testify before as follows: "Q. Is it not true that with the best you can do there is always more or less danger from a locomotive, and will be so long as a locomotive makes steam by fire? Of course you may reduce it comparatively, but don't you always think there will be more or

less danger from a locomotive in passing inflammable material, so long as the steam is made or the locomotive power is generated with fire?" What do you say to that now? 2765

A. No more danger from a locomotive or anything else with

fire passing inflammable material.

Q. There is no more danger from a locomotive moving, than from a standing fire, or a permanently located fire? Do you want the jury to so understand?

A. We don't admit that a locomotive is throwing a continuous

stream of fire.

Q. I have not said that. I asked you whether you wanted to be understood by this jury that there is no more danger from a moving locometive than from a standing fire?

A. Your question implies that the locomotive is throwing a con-

tinuous stream of fire.

Q. I will put this question to you: Is there any more danger from a locomotive moving upon a track at the rate, say, of 15 or 20 miles an hour, than from a standing engine?

A. I will answer that question this way-

Q. You can say whether there is more or less danger?

A. (Continuing:) Then you can construe it as to whether or not it is dangerous. I will take and run a locomotive, properly equipped and in good condition, over a bridge, with any amount of gunpowder that you may have under the bridge, and think I am perfectly safe.

Q. Now, we will have a comparison if you please; whether you want to be understood by the jury, that a locomotive running

1655

on a track drawing a load is no more dangerous to surrounding property than a stationary engine?

A. Well, sir, I don't consider it is.

Q. Now, did you testify before as follows: "Q. When sparks and cinders and smoke are emitted from an engine, is the tendency 2766 for the smoke and cinders to deflect and fall; take weather like this today? A. A day like this would have a tendency for the cinders to deflect and fall." Did you so answer?

A. Yes, sir.

Q. And did you testify as follows: "Q. Take any day, is the tendency of cinders to go down from the smokestack?" Did you answer: "No, sir, they would go up. They have got to go up first. Q. How many feet? A. I don't know. Q. From the force of the emission from the smokestack, after that force is lost, the tendency is to fall? A. It is so soon that you see these cinders come lighted that we cannot measure it. Q. What is the tendency of cinders after they lose the force from the smokestack, whether to rise or fall? A. By the force it receives it goes up. Q. And then after it loses the force? A. It has got to fall down." Did you so testify?

A. That is all right.

Q. Did you testify as fellows: "You have run out on engines and trains yourself? A. Yes, sir. Q. Don't you know that the smoke lays along and falls at the side for miles, so that you can see it from the car window on whichever side it is? A. I have not lately. Q. Do you tell this jury that smoke and cinders fall right over the back of the train? A. They do unless there is a strong wind. Q. Suppose there is a wind from the river which would be blowing towards the Backus property, on that side of the elevated structure, and there were smoke and cinders, would the cinders be more likely to enter the windows than running at grade? A. If there is a train coming in on our road, pulling an ordinary passenger car, and running over that road, running past Mr. Backus' property, I should be willing to assert that if he didn't see the train go by he would not know by the amount of cinders he would get in there; if he did not see it, he would not know it went by." Did you so

testify?
A. I testified to that, yes, sir.

Q. Do you think that a locomotive that carries a heavy load will send out more cinders and smoke than an engine running light?

A. Well, take a locomotive that is pulling a heavy load, it consumes more coal, and will consequently throw out more cinders

than an engine running light.

Q. And it is the same rule as to trains going up a grade?

A. Certainly.

Q. It works harder?

A. Certainly.

Q. Now, will you tell us, if you please, the length of an ordinary passenger car?

A. To give you an average, 60 feet; say 66 feet over all. Some are longer and some are shorter.

Q. What would be the extreme length of a train say with eight passenger coaches with a locomotive?

A. I will approximate the length.
Q. Yes, and include the platforms?

A. About 575 feet, an approximation. Five to six hundred feet. Somewhere along there.

Redirect examination.

By Mr. BAKER:

Q. Do you know anything about a device by which there is a steam jet that is made to exhaust or go into the smokestack? Is there any such device in use-in connection with this front-end extension?

A. There is a blower pipe that goes into the smoke arch. It has a steam jet for creating a draught in an engine when she is at rest. When an engine is at rest there is a blower pipe put in there to

create an artificial blast.

Q. Do you know anything about a device or a steam jet that is put in there for the especial purpose of deflecting the cinders?

A. There is what we call, I think, a Hutchin's device, and then there is a device that is put on engines by Mr. Barnes.

Q. Of the Wabash?

A. Yes, sir, the master mechanic of the Wabash road. He has a series of pipes around his fire-box on the front side and on the after side, and then he has a pipe in connection with that that runs into the smoke arch, so that he always has a continuous draught through there, and that is for the purpose of drawing the air in to prevent the black smoke.

Q. Is that in use on the Wabash in addition to your own device?

A. I believe it is.

Q. It is not in general use?

A. No, sir, it is not in general use; there are some roads in the country I have seen it on. I have had it on our engines and it is of no benefit.

Q. It is of no substantial benefit?

A. No. sir.

Col. ATKINSON: What is that?

A. The injection of steam jets into the furnace.

Q. The Wabash design?

A. Yes, sir.

Mr. Baker: You were not here when that design was tried here?

A. No, sir, I was not. I didn't know anything about it.

Col. ATKINSON: That was on No. 39?

Mr. BAKER: Yes, sir.

WITNESS: It is no good in my experience. I derived no satisfactory results from it, and abandoned it.

2769 Recross-examination.

By Mr. Dickinson:

Q. You have an eight-thirty Flint & Pere Marquette train going out of here each morning?

A. Yes, sir.

Q. A passenger train?

A. Yes, sir.

Q. Do you know what engine pulls it.

A. Yes, sir; engine No. 24.

Q. It has the number 24 painted in large figures on it?

A. Yes, sir; it is on the dome.

Q. It went out this morning, then, didn't it?

A. Yes, sir.

Q. You didn't see it pass, did you?

A. No, sir; I didn't.

Q. That is one of your best passenger engines?

A. Yes, sir.

Q. With all the improvements that you know of to make the pouring out of the sparks and cinders at a minimum?

A. Yes, sir, and I feel very proud of the engine.

Q. That is one you feel specially proud of for its success? A. Yes, sir.

A. Tes, sir.

Q. Especially with reference to cinders and smoke?
A. Yes, sir; when she is in condition.

Q. Is she in condition?

A. Supposed to be.

Mr. BAKER: When was that train inspected last?

A. I could not tell you without looking at my record.

By Mr. Robison:

Q. Look at these cinders that were taken from the Backus mill on the afternoon of September 6th, 1893, and state what, in your judgment, whether they came from an engine burning bituminous coal?

A. These are wood cinders, some of them.

Q. Did those come from an engine burning coal?

A. Well, possibly.

Q. How could they come—they were picked up in Backus' yard on the afternoon of September 6th?

A. I could not tell you, sir.

Q. You don't expect to find charcoal cinders from an engine burning wood, do you?

A. No, sir; from an engine burning wood we do?

Q. From an engine burning coal, I mean?

A. No, sir.

2770

Q. That is charcoal from fine wood, is it not?

A. I should say so.

Q. Will you expect to find that kind of cinders from a coal engine?

A. No, sir. 208-55

Recross-examination.

By Col. ATKINSON:

Q. What do you start fires with?
A. We start the fires with wood?

Q. Pine wood, sometimes?

A. Very seldom. We generally use hardwood with us. Q. It lights better with matches, I suppose?

A. Well, the way we use it it does. We don't use matches. Q. You sometimes use pine?
A. Sometimes, but not generally.

Q. When you do it makes charcoal?

A. Pine wood makes charcoal like any other wood.

Q. That is all.

Mr. BAKER: The only additional testimony I want will probably be furnished by an admission. I didn't bring the men here,

but this same device is in use on the other two roads. Barnes testified to it, and these diagrams were made by Mr. Morrison, of the Wabash. I haven't thought to bring him here, and I desire it to appear here that the same device is in use

on the other roads that now use this superstructure. Mr. Dickinson: All right.

Col. ATKINSON: That only covers the roads now using this depot?

Mr. BAKER: Certainly.

Col. ATKINSON: And they may discontinue it at any time?

Mr. Dickinson: I want you to admit this ordinance, Mr. Baker, that we put in before.

Mr. Baker: You may consider that in evidence. Consider the

petition in evidence.

Mr. Dickinson: The ordinance of the city of Detroit, then, is permitted in evidence, providing among other things "that this depot structure shall have under it suitable iron pans or shields to catch the ashes and refuse from locomotives under the tracks of said elevated road along and on River street, and along and on any other street above which said roadway shall be constructed." That is all I want to read of it now.

HENRY N. BACKUS, recalled on behalf of the respondents.

Examined by Mr. Dickinson:

Q. Did you see the F. & P. M. train go by on the superstructure this morning, the 8.30 train?

A. Yes, sir.

Q. What engine? A. No. 24.

Q. What was it doing as to throwing cinders and so on?

A. When I saw her she was passing the Peninsular stove works, and she was throwing cinders at a terrible rate. I so considered it, and smoke everlastingly.

Q. To what extent?

A. Oh, so the air was thick. It rolled out. I don't know as I have seen any more so than I did this morning.

Q. Did you see the cinders as they fell?

A. I was on the corner of Tenth street when it passed and others saw it up at Eighth street. Mr. Griswold saw her up at Eighth street.

Q. Was she throwing a great profusion of cinders?

A. Yes, sir.

Q. And of the same size of cinders you have shown?

A. Yes, sir.

Q. What time was that this morning?

A. I think it was a little late, about 9 o'clock.

Cross-examination.

By Mr. BAKER:

Q. Where were you?

A. At the foot of Tenth street.

Q. On the building?

A. No, sir, I was on the corner of Tenth and River streets. I was not at my factory.

Q. She was working very heavy?

A. Yes, sir.

Q. That was a good deal nearer the starting point than your factory?

A. Some nearer.

Q. How many cars did they have on?

A. I could not tell you, but I am under the impression about seven coaches.

Q. Baggage cars.

2773

A. It was her regular train.

Q. Did you notice whether the damper was open or not? A. No, I could not say that. I was on the ground.

Q. All you know about it is there was a heavy volume of

smoke and some cinders coming out?

A. Yes, sir, a good many cinders coming out. I didn't count them.

Mr. Dickinson: We now ask the court, inasmuch as there has been no showing of the public necessity of this railroad down there, to dismiss the case.

COURT: I shall deny the motion and you may take an exception.

Mr. Dickinson: Now, may it please your honor, I ask, inasmuch as your honor will remember before the question of necessity had something to do with your honor's ruling, as to who should have the opening and closing, and now the question is wholly upon the injury to the business and damages, I ask your honor, that the Backuses, who have been brought into court on this question, shall have the opening and closing, precisely like any person brought into court under an order to show cause.

COURT: On that matter, when the question was asked me upon

the former trial, I expressed some doubt as to whether it was only a question of damages, as to who would have the opening and closing, but after the matter was argued, the objections made to the confirmation of the report, I mean subsequent to the time when it was presented to me, of course it was an entirely off-hand opinion at that time; since that time, Mr. Dickinson, I have examined that question, as you will find on page 93, and I find the authorities are universal that the petitioner shall have the opening and closing.

Mr. Dickinson: In cases where the element of necessity is elim-

inated?

COURT: I don't know as directly upon that question. They have the affirmative, and having the affirmative it strikes me, under the rule laid down by Thompson on Trials, on page 247, and there are two Illinois and one Ohio case directly upon the subject, and all these cases hold that the petitioner has the opening and closing.

Mr. Dickinson: Then your honor so rules?

COURT: Yes, I so rule, and you may take an exception.

Mr. Dickinson: I will take an exception.

(The further examination of this case was then adjourned to Friday, November 3, 1893, 9 a. m.)

November 3, 1893—9.30 a. m.

Argument of Mr. Robison.

If the court please, and gentlemen of the jury: You have listened very patiently, it seems to me, to the somewhat tedious proceedings of this case, commencing a long time ago-just when I have forgotten myself now-and continuing up to the present time. A great deal of the testimony that has been given has been on subjects about which I presume the most of you are ignorant, subjects you know nothing about any more than the ordinary man engaged in business of his own does, which has been uninteresting to you and a great deal of it, it seems to me, according to the view I take of this case, has not very much to do with the case at all; and I ask you to be patient a little longer and hear what I have to say to you about the case, promising that I shall not take up anywhere near the time that has been talked about in your hearing in court, knowing as I do that you are as well acquainted with the facts as I am, because I know nothing of it except what the testimony here has shown, and believing that it is a matter which rests entirely in the good judgment, discretion and common-sense of twelve men,

citizens of Detroit, who are to decide between these parties contesting here. I can only call your attention to facts which seem to me to be important in the case, without undertaking or attempting to undertake to influence you in any way by appealing to your prejudices or undertaking to make a speech-a

thing I am unable to do at any rate.

Mr. Dickinson: Oh!

Mr. Robison: Which is true, and of which I might say the same of some of the gentlemen on the other side, if necessity required.

Mr. Dickinson: That is better.

Mr. Robison: I want to talk business to you and nothing else.

Now, the situation is just this: Some years ago the project was formed of bringing into this city, into the central part of the city especially, the passenger trains of several of the lines of railroad that were already in the city at that time and of others that wanted to get in. Mr. James F. Joy, I believe, was the head of the institution, the testimony here shows, and the union depot project was formed-a plan of establishing a passenger depot on the corner of Fort and Third streets, in which a number of railroad companies were interested and were parties. You remember the testimony shows that some years ago one railroad-a small one in importance compared with the other great lines who have their headquarters or do their business at any rate in this city—the Detroit, Lansing & Northern, was practically shut out of the Michigan Central depot. It had undertaken to compete with the Michigan Central railroad, to do business from this city to Grand Rapids, and it proposed to build a line from Grand Ledge, a station on that railroad, to Grand

Rapids, and by the construction of that line have the shortest route from here to Grand Rapids. It was at that time pay-

ing \$10,000 a year rent to the Michigan Central for the use of their depot. Immediately on forming that plan the Michigan Central raised the rent from \$10,000 a year to \$40,000 a year, practically compelling the Detroit, Lansing & Northern to stop business in Detroit or find some other place where its passenger trains could enter. That probably was the beginning of this enterprise; that united the Flint & Pere Marquette with the Wabash railroad, which had a depot a long distance from the center of the city, down at Eighteenth street, I think it is.

Mr. Baker: Twelfth street.

Mr. Robison: Twelfth street. It is a long distance at any rate from the center of the city, inconveniently located-and another railroad company, probably the largest or at least one of the largest in the world, the Canadian Pacific-they all united with this little road, the Detroit, Lansing & Northern, which was forced out of a place where it could land its passengers; and this union depot project was undertaken. A great deal of money has been expended in procuring a site and the proper facilities for reaching the depot. The city of Detroit gave this company the right to run its road on an elevated track through River street, and the law provides that property owners along that street or along any street which is taken or occupied by a railroad of this kind, should receive whatever damages, extraordinary damages, they might suffer by reason of this railroad being built, by reason of these elevated tracks being built, by reason of this street being occupied. We know, as a matter of fact and a matter of evidence also, that the project has succeeded; the depot is built, trains are running into it, it is one of the greatest enterprises and one of the enterprises of which the city itself may be most proud of all there are in our community—the union depot system that we have here at the present time.

2777 It has been accomplished in the face of the most strenuous opposition from all hands and by the outlay of money that never should have been exacted by compelling the company to pay—

Col. ATKINSON: I desire an exception to this statement.

Mr. Robison: As the testimony shows, \$96,000 was paid to the respondents in this case, Backus & Company and Absalom Backus. Jr., for the privilege of running that road in front of their place. The testimony shows other large amounts, forty-odd thousand dollars—the exact figures I cannot remember—in these statements (and I do not think it is of the greatest importance) forty-odd thousand dollars, I believe, to the Peninsular Stove Company and thousands of dollars to other property-owners along the line of that street; some few thousands to the Michigan Central-for the privilege of entering this city with other railroads and competing with them for business. About the smallest amount that has been paid-I think I am stating the facts-was paid to the Michigan Central of all those who sought damages from this company. So I say, gentlemen, that it has been in the face of the most strenuous opposition of people living along the line of this street that this railroad has had an opportunity of coming in here at all. But most of these matters have been settled. The testimony shows that this one and the Peninsular Stove Company are the only two, as I remember, and if I am mistaken I hope that the jury or the gentlemen on the other side will correct me, if it is a matter that they consider of any importance at all, because I mean to state the facts as I understand them-this case of Backus & Company and the one of the Peninsular stove works are the only two that are left unsettled. You will remember, gentlemen, that in each one of these cases it was necessary at first for a jury to pass upon the necessity of tak-

on the other trial a large amount of testimony was taken on that branch of the case as to whether it was necessary for this depot company, in order to reach its terminus over its tracks at the other end of the city, for them to come up through River street, whether it was the most practicable and best route that could be laid out. A jury has determined that point, and so much of it has not been appealed from by either party, and is settled beyond all question. Now, then, before this railroad company could pass Absalom Backus' place, his planing mill on River street, before it could use the structure it had erected, before it could use its tracks built on the west from A. Backus & Company, and on the east to the depot building, it was forced to pay Backus the amount that the jury determined,

\$96,000, was it not?
Mr. Baker: Four hundred, I think.

Mr. Robison: Well, \$96,000. From that decision the company took an appeal. The supreme court said it was wrong, and it is now before you to determine again how much Backus & Company are injured by the passage of this road, the building of this structure in front of their place on River street.

Mr. Dickinson: You do not mean to say that the supreme court said the amount was wrong, but that there were errors in the trial.

Mr. Robison: As I understand it that said so. I do not think that they said in so many words that the amount was too much.

Mr. BAKER: Yes, they did.

Mr. Robison: I think they said as much as to say that.

Mr. BAKER: Well, they said it.

Mr. Robison: Well, then, Mr. Dickinson, you and Baker fight that out.

Mr. Dickinson: I take an exception to the statement of Mr. Baker that the supreme court said the amount was wrong.

Mr. BAKER: Well, we will get the decision.

Mr. Robison: If the supreme court didn't say so, it ought to have said it. The testimony was before the supreme court.

Mr. Dickinson: Nothing was before the supreme court except

what was necessary to establish the error.

Mr. Robison: One of the claims was that the damages were excessive, as I understand it.

Mr. Dickinson: Not in the supreme court.

Mr. Robison: Well, it does not make very much difference.

Mr. Dickinson: I take an exception to the statement that the supreme court said it was wrong or considered the amount, and to the statement, or the substance of the statement, that the opinion of the supreme court should have any influence whatever on the subject of damages in any case.

Mr. Robison: I think myself that that is true.

Mr. Dickinson: I take an exception to it as an abuse of the privilege of counsel to make any such statement, under the constitution of the State.

Mr. Baker: I desire to put on record here that in view of the action of counsel for respondents in bringing out the award of that jury, we shall insist on reading to the jury, with the permission of the circuit judge, the decision of the supreme court on the question of damages.

Col. ATKINSON: I would like to also have the reporter note while these exceptions are being taken and the argument made, the cir-

cuit judge was not present.

Mr. Baker: Well, he has just stepped out for a moment.

Mr. Robison: If there is any trouble about that I desire to wait until the circuit judge returns, so that these matters can be got on record.

Mr. Baker: You better go on with your argument, Mr. Robison,

and we will give that attention at the proper time.

Mr. Robison: So I say, gentlemen, that whether the supreme court said so or not, and there seems to be some question whether you will be allowed to know whether they did or not, they certainly might have said so; and as I was saying, that is the situation at the present time. That decision and award of the jury was appealed from and the case is here for you to determine yourselves,

and I suppose that you will exercise your own judgment, as you have a right to do, and as you ought to do, and that is all we ask of you to do-to give the matter a fair consideration and use your good judgment as business men, men of common sense and experience, and say how much Absalom Backus has been injured by the building of this railroad in front of his place. You understand, gentlemen, that no land has been taken from him, not an inchnot one inch of property that Absalom Backus holds or owns has been taken from him. There has simply been put an elevated railroad in front of his place in the street, running along in front of his property, and it is for that that he is entitled to whatever damages a jury shall say he suffers. Now there should be no prejudice in your minds against the railroad in this case. I know that there is naturally a prejudice in the mind of almost every man against a railroad corporation. It is natural, it is something that cannot be avoided, and it is something about which I have nothing to say to you. I do not appeal to you to discard it entirely, I only ask you to use your good judgment as honest men and citizens,

people that understand your own business, who know what facts are when you see them, and act accordingly, remember-

ing, if you are going to think of the railroad at all, that it is not a weak, puny individual that the railroad company is fighting here, that it is not the home of a little private person that is being injured in this case at all, but the property of a rich corporation that, according to the testimony in this case, if it is true, is making more money a year—has in some years, at any rate—than the union depot company ever will.

Mr. Dickinson: To that statement as to what the union depot

company makes, we will except.

Mr. Robison: This is a matter of argument, I think, and a fair Absalom Backus himself has but very little interest in this controversy. His is a large property; there is no doubt about that. He has a number of acres at the foot of Eighteenth street, testified to here as to be worth \$2,000 a foot, by Mr. Henry Backus, something which I do not think you will exactly agree with-\$800,000. Mr. Backus himself says it is worth \$600,000. He has quite a piece on Fort street-I have forgotten now the valuation he put on that, but he leases it for \$1,000 a year, he says. He has a piece of property the rental value of which is \$5,000 a year, the piece of property in front of which this road runs; he has property in the northern part of the State that he values at \$400,000, and he has a farm in I don't know how much that is worth, but I notice from the testimony that there is a fence in front of it a mile long, running along the railroad; and all this property in the city at least is leased to Backus & Sons, a corporation in which he owns no stock, and the lease has yet to run twenty-three years. ceives from that property \$18,000 a year. In twenty-three years he would receive something over \$400,000 in rent.

In answer to a question asked him while he was on the witness-stand, he stated that this business of his, this lumber mill that he had been building and bringing to its present proportions, was for the sake of having something to support him and upon which he could rely in his old age. Now he has a property which he has rented-dead sure of his rent-to a corporation in which he has no interest whatever, having sold out his stock entirely, and rented for a sum of money which will amount to something over \$400,000 when the lease expires. Now you can hardly, at this distance, gentlemen, undertake to say how much this property is going to be damaged by the shutting out of light and by the cinders and by the dire that is thrown out by the engines on this road twenty-three years from now. Understand that at the end of that time he will have received over \$400,000, and how, at this time, can you say what the position of that property will be twenty-three years from now? At that time there will be no steam railroads, probably; everything will run by electricity; there will be no dirt or cinders to be thrown out, be no danger from fire or anything of At any rate, it is so uncertain what his damages will be or what the effect on this place will be at the expiration of his lease that you can hardly fix an amount of damages to him at this time, with the understanding and with the knowledge that you have, from the testimony and from the testimony of his sons here, that he has no interest whatever in this business-not one dollar has he got in there. And with a property that is leased to an institution that is making from \$36,000 to \$70,000 a year for a period of twenty-three years yet to run; so he has not very much interest in the case, has he? Now, then, gentlemen of the jury, there are damages which an institution of this kind suffers from another institution being erected and run, for which they cannot be paid, for which they are not entitled to be paid. And Backus & Company, if they had a planing mill situated in the country, away from any rail-

road, where there is no dirt or annoyance, no cinders, no smoke and no shutting out of light, could do business exactly as they want to. There would be no interference with the machines; there would be no grit, and their workmen could do a full day s work without any trouble from the want of light; there would be no such lumber turned out of it as has been shown to you and piled up in front of you; everything would run smoothly and all right; but their business would not be worth anything, they would have no markets. It is an institution like the union depot company built in a city that allows other people to live, that makes it possible for Absalom Backus, Jr., & Sons to make a profit of from \$36,000 to \$70,000 a year. Suppose things of this kind were not coming into Detroit at all; suppose there were no other mills going up around the city, no railroads coming into the city, no opportunities for the railroads that are already in, no terminal facilities for them to do business here at all, would Absalom Backus' property be worth as much as it is? Isn't there a connection between all the business enterprises, and one lives off the other? So there are certain incenveniences which follow the building of such institutions in their neighborhood, which men must put up with. You all know that here in this city, if you let a pile of lumber stand out anywhere, I don't care where you go, anywhere in the city, dirt will accumulate on it, 209.

which would not be there if it was piled up far away in the country somewhere where there is no business; but they are doing business right here in this city, and they must put up with certain inconveniences that follow from the carrying on of other enterprises around in their neighborhood; and it is only the extraordinary damage which they suffer for which they are entitled to receive pay at your hands.

Col. ATKINSON: Do you contend that they are compelled by law to put up with any inconveniences caused by the union depot company?

Mr. Robison: Certainly I do.

Col. ATKINSON: I take an exception to that statement. I understand under the constitution they are entitled to full compensation.

Mr. Robison: Now, let us see, gentlemen. Here is this elevated road built along in River street. Suppose it was shoved over thirty or forty or fifty feet, whatever the distance is I don't remember, and I don't think that part is of very much importance to what I want to say-suppose it was shoved over and this company had all its own property, had all the land absolutely on the other side of the street? Of course Mr. Backus is situated so that they could not buy in the rear without going to the other side of Fort street, and Mr. Backus is peculiarly situated for the illustration I want to make: but suppose this railroad was built on the other side of River street on their own land, would it have a right to go along there without any compensation to Backus whatever? Wouldn't it have a right to throw smoke the same as ordinary locomotives do? When the Michigan Central puts in another track or puts on an extra engine on its road, does it have to pay Backus anything? When another steamboat comes along the river and throws smoke which blows over into Backus' mill and soot and dirt, does it have to pay Backus anything? Would it have to pay Backus anything because of the light it shut out by building up a wall on the other side, or if the Michigan Central should put up a building all along the entire length of River street in front of Backus' mill and 100 or 200 feet high and shut out the light from Backus, would they have to pay Backus anything?

Col. ATKINSON: Suppose a spark comes from the Michigan Cen-

tral or the ferry and sets Backus on fire?

2785 Mr. Robison: The ferry would not have to pay for it unless it was shown—

Col. ATKINSON: To that I take an exception.

Mr. Robison: Unless it was shown to have been done through the negligence of the ferry company. That is all there is about it. Suppose a spark flies out of Backus' place and sets fire to one of his neighbors without anybody's being to blame for it, something that Backus could not help, he would not have to pay for the damage that is occasioned by that spark. It is only when it occurs through Backus' own negligence. Now, as I was saying, gentlemen, those things this company could not be compelled to pay for, and so Mr. Backus must put up with the ordinary inconveniences that result from institutions of that kind being built, without compensation.

There are a great many injuries done and a great deal of damage suffered by property-owners from other property-owners for which the damaged ones cannot receive any compensation.

Mr. Dickinson: Do you want the jury to understand that if you set fire to Backus' mill with one of your engines that there is no

liability?

Mr. Robison: No, sir, I do not mean to be so understood.

Mr. Dickinson: Unless we prove negligence—do you mean that to be understood?

Mr. Robison: Well, I would not care to state about that.

Col. Atkinson: Why should you be liable? The ferry company su't.

Mr. Robison: Well, I would not be liable; I do not think I

would.

Mr. Dickinson: If the union depot company set fire-

Mr. Robison: There would be no use of any insurance companies if every person was liable for every fire occasioned

without any fault of their own. I say that if this company uses the very best devices that it can, that are known to the art, to save other property from danger from fire and by accident a property is burned through them, they cannot be compelled to pay the damages that are suffered. Right on the corner of Third street, I guess it is, or Second street, at any rate, stands the residence of Allan Shelden, and on the next corner to it is that of Mrs. Chandler. That is injured, unquestionably injured, by the building of the union depot and by other business enterprises on Fort street. Fort street has gone back; it is not the street it used to be for purposes of that kind; they are damaged; their property is not worth what it was; but would it be contended for a minute that because there is a big business enterprise gone up on the other side of the street that they must pay people over there because their residences are not as valuable?

Mr. Dickinson: You contended all through the trial when the property was taken on Fort street that the union depot increased

the value of the property.

Mr. Robison: I don't know what was contended there; I was not in the trial. Of course, if there was any such contention as that made, it seems to me to be all balderdash—to say that for the purpose of having a place to live in, that the building of an institution of that kind, or any other institution of any kind, would increase its value as long as they wanted to live there.

Mr. Dickinson: You are right about that. It was contended that it would increase the value of the property for other purposes,

business purposes.

Mr. Robison: It may be that it does; I could not say, I would be inclined to think it did. If business property is worth more than residence property, it does increase it; if business property is not

worth more than residence property, it does not increase it.

2787 It depends on what you want to use it for. If Allan Shelden wants to live there, it's a pretty poor place to live in—a

thing which the distinguished counsel on the other side well knew when he get out of that ill-begotten country.

Mr. Dickinson: It is well-begotten.

Mr. Robison: Well, it was well-begotten, but it has turned out bad. Congress street down here used to be the leading residence street in the city of Detroit. Allan Shelden used to live on Congress street; but livery stables went up on one side and a brewery or bottling works on the other side—

Mr. Dickinson: And worse.

Mr. Robison: And worse, and Allan Shelden wanted to get out of there.

Col. ATKINSON: I wish you would be a little easier about Con-

gress street.

Mr. Robison: Well, you don't live there, of course-which property developed into valuable property, a great deal more than what it used to be when Shelden lived on the place-not on account of Mr. Shelden's moving, but I am only calling him by name as fixing the time. And that is just the case here every day, or almost every day; and right over here on Washington avenue, next to one of our biggest churches, there is a big livery stable being carried on. Now, that of course injures that property next to it for certain purposes. If a man wants to live there, that place is not worth much to him; if it is a dwelling-house it will not rent for much, will it? But you cannot go and sue the livery-stable keeper for the damage that it is causing you if you own the property. There are certain things that must be put up with, there are certain damages that owners of property suffer that they cannot get compensation for, that nobody is liable for, that simply accrue to a man by reason of

the way things are done in life. Just so with this Peninsular stove works. In the first place it was a glucose factory built on Fort street. Why, immediately it was built the residences

on Fort street became less valuable for residence purposes; they were worth very much less because Fort street immediately began to develop, as it began before to a certain extent, into a business street, and it could not be used for residence purposes any longer; it was not desirable. So that every man that had a house on that street who wanted to live there or wanted to rent his property for residence purposes was out of pocket. His property was worth less; he could not get as much for it, but it was one of the things he had to suffer for the good of the general public.

Col. ATKINSON: But the courts closed the glucose factory up.

Mr. Robison: No, sir, they did not close it up. Col. Atkinson: They enjoined them from using it.

Mr. Robison: They enjoined them from using it, to a certain extent. They closed it up because it was not a profitable institution.

Col. ATKINSON: It was enjoined for being a nuisance.

Mr. Robison: Simply because it was making a stink, that is all. They have not undertaken to close up the stove works, or Backus' mill on Fort street, or any of those business enterprises located on Fort street; they did not undertake to close them up, for they have a right to be there, and right next door to Allan Shelden's place

Mr. Backus or anybody else has a right to put up a brick planing mill; and Fort street is coming to that. Here goes the post-office up down below here. The street as a residence street is ruined, and for a time property has depreciated and become less valuable, only as it is wanted in particular instances for business purposes. It is going through the transformation that streets do go through when they are turning from residence streets to business streets, and in some instances the property becomes worth 2789 less for a time, until business takes up the entire street. Fort street is not the only street of the kind in the city. Miami avenue is another, and Congress street has lost entirely its dwelling-houses, there are no more dwelling-houses on that street, except at the far end. Larned street the same, and that is the way property goes and the way streets develop from one thing to another, from dwelling streets to business streets, not only in this city, but the world over. And there are certain damages and inconveniences and losses that men have to stand. It would be impossible and a wrong to make the people who have hurt their property pay them the damage they have lost. Would it be right to make the Peninsular stove works, for instance, pay Allan Sheldon and these other people up and down the street, the damages they have been put to, or the losses on their property by the building of these business enterprises on the street? Would that be right? It is not right and it is not law. They do not have to pay and they should not pay. People have to suffer, I say, for the good of the general public, and, to that extent in the same way, Backus must suffer, if he does, everything except extraordinary losses that he is subjected to by the building of this road in front of his place. Of course it is different when a railroad or any other public enterprise comes along and takes a man's property right away from him, and converts it to its own use; but here is a case where the road simply runs by Backus' property, and he must be paid what damage, extraordinary damage, he suffers on that account. Now, the Backus mill is located in a place here that all other lumbermen and all other planing-mill men say, or the most of them say, is an inconvenient location generally. There is not another one located right in the middle of the city on property worth \$2,000 a foot, for the yard itself. There is no other yard in this city located on property like that. He can go on Woodward avenue on almost any corner from the river north and buy property for a good deal less than that. So if his property is worth any such money as that, it certainly ought not to be occupied and used for the purpose of a lumber yard. Why don't he go out in the suburbs of the city, as other lumbermen do? We have Mr. Thompson here of the Delta Lumber Company; he got his property out there for about \$600 an acre, as I remember it now; it is worth more than that at the present time, maybe two or three thousand dollars an acre, but that is

a great deal different from \$2,000 a foot, and is it any wonder that Mr. Backus says he cannot compete with these people any longer, and isn't there some other reason for it if he cannot, which of course we do not concede and I do not believe; but if he is occupying

property where the rental value is so great, why not go out where he can get his rents at the same rate that other people are paying, and so compete with them in that way? This company is paying \$18,000 a year rent, when it could carry on the same business in the same way by the expenditure of perhaps \$5,000, and because they are forced to go somewhere else to do business, why lay it all to the elevated railroad? How can he compete with this Delta Lumber Company, for instance, doing the same kind of business that he is—how could he be expected to compete, with this company paying \$18,000 a year rent for premises they could get somewhere else for four or five thousand dollars a year? There is that amount of money certainly which they are throwing away that they cannot charge to the elevated railroad. And he says the competition is very close in this business, and they have to figure very closely and sharply in order to make a living at all. Of course they have

2791 managed to skin out one year \$70,000, and the rest of them \$36,000 a year, but the competition is mighty close, and if he only had a fair show and this elevated railroad didn't run by there, why what would he do? Competition is close and the railroad is grinding the life out of him, and yet he manages to scale out \$36,000

a year after paying \$18,000 a year rent.

Mr. Dickinson: You do not state the testimony at all-up to the

time of this construction.

Mr. Robison: Up to the time of this construction a year ago, and now bear me out, gentlemen, in saying that he does not know how much he has made since. Has he brought one single book or one single figure before you to show that he is not making money now. or that he is not making \$36,000 a year? He says it is impossible to figure out and it is impossible to tell, but could they not bring the book-keeper in here and show their sales each day and compare them with the sales of the year previous? Could they not estimate the profit, the percentage they are making in profit now, with other years? Do you suppose that they are losing money, as Henry Backus says? Absalom Backus, Jr., does not undertake to say that, and I do not believe he would say so; but Henry Backus is crazy on this subject, absolutely insane, if he is honest about it he is insane; he does not know what to do nor where to turn his hand nor what is going to become of him. They have got these millions and millions in property in this city, and what to do with it he does not know, but don't you believe that it would have been possible to them to show you if they had been losing money, if it is a fact, and do you believe it, and in view of the fact that they have been losing all this time that they are carrying on their business today at a loss-do you believe it? They have not done one single thing toward looking up another site or thinking how they could

2792 conduct their business hereafter or what they would do.

That is not reasonable. If you were doing a business that you knew you were losing at every day, you would stop it straight off it seems to me or at any rate, you would have gone far enough

off, it seems to me, or, at any rate, you would have gone far enough to be looking around to find some other place. Other people do business in competition with Backus in other places in this city, and it seems to me it would be possible for Backus to do it. If he has been losing money, as he says he has, he certainly would have been looking around to see if he could not better himself somewhere and locate somewhere in the city where he could scale off a

slight profit and not be running all the time at a loss.

Now, of course, they are entitled to damages. I do not deny that if I was on the jury I would give them damages, too, and a great deal of it would be from sentiment, I think. In a case where a man has got a house, a fine residence or a business, or anything that he is satisfied with, and some one comes up on the next lot to it and puts up a livery stable or a brewery or locates a saloon or any other thing that my family do not like, or that I do not like, for business purposes-if I had a chance, or if, in another case where it was not my property and I saw an instance where that was done and had an opportunity, I think I would make the man who put up the livery stable or the other obnoxious business pay for it if I could. Ordinarily you cannot do it; the law does not permit you to do it. There is no relief in law, and if it should be undertaken to give damages every time there are damages-and there are damages-if there was an opportunity to levy on the property of one man to satisfy the damages of another, business could not be conducted, but when I did get an opportunity, I think myself, gentlemen of the jury, as a matter of sentiment, if nothing else, I would give dam-He says, and I believe him Now, here is Mr. Backus. ages. in that, certainly, that he had all the opportunities for doing his business that he desired. He had railroad con-2793 nections; he had a fine plant. He had a street, River street, which he could use and did use in his business, and along comes a railroad. I don't care whether it damaged him or not, if they came along there and he did not like it, I think that he ought to be paid for it. I know I would be in favor of doing it if I had an oppor-

tunity myself, because there is something taken right away from him that he does not want to lose. He wants it just as it is, and it does not make any difference whether the taking of it away hurts him or not, if he wants to be left as he was, he has a right to be paid to a certain extent, and he is entitled to damages, and probably is entitled to more than he actually suffers-just as a matter of sentiment, I say. I know that is the natural feeling of mankind, and there is no use trying to get around it.

Col. ATKINSON: You think a man ought to have something for being forced to change his situation?

Mr. Robison: You ask me that question honestly, and I say that I do.

Col. ATKINSON: Well, you are reasonable.

Mr. Robison: I know it is true; I know everybody feels that way, and any one that undertakes to stand up against it is foolish. That is the natural feeling that every man has and if a railroad come along at the back end of my lot, when I wanted it myself, I would expect they would pay well for it, or any other public enterprise. If I have got property situated just to suit me, just as I want it, why, if they want to open a street through and it changes all

my plans and it fixes the property so that it would be better for the general public undoubtedly, or else the jury would not open the street—but it makes me change my plans differently from what I wanted them, and I think I ought to be paid something extra, something more than it is really worth; how much, is a matter of

judgment. I say it is all a matter of sentiment that these damages are allowed to a great extent. Now, you can see that here the way it goes. Here came a contest in this very proceeding between two railroads, the Michigan Central and the union depot. They did not have a jury in that case; they had three commissioners appointed by another provision of law. There was M. W. O'Brien, Col. Hecker and George H. Barbour who sat and heard the testimony, looked the premises over and considered how much this union depot company, running in front of the Michigan Central flour sheds, a large number of feet there, damaged them. They were damaged, it shut out their light, scared their teams, threw dust and cinders and sand and oil and all the stuff that comes from these union depot company engines and from none others. Of course the Michigan Central is running along there. In there and out of there, but that does not do anything, according to the testimony we have had here. They allowed them ten dollars a foot That was the damages that the Michigan Central railroad received, an amount which of course, would not be very much in Backus' case; but he is entitled to damages. Now they are claiming damages, as I understand it, for the obstruction to the light, for the dirt that is thrown, the cinders, sand, smoke, and soot, and the oil, and the extra hazard of fire, and scaring of teams on River street, and-I guess that is all, as I remember now. Now, gentlemen, you have been down there yourselves, and you are capable of judging. If the building of that elevated road in front of this institution has shut out the light from Backus' mill so that they cannot do work down there, he is entitled to be paid for it. Of course, if the line of the street was right in front of Backus' mill, or the line of Backus' lot-if there was another lot right in front of Backus' and not the street, why the union depot or anybody else would be en-

Backus could not get any damages. It does not make any difference, and it would shut out the light. Don't you see how that is, gentlemen? A man has a right to put up a wall if he puts it up on his own premises, and he can shut out the light from the other man's property, and the other man must accommodate himself to the circumstances. If he cannot get proper light the law will do nothing in regard to it, if he cannot get proper light or light enough to do his business, if that wall is put up, he has got to change his location or change business. It may be a damage to him but it is a damage that he cannot collect any pay for. It is one of those things that happen with the way of doing business, with the way of living. We are all entitled to live and some man's family has got to give up some things for the benefit of the general public. That is the rule that is adopted. But if this railroad built out on the street shuts out the light, according to the law, Mr. Backus is enti-

tled to damages. Now you have been down there yourselves and you have seen what the result is and what the effect is; and you have been in other places and I say your own judgment should go further in that matter than the testimony that is given here. If all the testimony that has been given before you is to be believed, it is funny how Backus is doing business down there at all in that basement. And you must consider, I submit, the situation of that basement. It is not contended that above the basement story there is any interference with the light, not enough to amount to anything; they have plenty of light in all the other stories except down in this basement. Now you all remember, you have been in places of that kind before, where other kinds of business are carried on than the planing-mill business, and where one story is built into a side hill, and it is not a very light place, is it? My own 2796 recollection goes back to the basement story of a barn on a

farm, where we built a basement story. You build it into a side hill, and the back end of that barn is always dark, more or less, and it is not calculated to be a light place. It is not a place that is light, and if absolutely pure, clear light and plenty of it is necessary for the carrying on of the business, it was never calculated for that kind of a business, with a railroad in front of it or away from it. because the back end of a basement building never can be made light without artificial light. There is no use trying to get around that; it is absolutely true and everybody knows it. Now the business was being carried on there yesterday all right. I was not down there with the jury, but I was there in the forenoon on other business and looked in there and the planing machines were running, and the men were working, and, so far as I could judge, they were able to do work in a workmanlike manner. I noticed men feeling of the lumber as it came out and looking at it to see whether it was all right or not, and I did not see any of these pieces coming out with a knife edge on one side and a half or three-quarters of an inch thick on the other. And I do not believe that it could be made dark enough so that a man would allow lumber of that kind to come out without knowing it, if he was paying any attention to his business whatever; and certainly not the location of this railroad in front of it or the passing of trains would have that effect. Now it has been testified to by Mr. Griswold-which expresses and explains it about as well as it can be done—that a passing train on that elevated railroad has about the same effect as a cloud passing across the sun on a sunny day. Of course there is a sort of shadow if a person is in a building or inside, away from the sun, caused by the cloud passing across the sun; there is a shadow which makes it somewhat darker, a trifle, at any

2797 rate. Possibly that may have that effect. I have not been there and seen it. I think that no trains passed there yesterday when I was there, but I think they did when you were there, and if they did, then you know yourselves what the effect is, and if I am wrong about it you will not pay any attention to what I am saying. But that is the testimony of Mr. Griswold, and it seems to me that that is the natural effect it would have. Now, if they are

210 - 55

so very anxious for light and so much of it, you remember, do you not, a shed and fence in front of this place, built up as high as the windows themselves. I may be exaggerating this, but it seems to me now as though it was ten feet high. Maybe it is not as high as that—eight or nine feet.

Col. ATKINSON: The shed by the fence?

Mr. Robison: Right in front, right along the sidewalk as you walk along River street on the left-hand side. To my mind, prejudiced as I am undoubtedly, it seems to me it is ten feet high. Maybe it is not over six, but there is a tight board fence built up there and I think, if I am not mistaken, a shed or roof extending from this fence on River street up towards the building. Isn't that the situation?

Mr. Baker: Certainly.

Mr. Robison: That shuts out more light than forty elevated roads up there. This fence is right square in front of the windows, a fair illustration would be, that window here being the window of Backus' mill and this table here would be the shed built up here fully as high as the top of those windows, and here is the elevated road up here. Now do you say that this road, running through there, shuts out all the light from Backus' mill when he has had this fence there for years? It is not so and that is all there is to it;

it is poppycock. And if they needed the light they are tell-2798 ing about here, and if they have been needing it all the while, they would have had the appliances in this mill that every other mill, as we have heard here testified about, has, and that is the modern appliances for giving light in places where it is

that is the modern appliances for giving light in places where it is needed. Other mills have an electric light plant connected with them. We have the one that Mr. Thompson testified about, this big institution, the Delta Lumber Company, which has electric light, and then the testimony about the mills in Saginaw, some of them a great deal larger than Backus', to say the least, and electric lights in every one of them and no elevated railroads running by them either. Now, if Backus wanted to do business and wants to compete with these other places, he has got to adapt himself to the situation as he finds it. He has got to have mills like the others. He says that his machinery is very much superior, not another mill is equal to it and yet he works down there without an electric light. He has got a little gaslight, a flicker of a light, two of them in some places, over these fine machines which require the finest kind of light according to their testimony, to adjust and run. It would seem to me that a business man would not do business in that way. That he certainly would do what he can do at an expense of \$800 as was laidjout in the Delta Company, where \$800 put in that institution 80 electric lights—as big an institution as the Delta Lumber Company-and 80 electric lights would make Backus' mill lighter than it ever was in daylight. There is one thing, as I remember, that Backus or Henry, one or the other, testified to, and that is that they were afraid to do it because they thought it might dazzle the eyes of the workmen. They don't know how it would affect the eyes of the workmen in there. It would be too light for their purpose, but at any rate he is bound to try it and see; other companies are doing it, and other mills are running in that way. But you have seen it, as I have already said, for 2799 yourselves. Here is a road which is not a solid, tight struc-

ture; some light goes through that. It is built on these legs standing out there, and they stand some forty feet, I think, from the mill. I think that is the testimony-forty feet. Here is a place forty feet for the light to get through and not interfered with in any way. Now, there are streets in Detroit and in many other cities, and how many alleys are there ten feet across, twelve feet and twenty feet? Twenty feet is a good, wide alley, I believe-right through the business part of this city; alleys built up with walls one hundred feet high and twenty feet of light, and yet they do business back in there and no fault found, no trouble with it at all; and here is a place forty feet wide for the light to get into Backus' mill, but they cannot expect light from forty feet or four thousand feet to come down into Backus' mill and light up the back end of a cellar, because that is all there is-where there is no light at all, no chance for it to get through except as it comes through the front; and, as I understand it, the basement part of the mill is the only place where there is any fault found. There is another trouble, I believe, that one of the witnesses testified to, that the rolling of these railroad trains across there makes it so noisy that they cannot do any business I think it was Mr. Robinson that Well, I don't know. As I said, I was not there; testified to that. I have not been there when a railroad train went along the elevated road. There is no question but that it will make some noise, but this is no nursery down there, where you got to keep quiet. There are hundreds of machines buzzing as they don't anywhere else hardly, and the idea of finding fault with a railroad train running across that elevated road! The only noise that it could make or the only thing that it could do would be to shut off the noise of some of those planers when they are going. When there

are none of those machines working there is no one there, 2800and the noise does not hurt them, but the idea of a railroad train forty feet away, when running over there, where there is ten within about the same distance over on the other side, the Michigan Central, running train after train by the same mill, only on a track lower, yet the noise of these trains is never thought of and no harm comes from it at all; it all comes from this elevated road. They probably make more noise than they do on the level, but I don't think there can be any serious difficulty, or that the noise of that railroad interferes with Backus' lumber mill or planing mill, because the planing mill makes more noise than a railroad train. anyway, and a man would have to holler to have himself heard in the mill when the planers are going, and on all occasions, whether there is a train going over the road or not. Now, it is claimed that these engines throw cinders. Well, so they do to a certain extent, but it strikes me very strongly, gentlemen, and very strangely, that it is only the engines that are on this union depot elevated road that throw this dirt and cinders complained of by Backus.

are cinders thrown by all engines, according to the testimony here. some more and some less, but we have done everything that we know of to bring it down to a minimum. If there was any appliance that could be put on these engines by which they would throw fewer cinders and less dirt, it certainly would be done. We have done the best we can and we want to run a railroad along this place; we want to run engines along there, and our engines have got to smoke as long as we burn coal or fuel of any kind. By and by we hope to run our road with electricity and do away with that part of Backus' injuries, everything except the noise of the trains and the light, but in those days perhaps we will have light enough

so that we can furnish him light enough that will rival daylight itself. Of course the time is coming when that has got to be done, when all these trains are going to be run by

electricity.

Col. ATKINSON: Don't you think the airship will be the principal means of travel in those days?

Mr. Dickinson: Edison is making an electric airship.

Mr. Robison: It is possible that will be so, but I do not think I am looking ahead a great many years. Backus is not going to be damaged until twenty-three years from now. He has got his place rented for twenty-three years-\$410,000 he is going to take in before he commences to be damaged. It don't make any difference to him how much Backus & Company are damaged by us, absolutely it does not; \$18,000 ever year, \$18,000 every year, whether they do business or not. He has got his place leased, and so I sayand I do not think I am exaggerating a great deal when I think that within twenty-three years there will be no locomotives on that road, judging from the progress we have made within the last ten years. Ten years ago it would not have been supposed that on Woodward avenue, or any of these lines-

Mr. Dickinson: I will interrupt you and we will take an exception to that line of argument, as the true damage, the true measure of damage is to take the property as it is today, as we find it, and as the railroad is, as we find it. The true rule of damages is the ultimate damage if the railroad facilities are used to their maxi-

mum extent-ultimate, by the present devices.

Mr. BAKER: That is, in other words, the jury are not to consider

anything which is in its nature speculative.

Mr. Dickinson: That is the point. It is not whether we may have airships or electric railways on trunk lines.

Mr. Baker: In discussing the question as to the damage sustained by Mr. Backus, as the owner of the real estate, he certainly has a right to call the attention of the jury that Mr.

Backus' damage does not commence until he returns into possession of his property at the end of his lease. In estimating

his damage the jury are to consider the property as it is.

Mr. Dickinson: Suppose the damage is such that it absolutely ruins his property for the uses for which it is rented, what then? The concern of Backus & Company may become bankrupt, and suppose they do not pay the rent?

The Court: My impression is, and of course there has been no discussion of the point, that the jury are to take into consideration the value of the property as it was prior to the erection of this railroad and allow such damages, if there are damages, for depreciation after the construction.

Mr. Dickinson: Not only of the plant itself but of the realty.

The COURT: Whatever damage may result from it. Col. ATKINSON: To count from the time it is done.

Mr. BAKER: Undoubtedly.

Mr. Dickinson: What we object to is the discussion as to the prospective building of electric railways later on, or of airships.

The COURT: I shall tell the jury distinctly when I come to charge them, that they are not in any way to consider any speculative damages.

Mr. Dickinson: Or speculative relief. The Court: Or speculative relief.

Col. ATKINSON: That will include balloons as well as airships.

Mr. Baker: If they go both ways, all right, but they are claiming they have got to move out of here and Mr. Backus has been finding a great deal of fault with that and what he is going to do with his property at the end of these twenty-three years he does not know.

2803 The COURT: As far as that is concerned, that seems to be objected to, but on the other hand, that may be to a certain extent speculative, and I think when I use the term speculative the

jury will understand what I mean. You may go on.

Mr. Robison: But I think these are things that you gentlemen will take into consideration to a certain extent, that is you have a right to consider, it seems to me, that the world is progressing all the while. Of course you are going to give damages now to Absalom Backus and to A. Backus, Jr., & Sons for all time to come, presuming this line is to stay there forever and this railroad is to go through there and run by there forever and he is asking for dam-He is asking for damages for years, so much a year, from now, how far into the future I do not know. And you have a right to consider and must consider that this property is not always going to stay in just the same shape it is in now, and this property is not always going to be used for a planing mill. You have got to take into consideration the course of business and the natural tendency of business and the progress of business. And I claim to you that you should consider that twenty-three years from now, when his property comes back into his hands, the chances are that he won't want it for this purpose at all, but that you are to give him a great amount of damages now because twenty-three years hence it will be thrown back on his hands and he cannot use it, would be nonsense.

Mr. Dickinson: He will probably be with his fathers then.

Mr. Robison: I hope not.

Mr. Dickinson: He will be 100 years old.

Col. ATKINSON: But the railroad company will be pounding away at his ghost just the same.

2804 Mr. Robison: He certainly has got the nest-egg they were talking about for his old age laid up anyway, and I am very glad of it.

Mr. BAKER: Col. Atkinson wants his ghost to recover damages. Mr. Robison: We are talking now simply about how much damage should be allowed him on account of light. Now he can only get damage as the light affects his business. If they can do business down there, and do it reasonably well, they are not entitled to damages for that. They are not entitled to damages if they can do business down there reasonably well; it may not be quite so convenient for them, but I don't think it shuts out their light enough to talk about at all; yet they have made a great claim on that. and I say that certainly it is a matter that you are to consider. But if you find, after looking it over and considering the testimony, and what you would naturally expect from a building of this kind and superstructure like this, built forty feet off from the mill, if it does not obstruct them so that they cannot do business reasonably well, he is not entitled to any damages. I think you will find that he can, and is, and is succeeding in doing business the same as he always has been doing. Now one of the great claims that they make for damages is the increase of the fire risk. I shall not undertake to say, because I do not believe it, that the running of an engine or the running of railroad trains by a lumber yard or planing mill, does not increase the fire risk.

Col. ATKINSON: You don't believe that it does?

Mr. Robison: I don't believe but that it does. I believe it does; there is no question in my mind about it. I do not see how a machine going along and spouting fire to a certain extent, as 2805 they say it does, and as we know it throws sparks—all engines do—I do not see how it can help increasing the fire risk.

Col. ATKINSON: You differ, then, from your Saginaw witness.

He said it could not increase the risk.

Mr. Robison: I do nothing of the kind. Wait until I get through

and you will see.

The Court: I think you better let Mr. Robison proceed, Colonel. Mr. Robison: The Saginaw witness did not deny but that the running of engines through a lumbering district or where lumber is piled right alongside, within a few feet of the cars as they run through, and as it is shown to you they do in Saginaw miles and miles through lumber piles, lumber on both sides from ten to twenty and thirty feet high, and through acres upon acres of kindling wood, pure and simple, slabs and edgings that most of you, at any rate, have seen piled up in that country. He does not deny but that there is a fire risk. There is no question but that there is a danger from railroads running through there. If there was not any danger from that, there would not be any necessity for any insurance. That is about the only thing they can catch fire from, ordinarily, in the center of the district; but what these men do say is that the risk is not increased to such an extent as to require an increase in the rate of insurance. Now that is what our man Chapman testified Mr. Chapman is the man whose business it is to attend to these things—not for the union depot company, because they have no connection with him whatever, but for all the insurance companies in the community. He is employed by the three companies, the Detroit Fire & Marine, the Michigan Fire & Marine and the Grand Rapids Fire Insurance Company, for the purpose of investigating these institutions in this city, of looking up the property in this city and saying how much the rate ought to be on that

property. He does not fix the rates, but he reports to his insurance companies the rate that ought to be charged, and he certainly, so far as I can see, is a fair man. There is no reason for his fixing these rates on different buildings at any different price from what he thinks they ought to bear. He tells you that he will not say that this elevated road does not increase the risk down there, because it does; but not to such an extent as to require the rates to be raised. And his testimony is borne out by Mr. Jones and the facts in the case, that they actually are not raised, as a matter of fact, if you come to 'avestigate it. Certainly the mill down there is inflammable m rial, isn't it? It is a hazardous risk, and so understood. The equire a rate on it of five and a quarter or five and a half pe cent., which is a high rate of insurance, but that has been the rate on this mill for years; it was the rate before this elevated road came there, it was the rate before it was thought of, and it remains the rate today on that mill, five and a quarter per cent. Now these insurance companies have their money invested in this business. Mr. Chapman is appointed for that purpose, and this institution that hires him, these three companies, sell his reports to the other insurance companies and the testimony here shows that they are used by almost all the companies in the city, and the rates remain the same on the mill. understand they are different on the powder-house there-about the same thing as a powder-house-this dust building. The rate is different there from what it has been, but Mr. Chapman said there had been no rate fixed by him before or by his predecessor and when he came to fix it, he put it at 8 per cent. on the dusthouse, and thinks that it should have been the same before this elevated road came there. Of course it is a dangerous piece of property, liable to catch fire and burn, but Backus' mill has been going there a year now or very nearly a year and no fires have

caught on it, but it is liable to, liable to burn. If it was not, there would be no necessity of any insurance, there would be none sought. And it may burn from the union depot engines or it may burn from some other source. It has burned three times before the union depot got there, so there is a risk in Backus' mill and there always has been a risk and always will be, whether the union depot company runs steam-engines or whether they run them by electricity or whatever they do, Backus' mill is liable to burn them up and he has got it insured because of the chance of it burning. But the rate remains the same on the mill. Now Mr. Jones, who appears to you as a friend of Mr. Backus, owns property down in Backus' lumber yard, and he has always been in favor of Mr. Backus. As the testimony here shows, he was on one of these juries

when the railroad was trying to get through Backus' property down below there. He says he has increased the rate on this engine-house and its connections. But he has done it, gentlemen of the jury, in face of the fixing of the rate by this man whose business it is and who says that the rate should be 8 per cent. on the dust-house alone, but that on the other property the rate should be just as it has been, four and a half; and who can say, who knows, whether the rate has not been fixed on this other property for the purpose of this case. I do not say that it has, but I leave it for yourselves to infer whether there is not an arrangement between one of the Backuses—

Mr. Dickinson: You are mistaken about the power-house; it is

the same as the dust-room.

Mr. Robison: I say just what Mr. Jones put it, but Mr. Chapman says it should be less.

Mr. Baker: Said it should be four and a half.

Mr. Robison: And that is the rate that he recommends to Mr. Jones himself, but Jones does not take it. Now, I do not say that there is any arrangement between Jones and Backus. that it should be made that way, or that it is not, but it certainly bears some marks of it, it seems to me. Here is an unbiased and unprejudiced man who says that that is a fair rate to put on that place. Of course the fact remains that it was insured for less than that before, but he says that it was too cheap before and that the risk on this dust-house was greater than that before, and it would seem to me that he uses common sense. If you were going down there to judge for yourselves which piece of property was the most liable to burn, it seems to me you would say that the dust-house is the greatest risk, with the dust flying around there, all open, with fire liable to drop in right from Backus' own mill or from somewhere else, that it was always a greater risk. That is what Mr. Chapman says, that it was always a greater risk than any other part of the institution down there, that there was no comparison between the mill and engine house and this dust-room, there is no comparison between the other buildings and the dust-house, and the dusthouse was always the greater risk. And it seems to me also that common sense teaches us, that that engine-house, built by itself, with the dust-room on the other side of it, is not the same risk as the dust-house is, and that common sense would teach you that the rate on that engine-house ought to be surely as low as it is on the mill. What is the necessity of it? Why should the engine-house be a greater risk, with nothing around it but brick walls and iron, no wood-why should the risk on that building and its contents be any greater than on this mill where wood is being worked there continually and sawdust flying in every direction and dust of all kinds. Common sense, it seems to me, would teach you, without any technical knowledge of the insurance business

whatever, that Mr. Chapman was correct when he told you 2809 that the risk on those buildings was no greater, on the engine-house was no greater, or not as great as on the mill itself, and that the rate ought to be four and a half, despite the fact that Mr. Jones said the insurance ought to be eight per cent. and that Mr. Backus has to pay it. The union depot company ought not to be charged for that, if he pays excessive rates, or if he has been paying too low rates before compared with the risk. If he got his dust-house insured for four and a half or four and a quarter before this, and has to pay eight now, when all insurance experts say it should have been eight before, should the union depot be charged with the extra expense he is put to? Not at all, and I do not think you will compel us to do so. But there is a risk, and that dust-house should pay a high rate of insurance. You have seen it down there yourselves, and you can see why it is a risky insurance, why it is a great risk to insure that kind of property. There is a rattle-trap concern built up there-I cannot give you the dimensions of it-but inside this lattice-work is contained a framework, wood, and then this wood is covered with a highly inflammable material, four thousand yards, I believe Mr. Backus testified, if I am not mistaken.

Mr. Dickinson: Twenty-five hundred yards. Mr. Henry Backus: Twenty-two hundred.

Mr. Robison: Which is it, twenty-five or twenty-two hundred?

Mr. DICKINSON: Well, suppose it is four thousand.

Mr. Robison: Well, it is a good many yards, anyway; a large amount of inflammable material over this wood frame inside of this lattice-work. If there is any fire going to catch, there is the place it would naturally catch—when he can change all that by an expenditure of not to exceed two thousand dollars. He can make that absolutely or very nearly fireproof by putting up a dust-

arrester such as all other people, or most everybody else, uses all over this country, but just his obstinacy keeps him from doing it, and, of course, it is not to be found fault with. That is the kind of a dust-arrester that he wants, and he is entitled to use If he thinks it is best, he is entitled to his own views of it, and if he wants to arrest dust by the use of the Backus dust-arrester he has a right to do it; but I say that you ought to be satisfied from the testimony here that it is not a safe one for him to use, in so far as the fire risk is concerned. If there is a fire catches in that institution from outside it will catch in that dust-arrester, because there is nothing to prevent it. It is just like putting a lot of shavings outside. Here is the open lattice-work for fire and sparks to drive through from any direction, with any wind from anywhere, wherever it comes from, and it is likely that a fire will break out some time or other, possibly from one of our engines, but should we be made to pay for that? When we show Mr. Backus how he can overcome that great risk, and don't you believe it can be done? Isn't it reasonable that it can be done? We have shown you that nearly all the mills in the Saginaw valley use this sort, and there are some big institutions up there, and they are certainly after the best they can find. They are not using a dust-arrester when there are other better ones right in the near neighborhood of their plants. I believe there are only three or four Backus dust-arresters in use in the city of Detroit.

Mr. BAKER: Three altogether.

Mr. Robison: Three of Mr. Backus' dust-arresters in Detroit, and all the rest are these metallic concerns that are absolutely fireproof, no fire can get into them and no fire can burn them, and now we have shown you by the testimony that his rattle-trap or fire-trap on top of that building can be replaced by an expenditure of two

thousand dollars, and we are willing to pay it and to protect 1 him from fire, to keep the fire out of his place. But, of

course, Mr. Backus is a peculiar man and his peculiarities are all right in a good many respects. There is not any one who respects him more than I do, his doggedness for one thing, he is a fighter from way back and everybody likes such a man, and he likes his own way, and it don't make any difference whether the dustarrester is a good one or a bad one—it is mine and I want it. That is what he says, and I am going to use it and I am willing to pay eight per cent. instead of four for the sake of having it up there, as an advertisement if nothing else. He wants to keep it there, he makes them, sells them, he has a patent on them. Of course if he would take his down, the patent Backus dust-arrester would not sell very readily. He sold one three years ago and he must get a mighty big price for them or he would go out of the business; the last one he sold was three years ago, except that he did sell some of this jute or whatever it is that he covers them with, to some one up at Cadillac, some time within the last year, but if he takes that down he cannot sell any more, and he would have to go out of the business. But I like his style, he wants to use it and can afford it, but for heaven's sake don't make us pay for it. Let him keep it there, but say to him, if you do, the union depot company has not got to pay for your idiosyncrasies; you must do it at your own risk. We have got one that we will put in there such as everybody else is using and pay for it, and we expect that you will say that we have got to pay for it.

Recess.

2812

The Court: At this time I wish to call the attention of counsel to the fact that I find, in looking over the former record, that there was an allowance made to Dean & Davison.

Mr. Dickinson: One dollar, I guess; merely formal.

The Court: There is nothing in the testimony in this case

in regard to that.

Mr. Baker: They have some mortgage on the property, or did have.

Mr. Dickinson: It is merely nominal at all events.

The COURT: Will that be a question the jury will have to pass upon?

Mr. Dickinson: No.

The COURT: The only question will be as to the allowance to A. Backus and A. Backus, Jr., & Sons.

Mr. Dickinson: Yes.

Mr. Baker: It appears in the testimony that Mr. Backus owns the land and A. Backus, Jr., & Sons own the plant, and Davison &

bean were the executors and trustees under the will of Crozier Davion, who had a mortgage on the property at one time, but whether is paid or not is wholly immaterial; they do not come here and sk any protection at all.

Mr. DICKINSON: No.

The COURT: Will there have to be a finding on that question?

Mr. Baker: Why, yes, they can find a dollar.

Mr. Dickinson: A dollar?

Mr. Backus: That mortgage has been discharged. The Court: If that is the case it drops out entirely. Mr. Robison: Now, gentlemen of the jury, there has been a little

estimony introduced here as to the value of this property. ourse, I don't know myself just how that is going to be considered, r in what light. I don't know just how you are going to consider he question of the value of the property and connect it with he question of how much damages there are to Mr. Backus. Of course the claim is that you are to consider just what it is worth for planing-mill purposes; that if Mr. Backus can earn \$70,000 a year profits out of that place, that is a good thing for him to keep; or I will come down to \$36,000 and shade that some; but it is a good property, and it ought to be left to him in as near the same shape as it was before the railroad came, and if Backus & Co. are dealing in an honest way, as they do business, and earn a profit of \$70,000 or \$36,000 a year, I am glad of it. It is a credit to the city to have such an institution, and there is no question about it that it is a first-class planing mill. Nobody has any right to, and nobody can truthfully cry it down or claim it is not so, or of no account or value to the city in the way of a credit. There is not any use in talking about it, but all I claim is that it is just as good today as it ever was. I actually believe it is, but I do not expect you gentlemen will look at it in that light. I would not if I was on the jury. As I stated before, even though it is exactly in the same shape as it was before, if Mr. Backus did not want the railroad there, he ought to be paid for its coming there; I believe that myself. Of course, if it is to be looked at simply for the use of a planing mill and for planing-mill purposes, it is ruined, as Mr.

Mr. Backus: I do.

Mr. Robison: You did not very strongly, but Henry Backus is clean gone on it. He has not the slightest idea which way to turn nor what he is going to do, he is in a bad shape. He is lying awake nights and what he is going to do he don't know, he is running along here at a loss, certainly losing money every day and he is in bad shape, and I pity him if he feels as he actually thinks he feels. It is too bad, but I do not think we are to blame for it. He has got a pretty good institution down there yet, and take all except the back end of that cellar, there is considerable light around there yet. And there is lumber around there and going up that elevator and through those planers and rip-saws and crosscut saws and all the other kind of saws that have been testified to that I don't know anything about. But his business is going

Backus said—not Absalom Backus, he did not claim that at all.

on and it is going to go on, and I will tell you this, gentlemen of the jury, that after this thing is finally settled, after this verdict is rendered and it is finally settled that Absalom Backus, Jr., & Sons. it won't be two weeks before something is done down there to make that institution just as they want it. It is too thin to say it cannot be arranged so that they can do business because there is an elevated road constructed forty feet away in the street in front of them. They are too shrewd and sharp and careful and smart business men to have any such thing as that happen. Just what change they will want to make I don't know. It seems they were not entirely satisfied when they burned out because Henry Backus says they looked around to see if they could not find a better place, and if they could not better themselves. There was something the matter, they were not just exactly satisfied, their lumber yard is a good ways from their planing mill for one thing. Take all other big planing mills in this country and you will find the lumber yard and planing mill right close together. Take the Delta lumber yard and planing mill that has been testified to, and they have the lumber yard and planing mill right in the same inclosure, lumber right at hand. You take all the lumber mills and planing mills that you have visited yourselves, anywhere, of any extent, and you will find they do not have to draw their lumber some blocks before they get it to their mill. It is no wonder that he does not want his institution located just exactly as it is, because he could do better with it somewhere else, if he had not had the land just as he did have it. But after this thing is finally settled, I believe that their fire-trap of a dust-arrester up on top will be taken off in the first place and they will put up a modern one, such as has been invented within

2815 the last few years, and such as is in general use in the planing mills and these factories where they make dust everywhere in this country. I say in general use, not in every instance, but in general use, and that is what will be put up in place of this institution he has got up there. They will turn their dust door around so that they will take their dust out away from in front the railroad, and away from where there are engines or fire, or if necessary they can locate their dust-room in a different part of the yard. It has been testified here that the dust can be carried 500 feet without any trouble directly to the engine-room. It costs some money to do it, sure, and we expect to pay for it and are willing to pay for it. And it will be done, but Henry Backus is not in the state of mind that he thinks he is. If he thinks he is as bad off as he pretends—

Mr. Henry Backus: I don't believe you could run it as well as I. Mr. Robison: Neither do I, but I don't think I would belly-ache around about it as much as you do, to tell the truth. I think you are very likely honest, but you are worked up into such a state that you are out of your head.

Mr. Henry Backus: I have got a pretty bad dose, that is a fact. Mr. Robison: Well, this commenced when you were a boy, you must remember.

Col. ATKINSON: Do you think that is a proper way to argue a case,

to turn around and abuse a man?

Mr. Robison: I am not abusing him at all; I don't mean to, but I don't believe it. I believe he is honest in it, but I think he is out of his head.

Mr. HENRY BACKUS: That is contrary to the statement you made

yesterday when you were down there.

Mr. Robison: What is that?

Mr. Dickinson: Never mind that; that is a conversation between

you two.

Mr. Robison: If there is any conversation I had with him 2816 I am willing he should tell it. I am sorry for the frame of mind he is in. I do not think Absalom Backus is half at had off as Henry-or the other one. The brother is all right, but of course he feels bad about it; but I think he feels a good deal worse than he really is. And it is true that they will fix that place up in two weeks after this thing is settled so that they will run along and without any particular danger and with plenty of light and all that, which can be done. Mr. Henry Backus is so excited about this thing that he states his property down there is worth \$800,000. He said, in the first place, \$2,000 a foot. It must be a state of excitement he is in when he says that, because everybody knows better-\$2,000 a foot where their lumber yard is. That is not of very much importance, except to show that his testimony is, naturally enough and naturally to be expected, shaded in his own You can naturally expect that, and when you find that he is testifying to the value of his property down in that location in that way, \$600,000 at least, and from that to \$800,000, it seems to me that when he fixes prices on other pieces of property around the planing mill and the machines and real estate in other places, you ought to make some allowances, and when he tells you what the building will cost, when Henry Spitzley, a man that some of you know, a man whose reputation, I believe, is a good one in this city, as a builder, as good as anybody's, and one of the men that people would go to if they wanted a building put up-when he tells you that the carpenter-work in it will cost \$22,612.09, and states that he will take a contract for putting it up for that price, and Henry Backus tells you that it costs pretty nearly three times as much as that, twice as much anyway, I think that Henry Backus is probably mistaken and that Mr. Spitzley is more apt to be correct

Now, Mr. Spitzley is a man that is unbiased in the business, he has not any interest in it, and of course Henry Backus, especially the way he feels, I think you will believe has some interest in this case and feel- somewhat interested, and his testimony naturally enough no more than is to be expected, is likely to be shaded in his own favor, and I am not finding any fault with it. Mr. Finn, for the mason-work, said the building would cost \$26,884, and Mr.

Backus did not dispute that.

Col. ATKINSON: He added \$1,500 for the retaining wall which he did not take in, for extra thickness.

Mr. Robison: He added \$1,500. He said he thought it should not be that.

Col. ATKINSON: Well, he estimated them two feet thinner than they were.

Mr. Robison: Yes, there was \$1,500 to be added to that, which would make \$28,000. Those figures were not disputed. Mr. Backus did not know anything about that and he thought those would probably be about right, as I remember it, or he did not know anything about it. Mr. Finn said he would take this job for that price and be willing to take a contract to duplicate the building as it is now, make it new. It is not very old now and it is not worth much less than when it was new, but it would be worth just as much new. He would do that work for \$28,000, adding the \$1,500 for additional walls, that Mr. Backus says was thicker than Mr. Finn did, but there is no fault found with his figures; they say that is about right. Mr. Spitzley says he would duplicate the carpenter-work in that building for \$26,000, that he would be willing to take a contract for it at that price. Mr. Backus says that Mr. Spitzley cannot do it as cheap as that and he gives his reasons;

Mr. Spitzley estimated the flooring too cheap, and this thing and that thing and the other thing, he estimated too little

lumber in, but Mr. Spitzley was at it a week or so, nearly a week, I think, before he could be got here to testify, for the purpose of giving him an opportunity to measure and calculate and he came here with those figures. And if he is an honest man he can build that thing for \$22,612, and would make something at it at the same time because he said he would be willing to take a contract at that Now there is a great difference of opinion about the machinprice. ery. I don't remember Mr. Backus' figures on the machinery, but if the place was taken away, and if Mr. Backus had to move, these machines would still be first-class Backusized machines, every one of them. All he would have to do would be to move them and of course if he had to move them, which I do not concede for an instant, and I do not think he ever will, as long as he is located just as he is, but the machines are still there whatever their value or price is, and the running of the elevated road in front of them does not decrease their value if they can be used just as well somewhere else, that is sure.

Mr. BAKER: Or there.

Mr. Robison: Yes, or there, as I think of course they will be used there. There is not any doubt they will be used right in that very spot, but if he had to move them the machines could be moved, and all the trouble there would be or any deterioration there would be would be the moving of the machines. That would cost a certain amount unquestionably if he had to move them, but I do not think he ever will. There is a great difference in the price. I think our figures are \$35,136, as I have them and Mr. Backus' are certainly more than \$100,000.

Col. ATKINSON: On the machines.

Mr. Robison: I think so. Do you remember, Mr. Baker, what Mr. Backus' figure is on the machinery?

Mr. Dickinson: Here is the inventory.

Mr. BAKER: His total estimate is about \$100,000 more than

Spitzley's.

2819

Mr. Robison: Of course, in the machinery I included the engine That is aside from Spitzley's estimate of the building. I am trying to tell you how much our figures are on the cost of that plant down there and how much his are. His figures of the value of the machinery and boiler and engine are \$110,00- in the face of \$35,000, our figures. That is three times as much. Now he may be right and our man may be wrong, but I am not going to comment at any length on that, because I do not think it would be of any use. I don't know enough about it to talk any more intelligently to you than you know yourselves. There are the figures of one man and the other, and if you are going to use those figures at all, in finding out what the damages are-something that I do not understand just how you are going to do-it is all left, of course, to your own discretion, and I ask you certainly to consider those figures. Mr. Spitzley undoubtedly left out items that Mr. Backus put in, not very many machines, however. You will find in the testimony of Mr. Spitzley that when questions were asked him about this machine and that machine that Mr. Spitzley knew them by different names. He says over and over again, I think I have got in all the machines; I intended to, and I think I have; but I do not know the machine by that name. And you will find in different places in his testimony that he so testified. Of course there are items that he did not put in at all. These saws that were hanging up, that were not in use, he did not include, and things of that kind; tools around the engine-room, and the wagons that were in use and the carts and the things of that kind, that he did not understand had anything to do with the building itself, and the fixtures in the building. So an allowance ought to be made in Mr. Backus' favor in that

regard. But if you are going to consider the value of this property in estimating how much it is damaged, why, I ask you as reasonable men, men of common sense, that know how these things are done and how people are apt to testify, to consider that, and in a reasonable common-sense way, and no other. We do not ask any favors and expect none. We want you to do as near justice in the case as men can. Mr. Backus is entitled to certain damages. Nobody can deny that, and that he will get them nobody expects to the contrary, and that he will get more than he is entitled to, I ex-That is sure. And I think if I was on the jury myself I would give him more than I rather think he is entitled to, because there is the sentiment in the business that no man can get over. Here is a railroad—the railroad does not make any difference—but if it is a private individual that came in front of this property with an institution of this kind that Mr. Backus said he did not like, I would be willing to pay him for it; but I do not think I would be willing to pay him ten times what his damages are or that I would be willing to give him nine-tenths for sentiment and one-tenth for damages. But so far as I am concerned, I expect that you will give Mr. Backus reasonable damages, liberal damages, for the railroad running in front of his property, but whatever the damages are that he gets, they will be more sentimental than actual, because the light that is shut off from his place is of no account. I believe that just as much as I do that I stand here, that he is not injured, by reason of that light, one dollar. That he may be injured by the cinders and smoke and soot falling over on his lumber, it may be true, but it is very strange, gentlemen of the jury, as I have thought before, and as I think I have expressed myself before, that the only engines in this whole community that throw cinders and soot and smoke are the union depot engines. Here is the Michigan Central rail-

road right alongside of this institution, as you saw it yesterday, with ten trains running where there is one running on this elevated road, and it is strange that the wind, in whatever direction it may be, north, south, east or west, never carries cinders from the Michigan Central, and that no damage or annoyance has ever come from any of those trains. Now it is not so, and that is all there is to it. The Michigan Central engines throw smoke and dust and cinders just as well as this road does, and sometimes when the wind blows in the right direction, they will come from the Michigan Central track just as well as they will from the union depot. It is just like Peter Henkel's testimony, in which he said that for years and years he had lived on the corner of Fifteenth and Fort streets, and he testified that the Michigan Central was farther away than the other track was, and I suppose I am bound by that, but running there for years, he had never noticed any trouble at all; his clothes could hang in the back yard, and, although there was the Peninsular stove works and the Backus mill pouring out smoke, and the McGregor boiler works and all those business enterprises and machine shops and things that there are on River street and Fort street, right in his neighborhood, he never had been interfered with at all; but when the union depot company, way off in another part of the town, an elevated road nowhere near him-the Wabash road was the one he was finding fault with, but the union depot elevated road was not anywhere near him-yet just as soon as they commenced he could not hang his clothes out any longer. It is not so; that is all there is to it. It is too thin; that is not true, and nobody will believe it, and nobody has any right to believe it. It is prejudice that makes a man testify in that way, because the Michigan Central Railroad engines will smoke just the same as the Wabash do, and just the same

2822 as the Canadian Pacific and the Flint & Pere Marquette, and they have been smoking along here for years, and if Mr. Henkel has had his clothes hanging in his back yard or his front yard, they have been smoked before the Wabash railroad commenced to operate here at all, because there are too many chimneys pouring out smoke all over the city. You know as a matter of fact, some of you, at any rate, that there is an interference in the business part of the city everywhere from smoke. Take your offices, and leave a sheet of paper on the desk with the window up, leave it there a day and it will be black and you cannot use it, and it does not all come from this elevated road either. It is one of the natural

results of people living in a place where there is business carried on. And if you are going to assail business enterprises here because they are throwing smoke and cinders and make some dirt, why the effect of your verdict will be to drive business enterprises away from this town. If people are going to live where there is anything going on, they must expect some dirt, and some smoke and some cinders.

Col. ATKINSON: Are you striking on politics now?

Mr. Robison: Well, I might before I get through. But that is a fact, isn't it? Am I talking sense or nonsense when I say that that is a fact; that is, people cannot be allowed to do business here except at a great expense in the way of damages, people that run institutions and run machines that throw smoke and dust and cinders, have got to leave the city, if they cannot do it. And those are things which people must expect, and it is the experience of people that live in the center of the city at any rate. They certainly are interfered with by dirt, not always cinders, I would not say that; but that the union depot company is the only railroad that runs into this city or the only institution or corporation that allows railroad engines to throw cinders is not true; and

that they have thrown them around Backus' place just as much and in as great a degree on the other side, as this railroad has, I think is certain, because there are ten trains running on this side of Backus' property where there is one over here. Of course this one is up above, but according to their theory these cinders will go fifty feet or more anyway, and once in a while there certainly is an east wind and some cinders must come from the Michigan Central into Backus' yard, but not a cinder has he ever noticed, according to the testimony of some of them, except from this one institution. Now that is not true. This is a railroad like the others and it is entitled to come into this city, and it expects to pay what damages it actually creates and a good deal more, and all it asks, as I understand it, is that it be given chance for life. This railroad enterprise that is up there is of as much importance to the city as Backus is, and there ought not to be too much given to him because of sentiment. Give him enough so that he can be halfway satisfied and I don't think there will be any fault found. think that is all I have to say.

Mr. Baker: If the court please, Mr. Dickinson made a question in your honor's absence, about the use that could be made in this case of the decision of the supreme court. Mr. Robison called attention, during his argument, to the fact that the supreme court had set this verdict aside as excessive, and Mr. Dickinson took an

exception to it.

Mr. Dickinson: I took an exception to the statement because whatever the supreme court has said of it and thought of it, it should not be stated in this case as at all affecting the jury, and I make the objection on the ground that on this question the jury were the exclusive judges of the amount of damages, and the opinion of the supreme court, who did not hear the witnesses, or see

the place or know anything about it, except from the printed record, which alleged certain errors of law, could not be used to influence the jury's judgment of the damages in this case. Your honor was absent when I made the objection and

took the exception.

Mr. Baker: All I desire to say about it is this, that if the case had been tried with no effort to bring before this jury the amount of the award in the other case, I should have been very willing to submit this question to the court and jury without any reference to the former proceeding, but Mr. Dickinson put Mr. Backus upon the stand and had him testify that he had received \$96,400.

Col. ATKINSON: Mr. Baker, you are mistaken about that.

Mr. BAKER: It is in your own testimony.

Mr. Dickinson: I asked Mr. Backus about the payment of the money.

Col. ATKINSON: You gave the amount, not Mr. Backus.

Mr. Baker: Mr. Backus gave the amount.

Mr. Dickinson: No, he did not.

Mr. BAKER: Yes, the first time it was brought to the attention of this court and jury, he testified to it.

Mr. Dickinson: I simply wanted to prove the payment of the

money.

Mr. Baker: I know, and in addition to that, if the court please, they put Mr. Dwyer on the stand to prove by him that they had received \$49,000.

Mr. Dickinson: You are mistaken as you can be. You testi-

fied to that.

Mr. Baker: You put that in in the shape of evidence. Now, if the court please, to offset the two highest verdicts that have been rendered in these entire proceedings, I put in evidence all of those verdicts, as your houor will remember; and I give notice now to the counsel they can make any use of it they see fit, and that I will insist before this jury that if they claim anything from the amount

of that former award, I shall insist upon the benefit before this jury of the fact that the supreme court set it aside as

excessive and as exorbitant and unjustified.

Col. ATKINSON: We take an exception to the statement that the supreme court did that.

Mr. BAKER: That is just exactly what they did do.

The COURT: What I shall tell this jury is, that they are to determine the question in this case, the amount of the award, entirely and exclusively from the evidence which has been introduced in this case.

Col. Atkinson: And that the opinion of the supreme court, even if it were that way—

Mr. BAKER: Or the opinion of the other jury. If you concede

that, I have no objection to it in any way.

The COURT: If you wish it I will go further and say that they are not to regard the opinion of the supreme court nor to regard the opinion of the other jury, but the sole responsibility of the de-

termination as to the amount to be awarded is under the evidence

as it has been offered in this case.

Col. ATKINSON: I think that far, your honor, would be all right, but I think this, if your honor will pardon me, that no counsel ought to state in the presence of a jury that the supreme court had found one way or the other on a question of fact, which is for the jury to decide. Now, you take some of the jurymen, and they may have such respect for the judges of the supreme court that they would think they were better judges of these damages than themselves.

Mr. BAKER: I don't desire to make any use of it at all except

with reference to the other verdict.

The Court: As far as this question is concerned, it has come up heretofore before me, where reference has been made to former trials, and I have always taken particular pains to tell the jury in

these cases, and I will so tell this jury when I come to charge them in this matter, that they are not to regard anything which may have happened in a former trial, but that they

are only to regard the testimony and evidence which is admitted upon this trial, and that the responsibility of their verdict rests entirely and solely upon that evidence, and they have to determine according to that evidence.

Mr. BAKER: That is perfectly satisfactory to me.

Col. Atkinson: We take an exception to Mr. Baker's statements.
Mr. Baker: I have already taken exceptions to their introduction of the other award.

Col. ATKINSON: He is a peculiar fellow. He will state it whether

the court says it or not.

Mr. Baker: All I want is fair play. The supreme court is excluded and that verdict is excluded, and has nothing to do with

The COURT: The only object I had in this matter is to give fair play to both sides, and I will do it in a conservative way, and not

in the heat of argument.

Recess till 2 p. m.

FRIDAY, November 3d, 1893-2 p. m.

Mr. Dickinson: Before proceeding to the argument to the jury, may it please your honor, it is well enough to call attention to a few principles on the lines of which I shall address myself to this tribunal. It has been suggested from time to time in the course of this proceeding from its inception that the measure of damages was to be regulated by the price of real estate and by the injury to real estate. I desire to make the point as strongly as can be made, that under the constitution and the law as construed by the supreme court, the damage to the real estate, however great it may be, is but a bagatelle, or may be but a bagatelle to the actual injury to the

business, plant, occupation, or whatever it may be called, 2827 which is carried on upon the real estate. If that be great, compensation must be given for it to the last dollar. If it be greater—three times, four times, ten times the damage to the real

estate—still that compensation must be given which is compensation under the constitution of the State until the single unit—the citizen of the community, whose property is taken or injured, is not taxed one penny more than his neighbors for the public improvement, either an injury to his business or any injury to the realty. And I call your honor's attention to this so that in the instructions your honor contemplates giving, they may follow, not our construction of the decisions, but the language of the decisions of the supreme court, speaking through such learned justices as Justice Campbell and Justice Cooley. I refer to section 15 of article XV. "Private property shall not be taken for public improvements in cities and villages without the consent of the owner, unless the compensation therefor shall first be determined by a jury of freeholders, and actually paid or secured in the manner provided by law."

The Court: That merely recognizes the power of eminent do-

main.

Mr. Dickinson: And I refer to section 2 of article XVIII. "When private property is taken for the use or benefit of the public, the necessity for using such property and the just compensation to be made therefor, except when to be made by the State, shall be ascertained by a jury of twelve freeholders, residing in the vicinity of such property, or by not less than three commissioners, appointed by a court of record, as shall be prescribed by law."

Now what is included within the terms of the constitution as compensation under the decision of the supreme court of this

State, and I shall only refer to a few. I shall mark the passages and ask your honor's attention to them in giving your views of the law to the jury. In the case of Pearsall vs. Supervisors, 74 Mich., and I read from page 561. There they interfered with or discontinued a portion of a State road by the appellant's property, and the question was whether she was entitled to damages for that public improvement, or the taking of the property, or the closing of the street, or the interfering with the street. The court says: "The value of Mrs. Pearsall's property may have become very greatly enhanced by the location of her buildings and orchard where they are now situate upon this road. Of this enhanced value she may become completely deprived by taking up this road, and, if so, she will be deprived of her property to that extent, and it will have been taken from her by the authorities for public use and necessity. Certainly on no other ground could she be deprived of such property rights in and upon the road. The constitutional provision is adopted for the protection of and security to the rights of the individual as against the government, and the term 'taking' should not be used in any unreasonable or narrow sense. It should not be limited to the absolute conversion of property and applied to land only; but it should include cases where the value is destroyed or injured by the action of the government, or serious injury is inflicted to the property itself or exclusion of the owner from its enjoyment, or from any of the appurtenances thereto belonging. In either of these cases it is a taking within the meaning of the

provision of the constitution. A partial destruction or any diminu-

COURT: There can be no question about that, Mr. Dickinson.

Mr. Dickinson: No, your honor, but we are before a tribunal which your honor is to instruct, who may assume that a public street is public property and may be taken, and I am going to ask your honor to charge the jury that Backus &

Sons have a property in the street-

COURT: There is no question in regard to that.

Mr. Dickinson: I read further: "If the public take any action which becomes necessary to subserve public use, and valuable rights of an individual are thereby interfered with and damaged or destroyed, he is entitled to the compensation which the constitution gives therefor, and such damage or destruction must be regarded as a 'taking.'"

There may be no question about that, but there has been a question in the course of this hearing, and — your honor will refer to your own decision on the motion for a new trial, your honor will find that you applied the rule by reason of the damage to the Backus property solely to the value of the real estate and the super-

structure.

COURT: That may have been upon the motion in regard to the confirmation of the prior verdict, but upon that question I shall

not have anything to say to this jury.

Mr. Dickinson: But the question is whether you will find as in that intimation the rule of damages to the damages to the real estate, or will say within the language of the books, that the damage to the business, if it be found, shall be compensated to the last degree.

COURT: I do not think, Mr. Dickinson, as far as any opinion I may have delivered in this matter is concerned, it goes to that

extent.

Mr. Dickinson: I know that; I know perfectly well that your honor, it was not fully discussed, and your honor's attention was specially directed to a comparison of the real estate values—

COURT: I mean that was only one of the incidental questions that

arose-

Mr. Baker: As far as the damages to the business are 2830 concerned, before your honor passes upon that, I desire to be beard

Mr. Dickinson: Now, in the case of Reidinger vs. The Marquette & Western Railroad Company, in the 62 Mich., there was an attempted change of the plat of the city, and the question was as to the right of the owner in the street, and they raised the question as to whether the dedication was valid, and the court say: "Whether the dedication of the streets to the public, contained upon this plat, is valid or not, the purchaser of a lot fronting upon such street has the right to have the street kept open for the usual and customary methods of travel. The grantor cannot thereafter withdraw or change the use of such public spaces to the detriment of the grantees,

and the destruction of their rights in the streets or public grounds on which their lots abut."

COURT: I think I had occasion to examine that question in the case of Currier vs. Berry, as to whether a plat or dedication is valid or not, it makes no difference if a person plats property and sells it according to the plat, the plat is the dedication between the grantor

and grantee of all the streets of the plat.

Mr. Dickinson: Now, as to what is compensation, I refer your honor to the case of The Grand Rapids & Indiana Railroad vs. Heisel. in the 47th Mich., page 398. "It need hardly be said that nothing can be fairly termed compensation which does not put the party injured in as good a condition as he would have been if the injury had not occurred. Nothing short of this is adequate compensation. In the case of land actually taken, it includes its value, or the amount to which the value of the property from which it is taken is depreciated, and in Jubb vs. Hull Dock Co., 9 Q. B., 443, it was held where the property taken was a brewery in operation, the damages in-

cluded the necessary loss in finding another place of business. In cases where damage is by injury aside from the actual

taking of property, the rule has been to make the party whole as nearly as practicable, and where it affected the rental value or enjoyment, the same principle has been applied as in other cases. There is no reason, and so far as we can discover, no law which allows the wrong-doer to cast any portion of an actual and appreciable loss on the party whom he injures." (In this case the same rule of damages would apply as in the Grand Rapids & Indiana case, and the suit was brought for damages, and the question was what was compensation.) "In such a case as this, it is in the power of the company and always has been to have the compensation settled once for all, and to get any benefit which the law attaches to such a method of ascertainment. Until this is done the possession is a continual wrong."

COURT: A question which arises in my mind is this: There is no question but what the Backuses are entitled to full compensation for such damages as they may suffer, but does not the other rule also attach, and that is, that the jury are not in any way to consider any speculative damages or any probable damages?

Mr. Dickinson: They can only consider the damages which are actually shown, but the other rule follows, may it please your honor, that they are not to estimate those damages for a year, or estimate the present injury done by the railroad, but they must assume that the railroad is running to its maximum capacity, that it has other railroads, that it may double, treble or quadruple its trains, so far as that is concerned, and they must estimate the damage for the future time, not for a year or three years or five years or ten years.

COURT: That is undoubtedly true to a certain extent, but the question that I have thought about considerably within the last few days is in regard to the testimony which was admitted

in the case in regard to their profits, the profits of their busi-Do they not come within the rule which applies in regard to speculative damages?

Mr. Dickinson: Not at all, your honor. If the profits are shown and the business is destroyed, you can only show it by the effect upon the business, and upon that point I call your honor's attention to the unanimous opinion of the supreme court delivered by Mr. Justice Campbell in the case of The Grand Rapids & Indiana R. R. Co. vs. Weiden (70 Mich., 393). "Under our constitution there is never any presumption that a railroad is necessary, or that any particular land ought to be given up to its uses. Every land-owner, therefore, has a perfect right to object to giving up his land, and is not confined to objections depending upon price or value. And a road already established has no better claim than any other to extend or change its lines. Although railroads are allowed by public policy to condemn lands, because they cannot exist otherwise, nevertheless the enterprise is, under our laws, which prohibit public ownership of railways, one of private interest and emolument, and must show its claims to legal assistance."

Now, upon the question of profits: "We are bound to see that parties are not deprived of their property without necessity, or without full compensation for being compelled to relinquish it. And, while respect is due to the honest action of juries, it is not conclusive, and is subject to comparison with the facts in the record. Both of the appellants were using their property in lucrative business, in which the locality and its surroundings had some bearing on its value. Apart from the money value of the property itself, they were entitled to be compensated so as to lose nothing by the interruption of their business and its damage by the change. A business stand is of some value to the owner of the business, whether he

owns the fee of the land or not, and a diminution of business facilities may lead to serious results. There may be cases when the loss of a particular location may destroy business

altogether for want of access to any other that is suitable for it. Whatever damage is suffered must be compensated. Appellants are not legally bound to suffer for petitioner's benefit. Petitioner can only be authorized to oust them from their possessions by making up to them the whole of their losses."

That goes directly upon the question which your honor suggests. Now I shall not take time to refer to the other cases. I will con-

tent myself to refer to those three or four leading cases.

And now, gentlemen of the jury, I think it is well enough to consider first principles briefly, to ascertain why you are here and what your duty is; how you come to be chosen to pass upon the question before you. You know that all free government is instituted for the protection of the individual citizen. That is for you, sir, and you, sir, and you, sir. For the protection of your life, your liberty, and your property. This is primary. That is all that government can do for you. That is everything you pay taxes for; to take care of your life, your personal liberty and your property. Nothing else. That is why we rear this great superstructure of the United States, the freest on earth. That is why we have the United States divided up into States so as to secure these three things more certainly—life, liberty and property. More certainly by having a

local government that knows what they are better than the Federal Government at Washington. That is why our experiment on this American continent—successful so far—is called the freest and best government on earth, because it takes the best care of the individual unit, and is not a government by any body of men, is not a

government of any aggregation of men, is not a government of any class, but it is the government of men who work, of men who build up the country and make it great and prosperous and rich. That is why capital comes ere, why your capital is safe when invested under this Government of ours. In the old countries, in the past, because today England is nearly free as our own country, the royal authority could take it, and they attempted it not many years ago, as shown in the German reports under the predecessor of the grandfather of the present Emperor, with the strong hand at the palace at Berlin. He did not like a little cottage that was there. He wished to extend his grounds, and he laid his strong royal hand upon the little cottage, as he could not deal with the man, and tore it down, and the right of the individual, even in monarchical Prussia, was vindicated, and the high court of appeals of Germany held that the right of that little cottager there by the King's palace was as sacred from the power of the King as the King's palace itself. And so as governments have progressed, this right of the free citizen to his life and liberty and property, to enjoy it as he pleases, so long as he does no injury to his neighbor, has been more and more protected with the advance of civilization. And we here in the forefront of the nineteenth century make the proud boast everywhere, abroad and here, and justly, that the individual citizen is protected, is free to go and come as he pleases, take care and run his house as he pleases and run his business as he pleases without leave or license from any governmental body or any other man in the United States.

But another element comes in, gentlemen of the jury. Public improvements must be made. We have got to have city halls. We have got to have highways. We have got to have these various things that all may enjoy, and in these cases the constitution says, our written constitutions say, because we have no unwritten con-

stitutions, that may be varied as the prevailing majority pleases, in England by a vote of Parliament and the signature of the Queen, but our written constitutions still protect life, liberty and property, beyond which you cannot go, provides a way that the individual shall give way for the public when private property is required for the public use. And how shall he give way? He pays his taxes just as you and I pay our taxes. He shall not be burdened, says the constitution of the State, says the Constitution of the United States, he shall not be burdened one dollar more in giving up his property, he who pays taxes equally with you, shall not be put to one dollar of loss if he is bound to give up his property. It is a high-handed proceeding, taken in the abstract, that the Government can say to you, whether you want to seil or not, whether you want to carry on your business or not, whether you want to preserve your business for your children or

not, it is a high-handed proceeding in the abstract when the Government says to you; true, those things are sacred; true, the Government has been instituted to protect you in carrying on your business and living where you please, but the good of the public requires that you shall give way in this instance; but, says the written constitution, if you do give way, if you do give up your own wishes and your own property and your own business site, or the site of your home, you shall not be burdened with one dollar or one penny of loss. Now the jury is not, as my brother Robison says, juries will favor the individual as against the corporation in such cases. It is not true. Our fathers who framed our constitution found that it was not true. But when you want a public improvement, with the newspapers crying, give way for public improvements, the tendency is to walk over a man with the whole sentiment of the community if he stands in the way. And so to provide for his protection-and I now come to your duty-for the

protection of the individual, our constitution provides, not that any legislature, as formerly was the provision of the constitution, could take the property and designate it for public use and determine the compensation to be paid the individual. Why? Because the legislature was a quasi-permanent body; it was composed of men who were there in office for two years, subject to influence, corrupt or otherwise; subject to the influence of a railroad corporation that desires to get possession of his property, so that the individual's property might be taken without just compensation by proper influence or improper influence brought to bear upon people in permanent office like legislators. A railroad lobby might get after them, or a body of newspapers might combine, political sentiment could be aroused, and that legislature could be influenced to do injury to a citizen by the cry for public improvement. And that is the reason the power - neighbors; a jury from the vicinage, twelve men from the courts, gentlemen of the jury, and is put in the hands of a temporary tribunal to determine this compensation and what is his loss; a temporary tribunal who come into office just to determine what that man's loss is, and to go out of office the moment they have determined it. A jury of his neighbors; a jury from the vicinage, twelve men from the vicinage who are not subjected to influence because they are not in office where they can be tampered or molded, but are called from the vicinage or the neighborhood itself, and who come into court, put themselves in the place of the neighbor whose property is sought to be taken, and assess his damages, or his just compensation so that he shall not lose a cent. Now I do not know as I have made myself clear, but that is the origin of the jury that sits here. And we are entitled, gentlemen of the jury, at your hands-the constitution of the State favors this individ-

ual unit because it puts here, not a court, not a legislature, 2837 not any permanent officer who may be subjected to influence while in office, but twelve of our neighbors who shall see that we are not mulct one cent by the public improvement which is taken for the public benefit. This being so, I ask nothing from this jury as stated by my learned friend, on the ground of senti-

213 - 55

ment—not one penny. But if there is a man on this jury who is not in favor of that just compensation provided by the constitution, and who is in favor of sending the Backuses out of there with the loss of a dollar by reason of taking this property for public improvement or injuring him, that man violates his oath and his duty, above all as an American citizen, to confine within the lines of the written constitution the power that invades the protection and the guarantees of life, liberty and property. The man, on the other hand, who goes out of his way for the sake of a public improvement in the city and taxes a man one penny more of taxes than he pays in proportion, pays him a dollar in loss on his property that is taken for public improvement, violates his oath as a constitutional member of this citizen's tribunal.

Now let us see about it. Mr. Robison says that Mr. Backus does not claim he will be injured, and after all he says, Mr. Backus has not a home here, to use his own language: This is not a home, he says, of a little private person, but a rich concern, but a rich concern. Is that an appeal to sentiment? A rich concern! Let us see. Let us see whether Backus has any interest. Commencing as a boy at the age of eleven years he learned the carpenter and joiner's trade, an intelligent, bright Yankee boy; no time to get an education, because he had to earn his bread and butter. A bright, efficient, quick, plucky, plucky, plucky American boy that was going to get there sooner or later. And he commences with his hands, and he made a citizen of this country, coming from a class

of citizens that has made our country the best the world The plucky boys who work and build and add to the riches of the country at large; who add to its prosperity; who are intelligent enough to take care of their political rights, know what is necessary to see to it that those rights and the constitutional guarantees of the fathers shall be protected in every particular and every principle. Men who get on by economy and thrift. who build up their fortunes, so that their business concerns managed with this economy and thrift become a unit in the great aggregate that makes of the United States the richest and most prosperous country on earth. It comes from just such boys as that. Backus no interest! A rich concern! And he struggled through it all. He gathered about him first by the hard work of his hands property enough to start his shop. He has built up and gathered together all this property (he inherited nothing) from the pluck and brains of that little boy who went and learned the carpenter's trade at the age of eleven years. No interest! Has he been a faithful citizen, sober, industrious, adding to his country's wealth! No interest! Having honestly accumulated this great property, because it is great, is it not, gentlemen of the jury? It is something to be proud of. He has reached the age of three score and ten; he is sixty-nine; he has worked all his life; he has gathered together piece by piece just the property he wants, hasn't he? Is there any doubt about it? This large piece of property on the river front, all from the earnings of his own hands, and the hands of his boys that he educated after him to take on the business after he should die. He

has gathered this great piece of property on the river front. He has established this successful mill; the most perfect in equipment, and in adjustment and in economy, as all agree, Spitzley who exam-

ined it, and everybody, there is that any one has been in. He has done this by attention to business. The same attention that made him a success and the same pluck that made him get there when he was a boy and learned the carpenter's trade. Never has been off to play. He brought up his boys to work and take care of what he has gathered together, and here he is. No interest! Backus no interest? In 1885 when these boys were getting on, and he was getting on in years, before a union depot structure was dreamed of, before it was dreamed of, gentlemen of the jury, when no thought of it had entered the minds of any soul on earth, then he made the leases, and what for? Mr. Baker drew them. Perfectly apparent. Take the business, boys. I gathered it together and shall not last always. It shall not be embarrassed. It is a paying thing. I have built it up with the experience of years that has lasted me from the time I was a worker in the shop. You have been learned in it, and we have built it up together. I have no one to leave it to, and nothing to desire except for myself and my You put upon the realty a rental value somewhere near the proper proportion of the earnings, which may be great or small; put upon the realty a rental value of \$18,000; put it into a corporation so that when one of us dies it won't have to go into the chancery court and be wound up, but may walk right along and be making its earnings year after year as it has done heretofore, and if the rent comes to me I can will that to my wife and she will have enough and be independent of the boys, and won't have to go and live with the daughters-in-law. I am entitled, and she is entitled, the helpmeet of my life, to an independence from my labor, and a good independence, enough and to spare for comfort the balance of her days when I go, and you shall go on with the business, and when we are both gone it is all yours. And he has no interest? Think of it, gentlemen of the jury, what interest

has Backus in this property? Look back across these years and see where he was aiming, and what he was aiming at. Has he got anything else on earth? A farm down there out of this business he has. He has that. No one knows what its value is, for farming property under the protective tariff don't appear to be worth But I am not going into politics. He has got that farm, it Did he, in the dark days of 1873 take that great is immaterial. business through the darkest times this country ever saw without bankruptcy, without dishonor, without failure, and pay his debts? Has he no interest to save it and see that it is not injured? Why, gentlemen of the jury, he is not suing for damages. He is not in court spending his time and his money employing counsel because he wishes to be here. That railroad concluded that it wanted to build up River street, and my brother Robison says that everybody thought the railroad when it came up, but it got the city's property on River street, didn't it? It closed that street up. The counsel was blind; it closed the city's street. It didn't ask any pay for this large amount of real estate they got in the street. Instead of going up through property and taking property which they would have to pay dollar for dollar for, the city surrendered its streets. I think they got a pretty good thing and nobody fought them, but Backus having this thing here, having this planing mill here situated relatively to the lumber yard and his property on Fort street, so that it could be used to the very best advantage with economy, says to you, gentlemen of the jury: I am brought into court, I am brought into court against my will under this power of eminent domain that says that my constitutional guarantees, when I meet a railread company, are of no value to me, that my property can be taken in spite of me. They can take down my mill under this power of eminent domain; they can rent it or injure it. I

cannot help myself. Come into court with me, Mr. Backus. He does not come into court and sue them. Come into court, Mr. Backus. The constitution says we cannot go by your mill unless we pay you compensation and just compensation. into court and defend yourself. Here he is. Now, we do not want to make a penny out of the railroad companies. Why should he? But he says to you, and to each one of you, gentlemen of the jury, this man who has never been a litigant but once voluntarily, and that was when as it appears by the evidence that under an agreement not to switch, they did switch through his lumber yard; all the other times he has been towed into court himself and ordered to give up his property. He is not a man to be sneered at, at all events. He is not a man to be laughed down, at all events. He is not a man whose word is doubted in this community, at all events. A man who has accomplished what he has in this American country of ours is entitled to just treatment and he is entitled to look you in the face, gentlemen of the jury, and every one of you, and say: I am brought into court, but thank God the constitution has given me a tribunal of my neighbors and friends; see to it; don't give me a dollar, but see to it that I am not mulet a dollar of loss. Why? We went into a trial here a little while ago, and on Mr. Baker's testimony the stove works were paid enormous amounts for this railroad to pass by its property-\$49,000. Fire occurs right here within 48 hours, fire caused by this elevated structure that sweeps away \$45,000. \$45,000 at once. And now, gentlemen, at the risk of being tedious, I am going over this testimony with you that we have taken in a sort of desultory fashion from day to day, and I am going to refresh your memory on the testimony, and show you that under the testimony it is inevitable that you

2842 should conclude that this property, this planing mill has been impaired at least 50 per cent, that the profits have been taken off, that the mill cannot be carried on, and that it is not salable, as it stands, to anybody since this superstructure. You can take the statements of counsel or the smiles of counsel as they come to you across the table when testimony of reputable men goes in, for the impression, whatever it may be, that comes from statements and from smiles and sneers but when you come to take the testimony of good and true men having no interest whatever in this

business, you will find the inevitable conclusion is, and the court is going to tell you, you must take the testimony as it it given to you, the inevitable conclusion is that this planing mill has come to its end by reason of this superstructure. If it has, and you fail to do your duty by Backus through fear or favor, I hope it will remain upon your consciences when you think of it and think of the business he has built up and his long life and struggle to make it what it is. Now, I am going to take the testimony and see what there is of it. They open the case, gentlemen of the jury, with the undoubted duty to show you what injury resulted, and to minimize that injury they offer you testimony tending to show some calculation by which you could arrive at the amount of injury. I am going through their testimony witness by witness now, and then come to our own.

Francis Adams testified that this property was worth on River street fifty to seventy dollars per foot. A year ago when he was sworn he testified that it was worth \$100 a foot, and he swears that he so testified now. He says at page 10: "I know very little about it since the railroad was built." He has not been inside the mill once. He has been by there and looked in. He himself got \$200 per foot

front, sold at the valuation of the railroad company, and to some extent has represented the depot company in acquiring other property. And his \$200 a foot front was below there.

Mr. Joy testifies that the property is worth \$150 a foot. Joy paid for the corner below there, just next to Backus', \$400 a foot for 75 feet, or \$28,000 for 75 feet; \$375 per foot in round num-That is at page 26. Now, gentlemen of the jury, on this valuation of property Backus gathered this together in this location with the Michigan Central, situated, as it is, piece by piece in four different arrangements for the purpose of getting an eligible manufacturing site for his business. He dug it out, excavated it and made it. Is that to be compared in value with little pieces of 20 and 40 feet on River street, that are occupied by saloons and one thing and another? Is that a fair criterion of value? This property that is gathered together so that all the witnesses unite in saying that prior to the building of the superstructure this was one of the best sites, and in fact one of the most eligible sites for manufacturing on account of its proximity to the center of the city and on account of its railroad connections. Is it to be a criterion, I say, to your minds, as to the value of this manufacturing site with sparse and scattered pieces of property from 20 feet the minimum to 75 feet in width on River street, that may be worth, if you please, \$150 a foot? Are these little scattered pieces to be a criterion of the value of this eligible manufacturing site, with three hundred and ten and six-tenths feet on River street, running back to Fort street, and the situation as this is, as it has been carefully gathered together at odd times?

Mr. Zug says it is worth \$100 a foot if there were no railroad connections. He testifies on page 42 as to the situation of the property, and he forms his judgment on sales of property, and

among them is a sale on Fort streets, and a sale of twenty feet on River street. And such testimony is given as the value of Backus' plant based on such information as that.

Mr. Phister puts the valuation per foot at \$150 per front foot.

The next man they call is Chapman, the insurance man. He is put forward as authority upon the increase of rates, and it turns out that he is the agent for the Michigan Fire and Marine, of Grand Rapids, and the Detroit Fire and Marine, of Detroit, and that acting as an advisor for these two companies sometimes sells his rates to others. He says that his business is advisory merely, and don't know whether Backus' rates had been increased or not. And I read you his testimony, showing its value, at page 52. Bear in mind that we are seeing whether Backus' rates have been increased. and he is called as a witness to show that they are not. Bear that in mind. Of all the companies, also bear in mind of all the companies, also bear in mind, that actually insured, and of all the companies that actuaries who fix the rates and know the insurance, not one single agent is called to show that he knows the actual rates: not one. "For what insurance companies do you act as inspector? A. The organization is maintained by or stands in the name of the Michigan Fire and Marine, of Grand Rapids, and Detroit Fire and Marine, State companies. Q. You do not represent all the fire insurance companies, do you? A. No, sir. Q. You do not know, or do not pretend to state, whether or not Backus' rates had been increased by the insurance companies in which he insured? A. I do not. Q. Does he insure in any of your companies? A. I could not say. Q. Don't you know whether he does or not? A. No, sir, I have nothing to do with that. Q. You have only these insurance companies you have spoken of? A. That is all; we furnish rates to different companies who purchase them. We furnish rates to a great many other companies. 2845

with one of the companies to whom you have furnished with one of the companies to whom you have furnished rates? A. Yes, I know that they have done so. Q. But you have nothing to do with the fixing of the rates they actually charged them? A. I cannot control that. We make advisory rates. Q. Your business is merely advisory to the insurance companies? A. Yes, sir. Q. Then after that if the insurance companies choose they make their own terms to the insured? A. Yes, sir. Q. What have you to say as to whether or not the cost of the Backus insurance has or has not increased since the building of the road? (And that was the true question.) A. I have no means of knowing. Q. Do you know of the rule by which rates may be increased or the cost of insurance may be increased by compelling the insured to take four-fifths valuation. A. I know there is such a clause in use."

Now that is his testimony, and he has no means of knowing anything else, except that he makes an advisory rate, and he don't know whether his own companies increased Backus' rate or not. His testimony as to the increase or decrease of rates, therefore, is absolutely valueless, and I want to ask if you are going to fix the rate that Backus is compelled to pay; I want to ask each one of you whether he actually does it, and whether there is an increase, if you can do it on Mr. Chapman's testimony. When he says he has no means of knowing what his own companies charged Backus, and that he does nothing but advise companies, and then they do as they please. They are. I shall show you by Jones, who is very much criticised because he does business for Backus, that the rate is actually increased to Backus to the extent of \$3,500 at least. Why? Because there is an increase of \$17.50 on the shaving-house which he is compelled to take to the extent he does, and be-

cause, I shall show you by Jones' testimony when I reach 2846 the defendants' testimony, not depending upon his word at all, but upon the actual business done, that Backus is injured every day, and the testimony is constant from day to day that he cannot get insurance with this superstructure passing by his door. testifies that he knows eighty, I think, or twenty who have already cancelled their insurance, and ten more who have notified him not to renew. He says it is absolutely impossible to place \$10,000 of that insurance at all. That all these policies have been cancelled since the building of this superstructure, and that he don't know where Backus is to get his insurance. He testifies that by reason of the application of the 80 per cent. clause, which all companies apply on manufacturing property that the rates are generally decreased, while the Backus rates, because of the extra-hazardous risk on account of this superstructure, and Jones says so in so many words, the Backus rate has been held at that old rate, where he says 100 or more of his own neighbors' have been decreased, and the universal rule is to decrease the rate under the 80 per cent. rule. And he says the reason that Backus is so held to this old rate, and it costs him \$3,500 a year more than it did, is because of this super-Does he lie? Will you at least take Jones, who knows, structure. as against Chapman, who don't know, and says he don't know and that he has no means of knowing. Especially will you take Jones when the whole town is open with subpœnas of this court to bring every applicant into court to testify to this question, to bring into court the men that do know, and they have not brought one. Now, this 80 per cent. clause, what is there of it? He explains it to you. They must take 80 per cent. under the new general rule, everybody; and how does it work? If you have property worth \$100,000, gentlemen of the jury, under this rule you must take \$80,000 insurance. If you take \$50,000 and your property is worth \$100,000 and you have a loss, you

2847 your property is worth \$100,000 and you have a loss, you can't get even your \$50,000; you only get something like \$35,000; that is, if you don't insure up to \$80,000 you lose half the amount of the face value that you do insure, or proportion to the whole that the amount you do insure bears to \$80,000. If you do insure for \$80,000, you get it all in case of a fire. If you insure only for \$50,000 and your property is worth \$100,000, you only get \$35,000 or \$36,000. Furthermore, for the \$80,000, if you insure \$100,000 worth of property, the rate is decreased in this form. It is as plain as a pike-staff. It is the best thing for the community

at large. If you insure for \$80,000 you pay about \$604 for your insurance; if you insure for \$50,000 you pay \$400, and you are only getting \$35,000, so that the rates are decreased by this method. Backus' are clear up to the top notch; he is charged just as much for his insurance of 80 per cent. as if he took but 20 per cent. Now I think I have made that plain. If I have not, I ask you when you go to your rooms to read over Jones' testimony. The rate is for the benefit of the people at large, and makes the insurance cheaper. They do not charge as much if you take 80 per cent. That is the rule. And they pay you your full loss. If you take less than 80 per cent. you do not get your full loss, but bear the loss of the pro'tion of the difference between the amount actually insured and 80 per cent. And the rate is made proportionately less if you insure for your 80 per cent. Backus'is not reduced in his rate in accordance with this general rule. Why? Because of the union depot structure, which makes it an extra-hazardous risk, and makes it, therefore, cost him \$3,500 more per year than it would have cost him without the union depot company structure.

Now the next testimony they put on was the dust-arrester testimony; the Vortex and the Cyclone. Drummers for these dust-arresters, commercial travelers, they are all pleasant

dust-arresters, commercial travelers, they are all pleasant fellows, and I don't know as "drummers" is a term of reproach, but I will say commercial travelers come forward here to boom their patents before the jury. They all admit there are from 50 to 1,000 dust-arresters. They have got the Vortex and the Cyclone, and Backus, who has invented one, and whose dust-arrester works perfectly, as you can see in his mill, and you didn't see any dust from that fine work upon dry lumber. And that is pursued because the union depot Co. think if he kept his old dust-arrester there when it works perfectly and economically, and does the business, the union depot Co. say that Backus must put in a Vortex or a Cyclone in the place of the one that works perfectly. They want to change his mill around and make him move his machines to the rear, or away from his old front. They want to shave him, cut his hair, and put on a black tie and change him all about. But now as to the value of that testimony. We objected to the dust-arrester testimony. Why? It is as plain as the nose on a man's face that it is of no value unless they show that the Backus dust-arrester itself increases the fire risk and the premium on the insurance. Now, with all the dust-arrester testimony, with the insurance agencies all open to them, with Chapman on the stand, with their actuaries in every insurance office in town, with examinations made by everybody from insurance companies to see whether they would take the risk and why they increased the rate on the dust-room, is a witness put upon the stand, but Chapman to show the increase because he uses his own dust-arrester and because he does not put a Vortex or a Cyclone. Now this dust-arrester testimony was only competent, to be perfectly frank and fair about it, if they could show by reason of his sticking to the dust arrester that the rate of insurance was increased. If it was increased then their argu-

ment would be proper, it would be perfectly so, if it was ruled in 2849 as proper, if the fire risk was increased or the rate of premium was increased, because Backus kept the Backus dust-arrester in when he should put in the Vortex or the Cyclone, but not an insurance man, not Chapman, who examined the property with the utmost care, was asked if the increase of rate would be the same on the dust-arrester building and the shaving-house, if they put in a Vortex or a Cyclone. So you are to let that out of your minds, you must not consider that, unless they show the value of that testimony to be that the rate of premium were increased. Why, this crowd of men who examined it, Chapman who examined the property and who put the increased rate on, put the rate of 8 % on, why insurance men in addition to Chapman, if he did not know, were not called to show the increased rate, not because of the dust-house, because the dust-house is essential and cannot be dispensed with, but that the rate was increased because it was Backus' instead of some other dust-arrester. Think it over. See the value of that. taking their testimony; see what you think of it. Now this testimony of the dust-arrester is all pure and sheer humbug, gentlemen of the jury, because it has no legitimacy in this issue, because they don't attempt to show because of this peculiar dust-arrester the rate of insurance is increased. And you know perfectly well that be it a Cyclone dust-arrester or a Vortex dust-arrester or a Backus dustarrester, that what goes into the dust-room or the shaving-room must come out, that the doors must be opened, and that the actual fire risk is because of the fire falling into the open room which you cannot keep closed. Who says that because of the burlaps the fire What insurance man, what actuary, what exrisk is increased? aminer for insurance companies goes upon the stand and says that that rate is increased because Backus chooses to stick to the dust-arrester that does his business perfectly? What fireinsurance agent can they produce-they have not produced

any—who will testify that the increased rate is because of the fire risk, is not because of the dust which goes in and must come out from the open doors, that the shavings go in and must come out through open doors and that the exposure is not in the highest place on the Backus building, on the burlaps, but the exposure is because of the open doors of the shaving-room and the

dust-room, and that is why the fire rates are increased?

Now we come to Spitzley and Cramer. I call your attention to the value of Spitzley's testimony, an honest man in a small mill, in this case. By his own testimony he has inventoried but 50 machines in all his testimony, and there is over 100, as you can see by the inventory, item by item. Now he is called as to the value of the machinery, and let me call your attention to his testimony. You know perfectly well that you should be offered the best testimony at first hands, and if Jenks is the best witness as to the value of the machines, then Jenks should be put before you for cross-examination, and not Spitzley on second-hand information from Jenks. Jenks is the agent of the Fay machines, while we buy from O. A. Woods, so that we have got before you through this second-hand

914_55

method with no ability to cross examine Jenks, his testimony through Spitzley at second hand. Jenks too, is a rival of Woods in the machine business, and who manufactures, according to the testimony, an inferior class of machines, or who represents a firm who does manufacture an inferior class of machines called the Fay machine, not one of which is in our building. I now call your attention to Spitzley's testimony at page 147, and I have figured up his value of his own testimony. "Q. You can have your list, (handing Spitzley Exhibit "1" to witness); let us see what you saw there in that shop in the way of ma-

chinery that you are so familiar with, you could tell its value without inquiring from anybody. You understand that? A. Yes, sir. Q. Without going to anybody and asking the price, that you are familiar with in your own shop? A. We have one large molder and matcher that I know the price of by our own machine. Q. What did you set it down at? A. \$470; and then they got a small one, at \$130. Q. That you know of yourself? A. Yes, sir; then there was a band-saw filer; we have one also, \$75; then there were 17 rip and cross-cut saws which I know the prices of. Q. What did you put those down at? A. Some at \$45 and some at \$44 apiece. Q. How many at \$45? A. There were six of them. Q. How many at the other price that you knew about yourself? A. Eight at \$44. Then there was another saw at \$44, and there was a gig-saw, \$72. Q. Eagan gig-saw? A. I think it was Eagan. I didn't put down the name of that. Q. Patented on one? A. They are all mostly patented. That was a patented one. Q. Was that an Eagan saw you put down? A. I cannot tell. I didn't put the name of that saw down. There is a machine here-three rip-saws and three more of those cross-cut saws of the same price. Q. What is the price? A. \$44 and \$45; three of them. Q. What else that you were familiar with? A. There was a couple of cut-off saws, some swing cut-off saws, which I know; we were going to put one up. Q. What was the price? A. \$50. Q. Did you inquire about that? A. We have to inquire about all machinery. We get a book or price-list from the different factories; we generally get the prices of these machines. Q. Did you look at them? A. Some of them, yes sir. Q. You think you could get at the price what you put it at, the way the books put it down? A. That is what we call the swing cut-off saw. Q. Did you see how it was set up

2852 by the Backuses? A. I seen where it was put up; yes, sir. Q. Didn't you notice that a table was put on there at right angles with the saw frame, 32 feet long? A. They had some long tables there, but they had nothing to do with the machine itself; wooden tables. Q. The table was in connection with the machine? A. Yes, sir. Q. Did you take that into consideration in estimating its value? A. Not in this price; no, sir. Q. Did you, then, in estimating the values take into consideration the cost of setting up and the material for setting up? A. Yes, sir. Q. I understand you did not take into consideration this table? A. Not this long table. There are about four or five wooden tables, which we generally put up ourselves; don't belong to the machines really. Q. Did you

estimate them separately? A. No, sir. Q. Didn't estimate them at all? A. No, sir. Q. Well, go on with whatever you saw there that you knew something of the value of without making an in-

quiry."

Now we have it here: "Those were all the machines that I knew the prices of without inquiring. Q. And your estimated value of all the machinery in the shop was how much? A. \$16,891. Q. And on that estimate, the only articles in the shop of which you had knowledge yourself without making inquiries you have just stated? A. The other machines, except those I stated just now, I had to inquire about. I went to Jenks and got the prices."

Now he didn't take the pains to figure it out with inquiring of Jenks, and it makes just \$1,600. Just 10 per cent. of the total valuation that he put upon these machines in view of his own knowledge, and for every other dollar of estimating, without showing Jenks' machines, the agent of the Fay Company, not a machine of whose is in our shop, where we have machines better in every

respect, and costing more, the Woods machine. Not Spitzley's knowledge, not his straight word, which would be honest and straight if he knew, but you have the testimony of Jenks, a man familiar with machines, right here within reach of a subpœna, whom we have been unable to cross-examine. Out of a total valuation which he puts upon 50 machines, and of those 50 he puts a value of \$16,000, and who got every one of the valuations except \$1,600 worth from Jenks. No doubt about it at all. There

it is at page 147 of his testimony.

Now let me call attention to another thing in connection with Spitzley. Spitzley was there, and we waited for him days and days in that shop taking that inventory. He was in and out and staying there. He is a planing-mill man. He knows, if any man knows, the need of light. He knows the effect of passing trains upon light. He knows the effect of smoke coming from passing trains upon the light. He knows the effect of cinders upon the finished material. He knows the effect of passing trains in every respect where they do damage. Did they ask Spitzley a word of what he discovered? Their witness, their only planing-mill witness. Now we can all go into a junk shop, or boiler shop, or either a machine shop or planing mill, we who are not experts in the business, and stand with openmouthed wonder and not take in the details. You can form about as good an idea of the situation there as you can of what the man in the moon is doing. You don't know the way they work the details of it, what this man is doing or that man is doing. You cannot tell the adjustments, you cannot tell the thousand and one things in any shop in which you take a cursory examination. Spitzley swears this was one of the best-equipped mills he ever saw; that the machines were in perfect adjustment; that the knives were in excellent condition; that it was a first-class mill, and its product

was standard for fine material, as he had known it for years. Spitzley, who goes down there day after day, is not called on /2854 the question as to whether the passing of the trains injures the light, whether the smoke goes in there and injures the light,

whether the cinders fall upon the timber and spoil it, whether the timber is made culls by the falling of soot upon it; whether the lumber is made culls by defects in the knives by reason of cinders nicking them; whether the light is such that it does not interfere with the testing of the product as it comes from the machine. these things we go into in full detail by disinterested planing-mill men, and Spitzley is not called who is there to observe. put on a great many disinterested planing-mill men to show the mill has been darkened by the passing of trains. Planing-mill men have been called, and this was one of the great items of damage. No one has been refused access to the mill. They go to Saginaw and they bring the employés of the Flint & Pere Marquette railroad to show how planing mills are in Saginaw valley. They testify as to the passing of trains on railroad tracks by planing mills, but have they brought a single man down from Saginaw to show that cinders and soot do not damage the lumber, or to contradict our planing-mill men? They have not brought planing-mill men, but they have brought the employes of the Flint & Pere Marquette Railroad Co., who have never gone inside of a planing mill. One man actually testified and would have left you to believe if he had not been cross examined, that a railroad runs through the planing mills there, but he retreated from that. But we have established in this case by disinterested testimony that this thing going by there has made it impracticable to carry on the planing-mill business where the smoke flew, where the cinders came, and where the light was obstructed by the passing of trains, and they never brought a single planing-mill man here to contradict that, and never asked Spitzley a question, neither did they ever send

2855 a man in there to observe and tell whether our witnesses told the truth or not. I am not appealing to your senti-I am talking about testimony, and it is a rule of law that in the absence of testimony within reach of a party, shall be taken against him. The fact that he does not produce the best testimony within his reach shall be taken against him. They have sent Spitzley and Finn and Kramer; why, knowing our whole case upon this alleged injury from our expert planing-mill men, sneering at it, laughing at it, condemning it, challenging it by the mouths of counsel, why have they not had a man go in there to ask leave of Backus, if they thought leave was necessary, and it has never been denied them, to observe whether these things did occur, and whether it be true, what Robison and Thompson and all the testimony of the witnesses who were planing-mill men testified to, whether they are right or wrong as to whether this business can be carried on there with this elevator and superstructure there? Expert men who know. Will some of you look in the face of others when you go inside the jury-room and ask of them why, if the testimony of these planing-mill men is to be challenged, they did not ask the question of Spitzley, who is a planing-mill man, and who spent days down there. They only called railroad men as to the appearance of a planing mill on the outside. Now, Spitzley and Kramer and Finn, Mr. Kramer's testimony is before you, and the inventories show

what he has omitted. There isn't any great difference except on the omissions of Spitzley and Kramer. There is no difference with Finn.

And the next witness called was Hill. You remember his testimony, which was merely to show that while the Michigan Central paid on the face of things \$3,000 a foot for some land belonging to the Detroit, Lausing & Northern, he was called to show that

was a sort of fixed up, and it didn't truly represent the value of the land. And the next testimony they called was in rebuttal, and wholly in rebuttal, after all our witnesses had been called, and all their Saginaw witnesses, their lawyer, claim agent, the track superintendent, all employés of the Flint & Pere Marquette, who pass over this railroad and who are connected with this union depot company. And they say the testimony is to show nothing more nor less than that a locomotive passing by a lumber yard will not set fires. Hascall (Hatswell) has got a patent. says that the Pennsylvania road have tried 561 times different things to stop the fire, and they are still trying. He is called to show they have a machine that will stop fire. His machine is a success to a certain degree, but bear in mind these machines have been upon these roads for ten years and the cars still come in this depot loaded with cinders. The cinders still get into the passenger cars to the amount of half a pint on a car clear down four hundred feet away from the engine. Cinders do still fall. And Mr. Sutherland says the thing has not been invented that will stop fire, that fire will fly, and fly 200 feet away to the side. But over and above all this, while this testimony is going on, his pet engine, engine No. 24 of the Flint & Perc Marquette, fully equipped with these devices, goes by on this elevated road and throws cinders and fire until it rattles on the hats of people who go by. It reminds me of the story of the man who said that a balloon filled with certain kinds of gas would not go up. The balloon was up all the time. The bailoon sailed away and was lost at sea. He says it can't go up, but the balloon had gone up. They said that locomotives (would not set fire along the side of the track, but my old friend Stewart, who had a flour and feed store down there, not on the line of the track at all, but 107 feet away from it on River street, was burned up, body and britches, hat and boots, with all his stock by fire from the union depot

engines on this trestle-work. It did burn. It did set it afire. Theorize as much with your patentees as much as you please. Theorize as much as you please as to the running of engines by lumber piles; it did burn Daniel Stewart's place of business 107 feet away. Theorize as much as you please, it did burn within 48 hours the stove-works property by cinders thrown upon its roof, and set it afire for the second time. Theorize as much as you please; it did burn, and does burn, according to Knapp, the inspector of lumber down there, the lumber though it is 100 feet away. Theorize as much as you please; it did set fire, it has set four fires in that lumber yard, watched as it is by night and day by watchmen which they are compelled to keep by reason of the passage of

these trains. Theorize as much as you please, the locomotives do throw fire and set fire, and you know it. So much for the Saginaw witnesses.

Again, upon negative testimony. We have had these men from the Saginaw valley; but have you seen a man along River street, a railroad man or engineer on that elevated road, I don't care what he is, whether he is a resident on River street, in the pay of the railroad, or friendly friendly to the railroad or whatever he is, whether he runs upon locomotives, whether he is a brakeman on the line of trains that run on that elevated structure, or whatever he is—have you seen a single man who knows the fact, who runs along the line, who lives on it, who passes up and down there, railroad man or citizen, storekeeper or saloon-keeper—have they put a man on the stand who has testified they don't throw cinders from the locomotives on this elevated structure, precisely as the Backuses say they do? What do we need of witnesses from Saginaw? The question is not whether they set fires running on the ground

back in the interior of the State on a level grade-the question in these large cities, with hundreds of witnesses, yea, with thousands of witnesses, to the passage of these trains day after day, is there a man called to testify that they do not throw sparks down from this elevated structure as they pass along? Where is the witness? Are they as accessible as Saginaw witnesses? there an engineer who will come on this stand from one of the union depot company's locomotives and say that his engine does not pour sparks and cinders and black smoke as they come up that grade? Maybe they are not as accessible as the Saginaw witnesses. Is there any doubt about it? I am commenting on their testimony in the absence of testimony. Men who have been through the tri-l before, know what they have to meet, come here to theorize from Saginaw that locomotives don't throw sparks and cinders and black smoke over Backus' property; where are your engineers and your firemen and your trackmen, who will testify that they don't throw cinders and black smoke over Backus' property as they come up that grade? Where is your answer to such a man as Is he a liar and a perjurer? A man who modestly James Dwyer? comes here and says he had rather give them \$10,000 in addition to the damage they have received than had that street closed up, that cinders poured upon him, that smoke came in upon him, and that the Backus property, in his opinion, was ruined as a manufacturing site. Call an engineer, call one, call a fireman who will testify that he can keep his fire-box closed and not throw out smoke when he pulls a load up that grade. Think of it. Think of it in connection with the sneers thrown upon Backus' testimony and of the witnesses who have not a particle of interest, who have testified to these things. Think of it also in connection with the testimony of Dwver and Henkel, because the wind does not blow sparks from

the Michigan Central, from the northeast, when the prevailing winds are from the south in the summer time according to Dwyer and Henkel and the other witnesses, that this superstructure has practically destroyed the front on River street. Haven't they a single witness that they can trust along that entire line of River street, railroad men or whatever, that that street is still used, or that their old viaduct is used? Is there a man to answer that class of testimony which is to the effect that River street is practically closed, and that we are practically without a front on any street? Dwyer says that his front is closed, that the street is no longer used, and that his customers no longer come down there and ship from there. Dwyer swears that Backus' front is Henkel swears that Backus' front is destroyed. The witnesses all swear that the front on River street is destroyed for street purposes, and is no longer used. Can't they find a man who lives down there or does business down there or walks up and down that street to testify that this street is still used? It is im-We claim that our retail trade is driven away from there. That it used to be very good, worth from two to four thousand dollars a year; that it is practically driven away, because the people won't come down there and trade, purchase this imperfect lumber, and we have it stacked up in the storehouse because we can't sell it as we used to sell it. Can't they find somebody down there who did business there or lived there and knew the people could come under there to swear that it is not practically closed? Why, gentlemen of the jury, it may be true that where a line of elevated road, if it is a light passenger service, passenger trains as on the New York elevated structures, passes along, the hor-es get accustomed to it; horses are accustomed to it from day to day, day in and day out, and they may get so they will not run away, or man may get accustomed to it, but he does not get accustomed to it in going three or four blocks and because he is there so seldom.

The horses do not have occasion to become accustomed to this elevated structure. So, if it is not practically destroyed, some resident, some business man, some man who was familiar with the locality, some Michigan Central man, somebody could have been called to say that this is nonsense, that this street is used as it was before, horses do not run away. People can just as well come down there as before, they do come; there is nothing in this part of the

case. But they have brought no such witnesses.

Gentlemen, I have finished the list of witnesses on the other side and have called your attention to every one of them. I have also called your attention to the absence of testimony within their reach on the insurance and on damages. I have called your marked attention to the fact that these people who know what these things are, are not called, and that people who do not know what this thing does and are called, and from a remote distance. I have called your attention to the fact that within their reach are men who carry on the planing-mill business and know the effect of this thing upon it, who would be frank and disinterested, and they are not called. I have gone over with you name by name, except the body of Saginaw witnesses, that were called for one purpose, and have finished the examination of their testimony, and the court is to tell you, and you must find your verdict according to the testimony produced before you.

I now take up the defendant's witnesses, and we have endeavored in this matter, gentlemen of the jury, to give you men who are not interested particularly except so far as is necessary when we called our own employees; we have called men who have good standing in the community, mostly men who are known to you, men in good standing, not interested, but competitors of ours in the business, and we have selected them and subpensed them with

2861 considerable care in presenting to you the truth upon the issues before us. We challenge your attention to the character of the witnesses we have called indiscriminately. Men engaged in the business as competitors of our own and from personal observation, going down there and examining the mill as to what effect this thing has upon the business. We have also added the testimony of our employees as to whether they are troubled, as alleged by the witnesses on behalf of the Backuses, by these cinders and by the smoke and the darkening of the mill by the passing trains and smoke of passing trains. We have called these witnesses, and I submit to you there is not one of them that can be impeached successfully. That they stand up under cross-examination and tell you the reason of their testimony and the whys and wherefores, so that their testimony must be taken as the truth, especially must it be so taken when they are not impeached in any way, when noninterest is shown, and above all, when within the reach of our friends may have witnesses to contradict them, if they are mistaken as to the effect of these things upon the property, and when those men who do contradict them are not called, when they are within reach.

In the first place, in order that you should know, not from one day's observation, but taking one day with another for a month or two, just what was done on that mill by the passing of the trains, at my suggestion as appears by the testimony, a disinterested man, a friend of Backus, but who was unoccupied at the time, as it happened, was asked to take observations of the passing trains, and the effect of smoke and cinders upon the Backueses, and these various things did damage to the mill. And we call those special observers who observed through the months of September and

October and give you a table. We give you Mr. Griswold, 2862 Mr. Roach and assistant, Walter H. Youngs, another assistant, and William B. Knapp, upon a question of whether during those two months, how many trains passed, whether they threw smoke or cinders, whether the cinders did go upon the dressed lumber, whether the cinders did get upon the coarse lumber, whether the smoke did come in and darken the mill, whether the fire-boxes were left open, whether in going up that grade they puffed and threw dense volumes of smoke, and all the rest of it. Daily observations. From day to day. By reputed witnesses and continuously, when one was not there the other was, so that they could tell you accurately for two months. That list will be handed to you as testified to, carefully prepared from the daily journals, a summary of it day after day, to the effect that day after day, take it one day with another, some days not so bad, some days not

hardly perceptible, but the great majority of days threw black smoke into that mill, so that it darkened the works and the men That it threw cinders in upon the dressed lumber as had to stop. it was in process of transshipment and ruined it. That it threw fire at night. That they switched out there at night, and while upon that let me call your attention to this. It is true that pending this hearing or up to now, if you please, they do not do switching right in front of Backus' except they switch and make up trains at night, but the switches are there, and the condemnation is for all purposes, enabling them to switch there; there is no agreement they shall not switch there from early morning until dewy eve in the daytime. They have the right to do switching right there in front of Backus' on these double switches. Do you suppose after this trial is finished, they will not use their switches to the top of their bent? They did some in September, not at all in October except at night. What if they did not? They can do it,

and you are here to give us damages as if they did it, if they The switches are there to be used. They are can do it. condemning the right to use switches in front of there every day as well as every night, and when the trial is over, and it is convenient to their business, don't you suppose they will stand their cars on this track and keep them there to suit their sweet will, if they condemn the right to do it, and you give us damages for what they may do or have the power to do? That is what they are asking for. Not to switch alone at night, but the privilege to stand and switch in front of Backus' mill every hour in 24 if they

saw fit.

Those observers then were put there, and was it not reasonable and proper for us to show you how it was for two months? not improper for us to give you this testimony. It was our duty to give you the best, and not take hearsay observations, but the accurate daily journal of disinterested witnesses. It was our duty to put them in, and challenge the attention of the other side to them, and let them contradict it if they can with their engineers and fire-The testimony is in unchallenged and undisputed, of Mr. Griswold and these witnesses as to the effect of the passing of these trains. Now, we called Knapp-we called upon Mr. Baker in the meantime, for the admission of the grade in front of the Backus mill, and he admits at page 300 that the grade there is 20 feet to the mile, and up to River street it is fifty-two and a half feet to the mile. The average length of a train according to Sutherland is from eight to ten cars, some longer, some shorter, of from 40 to 70 feet in length. Some of the big sleepers are 70 feet in length, making a train of eight cars say 480 feet long, or of ten cars, 600 feet long, and these cars coming up in front of Backus' mill on a 20-foot grade would be pulling the tail end of the train up the fifty-two and a half foot grade, and the testimony of all the witnesses

is that if an engine or locomotive is loaded and coming up a grade, it belches great quantities of black smoke. It must exhaust and does exhaust, and throws cinders and soot, and there is the Backus property over which it sends its cinders and soot.

215 - 55

There is no grade in front of the stove works. None whatever. grade in front of the match factory, or any other business property there, and no switches. Bear that in mind. This is peculiar to the Backus property. Here are switches in front; here is a grade of 20 feet to the mile in front of it up which a loaded train must travel, and here is a grade, 400 feet away, of fifty-two and a half feet to the mile, up which the trains travel and get in front of the Backus

property.

Knapp is the lumber inspector at the lumber yard. He says the cinders are upon the lumber down there, and they extend to 150 feet away on the lumber pile. A great many are on the lumber piles 150 feet away. They permeate the piles of lumber in that vicinity. At 40 feet away he found the lumber burned by cinders, and charred in through the lumber. He says that in an open car coming in on the Flint & Pere Marquette he has taken a quart of cinders out, that they throw the same kind of cinders now that they always did, and Knapp is back and forthat that mill day after day, in there and out, and he swears that the smoke comes into that mill and darkens it, and he says that the cinders come down upon the dressed lumber and spoil it, that the cinders do get upon the lumber and they find it in the knives, and it nicks the knives. That they never had any trouble with nicks in the knives before this elevated structure was built, and Knapp has been with them for 15 years. Friend Robison says it must come from the Michigan Central. If you will observe, on the Michigan Central side there is a high sheet-iron shield in the first place, and in the next place the prevailing winds in the summer time, when the windows

are open and there is any exposure, are from the south and southwest. And furthermore, the trains run below the grade of the mill. They are not upon an elevation throwing cinders and sparks down by the natural law of gravitation, but they throw them from a smokestack the engine of which is below the grade of the mill, and if they blow them in the direction of the mill they fly against the sheet-iron shield, both those sheds. The outside of them, if you observe, is of corrugated or sheet iron. At all events, Knapp testifies they never had cinders or smoke from those engines, and never were troubled in this way before the elevated structure came

by there.

Peter Henkel. Well, a pretty respectable citizen ordinarily until Robison got after him. No one ever dreamed that Peter Henkel would tell a wrong story for anybody or was very much of a crank, but a pretty solid, substantial citizen. He is long known here as an enterprising man who has added to the growth and wealth of the town, built a handsome business place, doing business in a building he is not ashamed of, a handsome building architecturally. Now they are sneering at Peter Henkel. He says this thing along River street amounts to a confiscation of the Backus property. Is not that right? It confirms and corroborates the testimony of Dwyer that this is so. He has a front on River street and it is absolutely destroyed, it is their only front. The stove works have a front on Fort street, but the Backus front, with all their light,

comes from their River Street front. It is built for that. And Henkel says he esteems that plant for manufacturing purposes, that site as it was before that elevated road, as worth \$100,000 or over. A pretty good judge. Do you think he is going to lie for Backus? Has he any prejudices? Where does his prejudice come in? He says the Wabash throws cinders on his yard. Southeasterly

winds will blow cinders there. And he is a crank because he says the Michigan Central did not do it, and the Wabash 2866 does do it, running in front of him. Now, Henkel goes into the mill and looks over and observes it as he should do before coming here and giving in his testimony, and he swears of his own knowledge. I have seen the smoke darken that mill and I saw where the cinders had spoiled fine lumber. Are you going to set aside Henkel's testimony. If it is destroying fine lumber, it is doing what Backus says in ruining his trade. And if the smoke comes in there and interferes with the light, it is destroying his trade. these things be true, then the testimony of the planing-mill men, of Thompson and Dupont and De Mann, is no longer fit, as they swear from personal observation, for planing-mill sites, and that they would not build it, they would not take it as a gift if they were compelled to put a planing mill upon it, and they all swear that the Backus mill is the most successful in the town in the trade, and doing the most perfect work and doing it the most economically. Now, they do testify to that. They would not build a mill They would not have a mill there. They would not put an investment in a mill there. He says that he would not buy that property for any fine manufacturing business. He has been there and looked it over and observed it. One of the jurors asked the question if Backus could not take the estimated value of the property and from the returns buy another site, if he could not do as well on another site. The question is not what he can do on another site, the question is, what damage to him is the plant, according to the decision of the supreme court, the injury to his business? Now, if it be true, gentlemen of the jury, that this thing damages him 50 per cent., if he cannot carry on the planing-mill business there, if no plan-

ing-mill men would buy a planing-mill equipment or buy 2867 it for a manufacturing site, if the value is injured, Backus must get his investment out of it before he can buy another site, and his investment is there with which he could buy another site, but how is he going to get it. If it has depreciated in value, as the witnesses all testify, if it is unsalable, how can he get his money out of it, how is he going to get his money to buy another site? True, if the elevated road ever made a proposition or suggestion that they would buy another site equally as good as upon this street, then we would say, let us move and take our old property. That would be another thing. But what are we to do? Are you to take into consideration the fact that we might get another site when our whole investment is there, amounting to the sum which Backus says, or the witnesses say it amounts to, when the witnesses testify that it is so impaired in value that it won't sell? Where shall we get our money to buy another site so that

we may move? Are we bound to move at al!? Are you not bound, Mr. Union Depot Company, if you stop our planing-mill business, according to this constitution of ours and these decisions of the supreme court of our State to pay us every dollar of damages that you do to our property, and if you stop our planing-mill business, pay us for it, and we will sell to some railroad or something else at the depreciated value, if you pay us the difference. Under these decisions and under the constitution of the State to which you are sworn to uphold, you cannot permit us to be damaged in one dollar or you fail in your duty. And if these witnesses testified truly, our property is not worth what it was and our business is gone. They say that Mr. Backus would not tell what his earnings—, that he was losing money there. A concern which has carried its credit high since 1873, and proud of it, doing the business of this magnitude and investing in lumber, and working along as best

they can in the hopes that something might happen that they might find a way out, when their credit stands A1 in these depressed times, when credit is crying for money, when credit everywhere is at its lowest ebb, when men are on the verge of bankruptcy, during these depressed days and long-pending legislation, when men are trying their best, with despair in their hearts, when men are paying nothing of their debts and men have nothing to pay, when bank credits are withheld, shall Backus come upon the stand and swear that he is doing a bankrupt business, that he is going into bankruptcy and has made losses, that his business is no longer successful? He says it is a losing business. That he cannot make anything there. He tells you that the fine work out of which the profits came cannot be done there. He tells you, and disinterested witnesses tell you, that the fine work that he previously did and which sold at the largest profits, is turned into culls by soot and mars from the knives, and sells for culls instead of first-class material. Do you want more testimony as to the unsuccessful character of the business? Do you want him to swear that he is doing business at a loss day after day, when he tells you that his business consisted of his finest work on which were the largest profits, and his box factory was only to work up the odds and ends, that he was economizing and working up everything that he could, that could be turned into money, and his profit was in the fine work which he no longer does because he can't do it. And Henkel says that the rental value of that property, observing it as he has, being in and out there, has decreased at least one-half.

Now, George W. Robinson, who is a planing-mill man and knows the Backus mill, says that it is a perfect mill, that the situation is the most eligible that he knows of, that it is the best mill he ever saw,

before this superstructure was put up. That it was first class in 2869 every respect, that the goods of Backus were standard. He says furthermore that competition is very sharp and that success in that business depends upon the great volume done and upon the strictest economy in utilizing everything, otherwise it is a losing instead of a paying business. And that small defects, faults, marks, discolorations, makes of good lumber culls, and that

culls can only be sold for what the consignee will give for them. That they are a loss although the actual utility of them in the working of them is not destroyed, they could be used for the purpose they are designed for, yet because they have the marks or flaws on them their values for this fancy work is destroyed and they must be sold as culls. I can illustrate that: You go into a shoe shop to buy a pair of shoes, will you take a pair that is scratched or has one single spot upon it. You don't want it, you don't want shop-worn articles, although a little scratch will not interfere with its utility. You go into a furniture store and will you take a chair that has a scratch on the varnish? You won't take a chair with a knot-hole in it, although it will sit just as well, but you won't buy it will you? You won't have it. Although you have the utility of the article perfectly, you won't see it if you see a defect in it, as, for instance, the molding around the support here if it is out of proportion to the other, if it strikes the eye, you won't have that chair although perhaps you can buy it at 50 per cent. discount; you will not buy it although you can get it much cheaper; you will always be ashamed of it. And it is so with everything. Speaking of competition, there is one house, that of Macey & Co., that sells twenty-five, yes, thirty millions of goods a year, and do you know what profits they make? One-fourth of one per cent. on their goods, and yet they make money even at a quarter of one per cent. Thirty millions a year-it may be fifty millions, and

2870 the most successful business in New York with a quarter of one per cent. profit. Now, you let a stream of water trickle down on the goods, make one spot on the handkerchiefs, or discoloration upon anything, and those articles on which they make onequarter of one per cent. profit will become 50 per cent. loss at once, and that which was a paying concern becomes a dead failure, because the profit is so narrow that you cannot afford to have the slightest discount from your standard of values. You cannot afford Your profit being narrow, in this planing-mill business, as for instance it may be one per cent,, it is very small at all events, two and a half per cent, on many things and depends upon the immense volume of business. If it is two and a half per cent. profit and you get a flaw upon an article which you would sell at only two and a half per cent. over cost, and you have instead of your two and a half per cent. profit on that business, you have a loss of 50 or 75 per cent. How long does it take to make that a bankrupt concern instead of a successful one? That is the way it works, and that is just the way it works with Mr. Backus with a capacity in his mill of 300,000 feet a day. Compare it with the Spitzley mill. Spitzley's mill is something like 30,000 a week. Backus' mill has a capacity of 30,000 feet a day and how long will it take from the moment it begins to work so that he loses by reason of becoming culls 50 per cent. on one thousand, 50 per cent. on another thousand or 5 per cent. upon another thousand, where is his two and a half profit gone? So that business which makes at a small profit, his rent, if you please, of \$18,000, and his \$16,000 besides, net \$34,000, and they were his figures, the mill which does that in one year on two and a half per cent. profit might the next year on 50 per cent. loss with the same expenses, as the expenses are the same whether it is run at a profit or a loss, wipe out his profits for years.

Mr. Robinson testifies that he would not take the site as a gift on the condition that I should build a planing mill there. And I will read his testimony briefly at page You remember Robinson's testimony and I do not believe a man of you will believe that Robinson would, for the sake of a friend, much less a competitor try to mislead the jury, and he is an expert planing-mill man and knows the business, and deals in the finished product. If he is not in the active business, he knows the goods when he sees it and knows how it is made. I will read from page 359. "Q. A think that has a small defect in it, it does not hurt the surface of the goods, the actual utility of the goods, but does it not take off a percentage of from 25 to 50 per cent. in the salable market value? A. Yes, sir. Q. Although the utility of it may not be injured by the blemish? A. It may be perfectly good for painted work when it is not good for oil finish. The greater part of good material is used for oil finish today. Q. Have you any interest in the Backus matter? A. Not a cent. Q. Have you seen the workings of this superstructure, and the railroad going up there? A. Yes, I have seen them. Q. In your judgment does it affect the mill for the purpose for which it was carried on prior to the building of the superstructure and these railroads running by there upon this trestle? A. If it was my own individual matter, I feel confident that I would try to move out. Q. You would not attempt to carry on that kind of business that Mr. Backus had carried on there?

A. I would not unless really compelled to. I would not with a view of thinking that there was or there could possibly be a profit in conducting a business hampered by the railroad as that is at present. Q. Now, as a planing-mill man, engaged in planing-mill business, or in this fine wood-work, such as is carried on there, would you, in looking for a site for the purpose of building a planing mill

to compete with your brethren in that kind of business in the markets of the United States, erect a mill on this place. on this superstructure? A. No, sir. Q. If this were given to you, if you could have the property or the site there and desired to erect a planing mill, would you take it if you were compelled to build a planing mill upon it? A. No, sir, I would not. Q. To do this fine work such as they do there? A. No, sir, I would not. Q. How was it before this structure was put up there? A. As far as I could see there was not anything to hinder them from doing a profitable business. The docks were not away so far but what they could haul at a reasonable expense, and the street was open so that customers could come in and get what they might wish, and people would have access to the mill, whereas at present all those advantages, except the nearness of the dock, are done away with, and I think if I were wanting to buy any lumber I would not drive around on the River road underneath that structure, nor undertake to go and see a man or firm, no matter how much I would wish to deal with them. I would not go in there to purchase lumber, that

is annoying in a great many respects, and particularly to a person going in there; it is almost impossible to hear a conversation when the trains are passing. An ordinary tone of voice cannot be heard in the confusion. Q. You have observed the smoke, and the pouring of the smoke down in the windows there at times from the passing trains? A. In cloudy weather on a great many days the smoke falls; it not only falls but it makes it cloudy and dark. Q. What have you to say as to the need of light in this fine planing-mill business? A. In order to do good work you must have good light. Q. Is it an absolute essential? A. It is absolutely necessary. You must have light or you can't do your work right in a planing mill. Q. In this case of light and steady light, are they not, in setting the gauges, liable to make a mistake and make these flaws in the work? A. They

2873 are, and a machine may get out of order, as a machine will occasionally in running, and if the light is not good enough to detect it, quite a quantity of lumber may be destroyed before it is observed. Q. That is, make these blemishes to which you have referred? A. Yes, sir, a machine may get out of its proper gauge a very little or may be off the center or from anything that may be on a piece of board, there may be a chip, and if it is dark that may not be observed until several boards or pieces may be run through the machine, and just as many of those as are run through with that flaw in the planing-machine knife are spoiled and they must be sent back and made into something else or thrown away. It may be such a class of lumber or moldings that cannot well be made over and they are culls instead of first class in such a case. Q. Well, the moment there is any considerable quantity of that, with the narrowness of margins and the competition in the trade I suppose it takes off the profits and makes it a losing instead of a paying business? A. It takes but a short while to take the profit off from 1,000 feet of lumber. Q. And make out of a large business a losing one instead of a paying business? Relatively, what is the proportion of profit made in molding as compared with other coarser lumber, correct and perfect molding? A. Well, the percentage is much higher. I can hardly say what would be a correct estimate. I will say this, that that is where the profits of a business of that kind come in, where a large part of the profits come in, as in the manufacturing of those moldings and fine work. It is not in the coarser lumber. Q. Running the ordinary business of a planing mill, without this additional instance of fine work in molding, is there any profit now in the condition of trade? A. It is so very small we can hardly discern it. Q. But in making fine work, I suppose, there are other pieces that come off that are used

2874 for culls or in coarser business? A. Yes, that is correct.

We may, if we have proper machinery, and proper facilities, and what might be quite a common board, or even what we term a cull board, we may take from one side of it a piece that would be worth more than the entire board when it was manufactured into a piece of molding or easing that would sell at a higher price."

Then he goes on and tells how the cinders come in on the cars.

The invariable rule is to clean off the cinders. There is hardly a car that comes in but what has cinders on it. He says that these machines are worth far more than new ones. He says the cost of the equipment should be added to the value of its cost. He states his own estimate of the valuation before the railroad came there at \$450 per foot because of the admirable location, its relations to the Michigan Central, the extent of its frontage, its two ground floors.

and its nearness to the business center for trade.

Now, E. L. Thompson. He is now actively engaged in the planing-mill business, having the next largest planing mill to Backus' in the country, and does all kinds of fine work, including sash, doors and blinds. He says light is not only a convenience but essential, and he says ample light, there must be no restriction of the light. He says any nick in the knives will make the product anmarketable. Again at page 386 he states that any defect upon this fine inside work makes of the lumber culls and will not sell for half and may not for 25 per cent. He says he would not have this site at all, that the impairment in his opinion is 40 per cent., and that is sufficient to ruin the business entirely.

Now, Geo. Sutherland, on the question of cinders. A Michigan Central man who has been with them 44 years. He has examined

in that time the Flint & Pere Marquette cars and the De-2875 troit, Lansing & Northern cars, as they came in there prior to their going to this depot. He says there are cinders on all closed cars, half a pint on each, they will average. All locomo-

tives have devices for arresting cinders, yet they have never done it. Now, we come to the men in the mill. You remember Kronbach. the foreman below. Kronbach swears that cinders come in there, get on the lumber, get in the machines and nicks the knives. he is the foreman. What are you going to do with it. Set it aside? He says that soot does get on the finished lumber, passing trains, and spoils it. And he is the foreman. He says that the bad light caused by the passing trains on very bright days makes their light bad. It is owing to the condition of the atmosphere, but these passing locomotives throwing large volumes of smoke makes the light so they cannot see. It is the passing trains that interferes with the light more than anything else, although you can see that the structure does itself interfere with the light of the lower story. He tells the jury of the care and fine adjustment necessary to run those machines, and to keep them adjusted, and the necessity of light therefor. He says further, that he had charge of the retail trade there and that trade is destroyed. That it did come there, I don't care whether it is a whim, or whatever it is, the trade did come there. and it is gone, and the trade on that class of goods was worth from three to four thousand dollars a year. And it is gone because the people will not come down by this elevated structure. That testimony is corroborated with other disinterested testimony, by the obstruction of that street as a front, or a street for the passage and repassage of teams. They do not come there any more. I read in a New York paper of yesterday-to illustrate how trade may be taken away-as an explanation of the failure of a man over in

Newark, N. J. The building of a public building in Newark, such as we are erecting nere, had necessitated the occupation of the street, and this man had a fancy dry goods store to which ladies went, and the Government were building this structure for two or three years, just as we are building the Detroit postoffice, and he had carried his business through these two years, and then this depressed season came on and he failed, and it is ascribed to the fact that the lady customers would not go there and pass over that debris of a great Government building going up there. 1 don't care what it is if the trade don't come there, and if it is driven away, the cause of it is responsible. And this trade does not go there, and this superstructure has driven it away? How would you like, any of you, to have a superstructure in front of your house. Take it home to yourselves. Or in front of your place of business, a superstructure. Not a passenger train, not a passenger elevated road, but a great thundering trunk-line road that switches, and with a steep grade, with the puffing, exhausting and the rolling of the engines running by, carrying great stones or great machinery, running by your door, with the most powerful trunk-line locomotive built, running by your door and exhausting, how would you Put yourself in our place, neighbors. A jury of neighbors. How would you like its effect on your business, if you have one, grocery business, or a shore business, I don't care what it is, if you have anything to sell, let it run by your place only for three blocks, and see if you would like its effect on your trade. Take it home to yourselves. That is the proper rule. Just think how you would You know it affects trade, and the trade came down to River street, they will not go under that superstructure, they will go somewhere else, and the amount of that trade stands uncontradicted at a minimum of \$2,000 a year. That is lost. Christopher Kraus, another witness to the same effect as Kronbach, that the cinders never did get into the knives

before the elevated road, that the smoke did not get in and 2877 darken the rooms before the elevated road, that the shade from the passing trains did not exist to obstruct the light before the clevated road, that a large retail trade was there before the elevated road was built, and that the fine lumber never was affected by soot before the elevated road. Burean was the engineer. I will not comment upon his testimony except to say he testifies that smoke and cinders came in the engine-room door, and that he has been burned by cinders coming from the engines from the elevated road. He has seen the smoke settle down and sweep into the mill over and over again. If it is not so, that which all this cloud of witnesses have testified to, and you are to give a verdict according to the testimony, if it is not so, where is the engineer who will come here, who passes over that structure, and tell you that he does not come up that grade throwing a great cloud of smoke into that Where is the engineer that will tell you that with a south wind, or no wind, he does not throw fire and cinders in there as Mr. Sutherland testifies? Where is the fireman that will so testify? And Standley, a foreman in the cutting-up department. It was

216 - 55

through Standley's statement that the light was so affected by the passing of trains and the smoke coming into the mill, that the men could not see the chip or the defect referred to by Robinson which I have read. He swears that the light is so defective that these things occur, that they do not notice the defects in the thicknesses of the two boards that should go together from the rip-saw and through the planing mill. He testifies that the smoke and cinders do come in on the finished lumber in course of transit to the storehouse. He testifies that the smoke and soot comes in there and darkens the rooms where they work so that they cannot see the defects. He says that 2,000 feet a week of this fine planing-

2878 mill work has been thrown out and become waste from this cause alone. 2,000 feet a week that could be sold at two and a half per cent. profit, sold and become a waste, with the same amount of labor put upon them that is required to be put on a piece of work to make two and a half per cent. profit and becomes 50 or 60 or 75 per cent. loss. And Sontag was a mill hand, a planer, the German, you remember, whom we had some difficulty in making understand the questions. He swore to the smoke and cinders

coming in.

James Dwyer, I have commented upon. He says that the street was formerly used as one of their fronts, that customers came there, and that since this structure was built no customers purchase on that side. That the structure was, or, to use his own language, "Since that structure has been put there we have not used it at all. That is, we do not drive out that way with our goods, nor do our customers come for goods in that way." This structure has caused a discontinuance of the street. That the Backus' only front is River street for their factory. If the street facilities are destroyed, the testimony of Mr. Kronbach, the foreman, is entirely corroborated that his custom-work at the mill is gone. Something has been said about whether this custom-work has been carried up to the storehouse, but the storehouse has been in operation ever since the fire of 1882, and this custom at the mill on River street under the charge of the foreman, has been going on concurrently with the custom at the storehouse since 1882, and it existed to the amount of \$2,000 to \$4,000 a year profit up to the time of the building of the superstructure, and there can be no manner of doubt, unless this foreman is a liar, and A. Backus in his old age has got to be a liar, and Henry Backus has become crazy or a liar, but what this trade has gone. They all swear to it. I will allude to Backus now. You saw him upon the stand. If there was anything he did not know

about, he would not swear to it to save his case or to save his mill. Now, Mr. Baker never cross-examined him, but sneered at him, and the intimation was from Mr. Baker that this question of rent was fictitious, that Backus did not get it, and so he asked him. Well, Mr. Backus, you haven't drawn all your rent. No, no; I have not. Well, how much have you drawn? Well, I don't know. Well, haven't drawn much of it. Drawn what I wanted. Can you tell how much you have drawn? No, sir. Well, give us

some idea. I can't. Well, now, why could not he say, if he was preparing his testimony, that he had drawn pretty nearly all of it. You could not get him to swear to it, because he didn't know, he hadn't looked at the books to see. There was no call for the books, and it turned out, gentlemen of the jury, and the impression rested upon your minds-I looked in your faces and saw it-you thought that was a fictitious thing, and he hadn't had his rents, and there was talk of his manufacturing testimony. That was the impression in your mind as Backus sat there and did not answer. He could not be made to answer something that he didn't know; when it turns out on the examination of the books by the book-keeper from actual testimony that he has drawn all but two years, and he has let that in, about \$36,000, about the period covered by the erection of this obstruction. That he has not taken out. There is about \$50,000 credit, and only that. The last rent credited to him the 1st of September, credited to him every year. That the total to his credit was \$50,000, of which about \$16,000 had been credited to him for lumber from his mill upon the Lake Shore. Now, Mr. Dwyer says, that his light is obstructed seriously, and that smoke and cinders pour upon him there and come in his nickel-plating room.

He says that Mr. Backus' property is not desirable for manu-2880 facturing purposes now. That it was very desirable before, and was worth \$350 per foot because of its relative situation, the size of it, and its railroad connections. He says this over and over again on cross-examination and on direct examination, and

there is no doubt about it.

Now we come to Daniel Stewart. He says that street is closed up and ruined, that it is no longer used under there. That it is destroyed. Now, these men say that this valuable piece of property, built with reference to a street with light upon it, with the use of a street that has a whole front that that street is destroyed. They bring that out. I did not. I proved by Stewart that these trains as they pass throw smoke and cinders upon the buildings, corroborating the testimony of these planing-mill men, and they cross-examine Stewart, and they find that the railroad passes about seven feet away from the corner, that there are two lots between him and the corner, making him 107 feet away from the railroad; they crossexamined him as to what he knows about throwing cinders and Well, he says, they threw fire on my place and burned up smoke. my store where I have been thirty years, and burned my stock of grain, of flour and feed, making it a total loss. So he happens to know it does throw fire, and they brought it out. Now, we call in addition to these planing-mill men that I have been over, Mr. De Mann. We have called before you, gentlemen of the jury, every planing-mill man we could get our hands on, every one of them. When we found there were two others that we would call, and these were Huyett and De Mann. And De Mann gives practically the testimony that Robinson and the other planing-mill men give. No interest in it, but a practical planing-mill man, and he testifies as to having examined the Backus mill thoroughly, and he says that in his judgment it is the best mill I have seen any-

where, and I have seen a great many. Now, De Mann did not know the Backuses, and we had him go down and take a look. I have seen a great many mills, he says, and everything is put up in first-class style, without exception. Everything in it that I can see, and I have examined it lately, is as good as it can be. Of the light he says it is absolutely essential, And he says as to cleanliness, the presence of grit or soot on the lumber is very important indeed; it must be cleaned off. Mr. Huyett gives substantially the same testimony, that the mill business cannot be carried on there successfully. We also called Mr. Dupont, a man who had been engaged in that business, and is still engaged in the building business, and runs a shop, and knows the machinery there. He testified that it is the best he ever saw for fine work, with the finest tools of all kinds for molding, and he has been there repeatedly, and has seen the lumber spoiled by soot; that he has seen the cinders come down on the lumber there, and the soot upon the lumber in course of transportation, that he has seen the trains go by and the place darkened with smoke so as to materially interfere with a man's work.

That closes the testimony for the respondents, except the testimony of the insurance man, to which I now call your attention and except the testimony as to the burning of the stove works. Now, Jones testifies he writes from three to four millions of insurance per year. It is a pretty good business for a man to be engaged in, who will go into a conspiracy, into collusion with property-owners or with a customer whose property is very difficult to insure to increase his risk to enable him to get some damages from a jury. I will read you what he says of that, and see whether he tells the truth: "Q. Will you please tell the jury the amount of increased rate, if any, by reason of the passing of the superstruture in front of their property?

of their property? A. Seventeen and a half per thousand, 2882 lacking, it may be, a few cents less than that, but in that neighborhood. Q. Is that the increase? A. That is the increase in premium. Their average rate before that structure was built was \$51, and today it is \$68.50, or very near that. Q. Why has that been put upon the property? A. They are afraid of the sparks of the passing engines on the elevated railroad. Q. And on how many thousand has that increased to? A. It makes an increase of their insurance premiums of about \$3.500 per annum. Q. Do you state that is wholly by reason of this superstructure? A. Yes, sir."

Do they show a single witness that it is not so. They have called only one witness on this point, Chapman, but he does not know. "Now, if you please, will you tell us the amount of insurance they are obliged to carry on their buildings? A. They are carrying \$30,000 on the factory proper, \$68,000 on the machinery, \$15,000 on the stock, \$7,000 on the power building and \$10,000 on the machines, engines, boilers, etc. I think that figures up \$130,000." You will observe that is fixed at 80 per cent., so that the estimate of his own examiners as to the value of the property, the value of the plant according to the low estimates of underwriters, putting on 80 per cent., is \$162,000, in round numbers, as the total estimate of

the plant. And there should be deducted from that, to be entirely fair, the \$15,000 on the stock. So their estimate of the value of the property would be about \$156,000. "A. The rate would have been probably reduced instead of increased, if it had not been for that structure." There is no doubt but that Backus is compelled to carry more insurance than he ever was before. As he stood he was willing to take the balance of the risk himself. Now he is required to pay insurance on \$50,000 more than he ever did before. That rule of the insurance companies applying the 80 per cent. clause is made acceptable by the reduction in the rates. The rates are cut down. The gen-

eral rule is under the 80 per cent. clause, more insurance 2883 and less rate. But they have considered this an exceptional risk, to which the rule did not apply. "Q. By reason of what. A. By reason of the elevated road. Q. Then in addition do they have to pay by reason of the elevated road, under that 80 per cent. clause, more for insurance than they would have to pay if the road would not have been constructed? A. They probably would have saved from four thousand to four thousand five hundred per annum, including the reduction and the increase. Q. The net loss to them now is something like \$4,000 a year on account of the railroad being there? A. \$4,000 a year would be a fair estimate. Q. Whatever there is of this insurance, you did not take it all in your company? A. No, sir; I place about one-third of it only." How is it that the rest of the companies, if a conspiracy exists to put on the increased rates, should have the same thing. "Q. You place it in your office? A. I do not place all in my office. I place about onethird of it, and the rest of it is placed with different agents. Mr. Margagh has about one-third of it, and Bierce & Sage have one-third of it." You see he gives the names, Margagh and Bierce & Sage. "Q. Do you find it difficult to place insurance on the Backus property? A. It is a difficult matter to place it. About one company out of every four declines it."

You can readily see, gentlemen of the jury, in this case that is the effect of this superstructure. They never declined the insurance before. It never was canceled before. Something has come there by which insurance is difficult to get. They cannot get up to their 80 per cent. limit, try as they will, and their policies are constantly

being canceled, and constantly being refused.

Then comes the cross-examination, some parts of which I wish to call your attention to. "Q. Do you swear that Mr.

Chapman has increased the rate on the mill? A. On the power-house, and it increases the rate on the whole thing, and it makes \$17.50 increase on every thousand. Q. That is, when they increase the rate on one building that would increase it on another? A. The average policy is increased from \$55 to \$68. Q. Don't you know the only increase he has made is on the shaving-house? A. On the warehouse. Q. It is all one? A. Yes, sir. Q. Now, that is the only increase that he has made, is it not? A. That is the only one. Q. Is that the only increase you have made? A. Yes, sir. Q. Every policy carries the same rate, so that it all arises from that

power-house? A. Yes, sir. Q. But you don't increase the rate on the rest of it? A. No, sir, there is no increase on the mill, only the increase on the power-house brings the whole up to about \$17.50. Q. How much insurance have you got on that power-house? A. There are \$7,000 on the building, and \$10,000 on the boilers and engines. Q. How much have you got on the mill proper? A. \$68,000 on the machinery, \$30,000 on the buildings, and \$75,000 on the stock in the mill. I do not have it all. Q. How much is in one company? A. \$3,000. Q. Is it not a fact on a large risk as that, they divide it up in small amounts, into just as many companies as they can? A. Certainly. Q. And the most in one company is \$3,000? A. I think so. Q. And that is distributed over the different parts of the plant? A. Yes, sir. Q. What did they pay before the elevated road was built? A. Four and a half per cent. Q. How much did you carry there? A. \$4,000 altogether. Q. And now they have increased that to how much? A. To \$17,000. Q. Before the railroad was built they carried \$4,000 on it and now they carry \$17,000 on it? Yes, sir, they have to carry it now. They could not get a single dollar of insurance from any company unless they carried that amount on it. Q. Do you mean to say

2885 these companies insist upon having so much insurance? A. Yes, sir, you could not get a dollar of insurance on it without it. Q. Then they are anxious to insure it? A. They want it so that in case of partial loss they won't be stuck for the whole sum." And now I come to the part of the cross-examination where he says as to the refusal and cancel-ation of policies. He says the reduction can be pointed out in a hundred different instances. He gives the reasons for their cancel-ation. He says at page 538 there are 100 of them that he knows of where the rates are reduced. There is no conspiracy about this. No agent has been called to contradict it. No agent has been called to testify that Jones has not told the truth. No one has been called - that Jones has not told the truth. No one has been called that knows anything about the rates actually paid upon the mill, and Jones has nothing whatever to do with anything but one-third of the insurance. He don't even place the other twothirds, or get it placed. "Q. What is the total amount of insurance they carry there? A. \$130,000. Q. And you say that it \$10,000 less than what they want? A. They have not been able to place this. They have not been able to place only about \$120,000. They are trying to place the rest. Q. They are trying to carry \$130,000?

A. They are carrying it now. Several companies have declined to reissue 80 per cent. of the value and some of the companies within the last few months, after examining the property and after carrying it for six or eight months, have canceled their policies." So there you have the testimony of Mr. Jones, with the names of the other agents. He takes one third of it. Here are 20 or 30 policies canceled already. No one knows when they will cancel the rest.

Further argument in this case was then adjourned to 9 a. m. next day.

Mr. Dickinson: A word more, may it please your honor, as to our views on the question of damages, on your honor's suggestion of yesterday as to speculative profits. The rule undoubtedly is, upon contract or the sale of property, that profits are speculative, as for instance goods; profits are considered speculative because it is assumed (and that is the reason always given by the courts) that in buying goods in that way he may go into the market and replace the goods, although he must always have the market value at the time and place of delivery, if that is increased or has been reduced. It is also true that in actions of trover that although the jury may give damages for a special wrong and injury, the measure of damages for the goods will be the market value at the time and place, and at what the man could have sold them for, or what profit he could have made in carrying on the business in selling the goods is not to be taken into consideration; but as we have shown, I think, by the decision of the supreme court, the rule in these cases is entirely different. Where a special business is carried on the rule is precisely like the rule, if your honor please, for the sale of a racehorse where the earning capacity of the horse is taken into consideration and is shown. It is not the market value of the horse or any other horse or any other race-horse, but the especial earning capacity of the horse may be shown, and so as to any special business which is taken without the will of the owner, and without the element of contract upon it, or of any earning capacity whatever; the earning capacity is considered and the analogous case, strictly analogous case, would be the rule of damages in case of the injury or death of a man by the negligence of the company, or whatever the company is liable for the death. Your honor knows that the

rule of damages universally is that the earning capacity of a
2887 man is taken into consideration and it is strictly competent,
and always shown that he was capable of and did earn theretofore a certain amount as bearing upon the future earning capacity, and this is then capitalized by the jury and the capital is given

by way of damages.

The Court: No real distinction, and what I might say an intel-

ligible rule, has ever been formulated upon that question.

Mr. Dickinson: That is left with the judgment of the jury, as to what his earning capacity is; that the courts have said, from the Supreme Court of the United States down. They do take into consideration in determining the earning capacity of a man and what he will in the future earn, the probability of his life or the length of his life, and that is always a question for the jury in estimating the probability and the total capitalization of his earning capacity, rating the amount that he is earning from year to year, is taken as the basis or measure of damages. I do not care to elaborate that.

The COURT: Using your first illustration of a race-horse, the way I look at it, the speed of the race-horse is one of the things which adds to the value of the horse, and the speed makes the horse more

valuable, as a business may make a plant more valuable.

Mr. Dickinson: It is always competent, in bringing damages, for a race-horse to show what he is earning on the track, and to show his capacity in that direction. That is the analogy. Now, then, take this business; it is a special business, its value is shown and it-earning capacity is shown. That it is a special business has been clearly shown, and that it is the best of its kind and earns so much money; you cannot injure that earning capacity as it stands.

The COURT: The earning capacity is a very important factor as

far as the value of the plant is concerned.

2888 Mr. Dickinson: But that must be taken into consideration, may it please your honor, in estimating the loss to the mill as it is situated, what it has been earning. It is not like a case of buying goods, because if you impair the earning capacity and the value of the investment as it stands, there can be no going outside to purchase again. It is a special business, it is an earning thing, as a man is; but my learned friend (Col. Atkinson) would elaborate this, and I have just called your honor's attention to it. I desire to give Col. Atkinson the utmost time that can be permitted, and shall

close by the time the hand reaches the half hour.

Now, gentlemen of the jury, something has been said by my friend Robison, in connection with this statement, that Mr. Backus has no interest and that he will get his land anyway. I think the court will agree, at our suggestion, that that cannot be taken into consideration by you. The impairment of the earning capacity is to be taken into consideration, and the impairment of the rental value of the property is to be taken into consideration, without regard to whether he has a lease running fifteen or twenty years, because if the testimony of the respondent in this case be true, the rental value is destroyed and it is worth but fifty per cent. And there is no testimony on the other side, not a word, and you have on this side the testimony of George L. Robinson, E. L. Thompson, Mr. Dwyer, Mr. De Mann, Mr. Dupont, Mr. Henkle, and Mr. Stewart. Mr. Joy is not asked. No other witness is called, no other planing-mill testimony is in, there is no testimony here except the testimony which we have carefully selected and put in from disinterested men, that the rental value of this property is decreased, this whole plant is decreased fifty per cent. What becomes then of the statement of Mr. Robison that Mr. Backus is entitled to no damages because he is going to get a rent of \$18,000

a year? If it is destroyed or the mill is burned down, the rents would cease. After the business had stopped or impaired so as to become bankrupt, the concern that pays the rent becomes bankrupt, and Mr. Backus is not obliged to take the promise of anybody to pay him his income. He is entitled in case of impairment, in case of destruction, or in case of injury to his tenants, to have that considered, and when it is shown to you that the capacity is impaired so that this rent cannot be paid, he is entitled to that damage. Now, another thing, this mill is put up for a planing mill and it is equipped for nothing else, so that the brick and mortar and lumber and timber in that mill are gone, are they not, and all the investment is gone, if he is compelled to move?

Are the brick and morter and lumber in the mill worth anything more than he would sell the old building for? other words, is it worth anything to a railroad if it buys the property? No, you could not get anything for that building as it stands. It is built for a planing mill and for nothing else, it is regulated for a planing mill, adjusted for a planing mill, and it is good for nothing else than a planing mill except for what brick and mortar there are in it, or what it will bring, so that he will lose the investment in the brick and mortar and lumber upon his being compelled to move, because he would erect a new planing mill-he might take the brick and mortar for what they are worth-but he would lose all his sewerage and excavation on that part of his investment absolutely. I call your attention also, gentlemen of the jury, to the comparison in prices. You can take the list and see that Mr. Backus has accurately represented the Spitzley machines by the number that Mr. Spitzley has estimated upon his list. You will have the testimony to compare it, and you will find Mr. Spitzley giving all the numbers of the machines he appraises in the last page of

his testimony, in the exhibit. You will find that Mr. Spitzley actually inventories, and therefore only appraises, fifty out of over one hundred machines. And while his appraisals of those machines in some cases corresponds with Mr. Backus', the Backus appraisal generally increa-es by reason of the equipment, which adds to the value and cost of the machine justly and properly, according to the testimony of the disinterested planing-mill witnesses. And in the Spitzlev estimate of \$16,891, he has estimated less than half of the machines, and besides that, you have got the Jencks uncross-examined testimony as to all but \$1,600 of it. Now is there any dispute as to the fact that there is no testimony as to the depreciation of this property except our own? Mr. Joy is not asked but as to the real estate. Frank Adams has not been in the mill or looked it over since the structure was put up, he has passed by it once, he says he does not know the present situation, and he does not presume to put an estimate on the depreciation by reason of the superstructure. He is not asked what the percentage of depreciation is at all, nor is any one of their witnesses. So that the sworn testimony before you is universal, that the depreciation upon this plant is fifty per cent. No one puts it lower except Mr. Thompson, who says it is thirty or forty per cent. That is the only break in the universality of the testimony that the depreciation of this plant is 50 per cent., that the depreciation of the rental value is 50 But, for instance, if the planing-mill investment cannot be carried on, what is the value of that investment on Fort street except the bare ground? Of course the earning capacity of the lumber yard is impaired if the planing mill is injured. There is no doubt about that, although the lumber yard is worth more comparatively to sell again on the river front than any of the rest of the property, because it is river front; but the earning ca-

2891 pacity in connection with the plant, and its value in this plant which you should consider, is notably and necessarily depreciated. And the mill itself, that is impaired to the extent they

say it is, that all the witnesses agree it is, becomes a loss and an unsuccessful instead of a successful concern, and cannot be carried There is no doubt whatever, gentlemen, that this mill must be moved if the planing-mill business is carried. Will you tell me what it is worth? The testimony of Thompson and Robinson and of De Mann is that the machinery taken out would not sell in the market for anything but second rate, and the value would be merely nominal, but it is possible, Thompson says, that you could not get and it would not be worth to exceed 50 per cent., because it must be set up again, that building must come down and the machinery must come out and you have nothing there but the shell. It is only built for a planing mill, and arranged for a planing mill, and you cannot sell it except for old brick and mortar and lumber. Then you have to take that new site and set up your new plant. The supreme court has said, as I have read to you, in the case of a tenant, merely the case of a tenant and not of the owner in fee, that the tenant is entitled to all damages which the railroad does by compelling him to move his place, and he is entitled to damages to his lucrative business. Here we have a case where you have a planing mill, and you cannot go outside like that tenant and rent a planing mill for Mr. Backus. It is a special business. Mr. Backus must build according to his ways in order to replace this, and according to the decision of the supreme court, the man whose property is taken for the public benefit must be placed in as good a position exactly without the abatement of a dollar as he was before. And that is your duty. Now, upon the valuation of the property, you will

2892 have Mr. Spitzley on one side of this sheet and you will have Mr. Backus upon the other. You will have corroborative of Mr. Backus the testimony of all these witnesses, and you will have

the testimony before you.

Now, to estimate the loss for insurance, you know that now Mr. Backus pays, in round numbers, enough for insurance to make you or I feel pretty rich. He pays 8 per cent. on \$17,000 as it stands, and he pays five and a quarter on the entire balance of \$130,000. That is exactly what he pays. He pays 8 per cent. on the powerhouse and 8 per cent, on the dust-room, and five and a quarter per cent. on the entire balance of \$130,000, which makes the total cost of his insurance between eight and nine thousand dollars, a very comfortable income on which you and I could keep our houses and live very nicely. That is what he has to pay out for insurance and, bear in mind, that at that rate he is only entitled if he has a loss, to 80 per cent. of his entire loss, and he is taking the risk all the time on his own shoulders of 20 per cent. of his entire property, and the fact is now before you that he cannot get insurance, that he is unable to make up his \$130,000, so that he cannot possibly get even his 80 per cent. He will only get his proportion of 80 per cent. in case of loss if a fire occurs tonight, and these policies continue to be cancelled as they have been, especially in view of these fires along there, and if a loss occurs by fire, Mr. Backus will have just so much risk and just so much total loss as he fails in getting insurance. And it is uncontradicted. They have not put an insurance man on to show

that this risk will be taken, not one of the hundreds in Detroit, although this insurance is carried in every agency in this city. The conspirator Jones puts upon it the same rate put upon it by the other agents, and there is not a witness called to show that this failure to get insurance can be overcome. Now in estimating the increase of

insurance can be overcome. Now, in estimating the increase of insurance and what he has to pay, you are to take into consider-2893 ation, if his increase and his actual cost of insurance is \$3,500, that that goes on year after year, his insurance continues and you are to capitalize the loss. Now upon that point, if he has to pay a thousand dollars more for insurance, the capitalization of one thousand dollars (for you must consider the future and not one year) is \$25,000 at 4 per cent., \$20,000 at 5 per cent., and \$16,666.67 at 6 per cent. Every additional five hundred dollars is 4 per cent. on \$12,500, 5 per cent. on \$10,000 and 6 per cent. on \$8,333.33. Every additional thousand dollars adds to this capitalization just so much as the first thousand dollars adds, and is the earning capacity which is necessary to earn the increase of the cost. And so you are to estimate depreciation of the profits, or the earning capacity. instance, in the property on River street there, if the retail trade is gone to the extent of two to four thousand dollars, take it at two thousand dollars, you are to estimate by the earning capacity which would make the two thousand dollars, and that is loss. The capitalization is the loss. I give you these suggestions in estimating the way that damages are given, as in the case of any injury to You cannot take it for a year. We are not earning capacity. suing for damages heretofore, we are bringing no suit at all. They are coming into court and saving, I will pay you for anything that may occur in all the future, that will occur to you by reason of our occupying River street and running these trains by there. the situation, and the difference between a suit for damages for past injuries and the other, is the situation of this case, where they come into court and say for all future time you are to be paid, and put in the position that you would be if we did not build our

structure. Now, upon the value of the real estate and the injury to it, you are entitled to take into consideration-of course the 2894 sworn testimony of the witnesses would stand uncontradicted, and you are to take that testimony into consideration in this connection. Take the case of the Michigan Central railroad on the opposite side of the street; I do not speak of the flour shed for which they got \$1,660, but I speak of the opposite side of the street They have a larger front, it is true, than Backus has, to Backus'. but what is the injury of carrying on the same business along the Michigan Central railroad. It is not a matter of sentiment between two railroad corporations, and they have given the Michigan Central railroad for the closing of this street in this way, or whatever it is of damages, that you can guess at; for destroying the street or injuring the street to this extent, \$28,500-\$1,660 of which only is for the front of the flour shed. All the rest is for that frontage opposite Backus, making \$28,500. If the Michigan Central is injured \$28,500 for carrying on a railroad business there, for goodness' sake

what is Backus injured, where the smoke and cinders pour into his lumber mill, and he carries on a business especially subjected to the dangers from fire, and where the soot and cinders destroy his busi-

Now, gentlemen of the jury, I have done. I have been through three trials of this case. This is the last trial under the law and under the statute that can be had. Responsibility is with you. It is for you to clear your consciences in your treatment of your neighbor; you are chosen as neighbors to see to it that this man who has his life's work in your hands and who believes fairly that it is gone from him with this structure there-you are to see to it that he does not lose one dot or tit-le of his investment or of the future earning capacity of his property. He has gathered it with infinite

pains. He has improved it every day, he commenced with his own hands, he inherited nothing. I do not appeal to you or ask of you one dollar because of any sentimental feeling, but I do say to you that you must do your duties as American citizens under the constitution of your State and of your nation. There is no avoiding it. You must do it and you must put this man in the position that he would have been if that railroad did not run along there. You must do it, you are sworn to do it, and if you do not do it, you have violated your duty as American citizens, and you have violated your oaths. I do not care if the sum be large, you must do it, and I never have had any doubt in my own mind, from the beginning of this case to the end, since I have investigated it, and I have been very much interested, that Backus, with his entire plant, with its earning capacity, cannot come out of this matter with this railroad running by there at a loss one penny less than \$250,000. The decision and determination of it is for you and for no one else. No court takes the responsibility upon this question, no legislature no common council, no other body of citizens except you. The great lawyer and eminent patriot Rufus Choate, than whom no more public-spirited man ever lived, when the railroads entered Boston, said for the property-owners of Boston although he was first and foremost in favor of railroads to that city, that on this question of the taking of property for public use, no citizen must lose one dollar more than the taxes he paid with his neighbor, whose property was not taken, and rather than to abate this rule, rather than to reduce one degree the cast-iron character of this rule imbedded in our fundamental law, so that one single individual unit, one citizen of this Republic should lose one dollar by the public good that railroads did more than his neighbor to whom it was doing good, it were better that the city of Boston should

have no railroads, because it goes to the foundation of the Government that the individual citizen shall not be mulcted for the public good more than his neighbor, that the Constitution guarantees him his property, guarantees that it shall not be taken for private use, shall not be taken for any other business unless he sees fit to sell it, and when this guaranty is taken from him for the good of his friends and neighbors, he shall suffer not one penny

more than his neighbor.

The responsibility is with you, gentlemen of the jury, and I leave it, and for the last time under the law of the State my ability to address upon this question the neighbors of these respondents.

Argument of Colonel Atkinson.

May it please your honor and gentlemen of the jury: I feel that in this case I am occupying a place which prudence would have forbid, and that instead of adding to the strength of the very able argument which has been addressed to you, I run the risk of taking This, however, is a matter of such great importance to these respondents that they desire the case presented from every possible standpoint so as to secure your favorable attention and your careful attention to what they consider an irretrievable loss in their business. Now, Mr. Dickinson has said to you that your decision in this case is to be final. Under the laws of this State there is an appeal from the first jury that tries a case of this kind, but under the same law the decision of the second jury is absolute and final. There is no appeal to the Supreme Court, no appeal to anybody. Your decision absolutely settles this question so that you can see how important it is that you make no mistake in dealing between these Now, the learned counsel who has addressed you on behalf

of the petitioners in this case (Mr. Robison) commenced his 2897 argument by referring to a number of matters that were not in

He told you of the struggles of the Detroit, Lanthe record. sing & Northern railroad to build a road to compete with the Michigan Central to Grand Rapids, and that as soon as they had surveyed their line from Grand Ledge to Grand Rapids, that the Michigan Central immediately raised their rent from \$10,000 to \$40,000 a year. He then gave you a good many matters which may possibly be considered as local history. I do not wish to criticise him particularly for alluding to them, because in one sense they may be said to be within the knowledge of every citizen living in the community. That a large number of roads combine with the Detroit, Lansing & Northern to build this depot and bring their trains into the city. You have one illustration in the dealings between the Michigan Central and the Detroit, Lansing and Northern; if the Michigan Central, to prevent competition willfully raised the rent of the Detroit, Lansing & Northern from \$10,000 to \$40,000 it is one of those object lessons that we should all take to ourselves, teaching us that railroad companies exact the last farthing which they can from the public and from those who compete with them in busi-Now there is an appeal made to you here on behalf of public improvements, to take these men's property because the public wants it, and to pay a low price because it will do the public some good. We are all a part of the public, gentlemen. We have loaned to these railroad companies what is called the power of eminent do-In every sovereign State the title to land comes from the sovereignty. In this State the title to land comes from the United States or from the State of Michigan through the United States. The State always reserves the right, in case it needs that property

again, to take it back from the citizen. It makes no difference how beautiful a house we may erect upon a hill, if in time of war 2898 we need the hill for a fort, down comes the house and up goes the fort for the common good. And so if it is needed for a court-house or a post-office or any public building where all the people are interested, the right to take back the property from the individual is vested in the Government; but the constitution provides that it shall not be taken from him unless a jury first finds that it is necessary, and second, fixes compensation, which means absolute payment for all the loss that may be incurred by taking Now, railroad companies have been loaned this power which the State originally had for itself. They are permitted to condemn lands on the theory that railroads are for the general good and for the general convenience, and although the profits do not come to the public but are taken by the stockholders and promoters, yet the State steps in and on behalf of these companies, and on account of the impossibilities of agreeing with so many people for the purchase of lands which they may need, permits them to condemn land, but only on the same condition that the State could condemn it itself, that a jury shall say it is absolutely necessary to take that land for the public good, and that they shall make compensation. And I want to let that word compensation sink into your hearts. It is not to pay the market value, it is not to pay any particular valuation that may be put upon it, but the idea of our law is that the party shall be compensated, that he shall be put in as good a position as he was before the public improvement is made. And what you should do, if you do justice in this case, is to place yourselves in the situation of Backus & Sons. Put yourselves in their situation just as nearly as you can and say to yourselves, now what sum would compensate me if I occupied that position for the injury that is done me. The learned counsel who addressed you on behalf of the railroad company said to you that you ought to give something more than the value, that a man ought to have something for having his plans of life broken up, for having his scheme for making a living

and providing for those whom he loves and who are to succeed him, entirely destroyed. And this is perfectly natural. Under the English law, if a railroad company wanted this property, Mr. Backus would have a right to say to them, You cannot have a part of the property but you may have all if you wish to pay a fair valuation. The railroad company would be compelled to take this entire plant if they wanted to use a part of it, if Mr. Backus saw fit; and, in addition to the value, the English statute requires the payment of ten per cent. for forcing a man to change his line of business, compelling him to give up that which he has established and to go into something else. Now, that too, is only just and equitable. If a man has established a newspaper and he is compelled to give up the plant which he has fitted up, especially for his own work-he has arranged his presses, he has arranged his cases, he has arranged his editorial room, everything exactly to suit himself, little by little and day by day one little convenience is

added to another until it exactly suits him, and some one comes along and wants that property for the public and it is so situated that he cannot supply himself with other property anywhere else, so that he has to go out of his selected calling and change his entire plan of life, he ought not to recover merely the money value of what there is around him to somebody else, but he ought to be compensated, compensated for the property, compensated for the loss, compensated for the change that he is compelled to undertake, and especially if he is old when changes come hard and are seldom successful.

Now, gentlemen of the jury, you ought in this case to consider what ownership of land means. Absalom Backus owns all this land. He has acquired it by purchase from persons who originally, by mesne conveyances, acquired it from the United States.

He had no power of eminent domain to help him acquire it. 2900 He found this land occupied by a great many owners, little pieces, and he cast his eye over it. Here is a location on the side of this bluff with the Michigan Central sweeping in, across, around and away from it and yet bringing to it every convenience that railroads can bring to property, but it belongs to a great many people: to establish a plant of this kind there I would have to have so much land. Now, he had not the power to go into court and have a jury say to any one of those who owned a little piece there, I want that to establish a planing mill for the public good and you must let me have it at what a jury thinks it is worth. He had to go to the owners and agree with them on terms, he could not enter upon an inch of that land without first obtaining the right to do so from the owner, and no matter what the owner asked, he was compelled to pay; until, by putting piece and piece together, he acquired this large plant for his particular purpose. He had been in this business from boyhood. He had commenced in the old way of planing lumber on a bench; he had seen its successive stages, he was at the birth of the art you might say and lived through all its developments until he could tell as he looked over this piece of ground where every wheel would turn, where every knife would cut, where steam would be applied, where shavings would be taken away, and where dust could be carried away, and in his mind's eye grasping it all, he commenced these negotiations. But his plan was broader than that. He knew that a planing mill must be supplied with lumber and he knew where the source of supply was. He had spent years in our Northern forests, he had spent years in the manufacture of product which must be brought to this mill for the purpose of utililizing it, and he knew how that was brought here by vessel and by rail. The source of supply at the time he made this purchase was almost entirely secured subject to water car-

2901 riage, and so, in addition to this mill, he found a lot of small property owners down on the river owning a large piece of property which is now known as the Backus lumber yard. Here again he was compelled to enter into negotiations with the owner—no power of eminent domain to help Absalom Backus acquire it, but by buying piece after piece, he finally secured that large tract of

land which today is the key to the future of Detroit, the only spot where any railroad can come in and reach our river without first paying tribute to some company that may come into competition with it, and, according to the evidence here, treat it in a most harsh and heartless way in fixing its price for the accommodation. Now, he secured that. Originally there was a good deal of profit in this business for the man who first invented machines, but machines were multiplied so that competition became sharp and it became a question how every possible thing could be saved. Why, I can remember when I was a boy at Port Huron the great problem of the mill-owners was how to get rid of their sawdust. There was scarcely a street in the city that was not three or four feet deep with sawdust; it was the way our roads were built. If any of you have been at Alpena until within very recent years, you will remember it was called a sawdust city, and you would see hundreds of teams coming out from the mills, disposing of their sawdust here and there, and with the sawdust the finer dust that will always be worked up in any establishment of that kind. Now, competition became so sharp that this article of sawdust instead of being something to be thrown upon the streets and got rid of and burned up, as you would often see along by the mill great fires burning to consume it, became an article of commerce. It must be saved. The very fine dust that naturally flew into the air and spread itself over the surrounding country became an article of commerce that was worth say-

The original culls that were not used at all twenty-five years ago in this State, except by somebody who would come and carry them away from the mill without charge, perhaps to build a fence in the country or something of that kind, were carefully selected; every good piece of board had to be saved, every piece that could be used for anything had to be used; and Absalom Backus, becoming familiar with all these things, had arranged this plant to do this kind of work. I submit it to you, gentlemen, you viewed this property and you cannot place your finger upon a single thing that is wasted that can be saved. Not one thing that can be saved by the ingenuity of man is wasted at the Backus mill. Then the smoke that issues from the fires is again burned so that what carbon remains in it is utilized in giving power to that machinery. Every grain of sawdust that can possibly be secured is secured and sold, every particle of dust that descends after it is blown up into those burlap chambers comes back and is loaded onto wagons and becomes an article of commerce. Every cull board that has a good side or a good piece in it is split and cut and divided until that good And when they have an order for any quantity of piece is saved. lumber so that there is a little remnant left, there is a great warehouse established on Fort street into which it is taken and it is piled there in pigeon-holes as carefully as a lawyer would file his papers, so as to be kept until somebody needs it and then sold. There is absolutely no waste. It is almost a perfect plant of its kind. Now, what has this plant cost? It has cost a great deal of money: the particular amount is in dispute, but there is an element of cost that entered into that property which no one

disputes and no man can gainsay. Here is this young man (Mr. Henry Backus), still young, forty years of age. He has devoted himself from his boyhood to that business until he comes before you to testify to the work of his life with pale and blanched

cheek, having devoted every power which God has given him of body and of mind, in developing this vast property, that he might secure the wealth for which we are all seeking in this commercial age. Here is this old man at sixty (Mr. Absalom Backus). God gave him an active brain and active body. His inventive genius, his industry, his hands and his thoughts have all been devoted to this business. Here is Newton Backus in the office. They have divided up their work; the old man is buying lumber in the North in his old familiar fields, the young man is in the mill watching every wheel as it turns and every knife as it cuts; the other is in the office watching the financial end of the concern, and these three men have coined their brain and blood and power until it has burned into this plant as a money-producing concern. Now, gentlemen of the jury, the man that would say this is only worth the dollars and cents which are represented by the brick and mortar and timber there would show a lack of heart, a lack of consideration, a lack of knowledge of human nature which I would be sorry to suspect in any of the men I am now addressing. Now, then, they own this plant, and what does the ownership of land mean? It means the right to use it to the center of the earth if we see fit, it means the right to use it to the sky if he can build so high, it means the right to have the air, which is the common property of all, come free and uncontaminated, so that he may have its benefits; it means the right to have the light which is the common property of all, and the beneficent gift of our Father to us, come unobstructed without windows so that we may have it to do what we please by it, to utilize it as one of the heirs of such a great inheritance. If this property was adjoining to another on River street, if some other private owner, as Mr. Robison tells you, then that private owner might build upon it and you might be

left in the dark, and just for that reason, Mr. Backus selected a place where some private owner could not darken his windows, could not obstruct his light, and he paid what we always pay for street frontage, a higher price, so that he might have the advantage of the street. Now, what right has he in the street you will ask me. The man who builds upon a street has a right to have it continue forever open. He has a right to it for air, he has a right to it for light, he has a right to it for use. He has not only the right to use it himself, but he has a right to have an unobstructed way left there so that if people wish to come to him for friendship sake, they may come unobstructed. It is worth money to have a clear way for your friends to reach you, to have those who wish to deal with you to come unobstructed for the purpose of dealing so that you may establish a business if you see fit, or a dwelling or anything that suits you, and may always have the conveniences of this street. This frontage is practically all there is of value, as Peter Henkle tells you. Suppose somebody built up on

218 - 55

this street here today and closed this building in and built on the other street in front of it and closed it in, what value would this property have if access to the street is gone? Every city lot is made to front on a street, because without that frontage it is absolutely valueless. Now, gentlemen of the jury, just bear in mind these facts. The Backuses own this property. They own this land, they own it with the rights which I have spoken of, they own the plant which they have built there at a certain cost in money and at a certain cost of time and work and thought on their own part. As Mr. Henry Backus, who has been charged with being insane in this case, remarked pathetically to you, I cannot give you the exact figures on that property, we were our own architects, we were our own millwrights, we were our own supervisors when it went up so that every nail and every

beam and every post and every stone that there is in that building went there under the supervising eye of these men

to establish just such a property as they saw fit and as they wanted. Now, gentlemen of the jury, what is this property to be considered? Is it to be considered as three properties or as one property? Was it acquired for three purposes or was it acquired for one? Now, upon this I need only call your attention to a very familiar rule of law and an equally familiar rule of morals, that the testimony is uncontradicted, that it was all acquired for one connected purpose. The three pieces are parts of the whole, and if you take one or destroy one, you have practically destroyed the others. This is the legal rule. The testimony, I say, is undisputed, and in the law you are bound by your oaths to follow undisputed testimony. No man has a right to say, without any testimony upon it to base his judgment: My brother has sworn falsely and I will not believe him. You are compelled to believe him if you act according to the laws of your country, unless there is something to contradict his statement or something inherently improbable in it. I say is this not only law, but it is founded on a rule of morals, it is an insult to the Creator of your fellow-man to disbelieve him when he is in no way contradicted, and should he state a fact to you of which he is supposed to have personal knowl-Now, then, these three properties were acquired for one purpose. If you take out of the chain that is acquired to do a certain work the middle link, what is there left of the chain? there is one of the jurymen here, if he will pardon me for alluding to him in matters personal to himself, who has been left as trustee of a certain business. He is left the trustee of a steamboat having a dock in Detroit and having an island terminus at the other end. If you take away the steamboat the island would be useless and the dock, so far as he is concerned would be useless, because the way of using both would be absolutely gone. If you

way of using both would be absolutely gone. If you 2906 take away the island so that there is no terminus to run to,

the steamboat line would be of no use; and if you take away the dock privilege in Detroit where those who embark upon that steamer have to land and take the steamer again, you destroy the property. You destroy it all by destroying any of the essential

links of which it is made up. In this case, gentlemen of the jury, you not only destroy the mill by this structure, but you lessen the value of the lumber yard and you lessen the value of the warehouse. You lessen the value of all this vast property a certain percentage, and it would be a narrow and unjust view on your part to say, we will simply give the compensation for the injury which we do to the mill, regardless of the other property in connection with which it is used. It would be unjust; it would not be compensation. The Backuses would not be in the same place after you gave them that award that they would if their property was left undisturbed. Compensation remember, is the thing that you are to make. You are not buying property to sell again. You are not buying it in an ordinary way, but you are going to a man and saying, I am ready to compensate you so that when you go out with this award you will go out with something in every way as good as what we have taken from you.

Now, gentlemen, with reference to the value of this property, I need not spend much time. My learned associate has gone over it so fully that I need scarcely say a word to you. I want next, though, before I get to the value of the real estate, to call your attention to what business means, as well as real estate. What is a business? This corporation, the respondent here Backus & Sons, represent the business of that concern. Absalom Backus owns the real estate. They own the business. They have built that large

warehouse into which some of us went the other day when we started to view the property. They have built the mill:

they have erected certain buildings down in the mill yard and they have an established business there. Before this structure came they had a retail trade on River street. Their foreman sold lumber which averaged them a profit of from two to four thousand dollars a year, down on River street. They had a retail trade with the whole city. They also had a trade in fine work like moldings and hardwood-work throughout the country. They had their customers all over the land, so that this great mill with all its machinery was kept constantly busy, and their names were known to sufficient numbers of customers so that the orders came to them for their products as rapidly as they could produce them; and on every order that came there was a profit, because business is done for profit, and not for a sanitary purpose merely. Now, what is an established business like that worth? You have heard the expression, the good will of a business. Suppose somebody wanted to start a drygoods store here, or a store like Newcomb, Endicott & Co.'s. How much would they give in addition to the ordinary rent to be allowed to step right in and have the use of Newcomb, Endicott & Company's name to go on in business with? I can remember when they moved up there; I can remember how the gossips of the city said this great concern has gone out of the ordinary avenues of trade and they never can succeed up there; and I don't know whether true or not, but it was generally reported that for two or three years they did business at a loss until they made people accustomed to go to that particular center, until they changed by

their own industry and pluck and perseverance the lines of travel and made their great store one of the centers of trade, which everybody supported who had anything to buy in their line. Now, what would the good will of such a business as that be worth?

2908 Suppose one of the partners wanted to withdraw, do you think he would simply take an inventory of the goods that were on the counters and on the shelves? The others want him to go out, and he says, "I am satisfied with this business; I am perfectly willing to remain here; I can go home and rest; I have organized this business so that clerks can do-it; I can take a trip to Europe; I can be gone for months, but this machinery, this organism which my brain has produced, will keep on earning me money." Do you think the man would simply take the price of his goods? Why, not at all. Infinitely greater than the goods themselves would be the price of the good will of the business which he had with it up there. He has accustomed the world to deal at that particular spot, and that custom represents dollars and cents to him, and he is entitled to his share of it. And so Backus & Sons, by long years of toil, by long years of perseverance, by doing business at the same place and in the same name, have accustomed the country to deal with them and buy their goods; and the value of the good will of their business is a great deal more than the value of the brick and mortar in their walls, or the timber by which that brick and mortar may be connected. Now, remember that they have a business there, and remember, gentlemen of the jury, that that business is to be broken up and destroyed, or if not broken up and destroyed it is to be carried on under such adverse circumstances that the profits hereafter will be very problematical and the losses more than probable.

Now, then, let us look at the value of this property. I will not attempt to go over the witnesses in detail, as Mr. Dickinson has done, because he must have impressed you with the figures given by each, and you have only to refer to the testimony to verify every

figure which he has given you. We have the testimony of 2909 many people in regard to the value of that real estate. We have the testimony of Mr. Henry Backus as to the value of the property down there on River street. He estimated it. He said it was worth \$2,000 a foot; and then he corrected that so as to say it was worth \$600,000. Well, gentlemen of the jury, he may be large in his estimate of that property down there, but it is a hard piece of property to get. It is a hard piece of property to acquire Detroit has been wasteful and lavish in giving away its water front. Of all this beautiful river and the stretch of this city along it from away in the east down to the Grand Trunk depot, and again from Third street away down to the extreme city limits, there is not a free access to a single citizen of Detroit to the river. We had a great river in front of us, and for the most part we have impounded our people so that they cannot get to it without crossing dangerous railway crossings built on the grade. If any of you have ever been in the city of London, you have walked along the Thames embankment; in the very heart of the city there for a mile and a

half is a great stone dock built along the bank of the Thames. It is kept there for the public use, that people may walk on it, may enjoy the advantages of seeing the river and breathing the air from the river. How much do you suppose it would take in money to obtain from the city of London the right of a railroad to go in there and occupy that river front? It has cost them millions and millions to reclaim it; but they found that the river front, which belonged to the people originally, was almost absolutely necessary as a breathing place for the people as the city became dense and populous. Now, in Detroit, I say, we have been lavish and wasteful in giving away our river front. We practically have only about half

a mile left in the center of the city, and then, both ways, 2910 east and west, children cannot reach the river, women cannot reach the river, we cannot reach it ourselves without crossing these dangerous places occupied by railroads. Now, mark you, I am not arguing against the railroads. I believe in railroads as much as any of you, but if we had been wise we would have put them in places where the public sacrifice would not have been so

severe, where the losses to us would not be so great.

Now, gentlemen of the jury, with reference to the value of this property. Mr. Backus values that mill property at \$125,000. He values the warehouse at \$25,000, and he values the mill vard below at \$300,000, although it is not for sale and he says he would not take for it a cent less than \$600,000. There are many things we have in life we do not want to sell. A man may have a horse that is not worth \$50, and yet he wants to keep him, and he would not take \$100 for it; he would not take \$150 for it; won't put a price on him at all, although he has no money value that would represent more than \$50. But Mr. Backus gives you a good reason for his valuation. He is getting \$12,000 a year rent for that property. It is worth that for the rental; it pays that rental in connection with the mill, and because he has a mill to use in connection with he gets \$5,000 more for the mill, and because he has a warehouse plant or real estate to use in connection with the mill he is able to get another thousand dollars there. Now, Mr. Backus values this property upon a very conservative basis. He thinks this property is worth what the rental represents at 4 per cent. Now, Mr. Joy was on the stand. He values this mill property at \$150 a foot on each street. Francis Adams, I think, had valued the whole Poor Francis Adams! For twenty of it at about \$15,000. years the walking witness-or nearly twenty years-the walking witness of this combination, can never see any value in 2911 anything that is left, because in the early days of this com-

bination he sold his own property to the railroad company at a less price, and he seems to be determined that no neighbor shall ever gain anything by what he retains. Mr. Joy values this at \$150 on each street, you remember, but Mr. Joy said if real estate will pay 4 per cent. net then it is a good investment, so that we have Mr. Joy's own testimony confirming Mr. Backus that this real estate is worth nearly \$450,000 in all, because it is paying \$18,000 in rent, and \$18,000 represents 4 per cent. on \$450,000. Mr. Joy owns a

large amount of real estate. Mr. Joy has been an enterprising sagacious man. He has been able to see in advance the march of public improvements, and sees real estate here and there and elsewhere where it would be likely to increase in value. He knows the value, according to his own testimony, as well as any man in the city of Detroit, and he testifies to you, gentlemen, that real estate that will pay 4 per cent. net is a remarkably good investment. Now, does this pay 4 per cent. net? It is answered by our learned brothers on the other side that this rental was not correctly arranged. What difference does it make, they will say, whether Absalom Backus gets his rent or whether the others get it? It would make no difference. Now, gentlemen, if this arrangement had been made after this improvement was contemplated, there might be a great deal in that argument. Dealings between relatives are always scrutinized carefully. They are always examined with some little of suspicion, especially if any one is likely to gain any advantage over a third party by the dealing that they are indulging in. But remember that there was nobody else interested but the Backuses themselves. They had no creditor to defraud, they had no company to bleed, there was nothing to consider except their own business and what

would be just and equitable between themselves. It was long before this union depot was thought of. We had supposed-we had taken Mr. Joy's word for it-that there was to be a grand union depot down on Twelfth street. I remember with what eloquence he told upon the board of trade of the grand architectural beauties of the building that he was going to put up there, at the time he was acquiring property down there. I remember that I suggested that possibly this building might not be put up after the land was acquired, and Mr. Magnus Butzel, one of our leading citizens, replied that he was perfectly astonished that any lawyer, any good citizen of Detroit, should have the impudence to doubt Mr. Joy's word, that a permanent and beautiful depot was to be constructed on Twelfth street that would be an ornament to the city for all time. The lawyer, as usual, was compelled to take a back seat, the position of a doubting Thomas, where everybody else was full of faith. The years have vindicated his suspicions, if not his judgment. I say that at the time these rentals were fixed these men supposed the union depot would always be there at Twelfth street. They had no reason to suspect that there were grand schemes of ambition running through the minds of great men in the railroad world, that would bring this depot up to Third street and finally acquire the property which they were building up for its uses. So they fixed the rental among themselves, what they thought was just and equitable. Now, I ask you, gentlemen of the jury, did the old man run a hard bargain with his boys, or didn't he let them fix it pretty much as they saw fit themselves? He owned the property. He had acquired it. It was the product of his life's work. But they were his heirs; they were the apples of his eye. Now, I leave it to you. Most of you are old enough to be fathers, and I presume you have attended to your

duties during your lives, and I think you will say with 2913 me that the probability is that the father indulged the sons and made a favorable bargain with them, rather than grinding them down and that the 4 per cent. which he exacted would be something less than he would exact from a stranger. And they could well afford to pay. Why, what had this business been doing at the time this rent was fixed? This business in 1881 and 1882, according to the testimony, had run up so that it paid one year as high as \$70,000! And was running along at pretty near that rate. For thirteen years last past this business had paid \$34,000 per year. That has come out of it. They have not dealt with that exactness between themselves that they might if they were dealing with strangers, but they know this came out of it because they know it has gone in somewhere else, and they have the property purchased with it to show it. Now, an \$18,000 rental where there was a profit of \$34,000 and a salray to each of these partners of \$3,000 besides, was not an extraordinary rent. The property was worth it. It was producing it. And, as I say, they had no reason to fix this rent higher than it should be. So that they actually fixed it on a low valuation of the property, \$450,000. Now, I need not go further than Mr. Joy to confirm that estimate of that value. But, gentlemen of the jury, if you are going to exercise your own judgment, I defy any man in the city of Detroit to present to you or to me for purchase today three properties with the advantages of these three pieces before this railroad was built, for \$450,000. It cannot be done. I know something of real estate myself, and I know that three such properties cannot be acquired for any such sum of money. You might acquire as much property; you might go down Fort street, for instance, as was suggested by Mr. (Foreman) Baker. You might acquire an entire block on Fort street, perhaps, but when you do it you would have no railroad to run its side tracks

2914 into your yard as the Michigan Central does with this property; you would have no such connection; it would not be worth anything like what this property is worth. It would probably cost you a dollar for every car, if you were enabled to get a side track across the street after you had worked your way through

the common council and put it there.

Mr. Dickinson: Across the street and up the hill.

Col. Atkinson: Across the street and up the hill and into your building—it would probably cost you a dollar or a dollar and a half or possibly two dollars for switching every car of lumber that you brought there and every car that you sent out, while this is so situated that the engines of the Michigan Central simply kick the cars into the place as they are passing, and they have no extra charge for transportation of that kind. Now, it only takes a small percentage to take away the entire profit of a business in this age of fierce and almost cruel competition. The man who has to pay a dollar a car on his lumber more than his competitor is lost. The man who has to put on an extra team to do cartage of the same amount of lumber as his competitor is being eaten into by the cost of this single team every day until the profits grow smaller year

by year and finally diminish. So that there is no place which has been pointed out to you where these people can go and do business with the same advantages. Now let me call your attention, as Mr. Dickinson has called it, to the absence of testimony on other points and the absence of testimony on this. That question was put by the juror, Mr. Baker. The attention of this railroad company was challenged to the fact that the jury had in mind that if these people could get another location equally advantageous, the price at which they could get it would have some influence on your minds. Have they brought you any witness to show where such a location can be

2915 The real-estate dealers of this city are not having very much to do just now, except a little in politics. They could have been brought here. Who has the property for sale? Where can it be acquired? This company with all its mighty power and influence, with its ability through hired agents to work from year to year, with all its vast staff to gather up testimony, has been unable to present a single witness who could say to you, We have found a place where Backus can do his business, with equal advantage to the one from which we are driving them, and it can be got at so much money. Now, gentlemen, they want you to help them They want you as they want me and as they want every one, to become their agents and advocates so that we will work for them. and that you will exercise your ingenuity to guess at some location which no man dared to swear to. Now see the injustice, gentlemen, if you attempt to do anything of that kind. No witness was upon the stand; the arguments that might be made against it caunot be suggested because we know nothing of what is passing silently in the juror's mind. Unless Mr. Dickinson and myself can rely upon this case being disposed of on the testimony, then we are absolutely in the dark as to what may influence your judgment; we have a right to rely upon the testimony, we have a right more than the testimony to rely upon the absence of testimony which might be produced if the contention of our opponents was just or fair. Now, I say that no one has been able to point out how these people can be compensated by giving them other property, by giving them another place to do business. Even if it broke them up for a year or two, that would be a serious break in their business. Suppose their business runs badly for a year and customer after customer goes elsewhere while they are rebuilding.

that would be a great break and a serious injury even if they could get as good a location afterward, and there is no one who has had the temerity to come here and say there is any such location that can be got for them. Now, do you think it was because Mr. Baker was careless? Who ever heard of Fred. Baker making a slip or being careless in a lawsuit? Do you think it was because Mr. Robison was so much given to humor that he had no time for the serious affairs of life? There is always a serious edge to the wit of George Robison, and if it were possible to rake with a fine-tooth comb a witness who would testify to anything of this kind, the railroad company would have him here. They would have him here if they had to sit up Saturday nights and

THE FORT STREET UNION DEPOT CO.

run special trains on Sunday with the whole staff on board to get them. No one ever came, no one exists. And it is just as absolutely proven to you as anything can be proven to twelve honest men that there is no place in all this city where you can transfer Backus' business and have them in an equally eligible situation to the one which they now occupy. Now, speaking of values, George Robison says he knows that you are not going to believe the Back-uses about the value of their property. Indeed! George knows almost everything, but it has been said that even the Almighty sometimes does not exactly understand what would be passing in the minds of jurors. He says he knows you will not believe him, and why? Because he testifies to it? What do you know about the value of that property down there? Do you know it, do you think, better than Backus? There are other men who might swear to it. There are the property-owners all along the line there. There are several who might be brought here if Mr. Backus is wild on the value of his property. Not one of them is brought.

He stands here, so far as the lumber-yard property is concerned. uncontradicted. There is not a single witness on the opposite side asked a single question as to the valuation of the lumber

yard or the valuation of the warehouse. The whole force of the testimony so far as it has been introduced, if I remember right, is simply on the valuation of the mill. I think I am right about that. It is uncontradicted. And it would be madness on your part or mine, gentlemen of the jury, to attempt to say that these men who know the uses this property could be put to, these men who are using that property, know nothing of its value, and we living in other parts of the city and in other parts of the county, are more competent than they to put a valuation on in the absence of all testimony to assist us, if they are wrong. Now then I have called your attention to the value of this real estate, and I have called your attention to the value of the good will of a business of this kind. What is it worth to have something that will bring you a certain income every year? This business seems to have been of that character.

Now, there is a good deal of conflict here as to the value of that mill and the value of the machinery. Mr. Spitzley values this machinery and mill, including Mr. Finn's estimate and Mr. Kramer's estimate, at \$96,137.17. Henry N. Backus values the same property-not exactly the same property, I will call your attention to the discrepancy in a moment-at \$193,407.46. Upon the crossexamination of Mr. Spitzley he stated to us that he did not estimate two out of three rip-saws, he overlooked them. He didn't estimate any trucks, on which you saw lumber being brought up there and moved about, he didn't estimate the lock-corner machine, the Rogers rounding machine, the extra knives, the extra pieces of machinery to provide for breaking and so forth, the grinding stones, the picket machine for heading pickets, the scales, the knife-balancing scales,

the extra saws, furniture in office, electric bells, two out of four matching machines, brazing machine that is used for 2918 welding saws or something of that kind, one of the pony

planers he overlooked, he overlooked eight matching machines, he overlooked three hundred saws, he put no value on the water pipes, he put no value at all or failed to see a Wood & Backus break-pressure surfacer, four mule stands, mill pipe and sewers, and pavement. Before you get through Spitzley's cross-examination you will find that all these things are omitted. What valuation would be put upon them if he had seen them is a matter that we will never know. Now then when he comes to the valuation he is away astray. For instance, he values five saws at \$45 each. Mr. Backus brings you the proof that these saws cost him when they were bought \$250 each. He values the Preston improved saw-it is a machine, I think-at \$90, and we have the proof before you that it actually cost \$200. He values a Wood molder at \$475 which Backus paid \$1,200 for on the cars at Boston. He values the Huntington molder at \$130, which Backus paid for in Newark \$550 on the car. He values two pony planers at \$135 and \$80 respectively. are three pony planers. One of them was omitted entirely by him, and the three cost Backus \$1,050, without any charge for setting them up or without any charge for bringing them here. He values eight matching machines out of ten-no, he omits eight out of ten and values two, and those omitted are shown by Mr. Backus to have cost \$2,000, or \$250 apiece. The sewers Mr. Backus paid \$1,000 for making. The pavement cost them \$1,800. Now, the attention of some of you was called to what is known as a Chicago siding machine when you where down there the last time. You must have seen that it was a complicated machine, with a great many complicated parts and adjustments connected with it. Mr. Spitzley valued it at \$44. It cost Mr. Backus to buy it \$500, and \$44 any man with any judgment must see would scarcely have

paid for the old iron which was in it. Why, you can go into any man's mill and make it appear almost worthless by adopting such a valuation as that. Mr. Spitzley's entire valuation of the machinery is less than one-third of the amount for which it is insured today. This property is insured upon a valuation by the insurance companies and by the Backuses themselves, which is supposed to represent 80 per cent. of its value, at more than three times the entire value put upon it by Mr. Spitzley. Now, I don't care how high Mr. Spitzley stands. There is an appeal made to you, gentlemen of the jury, apparently on the theory that some of you are friends of Mr. Spitzley. I have no attack to make upon Mr. Spitzley. He has gone in there, and in the hurry that he was in he has made such an inventory as he could, unassisted. He had no clerk to jot down or check his figures. He was there by himself trying to make an inventory of that great mill, and he admitted to you that many of the machines he was unacquainted with, and the only way he could do was to run up to a rival house, a man selling Fay's machines instead of Wood's, and get him to put a value upon his opponent's goods.

Mr. Dickinson: Without seeing them.

Col. ATKINSON: Without seeing them. He described something that he did not understand fully, he described it to a man who was

competing with Wood, and whose goods sell for 25 per cent. less than Wood's, and he got that man to put a valuation on. Now, to take such a valuation as that is simply to play with people's rights and commit a great crime that you may oblige this company. Now, Henry Backus says this plant and property, not that it is worth, but that it has cost \$193,000. On the former trial Absalon Backus valued this property at \$150,000. Their estimate on the value for insurance up there would make it \$147,000.

Mr. Dickinson: Without the dry kilns and without the

office.

2920

Col. ATKINSON: That is without the dry kilns and without the office, and labor, estimated at \$147,000. Now, Mr. Backus was perfectly honest when on the last trial he valued this property at \$150,000. Suppose I ask you Mr. (Foreman) Baker, what is the value of the furniture in your parlor? You might possibly remember what the carpets cost, you might remember what the table and the chairs and the large articles cost; but what you have bought for Christmas, what you have brought home on Thanksgiving, what has come down to you every year, the little articles that are put away in the corners and on the mantels and in a hundred places in your dwelling-house, would never recur to your mind at all; and remember that you are dealing here with the accumulations of a lifetime. These men have put a certain amount of money into this new structure, but they also had saved every brick they could from the old one, they had saved every pound of iron they could from the old one, every machine, everything that could be utilized. and all these went in without any very accurate account, because they were only dealing with themselves and they kept no particular account of it; so that Absalom Backus might have in his mind the net amount of money which it cost him, \$150,000, and yet there might be there the \$193,000 which is shown by the figures in the inventory of Mr. Henry Backus. But, gentlemen of the jury, is this all? Mr. H. N. Backus has laid before you his sheets and valua-tions. You have had planing-mill men brought here on his behalf who might be asked as to these values, because when a witness is put on for one purpose he may be examined under our system as to all. He has given you an inventory, he has given you a separate valuation of every article, and there is not a witness called to show

that he has put one cent more on any one of these machines than its actual value. Now, all that question was open to them in rebuttal, they could have brought witness after witness to show that some part of this was overvalued, but not one single witness is called. Mr. Spitzley admits a great many omissions, but even Mr. Spitzley is not called again to show that these particular values placed upon machines by Mr. Backus are too high. You remember the instance given of a certain number of cupboards, I think. Mr. Spitzley values eight, if I remember right, at \$54, and one of the eight he made himself and sold to Mr. Backus for \$40, leaving only \$14 to pay for the other seven just like it. I may not be right about its being cupboards; anyway it was some article like that. It is pointed out by Mr. Backus that there is real estate there

worth \$450,000 involved in this plant, and personal property in the neighborhood of \$200,000. Has Mr. Backus stated anything that is not there? Why, if he put in a machine that was not there then when you went down, your attention would have been called to it. for you would be asked to look for it. Some of their witnesses could have had this inventory and gone over it, the mill has been open to them through all this trial for the purpose of making such an investigation if they saw fit. So I take it that there is nothing better established than that every article he has in that inventory. There are undoubtedly still many articles omitted by is there. Henry Backus which even his careful inventory would not take. but he has put nothing on that does not exist and that is not worth the money that he asks for it. Need I argue to you, gentlemen, the cost of setting these machines up? No one has attempted to contradict him on that subject. He tells you how the foundations have to be made. You know how rigidly those machines have to be held in place. You know how great excavations are made

2922 under each for the purpose of piling in masoury until the foundation is perfectly solid on which these machines rest, for the slightest vibration will not only destroy the machine, but render the product of it worthless, and he tells you that the cost of these machines originally is comparatively small compared with the cost of putting them in their places, trying and testing them, supplying new pieces where there were faulty pieces, until they have a machine in perfect working order. I need not talk to you about the character of this machinery. We have the undisputed testimony of every man who understands it, that here is one of the best equipped mills in the United States. Mr. Robison thinks it is not quite so large as some he saw in Saginaw, but a man sometimes sees things larger than they are after spending Saturday night in traveling. There is no mill in the city, there is no mill anywhere that is shown to be better equipped than this. It is one after another, all these stories working in absolute harmony. You see the lumber pass automatically almost from one story to another, so that they not only use the broad surface in the basement, as Mr. Robison calls it, but that is multiplied by the stories as the build-And we have no proof of any such mill anywhere, or one so well equipped. And the very opponents of Mr. Backus, those who are opposed to him in trade, those who are competing with him, come here and tell you that it is the best mill they ever saw. Why shouldn't it be? I say, why shouldn't it be the best mill? these men want the best to do their work with? If there is a better law book on any subject that Mr. Dickinson has to treat than the one that is in his library, do you think he would hesitate for a moment to send out and get it? And just so with these men. If there was a better machine than the one they had then they wanted it and they

got it, until in their line they stand at the very head. Others may be as good; none better. None as good in the great city in which we live. Now then, there is their plant and there is their business. There is real estate worth \$450,000. There is a plant worth \$193,000, according to the actual inventory, from

which you well know that some things may be omitted. So that we have in round numbers \$650,000 invested to be affected by this structure. Not only that, gentlemen, but we have the good will of the business of which I have spoken to you and which it is hard to value, a business which brings a profit from year to year. of these men is called away it is so organized that it will keep on running and earning him money. Then is their custom all through the country; and custom means a good deal. If you should go down to one of the newspaper offices here today and tell them you could deliver them a thousand new customers and a thousand new subscribers, they would give you one thousand dollars for the list. And they would run the risk of those men discontinuing their paper afterward, if they would only subscribe for a short time so that they could get them started. So every customer that a man has in business costs him something. You get them one way and you get them another. One gets them by his affable manner, another by his great industry, and another by advertising. What do all these great boards around our city with Hudson and Mabley's signs mean? Every board and every sign costs them a great deal of money; it is simply that they may increase their list of customers; in other words, add to the good will of their business. Now, then, we have all that property to be affected, remember, that real estate, that plant, that good will, and it becomes a question for us then to examine and see how it is affected. Is this property really injured.

Now, we had Mr. Robison testifying. He says that he does 2924not think it is really going to be injured. It is going to be just as good afterward as it was before. Well, he does not know as much about that as his namesake, he does not know as much about it as De Mann or Dupont. All these men swear positively that this property is so affected that the business cannot be carried on successfully in it. What are you going to do with the testimony? Are you going to say, Well, they are in the planingmill business to be sure, but then we are a jury and we know more about it than they do? I would not like to discuss that with yourselves, but you will discuss it in your own consciences, you will discuss it as to whether you know more about this business than they do. Besides, you have viewed that property twice. You have the undisputed testimony that heretofore they were doing nice work in hardwood. They were making bannisters for stairs, they were making fine molding and all that kind of thing in that mill. Have you seen any being made? They are pegging away now at the boxes. They are doing the best they can. They have not abandoned their business. They have not left their mill to be shut up or anything of that kind, but they have been forced, as they answered you, Mr. (Foreman) Baker, to go into the box trade, rather than treat it as an incident as it formerly was in their trade. There is Mr. Dupont. Up to the time this structure was there he used to go down and get his hardwood for oil finish, and since then he has bought nothing but flooring from them, and he goes elsewhere to get this that will not be soiled that will take an oil finish. In other words, their custom has departed, and H. N. Backus has told

you that he has not solicited that trade because he knew he could not do it right, and there is a good deal in that, gentlemen. If you take a lawyer like Mr. Baker, who has been at the bar for fifteen or twenty years, and you come in and offer him a case and he says to himself, in view of my engagements I won't

be able to give that case the attention it deserves, do you think he would take it? Not at all. He would like to have as many cases as possible, but as an honest man he will say, I am not going to be able to give your case the attention it requires, and consequently I will decline the business. And so with Mr. Backus. He has a reputation for fine work, and when he finds he is not in a situation to do fine work, he no longer solicits orders for it. That is honest. That is manly, and that is what he should do. Now then, how is this property injured? We claim that it is injured by being deprived of part of the light from the street. But they tell us that our mill is back forty feet from the street, and if we could believe the arguments of counsel, it rather helps the sun to have this roadway between it and the mill. Backus has a right to build up to his line, hasn't he? That vacant space is his, not theirs. Has he got to always stay forty feet back from the street so that he may not be darkened by this structure? Why, if they are taking that forty feet from him, if that is there to supply the want of the street, then he ought to be paid for the forty feet, even if the light is as good as it was before. Now, is the light as good as it was before? There is a structure that has fourteen feet clear below. And then when you get up to the rail it is twenty-five feet from the ground, so that there is nine feet of material there between the bottom of that structure and the rail above. The stories are eleven feet in height. So that while the bottom of the structure is about three feet above the ceiling of the first story, the top of the structure is three feet above the top of the second story. I may be wrong in the figures, but practically that, so that it stands in front of the two stories of the building and affects the third. Now, the ordinance of the city of Detroit requires that under each of those tracks there shall

2926 be solid metallic pans. They have not put them in yet, because they wanted the light to come down between the ties when you were viewing the property down there, yet the ordinance of the city requires that they shall have to put solid metallic pans so as to catch the coals and the dropping oil and all that kind of thing before they comply with the ordinance under which they are allowed to occupy that street, and when they have done that they will have absolutely darkened the street below. Because in the course of time they will use that superstructure to carry every car that it is capable of. Railroad business is only in its infancy. There are four roads coming in there now. Probably in the future there may be twenty, there may be thirty, until like the great Liverpool station in London, there is an express train leaving it every five minutes of the twenty four hours, and I presume in the New York Central depot that there is a train going out on an average every five minutes of the day. So that they will eventually occupy this with all the railroad tracks that they can, until the metal shields beneath them

practically cover the whole affair. Now, if you believe that a superstructure can be thrown across this street fourteen feet from the ground below and then standing up with solid sides, the way that it is, nine feet more—more than that, eleven feet more (I think it is twenty-five feet to the track because that is what the plans show) if you believe that that can be thrown across the street the whole width of the street there, and that it will not darken the bottom of this building, then it is useless for me to reason with you. Why, put an awning on that window. Will it lessen the light that comes in here? It may not make it so dark that you cannot see or anything of that kind, but it will lessen the light. And we have the undisputed testimony of all the people who are in the business with

the Backuses here, that unimpeded light is absolutely neces-2927 sary to their business. If I am a tailor and you make the light just bad enough so that I cannot thread the needle,

although I may sew if I get it threaded, you spoil my business. And it only makes a little difference when a man can thread a needle and when he cannot. He can do it at 40, and at 42 he has to call his wife in to do it for him. His eyes have failed a little, very little, but if he is in that business where the needle has got to be threaded, it is spoiled by the want of eyesight or the want of light. And in this business the testimony is overwhelming that it cannot be carried on without the very best of light, the most accurate light. It is all nonsense to talk about it. Mr. Robison said there is a little shed there that shuts out the light forty times as much as the superstructure. Why, you remember the shed, there is a board fence about that high, and there is a roof about that wide to cover the rip-saw, and Mr. Robison in his exaggeration and in his absolute enslavement to this company has the temerity to tell you that that little thing there is forty times as bad as this structure which goes across the whole street, and which eventually will be absolutely sealed with these metallic pans beneath it. Now, who knows whether that is darkened or not? We are not depending upon Mr. Backus' testimony. We are depending upon the testimeny of the men who come in here without any interest. have brought you the foreman from every floor. We have brought you the engineer. We have brought you those that are actually engaged in work. We have brought you a disinterested man like Mr. Griswold who has seen men stop until trains would pass so that they could get a better view for setting their gauges, or for doing whatever work they might be at. Now, we have brought you overwhelming testimony on that. Every man that knows has testified;

that is, the superintendents of departments. Are these honest, reliable men? Why, you say they have been a long time in Backus' employ. That is true, but the man that comes here as foreman and tells you that he has had the same job for eighteen years, that day in and day out he has been at his post, and that during all that time he has been able to suit his employers, comes with a pretty good certificate of character. He must be a pretty good man or he would not be kept, and these men are men who have been there from thirteen to eighteen years, they have worked

out the proof of their own good character by their long term of service; and are you going to say that men who have been so faithful to their masters here would be so unfaithful to their Master in Heaven as to swear to a willful falsehood for the purpose of misleading? This is the kind of testimony that is presented, and upon this testimony we rely. We have a right to rely upon it. We do not present it with apologies, but with confidence that it must carry conviction to twelve honest men. Now then, we presented on this witness-stand one of the oldest and most respectable business men of this city, Peter Henkel. Has he any interest in misstating these things? He is the owner of a pleasant and very beautiful home on Fort street. If any of you have ever passed it, you can see the good taste of the owner in its surroundings. The building is low and spacious. There is nothing wasted in cornices or domes or towers, but around it there is a large plat of land with beautiful trees and everything that could make it inviting to the eye. Peter Henkel says he went there, I think, some thirty years ago, perhaps not quite so long; that in the early days, although the Michigan Central was running 1,500 feet from him before this railroad came, they hung their clothes out and could take them in at night unsoiled by dust, uncontaminated by smoke, absolutely clean as they were placed upon the line. And then he tells you that in

2929 those days and up to the time this railroad came, they had good fruit in the garden and everything went on as it had been, but when the railroad came, with its smoke and soot, they could no longer hang clothes out even at Peter Henkel's residence, which is six or seven hundred feet from this railroad; their fruit was destroyed by the constant falling of soot and cinders, even at that distance, so that he tells you that his property where he lives is damaged at least fifty per cent. Mr. Robison would have us, by his cross-examination, believe that Peter Henkel is some æsthetic gentleman whose eye was merely offended by the clouds of smoke that he saw in the distance and whose ear was hurt by the rattle of the engine, the opposer of progress, the man of ideas rather than the man of business. Well, if all the lawyers in this case put together had the capacity of Peter Henkel, then we would not be wasting our lives talking to you here, but would be amassing fortunes by a genius which could be made much more lucrative. Peter Henkel is one of our leading business men. He is a man who is known to everybody; he has no interest in this; he goes down and looks at Backus' property on his daily walk or daily ride and has seen it for years. He has watched its progress, he has watched its growth, he watched it when it was first built and he watched it when it was in cinders after the fire of 1882; he watched it as it again arose from its ashes and he was watching the trade and went there almost every Sunday, walking around as a man will among his neighbors and viewing the property that is in his vicinity, and he tells you when you take the front which a property has you practically confiscate it. And that is true. If you take the front from the Russell house today, the Russell house would be of no value. It is only its frontage that gives it its value. He tells

you that the injury to this property is at least 50 per cent. Fifty per cent.! \$650,000 they have there. Is it injured 50 per cent.? Why, gentlemen, the only thing about this case that appals one is the feeling of the tremendous injury done to these people, and I sympathize with Henry Backus when he says, I am completely broken up, I don't know what to do, I don't know where to turn. He feels that he cannot impress upon anybody the injury that is going to be done him there, and that this company is about to rob him of his business, of his life's work, and pay him with some miserable pittance that may be demanded by its lawyers from a jury. Now, I say that my brother Dickinson has gone away down on the verge of modesty when he has stated to you that \$250,000 would be the least possible amount that would compensate these people. That is \$100,000 less than the testimony of Peter Henkel. It is \$100,000 less than the testimony of every planingmill man that has been put on the stand with the one exception that Mr. Dickinson mentioned, who put the loss at from 30 to 40 per cent. Now, gentlemen, are you going to rob these people because you want to help the union depot company? Is this an orphan that is appealing to you? James F. Joy has made a reputation in this country for a man of stamina, a man of grit and a man who asks no odds of anybody, and James F. Joy knew when he gave birth to this great enterprise that he had to come in here and compensate every man whose property he took for the purpose of bringing it here. He calculated upon all these things and do you think that if he thought it would not pay that he would bring it. Now, we all love Mr. Joy. It has been one of the things that we have had to consider since this trial has been going on, the bereavements that have befallen him, and I have not an unkind word or an unkind thought of the grand old man who walks through our streets, a credit to the city and a credit to the State. But does he build railroad depots for the public good or to increase

And he built this one and he enlisted capital, others have gone in with him, and notwithstanding the fact of compensating everybody for his losses, they believe there would still be very large And, remember he has started a great property that is to last forever. Men come, men go, men die, men are born, but this union depot corporation is to last forever. It has an eternity before it, an eternity of undisturbed possession, and even though the returns may be small for a hundred years, it can afford to wait like nature to recoup in the far-off centuries, if necessary, any losses it may incur at the beginning. That is what the law does for it. Every stockholder may die, every one who is interested in it now will pass away, but their work, their stock, passes undisturbed to their heirs and successors, and goes on forever. And forever and forever the smoke will enter the windows that are reared on Backus' property, the dust will fly from their engines no matter what improvements they bring there, this property will be subjected to whatever annoyances there are, and you have put a lien upon it and you have done an injury to it that is to last for all time, not for 220 - 55

his own fortune? He builds them because they will pay.

thirty years, not for twenty years, not for 100 years, but to last as far as we can see into the future. Now, is Peter Henkel wild in his testimony? Why should he misjudge it? Do any of you live as near to the property as Peter Henkel; do any of you know as well the injury that is done? Are any of you better judges of business property than Peter Henkel? Why should you set aside this man's testimony and give these men less than the injury which Peter Henkel swears to. But take the other testimony to which Mr. Dickinson has adverted, and they all agree with him. There is no contradiction, no one is called. Even Mr. Spitzley they do not ask, what injury do you think is done to this property, is it in-

jured one-half? He is a planing-mill man; he was there for ten days taking that inventory. They probably were not on their guard all the time as they were when you went down, to shut off the engines while he was there. Now and then some raw engineer would come in who had not received his instructions for the day's performance and as the engine would come struggling up there, in all probabilities the cinders came down and the smoke came in just as it had been sworn to by the men who are there from day to day. But they do not ask Mr. Spitzley what the injury is. He knows what a planing mill is, he knows the light that is necessary-although they have had him there ten days on the ground they never ventured to ask him what the injury was that was done to that property. Now, I do not know how you judge it but if they had come to me with their case, I would say, who has taken observations of their property to see whether it is injured, what witnesses swear to it and if they answered, we had not done it, and as far as Mr. Spitzley is concerned, my next question would be, what did Mr. Spitzley say? and if they had not asked him, I would send for him at once and ask what he thought of it, and if his answer was favorable to me I would put him on the stand, but if he said they are injured as much as they claim, then I would pursue precisely the same tactics as Mr. Baker and Mr. Robison. That is exactly where they are. I can hear as plainly as though I were present at the conversation the talk between counsel and Mr. Spitzley, and his confirmation of the testimony brought by these respondents, so that they concluded, as prudent and able counsel as they are, that they would not ask him the question. Now, then, all these men swear to the injury, they swear to the smoke and dust and cinders. You have examined the property; I don't know how it strikes you. If you looked for cinders where the lumber was all covered up and the cinders could not get in, of course you could not

and the cinders could not get in, of course you could not 2933 find any. If you looked for cinders on the loaded lumber that stood outside, you would have seen them on the top. Yesterday was a bright day; there were only two engines passed so long as I remained there. I do not know how long you remained. One was shut down and was running light without any cars, and another was running with three empty cars. Now, the testimony is, I think, that 150 trains go over that in a day, and do you think they all go over in that shape? Mr. Dickinson had asked his honor to instruct Mr. Baker not to let the company know when you were

going down there, so that you might see these engines just as they go by in their natural state, but the case took a turn so that the papers announced in the morning that you were going to go down in the afternoon and examine the premises. Court was adjourned on account of the sad death of Judge Swift, with the understanding at noon that you should assemble at two o'clock the next -noon and go down and view the property, so that there was the notice given and they were on their good behavior. It may possibly be a sample of the way they are doing business. I noticed the Central locomotive as it came out. The Central had no interest in suppressing cinders and one of your number, I think, stood with me on the bridge while the Central train passed under it, and if I should ever want any one to prove that there were some cinders from the Michigan Central locomotive, I think he would be able to furnish the proof, if he would allow us to take his hat, if it has not been brushed off since. But they had no interest in suppressing cinders on the Michigan Central at the time and it may be that the other had. I don't know, I do not wish to make any charges against them, but I really think myself that they were running the road to do as little injury as possible to Backus at that particular time. Now, gentlemen, these are the injuries that have been inflicted upon these

people. What does Absalom Backus lose in this case? Robison says that he has rented this property for twentythree years, so that he is going to get his rent whether it is good for anything or not. Is that true, gentlemen? He has rented this property to his sons; they are his heirs as well as his sons. gets his rent regularly from them in all probability in the course of years it will come back to the sons again after his death. If they struggle on, meeting losses from year to year and still pay him his rent, what satisfaction is that to him? When he gets it he knows that his sons are paying him a rent for a thing that is no longer worth what it is rented at. It was worth it when he rented it, but it is no longer worth it and it has been rendered worthless by this structure, and are they going to be able to pay rent right along if their business is destroyed? Are they going to be able to pay it, and it does not make much difference how much your contract is with a man provided he is not able to keep it, there is no profit in If I agree to give one of you an income of ten thousand dollars a year and cannot pay ten cents, what is the good of my agreement? Now, can these young men go on with that business, pay for the stock which they have purchased of their father, and at the same time pay this rent and struggle against the injuries done them by this union depot? But remember, they are taking Absalom Backus' property forever, as I have already called your attention. What is the tiny space of twenty-three years compared with all time to come for which they are to injure or destroy this property? It is not always going to be a planing mill Mr. Robison says. That is true. This property may be wanted for warehouses for a wholesale trade. In the changes of our city it may be wanted for many purposes, it may be wanted as a place to store silks where a single speck of soot would destroy

the entire web. It ought to be left to these parties to use it for whatever they please. You are going to make it second or third rate property at best by allowing this structure to pass before it. You are changing its character forever so that the uses which it could be put to it can no longer be put to. There may be a time when they would want to use the upper stories there with a view of the river for one purpose or another, but it is forever darkened by the smoke, forever darkened by the soot, forever darkened by the cinders, forever rendered uncomfortable, forever rendered of less value than it is now. It is not at all likely that it will always be used for a planing mill. They are destroying one business now, but in the years to come if they are to enjoy this property, they destroy it for every other business to which it might naturally be put. Other railroads will want that ground, they will pay a high price for it if they could get in there. These people have blocked the way so that they have destroyed the possibility of selling it for anything of that kind. And, remember, they have not added in any way to the conveniences of these people, they have no more railroad facilities now than they had before. This improvement does not do them any good. They cannot reach it. If they build a side track from it, it would be only to darken the windows on another story if that were possible. So that they get no advantage. They have not the advantage that the rest of us have; they may ride out on it, but because they adjoin it they have none, they cannot ship a car by those roads from their mill, they have no access to it as they have to the Michigan Central; their property is so built that they do not have the connection with it that they do with the Michigan Central, so that they get nothing for all the injury that is done them and which is to last for all time to come.

Now, one of the advantages of owning real estate, one of the pleasant things about it, is to feel that it is yours forever, as our deeds read, to have and to hold forever to him and to his heirs and to his assigns. It is a little bit of God's earth that man has the exclusive right to. He has the right to sell it if he will, and to say to the man whom he puts in possession, "This is yours for all eternity; yours and your heirs' and your assigns'." If he does not want to sell it, it is pleasant to know that it will pass down to his children and to their children, and that the people of his blood may enjoy it for all years that are to come. But this property is to be injured during all that time. It is to be rendered second or third class, just as if you ran a railroad in front of the Russell house today and changed it from the very best property in the city to property that would be worth no more than if it were down on Franklin street or on Woodbridge street. And that was to last for all time, remember, because these incorporations are per-They are incorporated for 999 years, according to their articles, but the statute very kindly provides that they may renew the corporation for other like periods as those run out. So that it is practically a perpetual menace to this property—a perpetual injury-and these people must either sell it or must work at it under the disadvantages that are proven to exist. Now, let us suppose for a moment. Suppose this property had a retail trade worth two thousand dollars a year. How much is a retail trade that brings \$2,000 a year net profit worth, in round figures, to begin with? What sum invested, say at 5 per cent., will produce the \$2,000 a year? Suppose you want to get \$2,000 a year, and you want to put money enough in a bank—in the People's savings bank, or the Peninsular, or the State—to pay to some favorite child \$2,000 a year. They will give you 4 per cent. on it, and you will have to pile in there \$50,000 to produce for that child \$2,000 a year. Now, here is a business down there that brings these

people \$2,000 a year for their retail trade. It is going to be 2937 destroyed; that trade is going to be gone. Have they injured them \$50,000 or \$40,000 or \$30,000 by taking away that trade, or have they not? And remember that it is to be lost for all time, and the only way you can estimate with the eternity that lies before you in the injury is to say, what sum placed out at interest will bring this income? Suppose you make it 5 per cent., then you have got to take \$40,000 into the bank and deposit it there to make up for your retail trade. Suppose the fire risk is increased \$3,000 a year; how much have you got to deposit to provide against that increase? Suppose this union depot company says, "Very well, we have increased your fire risk, and we will deposit in the bank so that you may draw the interest on it every year enough to make up for your loss." They will have to carry into the bank \$60,000 and deposit it at 5 per cent., if they could get 5, to provide for that \$3,000 increase in the fire risk. And the testimony is undisputed. There would be \$40,000 at 5 per cent. to pay for the retail trade, and \$60,000 to pay for the increase in the fire risk; but is there any increase in the fire risk? Why, gentlemen, suppose that mill took fire today, how can they get an engine or a hook and ladder down River street to put out the fire? Talk about the electric wires making it impossible to protect property in this city, why, the building of this property on its face has destroyed all the utility of the fire department to all that river front. How can they get in there? ladder cannot be raised. They can run into a hole and that is about all, with their engine, but as Mr. Dickinson has pointed out to you, the increase in the fire risk is placed beyond all peradventure. These people are paying it, they have to pay it. Dare they go without insurance at the present time, when every train that is passing

2938 is in danger of setting them on fire, and don't they get their insurance as cheaply as they can? Why, they get it at the rates which Mr. Chapman fixed. They are not paying more than Mr. Chapman's rates, as I understand it. They are getting it as cheaply as they can, and they are compelled to carry a large insurance, not according to their wishes, but because they cannot avoid it, and they are compelled to insure themselves practically for twenty per cent. of the property; they are now carrying 30 per cent., or nearly that. Now, what amount invested will bring back that \$3,000, putting it at the minimum? Mr. Jones says it is from three to four thousand dollars net loss every year in insurance. Take it as \$3,000. It will take \$60,000 at 5 per cent. to provide for it,

\$40,000 to provide for the retail trade. Now, then, take the land, Suppose these young men are able to pay the rent for twenty-three The rent for twenty-three years that are yet to run of that lease it would - testimony of every witness who has been asked is that the land today is worth one-half less than it was before this structure went there, and the rent is worth half. There is \$9,000 a year which that property is worth less to these young men and to this company. Now, what sum placed at interest will produce that amount? You can figure it out for yourselves, gentlemen, in twenty-three years that are yet to run of that lease i- would amount to \$207,000, but you are not counting twenty-three years. For two whole years this whole concern has been kept busy trying to defend their rights and to get some price for their property. Trial after trial has been forced upon them, until, as you must know from your experience as business men, this very litigation must have cost them far more than this company is now willing to pay. If a man comes and wants your property for himself, you can bargain with him a little while, but if you find you cannot agree, you can say," I have not

time to talk about it." But the Backuses cannot stop. They are forced to keep on negotiating before a jury so that for two whole years their time has been practically absorbed by this company trying to compel them to take a less price for their property than they think it is worth. Ought you to compensate them for that? This company has them by the throat. It has the same power over them that the robber would have, although it has the law back of it, all society, the whole State, I may say, has come up and taken Backus by the throat and said, "We are going to make you sell to the union depot company; you got to sit here while we fix the price." One jury gives them a certain amount, an appeal is taken and it is brought back, but still they are held in this iron grasp of the State for this company. Now, these are all elements of damages, and you ought to consider them all. What you are bound to do is to compensate these people. You are not bound by what another jury did. When the other jury sat in this case this structure was not up. There could be no witnesses then to testify that it darkened Backus' mill; no cinders had come in from its engines; no soot had settled on the lumber; all these things have come around by demonstration since that time. There were no switches in front of Backus' then, and no reason to expect that there would be switches in front of Backus'. These things have been built since that time, and they have stood up there so that we have been able to collect the evidence of this injury now, and it is infinitely larger than any witness thought it would be before the structure was actually raised. All these elements of damage were conjectural before; all of them now have become a matter of demonstration and absolute proof. Now, then, suppose you put a value on the good will of this business; suppose you put a value on the injury

done to the real estate; when you have destroyed this mill, what are they going to lease their lumber yard for, their great warehouse? What will they use their warehouse for, what are they going to do? They know no other business. Suppose

today the courts of this State should say to me, we will no longer permit you to follow your profession, and at 53 I am compelled to abandon the business to which I have devoted myself since I was a boy of fifteen years. What else can I do, what can I turn to, what do I know? There are other and more profitable avenues open. A jury might say to me, why, become a builder of railroads, become a merchant prince, go and develop mines; but I do not know how to build railroads, I do not know how to sell goods, I do not know how to develop mines. I have devoted my life to one thing, and if I am shut off from that I am shut off from everything. This old man has devoted his sixty years, you might say, or fifty of the sixty years, because he brings you the picture of a boy of eleven years entering upon this business.

Mr. Dickinson: He is in his 70th year; he was 69 his last

birthday.

Col. ATKINSON: He is practically sixty years in his business, he has seen it all these years, he has seen its growth and he knows nothing else. What can Absalom Backus do? What can Henry Backus do, who is forty years of age? At forty a man is in his prime to do what he has learned to do, but he is too old to learn anything else. He has crossed the meridian where all things were possible to the place where only one thing can be done; and these men are to be thrown out; all their plans of life are to be changed; they are to be seen going around town, as Mr. Robison says, to see where they can locate and what they can do; they are to turn their warehouse into several the several through the s

yard to some other use or to some other kind of trade. And all this trade is new to them. Now remember, that of every 2941one hundred men who engage in trade in this country, ninety-five fail. When you get a man who has made a magnificent success, when you get a man who has commenced away down at the lowest round of the ladder and scaled it until he is almost upon the topmost round, you have one who has shown that he has devoted time, industry and ability, for which he ought to be paid. God has been good to him. Shall his fellow-men become his despoilers and rob him of the blessings which have been given? Now, I say, you are about to break up not only a business, but you practically break up three lives when you take this property. Oh, gentlemen of the jury, how small after all are the dollars and cents which can be given in compensation for all these things. Men have pride; they have pride in a successful career. That career is to be They are better for being active. They can only be active and successful at the same time in the career for which they have prepared themselves. They are better to be at work than idlers. It would be no blessing to these young men to give them money that would place them in idleness for the rest of their days. They had better be at work, but where can they work safely, where can they work prudently, where can they invest their money with the expectation of getting it back except in the business they have run, the business they have devoted their time to, to learn and know all about? So that you practically break up these lives, you break up

this business, you destroy the combinations which it took Absalom Backus years and years to bring about, of these properties separated and yet dependent on each other; separated a short distance, but still all the links in one chain, which brought him large profits in money from year to year. Now, there are many ways of estimations this dame of the standard of the

ing this damage. They will occur to yourselves, but what I 2942 beg of you is this: Do not, under the idea that you are doing some great public good, do this man or these men an irretrievable injury. No one is asking you to do it. The great and generous Commonwealth in which we live, which has loaned its mighty power of eminent domain to this company, has said to you, Guard the man who may be subjected to this power. The State is warning you, we have loaned this power to aid in acquiring property, but we have not loaned it for the purpose of oppression or the purpose of robbery. And it would be an abuse of one of the most extraordinary powers as well as one of the most sacred offices which man can possess, to give this property which belongs to the Backuses to this railroad company for one penny less than actual compensation. And compensation means a covering of every possible loss.

Recess till 2 p. m.

Mr. Baker's Argument.

2.30 P. M.

Mr. Baker: If the court please, before proceeding with the argument to the jury, I desire to call your honor's attention to certain questions of law relating to damages, or compensation that may be awarded in this case. And I disagree with my brethren as to the extent to which the respondents in the case are entitled to recover damages, and I have formulated my theories in regard to the damages in certain requests to charge. Brother Dickinson relies with a great deal of confidence upon the case of Weiden vs. Grand Rapids & Indiana R. R. Co., in the 70 Mich. But if your honor will examine that case you will see that it is a case where the entire property was taken by the railroad company, where it necessitated in and of

itself a removal of the business of the respondents from the property upon which they were carrying on business, and it

was a physical fact if the railroad company took the property, the business had to go to some other place. In that case Judge Campbell, in speaking of the rights of the property-owners, held that this interference with his business in compelling a removal of it was something to be considered in estimating the damages, but his remarks must be construed with reference to the case before him. In the case at bar we do not take any of the land that belongs to Mr. Backus or his sons, we merely go in front of it on the public highway, and the damages that he sustains are incidental damages. That is, they are such damages that occur to the property because this superstructure is built in front of it. If it was not on a public street, if that was private property, as explained by Brother Robison, he could not recover any damage, not a cent's worth of damage be-

cause whoever owns adjoining property has a right to make any legitimate use of it. So that when we come to consider this question of damages with reference to his business it depends, in my judgment, entirely upon the question of whether or not it is necessary or advisable, in view of the situation down there to remove his business to some other location, and I have requested your honor to instruct this jury that if the jury find the injury to the property is not so great as to make it necessary or advisable to remove the planing-mill and box business therefrom to another location then the

And in support of this doctrine I call your honor's attention to a number of decisions. A leading case upon that subject is found in the 107 Pa. State, 461. This is where a railroad company took a part of a lumber yard and a part of a wharf in Allegheny City, opposite Pittsburg. They have occasion in this case to consider the question of how far sales in the immediate locality should influence

the jury or should be considered as evidence of value. In other words, if the court please, the question as to what business is carried on there, and as to how profitable an institution it might be is merely an element to be considered in estab-

lishing the market value of the property.

The COURT: In other words, if a profitable business is carried on in connection with a certain site, the profitableness of the business itself must be taken into consideration by the jury in estimating the value?

Mr. Baker: Certainly, and that is all, and that is all there is to figure on. The figuring on profits to continue forever is simply ridiculous. That property is worth a certain amount of money before this railroad was built, and it is worth a certain amount of money

since, and the difference is the proper measure of value.

And now, gentlemen of the jury, I desire as briefly and as concisely as possible to lay before you the view of the petitioner in this case as to what the award should be to the respondents for building this elevated road in front of their property on River street. And we have heard in this case a great deal about the constitutional rights of the owner of private property in this country. They have gone to England, they have gone to Germany, but I know of no civilized country on earth at the present time where the owner of private property is not paid a compensation for his property when it is taken by the Government or by any corporation that performs a quasi public function, or that represents the public. There is undoubtedly no difference between the law of Germany in that respect and the law of England, and the law of America. In all civilized countries there is such a thing as the right of the government to take private property. It is called, to express it briefly, the right of eminent domain. That is the right of the people at large, whether they are

2945 represented by a sovereign, by a king, or by a parliament, or by a congress and a president to take private property when it is necessary for the public good, and that no owner of private property through caprice or undue attachment to his property can stand in the way of it. As has been said by my friends upon the other side, a railroad company in this country is permitted to con-

221 - 55

demn property to the public use, and is expressed by Judge Campbell, in the very case they cite, because they could not exist other-We could not have these improvements were it otherwise. It would be utterly impossible, gentlemen of the jury, to ever build a railroad, or to lay out a public highway, or an ordinary private way, or anything of that kind if every individual property-owner through which you should run would have a right to stop it by asking any price that he saw fit, in order to acquire his property. And while private ownership is protected, and rights are protected under the Constitution and laws of this country, at the same time a man cannot through caprice or because he thinks his property is worth ten or fifteen or a hundred times more than it is really worth, stop any such an enterprise. So that when you come to look at this, and when you come to see that while the Constitution protects the private ownership, protects the private owner in the ownership of his property and in the right to his property, there are limitations to it, to which he must submit for the public good. And this principle is very well illustrated in this case. Suppose the union depot company had to pay to Absalom Backus, Jr., & Sons whatever they saw fit to ask for that property? Suppose they were compelled to raise money and pay it out to satisfy their ideas, their ideas as to what their property is worth, and as to what their property is damaged in this case? Is there a corporation, is there an enterprise of this character in this city, either the Michigan Cen-

tral R. R. Co., the Detroit & Milwaukee Co. or the union depot Co., that could stand such a drain upon its treasury? Especially if all the property-owners along the line of River street had a right to boost their property, to elevate the value of it, and to insist upon being paid just exactly what they thought it was worth, without regard to right, justice, equity or good conscience, or anything of that kind. So that when Brother Dickinson comes in here and claims there is something about the constitution of Michigan that is peculiar to this country, that there is something in the doctrine of State rights that is peculiar in this country, that would protect a private owner, why he is simply making himself ridiculous. I undertake to say that the Constitution of the United States protects this private ownership just as much as the constitution of Michigan, and the State of Massachusetts, and a great many of the thirteen original States refuse to ratify the Constitution of the United States until they put in a provision that the Government of the United States should not take private property without making compensation. But that was at once not only a limitation upon the power of the Government, but it was a recognition of the necessities, of the necessity, gentlemen of the jury, of exercising this power of eminent domain as the public good required it. What would we do if every man could stop these enterprises, what would the Government do, what would the country do if every man had a right to say: Here, you cannot go by this property, you cannot take this property, I am so attached to it I won't sell it. I won't do anything about it. You can't have it. And that is what my learned friend rings the changes upon here hour after hour trying to

influence you and make you believe that there is something so dear and sacred in that planing-mill property down there that a railroad must not come within 40 miles of it. Now, gentlemen of the jury, when we come to look at the situation here, what do we find? We find that it was thought best, the money could be raised-probably could not be under present conditions-if the money could be raised to put this depot in the central part of the city. It is true they thought they could have a passenger depot at Twelfth street, and they have alluded to the thought that existed in 1882, that it would be possible to have a passenger depot at Twelfth street, but it proved false. It is no place for a depot to accommodate the public. It is no place for a depot to accommodate the people of this city, and the people who desire to do business with this city, and instead of building a passenger-house down there, they desired to put it up nearer the city, where it would furnish facilities to the traveling public, and it was thought best to go along River street. They would have you believe under the testimony of Peter Henkel and others that that is a street especially adapted for residence purposes, that that is a street where propertyowners are especially interested in having a view of Detroit river. That that is the street that is sacred and must not be used for public purposes, but when we go down there, gentlemen of the jury, we find a street that is lined upon one side, from beginning to end, with railroad property, with a great railroad yard. We go upon the other side of the property and we find nothing but manufacturing institutions and old residences that existed there years ago along the north side of River street from Twelfth street to the railroad, practically abandoned property years and years ago long before the elevated railroad and the union depot was thought of. A locality, gentlemen of the jury, where the manufacturing institutions and the railroad transport boats fill that atmosphere with smoke, with a cloud of cinders and soot and smoke, and make it just exactly what it was long before the union depot was thought of, a manufacturing locality, and a railroad locality. They had crossed that street right east of Mr. Backus' property, and a railroad crossing with some thirteen tracks, with the immense traffic of the Michigan Central going by there daily and nightly year in when this enterprise was started.

and year out, rendering that street at times impassable until travel had been diverted up Fort street and over a bridge there constructed for the public use. Now, that was the situation of this property when this enterprise was started. Why had Absalom Backus located his planing mill and box factory upon that street? He located it there because he wanted railroad facilities. He located it there because it was a manufacturing locality. He located it there because it was a proper place, as he thought, for his business to exist. He built up that factory, that institution, he had a lumber yard below, and he bought a storehouse above, so that he was reasonably well situated. Now, what use could he make of River street? Of what benefit was River street to him? And he had the same rights in that street that every other man has in the street in front of his property. What is a street for, gentlemen of the

jury? In the first place a street furnishes you ingress and egress to your property. In the next place a street furnishes a frontage where you can secure light. In the next place it furnishes you a means by which you can have gas pipes or water pipes laid to your property. In the next place it is a means by which you can use your property. Generally you can make use of this property, but his rights down there in that street were no different than the rights of the owner of any other property in this city. While in a technical sense he may own to the center of the street, yet all he has a right to do is to use that street in connection with his property. He has it in front of his premises. It is located there so that he can use it, and when the public desires to divert that

street to some other use, when any one desires to acquire that property for any other purpose, the question- to what extent, how much is he interfering with in the enjoyment of that street, and such things - connected with it. Now, you can conceive but two or three things of interest to him in that respect. As I say he has a right of ingress and egress. That is saved to him. My brothers would try to make out that it would be a great deal better if this road ran along the surface, but if they went along the surface it would destroy the use of that street. He would be deprived of the use of it, in hauling his lumber from his yard below to the mill. Is that interfered with? They come in her- and undertake to say that his draft horses and teams that he uses there are interfered with by this superstructure, but Mr. Backus himself admits on the stand that does not amount to very much. When we go down there to look at that property we see people driving along under that viaduct and, as I said during the examination of a witness in this case, once in a while you will get a rattle-headed horse that cannot learn anything and you cannot accustom him to any such place, but those are rare exceptions. Ordinarily a horse soon becomes accustomed to it, especially the kind of horses he uses, so that when we come right down to it, Absalom Backus and his sons can go on and use that street today just as much as they ever did. There is no perceptible influence upon it. There is no reason why he should not take loads of lumber or loads of hay or anything else and drive under that superstructure, because there is no perceptible difference in it. In fact, if you will look at the cross-beams over his gate you will notice it is not as high as the elevated road is, so that when you come down to the frightening of horses it is not true

as a matter of fact, that it is any serious inconvenience to him.

1. It does not amount to anything, it is of no consequence in this case.

What other rights has he there? He has the right to the light. And Brother Atkinson in his argument in this case assumed that the other jurymen who sat in this case were at a disadvantage because they could not see the superstructure. They could not see it—now, you can imagine the condition of this case, gentlemen of the jury, when it all depended upon inference, and the testimony of witnesses as to what was going to be there, as to what obstruction to the light was going to be there. Now, we have been there. This

jury have been there. You have looked at that property. You have seen trains passing by there. You have seen to what extent it hinders the light on that property. You know for yourselves. You don't have to take the testimony of Mr. Backus or his sons or any one else with regard to it, and you all know, as every sane man must know who has looked at the property, that that superstructure and the passing of trains has no perceptible effect on the light on those premises. Has no perceptible effect, no effect that would interfere with any workman on those premises, and in any spot or place on those premises. They talk about the drippings, the drippings and the oil, and they get up all sorts of stories as to how people would be interfered with in going over that property, and you can go from one end of that viaduct to the other and you cannot find a grease spot as big as a ten-cent piece, gentlemen of the jury. And traffic is going on there all day long, and at all hours, and still they say our light is obstructed and our lumber is covered with grease and with soot and cinders to such an extent that we cannot do business there. And they expect that 12 intelligent gentlemen who go down there and look at that property will be fools enough to believe that kind of a story. They have called attention to the fact that the

a story. They have called attention to the fact that the 2951 union depot company has not put those pans under there.

That was something that was put in by the common council just at the last stages of the enterprise. If any one wants those pans under there, they can be put under. If there is any occasion to put them there the union depot company will be only too glad. but we would like to have some call from somebody along that street showing that it is necessary or advisable to do it, and when you come to look at the ordinance in regard to the pan, you will find it is a pan to go right under the rails of the railroad track. They have been omitted from there, because there has never been any occasion for them, because there has been no dripping from them, not enough dripping to affect a load of Absalom Backus' lumber in a thousand years, not in a thousand years, to make one cent's worth of damage. Now, gentlemen of the jury, they say there is a great interference with that property because of an increase of a fire risk, and they find fault with me because I do not swear all the insurance agents and all the planing-mill people in this country with regard to it. Now, when I get the evidence according to the truth and according to the facts before the jury, I don't usually spend any further time in regard to it, and I just simply want to call your attention to what appears in evidence before you, by the undisputed testimony of Mr. Jones, and of Mr. Chapman, and the other witnesses in the case, and see whether there is anything in this insurance and in this fire-risk contention. A locomotive undoubtedly will throw cinders. A locomotive undoubtedly, if you open the fire-box and dump the fire-box on that structure, will throw fire. You have all noticed locomotives when in exertion, that the sparks will be lighted. That is, you can see them for some distance from the smokestack, but the farther away

they are the less you can see them. Not that the sparks are 2952 not there, not that the cinders are not there, but that they have gone out. And of course if you maintain inflammable material right alongside of a railroad, that a spark might possibly get into it occasionally, there is no doubt but what it would increase the fire risk, and ought to increase the fire risk. There can be no question about that. But it depends altogether, gentlemen of the jury, on what you have got alongside the railroad track. It all depends, gentlemen of the jury, on the nature of your structure, and how you take care of it, and what it consists of. Now, look at this property they have. They have a dust-arrester, and they have an open yard there, and in spite of the evidence that must be furnished to them by their own senses, they insist upon keeping it there. They insist upon keeping a sawdust vault there with two doors to it, one opening against a fence right close to and right under the elevated road so that when you stand upon the elevated road you can look right into it. They insist upon keeping another one that opens into a little yard, and insist upon hauling the sawdust and shavings out of there, and they keep it there, although that mill is liable to be burned up any day just simply because they expect if it is burned up before this matter is adjusted they can simply swell their damages, they can get their insurance and the old mill is gone anyway. When, if they had a particle of regard for their property they would go to work and see if they could not do something to avoid that fire risk, to avoid what they say necessitates a very large annual expenditure for increased insurance. Now, gentlemen of the jury, let me call your attention to this fact: When Mr. Jones went upon the stand he had to admit, just as we contend is the truth, that the fire risk upon the planing mill and all the other property there has not been increased on account of this, that is, it is not, so far as the actual risk is concerned, it is not increased. Mr. Chapman says that he does not know what the former rate was upon 2953

the shaving-house, but he goes down there and fixes a rate upon it for eight per cent. And is it any wonder, gentlemen of the jury, that left there as it is that nobody takes insurance upon that property? And we have a practical illustration of it, and I suppose my brethren thought they would stampede this jury with the fire that occurred down there. They had an old mansard roof, about 25 or 30 feet high, on a level with the passing trains so that sparks will blow right into that mansard roof. Now, the Peninsular Stove Company has probably learned something by that fire, and they will take some of the money they got from the union depot company and they will make corrections. They will not have this old mansard roof made of shingles and tin. They will have no such thing as that any longer. You can gamble on that. And of course Mr. Backus insists upon having this dust-arrester of his there in place of a better one, and having a sawdust vault and keeping it open so that it is on a direct line from the smokestack, he can expeet a fire, and he can expect to pay an increased insurance, and he can expect sooner or later that mill will be consumed by fire. But

is there any difficulty in avoiding that risk, is there any difficulty in getting that insurance rate down to what it was before this structure was built there? Is there any doubt about it on earth, gentlemen of the jury, when you consider the testimony in this case and the state of the art in regard to dust-arresters? You have heard the testimony in this case, and it appears that in 1882 Mr. Backus invented his dust-arrester, and his apparatus there, and that in 1885 or 1886 some ingenious individual invented this centrifugal-acting dust-arrester, and they can talk as much as they see fit about their dust-arrester, they have only succeeded in showing that three

of them are in use in this city, although here is where the 2954 owner of the patent lives, here is the best living example of

his dust-arrester, in this city with all the manufacturing institutions here, scattered over the Milwaukee road and the Michigan Central, around the city, and Delray and the Rouge, and there is not a single one of the large manufacturing institutions that use Not a single one. Go to the Saginaw valley, where there is nothing but planing mills and lumbering institutions, and woodworking institutions from one end of the valley to the other, and not one of them, with hardly an exception, but what uses this metallic dust-arrester that does its work as it ought to be, and as far as any outside exposure is concerued, is absolutely fireproof, because all you have to do is to make your shaving vault of a brick wall or of iron or of slate, and to put your centrifugal dust-arrester in it, and as far as any outside exposure is concerned, it is impossible to set it on fire. Now this means something, gentlemen of the jury, it means something when the entire trade, when all the men engaged in the business, when all the manufacturing institutions in the country practically, from Maine to Texas, make use of a device and Absalom Backus refuses to adopt it. And when you go down there and look at this dust-arrester, you will see it is on top of his prop-He has got a sawdust vault on the south end of it, there is no pretense that he feeds his boilers, his fire-boxes under his boilers, with that at all. North of that he has a dust-arrester, gentlemen of the jury, that is for shavings, and there is a connection between his vault and the boiler-house so that they can draw shavings from it and feed the fires under the boilers. Did anybody tell you, or did you see down there, how they got shavings out of that big vault? They go on and tell you how they use that space, and how the wind, when it blows, fills it right up full, thirty or forty feet long, and fifteen

or twenty feet across. Did they tell you how they got those shavings out of there so as to feed them to the fire-boxes?

They didn't bring that man out of that hole with an old shell hat on, and who goes up on top and tries to keep those burlaps on the outside clean. No, they didn't bring that out, but if you were down there looking at that property, and going around that property, you will see or did see how they operated it, how in the wall of that vault they have an opening through which they draw these shavings as to feed them to the fire-boxes. How do all these shavings get away over from the other side so they can feed them? Is that sensible, when we have the uncontradicted testimony

in this case that it is perfectly feasible to take one of these centrifugal-acting dust-arresters and by simply having a pipe right from the bottom of that dust-arrester right into the fire-box to feed it automatically. It is necessary to have a vault to take your refuse, and you can put that refuse in that vault and you don't need to burn the whole of them, you can burn any part of them you see fit, and from any part of your premises you see fit. It is only a question of a little more pipe. And if you haven't got fan power enough, all you have to do is to put — another fan and have another little engine, costing four or five hundred dollars perhaps, and have it operate that fan so as to blow this refuse a little further. But no, their dust-arrester is such a perfect one, and it works so magnificently, that they are bound to stick to it, although it increases the fire risk, although it increases the insurance rates, and it is just as plain to a man as anything can be that sooner or later, if they don't do something, that property will burn up. Now, gentlemen of the jury, cinders, of course, if they are hot and afire, and if they catch in the right sort of substance, will ignite, but they will not set fire against the brick wall, they will not set fire against glass,

they will not set fire against corrugated iron. They don't do anything of the kind. As a matter of fact, most of the cinders go out the minute they strike anything. Most of the cinders expire before they do strike anything in the air. So that when you come down to that it is perfectly easy to fix that River Street property so as to reduce the fire risk to a minimum and not

Street property so as to reduce the fire risk to a minimum and not cause any increase in the rates of insurance in any shape or manner, because all they have to do-and I have a little map made of this property that you can use, and you will find that there is a dustarrester here up on River street running back to their boiler-house, with the shaving vault right over the boiler-house, but you find they carry their kindling wood over their kilns, they carry their kindling wood by a carrier over the dry kiln, to a kindling-wood room that is between the office and the shed back of the office and the dry kilns. That is where they load their kindling wood, and in addition to that they have a large open space and a shed on the west side of their property, I don't know whether any of the jurymen went around there, but upon the west side of the property there is a shed and a large open space where it would be perfectly feasible to put all the refuse, sawdust and shavings they may have, there. Now, we found out upon the witness stand what an apparatus of this kind can be put in there for. It would cost about \$1,300 for the apparatus itself, and if he were to raise his walls it would be something more. \$2,000 would cover the entire thing, and take this combustible apparatus away from there and put it out of danger. There is no doubt about it. We have it verified completely when we examine the history of Mr. Backus in regard to this sub-We find in 1882 he started to make these dust-arresters and put in a number of them, and they were adopted to some extent, when this new invention came out in 1885, and was introduced, it

drove him out of the business and he has been out of it ever since, and will be out of it for all time. You may as well

ask a man if he were building a store or a nice house in the city of Detroit to put in old tallow candles and use them for lighting his premises as to ask a man building a planing mill today to use one of his dust-arresters. And he insists upon adhering to it, and he takes particular pains when the jury are down there to have those doors open when it is a risk every time he does it. And more than that, he goes down there and takes first-class lumber and puts it on River street so you can see it. Is that a place where he stores that kind of stuff? What are the facts in regard to the transaction of his business down there? The facts are he takes the lumber from his yard and hauls it up by teams just as they showed us, and they back their teams in that mill and they are dumped there and the lumber goes through the mill. He stores some of his uncut lumber in the fourth story and he takes it down and manufactures it and it goes out in that cart on his Fort Street front or it goes out on the Michigan Central side through those open she into the cars, and that is all he has to do in his mill. He does not use it as a place for storing lumber, that is worth fifty or sixty dollars a thousand, and he takes his overflow and refuse and sends it up on Fort street and puts it in their storehouse. Now, where, during the transaction of that business, where is the point that a large quantity of his product or of his lumber either dressed or undressed is exposed to the soot or cinders of the elevated road? There is no point in the transaction of this business where it occurs, gentlemen of the jury. If any cinders get upon his lumber they get upon it when it is in the lumber yard. We find that he piles his lumber right along the railroad track just as they do in the Saginaw valley, and does not even put up a tight board fence to keep off the cinders. It cannot be very much damage to him, gentlemen 2958 of the jury, if he does not even build an eight-foot fence

cinders. It cannot be very much damage to him, gentlemen of the jury, if he does not even build an eight-foot fence alongside of that roadway in order to protect this lumber. It is true, if a very live coal fell on a piece of dry lumber it might

scorch it, but that it makes any perceptible effect upon his lumber is ridiculous. If that were true, that live cinders fell upon the lumber, you could not have a lumber yard alongside of a railroad yard, and he would not pile lumber as he does within a few feet of this right of way where the railroad is running through there every hour, year in and year out. So that when you come to look at this matter of the cinders, you can see they build up a great fictitious fabric of theory that has no support as matter of fact. It has no foundation if it is true that all he has to do is to take his lumber up there and push it through his planing machines and take it into his mill and out on the other side, and he goes on with his business now in the same way just as he did before this railroad was built. And they talk about the interference of the retail trade down there. And they build upon this fact that they have a foreman down there by the name of Krombach and some of his friends who came down there and bought of him personally. Suppose Krombach dies, what will became of that business? And they would have you believe, gentlemen of the jury, that they lose two or three thousand dollars a year on that trade. Do you believe any such thing as

that? If men want to buy that material of Absalom Backus or his sons won't they go down there and inquire at the office or at the mill just the same as before? Is it reasonable to believe that trade could be diverted from that mill by the existence of this superstructure on River street, when it must be conceded that upon the situation of his property and his lumber yard, the principal and main use of his River Street front is simply a place to take in lumber to feed his mill with? There is no retail trade,

there is no purchaser that would insist on going down there on River street and seeing Krombach, and all he had to do was to stop on Fort street before he got down to the mill at all and buy it there before he got in front of that property; and if any man did go down to see Krombach, it was some of his friends or relatives, and it is a mere incidental thing; and still upon that they try to make this jury believe they lose two or three thousand dollars a year. But I noticed Mr. Absalom Backus, Jr., said he had no personal knowledge of the loss of any such business, so that where is this damage, gentlemen of the jury, where is this damage they talk about? Where do you find, as a matter of fact, there is any such interference with this property as to compel them to abandon that as a planing mill? And they have questioned me, that is, they have questioned my conduct in this case because I didn't swear witnesses. But, gentlemen of the jury, I have got twelve witnesses in this case that went down there and looked at that property; I have got twelve witnesses that went down and looked at that property before me this moment, and is it necessary to swear witnesses as to what is plain to the common sense and the eyes and the ears of the jury themselves? And I am only too glad, I am only too well pleased that it is not all in the fiction and in the brains of witnesses, but I have got a jury that have gone down there and looked at the property; they have seen that superstructure, they have seen that mill, and you can pass judgment upon it just as well as the most expert witnesses they can produce here. And it will be for you, gentlemen of the jury, to figure out how there is any such enormous damage and such great detriment to this property as they try to make out. It is for you to look at this testimony and see how far it is fictitious, to see how far it has any founda-

at the property, and it is upon that I rely. You have seen that superstructure there, and Col. Atkinson, in order to avoid the effect of the practical demonstration by your eyes, tries to make out there was something going on in this railroad company to prevent any demonstration before you; but you saw the business transacted there as it is ordinarily transacted. Many of you have seen it transacted there a long time before this trial commenced. Many of you have rode over that superstructure; many of you have passed along under that superstructure long before you were called as jurymen in this case, and you know as matter of fact, as every sensible man must know, that you saw business, when you went down as jurymen, transacted substantially as it is transacted every day. And I assert before you, because I know you are twelve men who have

eyes and who have ears, that when a train of cars passes by on that superstructure it has no effect whatever upon the light in that yard or upon that mill. It is absolutely without any effect, and the simple reason of it is, gentlemen of the jury, that there is too much broad daylight between the mill and the superstructure. They say the train passing by it obscures the view, and, that is all there is of it, and perhaps they are entitled to recover in this case because a train goes by and they cannot see the blue waters of the Detroit river quite as frequently or quite as pleasantly as they could before. But so far as a train of cars passing along that superstructure is concerned, it does not affect the light in any way, shape or manner. Now, gentlemen of the jury, you go into that mill and you will see how much light they have got, and they have introduced witness after witness to show how much light they need. They have got a contradiction of all their testimony right before your own eyes. They put their planing machines in a

basement, in a room where the only accession to the property is through the open doorways where they unload lumber. There are on the west side the openings in the alley, some windows; upon the other side are covered sheds, gentlemen of the jury, where they store their finished product and load it into cars on the Michigan Central road, and so far as that basement is concerned there is no light there except what comes through two or three open doorways where they back in the lumber and unload it. And yet, with all the years that mill property has been there Absalom Backus & Sons have never opened an area in that wall on the north part of that building. And if you remember the wall, the north wall of that mill property where they have those gas jets burning, you will remember an open yard in front, and there would not be any trouble in putting an area down there four or five feet and putting in a window at any time. Still it has been there all these years since 1882, and they have never dreamed of such a thing as lighting the front part of that mill, when there is not a basement in the business part of the city of Detroit, hardly, but what is lighted in that way. And there they have plenty of space in which to do it. So that when they talk about this question of light, it is not true that they need such an infernal lot of light in order to operate these machines, and it is not true that they cannot have it at a very small expense if the elevated railroad had any effect upon it, and it is not true that the elevated road affects those machines or the light around those machines to any perceptible extent whatever. And still they build up before you a fabric that would lead you to believe that they were in Ethiopian darkness, in that basement, on account of that superstructure, but they are located so that a section of the Rocky mountains would not darken it more, or Mount Shasti itself, casting its dark shadow on that

2962 mill and affecting the light in that property. Now, gentlemen of the jury, you can take a piece of property and build up a high building and you go a reasonable distance from it and you can build up another high building, and you get plenty of broad daylight between the two, the open broad daylight of the

blue canopy of heaven above you and within reasonable view on either side, and one structure will not perceptibly darken the light in the other. And Colonel Atkinson claims it is perfectly dark under this superstructure. He builds up a wall 25 feet high there. Now you see it. You saw how dark it is under that. The superstructure itself is not solid. The ties are open, the sides are open, and it is broad daylight under there as long as it is broad daylight anywhere. And as Brother Robison says, if there is anything that shuts off their light it is not the superstructure; it is this shed they built themselves, and the only light they have for the basement is the light that comes through the open doorways through which they pass the lumber. Now, gentlemen of the jury, we have heard a great deal about the dust and soot and cinders upon this lumber, but I have shown to you there is no spot from the transit of that lumber from the lumber yard below to the storehouse above where it is stored, where it can be subjected to any such thing, unless they put it on there on purpose to deceive somebody. And we have a complete contradiction of it, gentlemen of the jury, in the fact that they have constructed their shed, the place where they put their lumber before putting it on the cars, we find it an open shed without any sides at all upon the Michigan side of that property, and as we went down there the other day, we went over the Fort Street bridge and we could see those sidings, and we went under that shed, and we found some of their finished product, some two weeks' stuff piled up there, and those sheds exposed to

the Michigan Central yards. There is a long distance, quite a number of feet, where they have got nothing under heavens alongside of the Michigan Central property but a roof, with trains passing right by there, but Mr. Backus would have you believe, that the wind always blows from the west; that we do not have any east wind or any wind that would blow from the Michigan Central track. They don't do any harm there; they don't throw any cinders that can affect the product they have there. It all comes from the elevated road and nothing else. It is a wonder that the jury going down there and looking at the property-that such an argument could be made to you; that such a contention could be made here; that this elevated road is so utterly dangerous to this property, that they would have to move away from there, although they have been doing business right along with the same kind of exposure and they have purposely built their store-sheds where they pile the finished produce, open, they put in these sheds until they can get a freight car, and these sheds are open. It may be well enough, gentlemen of the jury, to make all these arguments, and we certainly, as far as the company is concerned, we would be in a hole here, or we would be laboring under great difficulty if you

Mr. Dickinson: Did you see any finished lumber under those sheds?

Mr. BAKER: Yes, sir; there is a pile of two-inch square pickets or something of that kind piled up there. And it is a place made for them. Mr. Backus testified that is the place they do ship from,

could not see this property.

that is the only place they have got to ship from. There is no other place where they can load on a freight car. Oh, no, no, they can put it out there alongside of the Michigan Central, the place where they have made for it, and it won't be injured, but if they just pass under this elevated road, and into that saw-mill, it

2964 is ruined. They have got to abandon it. They can't do it. When it don't stop under the elevated road; it don't stop in that cart between the shed and the mill; they just simply drive in there and shove it off the hind end of these trucks and it is passed through those machines. Will somebody tell me where this elevated road injures this lumber? Where is their finished product exposed to anything except the Michigan Central? Where does the lumber stop so that the elevated road could injure it? Where it there anything that interferes with the management of this business or the conduct of this business? If there is any such thing it is not open to the senses. It is not to be seen there. So that when you come right down to it, it is hard to determine just exactly what Mr. Backus' damages do consist of. He has got this property there. He may some time or other want to make something else out of it and it may be possibly that one of these posts or supports to the superstructure along the curb may be in his way, but I notice those posts when they were put there were put there so that they do not interfere with his gate or the approaches to his gate. So that he can drive in there just the same as he ever could. Is not this a good deal of a bugbear, a good deal of a nightmare to Absalom Backus and his sons? Have they tried, gentlemen of the jury, to lessen this injury, or to avoid the risk incident to this? And after this litigation is over, after this matter is settled, how long will it take the ingenious brain of Absalom Backus and his sons there to go to work and fix this property so they would not burn in a thousand years, as far as the railroad is concerned. Any good mechanic, any man with a clever head in that sort of thing knows it can be done. To avoid every risk it is not necessary to have a mansard roof strung along there. It is not necessary to have a burlap arrester. It is not necessary to have sawdust scattered around that yard, and underneath that superstructure there.

to ignite whenever a spark or cinder or something falls from that elevated road. It is not necessary to have this dust apparatus in that part of the yard at all. And still, because he has got it there, they come in and one counsel claims \$250,000, about twice or three times what the entire property is worth, and the other counsel says that is not enough, they ought to have \$500,000, ought to have twice that amount. And they expect you are going to believe, and

that you are going to render them some such verdict.

Now, gentlemen of the jury, a few words about the value of that property. It is not very important in this case, because the injury to it would be about the same whether it is worth \$250,000 or whether it is worth \$100,000, but they are anxious to have it appear in this case about what the property was worth as a matter of comparison, as being of some little assistance to the jury. The jury could see how utterly absurd it would be to give them any very

great amount of money in this case. Because if you take the testimony and look at it carefully, you will find in the first place, according to the best testimony we can get, the real estate itself as it is situated there is worth from 45 to 50 thousand dollars and it is a very liberal estimate. There are 238 feet of it on River street and 75 feet of it on Fort street. Now, the Fort Street frontage runs back only halfway. Certainly \$150 a foot is a good estimate for that, and \$150 a foot is a good estimate for the other, and when you figure that up it is something like \$46,000. Now, you can buy a pretty good piece of real estate for that amount of money, and as far as the Michigan Central crossing is concerned, why Michigan Central connections you can get anywhere. You can get railroad facilities any place around this city or down in Wyandotte. Any

quantity of sidings will be put in for you and all you have to do is to build their plant and ask for them. And I notice

Mr. Huvett, when he located located right in the line of railroad, right in an angle of two roads. When Mr. Thompson located he located on the Michigan Central so that their main line runs adjacent to his property 100 feet and on the line of a navigable stream, the River Rouge. So that when you come down to railroad connections, it is the cheapest kind of a thing and there is any quantity of real estate all around this city where you can obtain these facilities. There is no question about it and there is no occasion to swear witnesses about it because any man with common sense knows it. New, gentlemen of the jury, what is the plant worth there, as they have built it up and the machinery? Of course we could not go down there and take a perfectly accurate estimate, but we showed that property could be duplicated, brand new, according to the judgment of the men we sent there, for about \$100,000, and the Backuses come here and swell that to pretty nearly \$200,000. Now, gentlemen of the jury, it don't matter how much that cost. It don't matter what it could be duplicated for. The correct rule of damages in such a case as this would be the difference in the market value of this property before and the market value after this elevated road was built. It is possible that planing-mill property is not very salable, that is, it is not often sold. A large property like this is not often sold. But, do you believe, gentlemen of the jury, that that property could have been sold before this superstructure was built, for \$100,000? That is a fair question to submit to this jury. Much less could it have been sold for \$150,000, while it might cost-while it might take years to build up a property of this kind, while it might take a farmer years to make his farm productive, or a manufacturer years to make his plant productive, if you put it on the market you would certainly have to sell it

for much less than it actually cost. That is the experience of every one. After this superstructure was built there how much less is it worth? Now, we cannot form anything more than a judgment in regard to it. There is no accurate way of determining it. We can only look at the property, we can look at what it was designed for, we can look at the uses to which it can be put, we can look at it as it is there, and we can determine how

much this elevated road really affects that property, really affects the value of it as a manufacturing plant existing there as it does today. There is no practical difficulty about that, because we know what a railroad is and we know what a planing mill is, and we know very well that Absalom Backus & Sons are not the only men on earth that know how to run a planing mill. I have no doubt there are members of this jury that have just as good a knowledge of it in a general way as the Backuses have. There are other men in the business, there are other men that seem to thrive in the business, and the idea that they have something down there that simply eclipses all humanity is simply ridiculous. They have a planing mill there, they have machinery which they have used in the mill a good many years. It is worth just exactly what it is capable of being used for, just exactly what it can be made productive of, the amount of capital it can be made productive upon, and no more and no less. And when any one undertakes to argue they can't make as much mon there today as they could in 1892, they are simply fooling thems 38. They are just simply allowing the imagination of Absalom B aus and his sons to run away with They are just simply taking a view of it that magnifies the difficulty, building up a fictitious fabric, a speculative fabric that has no real foundation in truth. And they have not pointed it out. They can appeal to you in regard to Mr. Backus' age and the life his sons have followed in building up this property, but it does

not change that property, it does not change the planing-2968 mill business. It does not change the fact that you can go down to that lumber yard and you can take 2,500 or 3,000 feet on to one of those trucks and you can shove it through these planing mills and make flooring of it, or you can put it through a resaw and make thinner boards of it, and you can send it on to that mill and make it into anything you want and sell and dispose of it in the open markets, just as they could eighteen months ago. They try to show us a great dea! of this discolored lumber down there and sappy lumber. Of course lumber is becoming poorer in this country every year-they sort it closer. There is a lot of inferior lumber, but will anybody tell me why they can't make just as nice stuff as you could eighteen months ago? Where is the point or place where it could be so covered with soot and cinders as to be affected in its value? There is no place, unless they purposely and wilfully put it out and expose it after they have dressed it, either to the beatings of the cinders and smoke of the Michigan Central or this elevated road. And if they have done business all these years alongside of the Michigan Central with all the exposure, I do not see why they cannot do it now. You go down and look at those sheds where they store the finished product and you will see just exactly how it is. It is perfectly apparent and perfectly plain that they have fully as much if not more exposure, and in fact the only exposure that is in that entire mill upon their finished product, their dressed lumber, is in those sheds, and not when the rough lumber is passing under that viaduct and into the south end of that mill. So that when we come to look at the value of that

property, when we come to look at the situation of this property, when we come to look at the nature of the business, we can see that this elevated road has very little if any effect upon it. If it has any effect, as pointed out by Mr. Robison, and as I

frankly concede it has, it is in connection with the fire risk. and my brethren can talk here and talk as much as they see fit in regard to it, the fact is when you come to examine that, the increased insurance is because of the present situation of that property, because of the exposed condition of the property, if they leave it the way it is. It is precisely in the same condition with reference to a fire risk as the Peninsular stove works property was when they had that old mansard roof, with its rotten shingles up there on a level with the smokestack of these engines, and if they persist in leaving it there in that exposed condition, of course there is increased risk in the insurance, and of course insurance people will be shy of that risk and shy of that property. But, gentlemen of the jury, while Mr. Jones is compelled to come on this stand and concede the companies have not increased the risk on the mill, or upon any other part of that property except the power-house, he does undertake to tell us something about this 80 per cent. clause, and he shows his skill as an insurance agent when he undertakes to tell us about that, and he tries to make out that it is forced upon a man to take 80 per cent. That would be well enough in our case if it was true. That he took his increased insurance because of the 80 per cent. clause, but that 80 per cent. clause is not to the effect that a man is compelled to take 80 per cent. insurance. All it provides for is that if he takes less than 80 %, and there is a partial loss-if there is a total loss he gets the entire amount he is insured for, but if there is a partial loss he has to bear some proportion of that loss as he would bear the loss if it was a total one. the insurance companies found that with the improved fire apparatus that we have in the cities and the care that is taken of these manufacturing plants, the great majority of losses are partial

losses, and under the old method they would have to foot the whole bill as if it were a total loss, only insuring for 80 % of the total value, the insured carried some of the risk himself and therefore was correspondingly interested in preserving his property from fire. So that when Mr. Jones testifies to that he testifies to something that is not true, and he is trying to make out something that is not true, and you will remember Mr. Backus had to admit that he did his insurance long before he had any litigation with any railway company, and that he went upon the stand in these cases and testified he was going to increase the risk, and of course when the railroad was built and put through the lumber yard he did increase the risk, and when this was built he did increase the risk, but how did he do it? They went and asked Mr. Chapman to fix a rate upon that shaving-house, that was all. And they figured \$4,500 increased insurance out of this. Jones lays it all to this elevated structure. Now, if Mr. Backus desires to carry more insurance than he did before, there is no objection to his doing that. If he has the money to pay these insurance people and he does not

want to run any risk, there is no objection to that. If he wants to pay it to these insurance companies in order to get his protection in that way, we have no fault to find, although we submit that under the evidence in this case it would be a good deal better for him to make a comparatively small expenditure in improving his property and in putting it in shape and in putting in modern dust-arresters and putting his shaving vault in such a shape so that the insurance companies would not charge this 80 % upon that shaving value and would even reduce, as they say, the insurance upon the other parts of that property. But, as suggested by Brother Robison, and there is evidently a good deal of truth in it, he is so wedded to that

dust-arrester that he patented, that he invented, that he claims is the best on earth, that he had rather pay the insur-

ance companies this increased amount than to make a change or admit that he is wrong, or admit that somebody else is superior in inventive power and has invented an apparatus that double discounts it as far as doing the work is concerned, and as far as the fire risk is concerned. So far excelled him that it has driven him utterly and completely from the trade, so far excelled him that they have monopolized the business throughout the United States and Canada, and there is nobody but wagon-makers, J. C. Wilson & Co., and one other company down here that pay him the honor of using this rat-trap they had there years ago.

Mr. Dickinson: May I ask a question. Is there any testimony they would not increase the rate if the centrifugal dust-arrester had

been put in?

2971

Mr. BAKER: Gentlemen of the jury, all we could show, and all anybody could show would be the facts in regard to it. The situation of the property, the way it is situated, and show the way other property is insured, and to show how other people do it, and it is entirely fictitious when they argue that this dust-arrester has no affect upon the fire risk. I am willing to concede the stronger they make that the nearer it is to the truth and the better I like it. cause there can be no possible question that if they go on there just as they are now, that if he keeps that vault open down there, where you can stand up alongside of an engine on that track and look right into it, there can be no possible question, if they keep sawdust strewn around that yard, and using that proporty just as they are using it, and keep that burlap dust-arrester on top of that property, so that when cinders are blown into it, when the mili is not in operation, it will be liable to be burned up, and there is just the same kind of risk at the Peninsular stove works, and

2972 that illustrates it better than anything else possibly could and if they can make anything out of that they are welcome to it, because I think we fully realize what the danger from a locomotive is. They have reduced it to a minimum, they have reduced it so that it is upon very rare occasions they will set fire, but that they will do it, no man can deny and no man cares to deny. It is only necessary for men who have property alongside of a railroad and exposed to that risk to put their property so that when the cinders strike they will go out. It is so plain that a ten-year-old

223 - 55

boy from a mechanical school could put that mill in shape so that it would not burn in a thousand years. That is perfectly plain to my mind, and plain to this jury if it is not plain to my distinguished friends who represent the other side.

Col. ATKINSON: I did not catch your answer to Mr. Dickinson's

question.

Mr. BAKER: No, I suppose not. Brother Dickinson would have this case disposed of on expert testimony. That is, he would get us up in this world of high skill, that there is nobody knows how to run a matching machine but somebody down there in Backus' mill, that nobody knows how to dress lumber except they use some machine that he has got, or some workman that he has got. They don't seem to realize that the planing-mill business is one of the most common on earth. You can't go to a little village or any considerable town in the United States but what you will find something of that kind. They are everywhere and it is common knowledge what they are. That they are not really extra hazardous there can be no question. That they are naturally subject to losses by fire more than ordinary property is beyond question, and what I desire this jury to do is to consider that independently, to take into consideration the natural risks that that property is subject to and see how much additional if any risk it is subject to or increased hazard

because of this elevated structure. And because of the passing of the trains, and it seems to me, gentlemen of the jury, that it must be perfectly apparent to any one that the fact that it is put up there is of itself a very great protection. Because the cinders have further to fall, the further they go the less liable they are Whereas, if you had it on the grade with the Michigan Central, blowing right into your open sheds, it might set fire if the wind was in the right direction. So that when you come to look at it, the increased risk there is from two causes only. They do not store sawdust, they have only a floor out there between the fence and the mill, that is all. It is the open court. All the increased fire risk is right where the insurance agent put it, right on that dust-arrester just as it stands there, principally because of the burlap existing there on top of the property and partly because of those open doors. You will remember they do not feed that sawdust into their fire-boxes at all. They only use a part of their kindling wood and their shavings. That the sawdust vault on the south end of that property is merely used as a place to store sawdust and they haul it away by teams. They have not had the foresight, they have not had the judgment or the good sense even to put a galvanized sheet-iron covering over that door extending it out to the fence, or a galvanized sheet-iron awning over the other door that extends into the yard, they have not done anything with it except the moment the jury go down there to look at it they go and open those doors. do not know what they do when the jury are not there, but what I want to call your attention to is that hey haul it away in wagons or carts when it is perfectly feasible to blow that sawdust from another part of the yard, or it is perfectly feasible to make a little

enclosure there and pack that sawdust. They now have machines to press sawdust just as they press hay, and they can pack it and bind it up with wire and ship that sawdust all over the country. Nothing of the kind in use there, although they say this is an article of commerce and although their property is so constructed that they have to haul it away from there with carts. Now the idea of insisting on keeping that there in the face of this testimony; we do not have to have insurance agents or any one to tell us what will cause a fire. That is common knowledge. understand it just as well as all the insurance agents or planing-mill people on earth. If there is dry sawdust, or any kind of dust, from one of those mills, collected in any considerable quantities, and fire gets there, of course it will burn. And if it is confined it may be subject to explosion, just as flouring mills have been known to explode, and this sawdust vault might blow up any day, if you should light a match in it. Now, it may be all right enough to come in here and ring changes on this insurance, and to figure the percentage and show how many hundreds of thousands of dollars it would cost to avoid that risk, but I take it that practical, sensible men will readily see it can be avoided at a nominal expense, at the expense of \$1,500 or \$2,000, possibly five thousand dollars. Put that vault in some other place or enclose it, and dispose of it instead of moving it with wagons. There must be a limited demand anyhow, but it may be made into cakes about as big as a bundle of hay and shipped all over the country and disposed of. And do you suppose when we are through with this matter that they won't do Do you suppose this mill will ever burn up from this superstructure, if we get through litigation without its being burned up, that these ingenious mechanics, the greatest in the State, will not go to work and fix that property so as to avoid that risk? They have not done it before simply because they either wanted

the mill to burn up so as to swell their damages, or they 2975wanted to have their case and ring their charges on it through the eloquent counsel until they have misled the jury and got a large sum of money from this company. When you come down to it, the real facts, the damage is small, and whatever you do give them, as suggested by Mr. Robison, will be more a matter of sentiment than anything else. Because today that Absalom Backus and Henry Backus and Newton Backus cannot go on with their business, cannot conduct it just as well as they ever conducted it, can't make as much money as they ever made, to my mind is an absurdity, and if it is true it is because of some other cause and some other influence that is operating on that business than this They are trying to unload either an unprofitable business upon this company, or they are trying to magnify these damages so as to get out whole any way, shape or manner they can do it, and still have their property left, because you must remember in your deliberations, that when you bring in your reward that it is just so much money for them and they have their property left. They have that entire plant, they have all that machinery. have the lumber yard down below there, they have their warehouse up on Fort street, and they dominate and control it the same as when they bought it. So it is only necessary for you, gentlemen of the jury, to see how far this mill property is affected in value. How far they have been really damaged by the construction of this elevated structure and the operation of this railroad, and there is no doubt you should consider this fact, that they propose to operate that railroad there for all time. That railroad was not built there to look at, that railroad was built there for the purpose of operating railroad trains, and the more trains that are operated there

the better it will be for the union depot company, and it behooves people who live along or have property along the line of that superstructure to adapt their property to the changed condition and put it in shape so that the winds of heaven may blow from the north, or from the south, the east or the west, the fire from these locomotives cannot cause them to be consumed, and if in the meantime, before they make those changes they propose to pay increased insurance and carry a high amount of insurance, that is in accordance with their judgment, but it is not something that should be charged to my client or should be charged to this enter-We should pay what injury we do to this property, judged reasonably and sensibly and upon the facts that have been put in evidence here by the witnesses, and over and above all that, gentlemen of the jury, by your own judgment, by what you have seen down there, by the operations of that planing mill as you have seen it carried on, and as you know the business must be carried on. Exercise your judgment upon that subject. Make a fair and reasonable estimate as to the amount of these damages. Add a little something for sentiment and bring in your reward, and if you are sensible men, as I think you are, this company will be perfectly satisfied with the result. And with these remarks, gentlemen of the jury, I submit the case for your consideration.

2977

Charge of the Court.

GARTNER, J.:

GENTLEMEN OF THE JURY: I invite your cool, calm, careful and conscientious consideration to the matters about to be submitted to The case is one of more than ordinary interest. The importance to the petitioner and respondents, the interests involved, the eminence and ability of learned counsel engaged, the wisdom and legal learning shown, the more than ordinary interest exhibited, the far more than ordinary eloquence displayed and to which you have been unwearied listeners, the great earnestness in the presentation and contest made, all imperiously demand that you seek well and faithfully to perform the further duty which now devolves upon you, and bring to bear in the matters about to be submitted to you a cool and unbiased judgment and a careful consideration of the facts as you may find them, supported by the evidence produced, with a firm resolve to do your duty, your whole duty, to all the parties, without fear or favor, and without regard for the opinion of others as to conclusions honestly reached. The matter

has assumed that shape to be, as I have said, one of more than ordinary interest. Its final determination rests largely, if not entirely, with you; your responsibility must not be underestimated. The question before you is (as I will more fully explain hereafter) what compensation are the respondents entitled to as the owners of certain property, by reason of the construction of the superstructure in and along River street? Opportunity has been given you to fully examine the situation and condition of respondents' property, as well as the superstructure of the petitioner. Such view and such examinations as have been made by you, together with the

evidence admitted during the hearing, as well as all the arguments made, based upon and supported by the evidence

admitted, constitute collectively the basis upon anich your conclusions should rest. Your award should be the result of a careful, thoughtful and conscientious consideration of all these matters, remembering that what you have before you upon which to base your award is the knowledge you obtained by viewing the premises, the evidence and all the evidence admitted in the case, and the arguments made, in so far as you find such arguments supported by the evidence as you may find it. The evidence and the particular weight to be given to the testimony of any witness, or whether such testimony should be disregarded, are matters upon which I cannot in any way enlighten you. This is a matter belonging solely to the jury, and no judge is or should be permitted to enter upon, explain, elaborate upon, or express by intimation or otherwise, any opinion to a jury upon this peculiarly absolute province of the jury, in a controversy of this nature. I will, however, add that you should not suppose the existence of facts not supported by your view or observation of the premises, or the evidence admitted in the case, unless it be in instances where common experience and frequent observation show a fact fairly inferable though not fully established by the view of the premises or by the testimony in the case. But the former must be established by evidence before you; you should infer or presume the second. What you may infer as a fact must be a conclusion logically reached from facts established by evidence and resting in common experience.

Thus far I have dealt in the broadest generalities, but I may say that keeping these matters before you, your duty will be well done; failing, you are likely to be led into error which may terminate in

rank injustice to either party.

The power of eminent domain, or in other words, the 2979 power to take private property for public uses, is in the State. All property is subject to this power. It is a power recognized under the Constitution and law of the land; it is a power delegated by the people to and vested in the legislature, subject to certain constitutional limitations, and can only be exercised by virtue of a legislative enactment given in express terms or by necessary implication. The power of the legislature was, by the constitution of 1850 of this State, limited and restricted in this. By article 18, section 2, it is provided that "When private property is taken for the use and benefit of the public, the necessity for using

such property, and the just compensation to be made therefor, except when to be made by the State, should be ascertained by a jury of twelve freeholders residing in the vicinity of such property," etc. Thus you will observe that the questions of necessity and compensation are for the jury and are not in any way subject to legislative interference, and while the manner of procedure may be and is prescribed by statute, still any statute upon the subject which fails to observe and provide for every constitutional safeguard would be

inoperative and void.

That the petitioner, under the statute under which it is incorporated, is vested with the exercise of this power of eminent domain, is not and cannot be questioned. Certain proceedings have heretofore been had in this matter, and I call attention to them only for the purpose of stating to you that the question of the necessity for the taking—and which, as I have already stated, is one of the questions to be determined under the provision of the constitution—is settled. That question, viz., necessity, has been determined, and with that you have nothing to do. That has passed out of the case and is not before you. The question, and the only question before you for your determined.

question before you for your determination is that of compensation and of compensation only. Your duty and your only duty is to ascertain and determine what compensation or damages ought justly to be paid by the Fort Street Union Depot Company to the respondents for the real estate, property, franchises,

easements and privileges described in the petition, viz:

1. The amount to be allowed to Absalom Backus, Jr., as the owner

of the fee of the land described.

2. The amount to be allowed to A. Backus, Jr., & Sons, a corpora-

tion, as tenants in possession of such lands.

Upon this question, viz: compensation or damages, what I have to say must necessarily be in a broad and the most general way. This is a question for you, and from the very nature of a proceeding of this character you are vested with large powers and great discretion. These powers and this discretion should not be exercised arbitrarily, nor without proper regard for substantial justice. You should bear in mind that the greater the power, the more jealous is the law of its careful exercise, and the greater is the responsibility of the persons vested therewith. You should exercise a cool, careful, intelligent and unbiased judgment. The compensation or damages must be neither inadequate or excessive, and your award must not furnish a just inference of the existence of undue influence, partiality, bias and prejudice, or unfaithfulness in the discharge of the duties imposed upon you. You must, however, remember that the respondents' property is taken, or its enjoyment interfered with under the so-called power of eminent domain, a power somewhat and necessarily arbitrary in its character, and that where this is done the party whose property is taken, or whose enjoyment or use of the property is interfered with, is entitled to full compensation for the injury inflicted. While the allowance to be made should be liberal, still it must not be unreasonably

2981 exorbitant or grossly excessive. It should be a fair and liberal allowance and full and adequate compensation for the damages inflicted. You should not allow too little nor should you allow too much. Your award should be based upon that which is real and what is substantial, and not upon what is either fictitious or speculative. You should look at the conditions of things as they exist. Under the constitution and laws the right to take another's property for public uses, the power to exercise the right of eminent domain, is a part of the law of the land, but when this power is exercised it can only be done by giving the party whose property is taken or whose use and enjoyment of such property is interfered with, full and adequate compensation, not excessive or exorbitant, but just compensation.

I shall not call attention to any particular part of the testimony in the case; the responsibility of its application and the weight to be given it rests with you, always regarding that which is real and substantial and disregarding that which is fictitious and speculative; treating conditions as they have been shown and as they are, without speculating as to what might possibly happen or occur, taking conditions as you find them, and the natural and probable

consequences following such conditions.

I do not want to leave this case without again impressing upon your minds your great responsibility. You want to and must do that which is just and right by the petitioner, that which is just and right by the respondents. You have before you such knowledge as you obtained by viewing the premises, the evidence admitted in the case, the arguments of counsel, and which, as I have said, you may consider, in so far as supported by the evidence, and also the little that I have had to say to you. These matters are to be your guide absolutely and solely in the determination of the question involved. Let me impress upon you that in a court of jus-

2982 tice friendship ceases. We know no friends, we know no enemies, we do no favors. Here we are actuated by reason only, in its most cool, calculating, deliberate and unsympathetic spirit. Favor, offend, displease, are words which neither in thought nor spirit have meaning here. To do what is just and right is and should be our sole and absolute object. In the settling and determination of rights, in the administration of the law, acquaintances, associations and friendships are not in any way factors. Purity and honest intention, the careful exercise of honest judgment, with a firm resolve to do exact justice, are the only virtues. These principles are predominate and the indomitable spirit to do right is the only

incentive which actuates an honest mind and an honest man.

Gentlemen, the matter is now in your hands. Discharge your duty faithfully and honestly. I invoke in you the spirit so beautifully, though figuratively exemplified in the Goddess of Justice, who, blindfolded, weighs in the scale every human action and fearlessly determines the right, without passion, without prejudice, and regardless of and uninfluenced by wealth, position, or any thought

and sentiment not just and pure.

2983

THE FORT STREET UNION DEPOT COMPANY vs.
A. BACKUS, JR., & SONS.

NOVEMBER 6, 1893.

Defendants' Exceptions to the Charge of the Court.

Mr. Dickinson: I except to the sitting of the court and his charge to the jury generally, and to the fact of his charging the jury.

We except to his statement to the jury that the question of neces-

sity is disposed of, and that they have nothing to do with it.

We except to that part of the charge of the court wherein he says that the damages are to be confined to the damage to the real estate described and the improvements upon it; whereas, in our view, the damages are to the entire plant, including the injury to the business from the impairment of the mill as affecting its adjuncts, the lumber yard and the storehouse.

We except to the statement of the court as to avoiding undue influence, prejudice and all that is stated in that connection, in view of what had heretofore appeared as to the verdict theretofore rendered having been set aside as excessive; to that which was said also as to taking care to avoid any grossly excessive verdict in view of what has been said in the course of the trial and appearing on the record, that the prior verdict was set aside as excessive. To what is said in another place for the same reasons, as to avoiding an ex-

2984 cessive or exorbitant verdict; to what is said by the court as to avoiding the giving of speculative damages, in view of what has been said before by the court in regarding to taking into consideration the profits. I refer to what has been said upon the records in the course of the testimony and upon the argument, expressing the views of the court against taking into consideration the profits.

We except to the refusal of the court to charge as I requested in the language or in the substance, according to the decisions of the supreme court, which I read in full upon the opening of my argument and called attention of the court to it especially, to the expression of Campbell, J., in delivering the opinion of the court in G. R. & I. Co. vs. Weiden, 70 Mich., 395, 393.

Mr. Baker: Petitioner excepts to the refusal of its first and second requests, and the refusal generally of the circuit judge to tell the jury that they were not to consider the profits of the business.

STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

THE FORT STREET UNION DEPOT COMPANY, Petitioner,

ABSALOM BACKUS, JR., A. BACKUS, JR., & SONS, JAMES N. DEAN, and WILLIAM H. DAVISON, Respondents.

GENTS: You will please take notice that on Monday, the 4th day of December, 1893, at the opening of court on that day, or as soon thereafter as counsel can be heard, the petitioner will

move the court, before the Honorable George Gartner, circuit judge, to enter the following judgments in favor of petitioner in this cause under the statute:

1. A judgment against Absalom Backus, Jr., for \$2,850.00, with

interest from the 23rd day of January, 1892.

2. A judgment against A. Backus, Jr., & Sons for \$30,293.00, with

interest from the 23rd day of January, 1892.

3. A judgment against Absalom Backus, Jr., and A. Backus, Jr., & Sons, for the costs of the second trial of this cause, including all costs of the appeal, according to the statute in such case made and provided.

Said motion will be based on the files and records in this case in

the supreme court and in this court.

Detroit, November 21, 1893.

F. A. BAKER, Attorney for Petitioner.

To Dickinson, Thurber & Stevenson, attorneys for respondents.

(Endorsed: No. 29249. Motion to enter judgment.)

2986 STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

THE FORT STREET UNION DEPOT COMPANY, Petitioner,

Absalom Backus, Jr., A. Backus, Jr., & Sons, James N. Dean, and William H. Davison, Respondents.

Objection and Plea to Entry of Judgment.

Without waiving the objections heretofore made in this cause, in the course of the proceedings, to the jurisdiction of the court, and of the tribunal before which the last hearing was had, but expressly reserving all such objections and all protests against said jurisdiction and said proceedings heretofore made, and renewing them, Absalom Backus, Jr., and A. Backus, Jr., & Sons, on receiving notice of the motion made by the above-named petitioner for judgment against the said Absalom Backus, Jr., for \$2,850.00, with interest, and for a judgment against A. Backus, Jr., & Sons for \$30,293.00, with interest, and for a judgment against both Absalom Backus, Jr., and A. Backus, Jr., & Sons, "for the cost of the second trial of this cause, including all costs of the appeal," file the following objections and plea:

1. That the court has no jurisdiction or authority to enter said judgment-, or any of them, and that the provisions in said statute referred to in the said motion for the said judgments, and in accordance with which said motion is alleged to be made, are un-

constitutional and void.

2987 2. That it appears by the record that before any proceedings were taken for the said alleged second trial of this mat-

ter, the said petitioner had entered fully and absolutely into the possession and ownership of the property described in the petition, and thereby sought to be condemned, and has paid the respondents for the same without condition, and has been for a long period of time, to wit, a year or more, operating lines of railroad upon said property so sought to be condemned, and possessed and owned by it, upon which it had constructed its permanent railroad trestlework and other equipments of this railroad, all as described in said petition; and that therefore, under the constitution and laws of the State there was no jurisdiction or authority to proceed with said condemnation proceedings in and by the said second trial.

3. That as the consideration of the question of necessity for the alleged improvements set forth in the petition was expressly excluded from the consideration of the jury by the court, the proceeding of ordering a new jury and a second trial before them upon the

single question of damages, was void and of no effect.

4. That after the objection and protest of the respondents at the said second trial, the circuit judge, Hon. George Gartner, did before the said jury sit from the beginning of the trial of the cause to its close, in all respects as in a trial at common law, and did hold before the said jury that his function in that regard was not advisory, but that the said judge had the power to rule upon and admit or exclude testimony, and to direct and instruct the jury; and did state to the jury in that connection that he would not only instruct them, but that he would see that his instructions were carried out,

thereby restraining the jury and restricting their judgment and discretion, in direct violence of the constitution of the State and of the construction of the said constitution by the

courts of last resort of the State, and in every other case involving the premises, except in these proceedings, thereby denying the respondents, Absalom Backus, Jr., and A. Backus, Jr., & Sons, persons within its jurisdiction, by the State of Michigan, of the equal protection of the laws of said State, in violation of the true intent and meaning of article 14 of the Constitution of the United States.

5. That under the constitution of the State of Michigan the property of no person shall be taken for public use without just compensation made therefor; and that when private property is taken for the use or benefit of the public, the necessity for using such property and the just compensation to be made therefor, except when made by the State, shall be ascertained by a jury of twelve freeholders residing in the vicinity of such property, or by not less than three commissioners appointed by a court of record, as shall be prescribed by law.

That the necessity of taking the property in question has not been passed upon by a jury, as prescribed by the constitution, except in a verdict which has been annulled and set aside by the de-

cision of the supreme court.

6. That the verdict first rendered in this matter was appealed from, as a whole, by the petitioners, and wholly set aside, and on the second trial of said cause the court erred in holding that such verdict, after having been appealed from and set aside, was still in

force, so far as it found that it was necessary to take the property

for public use.

7. That it is not competent, under the constitution of this State, to rest the taking of private property for public use partly upon one verdict, and partly upon another; but under the constitution, a single jury, or commissioners when allowed by law, must

find the necessity for taking such property, as well as the damages to be allowed to the owner for taking the same.

8. That the circuit judge erred in charging the jury that in fixing the just compensation to be allowed to the respondents, the jury should consider only the property described in the petition; whereas the plant consisted in addition of a lumber yard and storehouse that were used together with said property, and all the evidence tended to show injury to the entire business carried on by the concern, and to all of the property on which it was conducted.

9. That the court erred, in the charge to the jury, in all that was said by the court in instructing them to discharge anything of a speculative nature, in connection with the requests for instruction made by the counsel for the respondents, and the colloquy between the court and said counsel regarding those requests immediately

succeeding them.

10. That the court erred in refusing to consider the requests of counsel for respondents that the jury should consider something apart from the money value of the property itself, and the point that respondents were entitled to be compensated apart from the money value of the property itself, so as to lose nothing from the interruption of their business and the damage occasioned by the change.

11. The court erred in its refusal to follow the decision read to the court upon question of damage, delivered by Mr. Justice Campbell, in the case of Grand Rapids R. R. vs. Weiden, 70 Mich., 393.

12. That the counsel for the petitioners argued to the jury that the compensation allowed by the first jury had been held by the supreme court of this State to be excessive, thereby improperly influencing the judgment of the jury upon said second trial,

2990 by the alleged opinion of the judges of the supreme court on

the question of damages.

13. That the jury impanelled in this cause was improperly influenced in their decision as to the just compensation to be allowed said respondents, by a statement of one of said jurors that he had examined the assessment-rolls and found that the property in question had been assessed at twenty-seven or twenty-eight thousand dollars (\$28,000.00); whereas no such evidence had been introduced in said cause, and no such evidence was properly before said jury. That the statement made as to said assessment-rolls was not only improper, but absolutely misleading. The assessments of said property showing that before said elevated railway had been built, said property was assessed at about double what it was assessed after the building of said elevated railway; as will appear by an affidavit hereto attached.

14. That said jury, in considering their verdict, were improperly

influenced by a statement made by some of their number, that the witness Jones, who had testified to the entire fire risk on account of the building of said elevated railway, had served as a juror on the first trial of this cause; whereas in truth and in fact the said Jones had not so served, and was entitled to the credit to be given to a fair and impartial witness.

15. That the jury in this cause acted improperly and illegally in not examining the premises in question together, and that the jurors Baker and Safford acted improperly and illegally in separating themselves from the rest of said jury, and making a separate exami-

nation of said property.

16. That the jurors in said cause were improperly influenced in said cause by the statement of one of their number, Mr. Sommers,

that the reason why the retail trade of the respondents had fallen off was that they so treated their customers that no one ever dealt with them but once; all of which instances of misbehavior and illegal action on the part of said jury will appear by the affidavits hereto attached.

17. Because the verdict is against the evidence, and because on the whole record it conclusively appears that the jury were unduly influenced and constrained to reduce the verdict of the first jury, and to discharge all the evidence in the cause tending to show the

amount of damages.

18. Further objecting to the granting of the motion in this matter, the respondents renew the objections to the proceedings for a second trial from their inception which were embraced in the protests and objections of these respondents filed in this cause before the empaneling of the jury, a true copy of which is hereto annexed, marked Exhibit "A."

DICKINSON, THURBER & STEVENSON. Attorneys for Absalem Backus, Jr., and A. Backus, Jr., & Sons.

JOHN ATKINSON, Of Counsel.

2992 STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

In the Matter of THE FORT STREET UNION DEPOT COMPANY, Petitioner,

ABSALOM BACKUS, JR., A. BACKUS, JR., & SONS, JAMES N. DEAN, and WILLIAM H. DAVISON, Respondents.

STATE OF MICHIGAN,

Daniel R. Griswold, of said county, being duly sworn, says that the verdict recently given in this cause is grossly inadequate, unjust and oppressive.

This affiant further states that since the giving of said verdict he has talked with Messrs. Zimmer, Young, Eby and Hauser, who

were members of said jury; that he is informed by said jurors that during the discussion in the jury-room after said cause was submitted, a member of said jury, whom some of the above-named jurors say was Mr. Sommers, stated to his fellow-jurors that he had examined the assessment-rolls in the city hall, and that the property in question was assessed at something like twenty-seven or eight thousand dollars, and that, therefore, it was of little value compared with value put upon it by the witnesses; that during the discussion in said jury-room, one of the jurors, whom some of the above-named jurors also say was Mr. Sommers, stated that the reason of the falling off of the retail trade of respondents was because they so dealt with their customers that no one ever bought

from them but once.

This deponent further says that he learned from said jurors that some of the jurors on said panel insisted that the testimony of Mr. Jones, who was sworn on said trial, should be entirely disregarded, on the ground that he had been one of the previous

inrors in this case.

This deponent further says that after his honor Judge Gartner had directed the jury to go in a body to examine the property in question, two of the jurors, Messrs. Baker and Safford, separated themselves from the rest and drove to the premises in question by themselves and made their examination separate and apart from the other jurors.

This deponent further states that said Baker and Safford, as this deponent has learned from the other jurors in said cause, voted

throughout for a very low compensation.

That deponent was informed by said jurors that the juror Sommers, during the time the jurors were in the jury-room and were considering, separated himself from the others and voted for a very low compensation, to wit, fifteen thousand dollars, absolutely refusing to reason with his fellow-jurors or to give any other reason for the vote which he cast except as above stated.

DANIEL R. GRISWOLD.

Subscribed and sworn to before me this 13th day of December, A. D. 1893.

STATE OF MICHIGAN, Sea:

Henry N. Backus, of said county, being duly sworn, says that he is one of the above-named respondents; that the verdict recently given in this cause is greatly inadequate, unjust and oppressive.

This affiant further states that since the giving of said verdict he has talked with Messrs. Zimmer, Young, Eby and Hauser, who were members of said jury; that he is informed by said jurors that during the discussion in the jury-room after said cause was submitted, a member of said jury, whom some of the above-named jurors say was Mr. Sommers, stated to his fellow-jurors that he had been over and examined the assessment-rolls in the city hall, and that the property in question was assessed at something like twenty-seven or twenty-eight thousand dollars, and that, therefore, it was of little value compared with value put upon it by the witnesses; that since hearing the said statement of said jurors, affiant has examined the said assessment-rolls and finds that since the building and opera-

tion of the petitioner's railroad, the assessment of the said 2996 real estate has been spread upon the said roll at less than

half what it was before said railroad was built, and that he has been further informed by said jurors that during the discussion in said jury-room, one of the jurors, whom some of the abovenamed jurors also say was Mr. Sommers, stated that the reason of the falling off of the retail trade of respondents was because they so dealt with their customers that no one ever bought from them but once.

This deponent further says that he learned from said jurors that some of the jurors on said panel insisted that the testimony of Mr.

Jones, who was sworn on said trial, should be entirely disregarded, on the ground that he had been one of the previous jurors in this

case.

This deponent further says that after his honor Judge Gartner had directed the jury to go in a body to examine the property in question, two of the jurors, Messrs. Baker and Safford, separated themselves from the rest and drove to the premises in question by themselves and made this examination separate and apart from the other jurors.

This deponent further states that said Baker and Safford, as this deponent has learned from the other jurors in said cause, voted

throughout for a very low compensation.

That deponent was informed by said jurors that the juror Sommers, during the time the jurors were in the jury-room and were considering, separated himself from the others and voted for a very low compensation, to wit, fifteen thousand dollars, absolutely refusing to reason with his fellow-jurors or give any other reason for the vote which he cast except as above stated.

JAMES H. CULLEN, Notary Public, Wayne County, Michigan.

And then follows, as Exhibit "A," the plea and protest of Absalom Backus, Jr., and A. Backus, Jr., & Sons, as set forth 2997on pages 36 to 42 of this Record.

(Endorsed: Objections to judgment. Filed Dec. 28th, '93. Victor T. Lemke, deputy clerk.)

Judgment.

At a session of the circuit court for the county of Wayne, held at the court-rooms, in the city of Detroit, on the 28th day of December, 1893.

Present: Hon. George Gartner, circuit judge.

THE FORT STREET UNION DEPOT COMPANY, Petiticner, ABSALOM BACKUS, JR., A. BACKUS, JR., & SONS, JAMES N. DEAN, and WILLIAM H. DAVISON, Respondents.

It appearing that heretofore, to wit, on the 16th day of July, 1891, a jury empanelled in this cause to determine the questions of public necessity and compensation, rendered, reported and filed in this court a verdict in favor of the public necessity, and awarding com-

pensation or damages to the respondents as follows:

To Absalom Backus, Jr., as the owner of the fee of the property described in the petition in this cause, the sum of seventeen thousand eight hundred and fifty dollars.

To A. Backus, Jr., & Sons, a corporation, as the tenants in the possession of the said parcel of land, the sum of seventyeight thousand two hundred and ninety-three dollars.

To James N. Dean and William H. Davison, executors of the es-

tate of Grozier Davison, deceased, the sum of one dollar.

And it further appearing that the petitioner, The Fort Street Union Depot Company, appealed from the said award of damages or compensation to the supreme court of this te, and that said court, under the statute in that behalf, directed that a new appraisal be had before a new jury, and remanded the case to this court for

that purpose.

And it further appearing that heretofore, to wit, on the 11th day of September, 1893, a jury was duly impanelled and sworn to make a new appraisal in this cause according to law, and that on the 6th day of November, 1893, said jury assessed the damages or compensation of said Absalom Backus, Jr., at the sum of fifteen thousand dollars, and the damages or compensation of said A. Backus, Jr., & Sons at the sum of forty-eight thousand dollars.

And the said petitioner having made a motion that judgment be rendered against said respondents respectively for the amounts said

awards were reduced by said second appraisal.

And said respondents having filed certain affidavits and objec-

tions in opposition to said motion.

And the questions so presented having been duly argued by Fred. A. Baker, attorney for the petitioner, and by John Atkinson and Don M. Dickinson, counsel for respondents, and the court having duly considered and deliberated thereon, it is ordered and adjudged that all of the objections to said motion, including the matters set forth in said affidavits, are overruled as not sufficient to defeat the

entry of said judgments under the statute in such cases made 2999 and provided, and on motion of F. A. Baker, attorney for petitioner, it is ordered and adjudged and considered that said petitioner, The Fort Street Union Depot Company, do recover of the respondent Absalom Backus, Jr., the sum of two thousand eight

hundred and fifty dollars, and that petitioner have execution thereof.

And on motion it is further ordered, adjudged and considered that the petitioner The Fort Street Union Depot Company do recover of the corporation respondent, A. Backus, Jr., & Sons, the sum of thirty thousand two hundred and ninety-three dollars, and that

petitioner have execution thereof.

And on like motion it is further ordered, adjudged and considered that the petitioner The Fort Street Union Depot Company do recover of the respondents Absalom Backus, Jr., and A. Backus, Jr., & Sons, the costs of the petitioner on its said appeal, including the costs of said second appraisal as a part thereof, the said costs to be taxed according to law and the rules and practice of this court, and that the petitioner have execution thereof.

GEO. GARTNER, Circuit Judge. (Endorsed: No. 29249. Judgments. Filed December 28, 1893. Victor T. Lemke, dep. clerk.)

Fred. A. Baker, being duly sworn, says that the foregoing items of costs charged as disbursements have actually been paid, or the liabilities therefor incurred, and were necessary and are reasonable in amount; that the witnesses above named were in good faith made to attend, and were deemed material and necessary, 225-55

and they respectively traveled the number of miles and actually attended the number of days specified, and that the copies and exemplifications charged for were actually and necessarily used, or necessarily and in good faith obtained for use.

FRED. A. BAKER.

Sworn to and subscribed before me this 29th day of December, A. D. 1893.

EDWARD A. STRICKER, Notary Public, Wayne County, Michigan.

To Dickinson, Thurber & Stevenson, attorneys for respondents:

Take notice: The foregoing is a true and correct copy of petitioner's bill of costs in this cause, and of the affidavit of disbursements required by rule. Application will be made to the 3002 clerk of said court, at his office, on the 2nd day of January,

A. D. 1893, at 10 o'clock a. m., to tax the same.

Dated at Detroit, December 29, A. D. 1893. Yours, etc., FREP.

FREP. A. BAKER, Attorney for Petitioner.

Taxed Bill of Costs for Plaintiff.

I do hereby tax the costs of plaintiff at the sum of four thousand one hundred and sixty-eight dollars and twenty cents.

WM. MAY, Clerk.

Dated February 12th, 1894.

STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

THE FORT STREET UNION DEPOT COMPANY, Petitioner,

Absalom Backus, Jr., A. Backus, Jr., & Sons, James N. Dean, and William H. Davison, Respondents.

And now come the said respondents, by Don M. Dickinson, their counsel, and move the court to vacate and set aside the order of William May, Esq., clerk of said court, taxing the costs of the petitioner in the above-entitled cause at the sum of \$4,168.20, for the following reasons:

3003 (1) That the taxation of the entire bill of costs is invalid on the general ground that all of the proceedings had in the above cause were invalid and without jurisdiction, and particularly that the alleged judgment is invalid, and that the court or judge had no jurisdiction to enter the said judgment.

(2) That the court below has no statutory authority to tax the

said bill of costs.

DON M. DICKINSON, Attorney for Respondents. STATE OF MICHIGAN:

In the Circuit Court for the County of Wayne.

THE FORT STREET UNION DEPOT COMPANY, Petitioner,

ABSALOM BACKUS, JR., A. BACKUS, JR., & SONS, JAMES N. DEAN, and WILLIAM H. DAVISON, Respondents.

COUNTY OF WAYNE, 88:

Don M. Dickinson, the attorney for the respondents in this cause, being duly sworn, deposes and says that the bill of costs hereto annexed was served on this deponent, or on some person in deponent's office, on the 29th day of December, A. D. 1893, and that on the 2nd day of January, 1894, he attended before William May, clerk of the said court, pursuant to the notice endorsed on the said bill of costs as served, for the purpose of opposing the taxation thereof.

3004 And deponent further says that he then and there oprosed the said taxation, and objected to the following items in the

said bill, i. e. :

Copy of record for printer, 3,076 folios at 10c	\$307	60
Printing record, 1,542 pages, at 80c	1,233	60
Printing brief, 65 pages, at 80c	52	00
Fees of 12 jurymen in court below, 50 days each at \$2.50.	1,500	00
Transcript of testimony and proceedings below reduced to	050	00
writing, 4,795 folios at 20c	959	UU

on the ground that in the court below there is no statutory author-

ity to tax such items.

And this deponent further says that he objected to the taxation of the entire bill of costs on the general ground that all the proceedings below in the above cause were invalid and without jurisdiction, and particularly that the alleged judgment is invalid and that the court or judge had no authority or jurisdiction to enter said judgment.

And further deponent saith not.

DON M. DICKINSON.

Subscribed and sworn to before me this 24th day of February, A. D. 1894.

SAMUEL S. HARRIS, Notary Public, Wayne County, Michigan.

Here follows petitioner's bill of costs and taxation therefor, as set forth on pp. 1362-1364 of this Record.

Deputy Clerk.

3012

Writ of Execution.

STATE OF MICHIGAN, County of Wayne, ss:

The Circuit Court for the County of Wayne.

To the sheriff of the county of Wayne, Greeting:

In the name of the people of the State of Michigan. You are commanded, that of the goods and chattels of A. Backus, Jr., & Sons, a corporation, respondents, and for want thereof, then of its land and tenements in your bailiwick, you cause to be made the sum of thirty thousand two hundred and ninety-three dollars, which The Fort Street Union Depot Company, petitioner, on the 28th day of December, 1893, in the circuit court for the county of Wayne aforesaid, at the court-room of said court, in the city of Detroit, recovered against it on a reduction of the award of compensation or damages in a certain condemnation suit or proceeding pending in said court, whereof the said respondent-stands convicted, as appears of record; and have you that money before the judges of the said circuit court aforesaid, at the court-room of said court, in the city of Detroit, on Tuesday, the fifth day of June, 1894, then and there to render to the said petitioner, and have you then and there this writ.

Witness, the Honorable Robert E. Frazer, presiding judge of the circuit court for the county of Wayne, at the court-room of said court, in the city of Detroit, on the 26th day of March, in the year of our Lord one thousand eight hundred and ninety-four.

[SEAL.]

WM. MAY, Člerk,
By CHAS. C. KELLOGG,
Deputy Clerk.

3013 STATE OF MICHIGAN, County of Wayne, 88:

THE FORT STREET UNION DEPOT COMPANY, Petitioner,

Absalom Backus, Jr., A. Backus, Jr., & Sons, James N. Dean, and William H. Davison, Respondents.

I do hereby certify that by virtue of the annexed writ of execution issued out of and under the seal of the circuit court for the

county of Wayne in the above-entitled cause, to me directed and delivered, I have, on this 9th day of May, A. D. 1894, levied upon all the following goods, chattels and personal property of A. Backus, Jr., & Sons, that is to say:

1 heavy steam-engine with automatic cut-off.

4 steam boilers complete.

2 steam pumps and connections.

1 large exhaust-injector.

1 large fan and coil.
3 large blowers and shavings connections.

1 knife-grinding machine.
1 upright copper-tube heater.
1 upright heater and filter.

1 horizontal condensing and settling boiler.

1 extra-heavy drive-pulley.

1 large steam drum.

5 Woods & Backus 30" x 8" 8-roll machines.

1 " 24" x 8" 8-roll machine.

1 " 24" matching machine.

2 Woods & Backus 14" flooring machines.
1 S. A. Woods heavy molding machine.
3 extension-frame gang rip-sawing machines.

3 power spin-feed rip-sawing machines.

1 heavy band resawing machine.
1 automatic saw-filing machine.

1 four-sided Huntington moulding machine.

1 heavy Jostin & Backus resawing machine.
1 heavy Cornell & Dangler & Backus resawing machine.

1 Graham & Backus resawing machine.
1 Huntington & Backus resawing machine.
10 Backus improved matching machines.
8 Backus bumping and gluing machines.
30 Backus improved sawing machines.

5 Backus improved swing sawing machines.

120 Backus heavy factory trucks. 3 panel or pony planing machines. 2 traveling-bed rip-sawing machines.

12 extra resaws, Backus teeth.

200 M feet of pine lumber now in planing mill.

150 M feet of pine lumber now in shed adjoining planing mill. 100 M feet of pine and hardwood lumber now in dry kilns.

All of said property being situated in and on the planing-mill and box-factory property of A. Backus, Jr., & Sons, between Fort street west and River street, and between the Michigan Cenral railroad and the lots and property of Barbara Steadly and Margaret Specht.

Detroit, May 9th, 1894.

CHARLES P. COLLINS, Sheriff, By PETER J. CANTO, Deputy Sheriff. (Endorsed: No. 29249. Writ of fi. fa. Date of judgment, Dec. 28, '93. Amount of judgment, \$30,293.00.)

3015 STATE OF MICHIGAN, County of Wayne, 88:

I, Henry M. Reynolds, clerk of Wayne county, and clerk of the circuit court for the county of Wayne, do hereby certify that the above and foregoing is a true and correct copy of the fi. fa. issued out of said court in said cause, together with the sheriff's certificate of levy attached to said fi. fa. That I have compared the same with the original, and it is a true transcript therefrom, and of the whole thereof.

In testimony whereof I have hereunto set my hand and affixed the seal of said court and county, at Detroit, this 22nd day of

August, A. D. 1894.

SEAL.

HENRY M. REYNOLDS, Clerk, By CHAS. C. KELLOGG,

Deputy Clerk.

Petition for Certiorari.

To the supreme court of the State of Michigan:

The petition of Absalom Backus, Jr., who is a citizen of the State of Michigan, and a person residing in the city of Detroit, in said State, and of A. Backus, Jr., & Sons, which is a corporation created and existing under the laws of the State of Michigan, having its principal office and carrying on its business in said city, respectfully shows:

That on the 24th day of January, 1891, the Fort Street Union Depot Company, a corporation created and existing under the laws of the State of Michigan, filed its petition in the circuit court for the county of Wayne, under and in form and in accordance with

3016 chapter 93 of Howell's Annotated Statutes, entitled "Union Railroad Station and Depot Companies," as amended; and therein and thereby initiated proceedings under such chapter against your said petitioners to build and operate a viaduct or elevated railroad, and a viaduct for teams, on River street, in said city of Detroit, in front of and contiguous to the property known as the Backus planing mill, having a frontage of River street of 238,6 feet, and extending back to Fort street, the said property being owned in fee by your petitioner, Absalom Backus, Jr., and leased for the purpose of a planing mill by your petitioners, A. Backus, Jr., & Sons; that such proceedings were had upon said petition under said chapter, that on the 25th day of February, 1891, a jury of twelve (12) freeholders, under the direction of Honorable George Gartner, circuit judge, were impaneled and sworn to ascertain the public necessity for taking said real estate, property, franchise and easements for the purpose of the said petitioner, and the public use and benefit thereof, and to appraise and determine the damages or compensation to be allowed to your petitioners therefor.

That on the 2nd day of March, 1891, the trial of said issue commenced and continued from day to day and until March the 18th, 1891, when the jury reported that they were unable to agree either on the question of necessity or on the amount of compensation.

That afterwards, on June 4, 1891, a second jury was impaneled and sworn, under the direction of said judge, in accordance with the prayer of said petition of the said The Fort Street Union Depot Company, and the said jury proceeded to hear proofs and testimony thereupon from day to day until the 16th day of July, 1891, when the said jury rendered a verdict and finding that the taking of

said property was for the public use and benefit and was 3017 a public necessity, and assessing the damages of your peti-

tioners as follows:

Absalom Backus, Jr., seventeen thousand eight hundred and fifty dollars (\$17,850); and A. Backus, Jr., & Sons, seventy-eight thousand

two hundred and ninety-three dollars (\$78,293).

That on August 15th, 1891, the said The Fort Street Union Depot Company filed a motion for a new trial in the said circuit court, which was duly heard and argued by counsel, and having been considered by the court, the Honorable George Gartner, circuit judge, an order was assumed to be entered by the said circuit judge, setting aside the award and ordering a new trial.

That afterwards the supreme court, in the case reported in 89 Mich., at page 210, granted a mandamus compelling the said circuit judge to vacate and set aside the said order for a new trial and confirm the award, which the the circuit judge subsequently did on or about the 5th day of December, 1891; and thereupon the said The Fort Street Union Depot Company took an appeal in the premises

to this the supreme court.

That afterwards, to wit, on the 23rd day of January, 1892, the said The Fort Street Union Depot Company paid to these petitioners the amount in full of the award of said jury as aforesaid, unconditionally, and entered into full possession of the property, franchise, easements and rights of these petitioners, described in said petition, and have since maintained and operated their lines of railroad over the same, and have maintained the viaduct for teams over the same.

That on the 30th day of January, 1892, these petitioners moved this court, as appears by the files and records of said court, that the appeal should be dismissed because of the said payments of 3018 the said awards, and the taking possession of the property by

the said The Fort Street Union Depot Company.

That afterwards, on the 4th day of March, 1892, the appeal of the said The Fort Street Union Depot Company came on to be heard in the case reported in 92 Mich., at page 33, whereupon said supreme court set aside the award of damages, but did not set aside the verdict of the jury as to the public necessity for taking the property, and did order the question as to the amount of damages to be submitted to a new jury to be impaneled in the circuit court for the county of Wayne, with costs to the said petitioner The Fort Street Union Depot Company.

The decision of this court in the case reported in 89 Mich., page 209 aforesaid, had not, in the meantime, been ordered for reargument, and in the hearing in the case reported as aforesaid in 92 Mich., the chief justice of the court, when counsel for respondents were about to argue the question as to whether the property of the Michigan Central Railway Company could be taken, and as to whether it was error below for counsel for respondents to argue that the said Michigan Central Railway Company's property could be taken, stopped that part of the argument of the said counsel, and stated that this court did not desire to hear argument on that question because the verdict of the jury had been unfavorable to respondents on the question of necessity; but nevertheless this court, as appears in and by its said opinion, reported in 92 Mich., did, without having offered to hear counsel for these petitioners, consider that question, and did decide it adversely to the respondents.

That afterwards before the circuit court for the county of Wayne (Judge Gartner) the said The Fort Street Union Depot Company did file a motion for an order to strike, summon and impanel a jury for the trial of the question of damages in the matter

in pursuance of the order and direction of the supreme court; which came on for hearing on April 17, 1893, whereupon your petitioners did file in the court and cause a paper-writing — words and figures following to wit:

(Then follows respondents' protest and plea to jurisdiction set

forth on pp. 36-42 of this Record.)

In the form of a plea and protest, which was overruled by the said circuit court, and the impaneling of said jury proceeded with, notwithstanding your petitioners' said exceptions and protest.

That afterwards to wit: on the 5th day of September, 1893, before the striking or impaneling of the jury, your petitioners' counsel protested in the presence of the court against a retrial for the reasons which he then and there stated, as hereinbefore set forth, and caused a record to be entered on the proceedings of the court of the Also that before the jury was sworn, your petitioners, said protest. through their counsel, protested against and objected to the sitting of Judge Gartner in the case; whereupon all said protests and objections were overruled, and the opening of said counsel for the said The Fort Street Union Depot Company and the testimony of witnesses proceeded with, the said Judge Gartner sitting and presiding and ruling in every respect as in a trial at common law; your petitioners objecting at every stage and protesting against the rulings of the court and against his presence, all in a respectful and decorous manner and language and without any offense to the said judge. That the said hearing proceeded until October 11, 1893, when the counsel for the said The Fort Street Union Depot Company announced that petitioner rested his case; whereupon your petitioners restated the objections and protested against being called upon to go

into their case for the defense, which objection and protest were again overruled, and the court stated that he proposed to sit in the case precisely as a judge would sit in a trial at

common law, and further that "the jury will determine those ques-

tions that I will submit to them, and I will see that my ruling is carried out by the jury also;" to all of which rulings and language of the court and each of them, your petitioners' counsel took exceptions; and still reserving their protests and objections, your petitioners proceeded to introduce testimony as to the damages which they had suffered by reason of the taking of the property as aforesaid; and especially the injury to the profits of their business, and the destruction of the facilities for carrying on the planing-mill business; and the hearing was continued from day to day, and the taking of proofs and testimony until the 6th day of November, 1893, when the court (Judge Gartner) proceeded to charge the jury as in a trial at common law, and in his charge did erroneously instruct the jury, as petitioners allege, in the particulars hereinafter more fully set forth, to which petitioners' counsel did then and there to each of said rulings, except.

The case having been given to the jury as aforesaid by the said judge, the said jury proceeded to return a verdict as follows:

Assessing the damages of Absalom Backus, Jr., at the sum of \$15,000 and the damages of A. Backus, Jr., & Sons at \$48,000; whereupon the said The Fort Street Union Depot Company did move the court before the said Judge Gartner for (1) a judgment against Absalom Backus, Jr., for \$2,850 with interest from the 23rd of January, 1892; (2) judgment against A. Backus, Jr., & Sons for \$30,293 with interest from the 23rd day of January, 1892; and (3) judgment against A. Backus, Jr., and A. Backus, Jr., & Sons for the costs of the second trial of this cause including all costs of appeal

upon the statute, etc.; whereupon these petitioners through their counsel appeared before said judge and filed the following objections and plea to the entry of any judgment:

(Then follows respondents' objections and plea to the entry of any

judgment as set forth on pp. 1348-1359 of this Record.)

Your petitioners further show that all the rulings embraced in the foregoing objections and therein referred to, were made by the said circuit judge, Honorable George Gartner, and exceptions were duly taken thereto by your petitioners' counsel; and that all the objections therein stated of errors in the proceedings were based upon the facts appearing in the trial and on the record as therein stated; and that the facts as to the actions of the jurors as stated in objections from XIII to XIX inclusive were fully supported by affidavits filed in the cause; and that the paper-writing referred to as Exhibit A in objection XVIII was the paper-writing filed before the impaneling of the jury in the words and figures hereinbefore first set out.

Your petitioners further show to the court that on the said hearing your petitioners argued to the said court that there was no power or jurisdiction in the court under the statute to enter up judgment on said motion, and further and specifically argued that there was no power or jurisdiction in the court to order an execution, and that an order for execution was no part of a judgment entry.

That the said court overruled all the said objections, including

the last two, and did proceed on the 28th day of December, 1893, to enter up judgment and order execution in the words and figures following, to wit:

(Then follows the judgment set forth in pp. 1359-1361 of this

Record.)

And thereupon the said court did proceed, against the argument and objections of your petitioners' counsel, to tax the costs of the said The Fort Street Union Depot Company at the amounts and figures set out in the paper-writing marked Exhibit A, hereto annexed; and thereupon, thereafter, the court did issue executions against the property of your petitioner Absalom Backus, Jr., for the sum of \$2,850; and against your petitioners A. Backus, Jr., & Sons for the sum of \$30,293, and against both of your petitioners for the sum of \$4,168, costs; which said executions were addressed to the sheriff of the county of Wayne, who thereupon levied upon and seized the personal property and chattels of A. Backus, Jr., & Sons, as follows: All of their steam-engines, boilers and machines in their planing mill and all of their lumber, manufactured and unmanufactured, in the city of Detroit in said county of Wayne, of the value of one hundred thousand dollars (\$100,000) and upwards, and did levy upon and seize the property of your petitioner Absalom Backus, Jr., as follows: 500,000 feet of pine and hardwood lumber, and other personal property of the value of \$10,000 and upwards; and all of the said property of your petitioners the said sheriff still holds and threatens to sell on said executions.

All of the said proceedings related in the premises appear by the files and records of the circuit court for the county of Wayne and of this court, and your petitioners allege manifest errors in the said proceedings, as related in and by their specific protests, objections and exceptions as hereinbefore set forth, and they allege as errors in addition to and supplementary to those set out in the foregoing petition in and by the proceedings they have been also denied by the State of Michigan the equal protection of the laws, contrary to the true intent and meaning of section one of article fourteen of amendments to the Constitution of the United States, in that in the aforesaid opinion of the supreme court that the judgment of the

supreme court of this State aforesaid reported in 89 Mich., page 209, was set aside and held for naught by the said court without an order for reargument and without notice to the petitioners or their counsel that reargument was desired, and without reargument in their behalf; and in that the said supreme court held as error the argument of the counsel for the said petitioners before the jury that the property of the Michigan Central Railroad Company could be taken under the power of eminent domain, without notifying the counsel for your petitioners that they desired to hear no argument as to whether the property could be taken or as to whether it was error to make the argument that it could be taken; and also that the taking of your petitioners' property under the alleged executions, has deprived your petitioners of their property

without due process of law and in violation of section one article 14 of the amendments to the Constitution of the United States.

That all the proceedings in the premises were purely statutory, and that there was no statutory authority for judgment against these respondents, and no pretense of statutory authority for the issue of the said executions.

Finally, they further allege that the provision of the statute authorizing the Fort Street Union Depot Company to condemn private

property for public use was unconstitutional and void.

Wherefore they pray that the writ of certiorari may issue from this court, directed to the circuit court for the county of Wayne for the sending up and review of all the proceedings in the premises and for the correction of the errors aforesaid.

> ABSALOM BACKUS, Jr., A. BACKUS, Jr., & SONS, By NEWTON D. BACKUS,

Sec. and Treas.

3024 STATE OF MICHIGAN, County of Wayne, 88:

Newton D. Backus, being duly sworn, upon his oath saith: That he is secretary and treasurer of the corporation known under the name and style of A. Backus, Jr., & Sons, and has signed the foregoing petition in the name of said corporation by the express direction and authority of its board of directors, and he makes this verification in behalf of said corporation and in behalf of A. Backus, Jr., whose signature is appended to the foregoing petition. That he knows the contents thereof, and that the statements of facts contained therein are true so far as stated of the own knowledge of petitioners therein, and that the statements therein made on information and belief or advice and belief are true to the best of his knowledge, advice, information and belief.

In the Circuit Court for the County of Wayne.

THE FORT STREET UNION DEPOT COMPANY

ABSALOM BACKUS, JR., A. BACKUS, JR., & SONS, JAMES N. DEAN, and WILLIAM H. DAVISON.

STATE OF MICHIGAN, County of Wayne, } 88:

Benjamin S. Warren, being duly sworn, says that he is law clerk in the office of Dickinson, Thurber & Stevenson, attorneys for the above-named Absalom Backus, Jr., A. Backus, Jr., & Sons, James N. Dean and William H. Davison, and has charge of the preparation of the record of certiorari removing said cause to the supreme court. That owing to the voluminous character of the record and the absence from the files of pleadings and papers in the case, it is impossible to prepare the record that it may be filed on August 3rd, the return day of the writ of certiorari, and that twenty days' time will be necessary to get all the papers in the case together and have the proper transcripts thereof made.

BENJAMIN S. WARREN.

Subscribed and sworn to before me this 2nd day of August, A. D. 1894.

BENJAMIN F. BRISCOE, Notary Public, Wayne County, Michigan.

3026 At a session of the circuit court for the county of Wayne and State of Michigan held at the circuit court rooms in the city of Detroit on the second day of August, A. D. 1894.

Present: Hon. George S. Hosmer, Hon. Robert E. Frazer, Hon. William L. Carpenter, Hon. J. W. Donovan, Hon. Wm. M. Lillibridge.

THE FORT STREET UNION DEPOT COMPANY vs.

ABSALOM BACKUS, Jr., et al.

Before Hon. J. W. Donovan, circuit judge.

In this cause it is ordered that the time for the return of the writ of certiorari and record in this cause be and the same hereby is extended from the third day of August, the return day of said writ, to the twenty-third day of August next.

(Signed) J. W. DONOVAN,

Circuit Judge.

In the name of the people of the State of Michigan.

[SEAL.]

To judges of the circuit court for the county of Wayne:

We, being willing, for certain causes, that it should be certified to our supreme court what proceedings have been had before you, and

what has been done by you in the case lately pending in said circuit court wherein The Fort Street Union Depot Company is petitioner, and Absalom Backus, Jr., Absalom Backus, Jr., & Sons, and

James N. Dean are respondents,

Do, therefore, command you, that you distinctly and openly certify the records and proceedings in said matter, to the said supreme court, before the justices thereof, that they may have them at the supreme court room, in the capitol, in the city of Lansing, on the third day of August, A. D. 1894, that said court may cause to be done thereupon what of right ought to be done, and have you then and there this writ.

Witness, the Honorable John W. McGrath, chief justice of our supreme court, at Lansing, this 28th day of June, in the year of

our Lord one thousand eight hundred and ninety-four.

CHARLES C. HOPKINS, Clerk Supreme Court.

I hereby certify, that the foregoing writ was duly allowed by Honorable John W. McGrath, chief justice of the supreme court of Michigan, on the 27th day of June, 1894. CHARLES C. HOPKINS, Clerk. SEAL.

To the supreme court of the State of Michigan: The execution of the within writ appears by the transcript of record hereto annexed.

August 22nd, 1894.

J. W. DONOVAN, Presiding Circuit Judge.

Writ of certiorari. Filed August 23rd, Endorsed: No. 14268. 1894. Charles C. Hopkins, clerk of supreme court.

STATE OF MICHIGAN: 3028

In the Circuit Court for the County of Wayne.

Absalom Backus, Jr., and A. Backus, Jr., & Sons, Plaintiffs in Error and Respondents Below,

THE FORT STREET UNION DEPOT COMPANY, Defendant in Error and Petitioner Below.

Assignment of Errors.

In certiorari.

And now some the said respondents, and assign errors in the record and proceedings certified to this court in this cause.

In this: in overruling the pleading, objections and protests in writing filed in the matter in the circuit court for the county of 227 - 55

Wayne, by the respondents below against a third trial of the matter, and the jurisdiction of the court, on April 17th, 1893, before the jury was summoned, struck, sworn or impaneled.

II.

In this: in overruling the several objections and protests of the respondents below to the jurisdiction of the court and of that tribunal at every stage of the proceedings.

3029 III.

In this: that in and by the constitution of the State of Michigan, in the specific provisions of article XV section 15, and article XVIII, section 2, of said constitution, as uniformly construed by the courts of the State, when private property is sought to be taken for the use and benefit of the public, the necessity for using such property and the just compensation to be made therefor in such cases, must be ascertained by a jury of twelve freeholders, residing in the vicinity of the property, or by not less than three commissioners, appointed by a court of record, as shall be prescribed by law, without the intervention of any judge or other person as a part of said tribunals or either of them, and without the constraint, influence or direction of any such judge or person. Whereas in these records and proceedings the discretion of the constitutional tribunal was interfered with and constrained by a judge of the circuit court for the county of Wayne, by setting aside the finding of the constitutional tribunal, and ordering a new trial and the power of the said circuit judge to do this indefinitely until the verdict and report of a jury should satisfy his judgment, was asserted and maintained by the said judge and was therein sustained by the court of last resort of this State, whereby as plaintiffs in error aver the proceedings were without jurisdiction, and they, persons within the jurisdiction of the State, were denied the equal protection of the laws of the State, contrary to article XIV, section 1, of the amendments to the Constitution of the United States.

IV.

In this: that there having been one verdict and report of a jury finding the necessity of the taking of the property and the damages to be awarded the respondents therefor, and the petitioner 3030 below having entered upon, taken possession and in all respects to the limits of the prayer of its petition, built and maintained its railroads and its culverts upon the property of the respondents sought to be condemned, and having paid to the respondents unconditionally the award of the said jury, under the constitution and laws of the State of Michigan, and as uniformly construed by the courts of said State, except in this case, there was no jurisdiction in any tribunal to prosecute a proceeding for condemnation under the power of eminent domain thereafter on the part of the said petitioner and defendant in error. Whereas in this

case, the power to so proceed was sustained, and plaintiffs in error aver that all such proceedings are without jurisdiction and void and as sustained by the courts of the State, deprive the plaintiffs in error and respondents below, persons within the jurisdiction of the State, of the equal protection of the laws of the State, contrary to said provision of the Constitution of the United States.

V.

In this: that as the title to the property sought to be condemned passed to the said petitioner below, and the title to the said money passed to the said respondents, the taking possession of the property by the petitioner and the proceedings are without jurisdiction, and the recovery of any portion of said money from the respondents and the seizure of their property thereunder, would be and are depriving plaintiffs in error and respondents below of their property without due process of law, contrary to said provision of the Constitution of the United States.

VI.

In this: that in and by the said proceedings the questions of the necessity for using the property, and the just compensation to be made therefor, were not left to a jury of twelve freeholders 3031 on the demand for a jury, but were left to two juries of twelve each, the one, according to the proceedings, passing upon the question of necessity, and the other upon the question of compensation. Whereas the same jury, under the constitution of the State, one jury of twelve freeholders, must pass upon both questions, and that in this the constitution of the State, as uniformly construed by the courts, has been violated, and in this regard the plaintiffs in error and respondents below have been denied the equal protection of the laws of the State of Michigan.

VII.

In this: that in the condemnation proceedings where a business plant was sought to be condemned for public use, the damages sought to be recovered, by the ruling of this court and of the court below, were held to be confined to the injury to the realty and the buildings thereon, and just compensation for interruption of business and to the business stand, and for diminution of business facilities, was denied, contrary to the said provisions of the constitution of the State of Michigan, and the uniform construction in such cases by the courts of the State in other cases, and contrary to the said provision of the Constitution of the United States.

VIII.

In this: that the verdict of the third jury was never filed or entered in the cause.

IX.

In this: that the court below had no jurisdiction or authority to enter judgment against Absalom Backus, Jr., for \$2,850.00, and against A. Backus, Jr., & Sons for \$30,293.00, and that the provisions in said statute referred to in the said motion for the said judgments and in accordance with which said motion is alleged to have been made, were unconstitutional and void.

X.

In this: that as the consideration of the question of necessity for the alleged improvements set forth in the petition was expressly excluded from the consideration of the jury by the court, the proceedings in said third and last trial upon the single question of damages only was void and of no effect.

XI.

In this: that the circuit judge, Hon. George Gartner, did sit with the said jury on said third trial from the beginning of the trial of the cause to its close in all respects as in a trial at common law, and did hold and maintain that his function in that regard was not advisory, but that the said judge had the power to rule upon and admit or exclude testimony and did rule upon and admit or exclude testimony, and to direct and instruct the jury, and did so direct and instruct the jury, and did state to the jury in that connection that he would not only instruct them, but that he would see that his instructions were carried out; in direct violation of the constitution of the State and of the construction of the said constitution by the courts of last resort of the State in all other cases, thereby denying to the respondents below, persons within the jurisdiction of the State of Michigan, the equal protection of the laws of said State, and in violation of the United States.

XII.

In this: that the circuit judge, Hon. George Gartner, overruled, under exception, the first objection of the respondents to the entry of the said judgments, or either of them.

3033 XIII.

In this: that the circuit judge, Hon. George Gartner, overruled, under exception, the second objection of the respondents to the entry of the said judgments, or either of them.

XIV.

In this: that the circuit judge, Hon. George Gartner, overruled, under exception, the third objection of the respondents to the entry of the said judgments, or either of them.

XV.

In this: that the circuit judge, Hon. George Gartner, overruled, under exception, the fourth objection of the respondents to the entry of the said judgments, or either of them.

XVI.

In this: that the circuit judge, Hon. George Gartner, overruled, under exception, the fifth objection of the respondents to the entry of the said judgments, or either of them.

XVII.

In this: that the circuit judge, Hon. George Gartner, overruled, under exception, the sixth objection of the respondents to the entry of the said judgments, or either of them.

XVIII.

In this: that the circuit judge, Hon. George Gartner, overruled, under exception, the seventh objection of the respondents to the entry of the said judgments, or either of them.

XIX.

In this: that the circuit judge, Hon. George Gartner, over-3034 ruled, under exception, the eighth objection of the respondents to the entry of the said judgments, or either of them.

XX.

In this: that the circuit judge, Hon. George Gartner, overruled, under exception, the ninth objection of the respondents to the entry of the said judgments, or either of them.

XXI.

In this: that the circuit judge, Hon. George Gartner, overruled, under exception, the tenth objection of the respondents to the entry of the said judgments, or either of them.

XXII.

In this: that the circuit judge, Hon. George Gartner, overruled, under exception, the eleventh objection of the respondents to the entry of the said judgments, or either of them.

XXIII.

In this: that the circuit judge, Hon. George Gartner, overruled, under exception, the twelfth objection of the respondents to the entry of the said judgments, or either of them.

XXIV.

In this: that the circuit judge, Hon. George Gartner, overruled, under exception, the thirteenth objection of the respondents to the entry of the said judgments, or either of them.

XXV.

In this: that the circuit judge, Hon. George Gartner, overruled, under exception, the fourteenth objection of the respondents to the entry of the said judgments, or either of them.

3035

XXVI.

In this: that the circuit judge, Hon. George Gartner, overruled, under exception, the fifteenth objection of the respondents to the entry of the said judgments, or either of them.

XXVII.

In this: that the circuit judge, Hon. George Gartner, overruled, under exception, the sixteenth objection of the respondents to the entry of the said judgments, or either of them.

XXVIII.

In this: that the circuit judge, Hon. George Gartner, overruled, under exception, the seventeenth objection of the respondents to the entry of the said judgments, or either of them.

XXIX.

In this: that the circuit judge, Hon. George Gartner, overruled, under exception, the eighteenth objection of the repondents to the entry of the said judgments, or either of them.

XXX.

In this: that the said circuit judge ordered and directed the issue of an execution without authority of law, after objection and full argument against the order by the counsel for the respondents.

XXXI.

In this: that the property of these respondents, to wit: of the respondents A. Backus, Jr., & Sons of the value of one hundred thousand dollars (\$100,000.00) and upwards, and the property of Absalom

Backus, Jr., of the value of ten thousand dollars (\$10,000.00) and upwards, had been seized and taken by the sheriff of the

county of Wayne under the said execution, directed as aforesaid to be issued by the said circuit judge, and therein and thereby they, and each of them, have been deprived of their property without due process of law, contrary to the said provision of the Constitution of the United States.

XXXII.

In this: that costs of the court below and of this court on appeal were awarded by the said circuit judge against the plaintiffs in error and respondents below, and execution issued therefor, when in and by the statute in such case made and provided, no costs could be awarded except against the defendant in error and petitioner below as the party appealing.

XXXIII.

In this: that the act of the legislature of the State of Michigan under which the said petition was filed by said petitioners, was unconstitutional and void, because the proceedings in the third trial were had under a decision of this court in a case reported in the 92d Mich. Reports, commencing at page 33, without having ordered for reargument the case reported in the 89th Mich. Reports at page 209, and without hearing any reargument thereon, and that on the hearing of the case aforesaid reported in the said 92d Mich. Reports, the chief justice of the court, when counsel for respondents were about to argue the question as to whether the property of the Michigan Central railroad could be taken, and as to whether it was error below for counsel for respondents to argue that the said Michigan Central Railroad Company's property could be taken, stopped that part of the argument of the said counsel for the respondents, and stated that this court did not desire to hear argument on that

3037 question because the verdict of the jury had been unfavorable to respondents on the question of necessity; but nevertheless, this court did, without having offered to hear counsel for petitioners, decide the same adversely to the respondents; contrary to the uniform practice and rulings of this court in all other cases than this, thereby depriving the plaintiffs in error and respondents below of the equal protection of the laws, in violation of the true intent and meaning of the said provision of the Constitution of the United

States.

DICKINSON, THURBER & STEVENSON, Attorneys for Plaintiffs in Error and Respondents Below.

Endorsed: Filed Sept. 22, 1894. Chas. C. Hopkins, clerk supreme court.

3038 At a session of the supreme court of the State of Michigan, held at the supreme court room in the capitol, in the city of Lansing, on the twenty-third day of November, in the year of our Lord one thousand eight hundred and ninety-four.

Hooker, associate justices.

FORT STREET UNION DEPOT COMPANY, Petitioner, vs.

ABSALOM BACKUS, Jr., et al., Respondents and Appellants.

This cause coming on to be heard is argued by Mr. F. A. Baker, for petitioner, and by Mr. Don M. Dickinson, for respondent, and submitted.

3039

Supreme Court of Michigan.

THE FORT STREET UNION DEPOT COMPANY

Absalom Backus, Jr., A. Backus, Jr., & Sons, James N. Dean, and William H. Davison.

Opinion.

Filed January 8, 1895.

This case is now before us for the third time. It was commenced February 25, 1891. The first jury disagreed. The second jury found a verdict for the respondents of \$96,143. This verdict was set aside by the circuit court in which the proceeding was tried. The respondents applied to this court for the writ of mandamus to set aside this order. 89 Mich. 209, 50 N. W. 646. The case was afterwards brought to this court by appeal, and is reported in 92 Mich. 33, 52 N. W. 790. After that decision the case was again tried before a jury, resulting in a verdict for Absalom Backus, Jr., tor \$15,000, and for Backus, Jr., & Sons for \$48,000. For a full statement of the case, reference is had to the former decisions. The case is now brought before us on a writ of certiorari, and substantially the same questions are involved and argued as are stated in the opinion in 92 Mich. and 52 N. W. No motion was made for a rehearing of that decision. The case was remanded for a new trial, under the rulings then made. The respondents will not now be heard upon the questions then decided, and we shall not argue them. By entering upon a new trial without a motion for a rehearing, both parties adopted that decision as the law of the case, and conducted the trial under it. All these questions are therefore res judicata, and not now open for review. That case was very ably and fully argued by counsel, and received the most careful consideration by the court, of which four of the present members were then members. A reexamination shows no reason for doubting the soundness of the conclusions then reached. We will now proceed to determine some questions which were not fully disposed of on the former hearing.

1. Complaint is made because the circuit judge presided at the trial, ruled upon questions of evidence, and charged the jury. No errors are assigned upon his rulings in either the admission or rejection of evidence. The precise complaint seems to be that he presided at all. The petition was presented to the circuit court for the county of Wayne, and all the subsequent proceedings were had in that court. The statute expressly provides that the circuit judge may attend the jury "to decide questions of law, and to administer oaths to witnesses." How. Ann. St. § 3466. Against this power there is no constitutional inhibition. The same course pursued upon this proceeding was also pursued in the case of Railway Co.

v. Dunlap, 47 Mich. 456, 11 N. W. 271, and the court refused to set aside the award, even though the charge of the judge was "ambiguous and open to criticism." Under the rule of

that case, this award cannot be disturbed, unless some ruling or instruction of the judge is clearly erroneous, and leads to the plain conclusion that the jury were thereby prejudiced against the respondents. The fact that no errors are assigned upon his rulings upon the testimony removes that question from discussion.

The judge, in both his rulings and his charge, was very careful not to encroach upon the functions of the jury. The charge was so clear, so appropriate to an important litigation (which had been conducted with great ability and vigor on both sides), and so carefully guarded the rights of both petitioner and respondents, that

we here give it in full :

" I invite your cool, calm, careful, and conscientious consideration to the matters about to be submitted to you. The case is one of more than ordinary interest. The importance to the petitioner and respondents, the interests involved, the eminence and ability of learned counsel engaged, the wisdom and legal learning shown, the more than ordinary interest exhibited, the far more than ordinary eloquence displayed, and to which you have been unwearied listeners, the great earnestness in the presentation and contest made, all imperiously demand that you seek well and faithfully to perform the further duty which now devolves upon you, and bring to bear in the matters about to be submitted to you a cool and unbiased judgment and a careful consideration of the facts as you may find them, supported by the evidence produced, with a firm resolve to do your duty-your whole duty-to all the parties, without fear or favor, and without regard to the opinions of others as to conclusions honestly reached. The matter has assumed that shape, to be, as I have said, one of more than ordinary interest. It- final determination rests largely, if not entirely, with you. Your responsibility must not be underestimated. The question before you is (as I will explain more fully hereafter), what compensation are the respondents entitled to, as the owners of certain property, by reason of the construction of the superstructure in and along River street? Opportunity has been given you to fully examine the situation and condition of respondents' property, as well as the superstructure of the petitioner. Such view and such examinations as have been made by you, together with the evidence admitted during the hearing, as well as all the arguments made, based upon and supported by the evidence admitted, constitute collectively the basis upon which your conclusions should rest. Your award should be the result of a careful, thoughtful, and conscientious consideration of all these matters, remembering that what you have before you upon which to base your award is the knowledge you obtained

3041 by viewing the premises, the evidence, and all the evidence, admitted in the case, and the arguments made, in so far as you find such arguments supported by the evidence as you may find it. The evidence and the particular weight to be given to the testimony of any witness, or whether such testimony should be dis-

regarded, are matters upon which I cannot in any way enlighten you. This is a matter belonging solely to the jury, and no judge is or should be permitted to enter upon, explain, elaborate upon, or

000 55

express, by intimation or otherwise, any opinion to a jury upon this peculiarly absolute province of the jury, in a controversy of this nature. I will, however, add that you should not suppose the existence of facts not supported by your view or observation of the premises, or the evidence admitted in the case, unless it be in instances where common experience and frequent observation show a fact fairly inferable, though not fully established by the view of the premises or by the testimony in the case. But the former must be established by evidence before you; you should infer or presume the second. What you may infer as a fact must be a conclusion logically reached from facts established by evidence and resting in common experience. Thus far I have dealt in the broadest generalities, but I may say that, keeping these matters before you, your duty will be well done; failing, you are likely to be led into error

which may terminate in rank injustice to either party.

"The power of eminent domain, or, in other words, the power to take private property for public uses is in the State. All property is subject to this power. It is a power recognized under the constitution and law of the land. It is a power delegated by the people to and vested in the legislature, subject to certain constitutional limitations, and can only be exercised by virtue of a legislative enactment given in express terms or by necessary implication. The power of the legislature was, by the constitution of 1850 of this State, limited and restricted in this: By article 18, § 2, it is provided that, 'when private property is taken for the use and benefit of the public, the necessity for using such property, and the just compensation to be made therefor, except when to be made by the State, should be ascertained by a jury of twelve freeholders residing in the vicinity of such property, etc. Thus, you will observe that the questions of necessity and compensation are for the jury, and are not in any way subject to legislative interference; and, while the manner of procedure may be and is prescribed by statute, still any statute upon the subject which fails to observe and provide for every constitutional safeguard will be inoperative and void. That the petitioner, under the statute under which it is incorporated, is vested with the exercise of this power of eminent domain, is not

and cannot be questioned. Certain proceedings have heretofore been bad in this matter, and I call attention to them
only for the purpose of stating to you that the question of
the necessity for the taking—and which, as I have already stated,
is one of the questions to be determined under the provision of the
constitution—is settled. That question—viz. necessity—has been
determined, and with that you have nothing to do. That has
passed out of the case, and is not before you. The question, and
the only question, before you for your determination, is that of
compensation, and of compensation only. Your duty, and your
only duty, is to ascertain and determine what compensation or
damages ought justly to be paid by the Fort Street Union Depot
Company to the respondents for the real estate, property, franchises,
easements, and privileges described in the petition, viz: (1) The
amount to be allowed to Absalom Backus, Jr., as the owner of the

fee of the land described. (2) The amount to be allowed to A. Backus, Jr., & Sons, a corporation, as tenants in the possession of such lands. Upon this question-viz. compensation or damageswhat I have to say must necessarily be in a broad and the most This is a question for you, and from the very nature general way. of a proceeding of this character, you are vested with large powers and great discretion. These powers and this discretion should not be exercised arbitrarily, nor without proper regard for substantial justice. You should bear in mind that, the greater the power, the more jealous is the law of its careful exercise, and the greater is the responsibility of the persons vested therewith. You should exercise a cool, careful, intelligent, and unbiased judgment. The compensation or damages must be neither inadequate nor excessive, and your award must not furnish a just inference of the existence of undue influence, partiality, bias, and prejudice, or unfaithfulness in the discharge of the duties imposed on you. You must, however, remember that the respondents' property is taken, or its enjoyment interfered with, under the so-called 'power of eminent domain,'-a power somewhat and necessarily arbitrary in its character; and that, where this is done, the party whose property is taken, or whose enjoyment or use of the property is interfered with, is entitled to full compensation for the injury inflicted. While the allowance to be made should be liberal, still it must not be unreasonably exorbitant or grossly excessive. It should be a fair and liberal allowance and full and adequate compensation for the damages inflicted. You should not allow too little, nor should you allow too much. Your award should be based upon that which is real and what is substantial, and not upon what is either fictitious or speculative. You should look at the condition of thing as they exist. Under the constitution and laws, the right to take another's property for public uses-the power to exercise the right of eminent domain-is

a part of the law of the land; but, when this power is exercised, it can only be done by giving the party whose property is taken, or whose use or enjoyment of such property is interfered with, full and adequate compensation, not excessive or exorbitant,

but just compensation.

"I shall not call attention to any particular part of the testimony in the case. The responsibility of its application, and the weight to be given it, rests with you; always regarding that which is real and substantial, and disregarding that which is fictitious and speculative; treating conditions as they have been shown and as they are, without speculating as to what might possibly happen or occur; taking conditions as you find them, and the natural and probable consequences following such conditions.

"I do not want to leave this case without again impressing upon your minds your great responsibility. You want to and must do that which is right and just by the petitioner, that which is right and just by the respondents. You have before you such knowledge as you obtained by viewing the premises, the evidence admitted in the case, the arguments of counsel, and which, as I have said, you may consider in so far as supported by the evidence, and also the

little that I have said to you. These matters a to be your guide absolutely and solely in the determination of the question involved. Let me impress upon you that, in a court of justice, friendship ceases. We know no friends; we know no enemies; we do no favors. Here we are actuated by reason only, in its most cool, calculating, deliberate, and unsympathetic spirit. 'Favor,' offend,' displease,' are words which neither in thought nor spirit have meaning here. To do what is right and just is and should be our sole and absolute object. In the settling and determination of rights, in the administration of the law, acquaintances, associations, and friendships are not in any way factors. Purity and honest intention, the careful exercise of houest judgment, with a firm resolve to do exact justice, are the only virtues. These principles are predominant, and the indomitable spirit to do right is the only incentive which actuates an honest mind and an honest man. Gentlemen, the matter is now in your hands. Discharge your duty faithfully and honestly. I invoke in you the spirit so beautifully, though figuratively, exemplified in the Goddess of Justice, who, blindfolded, weighs in the scale every human action, and fearlessly determines the right, without passion, without prejudice, and regardless of and uninfluenced by wealth, position, or any thought and sentiment not just and pure."

This charge correctly embodies the law upon this subject. There is nothing in it which could have any other tendency than to direct and aid the jury to a correct result. It in no particular invaded the province of the jury, and left to their consideration every legiti-

mate element of damage. The arguments of the learned and able counsel on both sides, which extended over two days, are found in full in the record. The reading of them discloses the fact that the judge did not restrict their arguments in the least; that they were not interrupted except by opposing counsel; and that every proper basis of damages was fully presented. Under these circumstances, we cannot concur in the statement of counsel that "the presiding judge made himself a controlling, constraining member of the constitutional tribunal, and thus rendered the proceeding void." In these proceedings it is important that the jury should be confined to a consideration of those matters which have a legitimate bearing upon the questions confided to them for determination. It is of little consequence what agency under the statute has secured the result,-whether it be the judge, or commissioners, or counsel, or the jury themselves. When courts can say that the proceedings have been conducted fairly and honestly, they must confirm the award. It is proper here to note that no requests to charge were presented on behalf of the respondents.

2. The amount of the first award was paid to the respondents pending the appeal to this court. Upon the second trial the award was diminished, and judgment entered for the petitioner for the difference between the two awards. The statute provides for the payment of this sum by the respondents to the petitioner. We think judgment for this amount was properly entered. As already

stated, this proceeding is in the circuit court, and the statute clearly contemplates the entry of judgment and the issue of execution to enforce the finding of the jury. The statute expressly provides for the entry of judgment. How. Ann. St. § 3468. A general statute also provides for issuing execution upon any judgment rendered in any court of record. How. Ann. St. § 7654. The case of Derby v. Gage, 60 Mich. 1, 26 N. W. 820, does not apply to this case. The railroad company in that case had abandoned the proceedings by refusing to pay the award, and consequently acquired no rights in the land. No execution could therefore issue either for the award or costs, both of which were held under the statute to be placed on the same footing.

3. The costs of the second trial were allowed by the court to the petitioner. The validity of this allowance depends upon the construction to be given to the statute. That part of the statute relative to costs of the second trial reads as follows: "If the amount of the compensation to be allowed is increased by the second report, the difference shall be a lien on the land appraised, and shall be paid by the company to the parties entitled to the same, or shall be deposited as the court shall direct; and in such case all costs of the appeal shall be paid by the company; but if the amount is diminished, the difference shall be refunded to the company

judgments therefor and for all costs of the appeal shall be rendered against the party so appealing." The costs of the first trial must be paid by the petitioner, and this it did. Had the award been increased, it would have been compelled to pay the costs of the second trial. We think the plain intent was to give costs to the successful party. Upon the appeal of the respondents and the increase of the award, would it be contended that they should pay the costs of securing a victory? If the literal language were followed, judgment for the difference, as well as for the costs, should be against the appealing party; but it is too clear to require argument that the judgment is to be against the respondents for

4. A motion was made to dismiss the writ of certiorari, on the ground that the second award is final under the statute, and that this provision cannot be evaded by invoking the use of this writ. The statute provides that the second report shall be final and conclusive upon all parties interested. We have chosen to dispose of the questions not adjudicated upon the former hearing on account of the importance of the case. It thus becomes unnecessary to decide the important question raised by the motion, and we pass no opinion upon it.

The award must be affirmed, with costs to the petitioner, The

Fort Street Union Depot Company.

C. B. GRANT. CHAS. D. LONG. JOHN W. McGRATH. R. M. MONTGOMERY. FRANK A. HOOKER.

Order of Supreme Court.

3046 At a session of the supreme court of the State of Michigan, held at the supreme court room, in the capitol, in the city of Lansing, on the eighth day of January, in the year of our Lord one thousand eight hundred and ninety-five.

Present: The Honorable John W. McGrath, chief justice; Charles D. Long, Claudius B. Grant, Robert M. Montgomery,

Frank A. Hooker, associate justices.

THE FORT STREET UNION DEPOT COMPANY, Petitioner, Absalom Backus, Jr., A. Backus, Jr., & Sons, James N. > #14268. Dean, and William H. Davison, Respondents and Appellants.

The record and proceedings in this cause having been removed to this court by writ of certiorari issued to the circuit court for the county of Wayne, and the same and the matters and proceedings therein having been examined and duly considered by the court and no error appearing therein, thereupon it is ordered and adjudged that the order of the circuit court for the county of Wayne, entered herein on the twenty-eighth day of December, 1893, affirming the award of the jury in this cause, be, and the same is hereby, in all things affirmed, and that the petitioner recover of and from the respondents its costs, to be taxed, and that it have execution therefor.

Know all men by these presents that we, A. Backus, Jr., & 3047 Sons and Absalom Backus, Jr., of Detroit, Wayne county, Michigan, as principals, and Anson Youngs and Henry N. Backus, as sureties, are held and firmly bound unto The Fort Street Union Depot Company in the sum of five hundred dollars (\$500), lawful money of the United States, to be paid to the said The Fort Street Union Depot Company, its successors or assigns; for which payment, well and truly to be made, we bind ourselves and our and each of our heirs, executors, administrators, and successors, jointly and severally, firmly by these presents.

Sealed with our seals and dated this ninth day of March, A. D.

1895.

The condition of this obligation is such that whereas the abovenamed A. Backus, Jr., & Sons and Absalom Backus, Jr., have applied for a writ of error from the Supreme Court of the United States to the supreme court of the State of Michigan in a certain cause therein pending, wherein the said A. Backus, Jr., & Sons and Absalom Backus, Jr., are respondents and The Fort Street Union Depot Company is petitioner:

Now, therefore, if the said A. Backus, Jr., & Sons and Absalom Backus, Jr., plaintiffs in error, shall prosecute their writ to effect and if they fail to make the plea good shall answer all damages

L. S.

L. S.

L. S.

and costs which may be charged against them, then this obligation to be void; otherwise to remain in full force and virtue.

[CORPORATE SEAL.]

A. BACKUS, Jr., & SONS, By N. D. BACKUS, Sec. & Treas. ABSALOM BACKUS, Jr. ANSON YOUNGS.

HENRY N. BACKUS.

3048 UNITED STATES OF AMERICA,
State of Michigan, Wayne County, 88:

The above-named Anson Youngs and Henry N. Backus, being duly sworn, each for himself says that he is a freeholder, residing in said county, in the city of Detroit, and that he is worth the sum of five hundred dollars (\$500) in property liable to execution over and above all just debts and liabilities.

Subscribed and sworn to before me this 9th day of March, A. D. 1895.

BENJAMIN S. WARREN,
[NOTARIAL SEAL.] Notary Public, Wayne County, Michigan.

Approved:

JOHN M. HARLAN,

Associate Justice of the Supreme Court of the United States.

March 15, 1895.

Filed May 24, 1895.

CHAS. C. HOPKINS, Clerk Supreme Court.

3049 Supreme Court of the United States.

Absalom Backus, Jr., and A. Backus, Jr., & Sons, Plaintiffs in Error,

vs.

THE FORT STREET UNION DEPOT COMPANY, Defendant in Error.)

Assignment of Errors.

Dickinson, Thurber & Stevenson, attorneys for plaintiffs in error.

3050 Supreme Court of the United States.

Absalom Backus, Jr., and A. Backus, Jr., & Sons, Plaintiffs in Error,

THE FORT STREET UNION DEPOT COMPANY, Defendant in Error.

Assignment of errors.

And now come the plaintiffs in error, by Dickinson, Thurber & Stevenson, their attorneys, and say that there is manifest error in

the record and proceedings of the supreme court of the State of Michigan in this cause, as follows:

(I.)

In this, the court erred in overruling the objection and protest of the plaintiffs in error made in writing and repeated at every

stage of the proceedings in the cause from their inception to the taking of the property of the plaintiffs in error under color of a writ of execution, all as shown by the said record, by which said objection and protest it was asserted that the said proceedings and execution were not due process of law within the true intent and meaning of section I of article XIV of the amendments to the Constitution of the United States, and that in and by said proceedings and said execution, the plaintiffs in error, being persons, were deprived of their property by an authority exercised under said State of Michigan, when the exercise of that authority, as is averred, was repugnant to the Constitution of the United States, to wit, in violation of said section I of article XIV.

(2.)

In this, the court erred in overruling the objections of the plaintiffs in error made in writing at the inception of the proceedings and repeated at every stage of the said proceedings up to and including the taking of their property under color of an execution, as shown by the record, by which objections they showed to the supreme court of the State of Michigan that in and by the said proceedings the plaintiffs in error, being persons within its jurisdiction,

had been and were denied by the State of Michigan the equal 3052 protection of the laws, whereby, as shown in and by the said record of said proceedings, the authority exercised under said State of Michigan in said cause to carry the said proceedings to judgment and execution was repagnant to the Constitution of the United States, to wit, it violation of said section I of article XIV.

(3.)

In this, the defendant in error having acquired the title, possession, and full enjoyment of the property of the plaintiffs in error specified in the proceedings under the prerogative of eminent domain conferred upon it under the constitution and laws of the State of Michigan, and having paid the ascertained compensation therefor to the plaintiffs in error, and the plaintiffs in error having thereupon in the proceedings below claimed a right and title to the said compensation so paid them and immunity from condemnation proceedings under the constitution and laws of the State of Michigan on the ground that title and possession of all the property sought to be acquired had passed to the defendants in error, and that the title to the said money had thereupon passed to the plain-

tiffs in error, and thereupon the plaintiffs in error having 3053 insisted that the proceedings below in form for condemnation under the power of eminent domain against them to recover, in whole or in part, the said compensation so paid to them, including the form of trial, judgment, and execution, were not due process of law, within the true intent and meaning of the Constitution of the United States, and that for the courts of Michigan to maintain and sanction such proceedings as to the plaintiffs in error would be in violation of the constitution and laws of the State of Michigan, and as the same were and had been uniformly construed by the courts of the State, and would be in special discrimination against the plaintiffs in error, in violation of the true intent and meaning of the Constitution of the United States, by denying them the equal protection of the laws, the said supreme court of the State of Michigan overruled the said claim of right, title, and immunity of the plaintiffs in error, as shown in and by the record of the proceedings of said cause.

(4.)

In this, that in and by the constitution of the State of Michigan, by the specific provisions of article XV, section 15, and article XVIII, section 2, of said constitution, and as the same were and had been uniformly construed by the court of last resort of the State of

Michigan, when private property is sought to be taken for the use and benefit of the public, the necessity for using such

property and the just compensation to be made therefor in such cases is not referred to any court or to any but a temporary body called for the special purpose, consisting of twelve freeholders residing in the vicinity of the property, exclusive of any other official or person in their deliberations and in the control of the per-

formance of their duties.

Whereas in these records and proceedings, under the authority of the supreme court of the State of Michigan, a judge was made a part of the said special tribunal, acting in every respect as a controlling influence, to the extent and following the form of proceeding as if the tribunal were a court and the proceeding judicial, in accordance with the course of the common law, all against the objection and protest of the plaintiffs in error, and therein and thereby the said supreme court of the State of Michigan denied to the plaintiffs in error, who were persons within the jurisdiction of the State of Michigan, the equal protection of the laws of the State of Michigan, by denying to them the protection of the said articles of the constitution of the State and of the said court's own con-

struction of the said articles of the constitution of the State, contrary to article XIV, section 1, of the amendments to the

Constitution of the United States, not withstanding that the plaintiffs in error did then and there duly claim before said court the protection of the said provision of the Constitution of the United States.

(5.)

In this, that there having been one verdict and report of a jury finding the necessity of the taking of the property and the damages to be awarded the plaintiffs in error therefor, and the defendant in error having entered upon, taken possession, and in all respects, to

229 - 55

the limits of the prayer of its petition, having built and maintained its railroads and its culverts upon the property of the plaintiffs in error sought to be condemned, and having paid over to the plaintiffs in error unconditionally the award of said jury, under the constitution and laws of the State of Michigan, and as the same were and had been uniformly construed by the courts of said State and by the said court of last resort, there was no jurisdiction in any tribunal to prosecute a proceeding for condemnation under the power of eminent domain thereafter.

Whereas in this case the power to proceed after possession 3056 and payment was sustained by the said supreme court in effect not to condemn property, but to recover back money paid for the same, not in a judicial proceeding, but in the form of a statutory proceeding for condemnation, against the objection and protest of the plaintiffs in error, whereby the said supreme court deprived the plaintiffs in error, persons within the jurisdiction of the State, of the equal protection of the laws of the State, by denying them the protection of the constitution and laws of the State in the premises, as the said constitution and laws were construed by the supreme court of the State of Michigan as to all other persons except the plaintiffs in error, contrary to the said provision of the Constitution of the United States, the protection of which was duly set up and claimed by the plaintiffs in error in said court and denied to the plaintiffs in error by said court.

(6.)

In this, that as the title of the property sought to be condemned passed to the said defendant in error and the title to the said money passed to the said plaintiffs in error by the appropriation of the property of the plaintiffs below, the proceedings therefore 3057 were without jurisdiction, and the recovery of a portion of said money, under color of a judgment, in proceedings not according to the course of the common law, but through the form of statutory proceedings for condemnation and the seizure of the property, under color of an execution issued upon said judgment by the authority of the supreme court of the State, was depriving said plaintiffs in error of their property by the authority of the State of Michigan without due process of law, contrary to the said provision of the Constitution of the United States, protection under which was claimed by the plaintiffs in error and denied

(7.)

by the said supreme court of the State of Michigan.

In this, that in and by the said proceedings the question- of the necessity for using the property and of the just compensation to be made therefor were, under the rulings of the said supreme court, left separately to two juries of twelve freeholders, one passing on the question of necessity and the other upon the question of compensation.

Whereas one and the same jury, under the constitution and laws

of the State, and as the same were and had been construed 3058 by the court of last resort of the State itself, must pass upon both questions, whereby, under the authority of the said supreme court of the State of Michigan, the constitution and laws of said State, as construed by itself, have thereby been violated and the plaintiffs in error denied the protection of the laws of the State of Michigan accorded to other persons within its jurisdiction, contrary to the said provision of the Constitution of the United States, the protection of which was claimed by the plaintiffs in error before said court, and in this regard also denied to the plaintiffs in error by said court.

(8.)

In this, that in condemnation proceedings under the constitution and laws of the State of Michigan, and as the same were and had been uniformly construed by the supreme court of the State itself, where a business plant is sought to be condemned for public use, the damages sought to be recovered are not confined to the injury to the realty and the buildings thereon, but must be just compensation and must include damages for interruption to the business

and to the business stand and for diminution of business facilities.

Whereas in this case the supreme court of the State denied to
the plaintiffs in error the said benefit of said constitution and laws
of the State and of its own rulings and judgment in con-

3059 struction thereof, by holding that the damages should be confined to the injury to the realty and the buildings thereon, and thereby the said State of Michigan by the act of its courts denied to the plaintiffs in error, being persons within its jurisdiction, the equal benefit of the laws of the said State, contrary to the said provision of the Constitution of the United States, protection under which in this regard was claimed by the plaintiffs in error before said State court, and the claim by said State court was denied.

(9.)

In this, that under the constitution and laws of the State of Michigan, and as the same were and had been uniformly construed by the courts of said State, the said court had no jurisdiction to enter judgment against Absalom Backus, Jr., for \$2,850.00, and against A. Backus, Jr., & Sons for \$30,293.00, and the taking of the property upon an execution entered upon said judgments under the authority of the State of Michigan, as set forth in the record, was depriving them of their property without due process of law, in violation of the Constitution of the United States, as claimed by the plaintiffs in error in the said supreme court of the State, 3060 which said claim was overruled by said supreme court.

(10.)

In this, that the property of the said plaintiffs in error, to wit, of A. Backus, Jr., & Sons of the value of \$100,000.00 and upwards, and of Absalom Backus, Jr., of the value of \$10,000.00 and upwards, had been seized and taken by the sheriff of the county of Wayne,

as appears by the records, under execution upon said alleged judgments, directed as aforesaid to be issued by the circuit judge, and

the validity thereafter sustained by the said supreme court.

Whereas under the constitution and laws of the State of Michigan no valid writ of execution upon such judgment could be issued against the goods and chattels, lands and tenements of the plaintiffs in error, and thereby, as the plaintiffs in error asserted and claimed in the said supreme court, they have been deprived of their property without due process of law, contrary to the said provision of the Constitution of the United States, the protection of which provision was invoked by the plaintiffs in error in the said supreme court of the State of Michigan, and denied by said supreme court.

3061 (11.)

In this, that costs of the proceedings were awarded against the plaintiffs in error, and the said execution issued therefor, when in and by the constitution and laws of the State no costs could be awarded, except against the defendant in error as the party appealing.

(12.)

In this, because the proceedings in the third trial in the condemnation proceedings were had in a case reported in 92 Mich. Rep., p. 33, without having ordered for reargument the case reported in 89 Mich Rep., p. 209, and without hearing any reargument thereon in behalf of the plaintiffs in error, and that on the hearing of the case aforesaid, reported in the 92 Mich., the chief justice of the court, when counsel for the plaintiffs in error were about to argue the question as to whether the property of the Michigan Central could be taken, and whether it was error for the counsel for the plaintiffs in error to argue that the said Michigan Central Railroad Co.'s prop-

erty could be taken, stopped that part of the argument of the counsel for the plaintiffs in error, and stated that the

said supreme court did not desire to hear argument on that question because the verdict of the jury had been unfavorable to the plaintiffs in error on the question of necessity; nevertheless the said supreme court did, without having offered to hear counsel for plaintiffs in error, decide the same adversely to the plaintiffs in error on the questions decided in favor of the plaintiffs in error in the said 89 Mich. Rep., at p. 209, and adversely to the plaintiffs in error on the questions as aforesaid regarding the right to take the property of the Michigan Central railroad, contrary to the law and the uniform practice and rulings of the supreme court of the State, then and still of the force of law as held to from the establishment of government in the State of Michigan, thereby depriving the plaintiffs in error of the equal protection of the laws, in violation of the true intent and meaning of the said provision of the Constitution of the United States.

3064 UNITED STATES OF AMERICA, 88:

To the Fort Street Union Depot Company, Greeting:

You are hereby cited and admonished to be and appear at a Supreme Court of the United States, at Washington, within 30 days from the date hereof, pursuant to a writ of error filed in the clerk's office of the supreme court of the State of Michigan, wherein A. Backus, Jr., & Sons and Absalom Backus, Jr., are plaintiffs in error and you are defendant in error, to show cause, if any there be, why the judgment rendered against the said plaintiffs in error, as in the said writ of error mentioned, should not be corrected and why speedy justice should not be done to the parties in that behalf.

Witness the Honorable John M. Harlan, associate justice of the Supreme Court of the United States, this 15th day of March, in the year of our Lord one thousand eight hundred and ninety-five.

JOHN M. HARLAN,

Associate Justice of the Supreme Court of the United States.

3065 UNITED STATES OF AMERICA, State of Michigan, County of Wayne, 88:

On this 21st day of March, in the year of our Lord one thousand eight hundred and ninety-five, personally appeared Benjamin S. Warren before me, the subscriber, a notary public in and for the

county of Wayne and State of Michigan, and makes oath that on the above date he delivered a true copy of the within citation to the Fort Street Union Depot Company by leaving the same at its office in the city of Detroit, in said county, with James Joy, Esq., who had charge of the said office at that time; and deponent further says that he delivered a true copy of the within citation to Fred. A. Buker, attorney for the said The Fort Street Union Depot Company, by leaving the same at his office, in the city of Detroit, in said county, with Edward A. Stricker, who had charge of the office at that time.

BENJAMIN S. WARREN.

Sworn to and subscribed the 21st day of March, A. D. 1895.
SAMUEL S. HARRIS,
Notary Public, Wayne County, Michigan.

I accept service of within on date above stated.

FRED. A. BAKER, Att'y for Defendant.

Filed March 22, 1895.

CHAS. C. HOPKINS, Clerk Supreme Court.

3066 United States of America, 88:

[Seal of the Supreme Court of the United States.]

The President of the United States of America to the honorable the judges of the supreme court of the State of Michigan, Greeting:

Because in the record and proceedings, as also in the rendition of the judgment of a plea which is in the said supreme court, before you or some of you, being the highest court of law or equity of the said State in which a decision could be had in the said suit between The Fort Street Union Depot Company, petitioner, and A. Backus, Jr., & Sons and Absalom Backus, Jr., respondents, wherein was drawn in question the validity of a treaty or statute of or an authority exercised under the United States and the decision was against their validity, or wherein was drawn in question the validity of a statute of or an authority exercised under said State, on the ground of their being repugnant to the Constitution, treaties, or laws of the United States, and the decision was in favor of such their validity, or wherein was drawn in question the construction of a clause of the Constitution

3067 or of a treaty or statute of or commission held under the United States and the decision was against the title, right, privilege, or exemption specially set up or claimed under such clause of the said Constitution, treaty, statute, or commission, a manifest error hath happened, to the great damage of the said respondents, as by their complaint appears, we, being willing that error, if any hath been, should be duly corrected and full and speedy justice done to the parties aforesaid in this behalf,

do command you, if judgment be therein given, that then, under your seal, distinctly and openly, you send the record and proceedings aforesaid, with all things concerning the same, to the Supreme Court of the United States, together with this writ, so that you have the same in the said Supreme Court, at Washington, within 30 days from the date hereof, that, the record and proceedings aforesaid being inspected, the said Supreme Court may cause further to be done therein to correct that error what of right and according to the laws and customs of the United States should be done.

Witness the Honorable Melville W. Fuller, Chief Justice of the United States, the 15th day of March, in the year of our Lord one

thousand eight hundred and ninety-five.

JAMES H. McKENNEY, Clerk of the Supreme Court of the United States.

Allowed by— JOHN M. HARLAN,

Associate Justice of the Supreme Court of the United States.

I hereby certify and acknowledge that a copy of the within writ of error was lodged in my office on the 22nd day of March, A. D. 1895.

CHAS. C. HOPKINS, Clerk Supreme Court of the State of Michigan.

Endorsed on cover: Case No. 15,997. Michigan supreme court. Term No., 55. A. Backus, Jr., & Sons and Absalom Backus, Jr., plaintiffs in error, vs. The Fort Street Union Depot Company. Filed August 19, 1895.

SUPREME COURT OF THE UNITED STATES.

OCTOBER TERM, 1897.

ABSALOM BACKUS, Jr., and A. BACKUS, Jr., & SONS vs.

FORT STREET UNION DEPOT COMPANY.

It is hereby stipulated that there was omitted from the return of the clerk of the supreme court of Michigan the amended order of confirmation granted and entered in this cause in the Wayne circuit court on the 23 day of January, 1892, as of the 30th day of November, 1891, and a certified copy of which order is hereto annexed. It is further stipulated that the verdict of the jury referred to in

It is further stipulated that the verdict of the jury referred to in the certificate of the clerk of the Wayne circuit —, on p. 980 of the printed Record, was afterwards found in his office, and a copy was

produced on the hearing in the State supreme court.

Said verdict awarded to the respondents damages or compensation as follows:

 To A. Backus, Jr., & Sons.
 \$48,000

 To Absalom Backus, Jr.
 15,000

\$63,000

This stipulation and annexed amended order of confirmation may be printed as an addition to the record in this cause. Dated Jan. 5, 1898.

DON M. DICKINSON, Attorney for Plaintiff in Error. FRED. A. BAKER, Attorney for Defendant in Error.

At a session of the circuit court for the county of Wayne, convened and held at the circuit court rooms, in the city of Detroit, on the thirtieth day of November, in the year one thousand eight hundred and ninety-one.

Present: Hon. Geo. Gartner, circuit judge.

THE FORT STREET UNION DEPOT COMPANY

Absolom Backus, Jr., A. Backus, Jr., & Sons, James N. Dean, and William H. Davidson.

Before Judge Gartner.

Amended Order of Confirmation.

In obedience to the writ of mandamus granted by the supreme court of this State in the above-entitled cause, condemnation suit,

but not otherwise, and against the deliberate judgment of this court, it is ordered that notwithstanding the objections made to the confirmation of the verdict and the award of the jury in this case as set forth in the motion made by the petitioner to vacate and set aside said verdict and award, and notwithstanding the further objections and the affidavits in support thereof this day read and filed, the said verdict and award is hereby in and by virtue of the legal operation and effect of said writ of mandamus in all things confirmed.

The petition in this cause was filed by the Fort Street Union Depot Company against the above-named respondents to condemn to the public use the right of way for the construction and operation of an elevated railroad in, upon, and along River street, in the city of Detroit, in the said county of Wayne, in front of the property hereinafter described, in which the respondents are interested as owners or otherwise, in accordance with the ordinance agreed upon between the Fort Street Union Depot Company and the common council of the city of Detroit, the orders of the State railroad crossing board and of the commissioner of railroads, the plan approved by the commissioner of railroads and the general plan adopted by said company, all of which are set forth or are mentioned in and were filed and served with the petition in this cause.

The respondents demanded a jury to determine the questions of

necessity and compensation.

A jury was empanelled and sworn, who reported to the court that they were unable to agree upon a verdict.

A second jury was empanelled, and they reported the verdict and

award confirmed by this order.

The following is a description of the real estate and property in which the respondents are interested and in front of which the said

elevated railroad is to be constructed and operated, viz:

All those certain pieces or parcels of land situated on the north side of River street, in the city of Detroit, in said county, known as the Backus planing mill and box factory. Said property is situated on the Lognon farm, so called, and the River Street frontage of said property is 238.06 feet, and it is bounded on the east by a strip of land, the property of the Michigan Central Railroad Company, and on the west by a lot, the property of Barbara Steadley.

It is further ordered that within sixty days from the date of this order the Fort Street Union Depot Company is required to tender and pay to Absolom Backus, Jr., the sum of seventeen thousand eight hundred and fifty dollars, and to A. Backus, Jr., and Sons the sum of seventy-eight thousand two hundred and ninety-three dollars, and to James N. Dean and William H. Davison, executors, the sum of one dollar, together with their costs and expenses, if the same have been taxed, including an attorney fee of twenty-five dollars; and if the said parties or either of them refuse to accept the tender and payment of said sums, the Fort Street Union Depot Company is required to deposit the same, under the supervision of the clerk of this court, in the Detroit National bank and to the credit of this cause, including said costs and expenses; provided,

that if said costs and expenses have not been taxed within the said sixty days, the same to be so deposited within five days after they are taxed.

Said money shall remain on deposit in said bank, but at the risk of the petitioner, subject to be drawn therefrom and to be paid to the parties entitled to the same on orders signed by one of the judges

of this court and countersigned by the clerk.

It is further ordered that upon the tender and payment or deposit of said sum of ninety-six thousand one hundred and forty-four dollars and of said costs, expenses, and counsel fees, as aforesaid, the said Fort Street Union Depot Company shall be entitled to enter upon and take possession of and use the right of way above described for the purpose of its incorporation under its articles of association and the constitution and laws of this State, and that said respondent shall be divested and barred of all right, estate, and interest in such right of way until such right or title shall be again legally vested in them and said right of way shall be deemed to have been acquired by said company for public use.

(Signed)

GEORGE GARTNER, Circuit Judge.

Endorsed: Filed Jan. 23, 1892. Wm. E. Fenwick, deputy clerk.

STATE OF MICHIGAN, County of Wayne, 88:

I, William May, clerk of the circuit court for the county of Wayne, do hereby certify that the above and foregoing is a true and correct copy of judgment entered in the above-entitled cause by said court, as appears of record in my office; that I have compared the same with the original, and it is a true transcript therefrom and of the whole thereof.

In testimony whereof I have hereunto set my hand and affixed the seal of said court, at Detroit, this 23rd day of December, A. D.

1897.
